Columbiformes, order of birds containing the PIGEONS and DOVES and also the SANDGROUSE. Another member, largest of all, was the dodo. Pigeons are the only birds able to suck up water, and are also notable for feeding their young on "pigeon's milk", a white liquid regurgitated from the crop. See also p.73.

Columbine, any of about 100 species of perennial herbaceous plant native to cool climates of the Northern Hemisphere. They have five-petalled, spurred flowers and notched leaflets. Height to 90cm (3ft). Family Ranunculaceae, genus *Aquilegia*.

Columbine, character in the HARLEQUINADE, evolved from Columbine, a maid-servant first found in 16th-century COMEDIA DELL'ARTE. The daughter, ward, or sometimes wife of the old man PANTALON, she falls in love with HARLEQUIN and she eventually elopes with him.

Columbium. See NIOBIUM.

Columbite, black oxide mineral of iron, manganese and niobium (Fe,Mn)Nb₂O₆. Niobium is replaced by TANTALUM to form tantalite, with similar properties to columbite but denser. They are found in granite pegmatites in w Australia and Madagascar. Columbite crystallizes in the orthorhombic system, forming prismatic crystals with one distinct cleavage. Hardness, 6.0 to 6.5; s.g. 5.2 (columbite) to 8.0 (tantalite).

Columbus, Christopher (1451-1506), Italian-born explorer often, although erroneously, credited with the discovery of America. After seeking Portuguese

Colosseum, this Roman amphitheatre probably seated about fifty thousand people

Samuel Colt's pocket model revolver had the longest production run of any of his guns

sponsorship he went to Spain in 1484, where he found support for a voyage in search of a western route to China. In Oct 1492 he landed in the Bahamas, the first European to reach the Americas, and called the people found there "Indians". He had made three other journeys by 1503, but without reaching the North American mainland. He died in poverty, still thinking he had found a route to the East. See also BRENDAN, SAINT; VESPUCCI. AMERIGO, p.1888 1888

Columbus, city and capital of Ohio, USA, on the Scioto River, 156km (97 miles) NE of Cincinnati. It is a major transport, industrial and trading centre for a rich agricultural region. During the American Civil War, Camp Jackson (now Fort Hayes) served as a recruiting centre, and a Union arsenal was built there in 1863. The city has numerous universities and colleges and the Battelle Memorial Institute (1929) which conducts scientific, technological and economic research, the largest private research organization of its kind in the world. Industries: machinery, aircraft, printing, publishing, glassware. Pop (1973) 540,933.

Colyer, Ken (1928-), British jazz trumpeter and guitarist with a fundamentalist approach to New Orleans jazz. He taught himself to play the trumpet in 1945 while in the navy, and formed his own group, Ken Colyer's Jazzmen, in 1953. He has influenced many British jazz musicians, including Acker Bilk and Alexis Kormer. **Coma**, state of unconsciousness brought about by a head injury, brain disease, drugs or lack of blood supply to the brain. **Coma Berenices**, or **Berenice's Hair**, northern constellation between Leo and Bootes and η of Virgo. It has few bright stars but numerous galaxies and clusters of galaxies. The η galactic pole is located in Coma Berenices. See also p.1011.

Comanche, major Shoshonean-speaking American Indian tribe which separated from the parent SHOSHONI in the distant past and migrated from a Wyoming into Kansas. Riding Mexican horses, they raided southwards until they became widely known and feared throughout Texas and Mexico. Numbering at most 15,000, they were famous as daring horsemen and for introducing the horse to the Northern Plains tribes. Today approx 3,500 Comanche live on reservations in SW Oklahoma.

Comaneci, Nadia (1962-), Romanian gymnast. At the 1976 Olympics, she displayed unparalleled precision of technique, receiving six perfect scores and winning three gold medals, a silver and bronze. In 1975, aged 13, she was Europe's youngest-ever champion, winning four golds and a silver.

Combat neurosis, also called battle fatigue, form of TRAUMATIC NEUROSI that develops under conditions of military combat, usually after injury or a close escape from injury. Poor sleep, loss of appetite, moodiness, anxiety, and strong feelings of vulnerability usually occur. Symptoms often subside when the victim is removed from battle, but return again when he re-enters a combat zone.

Combination Acts, acts of parliament of 1799 and 1800 making combinations (or trade unions) of workers in Britain illegal. They were passed because the Tory government of William Pitt feared that such combinations would be covers for politically subversive clubs. Despite the acts, trade unions multiplied after 1815 and in 1824, on the recommendation of a select committee, the acts were repealed. Another Combination Act was passed in 1825. It left trade unions legal, but severely restricted their ability to strike. See also pp.1570, 1571.

Combine. See COMBINE HARVESTER. **Combine harvester**, agricultural machine that cuts, threshes, cleans and gathers cereal crops. Modern combines cut only the top, fruited section (head) of a cereal stalk, beat it to release the grain and separate the grain from the chaff. See also pp.653, 658, 658.

Combined operations, modern military term used to describe the combined use of sea, air and land forces. In WWII there were

large-scale combined operations, notably on D-Day. Troops especially trained for combined operations were often called **COMMANDOS**.

Comb jellies, also called sea gooseberries or sea walnuts, jellyfish-like animals, members of the phylum Ctenophora. They move in the sea by beating their stiff, hairlike cilia contained in eight comb-plates. They are hermaphrodites, producing both eggs and sperm. They are also carnivorous, catching their prey with a pair of branched tentacles. Genus *Pleurobrachia*. See pp.2, 15.

Combustion, fast chemical reaction emitting heat and light, commonly involving oxygen. In solids and liquids the reaction speed may be controlled both by the rate of oxygen flow to the surface, and by catalysts. Industrial techniques harness the energy produced using combustion chambers and furnaces. See also SPONTANEOUS COMBUSTION.

Combustion chamber, rocket, part of a rocket engine in which the propellant is burned. It must be strong enough to withstand high pressures and temperatures, yet not be too heavy. High-strength steel or titanium is used for solid-propellant rockets; aluminum-steel alloys are sufficient for liquid-propellant rockets. See also ROCKET ENGINE.

COMCON, Council for Mutual Economic Assistance, a trade organization formed in 1949 by the USSR and East European Communist nations in response to the MARSHALL PLAN in Western Europe. Its members are the USSR, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, East Germany, Cuba and Mongolia. Instead of setting up one large market, it established a series of bilateral trade agreements, but provided for no uniform price system. See also pp.1717, 1724.

Comédie-Française, French national theatre, founded in 1680. It is organized according to a charter granted by Louis XIV and revised by Napoleon. There are two kinds of members: *pensionnaire*, chosen by addition, and *sociétaire*, to which the *pensionnaire* can be elevated only upon the death, retirement or resignation of a *sociétaire*.

Comédie Humaine, La, about 90 novels and stories of BALZAC, written between 1829 and 1850 and given the collective name by the author. They mirror every class of French society. The most famous are *Eugénie Grandet* (1833), *Le Père Goriot* (1834) and *César Bontoux* (1837).

Comedy, one of the two main types of drama. It differs from the other, TRAGEDY, by having a light style and theme, and usually a happy ending. It originated in early Greek fertility rites and, in modern usage, refers to any humorous play.

Comedy of Errors, The, (c. 1592), five-act farce by William SHAKESPEARE. **Comenius, John Amos** (1592-1670), Czech religious leader and educational reformer, who influenced the growth of modern education. Comenius believed in equal education for all children. His best-known book, *Orbis Sensualium Pictus* (*The Visible World in Pictures*, 1658), used many pictures and related Latin to the vernacular.

Comet, small body orbiting the Sun, often with an elliptical, long-period orbit. Solar radiation vaporizes the icy nucleus producing a luminous, gaseous envelope, the coma, which surrounds the nucleus, and a luminous tail of gas and dust, up to millions of miles long, that always points away from the Sun. The origin of comets is uncertain, it is thought they may be projected into the Solar System from a region (Oort's cloud) which is bound to the Sun. See pp.468, 969.

Comfort, Alexander (1920-), British medical biologist. He was director of research in the department of gerontology at University College, London, from 1966 to 1973. In 1973 he became a senior fellow at the Centre for the Study of Democratic Institutions at Santa Barbara, California. His books include *Authority and Delinquency in the Modern State* (1950), *Sex and Society* (1963) and *A Good Age* (1977).

Comfrey, any plant of the genus *Symphytum* of the BORAGE family, native to Eurasia. Comfrees have small yellow or purple flowers and hairy leaves. Boiled concoctions of *S. officinale* were once used to treat wounds.

Comic Opera, musico-dramatic work with some spoken dialogue and a light or amusing plot. The term is used indiscriminately and includes MUSICAL COMEDY and OPERETTA. In relation to operatic works, it approximates most closely to the early 18th century OPERA BUFFA (notably the operas of PERGOLESI), but bears little relation to the French OPÉRA COMIQUE (which may include serious or even tragic elements).

Comics, magazines primarily for the young, containing stories told by means of strip cartoons with "balloons" giving the characters' speech. They evolved from the comic-strip in the 1930s, and those in book-form concern themselves with adventure, war or crime, whereas the weekly ones are more usually collections of sport, school and family-life stories.

Comilla, town in a Bangladesh on the River Ganges. Situated on the main rail and road routes between Chittagong and Dacca, it is a market centre for the surrounding area, responsible for the export of hides and skins. Pop (1972 est.) 65,400.

Comines, Philippe de (c. 1447-1511), also known as Commynes, or Commynes, French statesman and historian. He served successively with Charles the Bold of Burgundy, Louis XI and Charles VIII. His *Mémoires* (1524) are an important source of medieval history and provide a wealth of detail about the period. **Cominform** (Communist Information Bureau), organization established in 1947 to co-ordinate and provide information to the Communist parties of the USSR, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, Yugoslavia, France and Italy. It replaced the Comintern, which had been abolished in 1943. Yugoslavia was expelled in 1948, and the organization was dissolved in 1956.

Comintern. See COMMUNIST INTERNATIONAL.

Commando, originally a unit of the Boer army during the Boer War (1899-1902). In 1940, commando units were formed in the British army to undertake dangerous small-scale missions. During WWII their exploits included a raid on Rommel's headquarters (1941) and on the port of St Nazaire (1942).

Commedia dell'arte, style of Italian comedy, popular in the 16th-18th centuries, which spread throughout Europe. Professional players performed on street stages or at court functions. The plays were comic, often crude and coarse and improvised on briefly outlined scenarios. An extremely popular form, with masked characters, the Commedia produced several now familiar standard characters: Harlequin (the clown), the Capitano (a braggart soldier), Pantalone (the deceived father or cuckolded husband), Colombina (the maid) and Innamorato (the lover).

Commensalism, relationship between two species in the interests of sharing food or providing locomotion, shelter or support. Often the relationship is mutually beneficial and harms neither. See also SYMBIOSIS.

Commercial law, body of laws that apply to most business transactions (except those relating to carriage of goods). An outgrowth of ROMAN LAW, it was administered by special courts in trading cities during the RENAISSANCE. "Law Merchant", a term applied to principles and procedure, evolved into effective municipal laws. These were incorporated into English common law in the 18th century.

Commissioners for Oaths, persons who administer oaths in Britain. Originally they were masters in CHANCERY. In 1677 COMMON LAW judges were empowered to appoint commissioners. In 1853 it was enacted that solicitors should be appointed by the Lord CHANCELLOR. Any solicitor with a licence to practise is eligible for the office.

Commission, Royal, extra-parliamentary committee appointed by the British

Commandos, the special service troops landing at Dieppe in the famous raid in WWII.

Commedia dell'arte, the renaissance theatre which brought us characters like Harlequin.

The Commons, the first televised state opening of the British Parliament in 1966.

Commonwealth Games, a Canadian athlete waves to Prince Philip at the opening.

Committee of Public Safety

Crown to enquire into and make reports on matters of public policy. DOMESDAY BOOK may be considered the first. Under HENRY II such commissions became regular. EDWARD I's QUO WARRANTO proceedings were the most extensive medieval inquiry. Medieval commissions, concerned chiefly with property and taxation, were like a modern census. The modern commission into a particular subject dates from the Tudors. Since the early 19th century social and economic questions have increasingly been the subject of inquiry.

Committee of Public Safety, political organization of the French Revolution. Formed in 1793 to defend the state and to supervise executive government, it controlled the country during the REIGN OF TERROR. Both DANTON and ROBESPIERRE were at different times members.

Commodity market, market organized by traders in which promises of immediate and future delivery are made. The commodities themselves are not brought to the market-place, only contracts (futures) are sold. Commodity markets deal in items that are subject to sampling and grading, such as grapes, sugar, coffee, tea, wool, cotton, rubber and copper.

Common Business Oriented Language. See COBOL.

Common cold. See COLD, COMMON.

Common denominator. See DENOMINATOR, COMMON.

Common lands, land on an estate on which, by a tradition dating from medieval times, the tenants of the estate are free to grow their own crops and pasture their own livestock. There are hardly any common lands still remaining, most having been swallowed up in the enclosure movement of the 18th and 19th centuries.

Common law, system of law developed in England and adopted in most English-speaking countries. Distinguished from CIVIL LAW (a codified system based on statutes), its chief characteristics are judicial precedents, trial by jury and the doctrine of the supremacy of LAW. Based originally on the king's court, "common to the whole realm", rather than local or manorial courts, it dates back to the constitutions of CLARENDON (1164) and is the customary and traditional element in the law accumulating from court decisions. Swift changes in society and public opinion have resulted in a proliferation of statutes which have come to supersede common law. See also ROMAN LAW, p. 1871.

Common law marriage, marriage by verbal agreement of the parties involved without a civil or religious ceremony. It does not require a licence and in Britain is regarded as legal if followed by cohabitation of the partners as man and wife.

Common Market. See EEC.

Common Prayer, Book of, official liturgy of the Church of England. It was prepared originally as a reformed version of the old Catholic liturgy for Henry VIII by Thomas CRANMER and was accepted by Parliament in 1549. Three years later it underwent thorough revision under the more Protestant government of the young Edward VI. Accordingly, the MASS was transformed from an act of sacrifice into one of commemoration, and was called the Lord's Supper or Holy Communion. After the intervening reign of the Catholic Mary, a combination of the 1549 and 1552 prayer books was produced by Elizabeth's Archbishop Matthew Parker, reincorporating much of Cranmer's liberalism. It is this version - with slight liturgical improvements and not finally published until 1662 after suppression during the Commonwealth - that in many churches is still in use. *The Alternative Service Book*, published in 1980, contains alternative services in modern language.

Commons, The, in Britain the third ESTATE of the realm - everyone who is not at least a baron (and so entitled to sit in the House of Lords). The term is often used to mean the HOUSE OF COMMONS of the British PARLIAMENT. It derives from the Latin *communis*; the *communis regni* ("community of the realm") meant in feudal times that larger political nation than simply the tenants-in-chief. It included

the knights of the shire and the burgesses of the towns which, from the 13th century, sent representatives to PARLIAMENT.

Common Sense, pamphlet published in January 1776 by Thomas PAINE. It attacked the British monarchy as being chiefly responsible for the restrictive measures against the American colonists, and was the first clear call for American independence from Britain. See also p. 1541.

Common Sense Realism, school of early 18th century Scottish philosophers, founded by Thomas REID, which advanced a theory of knowledge founded upon the self-evident "principles of the man in the street".

Commonwealth (1649-60), official name of the republic established in England after the execution of CHARLES I in 1649. After a series of unsuccessful attempts to find a suitable constitution, the PROTECTORATE was set up in 1653, in which Oliver CROMWELL was given almost regal powers. The Commonwealth continued until the RESTORATION of CHARLES II in 1660. See also pp. 1422, 1425, 1430.

Commonwealth Conferences, irregular meetings of Commonwealth heads, the offspring of the Imperial conferences of 1911-37. The first was held at London in 1944. They are now held about every two years to discuss matters of common interest at places throughout the Commonwealth. The first one not held at London was in Lagos in 1966.

Commonwealth Day, in Britain and most member countries of the COMMONWEALTH OF NATIONS, holiday to celebrate the foundation of the Commonwealth. The festival was first held in Canada in 1901 and was known as Empire Day until 1958.

Commonwealth Development Corporation, name given in 1963 to the Colonial Development Corporation, a British organization founded in 1948 to foster the growth of the economies of British colonies. It seeks to provide technical and managerial assistance for Commonwealth countries and to encourage and coordinate overseas investment in their industries.

Commonwealth Games, sports series originated as the British Empire Games in 1930. The competitors are members of the COMMONWEALTH OF NATIONS. Based on the Olympic Games, they are held every four years and must include athletics and swimming and seven other sports selected from the following: archery, badminton, bowls, boxing, cycling, fencing, gymnastics, rowing/canoeing, shooting, weightlifting and wrestling.

Commonwealth Institute, organization housed in Kensington, London, which has a permanent exhibition of the life and culture of the various members of the COMMONWEALTH OF NATIONS.

Commonwealth of Nations, voluntary association of states consisting of Britain and independent countries that were once its dependencies. Since the transition to independent status of many of the members, the Commonwealth has stressed cultural and economic co-operation and consultation on political issues of mutual concern. The British sovereign is head of the Commonwealth, and those member states that are dominions, such as Canada, recognize her as queen, they are outnumbered by republics, such as India and Malaysia, that have their own head of state. Commonwealth heads of government meet regularly for talks. In 1965 a Commonwealth Secretariat was set up, with headquarters in London. See also BRITISH EMPIRE, pp. 1702, 1703.

Commonwealth Relations Office, former department of the British government, established in 1947, when the secretary of state for Dominion affairs became the secretary of state for Commonwealth relations. The office was responsible for relations between Britain and Commonwealth countries and relations with the Republic of Ireland. In 1965 it was merged with the COLONIAL OFFICE, which became part of the FOREIGN AND COMMONWEALTH OFFICE in 1968.

Commonwealth Territory. See AUSTRALIAN CAPITAL TERRITORY.

Communards, supporters of the COMMUNE OF PARIS (1871). The Communards represented JACOBIN and patriotic feeling as well as socialist and anarchist ideals. They relied for their defence on the Parisian national guard.

Commune, usually a community of people who choose to live together for a shared purpose. In the 19th century many communes tried to put utopian socialist ideals into practice. In the 1960s hippies and others formed communes that were intended to be co-operative, self-supporting and free of what were held to be the undesirable values of conventional society. In China farming communes have been set up, similar to the state farms of the USSR. The communes own the land and a production brigade determines what is grown. Farmers have been granted small private plots of land to grow what they like, they themselves may either use the produce they grow or sell it.

Commune of Paris (1871), insurrection against the French national government, which was accepting a humiliating peace following the FRANCO-PRUSSIAN WAR. The Parisians, spurred on by radicals, anarchists and Marxists, decided to continue the fight and organized their own defences. The French government, based in Versailles, besieged the city (March-May 1871) and put down the revolt with great brutality. See also p. 1660.

Communications Satellite Corporation (Comsat), a private company created by the US Congress to develop a worldwide communications network. Thirteen other nations participate in the project, which was started with the launch of the EARLY BIRD satellite in 1965.

Communism, the political theory of Karl MARX and Friedrich ENGELS, but also sometimes used to mean the institutions (the COMMUNIST PARTY and the COMMUNIST INTERNATIONAL, developed by those people claiming allegiance to the theory. Like many theories, Communism, or Marxism, is sometimes self-contradictory, nevertheless its essential articles, as laid forth in the COMMUNIST MANIFESTO and DAS KAPITAL, may be outlined.

The theory is derived from the interpretation which Marx and Engels placed upon the course of human history. That interpretation asserted that all human phenomena rest upon economic facts, the most important of which are the changes that occur in the relationship between the means of production and their ownership. All wealth is produced by labour (the labour theory of value) and hence labour is wealth. Yet in the CAPITALIST system of Europe in the 18th and 19th centuries the workers owned neither their own labour nor the means of production. Hence they did not reap the fruits of their labour, which went to the capitalist owners of the means of production. Thus labour became alienated from capital and production. Capitalism, however, was asserted to be merely a transient stage in the progress of human institutions.

Marx's theory of history led him to prediction. Borrowing HEGEL's idea of the dialectic he developed, with Engels, the notion of DIALECTICAL MATERIALISM, which in social terms meant the war of classes. Marx postulated that just as the feudal aristocracy of Europe had inevitably been supplanted as the ruling class by the capitalist bourgeoisie, so the bourgeoisie (by the nature of its operations) brought into being the urban proletariat, or working class, which must overthrow it and establish the dictatorship of the proletariat.

Marx claimed that his socialism was scientific - as opposed to the Utopian socialism of men such as Robert OWEN - because it was based on inflexible economic forces which determine the course of human history. There was, however, no scientific basis to his historical interpretation, nor to his visionary expectation that the triumph of the proletariat would necessarily usher in a classless society. And in direct contradiction of his theory Communist parties have come to power, not in highly industrialized countries with a large urban working class, but in agricultural, peasant countries such as pre-

Revolutionary Russia and China as well as Indonesia and Cuba. See also pp. 1722-1727, 1855.

Communist International, or Comintern, also known as the Third International, Communist organization founded by LENIN in 1919. He feared that the reformist Second International might emerge and he wished to secure his control of the world socialist movement. The Comintern was made up mainly of Russians, and failed to organize a successful revolution in Europe in the 1920s and 1930s. The USSR abolished the Comintern in 1943 to placate its allies in WWII. See also p. 1678.

Communist Manifesto (1848), political tract by Karl MARX and Friedrich ENGELS. Essentially it states that economic factors determine social relations. The authors believed that the inevitability of class warfare would substitute a classless Communist society for the inequalities of a capitalist one. See also p. 1651.

Communist Party, name of numerous political parties in the world, each of them confessing with more or less strictness to Marxist, Marxist-Leninist or Maoist principles. It is the ruling party in the USSR, China, Albania and the COMECON countries.

The first Communist Party was founded at Minsk in 1898, led by LENIN, it was called the Russian Social Democratic Party. At the Brussels-London conference (1903) it affirmed three leading principles: that the party should accept all decisions made by its leaders, that all party members should be "activists" and that they should be prepared for a revolutionary seizure of power. Lenin's wing of the party, the BOLSHEVIKS, seized power in 1917. Since then the party has remained in power, under the successive leadership of LENIN, STALIN, MALENKOV, BULGANIN, KHRUSHCHEV and BREZHNEV. Under Communist rule Russia has been a one-party state, in which the controlling body is the secretariat, which selects and supervises all persons appointed to positions in the party organization. Through the secretariat the distinction between party and government posts has been, in effect, obliterated.

The Chinese Communist Party was formed under the leadership of Ch'en Tu-hsiu and Li Tsu-chao in 1921. After decades of civil war, it gained power in 1949 and proclaimed the People's Republic of China. Since then China, (like all Communist-ruled countries) has been a one-party state, led until 1976 by MAO TSE-TUNG, whose death was followed by a struggle for power.

The British Communist Party was formed in 1920. It has twice had two MPs, in 1922-23 and 1949-50.

Communism, group of people, usually living in the same area, who are bound together by similar customs, beliefs and outlook. Hunting and gathering bands of early men, farming villages, monasteries and cities are examples of communisms.

Community medicine, broad term that includes all aspects of public health and social services within a community. See also pp. 1086-1087.

Communitation, in law, reduction in the severity of a punishment. It does not eradicate guilt. Commutation is neither a pardon (which terminates punishment) nor a reprieve (which temporarily withholds sentence or temporarily suspends its execution).

Commutative law, rule of combination in mathematics, it requires that an operation on two terms is independent of the order of the terms. Addition and multiplication of numbers in commutative, since $a \times b = b \times a$, and $a + b = b + a$. Vector cross-multiplication does not obey the commutative law. See also p. 778.

Commutator, cylinder made up from copper bars, part of DC ELECTRIC MOTOR or GENERATOR. It makes contact via brushes between the electric terminals and the rotary ARMATURE winding. It also serves to reverse the current in these windings. See also pp. 876-877.

Comnenus family, influential Byzantine family, possibly of Italian origin. In the

10th-12th centuries members of the family included six Byzantine emperors (1057-1185), statesmen and authors, such as historian Anna Comnena (1083-1150). All the emperors of Trebizond (1204-1461) were of the family. The last one, David Comnenus, was executed in 1461 by Mehmet II. Attempts to link the Bonaparte family with a Corsican branch of the Comnenus family proved unsuccessful. See also pp 1276, 1310

Como, city in N Italy, at the SW end of Lake Como, capital of Como province in Lombardy region. Originally a Roman colony, it became a free commune in the 11th century. It was liberated from Austrian rule by Garibaldi in 1859. Mussolini was executed there in 1945. Monuments include a 18th-century cathedral of Sta Maria Maggiore. Industries: silk, tourism. Pop. (1971) 97,395

Comoria, Cape, southernmost point of the subcontinent of India. A rugged headland, it is the site of an ancient temple dedicated to shiva, which is a Hindu pilgrimage centre

Comoro Islands (Comores), independent republic off the E coast of Africa between Mozambique and Madagascar in the Indian Ocean, made up of a group of volcanic islands. The three major islands are Grande Comore (on which is the capital, Moroni), Anjouan and Mohéli. The islands are mountainous, the climate is tropical and the soil fertile. Farming is the chief occupation, and coconuts, vanilla, copra, cocoa and sisal are the main crops and exports. France acquired the islands between 1841 and 1909. They gained their independence in 1975. Area 1,797 sq km (694 sq miles). Pop. (1975 est.) 292,000. See also p 2015

Companies Act. See LIMITED LIABILITY

Companions of Honour, exclusive order of chivalry in Britain, founded in 1917. Membership of the order, which allows the member to put CH after his or her name, is limited to 65 men or women

Company, group of people who agree to work together as a firm or business. The legal responsibility of running a company rests with its board of directors which, if the business has raised finance by selling shares in the company, has to account to its shareholders. In a private company the directors sell shares to whom ever they please (sometimes the only shareholders are the directors themselves). The shares of a public company can be bought and sold by anyone through a stock exchange. In a limited company, the legal liability of its shareholders is limited to the value of their shares. There is a special branch of the law, company law, that applies to such businesses. See also AUDIT, CORPORATION

Comparative law, the study and comparison of the legal systems and laws of different countries and cultures. A relatively new discipline in legal studies, its growth has been linked to several factors, the needs of international business, the establishment of international laws, the promotion of international understanding, and the improvement of legal systems

Comparative psychology, field of biology that compares the behaviours of various animal species. Comparative psychologists study animals to learn more about all species and to aid their understanding of human behaviour. See also ETHOLOGY

Comparator, measuring device used to inspect a manufactured component for deviation from a specified value, normally by direct matching or by comparing it with a master part against pre-set tolerances. The decision to accept or reject a part may be done by an operator or the comparator makes the decision automatically

Compass, magnetic, direction-finding instrument consisting of a magnetic needle freely suspended or pivoted so that in the earth's magnetic field it can turn to align itself with the magnetic north and south poles. Adjustments can be made to give true north. The first use of the magnetic compass was once attributed to the Ancient Chinese, although this now seems unlikely. It was not until the 12th century that it was used in Europe, when the "needle" was a piece of LODESTONE. In navigation today the magnetic compass

has largely been replaced by the GYROCOMPASS. See also pp 870-871

Compass plant, large coarse perennial plant native to North America. It has a tall flower stalk with a number of large, solitary yellow flowers and long deeply cut leaves which are said to point in north and south. Height 3.5m (11ft). Family Compositae, species *Silphium laciniatum*

Compiègne, town in Oise département, NE France, 72km (45 miles) SE of Paris, on the River Oise. Joan of Arc was captured there by the Burgundians in 1430. The armistice ending WWI was signed on 11 Nov 1918 in a railway carriage in the Compiègne forest. Hitler forced the French to sign the 1940 armistice in the same carriage. Industries: chemicals, soap. Pop. (1968) 29,700

Complément Angler, The (1653), literary discourse on fishing by Isaac Walton in the form of a dialogue between Piscator (Fisherman), Venator (Hunter) and Aucupis (Fowler). It combines humour, pastoral description, verse and practical instruction

Complementary angles, two angles whose sum is 90°, or a right-angle. Supplementary angles have a sum of 180°

Complementary colours, in the light spectrum, any two colours which combine to make white light. This involves the mixture of at least three primary colours. Thus green (a mixture of the primaries blue and yellow) mixed with red (another primary) gives white. Green is therefore the complement of red. In painting adding different colours together has the reverse effect: combinations get darker, not lighter. See also pp 850-851

Complex, in psychology, collection of repressed memories and desires that have a powerful emotional charge. When this charge remains in the unconscious, it can exert a dominating influence on behaviour. The term was introduced by Carl JUNG, who deduced from research that certain associations were repressed because of their immoral or disagreeable content. Such associations can give rise to various NEUROSES

Complex compounds, in chemistry, compounds in which some atoms of the molecule are held by polar bonds and others by co-ordinate bonds. They are also known as co-ordination compounds. They can form complex ions such as chloropentammineplatinum, $Pt(NH_3)_5Cl^{2+}$, because of the co-ordinate bonding. In such compounds a metal atom is often surrounded by non-metal atoms, so that it does not manifest its metal character. See also CHEMICAL BONDS, CHELATE, LIGANDS p 895

Complex fraction. See FRACTION

Complex number. See NUMBER, COMPLEX

Composite, material such as concrete (fibreglass or plywood, made by combining two or more other materials. A composite usually has qualities superior to those of the materials from which it is made. See also pp 403, 549

Composite family, family (Compositae) of nearly 20,000 species of plants in which the "flower" is actually a composite flower-head made up of a cluster of many, usually tiny, individual flowers, called florets. In a typical composite such as the daisy, the flower-head has a central velvety disc, consisting of a cluster of tiny bisexual florets lacking visible petals. The outer ring of female ray florets has relatively large white petals. In composites such as the dandelion and endive the flower-head consists entirely of ray florets. Others, such as thistles, consist entirely of disc florets. Composites make up by far the largest family of plants, with a great variety of forms and sizes. They include food plants, such as artichokes, and many popular garden flowers. See also pp 370, 371, 373

Compost, mass of rotted plant and animal matter used as a FERTILIZER. When properly prepared, with the addition of nitrogen compounds during decomposition, it is crumbly, does not have an offensive smell and does not compete with plants for nitrogen. Large amounts have to be used to compensate for its relatively low nutrient content (compared with artificial

fertilizers), but the structure of soil is greatly improved after several seasons of composting. See also pp 668-669

Compound, substance formed by chemical combination of two or more elements. Compounds are produced by the rearrangement of valency electrons seeking to attain more stable configurations, and usually have properties quite different from those of their constituent elements. Ionic compounds have ionic bonds - they are collections of oppositely charged ions in which no distinct molecules exist. Covalent bonding produces two types of compound. In one covalent compounds, a solid is formed in which the bonds extend throughout the crystal. Such compounds, eg, boron nitride, are hard and have high melting points. In the other, molecular compounds, groups of atoms are bound in distinct molecules. Such compounds tend to be volatile, soluble in non-polar solvents and have low melting points. See also MOLECULE, pp 892-896

Compound eye, eye made up of from 12 to more than 1,000 simple eyes, each having light-sensitive cells, nerve fibres and a corneal lens. It is found in insects and most other arthropods

Compound interest, interest that is earned not only on the principal (the sum originally invested) but also on any previous interest that has been added to the principal. Simple interest is earned only on the principal. See also INTEREST

Compressed air, air kept at pressures much higher than that of the atmosphere (1 atm). It is prepared by pumping air into a reservoir from a pump or compressor, and is used extensively as a source of power for machines such as PNEUMATIC HAMMERS and other moving tools. It is easily transported in metal "bottles", and many factories have their own compressors

Compression-ignition engine. See DIESEL ENGINE

Compression of gases, reduction in volume of gases achieved by applying external pressure. Unlike liquids and solids, gases can be compressed to a considerable extent. Some, including carbon dioxide, can be liquefied by pressure alone at room temperatures. Many other gases must be cooled before they can be liquefied by pressure, the temperature above which they will not do so is called the critical temperature. See also AIR COMPRESSOR, CRITICAL POINT, pp 836-837

Compressor. See AIR COMPRESSOR

Compton, Arthur Holly (1892-1962), US physicist. He was head of the physics department at Washington University (1920-23) and at the University of Chicago (1923-45). He worked in the field of X-rays and discovered the scattering process known as the Compton effect, for which he was awarded the 1927 Nobel Prize in physics jointly with C T R WILSON. As head of the early phase of the Manhattan Project, he helped create its first sustained nuclear chain reaction

Compton, Denis Charles Scott (1918-), British cricketer. He played 78 times for England 1937-57 (5,807 runs at an average of 50.06), his cavalier batting for England and Middlesex winning many admirers. He once scored 300 for MCC. In football, he won England FA Cup and League honours with Arsenal

Compton, Fay (1894-1978), British actress, actress, full name Lillian Emmeline Compton, sister of Sir Compton Mackenzie. She made her stage debut in 1911 and later visited the USA and toured Europe. During a long career, she gave many notable performances both in the classics and in contemporary plays

Compton-Burnett, Dame Ivy (1892-1969), British novelist. Her novels, written mainly in dialogue, take place in upper-middle-class society in Edwardian England. They include *Pastors and Masters* (1925), *A House and its Head* (1935), *Elders and Betters* (1944) and *Mother and Son* (1955)

Compton effect, the scattering of waves such as X-RAYS and GAMMA RAYS into packets of energy called quanta (photons). The effect was discovered (1923) by the US physicist Arthur H. COMPTON, and is

Compton effect

Commune of Paris, the symbolic burning of the guillotine during the 1871 uprising

Communism, a Bolshevik demonstration at the Winter Palace in Petrograd in 1917

Como is the home of the Italian National Institute of Silk, the city's main industry

Compass, its direction finding power is because the Earth behaves like a magnet

Compulsive personality

Concertinas are commonly associated with sailor's sea shanties and shipboard music

Conches are often used as horns like the fabled shell trumpet of the Tritons

Concorde has set average journey times but has caused great controversy

Concrete is mixed up in medium quantities in machines like this on many building sites

evidence for the dual nature of energy ie wave and particle. It is observed as an increase in the wavelength of waves as they collide with electrons.

Compulsive personality, personality disturbance marked by obsessive concerns and rigid ritualistic behaviour making for an inhibited, orderly and stubborn person. Such a person has a huge capacity for work but finds it difficult to relax. Compulsive personalities show little spontaneity. They try and arrange their whole lives to fit into a set plan.

Computer, electronic calculating and problem-solving machine which originated in mechanical calculating machines of the 19th century, (such as the projected Difference Engine and Analytical Engine of Charles Babbage). The first modern electronic computer, which used 18,000 vacuum tubes (radio valves), was built at the University of Pennsylvania in 1946 and could perform 5,000 additions or several hundred multiplications each second. In later electronic computers, vacuum tubes and wiring were replaced by TRANSISTORS and PRINTED CIRCUITS. The latest computers use even more compact INTEGRATED CIRCUITS, which allow them to be of such complexity and efficiency that they can perform several million arithmetic operations each second. Computers are of two main types: analog and digital. Analog computers represent numbers by an analogous quantity which can be varied continuously. In electronic computers this is an electric voltage, but strictly speaking, analog computers also include such simple devices as the slide rule, which represents numbers by lengths. Digital computers represent numbers discretely, not continuously - a simple example is an abacus, in which numbers are represented by movable beads. In a modern electronic digital computer numbers are represented by a string of bits, each of which is either on or off.

Analog computers are, in general, even faster than digital computers but are not as accurate. They are employed principally for such operations as designing aeroplanes, where continuously varying properties require to be assessed one against the other. All computers employed commercially and most for scientific and technological calculations, are digital machines. They consist of a central processing unit in which information is stored and manipulated, an input unit which feeds programmed information to the central unit, and an output unit which delivers the processed data for inspection. Programs are written in one or another special computer language eg FORTRAN and COBOL, in which both the data and the required manipulation of it are specified. The program is fed into the computer (typically it is typed by the operator on a machine which produces punched tape) and is read by the computer at high speed. Output information is typically printed out or drawn graphically, it is frequently also displayed on a cathode ray tube. The magnetic discs and tapes are for the storage and manipulation of data. See also pp 455, 466-469.

Computer language, set of words and rules that enable a programmer to instruct a computer. The computer itself performs its operations using the BINARY SYSTEM in a machine code or language, which it is too time-consuming to program directly. So the computer translates an assembly or programming language into the machine code. There are several kinds of programming language designed for different purposes. For example, FORTRAN is for scientific and mathematical use; COBOL for business use; ALGOL for mathematical use; PL/I for general use. See also pp 455, 466-469, 579, 618, 626, 627.

Computer memory, part of a computer that stores information in words or their bits, each of which has an identification number (address) assigned to it for immediate use by the central processing unit. It may consist of magnetic cores, tape drums or discs. Developments in integrated chip circuits have revolutionized computer memory technology permitting greater retrieval speeds and miniaturization. See also pp 466-469.

Comte, Auguste (1798-1857), French philosopher, the founder of POSITIVISM. Comte proposed the law of the three stages - theological, metaphysical and positive - that represent the development of the human race. In the first two stages the human mind finds religious or abstract causes to explain phenomena, while in the third, explanation of a phenomenon is found in a scientific law. His philosophy influenced British thinkers such as J. S. MILL and Frederick HARRISON. His works include *Positive Philosophy* (1830-42) and *Système de Politique Positive* (1851-54). See also pp 1652, 1653, 1841.

Comus, pastoral entertainment by John MILTON, first performed in 1634 and published in 1637. The work describes the rescue of a chaste lady captured by Comus, the orgiastic son of Bacchus and Circe.

Conakry, capital city of Guinea, w Africa, on Tombo Island, in the Atlantic Ocean. Founded in 1884, it is a major port with a deep-water harbour and is the administrative and commercial centre of Guinea. It has an airport and is the terminus of the country's only railway. It exports alumina and bananas and has food processing industries. Pop. (1972 est.) 290,000.

Concentration camp, centre for the segregation and detention of people considered by the authorities to be objectionable or dangerous because of their politics, race, religion or nationality. Concentration camps were established by the British during the SOUTH AFRICAN (BOER) WAR and by many TOTALITARIAN regimes. During WWII a number of such camps were established by Hitler's Nazi Party and became infamous for the harsh treatment and extermination of Jews, Slavs, gypsies, criminals, homosexuals and other prisoners. See also AUSCHWITZ, BELSEN, DACHAU, p 1816.

Concentric circles, two or more circles lying in the same plane and having the same point as their centre.

Concepción, city in s central Chile, capital of Concepción province. Founded in 1550 by Pedro de VALDIVIA, it has been destroyed on several occasions by earthquakes and was severely damaged in 1960. An important commercial centre in a rich agricultural region, its industries include coal mining, oil refining, chemicals, textiles, food processing, brewing. Pop. (1975) 169,570.

Conception, start of pregnancy. The term is used to describe the fertilization of an egg cell by the male SPERM, or the implantation of the fertilized egg in the wall of the UTERUS. See also p 165.

Concept learning, type of learning characterized by considering the qualities, aspects and relations of objects and events, which then allows comparison, generalization, abstraction and reasoning. It enables a person to classify his experiences. Words and language form the basis of concept learning and they develop alongside each other in a child. See also pp 170-171, 172-173, 1124-1127.

Conceptual art, avant-garde philosophy of art dating from the mid-1960s and rejecting the physical art object in order to emphasize the artist's intellect, not his aesthetic ability. It is also called CON ART, IDEA ART, IMPOSSIBLE ART and POST-OBJECT ART. Conceptual artists create works invisible to the human senses, such as exhibits of inert gases or electromagnetic waves that can be detected only by instrument readings.

Conceptualism, philosophical theory in which the universal is found in the particular. A position between NOMINALISM (which analyses universals into particulars) and REALISM (in which universals are real apart from all particulars), conceptualism includes both universals and particulars. Essentially, it holds that the mind is the individual that universalizes by experiencing particulars, finding common factors in them, and then conceptualizing these common factors as universals. See also pp 1880-1881.

Concertina, portable wind instrument patented by the British scientist Charles WHEATSTONE in 1829. Similar in principle to an ACCORDION, it consists of two (gene-

rally hexagonal) panels of buttons (keys) separated by bellows. The notes are produced by vibrating metal reeds.

Concerto, musical work for instrumental soloist accompanied by orchestra. Concertos usually have three movements, and may be written for two or three soloists (double and triple concertos). The best-known concertos are those written for violin, piano or cello and are often virtuoso works.

Concerto grosso, musical form in which a small section of soloists on various instruments is contrasted with the full orchestra. Alessandro STRADELLA is now accredited with originating the form, although Giuseppe TORELLI (1658-1709) and Antonio VIVALDI (1678-1741) are better known for early examples.

Conch, GASTROPOD MOLLUSC found throughout the world in warm seas. It has a large, tapering, helical shell. The queen conch (*Strombus gigas*) of Florida is up to 30cm (12in) across and is regarded as a gourmet's delicacy. Family Strombidae.

Conclave, originally a place of assembly, then the assembly itself. More particularly the term denotes the assembly of CARDINALS meeting to elect a new POPE.

Concord, town in e Massachusetts, USA, 31km (19 miles) n.w of Boston on the Concord River. There was a battle at Concord in 1775 during the Revolutionary War when British forces were sent from Boston to destroy ammunition and supplies stockpiled in Concord, and were met by the MINUTE MEN. It was a literary centre in the mid-19th century and a number of writers lived there, including EMERSON, THOREAU and HAWTHORNE. Industries include furniture, iron and precision instruments. Pop. (1970) 16,148. See also p 1540.

Concordance, alphabetical or thematic index of all or only the principal words of a book, giving a reference to their location and citing the context. Alexander CRUICK (1701-70) compiled a concordance to the Authorized Version of the Bible which is still in use. There have been later concordances to the works of famous authors.

Concordat, agreement between Church and State regulating relations between them on matters of common concern. The term is usually applied to treaties between individual states and the VATICAN.

Concorde, supersonic transport (SST) aircraft developed and built jointly by the British Aircraft Corporation and Aerospatiale of France. See also p 517.

Concrete, hard, strong building material made by mixing CEMENT, sand, gravel and water. It is strengthened by embedding steel rods in it, giving reinforced concrete. Its modern use dates from the early 19th century, although the Romans made a natural form of concrete. See also pp 523, 534, 548, 549, 553.

Concrete, reinforced, building material made by casting strengthening steel rods in concrete - a mixture of CEMENT, an aggregate such as fine gravel or coarse sand and water. The cement binds the mixture into a solid mass. Without reinforcement, concrete slabs or columns can withstand limited stress, but when reinforced are among the strongest and cheapest building materials. See also pp 523, 534, 548, 551, 553.

Concrete Art, term coined in 1930 by Theo van DOESBURG as an alternative for ABSTRACT ART - which suggested a separation from reality. To Concrete Artists, a work of art was a "concretion of the creative spirit" using elements of natural phenomena (eg space, light and form). Popular as a term in Switzerland and Latin America, its best-known representative was Max BILL. Although it survived WWII, the term has seldom been used since 1950.

Concubinage, cohabitation of a man and a woman not married to each other. In some societies concubinage is actually a socially recognized relationship into which a couple enters instead of marriage or which exists in addition to the man's marriage. In most legal systems children of such a union cannot inherit property as of right.

Concussion, temporary brain malfunction due to a blow to the head. It results in loss of consciousness for a few seconds or

minutes, and later in intermittent headache and brief giddiness or difficulty in concentrating. Treatment consists of rest and close observation to ensure that there are no serious head injuries.

Condé, House of (1530-1830), branch of the French House of Bourbon. Notable members of the line included the first prince, Louis I de Bourbon (1530-69), a Huguenot leader. The third prince was Henry II (1588-1646), a Catholic, who was arrested for blackmail and sedition (1616), but was later rewarded for loyalty to Louis XIII. Louis II, the Great Condé (1621-86), was involved in the Fronde uprisings (1648-53), and later became one of Louis XIV's greatest generals. Louis Joseph de Bourbon (1736-1818) led émigré forces during the French Revolutionary Wars.

Condensation, formation of a liquid from a gas or vapour caused by cooling or an increase in pressure. More particularly it is the changing of water vapour in the air into water droplets, forming mist, cloud, rain or drops on cold surfaces. See also pp.250-251, 756, 836-839, 842-843.

Condensation, colloidal. See COLLOIDAL CONDENSATION.

Condensation nucleus, small liquid or solid particle, such as dust, on which water vapour in the atmosphere begins to condense in tiny water droplets or ice crystals with cloud formation. See also PE p.70.

Condensation trail. See CONTRAIL.

Condenser. See CAPACITOR.

Condenser, steam, device for changing steam to water by cooling. Condensers are used in steam-power plants where the steam from a turbine or steam engine must be condensed to water, which may then be pumped back for re-use in the boiler. See also pp.422-424.

Conder, Charles Edward (1868-1909), British artist. He began to paint while in Australia where he was born, later moving to Paris and London. Conder is known principally for his watercolours on silk and his designs for painted fans.

Condillac, Étienne Bonnot de (1715-80), French philosopher. Condillac was a prominent member of the school of sensualists, who believed that human understanding can be reduced to the articulation and comparison of sensations derived from experience. He wrote *Traité on Systems* (1749) and *Traité on Sensations* (1754).

Conditioned reflex, in psychology, new or modified response elicited by a stimulus after conditioning. See also pp.1118-1119, 1124-1125.

Condition Humaine, La, novel by the French writer, André Malraux, published in 1933. It is set against the background of Chiang Kai-Shek's coup against the Chinese Communists in 1927. It is an early expression of the Absurd in French literature.

Conditioning, in psychology, method of controlling or modifying behaviour. Most of the procedures and terminology stem from the work of Ivan Pavlov. A response elicited by a provided stimulus is called a conditioned reflex. Operant conditioning, first described by B. F. Skinner in the 1930s, involves rewarding or punishing certain actions to positively or negatively reinforce behaviour. It can give rise to new behavioural patterns, unlike classical conditioning, the basis of Pavlov's work, which can modify only the existing behavioural repertoire of a human being or animal. Operant conditioning occurs naturally. Many emotional responses are learned on this principle. See also pp.1118-1119, 1124-1125.

Condliffe, John Bell (1891-), Australian economist. He was professor of economics at the University of California from 1940 to 1959, when he became professor emeritus.

Condominium, joint sovereignty over a single territory by two or more states. In Roman law condominium was common ownership by two or more persons of a single property, and still has this meaning in Canadian and US civil law. The term developed, however, to include political sovereignty, especially during the age of European colonialism. From 1899 to

1935, for example, Britain and Egypt ruled jointly as a condominium in the Sudan.

Condor, common name for two species of American vultures, the black Andean condor (*Vultur gryphus*) and the rare grey-brown California condor (*Gymnogyps californianus*). They are two of the largest flying birds and feed on partly rotted carrion. Length up to 127cm (50in). Wing-span up to 3.5m (10ft).

Condorcet, Marie Jean Antoine Nicholas de (1743-94), French philosopher and mathematician noted for his *Essay on the Application of Analysis to the Probability of Majority Decisions* (1785). He suggested the progress of man to ultimate perfection in his *Sketch for a Historical Picture of the Progress of the Human Mind* (1795).

Condor Legion, force sent by Nazi Germany to assist the Nationalist forces of Gen. Franco during the Spanish Civil War (1936-39). It comprised almost 100 bomber and fighter aircraft and gave the Nationalists air supremacy, it was responsible for the bombing of Guernica.

Condottieri, leaders of mercenary armies hired to fight the numerous wars among the Italian states in the 14th-16th centuries. Both they and their armies were often foreign. By the late 14th century the condottieri had begun conquering principalities for themselves. Famous among the condottieri were the Englishman John Hawkwood (1320-1394) and Francesco Sforza, who annexed Milan in 1450.

Conductance, ability of a material to conduct electricity. In a direct-current circuit, it is the reciprocal of resistance. In an alternating-current circuit, it is the resistance divided by the square of impedance. Units of conductance are Siemens.

Conduction, transfer of heat within a body. If one end of a metal rod is placed in a flame, the heat energy received causes increased vibratory motion of the molecules in that end. These molecules bump into others further along the rod, and the increased motion is passed along until finally the end not in the flame becomes hot. See also HEAT EXCHANGE, p.842.

Conductivity, in physics, a measure of the ease with which a material allows electricity or heat to pass through it. For a solid substance, the electrical conductivity is the conductance between the opposite faces of a unit cube at a specific temperature. It is the reciprocal of resistivity and is expressed in ohms (Ω). For an electrolytic solution, conductivity is the ratio of the current density to the field strength. The coefficient of thermal conductivity of a solid substance is the amount of heat that flows between the faces of a unit cube of it in one second when the temperature difference across its faces is one degree. See also pp.842, 866-867.

Conductor, in physics, substance or body allowing easy passage of free electrons. Conductors have a low electrical resistance. Metals are the best conductors; they have free electrons which constitute a current when they are made to flow. The resistance of a metallic conductor increases with temperature as the vibrations of lattice atoms increase, hindering the motion of the electrons. See also pp.866, 868.

Conductor, in music, person who controls a group of players or singers, generally a band, orchestra or choir. The conductor's task is to co-ordinate a performance and to direct and inspire the interpretation of the music. Before the 19th century a harpsichordist or first violinist "led" or "directed" orchestral playing, but with the growth in size of orchestras the practice evolved of a musician standing before the players and conducting with a baton. Many small orchestras have reverted to the traditional practice of direction by the first violinist or a solo pianist or violinist. See also p.1581.

Cone, in botany, conical, spheroidal or cylindrical fruit- or seed-bearing structure borne by conifer trees and comprising clusters of stiff, overlapping, woody scales which separate to release seeds from naked ovules developed at their base. See pp.366-369, 366-367.

Cone shell, any of about 500 species of GASTROPOD MOLLUSCS found in tropical seas, it has a heavy cone-shaped shell with vivid markings and colours. Most feed on small worms or fish and some species can inflict serious or even fatal stings. Length, to 13cm (5in). Family Conidae. See also p.26.

Coney Island, resort area of New York, USA, famous for its fun fairs. It has been redeveloped since the 1950s and many amusement arcades have now been replaced by high rise flats.

Confectionery, delicacies or sweetmeats based on sugar, also known as sweets or candy. Sweetmeats, long ago known to the ancient Egyptians and in the Orient, were candied fruits made with honey. One of the earliest functions of confectionery was in making unpleasant medicines more palatable. In the 19th century the manufacture of sweets became extensive. There are two types, hard or soft, depending on the stage of crystallization of the sugar.

Confederate Constitution, adopted on 9 February 1861, by the CONFEDERATE STATES of America in Montgomery, Alabama. It greatly resembled the US Constitution, except that it emphasized the rights of individual states and the right to own slaves. See also pp.1628-1629.

Confederate States of America (CSA), government formed in February 1861 by the first seven states to secede from the USA. They were South Carolina, Mississippi, Florida, Alabama, Georgia, Louisiana and Texas. Virginia, Arkansas, North Carolina and Tennessee joined the CSA soon after. Jefferson Davis was elected president. The capital was located originally at Montgomery, but later moved to Richmond. The government was dissolved in April 1865. See also pp.1628-1629.

Confederation of British Industry. See CBI.

Confession, in Jewish-Christian tradition, the acknowledgement of sins. It may be made by a congregation in the course of worship or by individual penitents in public or private confession. It is customary in Catholic Christendom for individuals to confess their sins privately to a priest at regular intervals. The term is also used to denote a statement of religious belief, common during the Protestant Reformation.

Confessions of an English Opium Eater (1822), autobiographical work which brought Thomas de Quincey to eminence. He describes with imaginative force the pleasures and pains of taking LAUDANUM. **Configuration, electron**, the arrangement of electrons around an atom. It is usually written in a notation using 1, 2, 3, etc for the principal shell and s, p, d and f for the subshell. The number of electrons is written as a superscript. The electron configuration of the helium atom is $1s^2$, that of the sodium atom is $1s^2 2s^2 2p^6 3s^1$. See also pp.812, 886-891.

Confirmation, sacrament of the Christian Church the "outward and visible sign of an inward and spiritual grace". Today a candidate for confirmation takes the baptismal vows previously made on his behalf by godparents, and confirms that he means to keep them. As a token of renewed welcome to the congregation, a bishop lays his hands upon the head of the candidate. Candidates may be children (aged seven in the Roman Catholic Church) or adults (in other Churches). In the Eastern Orthodox Church, confirmation, baptism and first communion are combined in a single rite.

Conformity, adherence of an individual to the social norm of behaviour. The desire to conform is often taken as a basic motive in human behaviour, and studies have shown that people do tend to stick to the norm, especially when they are anxious, uncertain or under pressure. See also pp.1842-1849.

Conformity, in geology, the undisturbed, continuous layering of sediments in even strata with no evidence of folding, faulting, intrusion of new materials or erosion by wind or water.

Confucianism, philosophy that dominated China until the early 20th century and still

has many followers, mainly in Asia. It is based on the ANALICTS, sayings attributed to CONFUCIUS (c.551-479 BC). At first strictly an ethical system to ensure a smooth-running society, it gradually acquired quasi-religious characteristics. Confucianism views man as potentially the most perfect form of life, the ultimate embodiment of good. It stresses the responsibility of sovereign to subject, of family members to each other and of friend to friend. Politically, it helped to preserve the existing order, upholding the status of the mandarins, highly educated Confucians who ran the Chinese bureaucracy. When the monarchy was overthrown (1911-12) Confucian institutions were ended, but since the Communist revolution in China (1949), many traditional Confucian elements have apparently been incorporated in Maoism. See also pp.1258-1259, 1889.

Confucius (c.551-479 BC), founder of Confucianism. Born in the Chinese province of Lu of aristocratic parents, he was largely self-educated. An excellent scholar, he became an influential teacher of the sons of wealthy families and is said to have been prime minister of Lu but resigned when he realized the post carried no real authority. In his later years he sought a return to the political morality of the early CHOU DYNASTY, but found no support. He died a frustrated man, but his ethical concepts dominated Chinese society for 2,000 years. Some of his teachings are recorded in the *Analects*. See also pp.1258-1259, 1889.

Conga, Latin American dance in 4/4 time, in which a file of dancers accent the fourth beat with a kick. Also the name for a narrow drum originally used in such music, about 90cm (36in) high, played with the hands.

Congenital disorders, abnormal or pathological conditions of the body caused by infection or injury of the foetus in its mother's womb or during birth. They are therefore distinct from HEREDITARY DISORDERS. Important examples of congenital disorders are congenital venereal disease, including syphilis and gonorrhoeal conjunctivitis, and abnormalities such as deafness caused by German measles and rudimentary limb development caused by drugs such as THALIDOMIDE. See also p.1060.

Conger eel. See BELT.

Congestion, in medicine, increased amount of blood in the vessels of a tissue or organ. It is usually an early sign of inflammation, but may also be due to a circulatory disorder. Increased production of mucus by the cells lining the respiratory tract is also called congestion, and is a symptom of a respiratory disease or of breathing polluted air.

Conglomerate, in geology, a sedimentary rock made up of rounded pebbles embedded in a fine matrix of sand or silt. Formerly called "pudding stone", conglomerates are commonly formed along beaches or on river beds. The term is usually restricted to water-laid deposits. See also p.210.

Congo, officially named People's Republic of the Congo, an independent nation in west central Africa. Formerly French Congo, it was proclaimed a Communist state in 1970. The chief commercial crops and leading exports are sugar cane, cocoa, coffee and tobacco. There is some manufacturing. The capital is Brazzaville. Area 342,000sq km (132,046sq miles). Pop. (1975 est.) 1,345,000. See p.2016.

Congo, Belgian. See ZAIRE.

Congo river. See ZAIRE RIVER.

Congregationalism, Christian Church denomination in which each local church is autonomous and independent, members have at various times also been called Brownists, Separatists and Independents. It is based on the belief that Christ is the head of the Church and all members are God's priests. Modern Congregationalism began in England in about 1580. Congregationalists were prominent in Oliver Cromwell's English army and government and a major political force in American colonies. They settled PLYMOUTH COLONY in 1620 and established

Congress, American

Coninxloo's landscapes combine realistic detail with fantastic points of view

Connecticut, although a highly urbanized state, still has over half its land area forested

Maureen Connolly, 'Little Mo', considered to be one of the greatest women tennis players

Joseph Conrad presents a deeply pessimistic view of human life in his many fine novels

Harvard College in 1636. In 1972 the Congregational Church in England and Wales united with the Presbyterian Church of England to form the United Reformed Church. A similar union was effected in the USA in 1957, the Congregational Christian Churches united with the Evangelical and Reformed Church to form the United Church of Christ.

Congress, American, the legislative branch of the federal government consisting of the SENATE and the HOUSE OF REPRESENTATIVES. It first met in 1789. The Senate is composed of two elected members from each state, the House totals 435 members elected from each state in proportion to population. A resident commissioner from Puerto Rico is a non-voting member. Powers of Congress include the right to assess and collect taxes, regulate commerce, coin money, declare war, propose constitutional changes and raise and maintain defence forces. Legislation must be passed by both houses and be signed by the president to become law. The Constitution requires that Congress meet at least once a year. **Congress Party**, official name Indian National Congress, oldest political party in India and, until 1977, the only party to hold national office since Indian independence in 1947. It was founded in 1885, but did not become powerful until after WWI, when Mahatma GANDHI transformed it into a mass movement agitating by means of civil disobedience for independence from Britain. It was the party of the Hindus (as opposed to the MUSLIM LEAGUE). At the provincial elections of 1937 it gained power in many states. During WWII it declined to support Britain, who had refused to grant immediate self-government. Since independence it has provided three prime ministers of India: Jawaharlal NEHRU, Lal Bahadur SHASTRI and Indira GANDHI. The Congress was defeated in the 1977 elections but was re-elected in 1980. See also pp.1698-1699.

Congreve, William (1670-1729), English dramatist who wrote comedies such as *Love for Love* (1695) and *The Way of the World* (1700). His elegant satire represents the peak of RESTORATION DRAMA. He also wrote a tragedy, *The Mourning Bride* (1697).

Conic, or conic section, curve found by the intersection of a plane with a cone. Circles, ellipses, parabolas, or hyperbolas are conic sections. Alternatively a conic is the locus of a point that moves so that the ratio of its distances from a fixed point (the focus) and a fixed line (the directrix) is constant. This ratio is called the eccentricity (e): $e = 1$ gives a parabola, $e > 1$ a hyperbola, $e < 1$ an ellipse and $e = 0$ a circle. See also pp.786-787, 786-787.

Conifers, cone-bearing trees, generally evergreen, such as pines, firs and redwoods (most larches, which are also conifers, are deciduous). The earth's largest plants, they reach heights of up to 99m (325ft) and are a major natural resource of the Northern Hemisphere. Their forests supply softwoods for building and wood pulp for papermaking and other important products such as synthetic fibres based on cellulose. Conifers lack elaborate flowers but their foliage and colour make them popular ornamental plants. See also GYMNOSPERM; pp.366-369, 366-369, 714-715.

Coringham, Sir Arthur (1895-1948), RAF officer. In WWII he commanded the Allied attack in Tunisia (1941-43) and British and US air units in the Normandy invasion (1944-45). He was Air Marshal (1946) and commander of the Flying Training Command (1945-47).

Coninxloo, Gillis van (1544-1607) Flemish painter, a link between salvager and early 17th-century Dutch realist landscape painting. His landscapes combine realism with fantasy. RUBENS was among those he influenced.

Conjugation, sexual reproduction by fusion of gametes. It is characteristic of certain simple animals, lower plants and bacteria. In some algae, for example, a temporary conjugation tube forms a passageway for the contents of one cell to enter another. See also p.191.

Conjunctivitis, inflammation of the conjunctiva, the mucous membrane lining of the eyelid. It can be caused by infection, usually bacterial, by exposure to irritants, or by allergy, and produces watery, burning and itching eyelids. The contagious form is known as pink-eye.

Conklin, Edwin Grant (1863-1952), US biologist. He was professor of biology at Princeton University from 1908 to 1933. He is famous for his pioneering research in embryology and for his work in the processes of evolution and heredity.

Connacht (Connaught), province in W Republic of Ireland, including the counties of Mayo, Galway, Leitrim, Roscommon and Sligo. It was a kingdom of the O'Connors in ancient times and was invaded by the English in the 12th century. Area 17,122sq km (6,611sq miles). Pop. (1971 prelim.) 389,800.

Connaught, Arthur Frederick Patrick Albert, Prince (1883-1938), grandson of Queen VICTORIA. He was a personal aide to EDWARD VII and GEORGE V and aide-de-camp to Field Marshal FRANCH in 1914-15. He was Governor-General of the Union of South Africa from 1920 to 1923.

Connaught, Arthur William Patrick Albert, Duke of (1850-1942), 3rd son of Queen VICTORIA. He held commands in India (1886-90), was commander-in-chief in Ireland (1900-04) and the Mediterranean (1907-09), and governor-general of Canada (1911-16).

Connecticut, state in NE USA, southernmost state of New England. The Connecticut River valley separates the western and eastern highland regions. The state's economy is based on its manufacturing industries, which include transportation equipment, machinery, chemicals and metallurgy. Insurance is a major service industry, and Hartford is one of the world's leading insurance centres. Dairy produce, eggs and tobacco are the main farm products. Fishing is also important. The main cities are Hartford (the state capital and largest city), Bridgeport and New Haven. One of the original thirteen colonies, Connecticut was first settled by the English in the 1630s. Many Puritans flocked to the area, and in 1662 the colony received a charter from King Charles II of England. Many colonists later moved west but European immigrant workers took their place. Connecticut was one of the first states to ratify the US Constitution and was admitted to the Union in 1788. Area 12,973sq km (5,009sq miles). Pop. (1975 est.) 3,095,000. See also p.2161.

Connecticut, river in New England, USA. It rises in Connecticut Lakes, N New Hampshire, flows S (forming the border between New Hampshire and Vermont) and continues through W central Massachusetts and central Connecticut to empty into Long Island Sound near Old Saybrook. It has 23 tributaries and has hydroelectric power plants and flood control and irrigation schemes. It was discovered in 1614 by the Dutch explorer Adrian Block. Length 655km (407 miles).

Connecticut Wits, US writers in Hartford, Conn. at the turn of the 18th century, who produced satirical verses reflecting their conservative political views. Joel Barlow, John Trumbull, Timothy Dwight and David Humphreys were members of the group, also known as the Hartford Wits. **Connective tissue**, supporting and packing that helps to maintain the body's form and holds it together. Bones, ligaments, cartilage and skin are all types of connective tissue. See also p.146.

Connolly, Marcus Cook (1890-), US dramatist. Early in his career he collaborated with George S. Kaufman on the comedy *To the Ladies* (1922). He won a Pulitzer prize for *The Green Pastures* (1930), a humorous dramatization of biblical tales in the Southern black folk idiom.

Connemara, region in Galway, on the W coast of the Republic of Ireland. Wild and mountainous and having many lakes and streams, it is particularly popular as a holiday area. Most settlement is on the coast, the chief town being Clifden.

Connery, Sean (1930-), Scottish film actor, best-known for his role as James

Bond in the films of the Ian FLEMING spy stories. These included *Dr No* (1962) and *Diamonds are Forever* (1971).

Connolly, Cyril Vernon (1903-74), British author, critic and journalist. From 1927 he contributed to the magazine *New Statesman* and to the newspapers the *Sunday Times* and *Observer*. Co-founder with Stephen SPENDER of the magazine *Horizon* (1940-49), his books include *The Unquiet Grave* (1944) and *The Rock Pool* (1963). **Connolly, James** (1870-1916), Irish nationalist leader. He went to the USA in 1903 and helped to establish the INDUSTRIAL WORKERS OF THE WORLD. He helped to organize the Dublin transport workers' strike in 1913. For his part in the EASTER RISING of 1916 he was executed. See also pp.1642-1643.

Connolly, Maureen ('Little Mo') (1934-69), US tennis player. At 16, she won the US national singles championship, a title she later successfully defended (1952-53). She won the Wimbledon ladies singles championship (1952-54) and in 1953 won the grand slam of tennis by capturing also the French and Australian championships. She was forced to retire after a riding accident in 1954.

Connor, Ralph (1860-1937), Canadian clergyman and novelist, real name Charles William Gordon. He wrote adventure stories based on his experiences as a clergyman in the Canadian timber and mining camps. His novels included *Black Rock* (1898), *The Sky Pilot* (1899) and *The Man from Glengarry* (1901).

Connor, James Scott ('Jimmy') (1922-), US tennis player. He won the Australian and Wimbledon singles championships (1974) and the Wimbledon (1973) and US (1974) doubles titles with the Nastase. In 1977 he won the Grand Prix Masters singles tournament held in New York. He won the US singles championship in 1974, 1976 and 1978.

Conodont, any of numerous kinds of tooth-like microfossils composed of calcium phosphate; they occur in marine deposits of the PALAEZOIC and early MESOZOIC eras. Although their origin is uncertain, they have been classified in great detail and are used extensively in STRATIGRAPHY. See also pp.262-265, 270-275.

Conon (died c. 390 BC), Athenian admiral who, with the help of the Persian fleet, devastated the Spartan fleet at Cnidus (394 BC).

Conquest, George Robert Acworth (1917-), British poet and novelist. He worked in the foreign service (1946-56) and taught in Britain and the USA. He edited the verse anthologies *New Lines* (1956, 1963). His own volumes of poetry include *Poems* (1955), *Between Mars and Venus* (1962) and *Arias from a Love Opera* (1969).

Conquistador, Spaniard who participated in the conquest of the New World in the 16th century. The term is Spanish for 'conqueror'. Conquistadores were professional or semi-professional soldiers, usually from Castile, FLEZARRO and CORTEZ were the most famous. See also pp.1370-1371.

Conrad, name of four German kings. Conrad I (r.911-18) suffered continual opposition and lost control of Lorraine. Conrad II (c.990-1039) became the first SALIAN king in 1024. He consolidated his kingdom and was crowned Holy Roman Emperor in 1027. Conrad III (1093-1152) became the first king of the Hohenstaufen dynasty on his accession in 1138. Disputes with the Welf family developed into GUELPH and GUELBURG factional warfare in Italy. Conrad IV (1228-54) was elected king in 1237 but suffered constant opposition from the pope. From 1251 he ruled mainly in Sicily. See also pp.1294-1295.

Conrad, Charles Jr (1930-), US astronaut. In 1953 he joined the US navy and became a test pilot and instructor. In 1962 he was co-pilot on the Gemini 5 space flight and in 1966 was command pilot on the Gemini 11 flight. In 1969, with Richard Gordon and Alan Bean, he commanded the Apollo 12 flight to the Moon. **Conrad, Joseph** (1857-1924), British

novelist, & Józef Teodor Konrad Korzeniowski in Poland. His years as a ship's officer in Asian, African and Latin American waters suggested the exotic settings of many of his novels. His works include *The Nigger of the Narcissus* (1897), *Lord Jim* (1900), *Heart of Darkness* (1902), *Nostromo* (1904), *The Secret Agent* (1907), *Under Western Eyes* (1911) and *Victory* (1915).

Come, Emma (1838–1912), British social reformer. In 1880 she took over the Royal Victoria Hall, known as the "old vic", as a temperance music hall. Subsequently her niece Lilian Baylis turned it into the theatrical home for Shakespearean plays.

Consanguinity, relationship between kin which is defined in terms of blood-ties rather than marriage. It is particularly important in legal and genetic contexts because of the inheritance of property, on the one hand, and of hereditary characteristics, on the other.

Conscience, Hendrik (1812–83), Flemish Romantic novelist. He initially wrote in French, but later virtually created the Flemish novel form. A prolific writer, his novels include the epic *The Lion of Flanders* (1853–57), *Wooden Clara* (1850) and *The Conscription* (1864).

Conscience, ability of an individual to know the difference between what is morally right and wrong. Children develop a moral sense mainly through learning from others. See also SUPEREGO; pp.1132–1133.

Conscientious objectors, people who on the grounds of pacifist conscience refuse to acknowledge the right of the state to require military service. During WWI in Britain, about 59,000 men and women applied to be registered as conscientious objectors. Some 3,000 were given unconditional exemption and about 43,500 were accepted on condition that they took up approved war work. About 3,000 were prosecuted and most imprisoned.

Conscription, compulsory enlistment of people for service in the armed forces. Obligatory military service existed in ancient Greece and Rome, as it did in Anglo-Saxon England, but it was short-term and local. Modern national conscription dates from the French Revolution. In Britain conscription was used in WWI and WWII; peacetime conscription was first introduced in May 1939 and continued between 1945 and 1962, when it was abolished. Peacetime conscription was abolished in the USA in 1973.

Conservation, term that has come to mean a number of different, if associated, things in the preservation of habitats, species, natural amenities and agricultural fertility. It can mean the preservation of landscape from change due to natural erosion or to soil denudation caused by overcropping. The use of soil conditioners and artificial fertilizers to maintain soil fertility against the effects of large-scale cultivation can also be called conservation. So can the protection of particular areas (such as marshes) against changes, such as drainage, which would drastically alter their fauna and flora. The replacing of topsoil and landscaping of spoiled land, such as opencast mining areas, is also a form of conservation. Finally, individual species of animals and plants, threatened with reduction or extinction, can be conserved by law or in wildlife parks or reservations. See pp.342–349.

Conservation, laws of, physical laws stating that some property of a closed system is unaltered by changes in the system. The most important are the laws of conservation of matter and of energy. The former states that matter can be neither created nor destroyed; the total mass remains constant when chemical changes occur. The total energy of a system also remains the same; energy is converted from one form into another. Mass and energy are interconvertible according to the equation $E=mc^2$. What is conserved is the total mass and its equivalent in energy. See also pp.388, 406.

Conservatism, political outlook that seeks to maintain the stability of society by preserving the historic continuity of its laws, customs, social structure and institu-

tions. Its modern expression derives from the reaction, first in Germany, against the liberal doctrines of the ENLIGHTENMENT and the FRENCH REVOLUTION. Against the liberal's faith in the abstract rights of man and his willingness to undertake sweeping reforms, the conservative places his trust in the national experience and prefers to remove practical grievances by gradual, piecemeal reform. See also CHRISTIAN DEMOCRATS, CONSERVATIVE PARTY; TORY PARTY; p.1650.

Conservative Party, or Conservative and Unionist Party, the oldest political party in Britain. Its origins lie in the transformation of the early 19th-century Tory Party into the Conservative Party under Sir Robert Peel in the 1830s. Until late in the 19th century it was preponderantly a party of landed interests and depended electorally on the county constituencies. After the REFORM ACT of 1867 (passed by a Conservative government led by Lord Derby) and the establishment of a Central Office in 1870, the urban and commercial element in the party increased. In 1886 the split in the Liberal party over Irish Home Rule brought Liberal Unionists into the party and led to the most successful period in Conservative history. Under Lord Salisbury and Arthur Balfour the Conservatives held office for all but two years between 1886 and 1906. Before 1945, the party held office both in coalitions (the Liberal government of 1915–22 and the National governments of 1931–45) and twice in its own right (1922–24, 1924–29). Since 1945 it has held office singly from 1951 to 1964, from 1970 to 1974 and from 1979. Postwar leaders: Winston Churchill, Anthony Eden (later Lord Avon), Harold Macmillan, Alec Douglas Home, Edward Heath and Margaret Thatcher.

Conshelf, underwater habitats built under the supervision of Jacques-Yves Cousteau. In 1963 he lived for seven days 10m (33ft) under the Mediterranean in Conshelf I. Conshelf II was a similar experiment in 1964. In 1965 six men lived in Conshelf III at a depth of 100m (328ft) in the Mediterranean Sea for 27 days. See also p.485.

Consols, abbreviation for Consolidated Stock, or annuities in Britain. From 1748–51 and then in 1787 various public debts, incurred at different times, were consolidated into one Funded Debt. Various sources of revenue were at the same time made into a fund pledged as security for payment of interest to holders of consols. Consols are not, strictly, a loan, since the government need not repay the money; the investor in consols buys only the right to a perpetual annuity.

Conspiracy, agreement by two or more people to commit an illegal act. People may be guilty of conspiracy even though the planned crime was not committed.

Constable, John (1776–1837) British painter, one of the world's major landscapists of the 19th century. Constable was happiest painting the landscape of his native Suffolk, where he learnt what he called "the natural history of the skies". After a period in London (1795–1802) during which he attended the Royal Academy and studied the paintings of CLAUDE LORRAINE, Constable returned to Suffolk and, rejecting the fashionable Italianate paintings of the time, studied every effect of clouds and light on water – often using broken colour and a thick impasto texture. His first success came when *The Hay Wain* (1821) and *View on the Stour* (1817) were shown at the 1824 Paris Salon and were acclaimed by French Romantic artists, especially DELACROIX. The success of his paintings imported into France had a considerable influence on the development of the BARBIZON SCHOOL. In England Constable was neglected until the oil sketches on which his large works were based were shown publicly after their bequest to the Victoria and Albert Museum, London, in 1888. These are much admired and are rated as among his best work. See also pp.1579, 1579.

Constantine (Bodenensee), lake bordering on Austria, West Germany and Switzerland. Fed and drained by the River Rhine, it

divides into two arms near the city of Constance (Konstanz). It contains the remains of prehistoric lake dwellings. Area: 543sq km (210sq miles).

Constance, Council of (1414–18), gathering of bishops convoked by Antipope John XXIII to end the GREAT SCHISM between Rome (Pope Gregory XII) and AVIGNON (Pope Benedict XIII) and to combat heresy, notably that of JOHN HUSS. The council favoured the resignation of all three "popes" and elected Martin V as the new pope in 1417. John Huss was condemned and burned at the stake as a heretic.

Constant, in mathematics and science, a quantity or factor that does not change. It may be universal, eg the ratio of the circumference of a circle to its diameter (π); it may apply only to a particular circumstance, eg a symbol that has a fixed value in an algebraic equation; or it may be characteristic of an instrument or substance, eg WOLTZMAN's constant for gases. **Constanța**, city in E Romania, in the Constanța district, on the Black Sea. Founded in the 7th century BC as a Greek colony, it was taken by the Romans in 72 BC and named in the 4th century AD by Constantine. It is Romania's chief port and a major trade centre. It has Roman and Byzantine ruins, several mosques and a naval and air base. Pop. (1970 est.) 172,500.

Constantan, high-melting point alloy containing 45% nickel and 55% copper. It is used in THERMOCOUPLES and in conjunction with iron and copper to form Bimetall strips – the sensing element in some thermostats. See also pp.842, 875.

Constant de Rebecque, Henri Benjamin (1762–1830), Swiss-born French political writer. He was a member of NAPOLEON'S tribunal (1799–1802), but went into exile in 1803. After the BOURBON restoration he was leader of the liberal opposition (1819–22, 1824–30). His chief work was the psychological novel *Adolphe* (1816).

Constantine, name of 11 Roman and Byzantine emperors: Constantine I (c.285–337; r.305–37); Constantine II (c.317–40; r.337–40); Constantine III (d.411; r.409–11); Constantine IV (652–85; r.668–85); Constantine V (718–75; r.741–75); Constantine VI (770–97; r.780–97); Constantine VII (Porphyrogenitus) (905–59; r.913–59); Constantine VIII (c.960–1028; r.1025–28); Constantine IX (Monomachus) (c.1000–55; r.1042–55); Constantine X (c.1007–67; r.1059–67); Constantine XI (Palaeologus) (d.1453; r.1449–53). For Constantine I see CONSTANTINE THE GREAT. Constantine II, his son, inherited the western third of the Roman Empire. Constantine III was a usurping emperor of the Western Empire. Constantine IV defeated the Arabs decisively at Constantinople in 678, and Constantine V was a leader of the anti-monastic party in the ICONOCLASTIC controversy. Constantine VI was emperor when the second Council of Nicaea (787) was convened. Constantine VII was an important patron of the arts, and wrote on politics. The final schism between the Eastern and Western churches occurred in 1054, in the ineffectual reign of Constantine IX, and Constantine XI was the last Byzantine emperor, killed during the successful Turkish siege of Constantinople. See also pp.1276–1277.

Constantine, name of a pope and an anti-pope. Constantine (d.715) was pope from 708 to 715. His principal achievement was to uphold the authority of the Roman see against Ravenna's claim to independence. His quarrel with the usurper-emperor PHILIPPIUS was the beginning of the MONOTHELITE controversy. Constantine II was anti-pope from 767 to 768. He was not canonically elected and failed to win the support of the FRANKS or LOMBARDS. He was deposed in 768 by the Lombards and after 769 nothing more was heard of him.

Constantine I, or Constantine the Great (c.285–337), Roman Emperor (r.305–37). In the early part of his reign he had to contend with rivals for his throne, and during the decisive battle of Milvian Bridge against Maxentius he was said to

Conscription, prior to compulsory service patriotic appeals were made for volunteers

Conservation involves the protection of many endangered species in game reserves

John Constable's Salisbury Cathedral used new techniques in landscape painting

Constantine I claimed he saw a vision of the Cross while contemplating a military attack

Constantine II

Constructivism, a reconstruction of Tatlin's monument to the third international

Consumer goods, their abundance reflects the material standards of Western nations

Container transportation has accelerated the international movement of large cargoes

John Conteh retains the world light heavyweight title against Len Hutchins

have indicated his conversion to Christianity (312). In 313 he extended toleration to the Christians of the Empire by the Edict of Milan, perhaps seeing it as a means to achieve political unity. In 324 Constantine at last won sole control of the Empire, and he convened the Council of Nicaea in 325. He rebuilt BYZANTIUM, which was dedicated in 330, and renamed it Constantinople. He introduced legal reforms but ruled autocratically. He was baptized on his deathbed. *See also* pp. 1247-1276

Constantine II (1940-), King of the Hellenes from 1964 to 1973. In 1967 he went into exile having failed to overthrow the then ruling military junta, who proclaimed him deposed in 1973. This was confirmed by the republic established in 1974.

Constantine, Lewis Nicholas Constantine, Lord (1901-71), Trinidadian cricketer who played for the West Indies in the 1920s and 1930s. He was Trinidad's high commissioner to London from 1962 to 1964 and in 1969 he was elevated to the peerage. He was the first black to sit in the House of Lords.

Constantine, ancient fortified city and department capital in NE Algeria, on the River Rhumel. Founded by the Carthaginians as *Sanin Batim*, its name later changed to *Cirta* when it was a trading centre and capital of Numidia. It was a wealthy grain-exporting port under the Romans. Destroyed in AD 311, it was rebuilt by Emperor Constantine. Today it is Algeria's largest inland city. It has a university and a Muslim school. Industries: textiles, leather goods, food processing, tourism. Pop. 245,600.

Constantinople. *See* ISTANBUL

Constantinople Council of, four gatherings of bishops held at Constantinople. The first (381) was convened by the Emperor Theodosius I to unite the Eastern Church at the end of the controversies relating to ARIANISM. It promulgated the Nicene Creed. The second (553) was convened by the Emperor Justinian to settle controversies relating to NESTORIANISM. The third (680-81) was summoned by the Emperor Constantine IV to combat the heresy of MONOTHELITISM. The fourth (869-70) dealt with the PHOTIAN SCHISM.

Constantinople, Latin Empire of, formed after April 1204 when the armies of the Fourth Crusade captured the city of Constantinople and divided the former Byzantine territories among themselves. Western European feudal organizations were imposed upon some of the newly-formed states, and Constantinople was placed under the control of BALDWIN Count of Flanders. The Latin Empire was constantly under attack and ended in 1261 when the Greek Empire was restored by Michael Palaeologus. *See also* pp. 1276-1277, 1280-1281, 1310-1311

Constellation, in astronomy, traditional grouping of conspicuous stars forming a pattern as viewed from the Earth. There are a number of such groupings and each is an optical illusion, because individual stars may be at different distances from the Earth. Constellations visible in the northern and equatorial regions were named by ancient astronomers after animals or mythological figures, and some assumed importance in ASTROLOGY. Southern constellations remained unnamed by Europeans until the 16th and 17th centuries, and are often called after objects connected with navigation and science.

Constipation, incomplete or infrequent evacuation of stools that are hard and difficult to pass. It may be caused by an obstruction of the bowel passages or by a variety of digestive tract disorders, but is most often caused by improper diet or emotional stress. Treatment depends on the cause, but dietary change (with plenty of roughage and fluids) often helps. Cathartics may also be needed in stubborn cases.

Constitution, code of laws or collection of customary practices delineating the powers and organization of the various organs of government within a nation, and some of the rights and obligations of its citizens.

Constitutions, like that of the USA, can be written in one document, and subsequently amended by specific rules laid down in the constitution itself, or, like that of Britain, they can evolve from the historical development of the customs, government and law of the land, and never be collected into written form. *See also* pp. 1850-1859, 1870-1871

Constitutional government, system in which the various elements of government (executive, legislature and judiciary, for example) have clearly defined and limited roles, as opposed to the constraints applied by the physical problems of asserting authority. In classical Greece, the idea that the form and powers of government could be a conscious choice for a polity was formalized by philosophers such as ARISTOTLE. Modern theories of constitutional government date from the 17th century, when government by constitution was frequently invoked to resist the claims of monarchs to absolutism: in England an unwritten, agreed constitution was in force after the GLORIOUS REVOLUTION of 1689. From the late 18th century, written constitutions were established in many countries, notably the USA and France. Since WWI, and the general acceptance of DEMOCRACY as a desirable form of political organization, constitutions enshrining democracy have been the rule in most countries.

Constitutional law, set of procedures and doctrines defining the operation of the constitution of a state. In modern states with a written constitution, courts often have specific powers relating to the constitution and likely points of conflict. In the USA, for example, where there is a federal system of government, the SUPREME COURT has often had to resolve conflicts between the individual states and the central government. In countries without a written constitution, such as Britain, constitutional law is more imprecise and problems are normally resolved within the political process.

Constructor. *See* BOA

Constructionalism, in psychology, school which maintains that basic sensations derive from unconscious neurological processes. The opposite view, ATOMISM, holds that perception is in units of simple sensations. *See also* p. 134

Construction engineering, branch of civil engineering responsible for preparing the site, directing the placement of materials and organizing personnel and equipment.

Constructivism, Russian abstract art movement founded c. 1913 by Vladimir TATLIN, who created the first free geometric sculptural constructions in space. Other leading members of the movement were the brothers Naum GABO and Antoine PUVION whose sculpture, influenced by CUBISM and FUTURISM but less purely abstract in concept than Tatlin's, attempted to relate to the technology of the society in which they were created. From 1921 the Soviet regime officially condemned the movement and Gabo and Pevsner left Russia. Through them, and other exiles, Constructivism spread beyond the USSR and influenced modern European architecture and sculpture. Pioneer achievements in typography through El Lissitzky, and poster and exhibition design, were also influenced. *See also* pp. 1686, 1687

Consubstantiation, in the Christian doctrine of the EUCHARIST, the belief that after the consecration the substances of bread and wine continue to co-exist along with the body and blood of Christ. The doctrine, attributed to MARTIN LUTHER, is opposed to that of TRANSUBSTANTIATION.

Consul, one of the two chief magistrates of ancient Rome. The office was said to have been established in 510 BC. Consuls were elected each year to administer civil and military matters. After 367 BC, one consul was a PATRICIAN, the other a PLEBEIAN, and each had the power to veto the other's decisions. *See also* p. 1226.

Consul, government representative stationed abroad to protect his country's citizens and commercial interests. Consular services include issuing visas, birth and death certificates and the regulation

of passports. Consuls are established under reciprocal bilateral treaties, and enjoy conditional immunity from the laws of the country in which they work. They are not covered by diplomatic immunity, but have some freedom from the jurisdiction of the state where they serve.

Consulate (1799-1804), name given to the French Republic's government after the end of the DIRECTORY. There were three consuls but government was actually dominated completely by NAPOLEON, who became first consul for life in 1802. *See also* p. 1552

Consumer Council, National, state-financed but independent body in Britain, formed in 1961 to protect consumers. It does not deal directly with individual complaints, but as the consumers' representative applies pressure on central and local government and on manufacturers and retailers, according to complaints that it receives. It also seeks to raise the general level of consumer understanding.

Consumer durables. *See* DURABLE GOODS

Consumer goods, in economics, final goods produced for consumption by the domestic market. Consumer goods are classified as DURABLE GOODS if their useful life exceeds one year, eg. motor cars. If their life is less than one year, they are classified as non-durables, eg. food. Consumer goods plus services make up total consumption.

Consumer protection, intended to protect buyers in their purchase of manufactured goods, an idea that gained much force in the 1960s with the movement in the USA pioneered by Ralph NADER. Many countries now have consumer organizations, such as the British Consumers Association which passes on advice to its members through its magazine *Which?*

Consumer psychology, special field of psychology that studies the way consumers use their time and spend their money on goods and services. It examines their needs and their attitudes toward such matters as product quality, advertising and the public image of corporations and government agencies.

Consumption. *See* TUBERCULOSIS

Contact dermatitis, acute or chronic inflammation of the skin produced by contact with certain natural or synthetic substances, eg. wool, poison ivy, detergent. It most usually appears as skin redness and swelling, but sometimes occurs as an itchy vesicle. *See also* ALLERGY

Contact lenses, lenses worn on the eye to aid or correct defective vision. The earliest contact lenses were made of glass, but since 1938 plastic has generally been used. In the early 1970s "soft" lenses were introduced. Until 1950, lenses were made by taking impressions of the eye. Smaller lenses are now made, shaped to measurements taken from the eye. They cover only the cornea and float on a layer of tears. *See also* p. 137

Contactors, device for the repeated switching on and off of electrical circuits. Often, contactors contain a magnetic coil which diverts and extinguishes the electrical arc formed when a circuit is opened. *See also* p. 875

Container transportation, late 1960s development, chiefly in ocean shipping but also in air freight, that has greatly speeded cargo-moving. Ships have compartments above and below decks to hold large containers. In port, the containers are loaded and unloaded with specialized automated equipment. Usually, filled containers leave the factory by truck, are loaded on to railroad cars, and then on to a ship. *See also* p. 474

Contarini, noble Venetian family, dating from at least the 7th century AD. Its members included eight doges and many important statesmen and scholars. Domenico was the first Contarini doge (1043-71), and Andrea (r. 1367-82) donated his wealth to the state. Gasparo (1483-1542) was a humanist scholar, diplomat, theologian and cardinal. Other notable Contarini were Ambrogio (d. 1499), a great traveller, Giovanni (d. 1603), a painter, and Marco (d. 1689), a patron of music.

Conich, John (1951-), British boxer. A hard-hitting coloured middleweight, he

won British and Commonwealth amateur titles before turning professional in 1971. In 1974 he won the World Boxing Council version of the world light-heavyweight crown, only to be stripped of his title for failing to defend it in 1977.

Contempt, in law, disorderly conduct in a court or legislative body, or action performed elsewhere that tends to obstruct the work of a court or legislative body or bring it into disrepute. Contempt is usually punishable by a fine, imprisonment or public reprimand.

Contempt of Parliament, any action, by an MP or any other person, in breach of the privileges (the rules and habitual customs) of either house of Parliament. The offender may be committed, tried and imprisoned. The most famous instance of the offence in Britain was the regular publication of parliamentary proceedings before the practice was made legal early in the 19th century.

Conti, Italia (1874-1946), British actress, founder of a school for child actors. In 1911 she trained the children appearing in *Where the Rainbow Ends*. Subsequently she appeared on stage only occasionally, devoting most of her time to her school, which produced such actors as Noel Coward and Gertrude Lawrence.

Conti family, younger branch of French royal family in the Bourbon House of Condé. The family began its continuous line with Armand de Bourbon, Prince de Conti (1629-66), who took the name from the town of Conti, near Amiens. The line ended with Louis François Joseph de Bourbon (1734-1814), who was exiled after the French Revolution.

Continent, land mass on the Earth. The continents are Europe and Asia (or Eurasia), Africa, North America, South America, Australia and Antarctica. They are not evenly distributed over the surface of the Earth, more than two-thirds of the continental area is in the N hemisphere. They cover approx. 29% of the Earth above sea-level and extend below sea-level forming CONTINENTAL SHELVES. Continental masses are found on opposite sides of the Earth to ocean basins. Geologically, they are complex formations, but they usually have extensive interior plains or plateaus of igneous or metamorphic rocks of the PRECAMBRIAN age. These areas are very often surrounded by mountain ranges composed of much younger, sedimentary rocks which have been folded or faulted, and frequently display volcanic activity. The origin of the continents is still uncertain but it is believed that the oldest rocks, in the central shield areas, were formed when the Earth's crust first solidified, and that continental formation, or accretion, continues now. This is occurring at the edges of the continents where large plates of the Earth's crust are converging, a process known as PLATE TECTONICS. The continents are composed of the most part of granitic rocks called sial, under which are denser basaltic rocks called sima. These two form the crust of the Earth. Below the crust is the region known as the mantle, which is believed to be semi-molten. The continents appear to be floating on this mantle. This belief has lent support to the theory of CONTINENTAL DRIFT, which suggests that the continents were once joined together, and have drifted apart. See also pp.200, 206, 238.

Continental Congress (1774-89), federal legislature of the American colonies, during the war of Independence and the period of Confederation. Its first meeting, at Philadelphia in Sept-Oct 1774, created the earliest unified opposition to British rule, and agreed on a boycott of trade with Britain. The meeting was adjourned until May 1775. The Congress reconvened shortly after the battles of Lexington and Concord, and it appointed Washington to be commander of the American army. It considered a British peace plan, defied certain aspects of the NAVIGATION ACTS, and in July 1776 adopted the AMERICAN DECLARATION OF INDEPENDENCE. The Congress continued to meet until 1789, but its powers after the end of the war were few. See also pp.1540-1541.

Continental divide, line of separation running the length of a continent which determines to which side of the continent rivers flow. Such divides exist in the USA, Canada, S America and Australia.

Continental drift, theory which proposes that at one time all present-day land masses were joined in one supercontinent called Pangaea, but that about 200 million years ago it began to break up and the resulting land masses, roughly the continents of today, began to move over the Earth's surface. The idea was first suggested in 1912 by the German meteorologist Alfred Wegener but the theory was not fully accepted, until the 1960s, when the development of such theories as sea-floor spreading and PLATE TECTONICS, techniques such as radiocarbon dating, and the study of the distribution of fossils, geological formations, fauna and flora, all provided evidence for Wegener's original theory. See pp.200, 1931.

Continental margin, region of the ocean floor that lies between the shoreline and the abyssal ocean floor. It includes the CONTINENTAL SHELF, the CONTINENTAL SLOPE and the CONTINENTAL RISE.

Continental rise, gently sloping region of the CONTINENTAL MARGIN at the foot of the CONTINENTAL SLOPE. It is an area of thick deposits of sediments carried down by currents off the CONTINENTAL SHELF. See p.238.

Continental shelf, the almost flat part of the CONTINENTAL MARGIN between the shoreline and the CONTINENTAL SLOPE. Such shelves lie at an average depth of 200m (656ft) and have an average width of 75km (45 miles). They yield most of the world's marine food resources, some of the petroleum and natural gas, and large quantities of sand and gravel. See also p.238.

Continental slope, relatively steep slope in the sea-bed that lies between the CONTINENTAL SHELF and the CONTINENTAL RISE leading into the areas of much deeper water. The slope marks the boundary of the continental crust and the oceanic crust. See p.238.

Continuo, or thorough bass, system of accompaniment usually played on a harpsichord or organ, to such musical forms as recitatives, cantatas and oratorios. It was employed in music of the 17th and 18th centuries.

Continuous wave radiotelegraphy, emergency frequency used internationally for transmitting distress messages only from ships at sea. Other frequencies are allocated for regular ship-to-shore transmissions.

Contour, in cartography, a line on a map joining places of equal elevation. Closely spaced contours indicate a steep slope, few or no contours mean flat or almost flat ground. See also p.243.

Contour farming, practice of tilling moderately sloping land along lines of equal elevation, to prevent excessive run-off and reduce loss from surface erosion. It also helps to conserve water in the furrows.

Contraband, war materials which neutrals may not sell to belligerents. The definition of what constitutes war material has always been imprecise and is often determined by the decision of a power capable of enforcing its own interpretation.

Contrabassoon. See DOUBLE BASSOON.

Contraception. See BIRTH CONTROL.

Contract, in law, an agreement between parties that can be legally enforced. A contract creates rights and obligations, and if the obligations are not satisfied they can be enforced by law. Before an agreement is a legal contract, five elements must be present: it must be between parties who have the right to make it; they must have reached mutual assent, the arrangement must be within the law, consideration (eg. the exchange of money) must be involved, and the agreement must be in the proper form (eg. some contracts must be signed in front of witnesses).

Contract bridge, card game for four people, evolving from AUCTION BRIDGE. Known simply as bridge, it is the most international of card games, with Olympiads and world championships. Basically, the game has two parts, bidding and play-

ing. All 52 cards are dealt, opposite players being partners, and they bid in turn clockwise, the highest bid securing the contract. In ascending order, the suits are clubs, diamonds, hearts, spades and "no trumps". "One heart", for example, means that a partnership contracts to make seven tricks with hearts as trumps. The player who first bids the suit "plays" the hand, and after the lead by the defender on his left, his partner's hand is displayed as dummy. See also WHIST.

Contraction, in physiology, shortening, as of the length of a muscle, or reduction in diameter, as of the pupil of the eye.

Contrail, or condensation trail, condensed vapours appearing as streamers of cloud behind aircraft - particularly noticeable when flying through clear and damp air.

Contralto, lowest range (below SOPRANO and MEZZO-SOPRANO) of the female singing voice. A male voice in this range is called a COUNTER TENOR. See also ALTO.

Control column, main steering component in aircraft which controls roll and pitch. In both aeroplanes (joystick) and helicopters (collective pitch stick) it combines with foot controls which change direction above the vertical axis. Vertical movement in helicopters is controlled by the cyclic pitch stick. See also pp.518-521.

Control rocket, small rocket engine used to make fine adjustments to a spacecraft's attitude or orbit. Attitude control jets use compressed gas to alter the craft's orientation. Vernier engines make adjustments to the craft's speed to change its orbit. See also VERNIER ROCKET.

Control tower, at an airport, centre responsible for controlling the movements of all aircraft within a specified area. From the tower a controller can direct aircraft to and from runways and service areas. Communication is usually by radio, using reserved frequencies, but may be by light signals. See also AIR-TRAFFIC CONTROL, pp.526-527, 527.

Convection, transfer of heat by flow currents within fluids (gases or liquids). Warm fluids have a natural tendency to rise whereas cooler fluids tend to fall. This movement subsides when all areas of the fluid are at the same temperature. Convection in the form of winds is the main method of heat transfer along the Earth's surface. Liquid convection is employed in, for example, a car's cooling system or in some domestic central heating systems. See also HEAT EXCHANGE, pp.842-843.

Convection current, in geology, a slow "turn over" of rock (like convection in a heated liquid). It occurs when large masses of deeply-buried rock are heated, over geological periods of time, and the heat cannot escape or be distributed evenly by conduction. This hypothesis has been put forward to explain mountain-building by buckling of the convected rock as it cools at the Earth's surface. See also p.198.

Convent, community of monks or nuns occupying a MONASTERY or other monastic domicile, or the building in which such a religious community is housed. The characteristic form of convents was established in 3rd-century Egypt and introduced into Europe in the 4th century. Today the name tends to be restricted to houses of nuns.

Convention, the revolutionary assembly of France from 1792 (after the collapse of the 1791 constitution) to the rule of the DIRECTORY in 1795. It was the Convention which abolished the monarchy, established the republic and inaugurated mass conscription. See also pp.1550-1551.

Convention of 1818, agreement that established the 49th parallel as the boundary between the USA and Canada from Minnesota to the Rocky Mts, the status of Oregon was undecided.

Convergence, in mathematics, property of an infinite series (or sequence) having a finite limiting value. Thus, for the series $1 + 1/2 + 1/2^2 + 1/2^3 + \dots$ the sum of the first two terms is 1.5, the first three 1.75, and the first four 1.875, as more and more terms are taken the sum approaches 2, called the limit of the series. Such a series is said to converge. See also DIVERGENCE.

Convergent evolution, the tendency of

Continental drift, modern dating techniques now support a theory first proposed in 1912

Continental shelves are the shallow zones between the coast and the deep ocean

Contour farming, where the plough follows paths analogous to map contours

Control towers are the nerve centres for the safe and orderly movement of every aircraft

Convertible currency

several different species to resemble each other and to develop similar characteristics in their attempt to adapt to similar environments. See also pp 72, 189

Convertible currency, currency that can be exchanged for other currencies for any purpose and without penalty. In order for a currency to be convertible, it must be defined in terms of an accepted standard of value, eg. gold under a gold standard. See also EXCHANGE RATES, p.1786

Convulsive hysteria, in psychology, manifestations of Hysteria as physical disturbances such as blindness, deafness and paralysis. Conversion is a primitive mechanism for dealing with difficult situations and evoking sympathy. Hysterics are not malingers, although they may be responsible for their illness, they are unaware that they are doing so. See also pp 1112-1113

Conveyance, in law, the transfer of a legal title of land or property from one person, company or institution to another

Conveyor, machine for carrying objects from one place to another within a given area. Lifts, hoists, cranes, escalators and forklift and dump trucks are all types of conveyors, although the term is used more particularly for endless conveyors. These include looped belts moving on rollers, overhead trolleys moving on looped chains, scraper conveyors for moving loose material such as coal and ores, and fluidized-bed conveyors which transport granular or lightweight materials on a cushion of air. See also pp.436, 456-457

Conveyor belt. See MASS PRODUCTION

Convoy, grouping of ships sailing under armed naval escort in wartime. Convoys of merchant ships were originally formed as a protection against pirates. The system was used in both world wars to safeguard merchant shipping against German U-boats. Overland convoys are used for military transport, over difficult or dangerous terrain

Convulsion, bodily malfunction which results in violent, involuntary spasms of the muscles, sometimes accompanied by loss of consciousness. Such a seizure may indicate EPILEPSY, insulin overdose in a diabetic, or any of several brain disorders.

Conway Castle (Conwy), fortress in Wales built by EDWARD I in 1283 as part of his attempt to subdue Wales. During the Civil War the castle was garrisoned by forces of Charles I, but in 1646, after a three-month siege, it was surrendered to the parliamentarians

Conzinc Rio Tinto, Australia's largest mineral company. It was founded in 1959 in Victoria as the Rio Tinto company and took its present name in 1962 when it merged with the Consolidated Zinc Corporation

Cooch Behar district of West Bengal, India. It was established as a separate state ruled over by a maharajah in the 16th century, and became part of W Bengal in 1947. Its chief town is Cooch Behar. Pop. (1971 est.) 53,700

Cook, James (1728-79), British naval officer and explorer. In 1768-71 he led a scientific expedition to Tahiti to observe the transit of Venus, and also surveyed the coast of New Zealand. On the same voyage he charted the E coast of Australia, naming it New South Wales and claiming it for England. On a second expedition to the S Pacific (1772-75), Cook mapped much of the S Hemisphere and sailed further south than anyone before him. On his last voyage (1776-79) he discovered the Sandwich (Hawaiian) Islands, where he was killed. See also pp 1476, 1602, 1626

Cook, Sir Joseph (1860-1947), Australian politician. He emerged in 1908 as a leader of the Free Trade Party in New South Wales. As national defence minister (1909-10) he helped to set up the Australian Navy. He was prime minister (1913-14) and minister of the navy (1917-21). Cook was a delegate to the VERSAILLES Peace Conference (1919)

Cook, Thomas (1808-92), British founder of worldwide tourist agency, Thomas Cook and Son. Originally a missionary, he began to arrange the first group

tours for temperance organizations (1841-44). He opened his own firm in 1845, providing his customers with railway discounts and travel guides. He first offered foreign tours in 1855, the grand tour of Europe in 1856, and the first around-the-world tour in 1872

Cook, Mount, mountain in W central South Island, New Zealand, in the Southern Alps; the highest peak in New Zealand. It is in Mount Cook National Park and has the Tasman Glacier on its SE slope. Height 3,764m (12,349ft)

Cooke, Alfred Alistair (1908-), British writer and broadcaster on American affairs. He was chief correspondent for *The Guardian* (1948-72). He produced a highly successful television documentary *America: A Personal History of the United States* (1972-73)

Cooke, Sir William Fothergill (1806-79), British electrical engineer. He collaborated with the physicist Charles Wheatstone to develop the first commercial electric telegraph in 1839. In 1845 they patented a single-needle apparatus. See also p.634

Cooking, the preparation of food for eating by the action of heat. The traditional methods are roasting on a fire, baking in an oven, boiling in water and frying in a pan. The most recently developed method, as yet scarcely extended to domestic use, is cooking by MICROWAVES. It is believed by anthropologists that cooking was discovered by cavemen who came upon flesh burnt in a forest fire. When man learned to produce fire by the rubbing of sticks or stones, cooking became established. Cooking by boiling in water was a later development, which came only after the making of the first fireproof pots by MESOLITHIC man

Cook Islands, group of about 15 islands in the S Pacific Ocean, 3,000km (1,870 miles) NE of New Zealand, made up of the Northern Cook (or Manihiki) Islands and the Southern (or Lower) Cook Islands. Discovered by Capt James Cook in 1773, they became a British protectorate in 1888 and were annexed to New Zealand in 1901. Products: copra, citrus fruits. Area, 240sq km (93sq miles). Pop. (1975) 25,000. See also p.2016

Cook Strait, channel between North and South Islands of New Zealand. It was discovered in 1770 by Capt James Cook. Width 26-145km (16-90 miles)

Coolant, liquid or gas used to transfer heat from a hot to a cool region or to remove excess heat. For example, in a nuclear power station heat is transferred from the core to the generator by liquid sodium, pressurized water or by a gas

Coolidge, John Calvin (1872-1933), 30th President of the USA. He trained as a lawyer and became governor of Massachusetts in 1919. He became Republican vice-president in 1920 and president in 1923 after the death of Warren Harding. He was re-elected (1924-28), and his conservative presidency did little to curb the instability that brought the financial crash of 1929

Coolidge, William David (1873-1975), US physicist who in 1908 developed a method for drawing tungsten into filaments for making light bulbs and radio valves. In 1916 he patented an X-ray tube (Coolidge tube) capable of producing accurate amounts of radiation. He also devised portable X-ray units and worked on construction techniques for industrial quality control. During WWII he devised a submarine-detection system with Irving Langmuir, and he also worked on atom bomb research

Cooling, method of controlling the running temperature of the engines of cars, motor-cycles and aircraft, generally achieved by means of a flow of water or air. Most cars are water-cooled. In the most common cooling system, a pump driven by the engine, either through gears or by means of the fan belt, circulates water cooled in the radiator. In high-performance piston engines of WWII aircraft, the coolant contained or was composed of ethylene glycol. See also COOLANT, p.496

Cooling tower, tall construction that uses

atmospheric air to cool warm water in refrigeration and steam-power generation systems. There are three types of towers: atmospheric cooling towers, which depend on wind currents; natural draught towers, which depend on natural convection currents; and mechanical draught towers, which use fans to provide forced or induced convection

Coon, Carleton Stevens (1904-), US anthropologist who worked in N Africa and the Middle East (1925-39). He published many works on the development of human races, including *Origin of Races* (1962), in which he argued that different races evolved at different speeds

Cooper, Alfred Duff, 1st Viscount Norwich of Aldwick (1890-1954), British diplomat and Conservative statesman. He resigned his cabinet post in protest at the MUNICH AGREEMENT. He was minister of information (1940-41) and served as an ambassador in the Far East and France until 1947

Cooper, Anthony Ashley. See SHAFTESBURY, ANTHONY ASHLEY COOPER

Cooper, Gary (1901-61), US film star, real name Frank James Cooper. He was most famous for his laconic portrayal of western heroes. His films included *It* (1927), *The Virginian* (1929), *Morocco* (1930), *Sergeant York* (1941) and *High Noon* (1952)

Cooper, Dame Gladys (1888-1971), distinguished British actress who began her career in musical comedy. Her best-known roles were in *The Chalk Garden* (1955) and Noel COWARD's *Relative Values* (1951)

Cooper, Henry (1934-), British heavyweight boxer. He was British and Empire titleholder (1959-69) and European champion (1968-70). He twice fought MUHAMMAD ALI (then Cassius Clay) but on each occasion an eye injury shortened the contest

Cooper, James Fenimore (1789-1851), US novelist. His most successful works were the romantic Leatherstocking Tales, of which the best-known are *The Pioneers* (1823) and *The Last of the Mohicans* (1826). He was one of the earliest American novelists and was much influenced by Walter SCOTT. He also wrote a number of novels about life at sea, including *The Pilot* (1823), and works of social criticism. See also p.1772

Cooper, Leon N. (1930-), US physicist and Nobel Prize winner. From 1974 he was professor at Brown University, Rhode Island. With John BARDEEN and John Robert SCHRIEFFER he shared the 1972 Nobel Prize in physics for research in SUPERCONDUCTIVITY. They demonstrated that negatively-charged electrons in a superconductor arrange themselves in so-called "Cooper pairs", rather than randomly dispersing energy and momentum

Cooper, Samuel (1609-72), English portrait miniaturist whose paintings, dating from c.1642, of royalty and of such notables as Oliver Cromwell, are highly valued for both aesthetic and historical content. His highly technical skill combined broad and free brushwork with modelling of the face through use of light and shadow. Horace Walpole claimed that Cooper "first gave the strength and freedom of oil to the miniature". See also pp.1430, 1430

Co-operative Commonwealth Federation. See NEW DEMOCRATIC PARTY

Co-operative farming, organizing of farmers into producer's co-operatives. Land may be pooled, farm assets jointly owned, and buying and marketing undertaken collectively. The trading profits are then shared. See also pp.654-657

Co-operative movement, variety of organizations, throughout the world, founded to run non-profit economic enterprises for the benefit of their members. The first such movement was founded in England in 1844 by the ROCHDALE PIONEERS, who established a co-operative retail society to eliminate the middleman and share profits among its members. That movement had its origin in the socialist propaganda of Robert OWEN. The co-operative movement has been extended to include co-operative agricul-

Convoys, to remain grouped, travelled at the speed of the slowest member

James Cook was one of the first of the truly scientific navigators and explorers

Cooling systems are often pressurized to raise the boiling point of the coolant

Gary Cooper, remembered as the tough hero, also played romantic roles

ture, co-operative manufacturing (in which the workers own and manage their own plant) and co-operative banking and finance. Co-operative agriculture does not necessarily entail the common ownership of land, but does usually include the common ownership of machinery and pooled retailing. It usually also links farmers to credit unions for the purpose of borrowing. The co-operative movement is strongest in France, Scandinavia, Israel and China. In France more than 80% of grain is sold through co-operatives. In China all agriculture and most manufacturing is co-operative. The Scandinavian Wholesale Co-operative Society was founded in 1918. See also CO-OPERATIVE PARTY; CO-OPERATIVE WHOLESALE SOCIETY.

Co-operative Party, British political party, formed in 1917 as the political wing of the Co-operative Union. It is associated with the LABOUR PARTY and since 1946 all its parliamentary candidates have stood for election jointly as Labour co-operative candidates. Since 1959 it has limited the number of its candidates to 30.

Co-operative societies, non-profit-making voluntary enterprises owned and operated by their membership. Consumers' co-operatives distribute goods directly from the producer to the consumer. The first such society was the Rochdale Society of Equitable Pioneers (1844). Co-operative societies now operate in most countries. See also p.1571.

Co-operative Wholesale Society, organization formed in the north of England in 1863 to provide for consumer co-operation. It was a development from the early co-operative experiments of Robert Owen and the ROCHDALE PIONEERS, which encouraged consumers to form their own retail societies and share the profits among themselves, so eliminating the middleman. Modern Co-operative retail shops derive directly from the society.

Co-optimists, The musical revue, written by various hands, first produced on the London stage from 1921-27, then revived in 1929 and 1935. It starred many famous names of the musical theatre, including Stanley Holloway and Melville Gideon, who also wrote the music.

Co-ordinate geometry, or algebraical geometry, branch of mathematics combining the methods of pure geometry with those of algebra. Any geometrical point can be given an algebraical value by relating it to co-ordinates, marked off from a frame of reference. Thus, if a point is marked on a square grid so that it is x_1 squares along the x -axis and y_1 squares along the y -axis, it has the co-ordinates (x_1, y_1) . Circular, or polar, co-ordinates can also be used. See also CARTESIAN COORDINATE SYSTEM, p.791.

Co-ordinate system, reference system used to locate a point in space. A point can be defined by numbers representing distances or angles measured from lines or points of reference. In a CARTESIAN COORDINATE SYSTEM a point is defined by distances from intersecting axes. In a polar co-ordinate system, distance from a fixed point is used together with angular distance from a reference line. Two numbers are required to define a position in a plane; three numbers are required in three-dimensional space. A co-ordinate system enables curves or surfaces to be defined algebraically. See also p.784.

Co-ordinate systems, astronomical, co-ordinate systems used to locate the positions of celestial bodies on the CELESTIAL SPHERE, each system using a different great circle on the sphere as a reference plane. Equatorial co-ordinates - right ascension (or hour angle) and declination - refer to the celestial equator; horizon co-ordinates - azimuth and altitude - refer to the observer's horizon; ecliptic co-ordinates - celestial latitude and longitude - refer to the ecliptic; and galactic co-ordinates - galactic latitude and longitude - refer to the plane of the Galaxy.

Co-ordination complex, type of compound in which one or more groups or molecules form co-ordinate bonds with a central metal atom, usually a transition metal. The complex may be either a complex ion or a neutral molecule, as in nickel

tetracarbonyl $\text{Ni}(\text{CO})_4$. The co-ordinating species are known as LIGANDS. Inorganic chemistry is mainly concerned with the study of such compounds, some, such as heme and chlorophyll, have biochemical importance. See also ION, COMPLEX COMPOUNDS, CHELATION, pp.893, 896.

Co-ordination number, number of chemical bonds made to a central atom in a specified complex salt: eg, the number of anions surrounding a cation.

Coorg, former state in SW India, annexed by the British in 1834 and administered by them until independence in 1947. The region now produces timber, coffee and rice. Area: 4,110 sq km (1,587 sq miles).

Coornbert, Dirck Volckertszoon (1522-90), Dutch author. His works include a translation of the *Odyssey* (1561), short songs, *Liedekens* (1575) and a moral treatise, *The Polite Art* (1586). He was imprisoned in 1586 for his opposition to religious intolerance.

Coot, aquatic bird of freshwater marshes. Related to the RALLS, it takes flight awkwardly but is a strong swimmer and diver and feeds in or near water. All coots have white bills and foreheads. The female lays 8-12 buff-coloured, brown-spotted eggs on floating reed nests. Family Rallidae, genus *Fulica*.

Coots, Sir Eyre (1726-83), British soldier. In 1754 he was a captain in the first British regiment sent to India. He fought at the battle of Plassey in 1757, at Wandiwash in 1760 and Pondicherry in 1761. In 1778 he was made Commander-in-Chief in India and in 1781 defeated Haydar Ali at Porto Novo.

Copán, second largest Maya city of the Classic Period (about AD 300-900). Its ruins, in W Honduras, 56 km (35 miles) W of Santa Rosa at an altitude of 600 m (2,000 ft), are notable for the high artistic quality of its remains - portrait sculpture, friezes and statuary. By the 8th century, Copán's astronomers had calculated the Mayas most accurate solar calendar.

Cope, in the Anglican, Roman Catholic, Orthodox and in some Scandinavian Lutheran Churches, a liturgical vestment in the shape of a semicircular cloak, worn by clergy at solemn religious ceremonies when the CHASUBLE is not used.

Copeau, Jacques (1879-1949), French critic and stage director. In 1909 he founded, with Gide and others, *La Nouvelle Revue Française*. In 1913 he founded the Théâtre de Vieux Colombier, which sought to combat the prevailing realism of contemporary drama.

Copenhagen (København), capital city of Denmark on a Sjaelland and N Amager islands in the Øresund. A trading and fishing centre by the early 12th century, the city was often in conflict with the HANSEATIC LEAGUE. It became Denmark's capital in 1443. It suffered great damage by British troops during the NAPOLEONIC WARS and was occupied by the Germans during WWII. It has a university (1479), a 17th-century stock exchange and Amalienborg Square, which includes the royal palace. The commercial and cultural centre of the nation, it has food processing, shipbuilding, chemicals, brewing and car assembly industries. Pop. (1975) 756,256.

Copenhagen, Battle of (1801), naval battle between the English, under Sir Hyde Parker, and the Danes who had recently joined the league of ARMED NEUTRALITY. The Danish fleet was destroyed - partly because, according to legend, NELSON claimed, by putting a telescope to his blind eye, not to see an order to retreat.

Copepod, marine or freshwater CRUSTACEAN. Some copepods are parasitic on aquatic animals, especially fish. Their segmented, cylindrical bodies have a single median eye and no carapace. Length 0.5-2 mm (0.02-0.08 in), length of parasitic forms may be more than 30.5 cm (1 ft). There are 7,500 species. Subclass Copepoda. See also pp.30, 35.

Copernicus, Nicholas, or Mikolaj Kopernik (1473-1543), Polish astronomer. He studied initially at Cracow and also in Italy, where he studied law and medicine as well as astronomy. He was appointed canon of the cathedral at Frauenberg, a Prussia, in 1497. His work *De Revolutionibus*

Orbium Coelestium, which laid the foundations of modern astronomy, was probably written in 1530 but not published until 1543. See also pp.774, 914, 1436.

Copland, Aaron (1900-), US composer, especially known for combining folk and jazz elements with 20th-century symphonic techniques. His highly popular ballet music includes *Billy the Kid* (1938), *Rodeo* (1942) and *Appalachian Spring* (1944), which won the Pulitzer prize. He has written symphonies, chamber music and overtly patriotic pieces such as *A Lincoln Portrait*. Less well known are Copland's experiments with serial techniques, as in *Piano Fantasy* (1957). Among many film scores is *The Heiress* (1949). His postwar work includes the opera, *The Tender Land* (1954) and *Nonet* (1960). See also pp.1754-1755.

Copley, John Singleton (1738-1815), US painter, the finest portraitist of the colonial period. He had little academic training but was a working artist at 15, and was an extraordinarily gifted draughtsman and colourist. He settled in England in 1774.

Coppée, François (1842-1908), French poet and dramatist. He wrote about the poor in his works which include the poems collected in *Inimities* (1868) and *Le Cahier Rouge* (1874), the comedy *Le Passant* (1869) and the verse drama *Les Jacobins* (1885). He was notorious for his anti-semitism, particularly during the Dreyfus Trial.

Coppélia (1870), ballet in two acts by Arthur St Léon; music by Léo DELIBES. It is famous for introducing folk dance into ballet, and tells how a girl tricks a toy-maker into thinking that she is one of his creations come to life.

Copper, metallic element (Cu) of the first transition series. It occurs native (free or uncombined) and in several ores including cuprite (an oxide) and chalcocite (a sulphide). The metal is extracted by smelting and is purified by electrolysis. It is a good thermal and electrical conductor, second only to silver, and is extensively used in boilers, pipes, electrical equipment and alloys. Copper tarnishes in air, oxidizes at high temperatures and is attacked only by oxidizing acids. Properties: at no. 29, at wt. 63.546, s.g. 8.96, m.p. 1,083°C (1,981°F), b.p. 2,595°C (4,703°F); most common isotope Cu^{63} (69.09%). See also TRANSITION ELEMENTS, pp.398, 402, 890, 894-5.

Copper Age. See CHALCOLITHIC AGE. **Copper carbonate**, $\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$, green salt which occurs naturally as the mineral malachite. Pure copper carbonate, CuCO_3 , does not exist.

Copperhead, any of various species of snakes, so-called because of their head colour. The N American copperhead is a pit viper, rarely over 1 m (3 ft) long. The Australian copperhead is a venomous snake of the cobra family, often reaching 1.5 m (5 ft) in length. The Indian copperhead is a rat snake.

Copper oxide, chemical compound of copper and oxygen which exists in two forms: cuprous or copper (I) oxide, Cu_2O , a brilliant red powder found in nature as the mineral cuprite, and cupric or copper (II) oxide, CuO , which is black and decomposes into copper (I) oxide and oxygen when heated. It is added to furnace melts as an oxidant.

Copper plating, by ELECTRODEPOSITION, is used to prepare steel for a top coating (also by ELECTROPLATING) of nickel, chromium or silver, as a surface treatment of steel and brass in the production of decorative oxidized copper finishes and as a coating on steel to prevent surface hardening. The main copper salts used in electroplating solutions are copper sulphate and copper cyanide in the form of complexes such as potassium cuprocyanide, $\text{K}_2\text{Cu}(\text{CN})_4$. See also pp.398-399.

Copper processing, the recovery of the pure metal from its commercial ores. The ores, which contain mainly copper oxides and sulphides, are separated from the surrounding rock and are then concentrated. They are smelted into a molten mass, called matte, and pure copper (blister copper) is extracted by oxidizing

Coots, who feed mainly on water plants and seeds, will sometimes chase mice on land.

Copernicus, whose heliocentric theory shattered man's view of his place in nature.

Aaron Copland wrote symphonic music dealing mainly with American themes.

John Singleton Copley painted this portrait of Mrs Sylvanus Bonne.

Copper sulphate

Corals, one of the most primitive of all life forms, are still used in the British Isles.

Corals are the hard accumulation of the limestone skeletons of tiny marine animals.

Corals are the most primitive of all life forms, and are still used in the British Isles.

Coreopsis belongs to the family Compositae, the largest family of all flowering plants.

the impurities with air. Ores are often treated with acids and the copper recovered by electrolysis. See also p.398

Copper sulphate, chemical compound which exists in two forms. Cuprous or copper (I) sulphate, Cu_2SO_4 , is a light grey powder that reacts instantly with atmospheric moisture to produce cupric or copper (II) sulphate. This is usually seen as the bright blue crystals of the pentahydrate, blue vitriol, $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, used for copper plating, for preserving wood and for killing algae in ponds. It can be dehydrated to the colourless anhydrous salt CuSO_4 , which, because it absorbs water and turns blue, is used as a desiccant and, more widely, as a moisture indicator. See also p.895

Copper sulphide, compound of copper and sulphur which exists in two forms. Cuprous, or copper (I), sulphide (Cu_2S) is found in nature as copper glance and, together with iron, as copper pyrites. Cupric, or copper (II), sulphide (CuS) is a black powder which on heating decomposes to copper (I) sulphide.

Copra, the dried kernel or "meat" of the coconut and the principal commercial product of that nut. The husk is usually removed and the exposed kernel dried by the sun and later by artificial heat. The oil is pressed out and the residue, copra, sold as animal feed.

Coprolites, fossilized excreta of many kinds of animals of a great range of sizes, relationships and geological ages. They are useful to geologists and biologists because they often contain undigested plant seeds and tissues.

Coptic art, general term to cover the visual arts of the Christian, or Coptic, minority of Egypt from the 3rd to the 12th centuries. In addition to painting, it includes especially tapestry-making and ceramics. See also COPTS

Coptic Church, the ancient Church of Egypt and Ethiopia, claiming St Mark the Evangelist as its founder. It did not accept the pronouncements of the Council of Chalcedon (451) on Christology. After that council it formally embraced MONOPHYTISM. The spiritual leadership of the Coptic Church is exercised by the Patriarch of Alexandria. The number of Copts in the mid-1970s was estimated at about 34 million.

Copts, members of the Christian Church in Egypt, comprising between five and ten per cent of the population. A few Copts are Catholics, but the majority adhere to the Monophysite creed, declared heretical in 451, which denies the humanity of Christ. The head of the Coptic Church is the patriarch of Alexandria. In its rites the Church follows eastern customs, except that it circumcises children before baptism and obeys some Moslem dietary traditions. The Coptic language is dead.

Copyhold, form of land tenure in Britain, now extinct. It arose in the middle ages, when vassals were permitted to hold land at the pleasure of the lord of the manor. A copy of the holder's right (not title) was placed in the manorial court roll. The copyholder's rights depended entirely on the custom of the manor until, in the 17th century, he was given some legal protection. A copyhold franchise was included in the 1832 REFORM ACT. Copyholds were gradually converted into freeholds or leaseholds, and all traces of them finally disappeared with the Property Act (1925).

Copyright, legal authority granted to an individual or company to reproduce or perform works of art, literature and music. The earliest copyright act in Britain protected authors (1710). By the end of the 19th century all branches of the arts had received legislative protection. Copyright normally lasts during the lifetime of an author and for 50 years after his death. In 1956, film, radio and television performances were also covered by copyright.

Coques, Gonzales (1614-84), Flemish painter, nicknamed "Little van Dyck" because his style so resembled that of his contemporary. He is best known for his portraits.

Coracle, small, easily portable boat, con-

sisting of a wooden framework covered with animal skins or canvas, used on inland or inshore waters. Types of coracle are still used in parts of Britain and the USA.

Corals, small coelenterate marine animal found in colonies in marine waters. The limestone skeletons secreted by each animal polyp accumulate to form CORAL REEFS. Reef-building corals are found only in waters with temperatures in excess of 20°C (68°F). Soft corals secrete a fleshy material, horny corals (sea fans) secrete fan-shaped supports, and stony corals secrete limestone cups. Class Anthozoa. See also pp.12, 13, 275

Corall atoll, ring-shaped island surrounding a shallow lagoon. It is built up from great depths, yet the corals that built them cannot grow in depths of more than 45m (150ft). See also p.1940

Corals, or reef, fish, brilliantly coloured tropical fish that lives among coral reefs and similar formations. Its flat, round body, large tail and short fins give it the great manoeuvrability its habitat demands. Coral fishes include the butterfly, angle, cardinal, damselfish and parrotfishes. See also pp.60, 69

Coralli, Jean (1779-1854), French ballet dancer and choreographer. In 1802 he made his debut in Paris and later danced also in Italy and Portugal. He was choreographer at the Paris Academy (1831-45), creating the choreography for such ballets as *La Tarentule* (1839), *Giselle* (1841) and *Le Peri* (1843).

Coralline. See MOSS ANIMALS

Corall reef, rock formation found in shallow tropical seas. Such reefs are formed from the calcium carbonate secreted by the living coral organisms as protection against predators and wave action. The way in which the coral, and therefore the reef, grows is strongly influenced by the prevailing currents and the temperature of the surrounding sea-water. The main types are fringing reefs and barrier reefs. See also p.231

Corall Sea, arm of the sw Pacific Ocean between the Great Barrier Reef off the E coast of Australia, the New Hebrides (s) and New Guinea (nw). It was the scene of a US victory over the Japanese in 1942.

Corall Sea, Battle of (the May 1942), WW2 naval and air battle in the sw Pacific. The US Navy inflicted heavy losses on the Japanese fleet and checked Japan's progress towards Australia. See also pp.1710-1711, 1734

Corall snake, poisonous burrowing snake of the Americas and South-East Asia. It is secretive and docile, but its venom can be fatal to human beings. Most species, including the Eastern coral snake (*Microurus fulvius*), are brightly coloured, ringed with red, yellow and black. It feeds on lizards, frogs and other snakes. Family Elapidae.

Coram, Thomas (c 1668-1751), English seaman and philanthropist. From 1693 to 1704 he lived in the colony of Massachusetts. He returned to London and in 1735 was involved in founding a colony in Nova Scotia for unemployed English artisans. In 1739 he established the Foundling Hospital for abandoned London children.

Cor anglais, or English horn, reed instrument of the oboe family. It is longer than the oboe, its range is a fifth lower, its bell is pear-shaped and its double reed is inserted in a curved metal mouthpiece. It is used as a modern counterpart for the curved oboe da caccia in the music of J. S. Bach, and parts have been scored for it in many Romantic works, especially by Berlioz and Wagner. See also p.1581

Corbett, Harvey Wiley (1873-1954), US architect. He planned many early skyscrapers and is best known for his collaboration with Raymond Hood on the Rockefeller Center, New York.

Corbett, James John ("Gentleman Jim") (1866-1933), US boxer. In 1892 he won the world heavy-weight championship from John L. Sullivan in New Orleans, in the first championship contest ever fought with boxing gloves. He lost the title to Bob Fitzsimmons (1897) in Carson City, Nev.

Corbière, Edouard Joachim, known as Tristan (1845-75), French poet. Son of a

Breton fisherman, he was crippled by arthritis while young and died of tuberculosis at 30. Scorning Romanticism, he described his admiration for Breton seafaring life in the symbolist poems *Gens de mer* (1873).

Corbillon Cup, trophy donated by Marcel Corbillon of France in 1934 for the winner of the women's team event at the world table tennis championships. European countries dominated the early years but since the 1950s it has been mainly the preserve of Asian nations.

Corbuser, Le. See LE CORBUSIER

Corday, Charlotte (1768-93), French patriot. A noblewoman with the full name Marie-Anne-Charlotte Corday d'Armont, she stabbed the Jacobin Jean-Paul Marat to death in his bath on 13 July 1793 and was guillotined on 17 July. She was a GIRONDIS who disagreed with the radical policies espoused by Marat.

Cordierite, or iolite, silicate of aluminium, magnesium and iron, which occurs mostly in metamorphic rocks. It forms crystals in the orthorhombic system. Hardness 7, s.g. 2.6. See also p.280

Cordite, smokeless, high-explosive shell and bullet propellant made by mixing cellulose nitrate (gun-cotton) - a highly nitrated form of cellulose - and nitro-glycerine, both of which are themselves explosives. For stability, mineral jelly and acetone are added in small amounts. Cordite is generally manufactured in strands or cords, which give it its name. See also pp.556, 582

Cordoba, city in central Argentina, 623km (387 miles) NW of Buenos Aires, capital of Córdoba district. It is the third largest city in Argentina. Córdoba is a cultural and commercial centre, and exports farm produce from the surrounding irrigated region. Founded in 1573, the city flourished during the colonial era, being on a trade route from Buenos Aires to Chile. It has a university, founded in 1613. Industries: leather, textiles, glass, cement. Pop. 798,663.

Córdoba, city in s Spain, on the Guadalquivir River; capital of Córdoba province. It has been ruled by Iberians, Romans, Visigoths and Moors, and it flourished under Caliph Abd ar-Rahman III, the first caliph of Córdoba. In 1236 Ferdinand III of Castile captured Córdoba and imposed Christian culture on the city. It has an 8th-century mosque, a Moorish bridge and a fine art museum. Industries: coal and lead mining, engineering, building materials, textiles, food processing. Pop. (1974) 249,515. See also pp.1285, 1304

Core, in geology, a cylindrical rock sample that has been gathered by drilling, on land usually by a rotary drill, from the sea often by a metal cylinder, with a cutter on the bottom, which is forced into the rock. The core is used to identify the various layers in the rock or sediment. The mechanism for collecting the core is called a corer. See also pp.199, 482, 483, 483

Core, Earth, the interior of the Earth, under the Gutenberg discontinuity. Information concerning the composition of the core is obtained from seismic measurements. The core may be a plasma, dense compressed material comprised of atoms in which the electrons have been pushed towards the nuclei. The core makes up 16% of the Earth's volume and has 31% of its mass. Layers exist in the core: the outer one is relatively liquid, the inner is probably a mixture of iron and nickel. See also pp.194, 195

Corelli, Arcangelo (1653-1713), Italian BAROQUE composer who achieved early distinction as a violinist under the guidance of Giovanni Benvenuti. He helped to develop the concerto grosso, composed many sonatas and did much to consolidate the principles behind modern violin playing. See also p.1484

Corelli, Maria (1855-1924), British writer of popular romantic novels. Her first novel *The Romance of Two Worlds* (1886) was so successful that she went on to write many others, including *Thelma* (1887), *Barabbas* (1893) and *The Master Christian* (1900).

Coreopsis, large genus of about 100 annual

and perennial plants cultivated for their daisy-like yellow or variegated flowers, which occur in single or branched clusters. It is also known as tickseed. Height, to 90cm (3ft). Family Compositae.

Corfe Castle, town in Dorset, sw England, dominated by a ruined castle in which Edward the Martyr was killed in 978. The castle was almost destroyed by Cromwell after a long siege in 1646. The ruins are now a tourist attraction.

Corfu (Kérkyra), island in nw Greece, second largest of the Ionian island group, with Paxos (Paxoi) Island, it forms a department of Greece. Corfu is the capital. It was the scene of the first recorded naval battle c.665 bc, with Corinth for possession of Epidamnus and was allied with Athens in 433 bc against Corinth. The Romans held the island from 229 bc and it was part of the Byzantine Empire until the 11th century. It was occupied by the Venetians from 1386 until 1797, and then under British protection from 1809 until 1864, when it passed to Greece. The Germans occupied the island during wwn. Products: olives, olive oil, fruit, livestock, wine. Tourism and fishing are important industries. Area 593sq km (229sq miles). Pop. (1971) 89,664.

Corgi, or **Welsh corgi**, small, short-legged working dog, some types of which are related to the Dutch schipperke. Like the collie, the corgi was used for herding, but is now principally a house dog. It has a short, pointed head and its coat may be of almost any colour except all white. Average height at the shoulder, 30cm (12in).

Cork, **Carl Ferdinand** (1896-), us biochemist, b. Czechoslovakia. He went to USA in 1922, and was naturalized in 1928. He shared the 1947 Nobel Prize in physiology and medicine with his wife Gerty Theresa (1896-1957) for their discovery of how the chemical energy of glycogen, a carbohydrate stored in the liver and muscle, is broken down into a form that can be used by the body. The 1947 prize was also shared by B. A. ROUSSAY, the Argentine physiologist.

Coriander, strong-smelling herb of the CARROT family native to the Mediterranean and Near East. Oil from the seeds is used as an aromatic flavouring in foods, medicines and liqueurs; the leaves are used in soups, especially by the Chinese. Family Umbelliferae; species *Coriandrum sativum*.

Corinth, Louis (1858-1925), German painter and graphic artist. A member of the SEIZIONIST, Corinth opposed EXPRESSIONISM at first but his late portraits and landscapes show its influence, in the use of dramatic subject matter, IMPASTO paint and very lively brushwork.

Corinth (Kórinthos), city in NE Peloponnesos, Greece, at the sw tip of the Isthmus of Corinth; capital of Corinthia department. Corinth was one of the largest and most powerful cities of Ancient Greece, traditionally a rival of Athens and ally of Sparta, with which it fought in the Peloponnesian War (431-404 bc). It did, however, join with Athens, Thebes and Argos against Sparta during the Corinthian War (395-387 bc). In the mid-3rd century bc it was a leading member of the ACHAEAN LEAGUE but was destroyed by the Romans in 243. Caesar rebuilt the city in 44 bc. It was ruled by the Venetians from 1687 until 1715, then by the Turks until 1822, when it became part of Greece. It is 5km (3 miles) NE of the ruins of the ancient city of Corinth, which was destroyed by an earthquake in 1858. The ruins include a temple of APOLLO, the market-place and an amphitheatre. The present city is a major transport centre (it is at one end of the Corinth Canal) and has food processing, chemicals and wine-making industries. Pop. 20,733. See also pp.1203, 1204, 1206, 1210-1211.

Corinth, Gulf of (Kórinthiakós Kólpos), formerly Gulf of Lepanto, inlet of the Mediterranean Sea between central Greece (N) and Peloponnesos (S), connecting the Gulf of Patras to the Corinth Canal. Length 130km (80 miles), width 5-32km (3-20 miles).

Corinth Canal, artificial waterway across the Isthmus of Corinth, connecting the

Aegean Sea to the Adriatic Sea. It was built between 1881 and 1893. Running parallel to the canal are the ruins of the ancient Isthmian Wall, restored by Byzantine emperors between the 3rd and 6th centuries.

Corinthian, latest and most ornate of the Classical orders of architecture, developed by the Greeks in the 4th century bc but used more extensively in Roman architecture. A typical Corinthian column has a high base, sometimes with a pedestal; a slim, fluted column and a bell-shaped capital with acanthus-leaf ornament. See also pp.1212, 1213.

Corinthians, Epistles to the, NEW TESTAMENT epistles of St PAUL addressed to the Christian Church in Corinth. They were written from Ephesus c.57-58.

Coriolanus (1607), five-act tragedy by William SHAKESPEARE, based on Plutarch's *Life of Coriolanus*.

Coriolis, Gaspard Gustave de (1792-1843), French mathematician who explained the effect of the earth's rotation on objects moving above its surface in terms of the force or effect bearing his name. See also CORIOLIS FORCE, p.820.

Coriolis force, or **effect**, apparent force on particles or objects due to the rotation of the Earth under them. The motion of the particles or objects is deflected towards the right in the Northern Hemisphere and towards the left in the Southern Hemisphere, but their speed is unaffected. The direction of water swirling round in a drain or whirlpool demonstrates this force. See also pp.248, 234, 235.

Cork, county in S Republic of Ireland. It has a hilly and rugged terrain with fertile valleys. The chief occupations are farming (dairying, grain, livestock and sugar-beet) and fishing along the rocky coastline. The county town is Cork, a port at the mouth of the River Lee. The town was occupied by Oliver CROMWELL in 1649. Many public buildings were destroyed in nationalist uprisings in 1920. It exports farm produce and has brewing, motor vehicle, leather and food processing industries. Area (county): 7,462sq km (2,881sq miles). Pop. (1971) (county) 351,735, (town) 128,235. See also pp.2070-2073.

Cork, outer layer of the BARK of woody plants, cellular in structure but waterproof. This dead layer of tissue is formed by cork cambium. The bark of the cork oak, a tree native to the Mediterranean countries, is the chief source of commercial cork, used for making bottle stoppers and insulating and floor covering materials. Species *Quercus suber*.

Corn, fleshy underground stem that produces a plant such as the GLADIOLUS or CROCUS; it has more stem tissue and fewer leaf scales than a bulb. In most plants, new corns form on top of old ones, which last for one season.

Corman, Roger (1926-), us film director, writer and producer. Particularly noted for his numerous and popular low-budget productions starring Vincent PRICE, he has strongly influenced the careers of directors such as Peter BOGDANOVICH and Francis Ford Coppola.

Cormorant, aquatic bird found in coastal and inland waters throughout the world. It has a hooked bill, black plumage, a long body and webbed feet. It dives well and is sometimes used by man to catch fish. Length to 1m (3 ft). Family Phalacrocoracidae; genus *Phalacrocorax*. See also p.81.

Corn, in medicine, a raised, painful thickening of the skin. It usually occurs at a point of sustained pressure or pinching, most often on a toe.

Corn. See MAIZE.

Corn belt, common term for the area in the USA in which the crops most commonly grown are corn (maize) and soya beans. Roughly including Illinois, Iowa, Missouri, Nebraska and Kansas and w Indiana, corn belt has soils rich in nitrogen and organic matter and the area has a well distributed rainfall. These and other favourable factors have provided perfect conditions for the growing of maize and other cereal crops for feeding livestock. See also p.676.

Corn crane, bird of the IRL family com-

mon in grain fields of N Europe. It has a brown body and a short bill, and its specific name describes its call. Family Rallidae, species *Crex crex*.

Cornea, part of the SCLERA, or outer layer of the eye, that forms a transparent protective covering over the iris. Injury or disease of the cornea can cause ASTIGMATISM. See also pp.136-137.

Cornelle, Pierre (1606-84), first of the great French classical dramatists. His plays include the tragedy *Médée* (1635), the epic *Le Cid* (1637) and a comedy *Le Menteur* (1643). He was elected to the French Academy in 1647. Among his last works were *Sophonisbe* (1663) and *Antioch* (1667). See also p.1450.

Cornelius, Saint (d.253), pope from 251 to 253. He was elected to the papacy after the see of Rome had been vacant for 14 months because of DECELIUS' persecution of the Church. His rival, NOVATIAN, became antipope. Cornelius is believed to have died as a martyr. Feast 16 September.

Cornelius, Peter von (1783-1867), German painter. In 1811 he went to Rome where he joined the Nazarene group of German painters. He returned to Germany, where his most notable works include his frescoes in the Munich Glyptothek and his fresco *The Last Judgment* in the Ludwigskirche, Munich.

Cornet, brass musical instrument similar to a trumpet. It was included in scores by 19th-century French and Italian composers, by Malcolm Arnold in *Beckus the Dandy* (1943) and in early jazz by King Oliver. Its range is about the same as a trumpet's, but its tone is mellower and less penetrating.

Cornflour, or **cornstarch**, flour made from maize, or Indian corn, used widely in cooking. It is extracted from the grains of the corn cob by a complex process in which the starchy materials are separated from the embryo or germ for which they are food, the embryo itself being used as a source of corn oil. The starchy material is then pulverized and the cornflour separated from gluten and other substances which together go to make animal feed. By further processing, cornflour is prepared for the market as a nearly pure form of starch. See also p.676.

Cornflower, or **Bachelor's button**, annual of the composite family common in many parts of Europe (Germany's national flower). The ray-like flowers are usually a brilliant blue, and the hairy leaves are toothed or divided. Family Compositae, species *Centaurea cyanus*.

Cornforth, John Warcup (1917-), Australian research scientist. He worked with the British Medical Research Council (1946-62) and was head of the Milstead Laboratory, Kent (1962-75). In 1975 he shared the Nobel Prize in chemistry with Vladimir PRELOG for his work on the stereochemistry of enzyme-catalysed reactions and for his demonstration of how CHOLESTEROL is made in the body.

Cornhill Magazine, quarterly literary journal first published by George Smith in 1860. Its first editor was THACKERAY. It took its name from being published at 65 Cornhill, London. It attracted the most distinguished list of any 19th-century journal. It ceased publication in 1975.

Cornice, in classical architecture, the top band of an entablature supported by a row of stone columns. Today the term generally refers to the horizontal bands in the angle between a wall and ceiling, or above a door or window.

Cornish language, member of the Celtic group of languages, closely related to BRETON and WELSH. These three together form the British branch of the CELTIC LANGUAGE group. It died out in the late 18th century, although traces remain today in Cornish place names. The earliest written records of Cornish date from the 10th century. There have been recent attempts to revive the language, but with little success.

Corn Laws, series of acts regulating the import and export of grain in Britain. Records mention their existence as early as the 12th century. The most important was the 1815 act, which virtually prohibited the entry of foreign corn. It was thus held to keep British food prices high and

Corinth Canal, which connects the Aegean and Adriatic seas, was begun in 1881

Corinthian is the latest and most ornate of the three orders of classical architecture

Cormorants were once taken from their nests and trained to catch fish for their masters

Cornets are more mellow than trumpets and are a popular solo instrument in brass bands

Cornu, Marie Alfred

Corona, photographed during a total eclipse of the Sun in 1929 (exposure 20 sec)

Coronation, the newly crowned Elizabeth I leaving Westminster Abbey in June 1553

Corot, popular and important 19th-century landscape painter. Bridge at Nantes (detail)

Correggio was one of the great masters of the Italian High Renaissance. Dance (detail)

led to a 30-year campaign for free trade which ended with the repeal of the Corn Laws in 1846. See also pp 1466-1467, 1572, 1590, 1610.

Cornu, Marie Alfred (1841-1902), French physicist who worked mainly in optics and astronomy. He devised a photographic method of measuring light intensities in diffraction patterns and calculated the velocity of light.

Cornwall, county in SW England, on a peninsula bounded by the Atlantic Ocean, the English Channel and Devon. It has a rocky indented coast with hills and moors inland, and is drained by the Camel, Fowey, Tamar and Fal rivers. Its mild climate and picturesque coastline make it a popular tourist attraction. The chief towns are Bodmin (the county town), Truro, St Austell and Camborne-Redruth Area (including Scilly Isles) 3,512 sq km (1,356 sq miles). Pop. (including Scilly Isles) (1971) 379,892.

Cornwall, Duchy of, English estate consisting of lands in Cornwall and Devon granted by Edward III to the Black Prince in 1337 when he created him Duke of Cornwall. The lands have remained the possession of the monarch's eldest son, in the absence of whom they revert to the Crown. The duchy was administered from 1863 by a vice-warden of the stannaries court, the jurisdiction passing in 1896 to the county court.

Cornwallis, Charles Cornwallis, 1st Marquess (1738-1805), British soldier and administrator. At first a successful commander for the British in the American Revolution, he was forced to surrender at Yorktown (1781). As governor-general of India (1786-93, 1805), he reformed the administration, law and army and suppressed Tipu Sultan's revolt. Cornwallis was also viceroy of Ireland (1798-1801), where he defeated the 1798 revolt and carried through reforms and parliamentary union with Britain. See also pp 1493, 1540-1541.

Cornwallis, Sir William (1744-1819), British admiral. He served in the British West Indies until 1787; was commodore in the East Indies (1789-93), and commanded the Channel fleet during the French Revolutionary Wars.

Cornwell, David. See **LE CARRE, JOHN**.

Cornwall, John Travers (1900-16), British boy seaman. He joined the navy in 1915 and was killed at the Battle of Jutland in the following year. For his bravery on the *Chester* he was awarded the Victoria Cross posthumously.

Corollary, in mathematics, a proposition or theorem which is incidentally proved in proving some other theorem or proposition. More generally, it is an immediate or natural consequence or an easily drawn conclusion.

Coromandel Coast, rugged coastline of SE India, extending from Point Calimere (S) to the Krishna River (N). The rough seas off the coast during the monsoon season are a major hazard to shipping. Madras, Cuddalore and Nellore are the chief ports along the coast. Length 724 km (450 miles).

Corona, outer atmosphere of the Sun, visible as a pearly halo during a total eclipse. It extends outwards from about 5,000 km (3,100 miles) above the photosphere and consists chiefly of highly ionized hydrogen, nickel, calcium and iron atoms at a temperature of 2,000,000°K or more. See also pp 974, 976-977.

Corona Borealis, or the Northern Crown, northern constellations between Hercules and Bootes. It contains the recurrent nova *T Corona Borealis* and the irregular variable *R Corona Borealis*, the prototype and the brightest example of its class. See also p 1010.

Coronal hole, low-density, low-temperature region of the Sun's corona, first observed in 1973, from which the emission of X-rays is apparently minimal. Such regions appear on X-ray photographs as extensive dark areas, often originating near the Sun's poles. They are associated with disturbances in the solar wind. See also p 977.

Coronary occlusion, blocking of a coronary blood vessel, especially of a coronary

artery supplying blood to the heart. It is almost always caused by a blood clot in the artery and may result in a heart attack. See also **CORONARY THROMBOSIS**, p 1066.

Coronary thrombosis, blood clot in an artery to the heart, preventing blood (and with it oxygen and nutrients) from reaching the heart. Known as a heart attack, it is marked by chest pains, perspiration and sometimes collapse. Severe heart attacks can be fatal. See also p 1066.

Coronation, ceremony of crowning a monarch. The form of coronation used in Britain, which includes the election of the monarch by the peers and his assumption of the religious duties of the office, was first drafted by St Dunstan, who crowned king Edgar in 973. The Merovingian kings of France were probably the first to introduce Christian coronation to Europe. See also p 1289.

Coronel, Battle of (Nov. 1914), WWI victory of the German fleet, under Admiral von Spee, over the British, under Rear-Admiral Cradock, off Coronel on the Chilean coast. The British flagship *Good Hope* and the cruiser *Monmouth* were sunk.

Coroner, public official who inquires into deaths having apparent unnatural causes. In Britain the office dates from shortly before the appearance in the Articles of Eyre of 1194 of the keeper of the Crown's pleas (hence the name from the Latin *corona* for "crown"). He was a high-ranking officer who not only collected and recorded evidence relating to unusual deaths but protected the king's property against possible encroachment by the sheriffs. As the judicial structure became more complex, their role became limited. The Coroners Act of 1887 prohibited them from holding pleas of the Crown. By the Coroners Amendment Act (1926), a coroner, whose only duty became that of conducting inquests, must be a barrister, solicitor or medical practitioner of five years' standing.

Coronet, small crown worn on state occasions by peers of the realm in Britain. They were worn by dukes at least as early as the 14th century. In the reign of Elizabeth I they were worn by all other ranks except barons. In 1661 barons were also granted their own insignia.

Coronagraph, telescopic device for viewing the Sun's corona during daylight, at which time it is normally invisible. Mounted at a high altitude, it consists of a high-quality dust-free optical system and a filter (Lyot filter) through which only a very narrow wavelength band can pass. Thus individual emission lines of the coronal spectrum can be viewed without being obscured by the much more intense radiation from the Sun's surface. See also pp 975-977.

Corot, Jean-Baptiste Camille (1796-1875), French landscape and portrait painter, one of the most important 19th-century artists. He trained academically and travelled widely, making small oil sketches on the spot and later producing large salon paintings based on them. Critical evaluation of Corot's immense output has varied. His misty landscapes, highly popular in his time, were once considered his best work, current preference is for sketches and portraits. His landscapes influenced Cézanne and other post-impressionists.

Corporate state, concept of government in which workers and employers from similar industries are organized into corporations, these together with other corporations select representatives who determine national policy. Fascist Italy adopted features of the corporate state, with Benito Mussolini setting himself up as the final arbitrator of differences among the various corporate units.

Corporation, business organization that is legally a separate entity, which gives it limited liability as compared to a proprietorship or partnership. The owners or shareholders are not individually responsible for the legal dealings of the corporation, except to the extent of their holdings. The corporation form is most usual in large organizations, especially in the USA. In Britain the term *company* is often used.

Corpus Christi, feast of thanksgiving for the institution of the Eucharist, observed by the Roman Catholic Church and many high church Anglicans. It is kept on the Thursday after Trinity Sunday.

Corpus Juris Civilis, legal term meaning "body of the civil law". The name was originally given to the systematic compilation of Roman law drawn up in the 6th century which subsequently formed the basis of European law. **Corpus Juris Canonici** is the "body of the canon law".

Corpus luteum, mass of yellow tissue formed by the follicle in the ovary of a mammal after the ovum (egg cell) is released. If the ovum is fertilized, the corpus luteum secretes progesterone, a hormone needed to prepare the womb for pregnancy. If the ovum is not fertilized, the corpus luteum becomes inactive. See also p 165.

Correggio, full name Antonio Allegri da Correggio (c. 1490-1534), Italian painter from Correggio who worked mainly in Parma. In his oil painting and especially in his frescoes (notably those at Parma Cathedral) he made ingenious use of the available space and produced daring, although anatomically exact, foreshortening effects inspired by those of Michelangelo and Raphael. A soft golden haze (an effect learned from the paintings of Leonardo) characterize the major works of Correggio. One of the first painters to experiment with the dramatic effects of artificial light, he is the major link between the early illusionist painter Mantegna and the great Baroque ceiling painters. See also pp 1390-1391.

Corregidor, small island at the mouth of Manila Bay, Philippines. It was fortified by Spain in the 18th century and taken by the USA in 1898. An Allied stronghold during WWII, it surrendered to the Japanese in May 1942, but was retaken by US troops in February 1945. It was annexed to the Philippines in 1947. Area 55 sq km (25 sq miles).

Correlation, in geology, method of linking rock strata of the same age. Geologists do this by comparing similar rocks in different (and sometimes widely separated) outcrops or by studying the fossils they contain. See also **PALAEONTOLOGY**, pp 263-266, 267.

Correlation, in statistics, a number that summarizes the direction and degree of relationship between two or more dimensions or variables. Correlations range between 0 (no relationship) and 1.00 (a perfect relationship), and may be positive (as one variable increases, so does the other) or negative (as one variable increases, the other decreases). When two variables are highly correlated, as is IQ with school achievement, one may be used to predict the other. Thus, IQ tests have traditionally been used in schools to predict the likelihood of success. See also **INTELLIGENCE TESTS**, **STATISTICS**.

Correns, Karl Erich (1864-1933), German botanist and geneticist. In 1900 he rediscovered, along with two others, the works of Gregor Mendel, outlining the principles of heredity. Correns conducted experiments to determine the validity of Mendel's laws and helped to provide evidence that proved his theories.

Corrie, or cirque, enlarged head of a valley where a glacier forms. The enlargement is caused by the movement of firm (compacted snow), which travels out of the valley and down the mountain. See also p 224, 225.

Corroboree, Australian Aboriginal assembly for important dance rituals and festivals, particularly for initiating young men to adulthood by circumcision. Women were not permitted to attend corroborees, which were often held on special sites and provided the occasion for wild enjoyment. The term has since come to be used for all sorts of Aboriginal entertainment.

Corrosion, slow gradual tarnishing of surface or major structural decomposition by chemical action on solids, especially metals and alloys. It commonly appears as a greenish deposit on copper and brass, the reddish-brown deposit (rust) on iron or the grey deposit that quickly coats

freshly exposed aluminium, zinc and magnesium. Rust is the most important form of corrosion because of the extensive use of iron and its susceptibility to attack. Like many other forms of corrosion, it relies on an electrolytic process which occurs in moist conditions, especially sea-water. The net result may be explained in terms of an oxidation-reduction reaction, some metals such as aluminium and magnesium corrode readily forming the respective oxide which protects the under-surface from further corrosion.

Corrosive sublimate, mercuric chloride, $HgCl_2$, a highly poisonous salt. It is used as an insecticide and in the preservation of skins, furs and wood. It has also been used in very small doses as an antiseptic. See also CALOMEL.

Corsica (Corse), mountainous island in the Mediterranean Sea, about 160km (100 miles) SE of the French coast. Until 1768, when France purchased all rights to the island, it was under the control of a series of Italian rulers, having been a Roman colony from the 3rd century BC to the 5th century AD. Napoleon was born there in 1769. In 1794 Britain took the island, but Napoleon retrieved it for France. It was occupied by Germany in 1942-43. The capital is Ajaccio. Products: grapes, olives, mutton, cheese, wool, fish. Area 8,681sq km (3,352sq miles). Pop. (1968) 269,830.

Corsio, Gregory (1930-), US author and poet of the BEAT GENERATION. His volumes of verse include *The Vestal Lady on Brattle* (1955), *Gasoline* (1958), *Long Live Man* (1962) and *The Mutation of the Spirit* (1964).

Cort, Henry (1740-1800), British engineer who invented a process for purifying iron by puddling (stirring molten pig iron from a blast furnace). He also developed a method of shaping and finishing iron by passing it through rollers.

Cortázar, Julio (1914-), Argentine novelist and short-story writer, b. Belgium. His early short stories are concerned with the monster in man, the collection *Bestiario* (1951) describes several nightmares. His later work, while still surrealistic, also emphasizes structural literary innovation.

Corto-Real, Gaspar (c. 1450-c. 1501), Portuguese explorer. Sent by King Manuel I in 1500 to search for the Northwest Passage, he explored the coast of Canada and is believed to have discovered Greenland. In 1501 he made a second expedition, but failed to return.

Cortes, the legislature of Spain. Local cortes were set up in the 12th and 13th centuries as various regions were reconquered from the Moors. The first national Cortes met in 1810. It became the Spanish parliament during the Second Republic (1931-39) and during the period of FALANGE rule (1942-76), when its members were appointed by government agencies. Free elections to the Cortes recommenced in June 1977.

Cortés, Hernán (1485-1547), central figure in the Spanish conquest and colonization of Mexico. Under the patronage of Diego de Velázquez, Cortés sailed for central America with 550 men in 1518. He declared himself independent of Velázquez, gave himself the official standing and legal authority to colonize and marched inland toward the Aztec capital. Converting many of the local American Indians into allies of his cause, Cortés was able to capture Tenochtitlán in 1521. Cortés's personal power, symbolized by his titles and estates, was gradually eroded by the crown. He died in Spain, but his remains were transferred to Mexico in 1562. See also p.1370.

Cortex, in animal and plant anatomy, outer layer of a gland or tissue. Examples are the cortex of the adrenal glands, which is quite distinct from, and makes different hormones from, the central part, or MEDULLA, the cerebral cortex or outer layer of the brain, and the cortical layers of tissue in plant roots and stems lying between the bark or epidermis and the hardwood.

Cortisone, HORMONE produced by the cortex of the adrenal glands and essential

for carbohydrate, protein and fat metabolism, kidney function and disease resistance. Synthetic cortisone is used to treat adrenal insufficiency, rheumatoid arthritis and other inflammatory diseases, rheumatic fever and skin complaints. A potent, versatile drug, it can have unwanted side-effects such as body swelling.

Cortona, Pietro Berrettini da (1596-1669), Italian painter and architect, with BERNINI and BORROMINI the creator of the BAROQUE style in Rome. Cortona's mastery of illusionistic decoration is shown in the ceilings of the Barberini and Pitti palaces, Rome. His architectural masterpiece is the façade of the church of Maria della Pace, Rome.

Cortot, Alfred-Denis (1877-1962), French pianist, conductor and renowned teacher. He founded the Paris Orchestra Philharmonique and in 1905 formed a celebrated trio with Jacques Thibaud and Pablo CASALS.

Courumbé, chief commercial city of MATO GROSSO, SW Brazil. Standing on the River Paraguay, it flanks a region which is believed to hold the world's largest reserves of manganese. Its main communications are by river. Pop. (1975 est) 95,234.

Corundum, translucent to transparent mineral in many hues, aluminium oxide (Al_2O_3). It is found in igneous, pegmatitic and metamorphic rocks occurring as pyramidal or prismatic crystals in the rhombohedral system and as granular masses. It is the hardest natural substance after diamond. Gemstone varieties are sapphire and ruby, star sapphires reflect light in a six-pointed star. It is also used in watches and motors. Hardness 9; s.g. 4. See also pp.260, 261.

Corunna, Battle of (1809), engagement between Britain and France in the PENINSULAR WAR. The British commander, Sir John MOORE, was killed, but the French failed to prevent the British army from retreating and escaping from Spain.

Corvette, modern anti-submarine warship or, historically, and used interchangeably with "sloop", a small sailing vessel. Towards the end of WWII corvettes were replaced by frigates which were faster and better armed. See also p.569.

Corvidae, family of about 100 species of passerine (perching) birds, commonly known as the crow family, including CROWS, JACKDAWS, JAYS, MAGPIES, NUTCRACKERS, RAVENS and ROOKS. Crows are agile and aggressive in the air and will often mob birds of prey.

Corvo, Baron. See ROLFE, FREDERICK.

Coryphaena, genus of fish known commonly and confusingly as dolphins, this name also being used for several types of small whales. They are widespread, especially in tropical waters. Dolphin fish are fast swimmers and are brilliantly coloured. Species *Coryphaena hippurus*. See also p.340.

Cos. See KOS.

Cosa, Juan de la, (c. 1460-1510), Spanish navigator. Under Columbus he was the master of the *Santa Maria*, the ship which he ran aground in 1492. In 1500 he made the first large map of the New World, of great value to other cartographers.

Cosecant, ratio of the length of the side opposite to an acute angle in a right-angled triangle. The cosecant of angle A is usually abbreviated "cosec A" and is equal to the reciprocal of its SINE. See also p.796.

Cosgrave, Liam (1920-), Irish lawyer and politician. Elected to the Dail Eireann for the Fine Gael party in 1943, he was external affairs minister (1954-57), becoming party leader (1965) and prime minister from 1973 to 1977. He supported the British Government's plans for a Council of Ireland to link the governments of the Republic and the North. See also p.1781.

Cosgrave, William Thomas (1880-1965), Irish nationalist. He fought in the 1916 rebellion against Britain and helped win independence. Cosgrave was president of the IRISH FREE STATE (1922-32). His party, Cumann na nGaedheal, lost the election of 1932 to EAMON DE VALERA'S FIANNA FAIL. Soon after, Cosgrave helped found

the moderate Fine Gael Party, from which he resigned in 1948. See also pp.1780-1786.

Così Fan Tutte (1790), two-act comic opera by Wolfgang Amadeus MOZART, Italian libretto by Lorenzo da PONTE. Commissioned by Emperor Joseph II, it was first performed in Vienna. In a frivolous court farce, two disguised officers, Guglielmo (baritone) and Ferrando (tenor), test the fidelity of their ladies Fiordiligi and Dorabella (sopranos) to settle a wager. See also p.1453.

Co-signer, person whose signature appears along with the "maker" of a commercial document. The document is signed with the understanding that should the "maker" default the co-signer is responsible for the obligations incurred.

Cosine, ratio of the length of the side adjacent to an acute angle to the length of the hypotenuse in a right-angled triangle. The cosine of angle A is usually abbreviated "cos A". See also p.796.

Cosmetics, preparations applied to the body to beautify the wearer. From the Greek word meaning "skilled in adornment", such preparations are as old as mankind. The earliest were derived from vegetable colourings, and the ancient Egyptians used eye paints made of lead, antimony and copper ores. Galen, the Greek physician of the second century AD, created a cold cream which is still the basis for most cosmetic creams. The Italians led the modern development of cosmetics, the range of which was extended enormously by the discovery of aniline dyes in the mid-nineteenth century. There are now three main types of cosmetics: those for skin care (cleansing, stimulation and lubrication), make-up (pigmented foundation, rouge, face powder, lipstick and eye colourants), and such products as bath oils, deodorants and depilatories. See also pp.586-587.

Cosmetic surgery. See PLASTIC SURGERY.

Cosmic dust, very fine particles of solid matter in any part of the universe, including meteoric dust and interstellar material that can absorb starlight to form dark nebulae in galaxies. Spherical dust particles about 0.05mm (0.002in) in diameter, found in certain marine sediments, are thought to be the remains of some 5,000 tonnes of cosmic dust that fall to Earth each year.

Cosmic radiation, or rays, high energy radiation reaching the earth from space, the majority of which comes from the sun. Primary cosmic radiation consists of particles of extremely high energies which are usually protons, although the nuclei of atoms as heavy as nickel have been detected. When these particles strike the molecules of the atmosphere many other particles are produced, such as muons, pions and other mesons, leptons such as electrons and neutrinos and nucleons such as protons and neutrons, in addition to various HYPERONS. This process is secondary cosmic radiation and it leads to further nuclear reactions, or cascades. See also p.819.

Cosmology, branch of astronomy concerned with the origin, evolution and characteristics of the universe. Once considered the province of theologians and philosophers, it is now a science based on theoretical physics and mathematics. Experimental data are now available for testing various theories, including the "BIG BANG" theory (with the associated oscillating theory) and the STEADY-STATE theory.

Cosmonaut. See ASTRONAUT.

Cosmos, from the Greek *kosmos*, meaning "order", the universe considered as an ordered whole. PLATO and ARISTOTLE conceived of the universe as ordered by an intelligent principle. The conviction of an ordered nature became the basis of modern natural science.

Cosmos, summer-flowering plant, native to tropical America and cultivated in temperate climates. It has fern-like leaves and red or yellow disc florets, the ray florets occur in various colours. Common garden cosmos (*Cosmos bipinnatus*) may grow up to 3m (10ft) tall. Family Compositae.

Cossacks, community in S Russia, originating before the 16th century from

Cortés was nobly received by Montezuma, who believed he was an Aztec god.

Cortisone crystals. Their structure clearly visible when illuminated with polarized light.

Corvette, the fast, highly manoeuvrable anti-submarine vessel of World War II.

Juan de la Cosa, the western part of his great map of the New World made in 1500.

Cotangents and other trigonometrical ratios can be worked out on pocket calculators

Cotinga, family of birds which includes the cock-of-the-rock (*Rupicola rupicola*)

John Sell Cotman was the best watercolourist of the Norwich school (*Shady Pool*, detail)

Cotoneaster's apple-like berries reveal the relationship between the rose and the apple

escaped serfs and Tartar bands. The name comes from the Turkic *Kazak*, or adventurer. By the 16th century they had evolved into four main groups, with a militaristic society based on self-governing village communities and communal land-holding. Their relationship with the expanding Russian state was complex, and they took part in the revolts of Stenka Razin and Pugachev. By the 19th century their privileges had been curtailed and the tsar used them to suppress rebellions. During the civil war of 1918–20 most opposed the Bolsheviks, they strongly resisted collectivization. Their separate identity was suppressed by Stalin.

Costa, Lorenzo (c 1460–1535), Italian painter who decorated the Sforza Palace, Bologna. He succeeded Andrea Mantegna as court painter at Mantua, where he painted two *Allegories* for Isabella d'Este.

Costa, Lúcio (1920–), Brazilian architect who designed the town plan for Brasília, which is still in the course of its execution. Costa was responsible for inviting Le Corbusier to design the Ministry of Health building in Rio de Janeiro, which greatly influenced Brazilian architecture.

Costa Brava, coastal strip in Girona province, NE Spain, in Catalonia region, on the Mediterranean Sea near the border with France. Since WWII the area has developed a very important tourist industry and has many resorts along the coast.

Costa-Gavras, Costa (1933–), French film director, b. Greece, whose best-known works include the thrillers *Compromis secrets* (1956) and *Z* (1968). He also directed *L'aveu* (1970) and *État de siège* (1974), which have a political background, and *Section Spéciale* (1975).

Costa Rica, country in Central America between Nicaragua and Panama. The chief products are coffee, cocoa, bananas and sugar cane which are grown along the hot, coastal plains where most of the inhabitants live. Manufactured goods are imported. The capital is San José. Area 50,898 sq km (19,652 sq miles). Pop. (1975 est.) 1,986,000. See p.2016–2017.

Costello, John Aloysius (1891–1976), Irish politician. As leader of the FINE GAEIL party he was Prime Minister in two coalition governments (1948–51, 1954–57). His first government took the Irish republic out of the COMMONWEALTH. He resigned the leadership of Fine Gael in 1959.

Coster, Charles Theodores Henri de (1827–79), Belgian writer. His most famous work is *La Légende et les Aventures héroïques de Thyl Ulenspiegel et de Lamme Goedzak* (1868), written in deliberately archaic style. He also wrote *Légendes flamandes* (1858).

Coster, Laurens Janszoon (1370–1440), Dutch printer who is sometimes credited with having invented movable type which, after Coster's death, a worker took to Johann Gutenberg at Mainz.

Cost of living, money necessary to purchase a certain level of goods and services. Most countries publish information that charts family spending on such basics as food, clothing, heating, lighting and rent.

Costume, in the THEATRE, clothing worn by actors during a performance. Early theatrical costume was closely related to religious ceremony and tended to be highly symbolic. The simplicity of medieval costume was replaced later by lavish splendour of dress especially in the courts of 16th- and 17th-century Europe. In the 18th and 19th centuries authentic detail in elaborate period costumes mirrored the concern for historical accuracy. Today the effectiveness of stage costume depends on the designer's ability to interpret the director's approach to a production.

Corway, Richard (1742–1821), British painter famous for his miniatures. He used an unusual method, transparent watercolours on ivory, to give a translucent effect. He also painted portraits in oils and was elected a full academician of the Royal Academy in 1771.

Cotangent, ratio of the length of the side adjacent to an acute angle to the length of the side opposite to the angle in a right-angled triangle. The cotangent of angle A is usually abbreviated "cot A" and is equal

to the reciprocal of its TANGENT. See also IRIGONOMETRIC FUNCTIONS, p.796.

Cotinga, any of about 90 species tropical birds, of whom the males are generally brightly coloured and bizarrely ornamented. Examples are the COCK-OF-THE-ROCK and the UMBRELLA BIRD. There are also some plain and dull-coloured species. Most cotingas live in the Amazon forests. Family Cotingidae.

Cotman, John Sell (1782–1842), British landscape painter and etcher, co-founder with John Crome, of the NORWICH SCHOOL. His etchings of architecture in Normandy and England are important. Though not valued during his life, Cotman's watercolours – austere landscapes in broad washes of yellow, browns, blues and greens – are now highly prized, eg *Greta Bridge* and *Chirk Aqueduct*.

Cotoneaster, genus of about 50 species of deciduous shrubs of the ROSE family, mostly native to China. They have small white flowers and small, red or black, round, berry-like fruit, and are often cultivated as ornamental plants.

Cotonou, city in Benin, w Africa, approx. 24 km (15 miles) sw of Porto Novo. The former capital and largest city in Benin, it is the main port and an important transport centre for the country. Oil is drilled offshore and Cotonou is the distribution centre for petroleum products. Industries: food processing, textiles, motor vehicle assembly. Pop. 175,000.

Cotopaxi, active volcano in N central Ecuador 65 km (40 miles) s of Quito, in the Andes Mountains. The highest continually active volcano in the world, its frequent eruptions have caused severe damage. It was first scaled in 1872 by Wilhelm Reid. Height 5,896 m (19,344 ft).

Cotswolds, range of limestone hills lying mainly in Gloucestershire, w England and extending 80 km (50 miles) Ns from Bath. The local stone is widely used as a building material and the region is also known for its breed of sheep. The highest point on the hills is Cleeve Cloud, 314 m (1,031 ft).

Cotton, Thomas Heary (1907–), British golfer. His victory in the 1934 British Open ended 10 years of US domination, and two more Open titles (1937, 1948) established him as the foremost British golfer of his era. He won further renown as a writer and adviser on golf-course architecture.

Cotton, annual shrubby plant native to subtropical regions. Some species can be tree-like or ornamental, most cotton is grown for the fibres that develop in the seeds and are made into fabric. The leaves are lobed and flowers are yellow, white, pink or purple. Cotton needs a long, warm growing season, with ample moisture, except at harvest time. COTTON SEED is also commercially valuable. Family MALVACEAE. See also pp.712–713.

Cotton aphid, also called melon aphid or cotton louse, small, soft-bodied insect that is green to black and may be winged or wingless. It feeds on cotton, squashes, melons or lilies and spreads the disease that attacks crops of Easter lily bulbs in the USA. Length 3 mm (0.125 in). Family Aphididae; species *Aphis gossypii*. See also APHIS.

Cotton family, English antiquarians, important in the development of libraries. Sir Robert Bruce Cotton (1571–1631) collected many documents, including Hebrew and Greek manuscripts and Anglo-Saxon charters. His son Sir Thomas Cotton (1597–1662) increased the collection, which was transferred to the nation in 1700 by Sir Robert's great-grandson Sir John Cotton (1679–1731). The collection became part of the original BRITISH MUSEUM in 1753.

Cotton gin, machine used for separating cotton lint from seeds. The gin patented in 1794 by Eli WHITNEY (which could clean 22 kg – 50 lb – per day) consisted of a toothed cylinder which revolved and extracted the cotton seeds from a grate-like container.

Cotton industry, growing, harvesting, treating and weaving of cotton fibres from the fruits of the cotton plant (*Gossypium* SP.). The fibres are harvested, mostly by machine, and seeds and impurities such as

leaf debris and dirt are separated from the lint, also by machine. The raw lint is graded, baled and transported to the mills, where the lint is further cleaned, blended, carded to align the fibres in the same direction, and then spun into threads or yarn on bobbins or spools. The cotton yarn can then be woven into fabrics, often together with synthetic yarns. Further treatment of the cotton includes fulling, or shrinking and thickening the fibres. Finishing operations include bleaching, dyeing and printing. As a crop, cotton is one of the world's largest because of its low production cost; it is grown in most tropical and subtropical countries where the terrain is suitable. Cotton seed, which is the greater part of the fruit by weight, is also a major crop, being processed to make edible oil, cattle cake and other products. See also pp.590–593.

Cotton louse. See COTTON APHID.

Cotton mills, the cotton-spinning factories in Britain which emerged during the INDUSTRIAL REVOLUTION. Cotton manufacture was by far the largest industry between 1780 and 1850 and was the first to make a large-scale move from domestic, or cottage, industry (in which piece-work was distributed to hand-loom spinners in their homes) to factory industry, in which people left their homes to work steam-powered looms in the mills. See also pp.592–593, 1564–1565.

Cottonseed, seed of the COTTON plant from which cottonseed oil is extracted. This oil is used in salad oil, margarine, soap and paint. The seed hulls, or outer coverings, are ground and used as a livestock feed and fertilizers.

Cotton-tail, small rabbit with a fluffy white tail from which it gets its name. It lives in widely varying habitats from s Canada to Argentina and relies on its speed and ability to "freeze" to survive in the presence of many carnivorous neighbours. Length 27.5–50 cm (11–20 in). Genus *Sylvilagus*. See also pp.87.

Cottrell, Sir Alan Howard (1919–), British metallurgical scientist, who became master of Jesus College, Cambridge, in 1974. He has won numerous prizes for his work, most recently the Harvey Science Prize from the Technion Israel Institute. His publications include *Theoretical Structural Metallurgy* (1948) and *The Mechanical Properties of Matter* (1964).

Cottrell, Leonard (1913–), British writer and archaeologist. He worked for the BBC (1942–59) before devoting himself to writing. His books include *The Bull of Mino* (1958), *The Concise Encyclopedia of Archaeology* (1965) and *Lost Civilizations* (1974).

Cotyledon, first leaf or pair of leaves produced by the embryo of a flowering plant. In most species this seed leaf is small, but those of the common bean plant, for example, are easily visible at germination. The function of the cotyledon is to store and digest food for the embryo plant. See also DICOTYLEDON, MONOCOTYLEDON.

Coubertin, Baron Pierre de (1863–1937), French educator and sportsman. He is remembered for his untiring efforts to organize a modern version of the ancient Greek OLYMPIC GAMES. As a result, the first modern Games were held in Athens in 1896 and have continued ever since.

Couch. See CUCURBO.

Couch grass, or quack grass, or twitch, persistent, perennial grass that spreads rapidly by rhizomes, or underground stems. It is a common weed in the Northern Hemisphere. Species *Agropyron repens*.

Coué, Emile (1857–1926), French spiritual healer who made use of hypnotism and auto-suggestion. The chief principle of "Couéism", popular in the 1920s, was his adage "Every day, and in every way, I am becoming better and better".

Cough, the sudden and noisy expulsion of air from the lungs. It is a reflex action of the body to try and dislodge an obstruction or irritant in the respiratory system. A common symptom, a cough can be associated with a wide variety of conditions, from a mild cold to childhood diseases such as WHOOPING COUGH and more serious

illnesses such as PNEUMONIA and EMPHYSEMA

Coulomb, Charles Augustin de (1736-1806), French physicist. After serving as a military engineer in the West Indies, he returned to Paris shortly before the Revolution. His invention of the torsion BALANCE led to his experiments in electrostatics and the discovery of the inverse-square law that bears his name. The unit of electric charge is named after him. See also COULOMB'S LAW

Coulomb's law, one of the basic inverse square laws of physics. It states that the force between two point electric charges is proportional to the product of the charges and inversely proportional to the square of the distance between them. It can be stated mathematically as $F = Q_1 Q_2 / 4\pi\epsilon_0 r^2$ where F is the force, Q_1 and Q_2 are the charges and r is the distance between them; ϵ_0 is a constant called the permittivity of the medium between the charges.

Council, general term to describe a variety of bodies, elected and appointed, which carry out advisory, legislative or executive functions. In post-conquest Britain the council of medieval kings was the **CURIA REGIS**, from which sprang the **ROYAL COUNCIL**. The barons and officers of state called to it were expected to give counsel or advice. The most obvious public use of the word today is for the elected borough and county COUNCILS.

Council for Mutual Economic Assistance. See COMECON

Council of Europe, organization formed in 1949 to work for the greater political and cultural unity of Europe. Its member states are Austria, Belgium, Britain, Cyprus, Denmark, France, West Germany, Greece, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Malta, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and Turkey. In 1958 it established the European Court of Human Rights to protect individuals against the arbitrary acts of national governments. Since matters of defence are the function of NATO, and economic affairs the function of the E.E.C., the Council is primarily concerned with social and cultural affairs. See also pp. 1742-1743

Council of Ministers (E.C.), policy-making body of the European Economic Community, composed usually of the foreign ministers of each member nation. Representing the interests of the individual member states, the council generally acts only on proposals from the E.C.'s executive organ, which represents the community as a whole.

Council of Ministers (Soviet), highest executive and administrative organ of the USSR, empowered to establish and oversee the monetary system, law and order, civil rights policy and the organization of the armed forces. It also acts as foreign policy adviser. It is responsible to the Supreme Soviet, which appoints its members, or to the **PRESIDIUM**.

Countdown, final period preceding a rocket flight during which systems and components are checked on a pre-arranged schedule. A failure of one component results in either an interruption ("hold") of the countdown or the abandoning ("scrubbing") of the flight.

Counter culture, term used to describe the life-style of young people in the USA and in Europe who, in reaction against traditional Western values, adopted Eastern religion, communal living, drugs and other signs that they had "dropped out" of bourgeois society.

Counter-espionage, branch of a government's intelligence organization concerned with protecting a country from espionage. Counter-espionage also includes protection from other acts that might endanger a country's security, such as theft, sabotage, kidnapping and assassination. In Britain counter-espionage is run by the Security Service, generally known as MI5 (MI6 is the Secret Service, which controls espionage abroad). MI5 may collaborate with other government departments and with the Special Branch of the Metropolitan Police.

Counterfeiting, the illegal manufacture of coins or printed "money". Although

counterfeiting is a form of forgery, it is considered more serious since it is regarded as an offence against the government. In England counterfeiting was treated as treasonable from the 14th century until 1936.

Counterpoint, in music, technique in composition involving independent melodic lines that are sung or played simultaneously to produce HARMONY. The term, originally meaning "note against note", derives from the practice in the Middle Ages of adding an accompanying note to each note of a melody. Contrapuntal writing reached its apogee in the 16th century in the work of **BYRD**, **LASSO** and **PALESTRINA**, and in the organ compositions of **BACH** in the 18th century.

Counter-Reformation, revival of the spiritual and theological life of the Roman Catholic Church in Europe during the 16th and early 17th centuries. It began as a reaction to the Protestant REFORMATION. The Counter-Reformation strove to remove many of the abuses that had crept into the late medieval Church and won new prestige for the papacy and the Church. A leading part was played in the movement by new monastic orders, particularly by the Society of Jesus (**JESUITS**), founded by St Ignatius of Loyola. The Council of Trent (1545-63) clarified Roman Catholic teaching on the major theological controversies of the period and initiated internal Church reforms.

Counter tenor, male alto voice of the same register as the female CONTRALTO. It is produced by the use of **FALSETTO** and is most common in British church choirs. Alfred DELLA began its secular revival in the 1940s.

Countess of Huntingdon's Connexion, Calvinist Methodist denomination founded in England by Selina, Countess of Huntingdon, in the middle of the 18th century. It was affiliated to the Congregational Churches of England and Wales until this became the United Reformed Church in 1972.

Count of Monte Cristo, *The* (1844), novel by Alexandre DUMAS the elder. Edmond Dantès, a young sailor, is wrongfully imprisoned for 14 years in the Château d'If; there he is befriended by the Abbé Faria who dies leaving Dantès his fortune. Escaping disguised as Faria's corpse, he finds the money and uses it to avenge himself on his enemies.

Country and Western music, popular music originally associated with the rural and mountainous areas of the USA. The music now typically features sentimental lyrics and instrumental music played with stringed instruments such as the guitar, banjo or fiddle. Its origins were in the folk music of British immigrants, although in Texas Negro blues were also an influence. Nashville, Tennessee, is considered the commercial centre of country music in the USA. See also pp. 1756-1757

Country dancing. See FOLK DANCING

Country rock, in geology, rock adjacent to mineral veins, or that has an igneous intrusion. The general term "gneiss" was applied to this type of rock formation in older mining technology. It is metamorphic rock, usually banded and made up of coarse-grained material.

County, one of the main administrative divisions of the government of a state. In Britain and the Republic of Ireland it is a division of LOCAL GOVERNMENT. Counties based on historic boundaries are known as geographical counties, those with a function in local government are called administrative counties. Local government in Northern Ireland is administered through six geographical counties, which are subdivided into borough, urban and rural districts. In the early 1970s changes were made in the old county boundaries of England and Wales for administrative purposes. See also articles on individual counties and p. 2028

County Borough. See BOROUGH

County Championship, England's premier cricket competition, contested by the 17 first-class counties in a series of three-day matches. Championship rules were first applied to nine counties in 1871, when Gloucestershire and Nottingham-

shire tied for the title, although Surrey (winners in 1864, when sporting newspapers decided the championship) are held to be the first champions. Since then Yorkshire have won the most titles, followed by Surrey. The authorities have made several innovations, such as bonus points and limiting the first innings to a combined total of 200 overs, in an attempt to attract spectators. Perhaps the most significant contribution to a competition lacking public support was its first-ever sponsorship, in 1977, by Cadbury Schweppes.

County council, chief administrative body of the local government division of county in Britain. The county is the principal administrative district for local government. Each council consists of a chairman and councillors. It is elected every three years. It has both legislative and executive powers (as in the levying of rates). County councils derive from Anglo-Saxon and medieval shire courts. Historically they had no jurisdiction over large boroughs within their boundaries, but since the reorganization of local government in 1974, the power of borough councils has largely disappeared. There are 59 county councils (including metropolitan areas like greater London and greater Manchester) in England and Wales.

County Court, British court which has its origin in the shire court of Anglo-Saxon times. The modern courts date from the County Courts Act of 1846. At that time the main business of the court, presided over by a paid magistrate (it had previously been the sheriff), was the recovery of small debts. Since then its jurisdiction has expanded. By the 1959 act it is concurrent with the High Court in matters of COMMON LAW, EQUITY and PROBATE. There are more than 300 county courts.

Comp d'état, swift stroke of policy, either against the ruling power of a state or by the state against an element within it. Of the first kind, the most usual is a military take-over of civilian government, such as that by "the Colonels" in Greece in 1967. An example of the second kind is HITLER's murder of the Sturmabteilung leaders on 30 June 1934. Today the term is often shortened merely to "coup".

Couperin, François (1668-1733), French composer. He was organist and harpsichordist at the court of Louis XIV "Le Grand", as he was known, was the greatest of a large and long-lived family of brilliant musicians. Although now principally remembered for his many harpsichord pieces, his book on the technique of harpsichord-playing was influential in his day. See also pp. 1484-1485

Courbet, Gustave (1819-77), the leading French realist painter of his time. Largely self-taught, through his studies of great works in the Louvre, Courbet rejected traditional subject matter and instead painted monumental peasant groups, scenes from life in Paris and still lifes. His nudes, splendid in their richness of colour and textural contrast, and ranging from the mildly to the highly erotic, aroused shocked criticism - as did much of his work. His equally controversial political activity forced him into exile (1873) in Switzerland, where he spent his remaining years. Courbet's rejection of both Romantic and Classical ideals prepared the way for MILLET, DEGAS and the IMPRESSIONISTS. See also pp. 1594-1596.

Courmand, André (1895-), French-born US physiologist. He shared the 1956 Nobel Prize in physiology and medicine with Dickinson Woodruff RICHARDS and Werner FORSSMANN for their discoveries concerning heart catheterization and pathological changes in the circulatory system.

Cournol, Antoine-Augustin (1801-77), French philosopher and mathematician. He applied mathematics to the study of economics and contributed to the theories of supply and demand and monopoly. His most important work was *Researches Into the Mathematical Principles of the Theory of Wealth* (1838).

Coursing, ancient and controversial field sport in which two specially bred greyhounds race after a hare driven by beaters

Coulomb showed that an electrostatic charge is confined to the surface of a conductor

François Couperin taught music to the royal children at the court of Louis XIV

Courbet's paintings and politics shocked the conservative Parisians (self-portrait)

Coursing is one of several controversial bloodsports still actively pursued in Britain

Court, Margaret Smith

Jacques Cousteau introduced the magic of underwater life to a worldwide audience.

Covent Garden's old vegetable market has been modernised to house new shops.

Coventry's 14th-century cathedral was almost totally destroyed by bombs in WWII.

Sir Noel Coward, the brilliantly versatile actor, writer, composer and 'Englishman'.

into a closed area. The dogs are released some 73m (240ft) behind the hare and are awarded points for speed and agility, turning the hare, knocking it off its feet and, occasionally, for the kill. In Britain, where rules were formulated in the 16th century, the coursing season runs from September to March with the WATERLOO CUP, held near Liverpool, its blue ribbon. Entrants for courses are restricted to "stakes" of 8, 16, 32 or 64 and drawn in pairs, the knockout system being used to determine the finalists.

Court, Margaret Smith (1942-), Australian tennis player. She won the US amateur singles title (1962; 1965, 1968-69), US open singles (1969-70, 1973), and Wimbledon (1963; 1965, 1970), Australian (1960-66; 1969-71) and French (1962; 1964, 1969-70) ladies singles championships. In 1970 she equalled Maureen Connolly's record of winning all these titles in the same year.

Court, law. See LAW COURTS.

Court, ward of. See WARD OF COURT.

Courtauld, Samuel (1793-1881), British industrialist of Huguenot descent. He founded the firm of Courtaulds in 1816 at Bocking, Essex, which at first specialized in the production of silks, and from 1904 developed the production of viscose rayon. He promoted the nylon industry in Britain and pioneered other man-made fibres. His great nephew Samuel (1876-1947) was chairman of the company from 1921. In 1931 he bequeathed his London house (Home House), and his fine collection of 19th-century French painting to the University of London to form a department for the research and study of art (the Courtauld Institute). Courtauld's gift of paintings was later augmented by the donation of other private collections.

Courtney, Thomas (1937-), British actor. A stage actor from 1960, he is known chiefly for his film appearances in *The Loneliness of the Long Distance Runner* (1962), *Billy Liar* (1963), *King and Country* (1964) and *Doctor Zhivago* (1965).

Court leet, court of record in Britain. It was established in a MANOR, HUNDRED or lordship by royal charter. At its annual session it reviewed the FRANKPLEDGE and tried offenders for crimes committed within its area of jurisdiction. Courts leet fell into disuse with the Summary Jurisdiction Act of 1848, but a few have survived to the present day.

Court martial, court of the armed services for trial both of accused service persons and of certain civilians who are subject to the Services Discipline Acts. The origin of military courts is to be found in the Court of Constable and Marshal, part of the CURIA REGIS established in England by WILLIAM THE CONQUEROR. Modern status derives from Mutiny Act 1689. Current authorities are the Army Act 1955, Air Force Act 1955, and Naval Discipline Act 1957, as amended. Members of the court are serving officers, in certain cases advised by a judge advocate.

Courtenay, Dame Cicely (1893-), British film and stage actress. She began her stage career in Manchester in 1901 and made her first film in 1929. At the age of 78 she appeared in London in the play *Move Over Mrs Markham*.

Court of Arches, archbishop's court for the administration of ecclesiastical law in the province of Canterbury, in the Church of England. In some cases appeals are allowed from lower church courts to the Court of Arches.

Court of Chancery. See CHANCERY.

Court of Common Pleas, sometimes called Common Bench, superior court of British COMMON LAW, now defunct. It came into being in the late 12th century to hear civil disputes between individuals as opposed to litigation in which the Crown was a party. In the later Middle Ages it also supervised lower courts but its judgments were subject to review by the King's Bench. In 1880 it was united with Queen's Bench.

Court of Criminal Appeal, British court founded in 1907 by the Criminal Appeal Act and abolished in 1966, when its jurisdiction was transferred to the Criminal

Division of the Court of Appeal. Its judges were the Lord Chief Justice and the KING'S BENCH. Appeals could be made to it by a person convicted on indictment, either on a question of law or, with the leave of the judge who tried him, on a question of fact. Appeals against sentence were also heard.

Court of Session, supreme court of civil jurisdiction in Scotland. It derives from the 15th century, when JAMES I called together the Chancellor and certain lords three times a year to settle disputes. JAMES IV turned their sessions into a regular court of law. The court has the same judges as the criminal High Court of Judiciary and is presided over by the Lord President.

Court of Star Chamber, medieval court of equity in the Palace of Westminster, which derived its name from stars painted on the ceiling. It was used in the 15th and 16th centuries to assert royal power, but its authority was disputed by COMMON LAW lawyers, who disliked its swift and sometimes harsh proceedings. The Stuarts used it for ecclesiastical cases and to enforce the PREROGATIVE. It was abolished by the LONG PARLIAMENT in 1641.

Court of the Lord Lyon, Scottish body which controls all arms, badges and signs armorial, the granting of certificates of change of name and the execution of royal proclamations. Under the Lord Lyon, the chief officer of arms, are three heralds and three pursuivants.

Courtois, Jacques (1621-75), French painter who worked mainly in Italy. Influenced by Guido RINI and Francesco Albani, he is known principally for his paintings of battles.

Court roll, written record of the proceedings in any court, but applying especially to the manor courts of medieval Britain. In the roll were recorded wills, grants, surrenders and admissions of tenure (in particular copyhold), and also any matters pertaining to services and duties attached to the manor (such as COMMON LAND rights).

Courtship, in human society, the period before marriage in which a man wooes a woman. In many societies this not only involves the participants emotionally but can include fixed customs and rituals, such as the exchange of gifts, which are often presented to the woman's parents as well. In some cultures, where marriage is arranged (as in India), the couple do not meet before the marriage. In animals, courtship includes various forms of pre-mating activity. See also p 82.

Cousin, Jean, name of two French artists. Jean the Elder (1490-1560), a painter and designer, designed stained-glass windows in the St Eutrope chapel at Sens Cathedral and painted the first great French nude, *Eva prima Pandora* (Louvre). His son was Jean the Younger (1522-94).

Cousin, Jacques Yves (1910-), French oceanographer. Best known as the co-inventor (with Emile Gagnan) of the AQUATUNG, an independent diving unit permitting divers underwater mobility - he also invented a process of underwater television and conducted a series of undersea living experiments (CONSHELF I-III, 1962-65). Many of the expeditions made by his research ship *Calypso* were filmed by him for television and cinema. See also p 484.

Coutts, Thomas (1735-1822), British banker who, with his brother James, established Coutts & Co., at which George III and every successive British monarch have had banking accounts. They took over an existing business in the Strand, London, at premises which the bank still occupies.

Couvade, variety of customs in which the father simulates the experiences of childbirth during the final stages of the mother's pregnancy. It involves such customs as fasting, retiring to bed and miming birth pains. It occurs in ethnic groups and cultures throughout the world.

Covalent bond, type of CHEMICAL BOND in which two atoms share a pair of electrons, both electrons move in the combined field of the two nuclei. Most compounds with covalent bonds have discrete molecules.

They tend to have low melting points and to be soluble in non-polar solvents. Covalent bonding is most common in organic compounds. See also pp 891-892, 892-893.

Covalent radius, effective radius of an atom that is part of a covalent bond. It is computed in a way analogous to that for the IONIC RADIUS in ionic compounds, by considering the atoms as regularly packed spheres.

Covenant, in Jewish and Christian theology, a mutual agreement between God and his people. The Old Testament form of the bond, symbolized by the ARK OF THE COVENANT, was the rendering of sacrifices by the people of Israel in return for God's favour. The New Testament stresses the new and perfect form of covenant by which men receive the free gift of God's grace through faith and the life and death of Christ.

Covenant, Ark of the. See ARK OF THE COVENANT.

Covenanters, Presbyterians in Scotland in the 17th century, pledged by the National Covenant (1638) to uphold their religion. They opposed CHARLES I but supported the parliamentarians only after they had agreed to introduce Presbyterianism in England and Ireland as well as Scotland. When the English parliament refused to implement this agreement, the Covenanters allied with the future CHARLES II, only to be defeated at DUNBAR and WORCESTER. Despite further persecution after Charles's restoration, Presbyterianism was restored in Scotland in 1688. See also pp 1432-1433.

Covent Garden, leading opera house of England, founded in 1732 in the heart of a produce market in London, located in its present building since 1858, from 1946 also the home of the ROYAL BALLET. In the late 19th century the ROYAL OPERA COMPANY achieved world fame through many great singing stars. After a decline in the early 20th century Covent Garden again became one of the world's foremost opera houses. Joan SUTHERLAND achieved world renown there and musical directors since WWI have included Rafael Kubelik (1955-58), Georg Solti (1961-71) and Colin Davis. There was also a fruit and vegetable market at Covent Garden until 1974, when it moved to Nine Elms.

Coventry, city in West Midlands, central England, (18 miles) SSE of Birmingham. It was an important medieval market town and weaving centre. The city centre was badly damaged by bombs during WWII and the 14th-century cathedral of St Michael was destroyed, a new cathedral, designed by Sir Basil SPENCE, was completed in 1962. It is the home of the University of Warwick. Industries: motor vehicles, mechanical and electrical engineering. Pop. (1973) 334,440.

Coverdale, Miles (1488-1569), English priest who issued the first printed English Bible (1535) and the 'Great Bible' (1539). He was Bishop of Exeter (1551-53), in exile (1554-59) and rector of St Magnus, London (1564-66). See also GREAT BIBLE, p 1416.

Cow, name for mature female CATTLE that have borne at least one calf. It is also applied to other female mammals, such as elephants and seals.

Cowan, James (1870-1943), New Zealand writer on the MAORI and New Zealand pioneer days. He wrote *Maori in New Zealand and Legends of the Maori*.

Coward, Sir Noel Pierce (1899-1973), British playwright, composer and performer. He first attracted notice as a playwright with his drama *The Vortex* (1924) and later for his highly polished comedies such as *Hay Fever* (1925), *Bitter Sweet* (1929), *Private Lives* (1930), *Present Laughter* (1939) and *Blithe Spirit* (1941). Other works written by him include the films *In Which We Serve* (1942) and *Brief Encounter* (1946). He also composed hundreds of songs, including *Mad Dogs and Englishmen* and *Mad About the Boy*, performing many of them in cabaret and revues.

Cowbird, bird that follows herds of cattle, sometimes perching on the animals to feed on ticks. It lives in the USA and South

America. The female of most species lays its eggs in the nest of another bird, leaving the "host" bird to rear the young. Length to 20cm (8in). Family Icteridae.

Cowboy, or cowhand, US ranch hand, usually mounted on a horse, who tends large herds of cattle. Traditionally living and working in the West, cowboys came into prominence after the Civil War, in the late 1860s. They have been romanticized in song and story and today are a symbol of the rugged independence, colour and vigour of the old "Wild West". Expert horsemen and rope men, they saw the commercial possibilities in the herds of horses and cattle that wandered the plains. See also GAUCHO.

Cowdrey, Michael Colin (1932-), English cricketer. He first played for Kent in 1951 and was captain of the county from 1957 to 1971. He played in 114 test matches for England (27 as captain) and went on 11 overseas tours. He made 107 centuries in first-class cricket (22 in Test matches) and on his retirement in 1976 held the English record for the highest number of Test runs and the world record for Test catches.

Cowell, Henry Dixon (1887-1965), US composer. His large output included 20 symphonies; some of his compositions are influenced by non-Western music. He created "tone clusters" (dissonance produced by striking piano keys with the fist or forearm) and other piano pieces are played directly on the strings by rubbing, plucking or striking.

Cowes, town on the N coast of the Isle of Wight, renowned for its regatta at the beginning of August, called Cowes Week. Royal patronage has ensured its place in the social as well as the yachting calendar. Every two years the international ADRIAL CUP series is held there.

Cowfish, or trunkfish, bony marine fish found on both sides of the tropical Atlantic. Its triangular body has netlike markings and spines projecting from the top of the head. The scales are fused. Length up to 50cm (18in). Family Ostracidae, species *Acanthostracion quadricornis*.

Cowley, Abraham (1618-67), English poet and a founder of the Royal Society. His work, marking the transition between METAPHYSICAL and AUGUSTAN poetic styles, includes *The Mistress, or Love Poems* (1647), *The Davids and Pindaric Odes* (1656).

Cowley Fathers, popular name for priests of the Society of St John the Evangelist (SSJE), an Anglican society of mission priests and laymen founded in 1866 by the British cleric R.M. Benson, then vicar of St James's, Cowley, near Oxford. The first monastic community for men to be established in the Church of England since the Reformation, it now extends to several countries.

Cowpea, also called black-eyed pea, bushy annual plant native to Asia. It has edible bean pods measuring as much as 30cm (12in) long, and is grown mainly for hay, green manure or as cattle feed. Family Leguminosae; species *Vigna sinensis*.

Cowper, William (1731-1800), British poet and hymn writer. He was subject to intermittent depression, but during his lucid periods wrote a variety of prose and poetry, such as the long blank-verse poem *The Task* (1785), which is full of descriptive detail and love of the countryside. See also TASK, THE.

Cowpox, contagious disease in cows. It is caused by a virus, and symptoms are pustular eruptions on the teats and udder. Cowpox pus was used by Edward JENNER to develop a vaccine against SMALLPOX. See also p.1477.

Cowrie, or cowry, gastropod MOLLUSC identified by an ovoid, highly polished shell with a long toothed opening and varied markings. It is found on tropical coral shores. Length: 8.3-152mm (0.33-6in). Family Cypridae; more than 160 species, including the map cowry *Cypraea mappa*.

Cowslip, herb of the PRUNELLA family, with a hanging yellow flower. Familiar in British meadows, it is not so widespread as it once was, species *Primula veris*. In the US

the name cowslip is given to the marsh marigold or kingcup, a member of the BUTTERCUP family.

Cox, David (1783-1859), British landscape artist, regarded as one of the country's best watercolourists and known particularly for his paintings of North Wales. In 1836 he began painting on coarse wrapping paper which he found particularly suitable for absorbing the washes quickly.

Cox, Mark (1943-), British tennis player. He developed a solid left-hander's game to rank as Britain's No. 1 in the mid-1970s, when he was a consistent performer on the lucrative international circuit. He won the Dewar Cup in 1969. **Coxswain**, person who steers a boat or ship. In rowing competitions, such as between Oxford and Cambridge universities, he not only steers the boat but also directs the rhythm of the crew's strokes.

Coxwell, Henry Tracey (1819-1900), British balloonist who made his first ascent in 1844. In 1870, during the Franco-Prussian War, he helped to form a corps of balloonists for the German forces.

Coyote, wild dog, resembling a small wolf, originally native to W North America. Coyotes have moved into many eastern areas of the US formerly inhabited by wolves, including New England. Usually greyish-brown, they have pointed muzzles, big ears and bushy tails. Length: 90cm (35in); weight: about 12kg (26lb). Species *Canis latrans*. See also CANTOAS.

Coypu, large aquatic rodent, native to South America. It now also lives in North America and parts of Europe, both wild and on fur farms. Coypus have brown outer fur and soft grey underfur, commercially known as nutria. Overall length: 1.06m (3.5ft); weight: 8kg (18lb). Species *Myocastor coypus*.

Cozens, Alexander (c.1717-86), British painter, b. Russia, one of the earliest English landscapists in watercolours. Cozens is best known for his "blot drawing", a system of drawing in which dots of colour are randomly placed on paper and then integrated into a sketch.

Cozens, John Robert (1752-97), British painter of watercolour landscapes, a pupil of his father Alexander Cozens. Described by Constable as "the greatest genius that ever touched landscape", Cozens painted landscapes of a poetic rather than an exact topographical character and in doing so influenced TURNER, GATTON and other English landscapists. See also p.1578, 1578.

Crab, flattened, triangular, or oval DECAPOD CRUSTACEAN covered with a hard shell. Primarily marine, some crabs are found in fresh water and a few are terrestrial. Their short abdomen, often called a tail, is bent under. Most have a pair of large foreclaws, a pair of movable eyestalks and a segmented mouth. Crabs usually move sideways. Many of the 4,500 species are edible. Size: pea-sized to 3m (12ft) from leg tip to opposite leg tip. Order Decapoda. See also pp.30-31, 35, 35.

Crab apple, small sour fruit produced by certain apple trees. The various species grow in Europe, North America and Asia. The fruit is used in making preserves and jelly. Family Rosaceae, genus *Malus*.

Crabbe, George (1754-1832), British poet. His poetry is imbued with the atmosphere of his native Suffolk and is unflinchingly realistic, as in *The Village* (1783), *The Parish Register* (1807) and *Tales of the Hall* (1819).

Crab nebula, bright emission nebula in the constellation of TAURUS, the still expanding remnant of a supernova first observed by Chinese and Japanese astronomers in 1054. Its structure consists of gaseous filaments. The Crab is a powerful radio and X-ray source, with a pulsar located at its centre. See also pp.922-923, 923, 981, 984-985, 986-987, 1012.

Crabs, name commonly given to the condition of being infested with the crab louse, *Phthirus pubis*, in the hair of pubis and armpits. Crabs is caused by poor hygiene and crowded living conditions. Treatment includes shaving of the infested

hair followed by the application of ointment containing DDT.

Crab spider, webless SPIDER that moves sideways like a crab and is found throughout the world. Crab spiders hide on flowers whose colour they imitate, and grab their prey as it comes to feed. They inject venom into the victim's nervous system or blood, or both. Length: 20mm (0.8in). Family Thomisidae.

Cracking, stage in oil-refining during which the products of the first distillation are treated to break up the hydrocarbons into smaller molecules by the controlled use of heat, catalysts and often pressure. The cracking of petroleum yields heavy oils, petrol, and such gases as ethane, ethylene and propylene, which are used in the manufacture of plastics, textiles, detergents and agricultural chemicals. Cracking is therefore a means of yielding greater amounts of the lighter hydrocarbons, which are in greater demand, from heavier fractions such as lubricating oil. **Cracow**. See KRAKOW.

Cradle, Mt., mountain in NW central Tasmania, Australia, on a spur of the central highlands. Height: 1,545m (5,069ft).

Craig, Edward Gordon (1872-1966), British scenic designer. Son of actress Ellen Terry, he was a successful actor before turning to production and design. In *On the Art of the Theatre* (1905) he proposed that actors become "super-marionettes" controlled by the director-designer-creator. Among his numerous productions were Purcell's *Dido and Aeneas* (1900), Ibsen's *Rosmersholm* (1906) and *Hamlet* (1912).

Craig, Sir James Henry (1748-1812), British governor-general of Canada (1807-11). A career soldier, he fought in the American Revolution. He was unable to work harmoniously with the Canadian Legislative Assembly and in 1810 he alienated the French Canadians by suppression of *Le Canadien*.

Craigavon, James Craig, 1st Viscount (1871-1940), Northern Irish soldier and politician, first prime minister of Northern Ireland (1921-40). He was an extreme Unionist and helped Sir Edward CARSON to keep the province in Britain. See also p.1780.

Craige, Sir William Alexander (1867-1957), Scottish lexicographer and philologist. He was joint editor of the *Oxford English Dictionary* (1901-33), then professor at the University of Chicago. His works include *Icelandic Sagas* (1913) and *The Study of American English* (1927).

Craik, Dinah Maria (1826-87), British authoress. The moralistic novel *John Halifax, Gentleman* (1856) is her most famous work, but she also wrote stories for children, including *The Little Lame Prince* (1875).

Craiova, city in S Romania, 180km (112 miles) W of Bucharest (Bucuresti), on the Jiu River; capital of Dolj district. It was destroyed by an earthquake in 1790 and burned by the Turks in 1802. It is at the centre of Oltenia region, which has rich farmlands. Craiova is a grain market and administrative centre for the region. Its industries include food processing, machinery and electrical equipment. Pop. 175,450.

Crake. See RAIL.

Cramer, Johann Baptist (1771-1858), German pianist, composer and music publisher. He wrote principally for the keyboard - piano studies, sonatas and concertos - and as a pianist he was praised by BEETHOVEN. Cramer founded a music publishing house in London in 1824.

Cramp, involuntary persistent contraction of a muscle producing sharp pain. It may occur in almost any muscle as a result of over-exertion - as in athletics - chronic strain, or from normal physiological causes such as menstruation. Leg and abdominal cramp are the most common types.

Crampton, Bruce (1935-), Australian golfer. He joined the US circuit in 1957 and after then became Australia's leading money-winner, earning more than \$1 million and capturing 15 tournament

Coypu fur, known as nutria, resembles beaver and is used to make coats

John Robert Cozens's landscapes made a very great impression on John Constable

Crabs are distinguished from lobsters by the shorter length of the abdomen or 'tail'

Crab spiders catch their prey using camouflage. they do not spin webs

Cranach, Lucas, the Elder

Walter Crane, much influenced by the Pre-Raphaelites, was a successful illustrator

Crane fly with their long necks stretched out in front and their legs trailing behind

Craters indicate internal volcanic activity or meteoric bombardment from outer space

Joan Crawford with John Barrymore in a scene from the star-studded film *Grand Hotel*

titles, three of them consecutively in 1965

Cranach, Lucas, the Elder (1472-1553) German painter and engraver, court painter to the Electors of Saxony. A friend and follower of Martin Luther, Cranach designed many propaganda woodcuts for the Protestant cause. His portrait paintings, eg those of Luther and of Henry of Saxony, were among the first full-length portraits. He also developed a style of painting highly erotic female nudes in a glossy, enamel-like finish, new to German art, in such paintings as *Adam and Eve* and *The Judgement of Paris*. See also pp 1147, 1913

Cranach, Lucas, the Younger (1515-86), German painter who, following the death of his father, CRANACH THE ELDER in 1522, directed the family workshop in Weimar. Attribution of paintings to him is difficult as he derived his style from that of his father but the *Fountain of Youth* (1546) is generally accredited to him

Cranberry, plant of the HEATH family, distributed widely in N temperate regions. It is a creeping or trailing shrub and bears red berries with an acid taste. The berries are used to make cranberry sauce. Genus *Vaccinium*. See also p 710

Crane, Stephen (1871-1900), US novelist, short story writer, poet and war correspondent. His best-known work is *The Red Badge of Courage* (1895), a realistic story of the thoughts of a soldier in the Civil War. Other works include *Maggie: A Girl of the Streets* (1893), *The Black Riders and Other Lines* (1895), *The Open Boat and Other Tales of Adventure* (1898) and *War is Kind* (1899), a volume of verse

Crane, Walter (1845-1915), British painter, designer and illustrator. He was influenced by the PRE-RAPHAELITES and became an associate of William Morris in designing textiles and wallpapers. A superb illustrator, one of his finest works was an edition of Spenser's *Faerie Queene* (1894-96)

Crane, any of several species of tall wading birds found in most parts of the world except S America. This long-legged bird has brownish, greyish or white plumage with a bright ornamental head. It flies with its long neck straight out and feeds on almost anything. After courtship dances, the female lays two eggs in a bulky nest of vegetation on the ground or over water. Height to 150cm (60in). Family Gruidae. See also p 344

Crane, machine for lifting and placing heavy loads. The large tower cranes seen on docksides have a long horizontal jib counterbalanced by a short heavy arm. Other heavy cranes, such as those moving on wheels or rails in foundries, or those in railway goods yards, form a bridge over the load. Climbing and crawling cranes are used in the construction of high-rise buildings and large bridges. Small cranes, or hoists, are frequently mounted on road vehicles for breakdown work. See also pp 456-457, 463, 503, 521

Crane-fly. See DADDY LONG-LEGS

Cranebill, common name for the wild GERANIUM

Cranford, comic novel of manners by the British writer Elizabeth GASKELL, published in Dickens' magazine *Household Words* in 1853. *Cranford* is a series of sketches of village life, based on the author's childhood in Knutsford, Cheshire. It remains one of the most popular English novels

Cranial index. See CEPHALIC INDEX

Cranial nerves, 12 pairs of nerves that originate in different areas of the brain, they carry information from the head and control muscle-action mainly in the head and neck. The olfactory nerve is concerned with smell; the optic with vision, the oculomotor, trochlear and abducens with the movement of certain eye muscles, the trigeminal with sensation in parts of the face and with movement of jaw muscles in chewing, the facial with the sense of taste and with face, scalp, ear and neck muscle movement and salivary gland secretion, the auditory with hearing and balance, the glossopharyngeal with taste, touch and temperature in visceral-area organs, pharynx muscle movement and salivary gland

secretion; the vagus with muscle movement in the larynx and pharynx, stimulation of gastric and pancreatic secretion, and muscle movement in the heart, bronchi, oesophagus, stomach, small intestine and other organs, the accessory with muscle movement in the neck, and the hypoglossal with movement of tongue muscle and of small muscles in the neck. See also pp 126-127

Cranioostenosis, premature closing of the fontanelles, where the bones of the skull are joined. It commonly causes retardation and skull deformity, both of which can be minimized by surgery in the first two years of life. See also p 1115

Cranium, part of the skull, dome-shaped, solid, hard bone structure that surrounds and protects the brain and the organs of sight, hearing and smell. It is composed of a number of bones that are fused together. See also pp 146, 147

Cranko, John (1927-73), British choreographer, b. South Africa. He was a member of Sadlers Wells Theatre Ballet (1946-57). In 1956, he choreographed the first British-commissioned three-act ballet, *The Prince of the Pagodas*. His *Romeo and Juliet* (1962), with the Stuttgart Ballet, was considered his best work. In 1968 he became ballet director of the Bavarian State Opera, Munich

Cranmer, Thomas (1489-1556), English prelate and religious reformer. He was a distinguished theologian, and was appointed Archbishop of Canterbury by HENRY VIII in 1533. He secured the annulment of Henry's marriage with Catherine of Aragon despite opposition from the pope. Cranmer, a friend of Thomas CROMWELL, promoted the introduction of Protestantism into England, encouraging the translation and dissemination of the "Great Bible" in 1539 and compiling the first Book of COMMON PRAYER in 1548. After the accession of MARY in 1553, Cranmer was burnt at the stake. See also p 1404

Cranog, dwelling area built on artificial firm ground (made of peat, brushwood and timber) in shallow lakes or marshes. They were inhabited in Ireland from the Bronze Age to the 17th century. See also p 1468

Cripp, Lorraine (1938-), Australian swimmer. She won the 400m freestyle event at the 1956 Olympics and at the 1954 Commonwealth Games took the gold medal in the 110yds and 440yds freestyle events. She was the first woman to swim 400m in less than five minutes.

Craps, most popular dice and gambling game in the USA. Played with a pair of matched dice and any number of players, it is based on the fact that a 7 is the most probable throw. If the shooter's first throw totals 7 or 11 (a "natural"), he wins and continues to throw if he wishes. With 2, 3 or 12 ("craps"), he loses. If he throws 4, 5, 6, 8, 9 or 10 that number becomes his point and he carries on until it turns up again, when he wins and retains the dice. But if he throws a 7 at this stage he loses and gives up the dice

Crashaw, Richard (c 1612-49), English poet. The son of a Puritan preacher, he first taught at Cambridge University (1635-43) then in 1643 fled to France, where he became a Roman Catholic, and later went to Italy. His religious poetry, especially in *Steps to the Temple Sacred Poems*, *With Other Delights of the Muses* (1646), is notable for its ornate and exuberant imagery, which reflects BAROQUE art

Crassus, Marcus Licinius (c 115-53 BC), Roman politician. He commanded an army for SULLA in 83 BC and amassed a vast personal fortune in urban and rural property. He suppressed the slave rebellion led by SPARTACUS in 71 BC, financing six new legions. Crassus served as consul with his rival POMPEY in 70 BC, and in 60 BC Julius CAESAR formed with them the first triumvirate. He acted mainly in alliance with Caesar, and became governor of Syria in 54 BC. He was killed fighting the Parthians at Carrhae. See also p 1230

Crater, roughly circular depression in the surface of the Earth or the Moon, usually

with steep sides. It is formed either by meteoric impact, when shock waves blast out a hole in the ground, or at the vent of a volcano, when lava is expelled explosively. Space probes have revealed similar craters on the surfaces of other planets. See also pp 230, 932, 937, 971

Crater lake, accumulation of water, usually by precipitation of rain or snow but sometimes ground water, in a volcanic crater or caldera. A noted example is Crater Lake in Oregon, USA. Should an eruption occur, the resulting mud flow, or lahar, is often more destructive than a lava flow, owing to its greater speed

Crates, name of four different Greek philosophers. Crates of Thebes (4th century BC), a CYNIC disciple of DIOGENES, Crates of Athens (3rd century BC), a philosopher and head of the Old Academy; Crates of Mallus (2nd century BC), a stoic philosopher and grammarian, and Crates of Tarsus (2nd century BC), an academic philosopher

Crawfish. See CRAYFISH

Crawford, Joan (1908-77), US film star, real name Lucille Le Sueur. She remained a glamorous star for nearly half a century. Her major films include *Our Dancing Daughters* (1928), *Grand Hotel* (1932), *The Women* (1939) and *Mildred Pierce* (1945)

Crawford, Osbert Guy Stanhope (1886-1957), British archaeologist. During WWI he pioneered the techniques of aerial photography as a tool of archaeology. He founded and was the first editor of the magazine *Antiquity* (1927-57)

Crawford, Thomas (1814-57), US sculptor who studied in Rome and brought a Neo-Classical style to his art. His most famous works are his equestrian statue of George WASHINGTON and his enormous *Freedom* statue on top of the dome of the US Capitol

Crayfish, edible freshwater ten-legged CRUSTACEAN that lives in rivers and streams of temperate regions. Smaller than lobsters, crayfish burrow into the banks of streams and feed on animal and vegetable matter. Some cave-dwelling species are blind. Length normally 8-10cm (3-4in). Families Astacidae (Northern Hemisphere), Parastacidae (Southern Hemisphere), Austroastacidae (Australia). See also p 31

Crazing, or crackling, method of decorative glazing of ceramics, in which fine cracks in the glaze result from different shrinkage rates of the clay and the glaze during firing. It was originated by the Chinese

Crazy Horse (c 1842-77), American Indian chief of the Oglala Sioux tribe. He was a leader of the Sioux resistance to the advance of white settlers in the Black Hills, and assisted SITTING BULL in the massacre of George CUSTER's forces at the LITTLE BIGHORN in 1876. After surrendering in May 1877, he was killed possibly while trying to escape

Creastine, amino acid found mostly in the muscle tissue of vertebrate animals. Combined with phosphoric acid, it plays an important part in muscle contraction

Creation, in most mythologies and religions, an account of the origin of the world, as well as of man and all the other creatures on earth. There is a remarkable similarity in the creation stories as recounted in the holy books of major religions, such as the Bible and the Koran, and in the myths and legends of comparatively small ethnic groups, such as Australian Aborigines and American Indians

Creation, The, (1796-98), oratorio by Franz Joseph HAYDN. The text was selected and adapted from the biblical book of Genesis and Milton's *Paradise Lost*, and the composition contains vivid musical pictures of the Creation. First performed privately in Vienna (1798), with Haydn presiding over the orchestra it was an instant success

Crébillon, Prosper Jolyot de (1674-1762), French dramatist who wrote Senecan tragedies. His plays, such as *Electre* (1708), *Rhadamiste et Zénobie* (1711), *Xerxès* (1714) and *Pyrrhus* (1726), enjoyed great success. He was considered a rival of Voltaire

Crèche, day nursery for the children of working mothers. It may be organized by the management of the place of employment or run as a service by licensed individuals. Crèches first appeared in France in the 1840s.

Crécy, battle of (Aug 1346), first major battle of the HUNDRED YEARS WAR. Although the French forces, led by PHILIP VI, were greater in number, the English won a clear victory through their use of the longbow, and their superior strategy. As a result of this victory, the English, led by EDWARD III, were subsequently able to capture the strategically important port of Calais. See also pp 1346-1347.

Credit, exchange of goods in return for future payment. Credit allows consumers to purchase goods before they have the required funds and permits businesses to expand while deferring payment.

Credit, in accounting, an entry on the right-hand side of an account. Credit entries are required when assets are decreased and when liabilities and capital are increased. Credit entries are made to reflect increases in revenue accounts.

Credit, letter of, document issued by a bank allowing the holder to draw upon an amount of money at another institution. Liability is assumed by the issuing bank. There are several types of letters of credit, of which travellers' cheques are a type. They are widely used in international commercial transactions.

Cree, one of the largest divisions of the Algonquian language family of North American Indians, ranging from James Bay to the Saskatchewan River in Canada. Like the closely related Chippewa, the Cree served as guides and hunters for French and British traders and were a lifeline of the HUDSON'S BAY COMPANY for decades. Today about 1,000 live on reservations in Montana and Manitoba and more than 30,000 on reserves elsewhere in Canada.

Creed, in Christian Churches, term used for personal yet formal statement of commitment to doctrinal belief (Latin *credo*, "I believe"). The three most commonly said are the APOSTLES' CREED, the ATHANASIAN CREED and the NICENE CREED.

Creek Indians, confederation of American Indian tribes speaking the Muskogean tongue. One of the largest tribal groups to live in SE USA, they ranged from coastal Georgia to Alabama. They had an agricultural society and within the confederacy individual settlements had a large degree of autonomy. Land was communally owned. After the Creek Wars (1813-14), they were removed to Oklahoma, where the majority of the approximately 17,000 surviving Creeks now live.

Creep, in geology, slow downward movement of material. This slow movement of earth is not associated with erosion. It may occur on all sorts of slopes including those that are covered with vegetation. The steady downward flow of earth and rock carries the vegetation with it. Creep may be caused by the growth of plant roots, the burrowing of small animals or trampling of larger creatures, frost movement, or successive drying and wetting that leads to shrinkage and swelling of the soil.

Creep, in metallurgy, continuing deformation of a metal under stress so that it appears to flow like an extremely viscous liquid. Metal components can be tested for "creep rate" - the percentage elongation per 1,000 hours at a particular temperature. Engineers have to consider both the applied stress and the temperature of metal structures to avoid possible failure through creep. See also p 841.

Creepers, in botany, any plant that puts out tendrils or adventitious (false) roots as it grows, to creep over the ground or up neighbouring plants, fences or walls. In ornithology, the name refers to any small bird that creeps up and down tree-trunks, usually in search of insect food.

Creevey, Thomas (1768-1838), British gossip and diarist. He was a whig member of Parliament from 1802 to 1832. His letters and journals, published as *The Creevey Papers* (1903), are a lively source for late Georgian history.

Cremation, disposal of a corpse by burn-

ing it. It was a common custom in many parts of the ancient civilized world and is still the only funeral practice among Hindus and Buddhists. The early Christians discarded cremation as a result of their belief in the physical resurrection of the body. It was not until the 19th century that it was revived in the western world, mainly in free-thinking circles. Its legitimacy is recognized by all Christian Churches, the Roman Catholic Church rescinded its prohibition of cremation in 1963.

Crémazie, Joseph Octave (1822-79), Canadian poet, regarded as the father of French-Canadian poetry. He was a founder of the *Mouvement littéraire de Québec* (c. 1852), a group that stimulated French-Canadian literary development. Many of his poems were patriotic, including *Le Vieux Soldat Canadien* (1855), about an old soldier who awaits the return of the French. He moved to France in 1862.

Cremer, William Randal (1838-1908), English politician, trade unionist and pacifist. He organized the Carpenters and Joiners Union (1860) and founded the Workmen's Peace Association (which later developed into the International Arbitration League). As its secretary (1871-1908), he travelled widely to advocate international arbitration. From 1899 to 1908 he edited the peace journal *Arbitrator*. He won the Nobel Peace Prize in 1903.

Cremona, city of N Italy, in Lombardy region; capital of Cremona province. Founded in 218 BC by the Romans, it was a centre of learning in the Middle Ages and had a Renaissance school of painting. In the 17th and 18th centuries it was famous for violins made by the Amati, Guarneri and Stradivari families. It has a 12th-16th century cathedral and a 13th-century city hall. A market centre, it has textiles, precision engineering and brick industries. Pop. (1968 est.) 80,800.

Creole, person born in the West Indies or southern USA but of foreign descent. Generally a Creole's ancestors were either African slaves or French, Spanish or English settlers. In the USA the term is also used for someone of mixed European and Negro blood. The Creole language is a debased form of that of the dominant colonists, English in the USA, French in Haiti, and Spanish and Portuguese in Curaçao.

Cresote bush, or **greasewood**, shrub of the caltrop family, found in deserts of North and Central America. Its blackish stems, dark green leaves and small yellow flowers exude an odour of cresote or tar. Height: to 3m (10ft). Family Zygophyllaceae, species *Larrea tridentata*.

Crezer, Henry Duncan Graham (1888-1965), Canadian soldier and diplomat. He proved to be a brilliant artillery tactician in WWI and was made chief of general staff in 1940. He served in NW Europe in 1944-45. He retired in 1946 but represented Canada in several post-war peace conferences.

Crescent, symbol of the moon in its first quarter. The symbol has many historical associations. It has been associated with ISLAM, with or without a star, since the capture of Constantinople by the Ottoman Turks in 1453. It appears on the Turkish standard and also in the flags of several other Islamic nations, such as those of Algeria and Pakistan. In heraldry it usually appears with the horns pointing upwards.

Crespin, Regine (1927-), French soprano. She made her opera debut in 1951 as Elsa in *Lohengrin* at the Paris Opéra and as Tosca at the Opéra Comique. In 1960 she sang at LA SCALA in Pizzetti's *Fedra*, and in 1962 she appeared at the New York METROPOLITAN OPERA in *Der Rosenkavalier*.

Cress, any of several small, pungent-leaved plants of the mustard family, generally used in salads and as garnishes. The best known of these is WATERCRESS, a perennial plant that grows in clear, running water. Genus *Rorippa*, species *nasturtium officinale*.

Cressida, in Greek legend, a daughter of the Trojan priest Calchas. Her fame rests

upon the story of her affair with TROILUS, a valiant Trojan warrior, and her desertion of him for DIOMEDES, a Greek soldier.

Cresta Run, the banked, winding track of ice for one-man bobsleighs at St Moritz, Switzerland. The Grand National course is 1,212m (3,977ft) long, the Curzon Cup course starts at Junction, a point 887.9m (2,913ft) from the finish. Riders, prone and head first, average speeds of around 80km/h (50mph) and can reach around 145km/h (90mph).

Cretaceous period, last period of the MESOZOIC PERIOD, lasting from 135 to about 65 million years ago. Dinosaurs flourished until the end of this period, when they became extinct. The first true PLACENTAL and MARSUPIAL MAMMALS appeared and modern flowering plants were common. See also pp 185, 185-268, 272, 280-283.

Crete (Kriti), the largest island of Greece, in the E Mediterranean Sea, SE of the Greek mainland. The chief cities are Iraklion the capital, and Khania. Crete has a mountainous terrain upon which sheep and goats are raised. The mild climate supports the cultivation of cereals, grapes, olives and oranges. Minoan civilization was flourishing on Crete from 2000 BC, and the ruined palace of Knossos was built c 1600 BC. For reasons not fully understood, the Cretan kingdom declined. After 1125 BC the Dorians controlled Crete and established city states. It remained an important trade centre, but played no role in the political history of Ancient Greece. Crete was conquered by Rome in 68-67 BC and later came under Byzantine (AD 395) and Arab (826) rule. In 1669, Crete fell to Turkey. Foreign intervention forced Turkey to evacuate Crete in 1898 and Crete became an autonomous state under Turkish sovereignty. In 1908, Cretans proclaimed union with Greece which was confirmed by the Treaty of London (1913). Products: wool, hides, cheese, olive oil, wine. Area 8,259sq km (3,189sq miles). Pop. (1971 est.) 456,208.

Cretenism, disorder present at birth, or beginning in early childhood through lack of iodine or disease of the THYROID GLAND, in which a deficiency of thyroid hormones produces retarded physical and mental development. Symptoms include poor appetite, breathing difficulties, low body temperature, dry and thickened skin, decreased vigour and activity and a failure to grow and develop. It is treated with iodine or thyroid hormones. See also MENTAL RETARDATION.

Crévasse, deep crack in a glacier. It is the result of stress within the glacier or the movement of the glacier over uneven terrain. See also pp 224-225.

Crèvecoeur, Michel-Guillaume-Jean de (1735-1813), often known as J. Hector St John, US author, b. France. He moved to America in 1754 and became known as an agriculturist, writing articles under the name *Agricola*. His *Letters from an American Farmer* (1782) recorded life in early America.

Cribbage, card game for two, three or four players. A 52-card pack is used together with a cribbage board (scoring device) consisting of a wood or plastic board with rows of holes and four pegs. Each player receives five or six cards (depending on the number of players) and discards one or two into a separate pile called the "crib" or "box". Picture cards and tens count as ten points, aces as one each and the other cards their face values. The first card in the deck (the undealt cards) is turned face upwards. The object is to reach 31 points or as close as possible without exceeding the total, additional points being scored during play for various combinations of exposed cards.

Crichton, James (1860-82), Scottish man of learning, known as "the Admirable Crichton". He was a renowned scholar and linguist. In Paris, Padua, Venice and Genoa he earned a reputation as a skilled debater on scientific, philosophical and mathematical questions.

Crick, Francis Harry Compton (1916-), British biophysicist. He worked in the USA in the 1950s and in association with James

Battle of Crécy, French chivalry charge on the English bowmen who finally won the day

Cresta run, the course was modified recently to reduce the growing number of accidents

Crete's archaeological remains include Minoan towns and these Roman mosaics

Francis H. Crick, Nobel Prize winner for his work on the structure of the DNA molecule

Cricket

Cricket's governing bodies are now under attack from private commercial interests

Crickets chirp both to attract the interest of the females and to repel other males

Carlo Crivelli, his work is rich with colourful ornamentation, this is a *Madonna and Child*

Benedetto Croce, in his analysis of philosophy, saw art as the "dawn" of knowledge

WATSON and Maurice WILKINS he established the molecular structure of deoxyribonucleic acid (DNA). They were jointly awarded the Nobel prize in physiology and medicine in 1962. See also p.177

Cricket, sport popular in Britain and other Commonwealth nations, the national summer sport of England, where it was played before 1700. It is played by two teams of 11 players each, on an oval field generally about 160m (525ft) across. A game, which may take several days to complete, consists of one or two innings. In an innings all the players of one team bat once in turn, with two batsmen on the field of play at a time; the other team fields, providing the bowlers and a wicket-keeper. The game is controlled by two umpires, and the team scoring the most runs wins. Except for injury, no substitutions are allowed, and then the substitute is not allowed to bat or bowl. Batsmen and the wicket-keeper wear gloves and leg protectors (pads), and the fielders are positioned around the outlying areas of the field of play. The game revolves around two wickets, which are placed near the middle of the field, 20.1m (66ft) apart. A wicket is made of three wooden stumps 71.1cm (28in) high with two small cross-pieces (bails), balanced in grooves in the top of the stumps. At each wicket a batsman stands at a crease—a line marked on the pitch (1.2m, 4ft) in front of the wicket—using a cane-handled bat made of willow. The bowler, who runs up to a point just beyond one of the wickets, has six or (in some countries) eight bowls at the farther wicket, defended by a batsman. He delivers the hard, leather-covered ball, overarm with a straight arm action, usually allowing it to bounce once. Runs are scored each time a batsman exchanges ends with his partner. A ball hit over the boundary of the pitch scores four runs, or six runs (if it does not bounce) without the need for the batsmen to run. After the "over" of six or eight bowls, another bowler begins the next over from the opposite wicket. A batsman can be "out" (dismissed) in a number of ways, for instance by being bowled (when the ball delivered by the bowler hits the wicket, with or without touching the bat), by being caught (when the ball struck by the batsman is caught before it bounces by any fielder) or by being run out (when a fielder dislodges the bails with the ball before the batsman reaches the opposite crease or returns to his own). See also ASHES, THE; COUNTY CHAMPIONSHIP, TEST MATCH

Cricket, brown to black insect with long antennae and hind legs adapted for jumping, found worldwide. The field and house crickets are the best known of this family. Males produce a chirping sound by rubbing their wings together. Length 3–50mm (0.8–2in). Family Gryllidae. See also MOLE CRICKET, TREE CRICKET

Crimée (Krym), peninsula that extends into the Black Sea from SW USSR, W of the Azov Sea and joined to the mainland by the Perekop Isthmus. It is a sub-division of the Ukrainian Republic (Ukrainskaja SSR). Simferopol' is the capital. The Crimea was inhabited from the 10th to the 8th centuries BC by the Cimmerians. During the 5th century it was colonized by the Greeks and then, over the next hundreds of years, by Romans, Ostrogoths, Huns, Mongols, Byzantines and Turks, before being annexed to Russia in 1783. It was the scene of the CRIMEAN WAR (1854–56) in which the English, French, Turks and Sardinians opposed the Russians. The area was occupied by the Germans during WWI. It became the Krymskaja oblast in 1954. Area: approx. 27,000sq km (10,425sq miles). Pop. (1970 prelim.) 1,814,000

Crime and Punishment (1866), novel by Fyodor DOSTOEVSKY which examines the nature of crime and guilt. Raskolnikov, a penniless student, kills an old pawnbroker for her money but flees without it. Suffering from remorse, he repents, gives himself up and is redeemed by suffering.

Crimean War (1853–56), war fought by Britain, France and Turkey, with later support from Sardinia-Piedmont, against Russia. Russian ambitions for expansion

in the Middle East led the other powers to fear for the future independence of the Ottoman Empire. They occupied the Crimean Peninsula in 1854 to capture SEVASTOPOL, after the Russians had claimed a protectorate over Orthodox Christians in the Holy Land and seized two Turkish dependencies. The war was marked on both sides by incompetent leadership and organization. There were many deaths from disease and infection, despite the pioneering work of Florence NIGHTINGALE in introducing modern nursing methods. Most of the war was centred on the capture of Sevastopol, which was finally evacuated in 1855. On the accession of ALEXANDER II, Russia sued for peace, which was achieved at the Congress of Paris in 1856. The war ended Russian dominance in SE Europe. See also pp.1561, 1648

Criminal Injuries Compensation Board, body established in Britain in 1964 to provide compensation for the victims of crime. Anyone who suffers personal injury from a crime or from attempting to prevent one may apply, as may the dependants of an innocent person killed during a crime.

Criminal Investigation Department. See CID

Criminal law, body of law which defines crimes, lays down rules of procedure for dealing with them and establishes penalties for those convicted of them. Broadly, a crime is distinguished from a tort by its being deemed an action injurious to the state, whereas a tort is deemed to be a private injury. In many countries the criminal law has been codified. Among the best-known modern codes are the *Consensus Criminalis Carolina* (1532), promulgated by CHARLES V for the Holy Roman Empire, JOSEPH II's code for Austria (1786) and the CODE NAPOLEON. In Britain the law has never been codified. Criminal law remains what it was originally, a part of the common law, although since the 18th century it has been greatly added to by statute law.

Criminology, the study of the causes and prevention of crime. It embraces various aspects of sociology, psychology and the law, and investigates such aspects as the factors that lead to criminal behaviour, case histories, methods of treating offenders and methods of preventing crime. See also LAW, PENOLOGY, pp.648–650

Crinoid, class of primitive ECHINODERMS that includes the sea-lily and the feather star. A crinoid's mouth, on a small disc with the other main organs, is surrounded by long feathery arms. It feeds on particles that fall through the water and respires by means of its tube-feet. Class Crinoidea. See also pp.50, 182, 182

Crinoline, type of underskirt first in vogue in the 1840s. Its purpose was to stiffen and hold out the skirts. Originally made of whalebone and horsehair, it later developed into a metal frame worn under the skirts. It was modified to become the BUSTLE and gradually died out in the 1870s.

Crippen, Hawley Harvey (1862–1910), US doctor hanged for poisoning his wife. He settled in London (1900) and began an extra-marital affair. His wife went missing in Jan. 1910 and although he fled with his mistress he was traced to the SS *Monrose*, which was notified using the recently installed radio. (This is believed to be the first use of wireless telegraphy for police purposes.) Crippen was arrested before the ship reached Quebec and returned to London, where he was convicted and executed.

Cripps, Sir Richard Stafford (1889–1952), British socialist politician. He joined the Labour Party and entered Parliament in 1931. He was expelled from the Labour Party in 1939 for co-operating with the Communist Party against the Fascists. He was ambassador to Russia (1940–42) and Minister of Aircraft Production (1942–45). He was readmitted to the Labour Party in 1945 and joined Attlee's cabinet. He worked on the settlement for India (1946), and was Chancellor of the Exchequer (1947–50).

Crispi, Francesco (1819–1901), Italian

statesman. He served in GARIBOLDI's army in 1860 and, as a leftist and anti-clericalist, served as President of the Chamber of Deputies in 1876, Minister of the Interior (1877–78) and Prime Minister (1887–91, 1893–96). See also pp.1588–1589

Crispian and Crispinian, Saints (died c. 287), patron saints of shoemakers. According to legend they were two Christian brothers of noble Roman birth who went to Gaul and worked as shoemakers, accepting for their work only such money as was voluntarily offered to them. They are believed to have died as martyrs during the persecutions of DIOCLETIAN. Feast day 25 Oct.

Critical mass, minimum mass of fissionable material required in a fission bomb or nuclear reactor to sustain a CHAIN REACTION. The fissionable material of a fission bomb is divided into portions less than the critical mass; when brought together at the moment of detonation they exceed the critical mass. See also NUCLEAR FISSION pp.434, 814

Critical point, temperature and pressure above which a liquid and its vapour phase (a gas) can no longer coexist. If a gas is slowly compressed at temperatures above the critical temperature, or cooled at pressures above the critical pressure, it changes gradually from gas to liquid, rather than suddenly separating into two phases. See also p.836

Critique of Pure Reason (1781), treatise on epistemology by Immanuel KANT. In this greatly influential work Kant hoped to defend mathematics and science from the incursions of David HUME's scepticism. Its principal point was that consciousness, rather than sense-data (as Hume had argued), was fundamental to man's understanding. It includes "categories" (such as cause and effect) that are essential to experience and which can neither be proved nor disproved by experience. See also pp.1882, 1883, 1888–1889

Crivelli, Carlo (c.1430–c.1493), Venetian painter who worked in the Venetian tradition in Ancona, Ascoli Piceno and other towns of the Umbrian Marches, where his painted altarpieces survive. A highly original artist, Crivelli combined in his work such elements as simple direct piety with an intensely decorative style of drawing, resembling that of BOTTICELLI. His best-known works include his *Madonna and Child* (1485) and *The Annunciation* (1486).

Croagh Patrick, mountain in W Republic of Ireland, in S county Mayo, on the S shore of Clew Bay. It is traditionally the place where St Patrick first preached and is now a place of pilgrimage. Height 765m (2,510ft).

Croaker. See DRUMFISH

Croatia (Hrvatska), federal unit and republic in NW Yugoslavia, it includes Croatia proper, Slavonia, Dalmatia and a major part of Istria. A former kingdom, Croatia came under the rule of Hungary in 1102. After the fall of the Austro-Hungarian Empire in 1918, a kingdom was formed by Serbs, Croats and Slovenes. Political conflicts resulted in the assassination in 1928 of Stefan Radić, the leader of the Croatian Peasant Party, and his successor formed a separate Croatian state. In 1945, Croatia became a Yugoslav republic. Products: maize, grapes, wool, fish, oil, lignite, iron. Area: 56,538sq km (21,829sq miles). Pop. (1971) 4,422,564. See also p.2173

Croce, Benedetto (1866–1952), Italian philosopher and historian. He was a senator (1910–20) and Minister of Education (1920–21). In protest against Fascism he retired from politics when MUSSOLINI came to power until 1943, when he became head of the Liberal Party. His idealistic *Philosophy of the Spirit* (1902–17) is concerned with aesthetics, logic and linguistics, ethics and historiography. See also pp.1886–1887

Crocheting, form of knitting with a hook. Crochet stitches may be a single loop, a double loop or a combination of the two. In making the chain or single loop, lengths of yarn or thread are drawn through other, preceding loops. Crochet is used for com-

plete articles such as hats and shawls or for decorative edging to other articles.

Crockett, David (1786-1836), US frontiersman. He served in the US Congress (1827-31, 1833-35) as a Whig, and shrewdly cultivated the image of a rough frontiersman. He moved to Texas in 1835 and died at the ALAMO.

Crockett, Samuel Rutherford (1860-1914), Scottish novelist. He left the ministry and devoted himself to writing Romantic novels such as *The Raiders* (1894), *Mad Sir Uchred* (1894) and *Man of the Mountain* (1909).

Crocodiles, flesh-eating, lizard-like reptiles found in warm parts of every continent except Europe. Most crocodiles have a longer, more pointed snout than members of the ALLIGATOR family. All lay hard-shelled eggs in nests. Length up to 7m (23ft). There are about 12 species including two dwarf species in Africa. The Asian salt water crocodile (*Crocodylus porosus*) sometimes attacks humans. Family Crocodylidae. See also pp.66-67, 69, 346.

Crocodile bird, or **Egyptian plover**, African bird that feeds on insects, often those infesting crocodiles. It is grey, black and white, with greenish markings. The female lays two or three dark-speckled, cream eggs and buries them in sand. Length 23cm (9in). Species *Pluvianus aegyptius*.

Crocus, hardy perennial flowering plant native to the Mediterranean and Near East and widely cultivated. It is low-growing with a single tubular flower and grass-like leaves rising from an underground corm. It blooms in early spring or autumn. There are 75 species. Family Iridaceae, genus *Crocus*.

Croesus, King of Lydia in Asia Minor (c.560-546 bc). Renowned for his wealth, he gave rise to the expression "rich as Croesus". He kept friendly relations with the Greeks but was overthrown by Cyrus the Great of Persia.

Crofting, method of subsistence farming in Scotland which is becoming less and less frequent as more of the land comes under the control of the large landowners. A crofter grows cereal crops and has some sheep or goats as livestock. A croft, the crofter's dwelling, is a small stone cottage built on the land allotted to him.

Crofts, Freeman Wills (1879-1957), Irish civil engineer who gained wider fame as a writer of detective novels. Among his many stories are *Inspector French's Greatest Case*, *The Box Office Murders* and *Fatal Venture*.

Croker, Richard (1841-1922), US politician. From 1886-1902 he dominated FARMERS HALL and the New York City Democrats, after having opposed William ("Boss") Tweed. He served as alderman (1868-70) and coroner (1873-79) in the city administration before finally returning to Ireland.

Cro-Magnon Man, tall, erect, Upper Paleolithic race of men, possibly the earliest representatives of *Homo sapiens*. They settled in Europe around 35,000 years ago. Cro-Magnon Man was part of the Aurignacian culture and manufactured a variety of sophisticated flint tools, as well as bone, shell and ivory jewellery and artifacts. He was the first to develop a flexible form of language. Cro-Magnon artists produced the cave-paintings of France and northern Spain. Cro-Magnon remains were first found in 1868 in the rock shelter of Cro-Magnon in Les Eyzies-de-Tayac, Dordogne, France. See also pp.109, 114-115.

Cromarty. See ROSS AND CROMARTY.

Crome, John (1768-1821), British landscape painter, sometimes called "Old Crome". He was the leader of the NORWICH SCHOOL. Influenced by GAINSBOROUGH and HOBBSMA, his serene, powerfully imaginative paintings are almost all scenes of rural Norfolk. *Moonrise on the Marshes of the Yare* and *Mousehold Heath* are among the best known. His son, John Bernay, (1794-1842), called "Young Crome", painted mainly scenes of rivers and coasts.

Cromer, Evelyn Baring, Earl of (1841-1917), British administrator. His rule as consul-general in Egypt (1883-1907)

influenced the development of modern Egypt. He encouraged extensive development of railways, agriculture and irrigation at the expense of political and intellectual progress.

Crome Yellow (1921) novel by Aldous Huxley (1894-1963). His first book, it is a novel of ideas rather than action. It is set in a country house, from which the book takes its name, which was modelled on Garsington, home of Lady Ottoline Morrell. It contains caricatures of prominent members of the BLOOMSBURY group.

Cromford, cotton mill founded on the river Derwent, Derbyshire, by James ARKWRIGHT in 1771 in partnership with Strutt and Need. It was the first factory to use a water-powered spinning frame and a perpetual revolving cloth, called a feeder.

Cromlech, term usually applied to a MEGALITHIC stone circle such as STONEHENGE. The term, which derives from the Welsh, meaning "crooked stone", was originally used for a megalithic burial chamber.

Crompton, Richard (1890-1969), British writer. Born Richard Crompton Lamburn, he created William, the scruffy, adventurous schoolboy who was always in trouble. She wrote more than 30 William novels.

Crompton, Samuel (1753-1827), British inventor. His spinning machine (1779) proved a boon to the textile industry as it reduced the amount of thread-breakage that occurred with the spinning jenny and made possible the production of very fine yarn. He called his machine the spinning mule, was too poor to patent it and sold the rights for about £60. The House of Commons later voted him compensation of £5,000, which he lost in unsuccessful business ventures. See also pp.1542-1543, 1799.

Cromwell, Henry (1628-74), Governor of Ireland (1657-59). The fourth son of Oliver CROMWELL, he was appointed head of the English forces in Ireland (1654) and then made lieutenant and Governor-general. He followed moderate policies compared with those of his predecessor but was dismissed in 1659.

Cromwell, Oliver (1599-1658), English politician, Lord Protector (1653-58). He was a landowner from Huntingdon, and an MP after 1628. He rose to prominence as a commander of the parliamentarian army in the Civil War, and after the war he was a key figure in the negotiations about a new constitution, since he had the confidence of the army leaders. He eventually supported PRIDE'S PURGE and led the demand for the execution of CHARLES I. After the proclamation of the COMMONWEALTH, he was unofficially ruler of the country, and commanded the army in campaigns in Ireland (1649) and Scotland (1650-51). He attempted various constitutional measures until 1653, when he accepted the title of Lord Protector. In 1657 he refused the offer of the throne. His domestic policy was typified by an attempt to restore social stability although relying on the radical army, and his foreign policy was aggressively anti-Spanish. He was succeeded on his death by his son Richard. See also pp.1422-1425.

Cromwell, Richard (1626-1712), Lord Protector of England (1658-59). The son of Oliver CROMWELL, Richard was an able administrator but an incapable politician. He was ousted from power after eight months in which the central government lost all authority, and spent 20 years in exile before returning to England in 1680.

Cromwell, Thomas, Earl of Essex (c.1485-1540), English statesman. He was originally a wool merchant, and came to HENRY VIII's attention as secretary to WOLSEY. After his master's fall, he became the king's chief adviser in 1532, and was responsible for the achievement of the break with Rome and the dissolution of the monasteries. He also reorganized the royal administration. He fell from power after the failure of Henry's marriage with ANNE OF CLEVELAND, which he had promoted, and he was executed in 1540. See also pp.1401, 1404.

Cronin, Archibald Joseph (1896-1981), Scottish novelist. He was a medical inspector of mines and physician until the success of his first work, *Hatter's Castle* (1931) allowed him to devote all his time to writing popular, melodramatic novels, such as *The Citadel* (1937).

Cronje, Piet Arnoldus (c.1835-1911), South African military commander. He defeated the JAMESON RAID and fought against the British in the South African (Boer) War but was forced to surrender in 1900. See also pp.1606-1607.

Cronkite, Walter Leland, Jr (1916-), US journalist and broadcaster. His newspaper career began in the 1930s and in 1950 he joined the staff of the CBS news as a political commentator.

Crookes, Sir William (1832-1919), British scientist. He was a lecturer in chemistry at Chester College when he inherited a fortune, enabling him to devote himself to private research. He invented the RADIMETER and the CROOKES TUBE, which led to the discovery of X-RAYS. He was the first to suggest that CATHODE RAYS consist of negatively-charged particles. He also discovered the element THALLIUM. See also p.861.

Crookes tube, highly evacuated tube developed by Sir William CROOKES for the study of electrical discharges at low pressure. It was used in 1897 by J.J. Thomson to demonstrate the existence of the ELECTRON, and was also used to generate X-RAYS. See also p.861.

Crop rotation, practice of successively growing different crops on the same field. Rotated crops generally complement each other, each providing nutrients required by the others. See also pp.652, 668.

Croquet, lawn game, popular in Britain and the USA, in which four wooden balls (coloured blue, red, black and yellow) are hit with wooden mallets through a series of six wire hoops towards a peg. The first player to complete all 12 hoops (each hoop in both directions) and reach the peg with each ball in the correct order wins the game. Croquet had developed in France by the 17th century.

Crosby, Harry Lillis ("Bing") (1904-77), US popular singer and actor. After 1930 he became one of the most successful singers in the USA. In 1944 he won an Academy Award for the film *Going My Way*. His recording of Irving BERLIN's *White Christmas* (1942) is the best-selling record of all time.

Cross, Henri Edmond, pseudonym of Henri Edmond Delacroix (1856-1910), French painter of realistic landscapes and portraits. He was a member of the POINTILLIST movement led by Georges SEURAT. Cross's brilliant colour and solid form influenced MATISSE and FAUVISM.

Cross, Joan (1900-), British soprano. One of the greatest opera singers of her day, she was closely linked with the music of Benjamin BRITTEN. She was a founder member of the English Opera Group. (1946) took leading roles in such Britten operas as *Gloriana*, *The Rape of Lucrece* and *Albert Herring*, and was a Director of Opera at Sadler's Wells (1941-45).

Cross, ancient symbol with different significance to many cultures. In Christianity it is associated with Christ's sacrificial death on the cross for the redemption of mankind. A cross is usually placed on, above or near the altar in churches and is often carried in religious processions. Many Christians make the sign of the cross with their right hand as a symbol of their acceptance of the Christian faith. Other crosses are still used as religious or secular symbols. St George's Cross, St Andrew's Cross, Victoria Cross, Red Cross, etc. As a religious symbol it existed in one form or another in ancient Egypt, Babylonia and Assyria. In the Christian liturgical calendar the feast of the Exaltation of the Holy Cross is kept on 14 Sept.

Cross-bedding, in geology, sand deposited on the underwater slopes of a delta or the formation that results when sand dunes advance over each other. With dunes the tops are gradually removed, preserving the bedding on their down-wind side. See also pp.264, 266.

Crossbill, plait-like forest FINCH found

Crocodiles, unable actually to chew with their jaws, grind their food inside their stomachs

Cromwell's strict military discipline gave rise to the false idea that he was a cruel tyrant

Crop rotation was introduced in the Middle Ages by way of the three-field system

Croquet, traditionally a regal game, provides a memorable episode in *Alice in Wonderland*

Crossbow

Crossopterygian, group of fish long thought extinct until the discovery of the Coelacanth

Croton produces an oil once used as a powerful purgative and counter-irritant

Crown Jewels, suitably protected, as seen by the public in the Tower of London

Cruise missiles are a form of pilotless aircraft flying at low altitudes to avoid radar

mainly in the north of the Northern Hemisphere. It has a heavy, curved, scissor-like bill in which the upper and lower mandibles cross over, and which it uses to pry seeds from cones of evergreens. Length 15cm (6in). Family Fringillidae, genus *Loxia*.

Crossbow. See **BOW**.

Crossbreeding, or outbreeding, the crossing or mixing of two unlike parents to produce a **HYBRID**, eg crossing a horse and a donkey to produce a mule. Most hybrids are either sterile or extremely difficult to breed from.

Cross-country running, winter pursuit by athletes over a country course with natural obstacles. Competitions are also held on racecourses with hurdles as obstacles. International championships, for teams and individuals, are contested over at least 12km (men), and 2-5km (women). British events are 7-9 miles (men) and 2-3 miles (women). It began in the early 19th century in English public schools. A cross-country event is included in the Olympic pentathlon.

Cross-examination, in law, questioning of a witness by opposing counsel (eg a prosecution witness may be cross-examined by defence counsel). The purpose of cross-examination is to test a witness's evidence or to elicit additional information.

Cross-eye. See **STRABISMUS**.

Crossing the Bar (1889), lyric poem by Alfred Tennyson in which, himself approaching 80, he uses the analogy of embarking on a sea journey to suggest the imminence of death.

Crossopterygian, lobe-finned fish of the sub-class Crossopterygii, which flourished during the Devonian period (345-395 million years ago) and provided the evolutionary stock for land vertebrates. The COELACANTH is the only surviving member of the group. Fossil forms have fins that show the transition towards limbs for terrestrial locomotion; their trunks and tails resemble those of AMPHIBIANS. See also pp.56, 58.

Cross-pollination, transfer of pollen from the flower of one plant to another. The process may be used by man to hybridize different plant species whose genetic make-up is compatible, thus producing "synthetic" varieties. The result of the process is called a **HYBRID**. See also pp.671, 674-675.

Crossword, word puzzle arranged according to a particular design, usually a square or a rectangle, which is subdivided into smaller blank and shaded squares. Two lists of numbered clues are provided, one for words that run across the figure, the other for words that run down. The relevant letters are inserted in the blank squares only. The puzzle is completed when all the clues have been solved and the squares correctly filled in. Modern crosswords date from the early 1920s.

Croton, also called variegated laurel, any of several tropical shrubs or trees native to Australia and islands of the South Pacific. *Codiaeum variegatum pictum* is the most popular, with long leaves variegated with green, red, yellow and white. It grows to 1.8m (6ft). Family Euphorbiaceae.

Croton bug. See **COCKROACH**.

Croup, respiratory disorder most common in young children caused by inflammation of the LARYNX. It can be triggered by bacterial or viral infection, local irritation or allergy. Symptoms are a harsh, deep-sounding cough, difficult breathing and fever. Steam inhalation is often helpful although severe cases may require hospital treatment.

Crow, large, black bird found in woodlands and farm areas worldwide except in polar regions, South America and some Pacific islands. Living in large flocks, crows prey on small animals and eat plants and carrion. They can be crop pests. They are intelligent birds and can sometimes be taught to repeat phrases. They build stick-and-twigs nests in tall trees, where the female lays three to six greenish eggs. Family Corvidae. See also **CHOUH**, **JAY**, **MAGPIE**, **RAVEN**, **ROOK**.

Crowberry, or craneberry, prostrate shrub of N and Alpine regions. Its spreading

branches bear cylindrical leaves, the insides of which are hairy. The flowers develop into small, black, edible berries. Species *Empetrum nigrum*.

Crowfoot, plant of the BUTTERCUP family. There are several species, the ones which grow in woods and meadows having typical yellow flowers; aquatic species, which grow in the margins of ponds and in ditches, generally have white flowers. Genus *Ranunculus*. See also pp.328, 370, 382.

Crow Indians, large tribe of Siouan-speaking American Plains Indians who separated in the early 18th century from the KIDATSA. They migrated into the Rocky Mountains region from the upper Missouri River, and today occupy a large reservation area in Montana. They are noted for their fine costume, artistic culture and complex social system with humane child-rearing methods. Their population in the mid-1970s was about 5,000.

Crown, circular head ornament worn as a symbol of rank, generally royal, since the time of the ancient Egyptians. Since the Middle Ages the crowns of Western monarchies have usually consisted of an elaborate diadem (closed at the top by one or more arched bands over a cap, usually surmounted by an orb and cross), made of metal and thickly decorated with jewels. Among the most famous are the Lombard iron crown and the crown of St Stephen of Hungary. There are two crowns used by the British monarchy, both modern: a replica of the crown of EDWARD THE CONFESSOR (destroyed by Oliver CROMWELL), used at the CORONATION, and the imperial state crown, worn on state occasions. See also **CROWN JEWELS**.

Crown, in dentistry, the part of the tooth that protrudes above the gum. Artificial crowns made of porcelain or gold are used when teeth are badly decayed or broken, but still solidly rooted. They are also employed for anchorage when making a dental BRIDGE. See also p.1100.

Crown Agents, full name Crown Agents for Overseas Governments and Administrations, business and financial agents who look after the affairs in Britain of foreign governments and public bodies. They were first appointed in 1833, when they were known as Joint Agents General for the Crown Colonies. They draw their funds entirely from the fees charged to their clients.

Crown colonies, overseas dependencies of the British government which do not enjoy full self-government. They are administered by the FOREIGN AND COMMONWEALTH OFFICE. Executive power is usually vested in a governor, appointed by the Crown. Since the end of WWII the number of crown colonies has steadily fallen. There are now only 13 of them, including Hong Kong, Gibraltar, British Indian Ocean Territory, the Falkland Is. and several Caribbean colonies.

Crown Courts, British courts established in 1971 to replace the ASSIZE courts and courts of quarter session. They are superior courts, with a general jurisdiction, presided over by High Court judges.

Crown Estate Commissioners, since 1956 the official name for the agents who administer Crown lands in Britain. Since the reign of GEORGE III the Crown has surrendered its hereditary lands for life and the sale, purchase and development of such lands are discharged by the Commissioners. Forest land is managed by the FORESTRY COMMISSION, established in 1919.

Crown-green bowls. See **BOWLS**.

Crown Jewels, the crown, orb and sceptre, and other precious objects belonging to the British monarchy and kept on display in the TOWER OF LONDON. They include St Edward's crown which weighs more than 2kg (5lb), the Imperial Crown of State, weighing 1.6kg (3.5lb), and many other objects of symbolic significance. The Scottish jewels, called the Honours of Scotland, are kept in Edinburgh castle.

Crown land, property belonging to the British sovereign, most of which has been surrendered to Parliament since the reign of George III (1760-1820) in return for a fixed annual sum. The lands are managed

by commissioners who may lease or sell them.

Crown Proceedings Act (1947), act of the British Parliament making the Crown liable to be sued in CONTRACT or TORT as if it were a private individual. Actions are brought against either the appropriate department of state or the attorney-general.

Crown rot, disease that affects the crown of a plant, the part near the soil-line. It is generally caused by a fungus and most commonly attacks grasses and cereal crops.

Crowther, Geoffrey (1907-72), British economist and journalist. He was editor of *The Economist* from 1938 to 1956. He published *Ways and Means* in 1936 and *An Outline of Money* in 1941. He was made a life peer in 1968.

Crucible process, method of making high-quality steel, invented in 1740 by Benjamin Huntsman. Steel, charcoal and wrought-iron are melted in a fire-clay crucible. Coke fires were once used but were replaced after 1870 by the Siemens gas furnace, which could heat 100 crucibles to over 1,700°C (3,100°F). Electric furnaces have now replaced this process. See also pp.397, 398, 399.

Crucifer, any of about 2,000 annual and perennial plants of the MUSTARD or CRESS family, which have a flower with four petals in the shape of a cross. Many are important food plants, notably the CABBAGE in all its varieties. STROKS and WALL-FLOWERS are cruciferous garden flowers, as also are AUBRETTIA, rock cress, CANDY TUFT and ALYSSUM.

Crucifix, representation of the Cross bearing an image of the crucified Christ. Crucifixes are used widely in the West as objects of public and private devotion. After the Reformation their use declined among Protestants except in Lutheran churches. They were revived in the Church of England in the 19th century. Their place is taken in the East by crosses with flat likenesses, ie a form of ICON.

Cruden, Alexander (1701-70), Scottish author and bookseller (in London) whose *Complete Concordance to the Holy Scriptures* (1737) became the basis for many later concordances. He suffered from mental illness for much of his life.

Cruel Sea, The (1951), adventure story by Nicholas MONAGHAN. It tells the story of the crew of a corvette crossing the Atlantic Ocean in a convoy during WWII. It was made into a successful film (1953).

Cruelty, Theatre of, movement in France in the late 1920s, developed under the influence of theoretician ANTONIN ARTAUD. His ideas include the staging of elemental emotions in order to involve the audience and excite strong reactions in them. Artaud's theories emphasize ritual and the surreal, and the performance itself is considered more important than the texts used.

Cruft, Charles (1852-1938), British breeder of dogs and showman. He held his first dog show in 1886 and since that time the annual show in London, called Cruft's, has been the premier event of the dog season.

Cruikshank, George (1792-1878), British illustrator and cartoonist, who first gained fame with his caricatures of the leading figures in George IV's divorce proceedings. Besides political and theatrical illustrations, Cruikshank illustrated over 800 books, of which the best-known are Dickens' *Sketches by Boz* and *Oliver Twist*. Cruikshank's drawings for the translated edition of fairy-tales by the GRIMM brothers are perhaps the best testimony to his flair for the grotesque.

Cruise missile, also called aerodynamic missile, a self-propelled missile that travels under its own power, generally at low altitudes following the contours of the terrain. Unlike a BALLISTIC MISSILE it must be aerodynamically designed (like a conventional high-speed aircraft) to minimize atmospheric drag. It has the advantage of being able to fly low enough, following the contours of the land, to avoid conventional radar defences.

Cruiser, warship smaller, lighter and faster than a BATTLESHIP, ranging in size

from 7,500 to 21,000 tonnes. Arms limitation treaties after WWI restricted the large guns of cruisers to 200mm (8in). Few cruisers have been built since 1945, although the USS *Long Beach*, the world's first nuclear-powered surface warship, launched in 1961, is a cruiser.

Crusades, series of military enterprises undertaken by western Christendom to capture Palestine from the SELJUK Turks. The First Crusade (1096-99), which followed a chaotic Peasants' Crusade (1095-96) from France and Germany, captured much of the S Mediterranean coast and took Jerusalem in 1099. The second Crusade (1147-49) failed to capture Damascus. The Third Crusade (1189-91) was jointly commanded by Philip II of France and Richard I of England, the latter negotiated with the Turkish leader SALADIN for Christians to have access to Jerusalem. The Fourth Crusade (1202-04) sacked Constantinople and set up the LATIN EMPIRE OF THE EAST. The CHILDREN'S CRUSADE (1212) was followed by the unsuccessful Fifth Crusade (1218-21) which attacked Egypt. The Sixth Crusade (1228-29) was not a military expedition, but the Emperor FREDERICK II negotiated a new truce with the Turks. The Seventh Crusade (1248-50) was ineffectual, led by Louis IX of France, who was killed on the Eighth Crusade (1270). After the Ninth Crusade (1271-72), Acre, the last crusader kingdom in the Middle East, was taken by the Turks in 1291. See also pp 1310-1311.

Crust, in geology, outermost layer of the earth varying in thickness from 40km (25 miles) to 5km (3 miles) under the sea-floor. The continental crust is mostly granite, composed of silica and aluminium (silica), while the oceanic crust is essentially basalt, rich in silica and magnesium (summa), which underlies the continental crust. The continents tend to float in the magma like islands. Beneath the crust is the mantle. See also pp 194-195.

Crustacea, large class of more than 30,000 species of invertebrate animals in the phylum Arthropoda. The class includes the decapods (crabs, lobsters, shrimps and crayfish), isopods (pill millipedes and woodlice) and many varied forms, most of which are not distinguished by common names. Most crustaceans are aquatic, (marine or fresh water) or live in damp surroundings; they breathe through gills or the body surface. They are typically covered by a hard exoskeleton. The Japanese spider crab is the largest member, measuring up to 4m (13ft) across; the ocean plankton, as little as 1mm (0.04in) in diameter, is the smallest. See also pp 30-31, 34-35, 746-747.

Cruz Australis. See SOUTHERN CROSS.

Cruyff, Johan (1947-), Dutch footballer. Transferred from European champions Ajax to Barcelona for almost £400,000 in 1973, he became the world's most expensive footballer. Gifted with the skills to create and score goals, he led The Netherlands to the 1974 World Cup final. **Cruz, Sor Juana Inés de la** (1648-95), Mexican poetess. She is considered one of the greatest lyric poets of the Spanish colonial period. Her poems often reflected a tension between religious obedience and a passion for the new learning of the period.

Cruz e Sousa, João de (1861-98), Brazilian Negro poet who lamented Brazil's heritage of slavery. He was the outstanding Portuguese-language poet of the symbolist movement, which stressed the mystical and spontaneous. His books of verse include *Broquéis* (1893).

Cryogenic fuels, liquid rocket fuels that operate at low temperatures. Efficient liquid fuels such as oxygen and hydrogen have extremely low boiling points and must be refrigerated until shortly before the rocket is launched.

Cryogenics, branch of physics which studies materials and effects at temperatures approaching ABSOLUTE ZERO. Some materials exhibit highly unusual properties at such temperatures: they become SUPERCONDUCTING (ie they can carry an electrical current indefinitely), or they

exhibit SUPRAFLUIDITY ("creep" over boundaries, apparently defying the laws of gravity). See also p 846.

Cryolite, or *kryolite*, brittle, icy-looking red, brown or black halide mineral, sodium-aluminium fluoride (Na_3AlF_6) found in pegmatite dykes (Greenland has the only large deposit) and used in aluminium processing. It occurs as crystals in the monoclinic system, occasionally the cubic system, or as granular masses. The crystals are frequently twinned. Cryolite is used mainly as a flux in the smelting of aluminium, and also as a source of aluminium salts and fluorides.

Cryosurgery, surgery carried out using a freezing probe, cooled by liquid nitrogen, that destroys diseased tissue on contact. It is particularly effective in treating PARKINSON'S DISEASE and in the removal of tumours, cataracts and tonsils.

Cryptococcosis, often fatal fungus (*Cryptococcus neoformans*) infection, occurring mainly in middle age, affecting men twice as often as women. It attacks the central nervous system, including the membranes of the brain, and sometimes the lungs, skin and other organs. The fungus has been isolated in pigeon droppings. When it infects the lungs, its symptoms are fever, cough and general discomfort.

Cryptogam, early botanical term for plants with no flowers or seeds but which reproduce by spores, such as mosses, liverworts and ferns. Flowering plants were called PHANEROGAMS.

Cryptography, the science of secret writing. The message is translated into codes and cyphers. (Cyphers use substitutions for single letters, whereas codes use substitutions for whole words, phrases or sentences.) It is most often used in business, diplomacy and military operations. The science of code breaking is cryptanalysis. See also pp 606-607.

Cryptomeria, or Japanese cedar, evergreen cone-bearing tree of the pine family native to eastern Asia. It has a reddish-brown bark, whorled branches and fragrant wood. Family Taxodiaceae; species *Cryptomeria japonica*.

Crystal, solid with a regular geometrical form and with characteristic angles between its faces. The structure of a crystal is based upon a regular array of atoms, molecules or ions. The outward symmetry is a reflection of the internal order of the constituents. Most pure solid substances can be obtained in crystalline form. Crystals are produced when a substance passes from the gaseous or liquid phase to the solid state or comes out of solution by evaporation or precipitation. The rate of crystallization and the solvent used determine the type and size of crystal. Crystals vary in their physical properties. See also pp 256-258, 840-841.

Crystal counter, type of particle counter in which the detector is a crystal with a high potential difference applied across it. A high-energy particle hitting the crystal induces a transient increase in its electrical conductivity, thus producing a pulse of current that is registered and displayed on the counter.

Crystal defect, any deviation from perfect order in the lattice of a crystalline substance. Most crystals have some defects, which may be of different types. Point defects are single-atom faults with either a missing atom (crystal vacancy) or an extra atom in an unusual position (crystal interstitial). Dislocations also extend over many atoms, as when part of a line or plane of atoms may be missing or one plane may be displaced relative to another. See also p 841.

Crystal dislocation. See CRYSTAL DEFECT. **Crystal glass**, glass of a fine, hard quality, so called because it has the clarity of rock crystal (a type of quartz). Lead crystal glass is made with lead oxide, lime crystal is made with calcium oxide.

Crystal index, set of three numbers that characterize the type of planar configuration of atoms in a lattice. The three integers give the ratio of the reciprocals of the intercepts of the planes on three axes. See also pp 256-258, 840-841.

Crystal interstitial. See CRYSTAL DEFECT. **Crystal lattice**, three-dimensional

arrangement of atoms, ions, or molecules in a crystalline substance. The term is sometimes used in a more restricted sense to denote the diagrammatic abstraction of the pattern in which the atoms, ions or molecules are positioned. See also pp 256-258, 840-841.

Crystalline substance, solid substance in which the atoms or molecules form a regular ordered lattice. Most solids exist in the crystalline state, which is more stable, but it does not follow that they have crystals in the usual sense; metallic copper, for example, is crystalline only in that the copper atoms are arranged in a regular lattice. The bonds in crystals can be any of the major types. See also AMORPHOUS SUBSTANCE, pp 256-258, 840-841.

Crystallization, process of forming crystals by a substance passing from a gas or liquid to the solid state (SUBLIMATION or fusion) or coming out of solution (PRECIPITATION or EVAPORATION). In the fusion method a solid is melted by heating (ie fused), and crystals form as the melt cools and solidifies. Ice crystals and monoclinic sulphur are formed in this way. Crystallization is an important laboratory and industrial technique for purifying and separating compounds. See also pp 256-258, 840-841.

Crystallography, study of the formation and structure of crystalline substances. It includes the study of crystal formation, chemical bonding in crystals and the physical properties of solids. In particular, crystallography is concerned with determining the internal structure of crystals. In X-ray crystallography the lattice arrangement is calculated from the patterns produced by the DIFFRACTION of X-rays. POLARIZED LIGHT is also used, and its effects observed under a microscope. See also pp 256-258, 840-841.

Crystal optics, optical properties of crystals. The transmission of light by crystals differs from that by glass since the REFRACTIVE INDEX may depend on the direction of incidence of the light (crystals are not, in general, ISOTROPIC). Uniaxial crystals (belonging to the tetragonal, hexagonal and trigonal systems) have two principal refractive indices and display double refraction. Biaxial crystals (orthorhombic, monoclinic, triclinic) have three principal refractive indices. See also p 840.

Crystal packing, manner in which atoms, ions or molecules are packed together in a crystal. In simple terms, crystal structures can often be considered geometrically, as regularly arranged spheres of equal diameter. The most efficient ways of packing spheres are the arrangements known as hexagonal and cubic close-packing. In these packing configurations every sphere has 12 nearest neighbours and 73 per cent of the available space is filled. See also pp 256-258, 840-841.

Crystal Palace, first building of its size, 124 x 564m (408 x 1,850ft), to be made of glass and iron. Designed by Sir Joseph PAXTON for the Great Exhibition of 1851, held in Hyde Park, London, it was prefabricated in sections and assembled on site. Developed by Paxton from his work in greenhouse construction, the Crystal Palace greatly influenced railway station design. After the exhibition it was dismantled and re-erected on Sydenham Hill, SE London, where it stood until accidentally destroyed by fire in 1936. See also pp 1564-1565, 1601.

Crystal structure, regular arrangement of atoms, linked together by CHEMICAL BONDS in repeating patterns. Because of this regularity, and sometimes a corresponding asymmetry, the physical properties of a crystal, such as strength and conductivity, vary in a regular manner depending on the crystal axis along which they are measured. Single crystals are distinguished from non-crystalline (amorphous) and from polycrystalline materials, the physical properties of which are either invariant (because of complete mixing) or vary in an irregular manner. See also SU, pp 256-261, 840-841.

Crystal systems, seven types of crystal structure which are grouped from the 32 classes of crystal symmetry. The elements of symmetry found in crystals are axes,

Crusades forced a religious conservatism into a hitherto enlightened Arab culture

Crust, if the world were an egg, the crust would represent the thickness of the shell

Johan Cruyff, whose solo dribble brought the first goal in the 1974 World Cup final

Crystal Palace, a design that celebrated the possibilities of new building techniques

Crystal unit cell

Cubism can be said to introduce the element of time into painting. *Mandolin* by Braque

Lewis Cubitt designed King's Cross Station, one of the most advanced buildings of its day

Cuckoos are known as brood parasites after their methods of raising their young

Cullinan diamond, The Star of Africa, one of the gems in the Imperial State Crown

planes and centres. The seven systems are: cubic, trigonal, tetragonal, hexagonal, orthorhombic, monoclinic and triclinic. See also pp.256-258, 840-841

Crystal unit cell, simplest part of a CRYSTAL LATTICE characteristic of the crystal structure. The structure is formed of repeated unit cells. In a simple cubic lattice, for example, the crystal unit cell is a cube with an atom at each corner. Unit cells conform to the seven basic shapes of the CRYSTAL SYSTEMS. See also pp.256-258, 840-841

Cry the Beloved Country (1948), novel by Alan PATON, in which he deals with the racial conflict in South Africa from a sensitive, humanitarian viewpoint

Ctenophore. See COMB JELLY

Ctesiphon, ancient Parthian city on the River Tigris, ss of modern Baghdad in Iraq. It was the winter capital of the Parthian Empire and is now noted for the remains of a gigantic vaulted hall, the Taq-e Kisra. Arabs took the city in AD 637 and used the Taq-e Kisra as a mosque, but they deserted it in 763 upon the founding of Baghdad

Cuala Press, private printing company founded in 1908, an offshoot of the Dun Emer Press (1902), by Elizabeth and Lily Yeats, sisters of W. B. YEATS. The firm was established to provide work for Irish women and to produce classic and contemporary Irish literature. It published work by W. B. YEATS, Lady Gregory and John MASEFIELD. It closed down in 1948

Cuauhtémoc (c.1495-1525), last Aztec ruler of Mexico, who unsuccessfully defended the capital Tenochtitlán against Cortés' siege. Four years later, forced to accompany Cortés on an expedition to Honduras, Cuauhtémoc was implicated in a plot to kill the Spaniards and was executed

Cuba, independent nation on the largest island in the West Indies. Since a revolution in 1959 it has been a communist state under the rule of Fidel CASTRO and reliant on Soviet aid. The mainstay of the economy is sugar, two-thirds of the cultivated land being devoted to sugar cane. Sugar is exported together with rum, molasses, tobacco (mainly cigars) and nickel, which is one of many minerals mined. Other food products, chemicals and machinery are imported from Communist bloc countries. The capital is Havana. Area 114,524sq km (44,218sq miles). Pop. (1974 est.) 9,194,000. See p.2017

Cuban Missile Crisis (1962), USA-USSR confrontation over the installation in Cuba of Soviet nuclear missiles. Photographs taken by US reconnaissance aircraft revealed the construction of missile bases in Cuba, and a study was made of photographs of the cargo being carried on the decks of Cuba-bound Soviet ships. President John KENNEDY protested to Premier Nikita KHRUSHCHEV about the threat that such bases posed to the Western Hemisphere and, after increasingly hostile exchanges, Khrushchev ordered the bases to be dismantled

Cube, in mathematics, the result of multiplying a given number by itself three times. Thus the cube of a is $a \times a \times a$, written a^3 . The cube is also described as the third power of a number. Cube is also the name of a regular six-sided solid figure (all its edges are equal in length and all its faces are squares)

Cube root, number that must be multiplied by itself twice over to give a specified number. For example, the cube root of 27 is 3, since $3 \times 3 \times 3 = 27$. Cube roots are written in the form $\sqrt[3]{27}$ or $27^{1/3}$. In algebraic terms, the cube root of x^3 is x and the cube root of x is $\sqrt[3]{x}$

Cubic equation, equation of the third degree, is one in which the highest power of the unknown variable is three. An example is $2x^3 + x^2 + 7 = 0$. Cubic equations have three roots, two of which may be imaginary

Cubism, early abstract art style. It originated with Pablo PICASSO and Georges BRAQUE, who were later joined by Juan GRIS, Fernand LEGER, Jean METZINGER, Albert GLEIZES and others. Cubism, a term coined by the art critic Louis Vauxcelles,

was a conscious reaction to the Romanticism of Ferdinand DELACROIX, the primarily sensuous appeal of the Impressionists and the decorative approach of the FAUVES. The favourite form of the Cubists was STILL LIFE, seen as a composition of quasi-geometric forms without atmosphere or light, with restricted colours verging toward the monochromatic, and without movement. Natural perspective was abandoned, and a new perspective of overlapping, interlocking, semi-transparent planes was used in an attempt to present the solidity and volume of the subject two-dimensionally, from many different aspects simultaneously. Cubism in its early phase (1907-09) was influenced by African and Iberian art and, above all, by Cézanne's advice to "deal with nature by means of the cylinder, the sphere and the cone". Its second phase (1910-12) showed a breakdown of form, and a use of simultaneity - fragmented objects depicted from all angles and open from inside. The third, so-called "synthetic" phase (1913-14) developed by 1913, discarded imitation completely and sought to re-create the object by means of "emblems" similar to a metaphor in a poem. Gris did not distort the object but painted an analogous construction. Picasso's *Les Femmes d'Alger* (1907) is regarded as the source picture of Cubism. See also pp.1656-1657

Cubitt, James (1914-), British architect, who practised privately from 1948 onwards. His principal works include schools in Hertfordshire and Yorkshire, and he has also designed many public buildings and houses in Ghana. During the early 1970s he worked in Nigeria, Ghana and Libya

Cubitt, Lewis (1799-1883), British architect who designed King's Cross Station, one of the most advanced buildings of its time. With his brothers, Thomas and Joseph, he collaborated in the design of several London streets in Bloomsbury and Belgravia

Cubo-Futurism, term applied to a phase of Russian art immediately before WWI. One of many short-lived movements which were inspired by cubist ideas, it aimed to combine Cubist and Futurist elements in a style somewhat resembling the early Cubist curvilinear work of Fernand LEGER. Figurative material was depicted as a composite of shunting cylindrical components expressive of a jagged mechanical rhythm. The leading exponent of the style was Kazimir MALEVICH, who later proceeded to the pure abstraction of SUPREMATISM

Cúchulainn, Irish legendary hero. He was King of Ulster during the 1st century BC and the hero of the legend *The Cattle Raid of Cooley*, in which he defended his kingdom against the rest of Ireland. The CULLIN HILLS are named after him

Cuckoo, widely distributed forest bird. Related species are the ani, ROADRUNNER and coucal. True Old World cuckoos are generally brownish, although a few species are brightly coloured. Their chief food is insects. A brood parasite, the female removes one egg of another species and lays her egg in the nest. Soon after the cuckoo chick has hatched, it throws out any other eggs or young. It is then fed by the foster mother. Length: 15-75cm (6-30in). Family Cuculidae, genus *Cuculus*. See also p.77

Cuckoo flower. See LADY'S SMOCK

Cuckoo plant, also called wake robin, lords-and-ladies, tuberous plant native to Europe. It has arrow-shaped leaves and sends up stout SPATHES, each of which unfurls to reveal a SPADIX that gives off a fetid carrion scent, which is attractive to insects. Later red poisonous berries form and are revealed as the spathe dies off. Family Araceae, species *Arum maculatum*. See also p.382

Cuckoo spit, white froth often seen on the stems of plants. It is made by larvae of PROGHOPPERS, hopping insects belonging to the order HOMOPTERA. The larva feeds on the plant's juices and expels a watery froth to cover itself completely, and so hide from its enemies

Cuculiformes, small order of birds that

includes CUCKOOS, ROADRUNNERS, TOUCANOS and various related birds

Cucumber, trailing annual vine covered in coarse hairs; it has yellowish flowers and the immature fruit is eaten raw or pickled. The plant needs a warm climate or a protective frame because it is sensitive to frost and pests. Family Cucurbitaceae; species *Cucumis sativus*. See also pp.372-373, 684-687

Cúcuta, city in NW Colombia, near the border with Venezuela, capital of Norte de Santander department. Founded in 1733, it was captured by Simón BOLÍVAR on his march to Caracas. It was rebuilt after an earthquake in 1875. It is the centre of a coffee and oil producing region and has an oil refining industry. Pop. 167,400

Cudworth, Ralph (1617-88), English philosopher. He studied at Cambridge where he joined a group of theologians known as the Cambridge Platonists. His *Treatise Concerning Eternal and Immutable Morality* (published 1731) opposed Thomas HOBBES and the theory of determinism, and argued that there are eternal, immutable moral ideas

Cuenca, city in central Ecuador. Founded in 1557, it is known as the "marble city" because of its many fine buildings. It is situated in one of the richest agricultural areas in the Andes, and is a major commercial centre. The main industry is the weaving of Panama hats. Pop. (1971 est.) 77,300

Cugnot, Nicolas Joseph (1725-1804) French engineer who in 1769 invented the first self-propelled road vehicle. It was a three-wheeled, two-cylinder steam tractor designed to pull guns, and travelled at nearly 5km/h (3mph). See also p.492

Cui, César Antonovich (1835-1918), Russian composer and critic. He is best known for his dramatic musical works, including the operas *The Captive in the Caucasus* and *William Ratcliffe* and for the articles he wrote on Russian music

Cullin Hills, range of hills on the Isle of Skye, Highland Region, off the NW coast of Scotland. The highest peak is Sgurr Alasdair, which rises to 1,009m (3,309ft)

Cukor, George (1899-), US stage and film director. He is noted for stylish comedies and literary dramas. His major films include *Camille* (1936), *The Women* (1939), *The Philadelphia Story* (1940), *Born Yesterday* (1950), *A Star is Born* (1954) and *My Fair Lady* (1961). Many of his films featured Katharine HEPBURN (often teamed with Spencer TRACY).

Culdees, Irish and Scottish hermits in the 8th and following centuries who banded together, usually in groups of thirteen on the analogy of Christ and his twelve apostles. They were probably the last remnants of the ancient indigenous Celtic Christianity of the British Isles which was finally superseded by continental Catholicism

Culiacán, city in NW Mexico, on the Culiacán River; capital of Sinaloa state. Founded in 1531 by Nuño de Guzmán, it was the headquarters for Coronado's expedition in 1540 to the Gulf of California. It is situated on the coastal plain where tropical fruits, maize, cotton and sugar cane are grown and cattle raised. Pop. (1970 prelim.) 358,800

Culicidae, family comprising MOSQUITOES, small, dipterous flies which lay eggs in water. The larvae hang from the surface film by their breathing-tails and undergo complete METAMORPHOSIS within a PUPA, emerging as the familiar slender, hump-backed adult

Cullinan, Sir Thomas (1862-1936), South African diamond prospector and building contractor. He established the Premier Mine, the largest in the world, in which the CULLINAN DIAMOND was discovered. He was knighted in 1910 and was a member of the Union Parliament (1910-15; 1920-21)

Cullinan diamond, diamond found in 1905 in the Premier Mine of South Africa, the largest gem ever found; it weighed 3,106 carats (0.6kg; 1.33lb). It was bought by the Transvaal Government who presented it to Edward VII, and was subsequently cut into nine large and 96 small stones, the largest of which is the largest

cut diamond in the world. See also CULLMAN, SIR THOMAS

Culloden, Battle of (1746), decisive battle of the Second JACOBITE rising, in which the army of Charles Edward STUART (Bonnie Prince Charlie) was defeated by forces under the Duke of CUMBERLAND. Culloden ended the Stuart attempts to regain the throne by force. The battle was followed by a ruthless subjugation of the Scottish Highland clans who had provided most of Prince Charles Edward's army. See also p.1472, 1472

Culpeper, Nicholas (1616-54), English physician and astrologer who in 1649 published *A Physical Directory*, which was an unauthorized translation of the pharmacopoeia of the Royal College of Physicians. Despite its enormous popularity, this book (and his Puritan views) made him many enemies.

Culpeper's Rebellion (1677), uprising by North Carolina colonists against British trade policies. John Culpeper and George Durant led the colonists who jailed the British governor and replaced him with Culpeper. He ruled until 1679, when the British reasserted their authority. The rebellion is regarded as the first uprising in the American colonies.

Cultural lag, in anthropology, a theory describing the gap between the initial effects of innovations on a culture and their longer term effects. It is used specifically to describe the impact of western technology on primitive societies.

Cultural Revolution, The, officially the Great Proletarian Cultural Revolution, campaign led by MAO TSE-TUNG to purge the Chinese Communist Party of its opponents and to instil correct revolutionary social and political attitudes in the population. It was intended to combat the counter-revolution in domestic affairs which, in the early 1960s, had introduced incentives meant to promote efficiency in Chinese industry. It began with an attack on the moderates written by Mao and published in a Shanghai newspaper in November 1965. Senior party officials were removed from their posts and a series of open-air rallies, attended by millions of Mao's new youth corps, the RED GUARDS, was begun in August 1966. The revolution then spread throughout China and became a mass movement to defend the revolution against "bourgeois revisionism". It reached its peak in the autumn of 1968, when LIN BIAO-CHI, previously Mao's second-in-command, was relieved of all his posts. It was then that LIN BIAO was raised to the position of second most important official in China's political hierarchy. Throughout 1967 and 1968 the established local Communist Party authorities were replaced by Maoist Revolutionary Committees. See also pp.1697, 1726-1727

Culture, in ANTHROPOLOGY, all knowledge that is acquired by man by virtue of his membership of a society. A culture incorporates all the shared knowledge, expectations and beliefs of a group. Culture in general distinguishes men from animals since only man can pass on accumulated knowledge due to his mastery of language and other symbolic systems. Only man develops and uses culture consistently in the form of tools.

Cumae, ancient city in Campania region, sw Italy. It is believed to be the oldest Greek colony in Italy or Sicily, having been founded c.750 BC. It successfully resisted attack from the Etruscans, but was defeated by the Samnites in the 5th century BC. It came under Roman control in 338 BC, but from then on its fortunes declined and the town was destroyed in the 13th century AD. There are Greek and Roman ruins on the site and the cavern where the Cumaean Sybil, a priestess of Apollo, pronounced her prophecies.

Cumana, port in NE Venezuela, on the Manzanares River, approx. 227 km (141 miles) E of Caracas, capital of Sucre state. It was settled by the Spanish in 1520 in order to exploit the pearl fisheries near Margarita Island, and is the oldest European settlement in South America. It was raided by the native Carib Indians, the French and Dutch, and has been damaged

by several earthquakes. It exports coffee, cacao, sugar and tobacco and has fish canning industries. Pop. 100,500.

Cumans, Turkic people originating in Asiatic Russia. They conquered Russia in the 11th century AD, set up a state on the coast of the Black Sea and traded with the Byzantine Empire and Hungary. After they had been defeated by the Mongols in c.1240, many Cumans moved to Hungary.

Cumberland, William Augustus, Duke of (1721-65) British general, second son of George II. He brutally suppressed the JACOBITES after defeating them at the Battle of CULLODEN (1746). His subsequent continental commands (1747-48, 1757) during the war of AUSTRIAN SUCCESSION and the SEVEN YEARS WAR were unsuccessful. See also p.1472

Cumberland, see CUMBRIA

Cumbernauld, town in Strathclyde Region, central Scotland, 21 km (13 miles) ENE of Glasgow. It was designated a "new town" in 1956 to accommodate people from Glasgow and was the first such town in Britain to cater adequately for road traffic and separate it from pedestrian ways. Its industries include machinery and food processing. Pop. 31,784

Cumbria, county in NW England, formed in 1974 from the former counties of CUMBERLAND, WESTMORLAND and parts of YORKSHIRE and LANCASHIRE, bounded by the Solway Firth (N) and the Irish Sea (W). The region includes the LAKE DISTRICT. Carlisle is the main town. Area, 6,808 sq km (2,629 sq miles). Pop. 473,800.

Cumin, annual herb native to the Middle East and widely cultivated for its seed-like fruit used as a food flavouring. It has a branching stem and small pink or white flowers. Height: to 15 cm (6 in). Family Umbelliferae; species *Cuminum cyminum*. See also p.706

Cummings, Edward Estlin (1894-1962), US poet whose first work, *The Enormous Room* (1922), was a novel. His poetry, usually exhibiting either sentimental emotion or cynical realism or a combination of both, is characterized by unconventional spelling and punctuation. His verse includes *Tulips and Chimneys* (1923).

Cundall, Charles (1890-1971), British painter of portraits and landscapes. He was especially skilled at painting crowd scenes. During WWII he was an official war artist, his paintings in this period include *The Withdrawal from Dunkirk*.

Cuneiform, system of writing developed in Mesopotamia around 3000 BC in which all symbols are made up of wedge-shaped strokes, derived from the practice of writing on soft clay with a triangular stylus as a "pen". Developed from pictograms (which actually illustrated the meaning) the Cuneiform "alphabet" eventually comprised over 500 characters, most as words but including also some syllables and a phonetic system. Inscriptions and clay tablets have been found representing many languages in Cuneiform, Babylonian and Assyrian are the most common, although the ancient Persians also used the script. See also p.610

Cunha, Euclides da (1866-1909), Brazilian author. *Os Senhores (Rebellion in the Backlands)* (1902), his most famous work grew out of a newspaper assignment about a pitiful rural insurrection by followers of a religious fanatic. Its sense of the tragic caused some critics to acclaim it as "the most Brazilian" of all books.

Cunningham, Allan (1784-1842), Scottish poet. He was apprenticed to his brother (a stonemason) but went to London and contributed to the *London Magazine*. From 1814 to 1841 he was clerk of works (manager) at Chantrey's studio. He published several books of poems (which he called "songs") and *The Lives of the Most Eminent British Painters, Sculptors, and Architects* (1829-33).

Cunningham, Andrew Browne, 1st Viscount Cunningham of Hyndhope (1883-1963), British admiral. He was commander-in-chief of the naval forces in the Mediterranean (1939-43) and first sea lord and chief of the naval staff (1943-46).

Cunningham, Sir John (1885-1962), Brit-

ish admiral. He took part in the evacuation of Norway in 1940. He was commander-in-chief of the Mediterranean (1943-46), first sea lord (1946-48) and admiral of the fleet (1948-62).

Cunningham, Merce (1919-), US modern dancer and choreographer. He was with the Martha Graham Dance Company (1940-45) and in 1952 formed the highly acclaimed Merce Cunningham Dance Company. His productions are highly experimental and controversial and include *Arise Me!* (1958) and *How to Pass, Kick, Fall and Run* (1965).

Cunninghame Graham, Robert Bontine (1852-1936), Scottish author and politician. He travelled widely in South America, returned to Britain and became a Liberal MP (1885-92) and leader of the Nationalist movement in Scotland. He later travelled in Spain and North Africa and wrote many books about his journeys.

Cunobelinus, or Cymbeline (d.c. AD 42), ancient British king. He was leader of the CATUVELLAUNI tribe, with his capital at Colchester, and he conquered the TRINGVANTES, to become the strongest ruler of SE Britain. CARACTACUS was his son.

Cupid, Roman god of love, corresponding to the Greek EROS. Depicted as a winged boy carrying a bow and arrows of desire, he was the youngest and most mischievous of the gods, playing wanton tricks on both men and other gods. He was an attendant figure in much Roman love poetry and in sculpture.

Cupulnque, early prehistoric culture period of South American Indians in N Peru. This was a major division of the greater CHAVIN period, which lasted from c.1000-c.200 BC, and is noted for particularly well-formed and modelled ceramics. See also CHAVIN

Cupola, small dome shaped like an onion, crowning a roof or turret, at the intersection of the arms of a building or on the corners of a square plan. Cupolas are most often found in the Middle East, but some famous examples exist in Europe, as in the Gesù Church in Rome.

Cupressus, see CYPRRESS

Cuprite, red to reddish-brown, brittle, translucent oxide mineral, cuprous oxide (Cu₂O). It is formed by the weathering of other ores like copper sulphide and so is commonly found near the surface. Its octahedral, dodecahedral and cubic crystals occur in the cubic system, and it also occurs in grains and earthy masses. Hardness 3.5-4; s.g. 6.1

Cupronickel, alloy containing 75 parts of copper to 25 parts of nickel, widely used for coins. In 1947 it replaced the silver alloy used until that time for non-copper coins in the United Kingdom.

Curacao, largest island of the NETHERLANDS ANTILLES in the West Indies, in the Caribbean Sea. Most inhabitants are descended from African slaves imported during the 17th and 18th centuries, and the original Arawak Indians are now extinct. The island derives most of its income from refining Venezuelan oil and tourism. The capital is Willemstad. Products: aloes, divi-divi, groundnuts, tropical fruits, Curacao liqueur, phosphates. Area: 471 sq km (182 sq miles). Pop. 144,000. See also p.2104

Curacao, LIQUEUR originally produced by Dutch settlers on the island of CURAÇAO by distilling the bitter peel of unripened oranges. Today curacao is made by macerating orange peel in brandy or rum, distilling it and then sweetening the product. The liqueur is 60% to 80% proof.

Curare, poisonous resinous extract obtained from various tropical South American plants of the genera *Chondodendron* and *Strychnos*. Most of its active elements are ALKALOIDS, notably D-tubocurarine. It is used on the poisoned arrows of South American Indians, and produces muscle paralysis by acting on the nervous system. It now has several medical uses, notably as a muscle relaxant in abdominal surgery and setting fractures, and in treating spastic paralysis and some mental disorders. See also p.1091

Curassow, large, crested, long-tailed, turkey-like game bird that lives in Central and South American forests. It feeds on

Cultural Revolution. Mao's young Red Guards parade through the streets of Peking

Cumbria includes the English Lake District, a region of unparalleled scenic beauty

Cupid corresponds to the Greek god Eros, the centre of attraction in London's West End

Curassow, this wild bird is now being considered for large-scale breeding in captivity

Marie and Pierre Curie shared a 1903 Nobel Prize for their discoveries in radioactivity

Curlews can fly powerfully, necessary for their long journeys south for the winter

Curling is an ancient winter game which dates back at least to the 18th century

John Curry took his individual style of skating from the Olympic arena to the London stage

insects and vegetable matter. Curassows lay 2-3 white eggs in nests built on branches near water. They live almost entirely in trees and their flesh is a delicacy. Length to 1m (3.3ft). Family Cariamidae.

Curate, in modern usage, a clergyman who assists the incumbent of a parish in the performance of his duties. The term was originally used to denote a priest who had the charge ("cure") of a parish, as in England a vicar or rector.

Curapepe, town and health resort in central Mauritius, 16km (10 miles) S of Port Louis. Most people work in the nearby tea plantations. Pop. (1969 est.) 51,500.

Curia, political division of ancient Rome, composed of patrician and plebeian family units. Military service and electoral function were based on the *Curia*, which came to mean any public meeting-place. In medieval Europe the term was used for a court, and the modern papal court is still called the *Curia*.

Curia Regia, the great council to which kings in medieval England summoned their tenants-in-chief in fulfilment of their feudal obligation to give suit of court. There they gave counsel and, although the Curia's primary function was judicial, it is considered the origin of PARLIAMENT.

Curia Romana, official administrative body of the Roman Catholic Church. It is based in the Vatican and consists of a court of officials through which the pope governs the Church. It includes three groups - congregations, tribunals and curial offices - and is concerned with all aspects of the life of the Church and its members. In 1967 Pope PAUL VI began to modernize its structures and procedures.

Curie, name of two French scientists. Pierre (1859-1906) and his wife Marie (née Skłodowska), (1867-1934). Pierre's early work concerned the electrical and magnetic properties of crystals, from which he formulated a law relating magnetism to temperature. In 1895 he married Marie, and joined in her important work on RADIOACTIVITY. Together they discovered RADIUM and POLONIUM in 1898. In 1903 they shared the Nobel Prize in physics with A. H. BEQUEREL. In 1911 Marie was awarded a second Nobel Prize, this time in chemistry, for her work on radium and its compounds. See also pp 389, 1094-1095, 1637.

Curie, unit (symbol Ci) used to measure the activity of a radioactive substance. It is used for all radioactive isotopes and is defined as that quantity of a radioactive isotope which decays at the rate of 3.7×10^{10} disintegrations per second. It was named after Madame Marie CURIE.

Curitiba, city in SE Brazil, capital of Paraná state. Its development dates from the influx of European immigrants in the late 19th century, when it became a distribution centre for the surrounding agricultural region. Pop. (1970) 608,417.

Curium, radioactive metallic element (symbol Cm) of the ACTINIDE group, first made in 1944 by G. T. Seaborg and others by the alpha particle bombardment of Plutonium-239 in a cyclotron. It is chemically reactive and most of its halogen compounds have been prepared. It is also intensely radioactive and is toxic if absorbed by the body. Properties at no. 96, s.g. 13.51, m.p. 1,340°C (2,444°F), 13 isotopes, most stable Cm²⁴⁷ (half-life 1.6×10^7 years).

Curlew, long-legged shorebird with long down-curved bill and mottled brown plumage. Often migrating long distances, it is a wader and lives in open areas near water. It feeds on small animals, insects and seeds, and nests on the ground, laying two to four eggs. Length to 48.4cm (19.25in). Species *Numenius arquata*.

Curling, game resembling bowls on ice that is a major winter sport of Scotland, and popular in Canada and the USA. It may have originated as early as the 16th century. The game is played by two teams of four players on an ice surface 42m (138ft) long by 4.3m (14ft) wide. Each player has two circular smooth stones -

dished at the base and on top and having a handle - each weighing 18-20kg (40-44lb). Players are also provided with a *cramp* (a spiked metal foot-plate). At each end of the ice is a circular target with an area in the centre known as the *tee*. While one player sends his stone towards the tee, another player uses a broom to sweep the surface in front of it to give it a smoother surface over which to glide. Each player delivers two stones, alternately with his opponent. One point is scored for each stone lying nearer the tee than an opponent's stone. A game is 10 or 12 rounds (16 stones per round).

Curly-coated retriever, sporting dog with a dense, tightly-curved coat of black or deep brown. It is able to retrieve on both land and water. It is thought to be descended from the water spaniel. Height 58cm (23in); weight 30kg (65lb).

Curnow, Allen (1911-), New Zealand poet, a leading literary nationalist. He is best known for his collections *Not in Narrow Seas* (1939) and *Island and Time* (1941). He was the editor of the *Penguin Book of New Zealand Verse* (1960).

Curragh "Mutiny" (March, 1914), refusal of officers of the 3rd Cavalry and some infantry officers, stationed at the Curragh, near Dublin, to fight (if required) in Ulster in order to enforce the Liberal government's Home Rule proposals for Ireland. The chief organizer was Gen. Hubert Gough. The affair forced the resignation of the war minister, J.E.B. Seely.

Curran, John Philpot (1750-1817), Irish lawyer and orator. Noted for his wit and eloquence, he is best known for his defence of rebels arrested for the 1798 insurrection. As King's counsel in 1782 and member of the opposition in the Irish Parliament (from 1783), he supported the rights of Catholics (although a Protestant himself) and opposed the Union (1800).

Currant, any of several mainly deciduous shrubs and their fruits, which are rich in vitamin C. Black, red and white currants are included in the genus *Ribes*; they are popular plants and are cultivated widely. The fruits are used in pies, preserves and syrups. See also p 710, 710.

Curral moth. See MAGPHE MOTH.

Curry. See MONEY.

Current, broad, slow drift of water moving in a certain direction, distinguishable from the water surrounding it by differences in temperature and/or salinity. A current can be caused by prevailing winds which sweep surface water along forming drift currents. Such currents are affected by the CORIOLIS FORCE, by the shape of the ocean bed or by nearby land masses. Currents at a deeper level are the result of variation in density of the water which in turn varies according to temperature and salinity. See also p 234.

Current, electric, flow of electrons along a conductor (or of ions through an ELECTROLYTE or gaseous discharge). By convention the direction of current flow is from a positive to a negative terminal, although electrons flow along a wire in the opposite direction. It is measured in AMPERES and its symbol is I. Direct current (DC) flows continuously in one direction, whereas alternating current (AC) regularly reverses direction. Mains AC reverses 120 times/sec in North America and 100 times/sec in most European countries (corresponding to supply frequencies of 60Hz and 50Hz). See also pp 866-869, 878-881.

Current value, market value of goods and services as measured in current monetary prices. During inflationary periods, the market value of a product increases as its price increases even though the quantity is constant. The current value of all final goods and services is the GROSS NATIONAL PRODUCT (GNP).

Currie, Sir Arthur William (1875-1933), Canadian soldier and educationalist. After holding a succession of commands during WWI, he became general-in-command of the Canadian corps in France in 1917. In 1919 he became Canada's first full general. From 1920 to 1933 he was principal and vice-chancellor of McGill University.

Currie Cup, two trophies donated by shipowner Sir Donald Currie for South African inter-provincial rugby and cricket competition. The cricket cup, first con-

tested in 1889-90, was given for this express purpose. The rugby cup was originally for the team providing best opposition to the 1891 British touring side. It went to Griqualand West, who gave it as a trophy for the inter-provincial tournament begun in 1889.

Curry, John (1949-), British ice-skater. He was the British men's champion from 1973 to 1976. In 1976 he won the European, Olympic and World gold medals. He then turned professional and founded the Theatre of Ice Skating.

Cursor Mundi (c. 1300), English poem of unknown authorship. Its 24,000 lines, written in a northern English dialect, tell the history of the world from the Creation to Doomsday and are based somewhat on the paraphrase of Genesis which has been attributed to the English poet CAEDMON.

Curtain wall, originally a non-load-bearing wall, such as a fortified wall around a castle. In modern building, curtain-walling is a technique which adds a wall (generally prefabricated) to a structure erected in "skeleton" form.

Curtin, John (1885-1945), Australian political figure. A newspaper editor before first entering Parliament in 1928, he was leader of the Labour Party from 1935 until his death and prime minister and minister of defence from 1941.

Curtis, Lionel (1872-1955), British colonial official who in 1916 introduced the term "Commonwealth of Nations" when advocating federation for the members of the British Empire. He was influential in the unification of South Africa.

Curtis, Tony (1925-), real name Bernard Schwarz, US film actor. He served in the Navy in WWI and made his first film, *Cross Cross*, in 1948. Since then he has played leading roles in many films, including *Trapeze* (1956), *The Defiant Ones* (1958), *Some Like it Hot* (1959) and *The Boston Strangler* (1968).

Curtis Cup, biennial amateur golf fixture for ladies' teams representing the British Isles and the USA. First contested in 1932, it has been dominated by the USA.

Curtiss, Glen Hammond (1878-1930), US aviator. He began, as did the Wright brothers, by building bicycles. By 1908 he made the first US flight of more than 1km (0.6 miles). He built planes during WWI and his JN-4 ("Jenny") was a well-known trainer. Curtiss' company and that of the Wrights merged to become the Curtiss-Wright Corporation.

Curvature of the spine, exaggerated shaping of the spine, which is usually gently curved. There are three major types: Scoliosis, or lateral curvature, can be due to bad posture or to a pre-birth abnormality. Lordosis, an accentuation of the inward curve of the neck region or more commonly of the lower back region, results in a sway-back appearance. Kyphosis, an accentuation of the outward curve behind the chest, can in severe form result in a hunchback appearance.

Curve, commonly, a continuously bending line without angles. In mathematical terms a straight line is also a curve, and in analytic geometry, a curve is the locus of points that satisfy a mathematical equation. See also pp 784-787.

Curwen, John (1816-80), British Congregational minister who devised the TONIC SOL-FA method of teaching sight-singing. Although officially frowned on for many years his methods eventually triumphed.

Curwen Press, printing company originally set up in the 1860s by the Rev. John Curwen. It was taken over just before WWI by Harold Curwen, who transformed the press into one producing quality illustrated books, featuring the work of such artists as Paul Nash, Graham Ardizzone. In 1975 it presented more than 750 prints to the Tate Gallery.

Curzon, Clifford (1907-), British pianist. He studied at the Royal Academy and made his debut in 1923. Later he studied with Artur Schnabel and Nadia Boulanger. He was professor at the Royal Academy until 1932, when he embarked on his concert career, touring the world. He became known for his performances of SCHUBERT'S piano music.

Curzon Line, (1919), demarcation by the LEAGUE OF NATIONS which established the eastern frontier of Poland and awarded the city of Vilna to Lithuania and large areas of Poland to Russia. The Poles invaded the USSR and recovered the territory in 1921. The YALTA CONFERENCE of 1945 recognized the Curzon line.

Curzon of Kedleston, George Nathaniel
Curzon, 1st Marquess of (1859-1925), British Conservative statesman. He entered Parliament in 1886 and travelled widely in the East before becoming Viceroy of India (1899-1905). There he carried out many reforms before his resignation was engineered as a result of an argument with Lord KITCHENER. He served in the war cabinet (1915-19) and as foreign secretary (1919-24).

Cuscuta, tree-dwelling MARSHMALLOW related to the PHALANGERS and OPOSSUMS, native to Australia and New Guinea. It grows to the size of a large domestic cat and has a prehensile tail which it wraps round branches during nocturnal rambles through the tree tops in search of insects and vegetable food. Family Phalangeridae, species *Phalanger vestitus* and *P. maculatus*.

Cush, Kingdom of. See KUSH, KINGDOM OF.

Cushing, Harvey (1869-1939), US surgeon. His pioneering techniques for surgery on the brain and spinal cord helped advance NEUROSURGERY. He also first described the syndrome produced by oversecretion of adrenal hormones that is now known as CUSHING'S SYNDROME. **Cushing's syndrome**, rare disease marked by obesity of the body, facial redness and in women an increase in body hair and menstrual disturbances. It is often associated with high BLOOD PRESSURE, DIABETES MELLITUS, brittle bones and psychological factors. It is caused by an excessive amount of ADRENAL hormones, which can be stimulated by a tumour and occasionally by administration of the drug CORTISONE. See also p.1077.

Cushioncraft. See HOVERCRAFT.

Cusp, in geology, a crescent-shaped depression of shingle that occasionally forms in a regularly spaced series along a beach. Cusps may vary in length from a few feet to hundreds of feet. No good explanation of them has yet been found. **Cusp**, in astronomy, either of the two horned extremities of the crescent phase of the MOON, MERCURY or VENUS.

Custard apple, family of partly evergreen trees grown in tropical and subtropical America. The leaves are lance-shaped, and the yellow flowers produce large, red to brown, heart-shaped fruits with an edible custard-like pulp. Height: to 7.5m (25ft). Of the many species the CHEQUAMONA, sweetop and sourtop are especially cultivated for their fruit. Family Annonaceae. See also pp.690-691.

Custer, George Armstrong (1839-76), US soldier who was made a major-general in the Union army in 1864 and after the Civil War became acting commander of the 7th Cavalry in 1866. He was court-martialled and suspended for a year in 1867. In 1868 he returned to service and led attacks on the Cheyenne. In 1876, at the Battle of the LITTLE BIGHORN he misjudged Indian strength, and he and his immediate command were wiped out by the Sioux and Cheyenne under SITTING BULL.

Customs and excise, taxes on goods the first on imports, the second on goods consumed within the country of manufacture. The development of the customs system in England dates from 1266, when Edward I levied taxes on the merchandise of all traders, but because of widespread opposition this was discontinued in 1274. Customs were administered by the EXCHEQUER until 1605. The Commissioners of Excise were appointed in 1643 but did not obtain direct control of taxes until 1671. Customs and excise came under the control of one board in 1909.

Customs union, trading area within which goods may cross boundaries, whether national or provincial, without duty having to be paid. The EEC is, among other things, a customs union or common market. The most famous customs union in modern history is the German ZOLL VEREIN (1834). See also BENELUX.

Cut, break in the skin that results in bleeding or, in severe cases, haemorrhage. Bleeding is best stopped by applying pressure to the wound. Only rarely is a tourniquet ever advisable.

Cuthbert, Saint (c.635-87), English monk and bishop. He entered the monastery of Melrose under the Abbot, St Eata, in 651. He is believed to have performed miracles on Farne Island; he became Bishop of Lindisfarne in 685. He is buried in Durham Cathedral. Feast: 20 March. See also p.1273.

Cuthbert, Betty (1938-), Australian athlete. The "Golden Girl" of the 1956 Olympics, she won three gold medals (100m, 200m and 4 x 100m). In 1964 she won the Olympic 400m event.

Cuticle, exposed outer layer of an animal, in human beings the epidermis, especially the dead skin at the edge of fingers.

Cutter, a small, fast-sailing boat with a single mast rigged fore and aft, carrying a mainsail and at least two headsails, similar to the sloop. Traditionally, the deep and narrow hull has a sharply raked stern and a sliding bowsprit. They were used to pursue smugglers in the early 19th century. The name is also used for heavy rowing boats carried on large ships.

Cutting, piece of a plant used to start a complete new plant of the same kind. Like other methods of vegetative (asexual) propagation, cuttings have the advantage of producing plants that are genetically identical to the parent plants. Cuttings are most commonly taken from young stems, although leaves and pieces of root can also be used. Cuttings of woody twigs, including those of apples and grapes, are usually taken during the winter and stored under cool moist conditions until spring, when they are planted in sandy, damp soil to help the development of their roots. See also pp.674-675, 674-675, 716-717, 716-717.

Cuttlefish, CEPHALOPOD MOLLUSCS related to SQUIDS and OCTOPUSSES. Like squids cuttlefish swim rapidly by the propulsion of a jet of water forced out through a siphon. They have ten sucker-covered arms on the head, two being much longer than the others. Their flattened bodies contain the familiar chalky cuttle-bone. Capable of rapid colour changes, they can also eject blue-black "ink" as a means of protection. Family Sepiidae, species *Sepia officinalis*. See also pp.6, 24-25.

Cutworm, mainly nocturnal caterpillar (larva), especially of the moth genus *Agrotis*, which attacks plants and crops, cutting through their stems at ground-level. Some species attack the roots of plants. Length: to 5cm (2in). Order Lepidoptera, family Noctuidae.

Cuvier, Georges, Baron de (1769-1832), French geologist and zoologist, a founder of the disciplines of comparative anatomy and palaeontology. His scheme of classification stressed the form of organs and their correlation within the body. He applied this system of classification to fossils, and came to reject the theory of the gradual development of the earth and animals, favouring instead a theory of catastrophic changes.

Cuvilliers, François de (1695-1768), French architect and decorator. He was the foremost rococo artist in Germany, appointed architect to Emperor Charles VII in 1742. He built the Residenz-Theater, Munich (1751-53).

Cuyp (or Kuyp), Aelbert (1620-91), Dutch painter, one of a family of artists, best known for his animal studies and calm, colourful landscapes. His father, Jacob Gerritsz Cuyp (1594-c.1651) was a portrait and landscape painter. Jacob's half-brother Benjamin Gerritsz Cuyp (1612-52) was a genre painter, influenced by REMBRANDT.

Cuyp, Jacob Gerritsz (1594-c.1651), Dutch painter known principally for his portraits, especially of children. He also painted landscapes which influenced his son Aelbert, and his nephew Benjamin, both painters.

Cuza, Alexander John (1820-73), Romanian ruler. He was elected Prince of Walachia and Moldavia in 1859, and recognized by the Turks in 1861, when his principalities were united into the state of

Romania. Cuza introduced social reforms including the emancipation of the serfs in 1864 and the foundation of universities. He was forced to abdicate in 1866. See also p.1561.

Cuzco, city in s central Peru, 563km (350 miles) SE of Lima, capital of Cuzco department. An ancient capital of the Inca Empire, it is a centre of archaeological research, nearby sites include the fortress of Sacsahuaman, Inca terraces at Pisac, and the Inca city of Machu Picchu. It was founded in the 11th century and fell to the Spaniards in 1533. Cuzco was destroyed by earthquakes in 1650, and then rebuilt. It is a market centre with textile industries. Pop. (1969 est.) 105,400.

Cwmbran, urban district in Gwent, SE Wales, approx. 24km (15 miles) NNE of Cardiff. It was established under the New Towns Act of 1946 to house steelworkers. Pop. (1970) 31,600.

Cyanide, salt or ester of hydrocyanic acid (prussic acid), HCN. The most important cyanides are sodium cyanide (NaCN) and potassium cyanide (KCN), both of which are deadly poisonous and have a characteristic smell of almonds. Cyanides have many industrial uses - in electroplating for the heat treatment of metals, in the extraction of silver and gold, in photography, and in insecticides and pigments.

Cyanophyta. See BLUE-GREEN ALGAE.

Cybele, in Greek mythology, an earth goddess, borrowed from PHRYGIA, whose cult was merged with that of RHEA. She was probably the mother of MIDAS. Patroness of wild beasts, especially lions, she personified the wild, primeval aspects of nature. **Cybernetics**, study of communication and control systems in animals, organizations and machines. The term was first used in this sense in 1948 by the American mathematician Norbert WIENER. Cybernetics makes analogies between the brain and nervous system and computers and other electronic systems, analysing, for example, the mechanisms of FEEDBACK and data processing in both. Thus a household thermostat might be compared with the body's mechanisms for temperature control and respiration. Cybernetics combines aspects of mathematics, neurophysiology, computer technology, INFORMATION THEORY and psychology. See also p.465.

Cycads, family of primitive palm-like shrubs and trees that grow in tropical and subtropical regions. Feathery leaves which are poisonous in most species, crown a stout columnar stem. These plants first flourished about 225 million years ago. Most of the 100 or so surviving species are less than 6.1m (20ft) tall. Family Cycadaceae.

Cyclades, (Kiklādes), large group of islands off SE Greece, in the Aegean Sea, a department of Greece, the capital is Hermopolis, on Sifos Island. The name is derived from the Greek *kyklos*, meaning ring. During the Middle Ages, most of the islands were incorporated into the Venetian Duchy of the Archipelago. They were annexed to Greece in 1829 from the Ottoman Empire. Mineral deposits include bauxite, lead and sulphur. Products: wheat, grapes, fish, olive oil, tobacco, marble. Area: 2,572sq km (993sq miles). Pop. (1971) 86,084.

Cycladic art, art of the Greek islands, especially marble statuary. It reached its peak in the 7th century BC, with great centres at Naxos, Paros, Delos and Melos.

Cyclamates, white, odourless, soluble crystalline salts, calcium cyclamate, $(C_6H_{11}NHSO_3)_2Ca \cdot 2H_2O$ and sodium cyclamate, $CH_2H_{11}NHSO_3Na$. They have about 30 times the sweetening power of ordinary sugar (sucrose). Both were used as artificial sweeteners until they were shown to produce undesirable side-effects.

Cyclamen, genus of 20 species of low-growing perennial herbs, native to central Europe and the Mediterranean region and grown widely by florists. They have swollen, tuberous, turnip-like roots, and heart- or kidney-shaped leaves, often marbled or ribbed. The drooping blooms are white, pink, lilac or crimson, and appear in the autumn and winter. Family Primulaceae.

Cuttlefish are often caught at night, lured to the surface by the fisherman's lights.

Georges Cuvier formed his illustrative style as a child by copying the works of Buffon.

Aelbert Cuyp, *Landscape with Shepherds and Cows*, typical of his pastoral scenes.

Cuzco, once capital of the ancient Inca empire, parades a Catholic European saint.

Cyclones are belts of low pressure which sometimes turn into violent tropical storms

Cyclops: this freshwater creature gets its name from its large, single median eye

Cyclotrons, or atom smashers, accelerate nuclear particles to extremely high speeds

Cymbals, percussion instruments which get their name from the Greek word for cup

Cycle, series of changes through which any system passes which brings it back to its original state. For example, alternating current starts from zero voltage, rises to a maximum, declines through zero to a minimum and rises again to zero. In the internal combustion engine the two-stroke engine completes one cycle each downward plunge and return, the four-stroke cycle takes two such movements. See also pp.498, 880-881

Cycle racing. See BICYCLE RACING.

Cycling. See BICYCLE RACING.

Cyclo-cross, cycling's equivalent of cross-country running. Competitors ride where possible; otherwise they run, bikes on shoulders, over fields, woodland and hills often worsened by winter conditions. Artificial hazards can be added to the natural ones. A race covers 16-24km (10-15 miles) over a circuit usually 0.8-3.2km (0.5-2 miles). Obscure in origins, the sport is most popular in Europe, with annual world championships. These were open events until 1966 but there are now separate ones for amateurs and professionals.

Cyclohexane, colourless liquid hydrocarbon (C_6H_{12}) which occurs naturally in crude oil, but is made commercially by combining hydrogen with benzene, using a catalyst. It is one of a type of chemical compound called conformations, they can exist in two forms differing only in the arrangement of their bonds, and may "flip" from one form to the other. M.p. $6^\circ C (43^\circ F)$; b.p. $81^\circ C (178^\circ F)$. See also p.895

Cyclone, or "low", system of winds, or a storm, that rotates inwards around a centre of low atmospheric pressure, anticlockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere. It is associated with cloudiness and high humidity. Strong tropical cyclones, originating near the equator, give rise to hurricanes. Although having the same spiral motion, cyclones are distinguished from small-scale systems such as tornadoes and waterspouts. They do not have fronts which are associated with middle-latitude wave cyclones. See also pp.248-250, 252, 255

Cyclonite, also called RDX, T_4 or hexogen, a high explosive discovered in 1899 by Hans Hemming, formula $(CH_2NNO_2)_3$. A colourless, crystalline solid, it is made by first mixing formaldehyde and ammonia and then nitrating the product. It was not used until WWII, when most of the combatants employed it. It is sensitive to striking, and so its main peacetime use is in blasting caps. See also pp.582-583

Cyclopaedia, early English encyclopaedia published by the writer and translator Ephraim Chambers (*d.* 1740) in 1728. It was the first encyclopaedia to embody cross-references. The *Cyclopaedia* was translated into French and it was originally hoped that it would form the basis of Diderot's famous *Encyclopédie* (1751-72). But in the event, little of the *Cyclopaedia* was used. See also p.622

Cyclopes, in Greek mythology, three storm gods, each having one eye in the centre of its forehead, who forged the thunderbolts of Zeus. They were later depicted by Homer as hideous giant herdsmen living on an island and eating humans. Odysseus escaped one by blinding him.

Cyclopropane (C_3H_6), colourless hydrocarbon gas. It is a cyclic alkane with three carbon atoms joined in a "strained" ring. It is widely used as an anaesthetic that does not irritate the lungs and is a good muscle relaxant.

Cyclops, genus of common freshwater predatory copepod crustacean. Transparent and bullet-shaped, it derives its name from its large median eye. Gravid females carry two large egg sacs. Length under 1.6mm (0.06in). See also pp.19, 30, 31

Cyclorama, a large, concave screen, sometimes curving at the top, developed at the beginning of the century and used in stage design as a background, often lit with coloured lights. It is also a circular room or gallery having a series of paintings or photographs so arranged as to give an

all-round view of a scene.

Cyclostomata, sub-class of primitive jawless fish found in temperate to cold waters. It includes the parasitic lamprey and the scavenging hagfish. Both have eel-like bodies supported by cartilage and a notocord, and sucking mouths with sharp teeth. The lamprey feeds by sucking blood from its host, and the hagfish feeds on dead and dying fish with the aid of its rasping tongue. See also p.55, 55.

Cyclothymic personality, in psychology, personality disturbance characterized by abnormal and irregular alternations of sadness and elation. In its extreme form, with mania and severe depression, it is the main symptom of manic-depressive psychosis. The state is highly resistant to change, treatment consists of symptom alleviation with drugs. See also p.1112.

Cyclotron, particle accelerator, or atom smasher, in which charged particles such as protons or heavier ions are accelerated outwards in a spiral. It has two semi-circular or D-shaped electrodes across which is applied an alternating voltage. The charged particles are attracted by electrostatic forces to the electrode of opposite charge, but since the polarity alternates, the particles are swung outwards at increasing speed. See also p.819

Cygnus. See NORTHERN CROSS.

Cygnus Loop, bright nebula in the constellation of Cygnus. It is made up of several separately catalogued portions, including the Veil Nebula (NGC 6992) and appears as wispy filaments forming roughly circular arcs. The Cygnus Loop is believed to be the remnant of an ancient supernova and is a powerful source of radio waves and X-rays. See also p.985.

Cylinder, engine, one of the cylindrical chambers in an internal combustion engine. Inside each, a tightly fitting piston is pushed down by the pressure of the expansive force of burning fuel. The movement of the piston is lubricated by oil from the sump. The cylinders become hot in use and can be cooled either by air or water cooling systems. See also pp.496-497, 497, 498.

Cymbal, saucer-shaped, percussion instrument of brass with a small dome in the centre, usually without definite pitch. It is played by clashing together a pair held in both hands or by striking a suspended cymbal with a beater. It is used in symphony orchestras, brass bands and as part of the drum kit in most jazz and rock groups.

Cymbeline. See CYNOBELINUS.

Cymbeline (1609), play by William Shakespeare. Derived from a combination of British history and a story from Boccaccio's *Decameron*, the plot concerns the secret marriage of Cymbeline's daughter Imogen to Leonatus Posthumus. Typical of Shakespeare's late romances, the play ends on a note of general reconciliation.

Cymmodorion, Honourable Society of, Welsh society serving a variety of purposes. The first society (1751-87) was founded for philanthropic ends by Welsh men living in London. The second (1820-37) worked to foster Welsh nationalism, especially through the *Eisteddfod*. The third (1873-) is a patron of Welsh culture, history and arts.

Cynewulf (fl.800), English poet, presumed to be the author of *Elene*, *Fates of the Apostles*, *The Ascension*, and *Juliana*. Little is known about him, but the poems suggest that he was a priest in Mercia or Northumbria. Cynewulf's work shows a clarity of narrative unusual in Old English poetry.

Cynicism, philosophical way of life begun by Antisthenes, a pupil of Socrates. This goal of life requires self-sufficiency, as exemplified in the life of Diogenes of Sinope (c.412-323 bc), a contemporary of Alexander the Great. With the succession of individuals who "lived" its precepts, great variation developed in its interpretation. The word cynic was derived from the Greek word meaning dog-like.

Cypher, method of disguising a message in

which each letter is replaced by a sign or another letter or numeral according to a prearranged system. Cyphers are distinguished from codes, in which each word is replaced by a sign, another word or a group of numbers. "Codes" such as Morse code or the flag semaphore are strictly speaking, cyphers. Cyphers have been used since Renaissance times, particularly for military messages, and machines for producing complex cyphers were developed in the 19th century. See also pp.606-607.

Cypress, tall, evergreen tree native to North America and Eurasia, and growing best in warmer climates. It has scale-like leaves, roundish cones and a distinctive symmetrical shape. The wood is durable and fragrant, and is of value commercially. Height: 6-24m (20-80ft). Family Cupressaceae, genus *Cupressus*. There are about 20 species. See also p.368.

Cyprian, Saint (c.200-258), bishop of Carthage. He was a pagan rhetorician who was converted to Christianity c.246 and elected bishop of Carthage c.248. He suffered for his faith in the persecutions carried out by the Roman emperors Decius and Valerian, and was martyred in 258. He wrote many theological treatises including *The Unity of the Catholic Church* (251), which he wrote after the schism of Novatianus. Feast day: 16 September.

Cyprinodont, any of a family of about 400 species of small soft-finned fishes that live in fresh and brackish tropical and subtropical waters of North America and Africa. The best known are the sword tails and killifishes. Family Cyprinodontidae.

Cyprinoid, any of a family of about 1,500 species of freshwater fish, many of which are familiar to the angler, including carp, dace, bream, roach, tench, barbel, minnow, gudgeon, rudd and chub. Family Cyprinidae.

Cyprus, island republic in the E Mediterranean Sea, which became independent in 1960. It is inhabited by both Greeks and Turks, between whom there has been much strife. The capital is Nicosia (Levkosia). Cyprus is predominantly agricultural, the main crops being wheat and barley, fruit (including grapes for wine) and potatoes. There is some light industry. Area: 9,251sq km (3,571sq miles). Pop. (1976 est.) 639,000. See pp.2017.

Cyprus. See CYPRESS.

Cyrano de Bergerac, Savinien (1619-55), French writer. His novels and plays combine free thinking, humour and burlesque romance. He wrote two prose fantasies, *Journey to the Moon* (1657) and *The Comical Tale of the States and Empires of the Sun* (1662), which contain many scientific predictions. He was famous for his swaggery.

Cyrano de Bergerac (1897), five-act drama by Edmond Rostand. It remains popular today and was made into a film in 1950 and a television play in 1968. Cyrano, afflicted with an enormous nose, writes love letters to Roxane for his friend Christian, although he loves her himself. When Christian is killed in battle, Roxane enters a convent. Years later she discovers Cyrano's love for her on the day he dies.

Cyrenaica, historic region in NE Libya, on the Mediterranean Sea. Colonized by the Greeks in the 7th century bc, it was bequeathed to Rome in 96 bc, and conquered by the Arabs in ad 642. It became part of the Ottoman Empire after the mid-16th century. An Italian colony in the 1930s, it was the scene of many battles during WWII. Area: 855,368sq km (330,258sq miles).

Cyrenaic School, school of hedonistic philosophy founded by Aristippus (fl. late 4th and early 3rd century bc). It maintained that happiness lies not in slavery to, but in mastery over, pleasure. Its importance in philosophy declined in favour of the later version of Epicurus.

Cyril, Saint (fl.9th century), with his brother, Methodius, one of the two so-called "Apostles to the Slavs" who did missionary work among the Khazars and Moravians. He invented an alphabet from the Greek, upon which the Cyrillic alphabet is based.

Cyril of Alexandria, Saint (c.375-444),

Greek theologian and patriarch of Alexandria from c 412. He upheld the Christological orthodoxy (which emphasizes the inseparable humanity and divinity of Christ, with Mary as the mother of God) against NESTORIUS.

Cyrillic alphabet. See ALPHABET.

Cyrus the Great (c.600–529 BC), King of Persia, founder of the ACHAEMENID dynasty and the Persian Empire in 549 BC. He took over Media, defeated and captured King CROESUS of Lydia (c.546 BC), captured BABYLON in 539 BC and the Greek cities in Asia Minor, but failed to conquer Egypt. He delivered the Jews from captivity, giving them Palestine to rule. While fighting the Massagetae, a tribe NW of the Caspian Sea, he was killed. See also pp.1192–1193.

Cyst, abnormal growth in the form of a sac that contains solid or liquid material. It may occur in a glandular organ, such as breast or prostate, or in the skin. A cyst may be malignant (cancerous) or benign, the former may interfere with normal physical functions and need to be removed. The latter are also sometimes removed for cosmetic purposes.

Cysteine, (HS.CH₂.CH.NH₂.COOH) crystalline AMINO ACID that occurs in animal proteins, especially those in the hair, hooves and the keratin of the skin. The hydrogen and sulphur group in it make it the catalytic element in some enzymes. See also pp.907, 907–908–911.

Cystic fibrosis, hereditary glandular disease most often occurring in childhood, in which the body produces abnormally thick mucus that often obstructs the breathing passages, causing chronic lung disease. There is a deficiency of pancreatic enzymes, an abnormally high salt concentration in the sweat, and loss of weight. The disease is treated with antibiotics, salt replacement and a high-protein diet. Severe cases may be fatal.

Cystitis, inflammation of the urinary bladder due to acute or chronic infection, more common in women, usually caused by bacteria. Symptoms include frequent and difficult urination, a burning sensation during and after urination, low back pain and slight fever. Treatment consists of antibiotics and increasing the intake of fluids. See also p.1078.

Cytochemistry. See CYTOLOGY.

Cytochromes, proteins containing haem, an iron group, as in HAEMOGLOBIN. They are fundamental to the process of respiration in all living cells that need atmospheric oxygen. See also pp.908–910.

Cytology, study of living cells and their structure, behaviour and function. It began with ROBERT HOOKE's microscopic studies of cork in 1665 and the various forms of microscope are still the main tools of cytology. In the 19th century, MATTHIAS SCHLEIDEN and THEODOR SCHWANN developed the cell theory, which has since been frequently confirmed and is one of the fundamental concepts of cytology. Recently the chemistry of cell components, cytochemistry, has been a major area of research.

Cytoplasm, jelly-like, non-particulate matter inside a CELL and surrounding the nucleus. The proteins needed for cell growth and repair are produced in the cytoplasm. See also p.174, 174.

Cytosine, organic base, first isolated in 1894. Derivatives of cytosine made in the body are important in cellular metabolism and in the formation of RNA and DNA, thus being vital for the retention of genetic characteristics. See also p.907.

Czar. See TSAR.

Czartoryski, Adam Jerzy (1770–1861) Polish politician of an ancient family that had effectively ruled Poland in the 18th century. He served in the Russian court from 1795, but became disillusioned with Russian ambitions in Poland and returned home to lead the Polish insurrection of 1830. After its failure he lived in exile in Paris, where he planned an insurrection which eventually took place in 1863.

Czechoslovakia, landlocked nation in central Europe, a member of the Communist bloc. It is one of the most industrialized nations of central Europe, the main industries being iron and steel, chemicals,

motor vehicles and textiles. There are deposits of coal and iron but many raw materials are imported. The chief crops, produced mostly on co-operative farms, are sugar-beet, cereals and potatoes. The capital is Prague. Area. 127,869sq km (49,370sq miles). Pop. (1976 est.) 14,862,000. See pp.2018–2019.

Czeray, Karl (1791–1857), Austrian pianist, teacher and composer. A pupil of BEETHOVEN, he later taught LISZT. His piano studies are still popular. **Częstochowa**, city in Katowice province, s Poland, on the Warta River, approx 200km (125 miles) SW of Warsaw (Warszawa). An ancient monastery stands on Jasna Góra (Mountain of Light) and contains an image of the Virgin painted by St Luke, which was brought to Częstochowa in the 14th century and successfully defended against Swedish attacks in 1655 and 1705. It became a symbol of national strength and unity. The city was taken by Germany in both world wars. Industries: iron and steel, textiles, paper making. Pop. (1974) 195,400.

D

D, the fourth letter of the alphabet, derived from the Semitic *daleth* and the Greek *delta*. In Roman numerals, D stands for 500.

Dab, marine PLATFISH of the order Pleuronectiformes; a valuable food fish. The upper, "sighted" side is brown with darker spots, the underside is almost white. Length to 25cm (10in). Species *Pleuronectes limanda*. See also p.62.

Dabchick, also called little grebe, small, round-bodied, fresh-water diving bird with lobed, rather than webbed, feet and dark plumage. It is the smallest of the grebes and is common in Britain. It is a good flier and nests on floating vegetation. Length approx 27cm (10in). Family Podicipedidae, species *Podiceps ruficollis*. **Dablon, Claude** (c.1619–97), French missionary in Canada. A Jesuit, he went to Canada in 1655 and accompanied Claude Jean Allouez to Wisconsin in 1670 and was a superior of Jesuit missions (1671–80, 1686–93).

Dacca, port and capital of Bangladesh, 129km (80 miles) NE of Khulna. Pakistan formally surrendered to India in Dacca in 1971. It has the University of Dacca, founded in 1921. In the centre of the world's greatest jute-producing area, Dacca has engineering, textiles, printing and chemical industries, it is also noted for cottage industries that produce handicrafts. Pop. (1974) 1,730,253.

Dace, any of several small fresh-water fishes of the CARP family, Cyprinidae. The common European dace (*Leuciscus leuciscus*) is silvery and may grow 30cm (12in) long. The Moapa dace (*Moapa caerulea*) is recognized as an endangered species. See also p.346.

Dachau, town in Bavaria, SW Germany, the site of a CONCENTRATION CAMP established by the Nazis (1933–45). More than 32,000 people lost their lives there.

Dachshund, small German hunting dog bred to follow badgers to earth. It has a long tapered head and rounded pendulous ears, the long body is set on short legs and the tail is held in line with the back. Its coat may be smooth, wiry or long. There are two types, standard and miniature. Height (at shoulder) up to 23cm (9in).

Dacia, ancient region of Europe (now in Romania). Its inhabitants were thought of as wealthy and independent by the Greeks and Romans until they were colonized by Trajan in 101–106. Dacia was later overrun by Goths, Huns and Avars, but the Romance language of the area was retained and became the basis for modern Romanian. See also p.1233.

Dacoiti, term used in India and Burma for an armed bandit, usually one of a gang. Although at its worst in the 18th and 19th

centuries, dacoity has remained a problem since independence in 1947.

Dacron, trade name for long-chain polyester fibre made from glycol and terephthalic acid, known as Terylene in Britain. It has high elastic recovery and low moisture absorption and is not combustible, but melts at about 260°C (500°F). It is used extensively in ropes and in crease-resisting fabrics. See also pp.590–591.

Dactyl, in poetry, metrical foot consisting of a stressed, followed by two unstressed syllables, or a long followed by two shorts, as in the word "mannikin". The meter is called dactylic.

Dada, or **Dadaism**, movement in literature and the visual arts that was started in Zürich in 1916 by a group of artists and writers which included Tristan TZARA, Marcel JANCO, Richard HUELSENBECK, Hugo BALL, Jean (Hans) ARP and others. The group, repelled by war and bored with the prevalent CUBIST art styles, promulgated complete nihilism, espoused satire and ridiculed civilization. Dadaists participated in deliberately irreverent behaviour, designed to shock a complacent public. They stressed the illogical or absurd and the importance of the irrational unconscious mind. In the 1920s SURREALISM developed from Dadaism. See also pp.1684, 1684, 1685.

Daddah, Moktar Ould (1924–), the first president (from 1961) of Mauritania. His authoritarian rule maintained a precarious national unity.

Daddi, Bernardo (c.1290–1348), Italian painter, a major Florentine artist of the generation after Giotto, whose influence is evident in Daddi's frescoes *The Martyrdom of St. Stephen* (in Sta Croce, Florence). Daddi's later work, such as the altarpiece of *S. Pancrazio* (Uffizi, Florence), was influenced by Sienese painting, especially that of the LORANZETTI brothers.

Daddy-long-legs, fly of the order Diptera. It has a slender body, long fragile legs and one pair of wings. The hindwings are reduced to special balancing organs called halteres. Length to 3cm (1.2in). Family Tipulidae; species *Tipula simplex*. The name is also given to the HARVESTMAN spider. See also p.42.

Daedalus, in Greek mythology, a masterly architect and sculptor. He constructed the LABYRINTH for King MINOS of Crete. Imprisoned for offending the king, he made wings of wax and feathers to escape with his son ICARUS. The attempt ended in the death of his son.

Daffodil, bulbous flowering ornamental plant of the family Amaryllidaceae. The long rush-like leaves grow from the base and the single flowers are yellow or yellow and white, with a bell-like central cup and oval surrounding petals. Height to 45cm (18in). Genus *Narcissus*. See also p.674.

Dagda, one of the two greatest kings of the Tuatha Dé Danann in Irish mythology. A successful military leader of superhuman capacity, he could invoke the seasons with a harp that played by itself. He had a cauldron of plenty (called Undry) and a massive club that dealt out death or life.

Dagger, short sword or double-edged knife used for stabbing, or thrown from a short distance. Its design varies in different countries. It is called a stiletto in Italy, a poniard in France and a dirk in Scotland. The blade can be between 10 and 50cm (4–20in) long, tapered to a sharp point, or broad and pointed, the handle, or hilt, may be ornately designed, and is usually fitted with a guard. Daggers are used in close combat by many armies, particularly in guerrilla fighting. See also pp.554–555, 771.

Daghestan (Dagestanskaja ASSR), autonomous republic in the SE European USSR, bounded on the E by the CASPIAN SEA. The region is mountainous and divided by valleys, although there are irrigated lowlands to the N. These support wheat, maize and grapes and the rivers Samur and Sulak now provide hydroelectric power. Difficulty of access has left the mineral resources untapped and local industries concentrate on canned fruit, glassworking

Cyrus the Great, the Persian king, triumphantly entering Babylon captured in 539 BC.

Czechoslovakia: the Tyn church towering behind the Kinský Palace in Prague.

Dachshund, the small, strong German dog bred specially for following badgers to earth.

Daedalus was the father of Icarus, whose wings melted as he flew too near the Sun.

Daguerre, Louis Jacques Mande

and wood products. The capital is Mak-hachikala. Area: 50,300sq km (19,421sq miles). Pop (1970) 1,429,000.

Daguerre, Louis Jacques Mande (1789-1851), French painter and inventor of the daguerreotype, an early photographic process in which a delicate image is produced on a copper plate coated with silver iodide developed with mercury vapour. In 1829 he joined Nicéphore NIEPCE in photographic experiments. Their process was announced in 1839 at about the same time that William Fox TALBOT developed his calotype in England. See also p.628.

Dahl, Michael (1656-1743), Swedish portrait painter. He lived in England after 1689 and was a popular rival to Sir Godfrey KNELLER at the court of Queen Anne. **Dahl, Ronid** (1913-), British writer, chiefly of short stories. His first publication was the collection *Over to You* (1945). He won the Edgar Allan Poe award in the USA in 1954 and 1959.

Dahlab Archipelago, island group in the Red Sea off Mesawa (Massawa), Ethiopia, to which it belongs. Part of the province of Eritrea, it is made up of two large islands and more than 100 smaller ones, which are mostly uninhabited, the area noted for its pearl fisheries. Area: 1,165sq km (450sq miles).

Dahlberg, Erik, Count (1625-1703), Swedish soldier, architect and graphic artist who distinguished himself as a military engineer in Sweden's war with Denmark (1675-79) and later in the Great Northern War (1700-21).

Dahlia, genus of popular, late-blooming, perennial plants with tuberous roots. The common garden dahlia (*Dahlia pinnata*) has been developed into more than 2,000 varieties with a wide range of flower heads usually white, red, purple or bicoloured. Height to 1.5m (5ft). Family Compositae. See also p.372.

Dahomey, former region of W Africa, forming modern Benin and part of Ghana. The Dahomey tribal group emerged in the 17th century and won great prosperity by conquering local tribes and selling them to the Europeans as slaves. The region became a French protectorate in 1863, which became independent as Benin in 1960. See also pp.1988, 2051.

Dahrendorf, Ralf (1929-), German sociologist who believes that conflict is a basic element of society. His works include *Class and Conflict in Industrial Society* (1959) and *Essays in the Theory of Society* (1967).

Dai-buttsu, Japanese name for giant statues of BUDDHA, the most famous of which are the two extant sculptures at Nara and Kamakura and the one at Kyoto, destroyed and now represented by a wooden replica.

Dail Éireann, popularly elected house of the two-chamber parliament of the Republic of Ireland (The upper house is called the Seanad Éireann). Its first members were elected in 1918 and assembled at Dublin in January 1919.

Daimler, Gottlieb (1834-1900), German engineer and motor-car manufacturer. In 1822, with Wilhelm MAYBACH, he established a research laboratory where a year later they developed a lightweight petrol engine. Daimler then used this to power a motor-cycle and then his first car (1886). In 1890 he founded the Daimler Motor Co., which made Mercedes cars, and became (1926) Daimler-Benz & Co. See also pp.490-493.

Daimler-Benz, international vehicle-manufacturing corporation based in West Germany, with several foreign subsidiaries. It produces Mercedes-Benz cars and lorries and in 1976 employed about 168,800 people throughout the world. It was formed in 1926 when the two German pioneering car manufacturers of DAIMLER and BENZ were merged. See also pp.488, 492.

Dalren. See LUDA.

Dairy cattle, domesticated cattle raised mainly for milk and products derived from it. Cows have large udders and produce more milk than is needed for nursing their calves, which are weaned a few days after birth. An efficient cycle has been evolved

in which manure from the animals replaces nutrients taken from the soil by feed crops. See also pp.722-727.

Daisy, any of several members of the family Compositae, especially the common English garden daisy, *Helis perennis*. It has basal leaves and long stalks bearing solitary flower heads, each of which has a large, yellow, central disc and small radiating white petals tinged with pink. There are also many cultivated varieties.

Dakar, capital and largest city in Senegal, W Africa, on the S tip of Cap Vert, on the Atlantic coast. Founded in 1857 as a French fort, the city grew rapidly after the completion of a railway in 1885 linking it to Saint-Louis on the Senegal River. There is a Roman Catholic cathedral and a presidential palace. Dakar is a modern city with excellent educational and medical facilities, which include the Pasteur Institute. Industries: food processing, textiles, oil-refining, brewing. Pop. 799,000.

Dakota. See NORTH DAKOTA, SOUTH DAKOTA.

Dakota Indians. See SIOUX.

Daladier, Edouard (1884-1970), French statesman, radical leader and minister of war. Prime minister in 1933, 1934 and in 1938-40, he signed the Munich Pact in 1938 and declared war on Germany a year later. He was interned by the Vichy Government in 1942 and deported to Germany until his release in 1945.

Dalai Lama, Grand LAMA of the Yellow Hat Buddhist monastery at Lhasa, given the title "Dalai" (meaning "oceanwide") in the 16th century. The Grand Lama was made temporal and spiritual ruler of Tibet in 1642. The spiritual supremacy was later shared with the PANCHEN LAMA, while the Dalai Lama retained the temporal leadership until the Tibetan revolt against the Chinese in 1959, when he went into exile in India. The Dalai Lama is believed by Tibetan Buddhists to be a divine reincarnation of the bodhisattva Avalokitesvara, ancestor of the Tibetan people. On the death of a Dalai Lama his soul is believed to pass into the body of an infant, born 49 days later, whose identity is determined as a result of elaborate tests.

Dan-ail, city in the central highlands of S Vietnam, 225km (140 miles) NE of Saigon. Developed by the French as a health resort and hunting centre, it is a modern city with a university. Products: coffee, tea, rubber. Pop. (1971 est.) 86,600.

Dal Cais, Irish clan which flourished in Munster in the late 10th and early 11th centuries. Its two most powerful kings were Mathgamain, who gained control of Munster in c. 964 and gained Limerick from the Norsemen in 968, and Brian BORU, who became king of all Ireland in 1002 and destroyed the Norse threat at the Battle of CLONTAR in 1014. See also p.1314.

Dalcroze, Emile Jaques. See JAQUES-DALCROZE ÉMILE.

Dale, Sir Henry Haldett (1875-1968), British physiologist who shared the 1936 Nobel Prize in physiology and medicine with Otto LOEWI for discoveries relating to the chemical transmission of nerve impulses. Dale found that the chemical acetylcholine served to transmit nerve impulses across the tiny gap from one nerve cell to another. His writings include *Adventures in Physiology* (1953) and *An Autumn Gleaning* (1954).

D'Alembert, Jean le Rond. See ALEMBERT, JEAN LE ROND D'.

Dalén, Nils Gustav (1869-1937), Swedish engineer responsible for the development of automatic lighting for lighthouses and railway signals by means of a "sun-valve" - a switch responsive to the sun's radiation. Dalén was awarded the Nobel Prize in physics in 1912, but was blinded in a laboratory explosion a year later. He also invented a substance that absorbs acetylene and prevents the risk of explosion in acetylene tanks.

Dalgarno, George (c. 1626-87), Scottish educator. In *Ars Signorum* (1661) he advocated a language made up of letters that stood for ideas, and *Didascalocopus* (1680) proposed a hand alphabet for the deaf and dumb.

Dalhousie, James Andrew Broun Ram-

say, Marquis of (1812-60), British colonial administrator, b. Scotland. He became Lord Ramsay upon the death of his brother and was governor-general of India (1847-56), he defeated the Sikhs, annexed the Punjab and installed John Lawrence as its ruler. His annexations and style of government angered the Indian princes, though his administration helped to develop India's transport system.

Dali, Salvador (1904-), Spanish artist whose achievements have received enormous publicity. His style, a blend of meticulous realism and hallucinatory transformations of form and space, made him an influential surrealist. Dali has also designed jewellery, fabrics, furniture and stage décor. See also p.1684.

Dalín, Olof von (1709-63), Swedish author. He was exiled for political activities in 1756 and during his exile, which lasted until 1761, he completed his *History of the Swedish Kingdom*.

Dallapiccola, Luigi (1904-), Italian composer. He has used the 12-tone system of SCHOENBERG, and was the first Italian composer of atonal music. He was persecuted by Mussolini during WW2 because his wife is Jewish. He was keenly interested in vocal music, *Canti de Prigione* established him as a mature composer.

Dallas, city in NE Texas, USA, the state's second-largest city and one of the fastest-growing in the nation. A leading commercial, financial and transport centre of SW USA, it was founded c. 1841. Dallas became an important cotton market in the 1880s and in the 20th century has boomed with the development of the Texan oilfields. President John F. Kennedy was assassinated there on 22 Nov 1963. It has oil refining, electronic equipment, clothing and aircraft industries. Pop. (1970) 844,401.

Dalmatia, historic region of Yugoslavia, between Bosnia and Herzegovina and the Adriatic Sea. An important Roman province in the 1st-5th centuries it became part of the Byzantine Empire in the 6th century. It was taken by Austria in 1815. After WW2, it became part of the Federal Republic of Yugoslavia (Croatia) under the Yugoslav Government. Split is its regional capital. Products: cement, bauxite, wine, fish. Tourism is a major industry. Area: 12,732sq km (4,916sq miles).

Dalmatian, dog characterized by its white coat with black or liver spots. It has a long flat head with a long muzzle and high set ears. Its powerful body is set on strong legs and the tail is long and tapered. It is believed to have an instinct for working with horses. Height: to 58cm (23in) at the shoulder.

Daloz, Aimé-Jules (1838-1902), French sculptor who created monumental decorative works during the Third Republic. His masterpiece is the *Triumph of the Republic* in the Place de la Nation, Paris.

Dalriada, ancient British kingdom comprising part of Antrim, N Ireland, and Argyll, in Scotland. The kingdom emerged in the 5th century AD as many tribesmen from Ireland ("Scoti") moved to Argyll. The kingdom declined following Viking raids in the 9th century. See also p.1316.

Dalrymple, John, 1st Earl of Stair. See STAIR, JOHN DALRYMPLE, 1ST EARL OF.

Dalrymple, John, 2nd Earl of Stair. See STAIR, JOHN DALRYMPLE, 2ND EARL OF.

Dalton, Hugh, Baron Dalton of Forest and Frith (1887-1962), British statesman. He was a Labour member of Parliament (1921-31, 1935-59), and the Bank of England was nationalized while he was chancellor of the exchequer (1945-47).

Dalton, John (1766-1844), British chemist and physicist. His early interest in meteorology yielded important information on the trade winds, the cause of rain and the Aurora Borealis. He described colour blindness (sometimes called Daltonism) based on his own experiences and those of his brother. His study of gases led to Dalton's law of partial pressures. His atomic theory states that each element is made up of indestructible, identical, small particles, he also constructed a table of atomic weights. See also pp.812, 818, 886.

Dalton's law, in physics, states that the pressure exerted by each gas in a mixture of gases does not depend on the pressures of the other gases, provided no chemical reaction occurs. The total pressure of such a mixture is therefore the sum of the partial pressures exerted by each gas.

Daly, John Augustin (1878-99), US playwright and theatrical manager, who began his career as a critic for New York newspapers. In 1869 he opened the Fifth Avenue Theater and established the famous Daly's Theater on Broadway (1879).

Dam, Carl Peter Henrik (1895-1976), Danish biologist. In 1939 he isolated vitamin K, the fat-soluble vitamin needed for blood clotting. For this work, he received the 1943 Nobel Prize in physiology and medicine, which he shared with E. A. DOSSY. In addition he examined the roles of other vitamins and lipids.

Dam, barrier built across a stream, river, estuary or part of the sea to confine or check the flow of water for irrigation, flood control or electricity generation.

The first dams were probably constructed by the Egyptians at least 4,500 years ago. Common types are gravity, arch and buttress dams. Gravity dams are anchored by their own weight. Arch dams are of two types: single-arch and multiple-arch. Single-arch dams are curved (convex to the water they retain) and are supported at each end by the river banks. Multiple-arch and buttress dams are supported by buttresses rooted in the bedrock. The highest dam is the USSR's Nurek, 317m (1,040ft) high. The Fort Peck Dam in Montana, USA, has a record volume of 96,000,000cu m (125,568,000cu yd). The cheapest source of electricity that is used commercially comes from hydroelectric schemes made possible by dams such as the Aswan High Dam in Egypt. See also pp.540-541.

Damages, in CIVIL LAW, an award of money to a plaintiff in compensation for civil injury, such as breach of contract or slander. In addition to straightforward awards, in which compensation is made as fairly as may be in relation to the injury, there are two special types of award. The first is exemplary, or punitive, damages, in which the unsparing amount awarded is intended to be not a just compensation for the injury, but a punishment of the offender. It is reserved for acts of malice or wantonness. The other is nominal damages, in which, although the plaintiff's action is sustained, the injury is too trifling to warrant substantial compensation. See also CRIMINAL INJURIES COMPENSATION BOARD.

Damaraland, historic area and modern administrative region of Namibia (South West Africa), extending between the Namib and Kalahari deserts (W and E) and from Ovamboland (N) to Great Namaqualand (S).

Damas, Léon (1912-), Guinean poet. An early supporter of négritude, his collections of verse, *Pigments* (1937) and *Black Label* (1956), contain sensitive portrayals of village life in Guinea.

Damascus, capital of Syria, standing in an oasis on the edge of the Syrian desert, 137km (85 miles) NE of Haifa. It is thought to be the oldest continuously occupied city in the world and has belonged to, in turn, the Egyptians, Persians, Byzantines, Arabs, Seljuk Turks, Mongols, and Ottoman Turks. After WW2 it became the capital of one of the French Levant States, and the capital of independent Syria in 1941. It is Syria's administrative and financial centre, and local industries include textiles, metalware and refined sugar. Pop. (1975 est.) 1,049,500.

Damask, patterned, woven fabric of wool, linen, silk, cotton or man-made fibre. The name is derived from the Damascus weavers who first made it. True damasks are reversible. See also pp.590-591.

Damasus I, Saint (c. 304-84), pope (r. 366-84), whose election was challenged by the ARIANS, who chose Ursinus as antipope. Both were consecrated by bishops, although eventually Emperor Valentinian I expelled Ursinus from

Rome. Damus asserted that a pope could be tried only by ecclesiastical courts. St Jerome produced a revised Latin translation of the Bible under his supervision. **Dame**, legal title of the wife or widow of a knight or baronet. It is also the title accorded to women appointed to the 1st or 2nd class of the Order of the British Empire.

Dame aux Camélias, La (1848), novel by Alexandre Dumas (Fils) based on his love affair with Marie Duplessis, a courtesan. When transferred to the stage (1852) it proved hugely successful. Giuseppe Verdi used the story for *La Traviata* (1853).

Damien, Father (Joseph de Veuster) (1840-89), Belgian Roman Catholic missionary. He was sent to Hawaii by the Fathers of the Sacred Heart, where he joined a community of lepers on Molokai Island to administer to their needs.

Damocles, in Greek mythology, a courtier of Dionysius I of Syracuse (Sicily). His eulogies of the king made him a well-known figure at court. At a banquet Dionysius suspended a sword hanging by a fragile thread above his head. Damocles was thus made to realize that the wealth and power he praised were ephemeral and did not bring happiness.

Damon and Pythias (Phintias), famous friends in Roman legend. Pythias plotted against Dionysius of Syracuse (c. 430-367 BC) and was condemned to death, but Damon agreed to take his place in prison until the day of his execution so Pythias could settle his affairs. Pythias did return on the day of his execution, and Dionysius was so impressed with the loyalty of the two that he pardoned Pythias.

Dampier, William (1651-1715), English navigator and buccaneer. An adventurous early career included a buccaneering expedition against Spanish America and a journey across the Pacific Ocean, after which he was marooned. Sent by England in 1699 to the south seas, he explored the coasts of Australia, New Guinea and New Britain and gave his name to Dampier Archipelago and Dampier Strait. See also p. 1602.

Damselfish, any of 250 species of small lively marine fish, found in tropical waters of the Atlantic and Indo-Pacific oceans. It is brilliantly coloured, deep bodied and generally has a forked tail. It has a single nostril on each side. Length to 15cm (6in). Family Pomacentridae.

Damselfly, delicate weak-flying insect resembling the dragonfly. Almost all have a slender, elongated, blue abdomen and one pair of membranous wings that are held vertically (not flat) over the body when at rest. Length to 5cm (2in). Order Odonata. See also p. 328.

Damson, small tree and its edible fruit. The name is now applied to varieties of plum (*Prunus domestica*), especially *P. insinua*. The oval fruit, a drupe, is generally borne in clusters, and has a tart flavour and is made into jam. Family Rosaceae. See also pp. 688-689.

Dan, in the Bible (Genesis), fifth son of Jacob, born to Bilhah the maid of his wife, Rachel. His tribe settled north of Judah near the Mediterranean Sea.

Dann, Richard Henry (1815-82), US author. In 1834 he sailed as a common sailor on the brig *Pligrim* around Cape Horn to California and back. From that experience he wrote *Two Years Before the Mast* (1840), a classic in American literature of the sea.

Danæ, in Greek mythology, the daughter of Aeneas of Argos. Zeus appeared to Danæ in a shower of gold and she bore his son Perseus, who killed the Gorgon Medusa and also, in fulfilment of a prophecy his grandfather Aeneas.

Da-nang city in central Vietnam with a port on the South China Sea. It is a commercial shipping, rail and air-transport centre. The first European settlers landed at Da-nang Bay in 1535 and it was ceded to France by Annam in 1787. There was a huge US military base at Da-nang during the Vietnamese war. Industries: soap, cotton, silk production. Pop. 334,200.

Danby, Francis (1793-1861), Irish painter who worked in England and Switzerland. His early paintings - small land-

scapes such as *Blaise Castle* (c. 1822) - have a charming realism, but he was later influenced by Turner's Romanticism.

Danby, Thomas Osborne, Earl of (1632-1712) (subsequently Marquess of Carmarthen, Duke of Leeds), English Tory politician who was Charles II's treasurer and chief minister (1673-78). He built up an Anglican court party in Parliament, but was impeached and imprisoned (1679-84) by them when a secret subsidy he had negotiated with Louis XIV was made public. Danby organized Tory support for William and Mary, invited them to seize the crown and became their chief minister (1690-95) until he was again impeached on a charge of bribery.

Dance, English word derived from French from Old High German *dansōn*, to stretch. Dancing is the ancient art of ordered stylized body movements coupled with leaps, measured steps and other actions, normally performed to the accompaniment of music or voices. The purpose of a dance may be religious, artistic, a means to communicate emotions, entertainment or as a form of popular expression. At its most primitive form, the dance was probably part of courtship and religious ritual. Other forms of dancing originated in China, Japan and India, where mime was the distinctive feature. The dances of Africa are quite different from those of Asia, they are characterized by rapid, athletic movements whereas Asian dances are more graceful. In the 18th century Bach and Handel composed music for gavottes and minuets. The waltz also became popular early in the 19th century. The Spanish style of dancing has assimilated Arab and gypsy influences and is accompanied by the guitar. Ballroom dancing (waltz, foxtrot, tango, quickstep etc.) became popular in the 19th and early 20th centuries, and from the 1950s came the introduction of such dances as rock 'n' roll, the jive and the twist.

Dance of Death, theme which probably originated in 13th or 14th century morality poems and plays. These, as recited and performed, accorded with popular beliefs that the dead rose up at night to attract the curious and unsuspecting and to dance them to their deaths. This superstition was reinforced with stylized dance pageants, paintings, illustrations and verse in which the dance symbolized the inevitability and equalizing nature of death.

Dance Theatre of Harlem, primarily black ballet company founded by Arthur Mitchell in 1968. Based in New York City, the company performs a varied repertoire of works ranging from classical ballets by George Balanchine to modern ethnic choreography by Talley Beatty.

Dancing. See DANCE.

D and C operation, abbreviation of dilation and curettage, in which the inside of the womb is scraped to remove abnormal tissue, to obtain a sample for testing or to procure an abortion.

Dandelion, one of the most widespread perennial weeds. It has deeply-cut basal leaves and yellow flowers, and reproduces by means of parachute seeds. The leaves are sometimes used in salads and the flower heads in making wine. Family Compositae, species *Taraxacum officinale*. See also pp. 378, 687.

Dandie Dinmont, Scottish hunting terrier. It has a massive head with a distinctive topknot, large hazel eyes and pendulous ears. Its long body has a downward curve and is set on short legs. The pepper-coloured coat is hard but not wiry. Height to 28cm (11in) at the shoulder.

Dandolo family, Venetian family that became rich and powerful by the 11th century, was at its height in the 12th-14th centuries and held high offices in Venetian government until the fall of the republic. Prominent members included Enrico (c. 1192-1205), doge of Venice who took Constantinople in 1204, Giovanni (doge, 1280-89), Francesco (doge, 1329-39), and the last Dandolo doge Andrea (doge, 1343-54), who joined the crusade against the Turks (1343-46) and also waged war on Hungary and Genoa.

Dandruff, dead scalp skin that appears as white or yellowish flakes in the hair. It is

made noticeable by oiliness and dense growth of hair, and is sometimes aggravated by inflammation, commonly seborrhoeic dermatitis.

Dane, Clemence (1888-1965), pseudonym of Winifred Ashton, British novelist and playwright. Her first novel was *Regiment of Women* (1917), a fictional account of teachers at a girls' school. Dane also wrote detective stories, plays and essays.

Danegeld, land tax levied in Anglo-Saxon England. It was first raised by Alfred the Great to pay off the Danish invaders, and became a regular payment in 991 in the reign of Ethelred. Payments to the Danes ceased in the 11th century, but the tax was still collected until 1162. See also p. 1289.

Danelaw, area in England occupied by Danes after a treaty in 886 between Guthrum and Alfred. The region was soon reconquered by the Anglo-Saxons, although Danish law prevailed there until the 11th century. It included East Anglia, Essex, part of Mercia, and Northumbria between the Thames and the Tees and was bounded in the W by Watling Street. See also p. 1289.

Danes, North Germanic peoples who first settled in the Jutland peninsula about 10,000 BC. Their history is vague until about AD 800 when they played an important part in the Viking raids on Western Europe. In the 9th-11th centuries they invaded England and established kingdoms in Yorkshire and in East Anglia. Unification of Denmark was completed by Harold Bluetooth, and his grandson Canute added Norway and England to his kingdom. See also pp. 1290-1291.

Dangerfield, Thomas (c. 1650-85), English conspirator. Employed to aid Roman Catholic suspects in the Popish Plot by defaming the Protestants, he betrayed his employers. He was killed after two days in the pillory.

Daniel, biblical hero and visionary, and prophetic book bearing his name. The book, probably written in about 165 BC, relates events in the legendary Daniel's life (6th century BC) during what is represented as the Babylonian captivity.

Daniel, Samuel (c. 1562-1619), English poet and dramatist. His works include the sonnet sequence *Delia* (1592), *A Defence of Rhyme* (1603) and the play *The Queen's Arcadia* (1605).

Daniel, Yuri M. (1925-), pseudonym of Nikolai Arzak, Soviet writer. Most of his works have been published pseudonymously in Western Europe. Characterized by satire and fantasy, and largely directed against the Soviet regime, they include the stories *This is Moscow speaking* (1962), *Redemption*, and *A Man from Minap*. Arrested (1966) for allegedly writing anti-Soviet propaganda, he was sentenced to five years' hard labour.

Danish Royal Ballet, leading ballet company of Denmark, based at Copenhagen. Its origins are obscure, but it dates from the 16th century. It gained its international reputation under the direction of August Bournonville (1805-78).

Dankworth, John (1927-), British composer and saxophonist. He formed a large jazz orchestra in 1953, but frequently works with small jazz combos, his wife the singer Cleo Laine has often appeared with him. He has composed many works for combined jazz and classical musicians, and is a leading film composer. His scores include *Saturday Night and Sunday Morning* (1960), *The Servant* (1963), *Darling* (1965) and *Accident* (1967).

Danse macabre. See DANCE OF DEATH.

Dante Alighieri (1265-1321), Italian poet famous for the *Divine Comedy*, written in terza rima. In his early years he wrote many canzoni to Beatrice Portinari, whom he admired from afar. In 1300 he became one of the rulers of the city-state of Florence, and during this time was responsible for the exile of his friend Guido Cavalcanti, who had been a great influence on his early writing. Later Dante himself was exiled and wrote his inspired and majestic works under the patronage of various nobles until he died in poverty.

Dam, vital water supplies and hydroelectric power flow from the High Dam at Aswan

Damascus is thought to be one of the oldest continuously occupied cities of the world

Dance, whose style and form generally reflects the popular music of the day

Dance of Death, a medieval belief that the dead rose from their graves to dance at night

Danton, Georges Jacques

Darts, the Pilgrim Fathers were reported to have played darts on the Mayflower in 1620

Charles Darwin's revolutionary theory undermined even his own deep religious beliefs

Darwin, the Roman Catholic Cathedral destroyed with the rest of the city in 1974

Darwin's Finch, the little bird that provided a vital clue to Darwin's theory of evolution

in Ravenna. Other works include *La Vita Nuova* (The New Life), *Convivio* (Banquet), *De Monarchia* (On Monarchy) and *De Vulgari Eloquentia*, a treatise appealing for the use of the vernacular in literature.

Danton, Georges Jacques (1759-94), French statesman and controversial official of the revolution. He played the role of moderate in the turbulent 1790s, seeking conciliation between the *GRONDINS* and *MONTAGNARDS*. Briefly leader of the *JACOBIENS* (1793) and a member of the Committee of Public Safety, he was arrested during the Reign of Terror and guillotined.

Dana. See *ANU*.

Danube (Donau), second-longest river in Europe. It rises in the Black Forest of West Germany, flows NE then SE across Austria to form the border between Czechoslovakia and Hungary, then S into Yugoslavia, SE and E to form part of the borders of Romania with Yugoslavia and Bulgaria and continues N across SE Romania to enter the Black Sea. It was made an international waterway in 1923 and is today under the control of the Danube Commission, which has its headquarters in Budapest, Hungary. Length: approx. 2,859km (1,770 miles).

Danube school, number of painters of the early 16th century who did not form a compact group, the term refers more to the supremacy of landscape painting in the Danube region at the time than to any coherent artistic philosophy. Much of their work emphasized a romantic, expressive style of landscape painting. Among the artists involved were *ATTINGER* and *CRANACH*. See also pp. 1147, 1394, 1913.

Danzig. See *GDANSK*.

Daud Khan, Sander Mohammed (1909-1978), Afghanistan military and political figure. He served as prime minister (1953-63) under Emir Mohammed Zahir Shah. Returning to the army, he overthrew Zahir Shah in 1973, proclaimed Afghanistan a republic and appointed himself president.

Daphne, genus of 70 species of flowering plants of the family *Thymelaeaceae* distributed throughout the world. It is the most important ornamental genus and includes the spurge laurel (*Daphne laureola*), mezereum (*Daphne mezereum*).

Daphne, nymph in Greek mythology. *APOLLO*, struck by one of Eros' gold-tipped arrows, fell in love with Daphne. But she had been shot with one of Eros' leaden points, and so scorned all men. To protect her from Apollo, the gods transformed Daphne into a laurel tree. Thereafter Apollo wore a laurel branch on his head as a symbol of his love and grief.

Daphnia, also called waterflea, tiny fresh-water crustacean which can reproduce sexually or parthenogenetically. Length to 0.75cm (0.3in). Order *Cladocera* of the subclass *Branchiopoda*. See also pp. 30, 35, 328.

Daphnis, in Greek mythology, the inventor of pastoral poetry. The son of *HERMES* and a Sicilian nymph, Daphnis was taught by *PAN* to be a minstrel to *APOLLO*. Daphnis pledged his love to the jealous nymph *NOMEIA*, but was seduced by the nymph *CHISMAERA*. *NOMEIA* blinded him for his unfaithfulness.

Daphnia and Chloe, ballet in three scenes by Michel FOKINE with music by Maurice RAVEL. Originally produced in 1912 in Paris, it starred Tamara Karsavina and Vaslav NIZHINSKY. It tells of the love of the shepherdess Chloe and the goat herd Daphnis. When Chloe is kidnapped Daphnis invokes the aid of *PAN*, who frightens away the kidnappers and reunites the lovers.

Da Ponte, Lorenzo. See *PONTE, LORENZO*.

D'Arblay, Madame. See *BURNEY, FANNY*.
Darby, Abraham (1678-1717), English ore-smelting expert and manufacturer. He recognized the disadvantages of smelting iron with charcoal and from his experience of smelting copper with coke, Darby founded the Bristol Iron Company in 1708 and one year later, became the first to make good quality iron with coke.

Abraham Darby III (1750-91) designed and built (1779) the world's first iron bridge, which stands at Coalbrookdale, England. See also pp. 387, 389, 395, 533.

Darby, John Nelson (1800-82), British religious leader. He joined the *PLYMOUTH BRETHREN* c. 1830 and in 1847 led a breakaway group which established themselves as the "Darbyites". Like the Brethren they rejected all outward church forms and offices.

Darcy, Thomas, Lord (1467-1537), English soldier and political intriguer. He served in military expeditions for Henry VIII. During the *PILGRIMAGE OF GRACE*, he yielded Pontefract Castle to the rebels and joined them. He was executed for treason.

Dardanelles, narrow strait between the Sea of Marmara and the Aegean Sea, and separating the Canakkale district in Asian Turkey from the Gallipoli peninsula in European Turkey. With the Bosphorus Strait, the Dardanelles forms a waterway from the Black Sea to the Aegean. It was crossed by means of a bridge of boats by Xerxes I in 480 BC and by Alexander the Great in 334 BC. Throughout the history of the Byzantine and Ottoman empires, and during both world wars, the Dardanelles was of strategic importance in the defence of Constantinople. Length: 61km (38 miles), width: 12-6km (0.75-4 miles). See also p. 1668, 1670-1671.

Dare, Virginia (b. 1587), first English child born in America, in the Roanoke Island Colony. The granddaughter of Governor John White, she disappeared after an Indian attack. Her fate, and that of the rest of the colony, are unknown.

Dar-el-Beida. See *CASABIANCA*.

Dar-es-Salaam, capital and chief port of Tanzania, in central E. Tanzania, on the Indian Ocean S of the Zanzibar Channel. Modern, with several colleges, Dar-es-Salaam is Tanzania's commercial centre and largest city. Industries: textiles, cement, building materials, glass. Exports: agricultural products, diamonds, minerals. Pop. (1975 est.) 517,000.

Dargomyzhky, Alexander Sergeyevich (1813-69), Russian composer and pianist. He wrote orchestral music, songs and operas, the best-known being *Rusalka* (1856) and *The Stone Guest* (completed by friends in 1872).

Darien, eastern region of Panama, lying between the Gulf of Darien and the Gulf of San Miguel. Originally the word meant the whole of Panama, settled in 1510 by an expedition led by BALBOA (not, as Keats had it in *On First Looking into Chapman's Homer*, coarcted). It was the first Spanish settlement in Central America and the base for the exploration of the mainland between 1511 and 1519.

Darien, Gulf of, inlet of Caribbean Sea between E. Panama and NW Colombia, it receives the Atrato River. The Spanish settled on its shores in the 16th century.

Darien Scheme (1695-99), unsuccessful Scottish project to colonize the Isthmus of Panama. The Scottish parliament, disowned by the English government and opposed by the Spaniards, invested heavily in the scheme. The failure of the settlements was taken as a demonstration of Scotland's commercial weakness and helped to secure the Act of Union (1707) with England.

Dario, Ruben (1867-1916), Nicaraguan poet. The father of the Modernist movement, he influenced both Latin American and Spanish writers. His finest book of verse, *Songs of Life and Hope* (1905), is noted for its universality and eloquence.

Darius, name of three *ACHAEMENID* kings of Persia. For Darius I, see *DARIUS THE GREAT*. Darius II (r. 423-404 BC) faced uprisings in much of his empire, and lost Egypt in 410 BC. Darius III (r. 336-330 BC) was defeated by Alexander the Great at the Battle of Issus in 333 BC and at Gaugamela in 331 BC. He fled to Bactria where he was murdered. The Achaemenid empire ended with his death. See also pp. 1193, 1214.

Darius the Great (548-486 BC), Achaemenid king of Persia (r. 521-486), also known as Darius I. He divided his lands into satrapies (provinces) with a degree of regional autonomy but respons-

ible to Darius himself. He also fixed an annual taxation, consolidated his frontiers in both India and Thrace, and linked the Nile with the Red Sea by canal. He invaded Greece to punish the Greeks for aiding a Loman revolt (499-494 BC), but he was defeated at Marathon (490 BC). He also restored much of the power of the kingdom of JUDAH. See also pp. 1192-1193.

Darjeeling, town in West Bengal, NE India, at the foot of the Himalayas. It is noted for its scenic views of Mt Kanchenjunga and Mt Everest. The centre of a tea-producing region, it is a market for grain, fruit and vegetables and an administrative centre. Pop. (1971 est.) 42,700.

Dark, Eleanor O'Reilly (1901-), Australian novelist. She was the first novelist to examine Australian urban life and its social and psychological effect on human behaviour, as in *Prelude to Christopher* (1934) and *Return to Coolam* (1936).

Dark adaptation, the slow change in sensitivity of the human eye that takes place when someone passes into dim light from bright light. It is caused by a shift in functional dominance from cone cells to rod cells in the retina of the eye as the overall illumination is reduced. The complete process takes 35-40 minutes. See also pp. 136, 137.

Dark Ages, the period of European history from the BARBARIAN invasions of the ROMAN EMPIRE to the beginning of the 11th century. Now out of fashion, the term refers to the alleged stagnation of science and learning which followed the decline of Greek civilization and the political instability which resulted after the demise of Roman rule. The social and political upheavals of the period and the migrations and conquests of the Germanic tribes produced the merger of northern European tribal culture and classical culture which became the basis of mediaeval European society. It was also the period in which the West was converted to Christianity, a change which produced new uniquely Christian forms of art and literature. See also pp. 1270-1271, 1286-1287, 1292-1293, 1294-1295, 1306-1307.

Darkest at Noon (1940), novel by Arthur KOESTLER. Drawing on the author's own experience of imprisonment during the Spanish Civil War, it describes the thoughts of an old Bolshevik, Rubashov, who awaits his execution by a government he helped to put into power.

Darley, George (1795-1846), British poet and mathematician, b. Dublin. He wrote prose tales, some collected in *Labours of Idleness* (1826). His poems include *The Errors of Ecstasy* (1822), *Neperthe* (1835) and the pastoral drama *Sylvia* (1827).

Darling, Grace Horsley (1815-42), British heroine, the daughter of a light-house-keeper at Longstone, off the NE coast of England. Together with her father she took out a small boat in a stormy sea to rescue the survivors of the wrecked steamship *Farfarshire* (1838).

Darling, river in SE Australia. It rises in the Eastern Highlands in S Queensland and N in New South Wales, then SW into the Murray River. It is the longest river in Australia and is used for irrigation schemes. Length: 2,740km (1,702 miles).

Darling Downs, plateau in SE Queensland, Australia, W of the Great Dividing Range. First settled in 1840 by sheep herders, the area is now important for farming, especially for dairy produce. It is also in Australia's wheat belt. Area: 71,510sq km (27,610sq miles).

Darling Range, mountain range in W Australia running parallel to the SW coast. The suburbs of Perth are located on its slopes, and gold and tin are mined there. The highest point is Mt Cooke, rising to 583m (1,910ft). Length: 880km (500 miles).

Darlington, town in Durham, NE England, on the River Skerne, 21km (13 miles) W of Middlesbrough. It was one terminus of the world's first passenger railway service opened in 1825 from Stockton Industries' railway engineering, textiles. Pop. 96,900 (1976 est.).

Darmstadt, city in central West Germany, 19km (12 miles) e of the River Rhine (Rhine). The old town, or Altstadt, dates from the Middle Ages. The city was severely damaged during WWII. Industries: chemicals, steel, machinery. Pop. 141,224.

Darnley, Henry Stuart (or Stewart), Lord (1545-67), Scottish noble, second husband of MARY, QUEEN OF SCOTS. Born and educated in England, he was a claimant to the English succession. He went to Scotland in 1565 to marry Queen Mary. Weak and vicious, Darnley was involved in the murder of Mary's aide Rizzio (1566). Mary was probably party to Darnley's murder after the birth of their son, the future JAMES I OF ENGLAND.

Darrow, Clarence Seward (1857-1938), US lawyer. He became famous for his successful defence of William Haywood (1906), accused of assassinating a former Governor of Idaho. He was also renowned for his role as defence counsel in other notorious cases. He wrote *Crime, Its Cause and Treatment* (1922).

Dart, Robert Thurston (1921-71), British harpsichordist, pianist and conductor. He was appointed professor of music at Cambridge University in 1947 and at London University in 1964. With other artists he made fine recordings of English and continental Baroque music.

Dartchery. See ARCHERY.

Darter, any of 100 species of freshwater, bottom-dwelling fish found in clear streams of N. America. It is slender, brightly coloured and capable of darting quickly through the water. It feeds mainly on small aquatic animals. Length to 23cm (9in). Family Percidae.

Dartmoor, moorland region in s Devon, SW England, composed mainly of granite which gives rise to many stark outcrops. The area was established as a National Park in 1951. The highest point is High Willhays, rising to 621m (3,039ft). Sheep and cattle-raising are the chief farming activities; tourism is also an important industry. The prison at Princetown was built in 1806 originally for French captives. Area 945sq km (365sq miles).

Darts, game particularly popular in the USA and Britain, developed in England in the 15th century. It is played with three weighted wooden or metal darts 12.7-15.2cm (5-6in) long. The darts are thrown at a board, 43.7cm (18in) in diameter. Players generally stand 2.4m (8ft) away. There are several variations of play, as well as types of targets. The object in the 20-point board is to start with a certain score (201, 301, 501, 1,001), according to the number of players, and to reach zero by subtracting the amount of points scored from the number indicated. Generally each player has to begin and end on a 'double'.

Darwin, Sir Charles Galton (1887-1962), British physicist who trained under Ernest Rutherford at Manchester. At Cambridge Darwin and R. H. Fowler developed the new methods of statistical mechanics that later served as a foundation for QUANTUM MECHANICS.

Darwin, Charles Robert (1809-82), British naturalist, originator of a firm theory of organic evolution. In 1831 he joined an expedition in HMS *Beagle*, which explored the South American coast. The observations made of the flora and fauna there, and in particular on the Galapagos Islands, formed the basis of his future work on animal variations. He considered various earlier theories on the subject of evolution and compared them with his own research. The development of a theory similar to Darwin's own by A. R. WALLACE led Darwin to present his ideas to a meeting of the Linnean Society in 1858, and he published *The Origin of Species*, a detailed exposition of evolution, in 1859. His ideas reached a wider public with the publication of *The Descent of Man* (1871), and other works. See also pp.186-187, 1636.

Darwin, Erasmus (1731-1802), British physician, grandfather of Charles Darwin. His *Zoonomia, or the Laws of Organic Life* (1794-96) advanced the theory of evolution.

Darwin, Sir Francis (1848-1925), British botanist and son of Charles Darwin. He edited his father's letters (1887 and 1903) and was knighted in 1913. He lectured in botany at Cambridge and became a Fellow of the Royal Society in 1882.

Darwin, Sir George Howard (1845-1912), British astronomer and mathematician and second son of Charles Darwin. He was professor of astronomy at Cambridge and was distinguished for his work on tidal friction and the equilibrium of rotating masses. See also p.928.

Darwin, port and capital of Northern Territory, N. Australia, at the entrance to Port Darwin, an inlet of the Timor Sea. It was the headquarters of the Allies in N. Australia during WWII, and was bombed by the Japanese in 1942. In 1974 90% of the city was destroyed by a cyclone. A five-year reconstruction plan included housing construction that will withstand cyclone-force winds. Darwin's harbour is the major shipping point for the sparsely populated and relatively undeveloped N. region of Australia. Pop. (1976 est.) 41,374.

Darwin finch, any of 14 species of finches (in three genera) of the Galapagos Islands, they provided Charles Darwin with a valuable clue to his theory of evolution. He noted that they had all evolved from a seed-eating species of South American finch and had adapted differently to be able to feed efficiently in differing habitats: trees, cacti or on the ground. Some have large beaks to deal with larger seeds, others have smaller beaks for smaller seeds, or finer beaks for insects. *Camarhynchus pallidus* forces insects out of crevices with a cactus spine or a small twig. The various species can no longer interbreed. Family Fringillidae, subfamily Geospizinae. See also pp.80, 186-187.

Darwinism. See EVOLUTION.

Das Kapital. See KAPITAL, DAS.

Dasyurus, genus of mainly nocturnal, carnivorous marsupials found in Australia, New Guinea and Tasmania, they have large canine teeth, separate digits and long tails. The female's pouch is normally shallow. Family Dasyuridae.

Data processing, systematic sequence of operations performed on data, especially by a computer, in order to calculate new information or revise existing information stored on magnetic tape or discs, punch cards or microfiche. The data may be in the form of numerical values representing measurements, scientific or technical facts, or lists of names, places or book titles. The main processing operations performed by a computer are arithmetical addition, subtraction, multiplication, and division, and logical operations, which involve decision making based on comparison of data, as in, "if condition A holds then follow programmed instruction P, if A does not hold then follow instruction Q". Modern computers are capable of rapid data processing, such as the "renovation" of television pictures sent back from outer space. See also pp.466-468, 626.

Data storage. See COMPUTER MEMORY.

Data terminal, computer, station remote from a computer, but connected to it through a transmission path (commonly by telephone line) for entering or receiving data. It normally consists of at least one combined input and output component, such as a teleprinter with its associated electronics. More complex terminals may have a cathode-ray unit for visual display, or an X-Y plotter for graphs. The system is favoured by small-scale users who find it economical to share the services of one computer simultaneously with other users. See also pp.466-468.

Data transmission, computer, supply of information to or from a computer via hard wire (telephone lines) or microwave broadcast (from earth-stations or satellites). DATA TERMINALS at each end of the transmission path regulate the information by encoding, decoding and synchronizing the transmitted signals. See also pp.466-467.

Date palm, tree native to the Near East

and economically one of the most important palms. It has feather-shaped leaves and large flower clusters that produce the popular fruit. Height up to 30.5m (100ft). Family Palmae. See also p.374.

Datolite, colourless or white orthosilicate mineral, basic calcium borosilicate, $\text{CaBSi}_2\text{O}_6(\text{OH})$, found in cavities in trap-rock. It occurs as monoclinic system crystals or, rarely, as granular masses. Hardness 5-5.5; s.g. 2.9.

Datura, genus of plants. Some produce useful drugs, others are ornamentals. The flowers are large, trumpet-shaped and sweet-smelling. Thorn-apple, or jimson-weed, (*Datura stramonium*) is the source of a crude narcotic. Family Solanaceae (the NIGHTSHADES).

Daubenton, Louis Jean-Marie (1716-1800), French comparative anatomist. He assisted Georges BUFFON with *Histoire Naturelle* (1749-1804). His research on mammalian skeletal structure aided the development of comparative anatomy into a special branch of study.

Daubigny, Charles-François (1817-78), French landscape painter, associated with the BARBIZON SCHOOL. Many of Daubigny's paintings are atmospheric oils of the Seine and Oise river areas, eg *River Scene with Ducks*, but he also worked in Britain, Holland, Italy and Spain.

Daudet, Alphonse (1840-97), French novelist. His works include the sketches *Lettres de mon moulin* (1869), *Aventures Prodigieuses de Tarran de Tarascon* (1872), one of a series of burlesque tales, and the novels *Les Roux en exil* (1879) and *L'Immortel* (1888).

Daughters of the American Revolution (DAR), US patriotic society founded in 1890. Its members are female lineal descendants of activists in the cause of American independence. The DAR was chartered by the US Congress in 1895. In the 1970s there were 2,800 local chapters and about 188,000 members.

Daumier, Honoré (1808-79), French painter, sculptor and caricaturist. His great achievement was the lampooning of French middle-class society in more than 4,000 lithographs, worked in a realist style.

Dauphin, title of heir of the French monarch from 1350 to 1830. The name was originally that of the rulers of Viennois, SE France, lands known as the Dauphiné, which were sold to the French crown in 1349. Lands in Auvergne were also so named and passed to the French crown in 1693.

Davao, port and largest city on Mindanao island, in the Philippines, on the Davao Gulf, in the Davao Del Sur province. The city was taken by the Japanese in WWII. During the 1960s Davao's industry grew and its population more than doubled. It is now the commercial centre of a prosperous farming region. Products: hemp, timber, rice, copra, tobacco. Pop. 463,700.

Davenant or D'Avenant, Sir William (1606-68), English poet, dramatist and poet laureate (1638-68), rumoured to have been Shakespeare's son. His *Siege of Rhodes* (1656) was the first English opera. Other works include the epic *Gondibert* and the plays *The Tragedy of Albion* and *The Wit*.

David, Saint (d. c.600), patron saint of Wales. A great ascetic in the tradition of early British Christianity, he founded many churches in Wales. Feast 1 March. **David, King of Israel** (c.1000-962 bc), ruler who came to prominence by defeating the PHILISTINE champion Goliath. He became one of the greatest kings and heroes of the Jews, unifying the tribes and moving the capital from Hebron to JERUSALEM. His history is related in several versions in the Old Testament, and many of the psalms are attributed to him. See also pp.1190, 1190.

David, name of two kings of Scotland. David I (1084-1153) came to the throne in 1124. His interests in Cumbria and Northumbria involved him in the English civil war on the side of MATILDA against STEPHEN, who defeated him in 1138. He introduced Anglo-Norman feudalism to

Scotland and strengthened the towns. David II (1324-71) became king in 1329 and was defeated by EDWARD I of England at Halidon Hill in 1333. He was exiled to France, and was again defeated in England in 1346 following his return to Scotland in 1341. He was released on ransom in 1357. See also pp.1316-1317, 1378, 1379.

David, Gerard, or Gheerard (c.1460-1523), Flemish painter who succeeded MEMLING as the most important painter of the school. Though influenced by Van Eyck and Van der Weyden, David has an austere grace that is distinctive. He was commissioned by the town of Bruges to paint several works, including two to warn officials of the retribution for injustice, *The Judgement of Cambyses* and *The Flying of Sisamnes*. Among his other works are *Madonna Enthroned* and *Annunciation*.

David, Jacques-Louis (1748-1825), French painter of historical scenes and portraits. As leader of the Neo-classical movement, he had a great influence on art and fashion. Influenced by Poussin and Greek and Roman art, David's work was involved with his Jacobin views and support of Napoleon. His most famous work is *Oath of the Horatii* (Horatii) and his many masterpieces include *Death of Marat*, *Mme Recamier* and *Death of Socrates*. See also pp.1487, 1487, 1556.

David, Pierre-Jean (David d'Angers) (1788-1856), French sculptor whose works include the statue of the Grand Conde at Versailles and statues of Lafayette and Jefferson in Washington, DC.

David (1504), sculpture by MICHEL-ANGELO, commissioned by the city of Florence in 1501. It was sculpted from a piece of white marble abandoned by an earlier sculptor, and epitomizes the confidence and idealism of the high Renaissance.

David Copperfield (1849-50), semi-autobiographical novel by Charles Dickens, which he called his "favourite child". Copperfield retrospectively relates his adventures, misfortunes and eventual success and happiness.

Davidson, John (1857-1909), Scottish writer. His novels, plays and poems, including two series of *Fleet Street Eclogues* (1893, 1896), won critical acclaim but were not commercial successes. He committed suicide after a life of poverty in London.

Davidson, Thomas (1840-1900), Scottish-born US philosopher and lecturer. In 1883 he founded the Fellowship of the New Life, from which the FARMAN SOCIETY developed. He also started lecture classes for workers and a summer school in New York State. His many books include *Aristotle and Ancient Educational Ideals* (1892) and *History of Education* (1900).

David, Alan (1920-), Scottish painter, lithographer and jazz musician, influenced by ACTION PAINTING and especially JACKSON POLLOCK. David's own experience as a goldsmith and jazz musician and his interest in Zen Buddhism enabled him to use colour in a sensual, freely improvised fashion, full of rhythm and movement.

Davie, Donald (1922-), British poet and critic. His collections of poetry include *Brides of Reason* (1955), *Events and Wisdoms* (1964) and *The Shires* (1975). His critical works include *Articulate Energy* (1957) and *Thomas Hardy and British Poetry* (1972).

Davies, Arthur Bowen (1862-1928), US painter of romantic landscapes with whimsical figures. A member of the Eight and president of the Society of Independent Artists, Davies organized the 1913 ARMOY SHOW, introducing modern European art to the USA.

Davies, Sir Henry Walford (1869-1941), British composer and organist who became famous for his popular radio talks. He was organist at Temple Church, London (1898-1918), and St George's Chapel, Windsor (1927-32). He was made Master of the King's Music in 1934.

Davies, Sir John (1569-1626), English poet and government official, attorney-general for Ireland (1606-19). His poetry,

Davies, Lynn

which was often a vehicle for his philosophical reflections, includes *Orchestra* (1996), *Noise Teipsum* (1999) and *Hymns of Astraea* (1999).

Davies, Lynn (1942-), Welsh long-jumper, the first Welsh Olympic gold medalist when, at Tokyo in 1964, his jump of 8.07m (26ft 5½) beat established favourites. In 1966 he won European and Commonwealth golds to complete a unique triple, retaining his Commonwealth title in 1970.

Davies, Peter Maxwell (1934-), British composer. His first published work was the trumpet sonata of 1955. He is a prolific and varied composer, who has made much use of jazz rhythms and idioms. He wrote film music for *The Devils* (1971) and two operas, *Taverner* (1970) and *The Martyrdom of St Magnus* (1977).

Davies, Rhys (1903-1978), Welsh novelist and short-story writer. He writes on Welsh themes, with lyrical beauty. His novels include *The Whithered Root* (1927) and *Girl Waiting in the Shade* (1960). He has published a play, *No Escape* (1954), and many story collections, including *Pig in a Poke* (1931).

Davies, Robertson (1913-), Canadian novelist, dramatist and journalist. His sharp wit and polished satire are developed to the fullest in his novel *A Mixture of Fractions* (1958).

Davies, William Henry (1871-1940), Welsh poet. After living as a tramp in Britain and the USA he wrote his *Autobiography of a Super Tramp* (1907). Thereafter he wrote many volumes of simple, unaffected verse.

Davis, Dan (1913-), New Zealand-born writer resident in Britain. Most of his novels deal with New Zealand or New Zealanders abroad. They include *Cliffs of Fall* (1945), *Roads from Home* (1949) and *Not Here Not Now* (1970). He also wrote *Crete*, a volume of WWI military history.

Da Vinci. See **LEONARDO DA VINCI**.

Davis, Bette (1908-), US film actress, real name Ruth Elizabeth Davis. She is well known for her intense roles in such films as *Of Human Bondage* (1934), *Dangerous* (1935), *The Petrified Forest* (1936), *Jezabel* (1938), *The Old Maid* (1939) and *All About Eve* (1950).

Davis, Colin (1927-), British conductor. In 1971 he was appointed musical director of the Royal Opera, Covent Garden. He was principal conductor of the BBC Symphony Orchestra from 1967 to 1971. Knighted in 1980.

Davis, Dwight Hilley (1879-1945), US public official, champion tennis player and donor of the DAVIS CUP. He enlisted in the army in WWI and rose from the rank of private to lieutenant-colonel. He was secretary of war (1925-29) and governor-general of the Philippines (1929-32).

Davis, Jefferson (1808-89), President of the Confederate States of America (1861-65). He was elected to Congress in 1845 but resigned to fight in the Mexican War in 1846. He was made secretary of war in 1851 but resigned from the Senate when Mississippi seceded from the Union, and he became president of the Confederate States. He served two years in prison and was indicted for treason in 1866, but never tried. See also pp.1628-1629, 1629.

Davis, Joe (1901-), British billiards and snooker professional, the first to hold both world titles at once, billiards 1928-33, snooker 1927-47. His best championship break at billiards was 2,052 in 1930, and in 1955 he achieved snooker's maximum break of 147.

Davis (or Davys), John (c 1550-1605), English explorer and inventor of the Davis quadrant. He made three voyages to Canada in search of a north-west passage (1585-87) and explored the Davis Strait, Cumberland Gulf and Baffin Bay. In 1588 he fought against the Spanish Armada. See also p.1412.

Davis, Miles Dewey Jr (1926-), US jazz trumpeter, one of the most influential of modern jazz players. During the 1940s he played with such musicians as Charlie Parker, contributing to bebop. He developed an introspective style during the 1950s and 1960s with his own small

groups and made some notable recordings with the arranger Gil Evans. During the 1970s his style changed to a blend of jazz and rock.

Davis, Paulina Wright (1813-76), US suffragette. She lectured to women on anatomy and physiology and helped to open the medical profession to them. She founded the first US women's rights newspaper, *Una* (1853), and wrote *A History of the National Women's Rights Movement* (1871).

Davis, Sammy, Jr (1925-), US singer, dancer and actor. In 1930 he joined his father and uncle in a music hall act. He appeared in several shows on Broadway, including *Mr Wonderful* (1956) and *Golden Boy* (1964), and in many films, such as *Porgy and Bess* (1959).

Davis, Stuart (1894-1964), US painter. His work depicted modern city life in a style influenced by fauvism and cubism. In 1927 he began a series of still-lives on the theme of an eggbeater.

Davis Cup, men's international tennis team competition conceived by the American Dwight F. Davis and first contested in 1900. The holders met the foremost challenger annually until 1971 when the Challenge Round was replaced by a zonal knock-out producing two finalists.

Davison, Clinton Joseph (1881-1958), US physicist, who worked on thermionics, electron diffraction and the electron microscope for the Bell Telephone Laboratories. In 1927, working with L. H. Germer, he was able to confirm by means of diffraction by crystals the wave nature of moving electrons, which had been hypothesized by Louis de Broglie. He shared the Nobel Prize in physics with G. P. Thomson in 1937.

Davitt, Michael (1846-1906), Irish nationalist. He became a Fenian and was imprisoned in 1870. Released in 1877 he established the Irish Land League two years later to help tenants against absentee landlords. He favoured the nationalization of land and as a result was opposed to Charles Parnell. See also pp.1642-1643.

Davy, Sir Humphry (1778-1829), British chemist whose studies in electrolytic cells convinced him that they produce electricity by chemical means, and led to his isolation of the elements sodium and potassium. He proved that all acids contain hydrogen and that this is responsible for their acidic properties, and he explained the bleaching action of chlorine. As a result of an investigation of the conditions under which firedamp (methane and other gases) and air explode, he invented the miner's safety lamp which is named after him. He was created a baronet in 1818. See also pp.888, 902.

Davy Jones, malevolent spirit or personification of the sea. "Davy Jones's locker" is the bottom of the ocean or the grave of men drowned or buried at sea. The origin of the phrase is unknown, but it may refer to Jonah (or Jonas) the prophet.

Dawe, Donald Bruce (1930-), Australian poet. He was a labourer and postman until 1962, when he published *No Fixed Address*. He has also published *An Eye for a Tooth* (1968) and *Beyond the Substitution* (1969).

Dawes, Charles Gates (1865-1951), US politician. He was a lawyer and banker, and served as comptroller of the currency under William McKinley. In 1923 he headed the financial commission that drew up the DAWES PLAN (1924) to restructure the German economy, for which he received the 1925 Nobel Peace Prize. He was vice president (1925-29) to Calvin Coolidge.

Dawes, John (1940-), Welsh rugby union player. A centre with London Welsh, he played 22 times for Wales (1964-71) and in 1971 captained the British Lions in unprecedented victory in New Zealand. He coached Wales and the 1977 Lions in New Zealand.

Dawes, William Jr (1745-99), US patriot. He rode from Boston to Lexington and Concord on 18 April 1775 to warn the colonists of the arrival of British troops. He was joined on the way by Paul Revere and Dr Sam Prescott.

Dawes Plan (1924), financial measure devised by Charles Dawes to collect and distribute WWI reparations payments. It established a schedule of payments that Germany could bear and arranged for a loan of 800 million marks by US bankers to the German Government to stabilize German currency.

Dawson, Peter (1882-1961), Australian bantam. Although he sang in opera, it was as a recording artist (from 1904) and concert singer that he achieved renown. He recorded about 2,500 songs, one of the most popular being *The Road to Mandalay*.

Dawson (Dawson City), town in Yukon Territory, Canada, at the confluence of the Yukon and Klondike rivers, 80km (50 miles) E of the Alaskan border. It was a boom town during the Yukon gold rush in 1896 and the capital of Yukon Territory from 1898 until 1952. Pop. 750.

Day, Doris (1924-), US singer and actress, b. Doris Kappelhof. Her recordings sold millions in the 1940s and 1950s - eg, *Sentimental Journey* (1945), *Secret Love* (1954) - and her fresh ebullience enhanced such films as *Calamity Jane* (1953), *Pajama Game* (1957), *The Man Who Knew Too Much* (1956) and *Send No Flowers* (1964).

Day, John (c 1574-1640), English dramatist. Much of his work has been lost and he is best remembered for *The Parliament of Bees* (c 1607), an allegorical masque made up of a series of six "characters" in dialogue form.

Dayaks, number of tribes in Borneo, probably descendants of the original Indian settlers of the Malay archipelago. The family is the chief unit of social life, and they practise ancestor worship; their main crop is rice. They are famous for their carved shields and masks, which are used in ceremonial dances, and also for their wood and bone carvings of people and animals.

Dayananda Sarasvati (1824-83), Indian religious leader, b. Mwa Sankara. Discontented with the Hinduism of his day, he became the major spokesman for a return to the authority of the Vedas. He condemned idol worship, child marriage and the low status of women, advocated many social reforms and founded the ARYA SAMAJ (Society of Nobles) in 1875.

Daydreaming, indulging in fantasy and reverie while awake. The mind is allowed to wander aimlessly, usually through pleasurable or gratifying events or images. It is said to be motivated by unfulfilled and often unconscious desires. It is also a way of briefly overcoming frustration.

Day-Lewis, Cecil (1904-72), British poet and critic. His concern for social justice and socialist causes is evident in his poetry, which includes *Transitional Poem* (1929), *Magnetic Mountain* (1933), *Overtures to Death* (1938) and *Collected Poems* (1954). He was poet laureate (1968-72). He also wrote detective stories under the pen-name Nicholas Blake.

Dayr az-Zawr, town in E Syria, on the River Euphrates, capital of Dayr az-Zawr governorate. The town was taken by the British in 1941 and became part of independent Syria in 1946. Today it is a trading and transport centre for a large farming region. Pop. 42,036.

Dayton, city in SW Ohio, USA, at the confluence of the Great Miami and Stillwater rivers, 75km (47 miles) N of Cincinnati. It is a commercial centre for the surrounding agricultural region. Its industries include domestic appliances and cash registers. Pop. (1970) 243,601.

Dazbog, in Slavonic mythology, the sun god, son of the sky god Svarog. Dazbog was often described as riding in a magnificent chariot and became a symbol of prosperity and power. With the advent of Christianity, he sometimes became identified with the Devil, in Serbian folklore.

D-Day (6 June 1944), code-name for the Allied invasion of Normandy during WWI. The Americans and British, commanded by Eisenhower overall and with Montgomery in charge of the land force, landed on the coast between Cherbourg and Le Havre in a combined air and sea invasion. Despite severe opposition, they

established their bridgeheads by 9 June and from there captured the whole of N France. See also pp.1710-1713.

DDT, dichlorodiphenyltrichloroethane, colourless crystalline organic halogen compound, first used as an insecticide in 1939 against the Colorado potato beetle. It acts as a contact poison, disorganizing the nervous system. It kills fleas, moths, beetles and other destructive insects, and is effective against the anopheles mosquito, which carries malaria. Many species, however, have successfully developed resistant populations. Birds and fish feeding on affected insects suffer toxic effects, as do many animals and man if those birds and fish are eaten, as it is not easily degraded into non-toxic components. DDT may persist in food chains for a long time. The use of DDT has consequently been banned in many countries.

Deacon, ordained priest's assistant in the ministry of the Christian church. The institution of the deaconate can be traced to the New Testament, which describes the ordination of seven deacons, including St Stephen and St Philip (Acts 6: 1-6), to carry out the administrative work of the early Church allowing others more time for evangelical work.

Deadly nightshade, also called belladonna, poisonous perennial plant native to Europe and western Asia. It has large leaves, dull, purple flowers and shiny black berries. Alkaloids such as atropine have been obtained from the roots and leaves, and eating the fruits can be fatal. Family Solanaceae, species *Atropa belladonna*. See also pp.1062-1091.

Deadnettle, tall flowering plant of the genus *Lamium*, it closely resembles the stinging nettle, but the leaf, though hairy, has no sting. It has pointed, oval, toothed leaves and yellow or purple flowers. Family Labiaceae.

Dead reckoning, navigational method that determines the position and speed of a ship or aircraft without the help of celestial observation (sighting of the sun, stars or moon). Calculations are made from the records of the course, distance and time already covered using the log and a compass; they also take into account drift due to wind or currents.

Dead Sea (Al-Bahr-ul-Mayyit), salt lake on the border of Jordan and Israel, fed by the River Jordan and several small streams. The surface, 396m (1,302ft) below sea-level, is the lowest point on earth. It is situated in a hot, dry region and much water is lost through evaporation; input has also been reduced by the use of the Jordan's waters for irrigation purposes, so the water level fluctuates throughout the year. One of the saltiest waters in the world, it supports no life, and large quantities of salts (potash, bromides and chlorides) are commercially extracted.

Dead Sea Scrolls, manuscripts of leather and papyrus discovered in and after 1947 in caves and ruins near the Dead Sea, mostly around Qumran. These documents, written in Hebrew or Aramaic, most of them between 100 BC and AD 50, provide valuable information about the culture in which early Christianity spread. They include versions of most of the Old Testament, many apocryphal and pseudographical works, biblical commentaries and other documents. See also pp.610, 1244.

Dead Souls (1842), novel by Nikolai Gogol. Chichikov, an impoverished nobleman, buys "dead souls" - serfs registered on the last census but who have since died. The landowners sell as they have to pay a tax on the souls until the next census and Chichikov profits by being able to raise a mortgage on them.

Deadwood, town in the Black Hills of W South Dakota, USA, which was settled in 1876 after the discovery of gold. Wild Bill Hickok and Calamity Jane are buried there. Industries: tourism, mining, timber. Pop. (1970) 2,409.

Deafness, part or total lack of the sense of hearing. The congenitally deaf people are born deaf, the adventitiously deaf are born with normal hearing but lose it later in life. There are three major types of

Deafness (1) (n)

prevalently in which there is interference with the transmission of sound to the organs in the inner ear as a result of infection.

The development of bony abnormality later in life. (2) Sensory neural hearing loss at birth due to congenital incompatibility of other nerve damage or developing in later life as a result of neural degeneration and advancing age. (3) Central hearing loss or abnormality in the central nervous system occurring because of brain damage or disease.

deafening disorders. The treatment of deafness depends on its cause and ranges from administration of drugs to combat infection to delicate surgery and microsurgical techniques that can for instance correct some congenital malformations and bony growths. Electronic hearing aids that amplify sound help many who are hard of hearing, but the use of ventricular and speech reading or lip reading techniques help the deaf to have a normal life. See also pp 138-139, 1877.

Dean, Alfred (1886-1919) Australian politician. A leader of the Liberal Party, he was prime minister of Australia in 1913-14, 1915-18, and 1919-20. He pressed for social reforms on various issues. In 1901 he became the first attorney general of Australia. See also p 1605.

Deal, town in Kent at 19 mi (31 km) N of Dover on the Straits of Dover. It was one of the major ports. It is a port for ship and hovercraft services to Calais and other French towns. The chief industries are tourism and fishing. Pop. 35,400.

Dean, title of various church officials. For example, the term is used for clergies of services and supervision of church property. But a dean may also have administrative duties. The head of a cathedral church is called a dean.

Dean, Basil (1888-1978) British theatrical producer and actor. During which he produced and directed 1934 film *Our Man in Havana* (British Service Association).

Dean, Bill ("Dixie") (1907-1980) British actor. Centre forward who played for Liverpool, Nottingham County and Truants, Rovers, Walsley, and in 1919.

Dean, James (1941-85) film actor. In 1954 he played the lead in the film *Operation Dumbo* (the black comedy *My Darling Clementine*), and in 1955 appeared as a murderer in *The Long Walk Home*. He was killed in a car crash in 1985. He was killed in a car crash in 1985. He was killed in a car crash in 1985.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Henry (1751-1829) English actor. He was distinguished himself in the American War of Independence. He was killed in a car crash in 1985. He was killed in a car crash in 1985.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Dean, Forest of, ancient royal forest 3 km (2.0 miles) long and 16 km (10 miles) wide in Gloucestershire, W England, situated between the Severn and Worcester rivers. It is one of the largest of the ancient forests of England.

Death is the stopping of the heart and of breathing with few if any effects of recovery follows. Also the need for organs for survival from the recently dead has led to death being defined in terms of the complete cessation of all levels of activity in the nervous system. See also pp 1148-1149.

Death, Be Not Proud is a sonnet by John Donne, expressing faith that after the Last Judgement death itself shall die.

Death cap, also called deadly amanita, highly poisonous fungus that grows in wooded areas, especially under beech or oak trees. It has a yellowish green, indistinctly striated cap about 9 cm (3.5 in).

The gills are white like the stem which bears a pendulous ring and has a bulbous base. If eaten the person may take a long time to show any effect after which time it may be a very serious liver damage and an almost certain death.

Species *Amanita phalloides* S. desc. p 155.

Death in Venice (1911) novel by Thomas Mann. In it he uses the conflict between spirituality and weariness in a great writer to symbolize the decay of Western art. It was made into a film in 1971 by Luchino Visconti, and an opera by Benjamin Britten in 1973.

Death of a Salesman (1949) two act play by Arthur Miller. It tells the story of a well-meaning salesman whose career and family life are nevertheless a failure, and he kills himself so that his family can have his insurance money.

Death penalty, see CAPITAL PUNISHMENT.

Death rate, or mortality rate, statistic that is the number of deaths in a population. The most common type is the crude death rate, the number of deaths per 1,000 population per year. Death rate can also be related with age groups.

It also has a function for the living in helping them through mourning. See also pp 1158-1159, 1898-1899, 1908-1909.

Death's head hawk moth, large European hawk moth that feeds on the skin of the dead. It is a large moth that feeds on the skin of the dead. It is a large moth that feeds on the skin of the dead.

Death's head hawk moth, large European hawk moth that feeds on the skin of the dead. It is a large moth that feeds on the skin of the dead. It is a large moth that feeds on the skin of the dead.

Debit, in accounting, an entry on the left side of an account. Expenditure is recorded through a debit entry. The term is sometimes used interchangeably with the term *debit*.

Debrecen, city in Hungary, 193 km (120 miles) E of Budapest. The city was named the 'Calvinist Rome' because of its great Protestant Church which was a stronghold of Hungarian Protestantism in the 16th century. Louis Kossuth proclaimed Hungary's independence there in 1849. Industries: food processing, farm machinery, furniture. Pop. 119,741.

Debreit, John (c 1780-1823) British publisher. In 1802 he published a complete reference guide to the British peerage. Up to date editions have continued to be published and still bear the title *Debreit's Peerage and Baronage*.

Debreit, John (c 1780-1823) British publisher. In 1802 he published a complete reference guide to the British peerage. Up to date editions have continued to be published and still bear the title *Debreit's Peerage and Baronage*.

James Dean, the teenage cult movie star, proudly displays his motor racing trophies.

Death of a Salesman explores the tragedy of man in a hopelessly materialistic society.

Deathwatch beetle, whose mating call was once believed to foretell a death in the family.

Claude Debussy would be said to be to music what the impressionists were to painting.

Decapod

Decapods are the group of crustaceans which include the shrimps, lobsters and crabs.

Decathlon athletes finishing the punishing 400m at the Montreal Olympic Games.

Decius used the Christians as scapegoats for his political and economic failures.

Decorated style is shown in this monument to Edward II in Gloucester Cathedral.

ten as if narrated by ten young men and women who have escaped from the Florentine plague of 1348 and pass the time for ten days telling one another anecdotes, fabliaux, and fairy tales, many of them bawdy.

Decapod, any of about 8,500 species of mainly marine, higher crustaceans, including shrimps, lobsters and crabs. They have ten legs including the chelae (pincers), which are enlarged modified legs. The order Decapoda has been represented since the Permian or Triassic period. See also pp 30-31, 34, 746-747.

Decathlon, sporting event made up of ten different track and field events. It takes place over a two-day period and is considered the most demanding in athletics. On the first day the individual must compete in a 100m race, long jump, shot put, high jump and a 400m race. The second day includes the 110m hurdles, discus, pole vault, javelin and 1,500m race. It was introduced as a three-day event in the Olympic Games of 1912.

Deccan, plateau in central India, s of the Narmada River. On its s and w edges it rises to ranges of hills called the Ghats. The plateau is covered with rich volcanic soils and cotton and cereal crops are grown there. In the s there are coffee and tea plantations. It was in the Deccan in the early 18th century that the Hindus began to regain their political power. Later in the century the British defeated the French there in their struggle for India.

Decembrists, name given to group of Russian officers and noblemen who staged an unsuccessful revolt against Tsar NICHOLAS I in December 1825. They were members of the Northern Society, a secret society demanding representative democracy. The Decembrists gathered 3,000 troops in Senate Square, St Petersburg, but they were ill-organized, and the tsar's troops quickly dispersed them.

Decibel (dB), logarithmic unit, one tenth of a bel, used for comparing two power levels. It is frequently used for expressing the loudness of a sound in terms of a particular reference level. The decibel difference between two sounds is given by $dB = 10 \log_{10} (P_1/P_2)$ where P_1 and P_2 are the power levels of the sounds. The faintest audible sound (2×10^{-12} W/m²) is arbitrarily given a value of 0 dB. The human threshold of pain is about 120 dB, and ordinary conversations occur at about 50 to 60 dB. See also p 832.

Deciduous, term describing the annual or seasonal loss of all leaves from a tree, it is the opposite of EVERGREEN. First, or milk, teeth in human beings are also referred to as deciduous.

Deciduous forest, area of vegetation composed mainly of deciduous trees, which lose all their leaves during one season. Such woodland is often dominated by oaks, chestnuts, birches, elms, beeches and larches. In tropical regions it is known as a monsoon forest. See also pp 304-307, 374-377.

Decimal fractions, numbers in the DECIMAL SYSTEM (based on 10) that are written as digits to the right of a decimal point. The number 52.437 represents an integer (whole number, 52) added to a decimal fraction (0.437). It is composed of $52 + (4 \times 10^{-1}) + (3 \times 10^{-2}) + (7 \times 10^{-3})$, which may also be written $52 + (4/10 + 3/100 + 7/1000)$, $52 + 437/1000$, or $52,437/1000$. Decimal fractions are added, subtracted, multiplied and divided like integers, but the decimal point must be correctly positioned after each operation. See also p 779.

Decimal system, commonly used system of writing numbers using a base ten and the Arabic numerals 0 to 9. It is a positional number system, each position to the left representing an extra power of ten. Thus $6,741 = (6 \times 10^3) + (7 \times 10^2) + (4 \times 10^1) + (1 \times 10^0)$. Note that $10^0 = 1$. Decimal fractions are represented by negative powers of ten placed to the right of a decimal point. Thus, $3,145.3 = (3 \times 10^3) + (4 \times 10^2) + (5 \times 10^1) + (3 \times 10^0) + (4/10 + 5/100 + 3/1000)$. See also pp 780-781.

Decius, Gaius Messius Quintus Trajanus

(AD 200-51), Roman emperor (r 249-51). In an attempt to strengthen the state religion he was responsible for the especially cruel and methodical persecution of Christians in the empire. See also pp 1246, 1246.

Declaration of Independence. See AMERICAN INDEPENDENCE, DECLARATION OF. **Declaration of Rights**. See BILL OF RIGHTS. **Declaration of the Rights of Man and Citizen** (1789), statement of the principles of the FRENCH REVOLUTION. It was adopted by the National Assembly, accepted by LOUIS XVI, and included in the constitution of 1791. Influenced by the AMERICAN DECLARATION OF INDEPENDENCE and the ideas of ROUSSEAU, it established the sovereignty of the people and the restrictions for social consideration embodied in "liberty, equality, and fraternity". See also pp 1550-1551.

Declaratory Act (1766), law in which the British Parliament asserted its right to legislate for the American colonies if it so wished, after the repeal of the STAMP ACT. See also pp 1540-1541.

Declension, term for a particular class of noun in a specified language, classified according to the system by which the noun inflects to indicate gender, number and case. The term also describes the system of inflection involved the various genders and the case endings, which also take account of singular and plural, and any alternative. In many languages pronouns, adjectives, prepositions and even articles undergo declension.

Declination, angular distance of a CELESTIAL BODY N or S of the CELESTIAL EQUATOR (N is positive, S is negative), measured in degrees along a line passing through the body and the CELESTIAL POLES. Declination and right ascension form the axes of the co-ordinate system used with reference to the celestial equator.

Declination, magnetic, angle between the magnetic lines of force and the meridians of latitude. Declination is measured positively in degrees east or negatively west of magnetic north, which is the place pointed to by a compass. Lines of equal declination are isogonic lines, and the line of zero declination is the agonic line. See also p 196.

Decline and Fall of the Roman Empire, *The History of* (1776-88), historical work in six volumes by Edward Gibbon. Written partly in Lausanne, it covers the periods from the reign of Trajan to the capture of Constantinople in 1453. The work is regarded as a masterpiece of literature as well as of history.

Decompression, rapid decrease in atmospheric pressure, experienced when the pressurized cabin of an aircraft is ruptured, or when a diver returns to the surface too quickly (giving rise to the BENDS). When someone works under pressures greater than atmospheric pressure, the respiratory gases are compressed and abnormally large amounts are dissolved in the blood and tissues. Sudden release of this pressure causes the gases to bubble off and interrupt the oxygen supply.

Decompression chamber, air tight compartment capable of withstanding high pressures, used to house one or more divers or other personnel working in pressurized environments while they are gradually returned to normal atmospheric pressure. Compression chambers are necessary to avoid decompression sickness (the BENDS). Deep-sea divers usually work in teams so that work progresses while divers who have been relieved are progressively decompressed in submerged chambers at various depths. See also DECOMPRESSION, p 484.

Decompression sickness. See BENDS.

Decorated style, term used to describe the middle phase of GOTHIC architecture in England from about 1250 to 1350. Characteristic of the style was the use of vaulted portals and richly designed windows using narrow strips of stone in gently curved tracery, such as at Exeter Cathedral. Ribs in the vaults of portals became more purely decorative. See also p 1350.

De Coster, Charles. See COSTER CHARLES. **Décapage**, form of COLLAGE in which

wood, metal or glass surfaces are decorated with paper cutouts or similar material and then permanently preserved by thin coats of varnish or lacquer. The technique is simple and has gained popularity as an easily accessible art form.

Decree, equivalent in a court of EQUITY of a judgement in a court of law. However, whereas a judgement is always given against one party, in equity a decree may bind both parties. In particular a decree may be an injunction upon one or both parties to behave in a certain way. The injunction may then be enforced by proceedings for CONTEMPT OF COURT. The most common decree is the decree nisi, which dissolves a marriage and may award alimony.

Deductive logic, reasoning method, opposite to induction, where the conclusion follows necessarily from the premises (which, of course, need not be empirically true). The classical form of this method is in Aristotle's syllogisms. For example "No green books are worth reading. All war books are green. Thus no war books are worth reading." (Green is known as the middle term in this syllogism.) The deductive method was greatly extended by the development of symbolic logic.

Deductive method. See AXIOMATIC METHOD. **Dee, John** (1527-1608), English mathematician and occultist. He was an associate of the alchemist Edward Kelley and was a favourite of Queen Elizabeth I. He also did preparatory work on the Gregorian Calendar.

Dee, common British river name. The most well known is in Scotland, it rises in the Cairngorms, flows through the Grampian Region, and enters the North Sea at Aberdeen. It is noted for its salmon. Length, 140km (87 miles).

Deed, in law a written document, the instrument authorizing the transfer of title to real property. It must be signed, sealed and (in Britain) delivered. There are two kinds of deed. A deed indented, or indenture, is one which binds two or more parties. Its name comes from the original practice, in the Middle Ages, of indenting each copy given to each party in order to make them tally with one another. A deed poll binds only one party and gets its name from its paper being polled, or shaven, to give it a clean-cut edge. Examples of deeds are conveyances and mortgages.

Deep freezing, method of FOOD PRESERVATION, usually at -5°C (23°F) or below. Some foods can last for years if properly frozen. Three methods are widely used for commercial deep freezing, in blast freezing, a flow of cold air is passed over the food, in contact freezing, the food is placed between refrigerated plates, or in a refrigerated alcohol bath, and in vapour freezing, liquid nitrogen, or solid carbon dioxide (dry ice) is made to vaporize in the food compartment. In home freezing, various refrigerated cabinets are used.

Deep scattering layer, (DSL), sound-reflecting layers in ocean water that are distinct enough at times to create a "false bottom". Various layers that can be detected during the day by sonar equipment disappear at night. Shoals of small, deep-dwelling fish, crustaceans and squid that feed on the water surface at night seem to be the cause. DSLs occur in all oceans of the world and are found most commonly at depths of 400m to 800m during the daytime.

Deep-sea drilling project (project Mohole). See DSDP.

Deep-sea reversing thermometer. See DART.

Deer, four-toed, long-legged, hoofed, ruminant mammal. There are 53 species in 17 genera distributed throughout the world in forests, arctic tundra, deserts, open bush and swamps. In most species the male (buck or stag) bears antlers formed from bone and covered, while growing, with a skin called "velvet", they are grown and shed yearly and the male's age may often be estimated from the relative size and complexity of its antlers. Deer often gather in herds. They are generally brown, with spotted young (called fawns).

They eat the bark of trees, young shoots, twigs and grass. Man exploits them for their meat (venison), hides and the antlers which are regarded as hunting trophies. The deer family Cervidae is known to have existed since the Oligocene epoch. Today the Chinese water deer is the smallest, measuring only 55cm (22in) tall at the shoulder, the moose, at 2m (6.5ft), is the largest. See also pp 94-95, 736-737, 751.

Deers, John (1804-86), American blacksmith, industrialist and manufacturer of agricultural equipment. In 1837, in partnership with Leonard Andrus, he made one of the first steel ploughs. He went on to found his own firm, still making ploughs.

Deerhound, hunting-dog originally bred in Scotland and one of the oldest breeds in Britain, it has a long tapering head with low-set ears. Its long slim body is set on strong straight legs. The thick ragged coat may be grey or brindle. Height over 76cm (30in) at the shoulder.

De facto, in law, condition in which a person or company acts with apparent right and under pretence of appointment or election, but is not legally qualified to do so. De facto acts are usually valid.

De Falla, Manuel. See FALLA, MANUEL DE.

Defamation. See LIBEL, SLANDER.

Default, in legal proceedings, the failure of a defendant or plaintiff to appear in court within a stated time. It is also the failure of a person to fulfil a legal obligation.

Defence, Ministry of, British department of state. It was first formed in 1940. In 1964 it was reorganized to combine in one department the old War office, ADMIRALTY and Air Ministry. It is presided over by a secretary of state, under whom there are two ministers of state, one for administration and one for equipment.

Defence mechanism, unconscious or involuntary reaction adopted by a person to protect him from the painful "effect" of a mental or physical event. A wide range of such mechanisms, from repression to neuroticisms, is included in the term.

Defendant, in law, the person or persons against whom charges have been brought. A defendant may be either civil (not subject to arrest) or criminal (subject to arrest).

Defender of the Faith or Fidel Defensor, title adopted by the monarchs of England since 1521. The title was first given to Henry VIII by Pope Leo X after the publication of a book by Henry attacking Martin LUTHER.

Defenestration of Prague (May 1618), event that marked the outbreak of the THIRTY YEARS WAR. The Protestant Bohemian subjects of the HAPSBURG Ferdinand resented his Catholic rule. Two Hapsburg regents were thrown from the windows of the Prague council chamber, the Bohemian throne was offered to the Protestant Frederick, the Elector Palatine. See also pp 1407, 1407.

Deficiency disease, condition caused by an inadequate intake of vitamins or other essential diet factors. Pernicious anaemia is caused by a lack of vitamin B₁₂, scurvy by the lack of vitamin C and pellagra by the deficiency of niacin (nicotinic acid) in the diet. Night blindness is a result of a lack of vitamin A, a source of which is carrots, which gives some truth to the old saying that eating carrots helps one to see in the dark. A vegetarian diet can contain all the necessary dietary elements except vitamin B₁₂.

Deficit borrowing, large-scale borrowing employed by a government as a budgetary measure to offset a situation requiring large expenditure, such as widespread unemployment. With the growth of government expenditure in most countries deficits have become a common feature. The three main borrowing sources are the central bank, the commercial banks and the public.

Definite integral. See INTEGRAL.

Deflation, falling prices, the opposite of INFLATION. It normally occurs during a recession or depression and it can be measured by the price index in the same way that inflation is measured. Excess production capacity within the economy is

usually the cause of deflation. Excess capacity leads to an excess of supply, in which manufacturers wish to supply more goods at full employment than consumers wish to buy. See also pp 1690, 1864-1867, 1867.

Deflationary gap, condition in which the total demand for goods and services in the economy is less than the total supply that can be produced at the full employment level of income. Such a gap is generally reflected by a relatively high rate of unemployment. See also STAGNATION.

Defoe, Daniel (1660-1731), English journalist and novelist. He joined the Duke of MONMOUTH's rebellion in 1685 and William III's army in 1688. He supported William in the poem *The True-born Englishman* (1701) and was imprisoned for his pamphlet *The Shortest Way with the Dissenters* (1702). His works include *Robinson Crusoe* (1719), *Moll Flanders* (1722), *A Journal of the Plague Year* (1722) and *Roxana* (1724). See also pp 1467, 1478, 1479.

Defoliant, any chemical that affects the metabolism of plants and causes their leaves to drop off. Cacodylic acid, 2,4,5-T, picloran and 2,4-D are common defoliants. Sometimes used to facilitate harvesting, defoliants gained notoriety in the Vietnam War when they were used by the Americans to destroy food crops and large areas of jungle, resulting in massive disruption of the fragile jungle ecosystem.

De Forest, Lee (1873-1961), US inventor who in 1907 developed the audion vacuum-tube (triode valve), a device that made live radio broadcasting possible. It remained the key component of radio, television, radar, telephone and computer systems until the transistor was invented in 1947. See also p 885.

Deforestation, clearing away of forests and their ecosystems, usually on a large scale, by man. It may be done to create open areas for farming or building, or to make use of the timber from the trees. There is an immediate danger that the vital topsoil will be eroded by wind (as in the dust bowl in the USA in the 1930s) or, in hilly areas, by rain. Proposals to clear whole regions of the rain-forests of Amazonia in Brazil which play a key role in maintaining the oxygen balance of the Earth, could, if implemented, cause a global catastrophe. See also pp 752, 759.

Degas, Hilaire-Germain Edgar (1834-1917), French painter and sculptor. Classically trained and a lifelong admirer of Jean INGRES, Degas was a perfectionist whose achievement was to combine the discipline of classic art with the immediacy of the modern. After meeting Édouard MANET and Émile ZOLA, he showed his work at the IMPRESSIONIST exhibitions. Sharing their interest in everyday life, he began painting ballet, café and racing scenes. A brilliant draughtsman, influenced by Japanese prints and photography, he introduced unusual angles and off-centre composition into his work. To master movement, he made sculptures of dancers and horses. His use of colour and light always subtle, became concentrated in his later pastels. See also pp 1596-1597, 1596.

De Gaulle, Charles André Joseph Marie (1890-1970), French general and politician. A graduate of the *École Spéciale Militaire* of Saint-Cyr, he fought in WWI and was wounded and captured in 1916. In 1924 he graduated from the *École Supérieure de Guerre* and served in the occupation of the Rhineland and in Lebanon. He was made a brigadier-general, in charge of the fourth Armoured Division in 1940. When the VICHY GOVERNMENT was created, he went to England as the self-declared head of the Free French forces and was sentenced to death by court martial in France. He was later head of the French Committee of National Liberation in Algiers. After the war, he made two partially successful attempts to reorganize the French government (1945-46) and following a period of retirement was elected president of the Fifth Republic in 1958. He settled the Algerian crisis and made France a nuclear power. He resigned after defeat in the

referendum on administrative reform in 1969. See also pp 1742, 1743, 1792-1793.

Degaussing, demagnetization of a magnetized substance, performed by surrounding the substance with a coil carrying an alternating electric current of decreasing magnitude. The name is derived from the CGS unit of magnetic flux, the gauss.

Degenerative disease, progressive wasting ailment in which a patient's condition deteriorates at a greater or lesser rate, depending on the treatment used and the response to it, often such a condition can be arrested, although it cannot be reversed. Various degenerative diseases are glaucoma, osteoarthritis and carcinomas of the lymphatic system.

Degradation, in geology, wearing away or general reduction or erosion of earth. Examples are the carrying-off of rocky material by wind, water or ice, the action of a stream as it cuts its channel; and the denudation of slopes or the transport of material. See also p 758.

Degree, in mathematics, unit of angular measure equal to one three-hundred-and-sixtieth (1/360) of a complete revolution. One degree is written 1°, and can be divided into 60 parts called minutes (eg 20'), which may in turn be divided into 60 parts called seconds (eg 25"). Three hundred and sixty degrees are equal to 2π radians; using this fact, angular measurements can be converted into linear measurements since π is a transcendental number. In physics and engineering, a degree is one unit on any of various scales, such as the Celsius temperature scale or the Baumé scale of specific gravity.

Degree, academic, title conferred by universities or colleges as an indication of the successful completion of a course of study. Undergraduate degrees are awarded at the end of an undergraduate course in the arts, sciences or other subjects or professions, eg Bachelor of Arts (BA) and Bachelor of Science (BSc). They are usually graded according to the standard achieved. Postgraduate degrees vary according to the amount of original thought and research they involve, the highest in Britain is that of Doctor of Philosophy (PhD), or its equivalent, which usually takes three or more years to complete.

De Havilland, Sir Geoffrey (1882-1965), British aircraft designer. He built his first plane in 1908 and during WWI he designed military aircraft creating the DH series. He was a director of the company that bears his name, a firm which has produced many famous and innovative aircraft, including the TIGER MOH and the MOSQUITO.

Dehiwala-Mount Lavinia, city on the SW coast of Sri Lanka, 13km (8 miles) S of Colombo. It is a commercial centre and resort. Products: fish, coconuts, rice. Pop 122,000.

Dehumanization, process both psychological and social, by which people are made to feel alienated from a full sense of humanity. Assembly lines in factories are called dehumanizing because they compel people to function as if they were parts of a machine.

Dehydration, removal or loss of water from a substance or tissue. Water molecules can be removed by heat or a dehydrating agent such as concentrated sulphuric acid, which removes hydrogen and oxygen, in the form of water from another chemical. Dehydration (drying) is used to preserve foodstuffs. In medicine, dehydration is the excessive drying of the body due to water loss, often a symptom or result of disease or injury.

De-icing, aircraft, prevention and removal of ice which forms on the leading edges of wings, tail and propellers of aircraft in flight. Rubber "boots" along the leading edges of exposed surfaces are pulsated, or edges are heated, to dislodge or melt ice as it is formed.

Deimos, smaller of Mars' two satellites, discovered in 1877 by Asaph Hall. Diameter 12km (7.5 miles), mean distance from planet 23,500km (14,600 miles), mean sidereal period 1.26 days. See also pp 952-953.

Deira, northern Anglo-Saxon kingdom

Daniel Defoe, a satirical print in which he is pilloried for his attitudes to religion.

Edgar Degas was a superb sensitive draughtsman.

Charles de Gaulle's broadcasts from England inspired the people of occupied France.

Lee De Forest's triode valve (1907) marked a crucial advance in early radio broadcasting.

Deidre

Eugène Delacroix, *Horse Frightened by a Storm*, one of the artist's many fine studies

Grazia Deledda, the Italian novelist who won the 1926 Nobel Prize in literature

Delft, artists working on the famous Delft blue pottery, painted entirely by hand

Delhi, a view of the Red Fort, built during the reign of Shah Jahan in the 17th century

between the rivers Humber and Tyne. In the late 7th century it was united with its neighbour to the N, **BERNICIA**, to form the kingdom of **NORTHUMBRIA**.

Deirdre, a tragic figure in Irish mythology. Conchobar, the king of Ulster, kidnapped the supremely beautiful Deirdre intending to marry her, but she fled with Naoise to Scotland. After many adventures, they were permitted to return to Ulster, but Naoise and his two brothers were treacherously murdered. Deirdre killed herself almost immediately.

Deism, system of natural religion which was first developed in England in the late 17th and 18th centuries. It affirmed belief in one God, but held that he detached himself from the universe after its creation and made no revelation. Reason was man's only guide. The deists opposed revealed religion in general and Christianity in particular. The most influential deist writings were John Toland's *Christianity not Mystical* (1696) and Matthew Tindal's *Christianity as Old as the Creation* (1730). Deism did not become popular in England, but it exercised a great influence on the enlightenment in France where **VOLTAIRE**, **J.-J. ROUSSEAU** and the **ENCYCLOPÉDISTS** were its chief exponents.

Deja vu (French, "already seen"), feeling that one has encountered the same situation before, when in reality it is new. One explanation is that the situation is very similar to a previous one that is no longer consciously remembered. It tends to occur more often when people are tired.

Dejeuner sur l'Herbe (1863), painting by **MANET** that raised a controversy in the Paris art world and which inspired young artists later to form the nucleus of the **IMPRESSIONISTS**. The painting, in bold colours, depicts a seated nude female figure gazing at the viewer, two male figures fully clothed in modern dress, and another scantily clad female figure in the background.

De jure, legal term from Latin meaning "by right", or "by lawful right". It enables companies and persons to perform duties and acts legally attributed to them. It is used to acknowledge the existence and respectability of governments.

Dekker, Thomas (1572-1632), English dramatist best known for his comedy *The Shoemaker's Holiday* (1599). He also wrote *The Gull's Hornbook* (1609), a satirical pamphlet containing incidental details of contemporary London theatre.

De Kooning, Willem (1904-), Dutch-born US painter, an important **ABSTRACT EXPRESSIONIST**. Although influenced by Pablo Picasso and Max Ernst, de Kooning's paintings are distinctive and original, marked by organic shapes in harsh colours or white on black and executed with energetic, almost violent, brushwork.

De la Beche, Sir Henry Thomas (1796-1855), British geologist. He set out, on his own initiative, to prepare a geological map of England, this prompted the British government in 1835 to form the Geological Survey, of which he was the director.

Delacroix, Eugène (1798-1863), French painter, draughtsman and writer. A leader of the Romantic movement. **GRACILE**, **CONSTABLE** and other contemporaries influenced him, as well as past masters such as MICHELANGELO, **POISSON** and **BURNING**. A master of colour, he was original in his use of related (as opposed to purely local) colour, and of complementary colours. His paintings, brilliant compositions full of superbly modelled and juxtaposed figures painted in broken colour and very free brushwork, deeply influenced later realists and the **IMPRESSIONISTS**. *Massacre of Chios* (1823) and *Liberty leading the People* (1830) are among his best known works. See also pp 1556-1557, 1557, 1559, 1662.

Delacroix, Henri Edmond. See **CROSS**, **HENRI EDMOND**.

De lafield, E.M. (1890-1943), pen-name of British novelist Elizabeth Monica Dashwood. She wrote plays, short stories and novels of manners, of which the best known is *Diary of a Provincial Lady* (1931).

Delagoin Bay, inlet on the SE coast of

Mozambique, an island off SE Africa, in the Indian Ocean. It was discovered by Antonio do Campo in 1502. Length 88km (55 miles).

De la Hauty, Shirley (née Strickland) (1923-), Australian sprinter and hurdler. She competed in three Olympic Games (1948, 1952, 1956), winning three gold medals (1952 80m hurdles; 1956 80m hurdles, 4 by 100m), one silver and four bronze, the most Olympic medals won by a woman. She also won three golds at the 1950 Empire Games.

De la Mare, Walter (1873-1956), British poet, short-story writer and anthologist. His collections of poems include *Songs of Childhood* (1902), *Peacock Pie* (1913) and *Poems for Children* (1930). Of his poetry anthologies, *Come Hither* (1923) is outstanding. His prose includes the novel *Memoirs of a Midget* (1921) and the collection of stories *On the Edge* (1930). He wrote imaginative stories for children.

De laune, John Thaddeus (1817-79), British journalist. Under his editorship (1841-77) *The Times* gained its reputation as the voice of Britain.

De laune, Shelagh (1939-), British dramatist. Her first play, *A Taste of Honey* (1959), was staged in London and won the Charles Henry Foyle New Play Award. A second play, *The Lion in Love* (1960), also won a prize. Her other works include *Sweetly Sings the Donkey* (1964), a collection of short stories.

De la Ray, Jacobus Hercules (1847-1914), Boer military commander and political figure. He was a general in the **SOUTH AFRICAN BOER WAR** (1899-1902) and later helped South Africa recover, serving as a legislator (1907-14). When WWI broke out in 1914 he organized a Boer rebellion but was killed before it began by a police patrol rounding up dissidents.

De la Roche, Mazo (1885-1961), Canadian novelist. She wrote a series of best-selling novels chronicling the Whiteoaks, a matriarchal country family who have been described as a transatlantic version of **GALSWORTHY'S** Forsytes.

De la Rue, Warren (1815-89), British astronomer. In 1858 he invented the heliograph, an instrument for taking photographs of the sun. In 1860 he observed the solar prominences and demonstrated their origin. See also pp 974, 974.

De launay, Robert (1885-1941), French painter, the founder of **ORPHISM**, which extended the **CUBIST** technique of fragmentation into the realm of colour. He deeply influenced the **BLAUER REITER** group and by 1914 was one of the most influential artists in Paris.

De launay-Terk, Sonia (1885-1979), Russian-French painter, with her husband Robert DELAUNAY a pioneer of **ORPHISM**. After WWI she became a highly successful and versatile designer of rugs, fabrics, scenery and costumes of great originality and beautiful colouring. In the 1930s she returned to painting, which she was still doing when in her eighties.

De Laurentiis, Dino (1919-), Italian film producer. He financed a number of artistically important films, such as *Bitter Rice* (1949) and *La Strada* (1956). He subsequently participated in multinational productions such as *War and Peace* (1956), *The Bible* (1966), *Waterloo* (1970) and *King Kong* (1976).

Delaware, state in the USA on the coast of the Atlantic Ocean, occupying a peninsula between Chesapeake Bay and Delaware Bay. The fourth smallest US state (after the District of Columbia, Hawaii and Rhode Island), most of its land is coastal plain. The Delaware River, an important shipping route to Pennsylvania and New Jersey, forms part of the SE boundary. Delaware is primarily an industrial state, but agriculture is important: the chief products are cereal crops, potatoes, soybeans and dairy produce. Industry is concentrated in the N of the state and includes chemicals, food processing, rubber, plastics and metallurgy. The state capital is Dover, but the only large city is Wilmington in the N.

Delaware was first settled by Swedes at

Wilmington (Fort Christina) in 1638. It passed to the Dutch in 1655 and then the English in 1664. One of the original 13 colonies to declare independence from Britain, Delaware ratified the US Constitution within three months of its being drawn up. The state remained loyal to the Union during the American Civil War although there were some slaves within its borders. Area 5,328sq km (2,057sq miles). Pop. (1975 est.) 579,000. See also p 2161.

Delaware Indians, tribe of Algonquian-speaking North American Indians named after Lord De la Warr. The tribe, divided into three major divisions, the Unami, Munsee and Unalachtigo, lived in New Jersey, Long Island, Pennsylvania and Delaware. Most of the original 8,000 Delaware were forced to move in the early 19th century to Indian Territory (now Oklahoma).

De La Warr, Thomas West, Baron (1577-1618), English colonial governor of Virginia. He was the first governor of the JAMESTOWN Colony (1610-11). When he arrived the colonists were discouraged and ready to leave, but under his rule the colony was strengthened. Delaware state, river and bay are all named after him.

De la Warr, Thomas West, Baron (1577-1618), English colonial governor of Virginia. He was the first governor of the JAMESTOWN Colony (1610-11). When he arrived the colonists were discouraged and ready to leave, but under his rule the colony was strengthened. Delaware state, river and bay are all named after him.

De la Warr, Thomas West, Baron (1577-1618), English colonial governor of Virginia. He was the first governor of the JAMESTOWN Colony (1610-11). for his ballets, especially *Coppelia* (1870), but also the altogether grander *Sylvia* (1876). He also wrote several opera and choral works, sacred and secular.

Delict, *Law of*, in many countries the part of the civil law which corresponds to the Anglo-Saxon law of TORT. It derives from Roman law, before the separation of criminal and civil law in the 3rd century. It meant simply the obligation to pay monetary compensation to the victim of a crime. Theft, robbery, physical injury and damage to property all came under the law of delict.

Delilah, Old Testament figure who betrayed samson to the Philistines. Having earned that his strength lay in his hair, she cut it while he slept. She has become a symbol in literature of female treachery, as in Milton's *Samson Agonistes*.

Delinquency, term covering antisocial acts, misdeeds and crimes, most often applied to the behaviour of juvenile offenders.

Delinquency, juvenile, sociological and legal term for offences committed by children and adolescents that would be termed criminal if committed by adults. It is only since the turn of the century that juvenile courts have developed, and these courts emphasize correction and rehabilitation rather than punishment, in such institutions as hostels and foster homes. Theft is the most common offence among children, and juvenile delinquency has a great number of socio-economic causes such as emotional maladjustment, broken homes and economic deprivation. It is higher in the more developed countries.

Delirium, symptom of many disorders, ranging from exhaustion, sunstroke, infectious diseases and high fever to metabolic dysfunction and extreme intoxication (delirium tremens, etc.). It is characterized by mental confusion, rambling statements, obsessive thoughts and poor judgment. The delirium may range from whimsicality to mania, but the patient is usually quickly tired by it and falls into an uneasy sleep, although sometimes he must be quieted with suitable drugs.

Delirium tremens. See DT.

Delisle, Guillaume (1675-1726), French scientist, one of the founders of modern cartography. He used astronomical observations and accurate measurements to compile the 90 or so maps he published during his lifetime. His first important work - maps of the continents and a globe - was published in 1700. He was geographer to the French king in 1718, his brother was the French astronomer Joseph Nicolas DELISLE.

Delisle, Joseph (1688-1768), French astronomer. He pioneered the study of the sun and in 1725 he was invited to St Petersburg by Peter the Great, where he founded a school of astronomy.

Delius, Frederick (1862-1934), British composer of orchestral, operatic and chamber works. He combined elements of romanticism with impressionism, most notably in numerous orchestral pieces, including *Brigg Fair* (1907) and *On Hearing the First Cuckoo in Spring* (1912). Recognition of his genius came later in life in Britain, where Sir Thomas Beecham was among his most ardent champions. See also ROMANTICISM.

Dell, Ethel M. (1881-1939), British writer of romantic stories. She achieved tremendous popularity with her highly emotional novels, which included *Way of an Eagle* (1912), *The Keeper of the Door* (1915) and *Storm Drift* (1930).

Della Cava-Debeljevic, Lina (1919-), Swiss soprano. She has sung with the Metropolitan Opera, the Munich and Vienna State Operas and at La Scala, Milan. In 1970 she received the Cross of Honour, Austria's highest medal of achievement.

Della Francesca, Piero. See PIERO DELLA FRANCESCA.

Della Porta, Giacomo (1537-1602), Italian architect and sculptor. A pupil of VIGNOLA he completed the cupola of St Peter's, which had been left unfinished by MICHELANGELO. Of the palaces he designed the most notable was the Villa Aldobrandini.

Deller, Alfred George (1912-1979), British singer who, through his unique natural vocal register and musicianship, revived the art of the COUNTER TENOR. He is famous for his interpretations of Henry PURCELL, and had works written especially for him by Benjamin BRITTEN.

Delos (Dhlos), smallest of the Greek Cyclades (Kiklādhos) islands in the Aegean Sea. In Greek mythology, it was considered the birthplace of Apollo and Artemis. Its rulers became treasurers of the Delian League from 478 to 454 BC. Declared a free port by Rome in 166 BC, it prospered as an important shipping and slave centre. The island was sacked during the Mithridatic Wars in 87 BC. French excavations since 1877 have uncovered remains of temples, theatres and commercial buildings.

De los Angeles, Victoria. See ANGELES, VICTORIA DE LOS.

De Lathourbourg, Jacques Philippe (1740-1812), French Romantic landscape painter who settled in London in 1771, where as a stage designer he won fame for his large-scale dramatic sets of nature and his picturesque scenes.

Delphic Oracle, most famous of the ancient Greek oracles, at Delphi. It was housed in the temple of APOLLO, built in the 7th century BC, although it was first associated with the worship of the earth goddess Ge. It was famous for the ambivalent prophecies uttered by a priestess sitting on a golden tripod. The messages were usually translated by a priest and delivered in verse. The temple was destroyed and rebuilt twice.

Delphi forecasting, management procedure employing a forecast or prediction based upon answers given by experts in the field. Instead of them all meeting to reach a decision, the Delphi technique involves sequential interviews.

Delphinium, also called larkspur, any of about 250 species of herbaceous plants native to temperate areas. It has compound palmate leaves and loosely clustered purple, blue or white flowers. Garden larkspurs are varieties of *Delphinium elatum*, a hardier Asian plant. Family Ranunculaceae.

Delta, fan-shaped body of alluvium deposited at the mouth of a river. A delta is formed when a river deposits sediment as its speed decreases while it enters the sea, and the waves, tides and currents are not sufficiently strong to carry the material away. Most deltas are extremely fertile areas, but are subject to frequent flooding. The term was used by Herodotus in the 5th century BC to describe the land at the mouth of the Nile, which resembled the Greek letter "delta". See also pp. 221, 263, 265.

Deltoid muscle, triangular muscle over the shoulder joint. Contraction of the deltoid draws the arm upwards and the shoulder backwards and outwards. See also pp. 148-149.

Deluc, Jean Andre (1727-1817), Swiss geologist and physicist. He invented the dry pile, a type of battery, and a form of HYGROMETER. Deluc also researched the atmosphere and published the first correct rules for calculating the height of a mountain by using a BAROMETER.

Deluge, The story of the Great Flood. In one of its earliest pre-biblical versions, reconstructed from a broken clay tablet from Mesopotamia, some of the gods decided to destroy mankind. But one of them, Ea (Enki), thinking this harsh, counselled a mortal, Ziusadra, to build a boat to save the seed of mankind. The flood lasted seven days, after which the sun shone and the earth reappeared. Thereupon the gods, pleased with his obedience, made Ziusadra immortal.

Delusion, false or irrational belief based upon a misinterpretation of reality. Mild delusions are quite common in normal people, but fixed delusions, resistant to reason, are a form of PARANOIA. Such psychotic delusions include persecution delusions, in which the person feels himself to be hunted or persecuted by someone, delusions of grandeur, in which the person imagines himself to be someone of great importance, eg Napoleon or even God,

and influence delusions, in which the person thinks himself controlled by some remote force such as cosmic rays or magnetism. See also pp. 1106, 1110, 1111.

Delvaux, Paul (1897-), Belgian painter, influenced in the 1930s by CHIRICO and the SURREALISTS. In characteristic paintings he arranges nude women and clothed men in incongruous settings reminiscent of Chirico's "metaphysical painting".

Demand, in economics, schedule of prices and the quantities that would be purchased by consumers at those prices. For most goods, the normal relationship between price and quantity is inverse, that is, as the price of the goods increases, the quantity demanded by consumers declines. The demand for goods is determined by a number of factors, however, including purchaser's income, price of competing goods and consumer tastes and preferences. See also pp. 1862, 1863.

Demand and supply. See SUPPLY AND DEMAND.

Dementia praecox, term used by Emil KRAEPELIN at the turn of the century to describe what is now called SCHIZOPHRENIA. Literally, it means "early insanity" but is insufficiently exact to describe the condition fully. See also pp. 1110-1111.

Demerara, river in Guyana, NE South America, it rises in the Guiana Highlands, and flows N to the Atlantic Ocean. Georgetown, Guyana's main port, is at the mouth. Length approx. 322km (200 miles).

Demense, in a feudal system, land enjoyed by the king or the nobles, rather than being leased out to their feudal tenants. Originally, peasants owed labour services to the lord on his demesne, but during the 14th century it became common for the demesne to be leased out to tenant farmers for fixed rents. See also pp. 1292, 1324-1325, 1330-1331.

Demeter, ancient Greek nature goddess, sister of ZEUS and mother of PERSEPHONE. Although specifically the goddess of corn, she presided over all crops and fruits and over human health and fertility. She was usually depicted as bountiful and gentle. See also pp. 1900, 1906.

Demetrius, name of two kings of Macedonia. Demetrius I (c. 336-283 BC) became king in 294 after defeating Ptolemy I in 306 and taking Athens in 294. He invaded Asia in 287 but was defeated. Demetrius II (c. 276-229 BC) became king in 239 and was defeated in a war with the Aetolian and Achaeans leagues.

Demetrius I Soter (187-150 BC), King of Syria (162-150 BC). He became king after overthrowing his cousin, Antiochus V. As king he crushed the revolt of Timarchus in Babylon and attempted to subdue the Maccabees in Jerusalem.

De Mille, Cecil Blount (1881-1959), US film producer and director, noted for his lavish dramatic presentations. With his first film, *The Squaw Man* (1913), he established Hollywood as the US film-production capital. Much of De Mille's best-known work covered biblical themes such as the films *The Ten Commandments* (two versions, 1923, 1956) and *King of Kings* (1927). Other major films include *Forbidden Fruit* (1921), *Union Pacific* (1939) and *The Greatest Show on Earth* (1952), which won an Academy award. See also p. 1683.

Demirel, Süleyman, (1924-), Turkish politician. He became leader of the Justice party in 1964 and prime minister the following year. His government fell in 1971 following left wing agitation, but he regained power 1973-1978.

Democracy, political system in which people are involved in some way in the ruling of society. In one form the will of the people is expressed, indirectly, through elected representatives. Democracy stresses that all men are endowed with basic civil rights. In the British system, in which the executive and legislative branches of government are unified, ministers keep their executive positions through majority support in the Commons. An election is usually called if that support is lost. See also p. 1854.

Democratic Centralists (Democratic Cen-

Delphic Oracle, influencing Greek politics and religion from Mount Parnassus

Delphinium, the wild wood/and species of this perennial flower is called larkspur

Delta, usually the slower flow of a river the larger is the area of its delta

Demeter, Goddess whom the Greeks believed taught man the arts of agriculture

Democratic Party

Democritus speculated at an atomic theory confirmed scientifically centuries later

Jack Dempsey squares up to Paul Getty at an Anglo-American sporting club dinner in 1967

Dendrochronology is a method of dating timber by examining a tree's growth rings

Denmark, the famous statue of the mermaid Langelinie in the harbour of Copenhagen

(tre). French conservative party opposed to policies of Charles De Gaulle, including the former Mouvement Républicain Populaire

Democratic Party, US political party, the descendant of the Anti-Federalist and Democratic-Republican Parties. From the election of Thomas JEFFERSON as president in 1801 until James Buchanan's election in 1857, the party was strong, gathering its support mainly from farmers, small businessmen and the professional classes. Party strength declined after the Civil War until 1932, when Franklin D. ROOSEVELT was elected. After that, it remained strong until 1952. In 1960 Democratic candidate John F. KENNEDY won the presidential election beginning "the New Frontier" era that stressed US world responsibilities for peace and economic growth at home. Lyndon B. JOHNSON succeeded Kennedy. Jimmy CARTER was president from 1976-1980. See also DEMOCRATIC REPUBLICAN PARTY, pp. 1628-1748

Democratic-Republican Party, US political party, originally called the Anti-Federalist party, or Republicans, that was formed in the late 1790s. Led by Thomas JEFFERSON, James MADISON and James MONROE, the party opposed strong central government and Alexander HAMILTON's economic policies. It supported the French revolution, advocated an agrarian democracy, strict construction of the Constitution and other measures to minimize aristocratic control of government

Democratic Socialism, political belief based on the twin assumptions that evolution rather than revolution is the best way to introduce the socialist economy and that democratic practices must be followed before and after socialism is introduced. British socialists, for example, have always operated entirely within the democratic system. See also SOCIALISM, pp. 1692-1695

Democritus of Abdera (c.460-370 BC), Greek philosopher. Although none of his books have survived he is best remembered for his atomic theory. He suggested that all matter consisted of tiny, indivisible particles, that various atoms differed physically and that atoms' motions were determined by laws of nature, not the actions of gods. See also ATOMISM, pp. 812, 886

Demographic transition theory, or **theory of the vital revolution**, social theory that relates population patterns to the degree of social development. In pre-industrial societies, DEATH and BIRTH RATES are high. Modernization decreases the death rate, but not the birth rate, causing a temporary acceleration in population growth. With more advanced development, the birth rate also drops and population growth stabilizes.

Demography, term introduced in 1855 by the Frenchman Achille Guillard for the scientific study of human POPULATIONS, their changes, movements, size, distribution and structure. It began with the work of Englishman John GRAUNT, who published the first mortality table in 1662. Demographic methods are primarily statistical and quantitative, and they are used by government and business for ascertaining public needs

Demoiselle crane, one of the smallest cranes, found from SE Europe to central Asia, it winters in Africa or India. Unlike most cranes, it prefers dry grassy areas to marshland and eats a varied animal and vegetable diet. Length up to 96cm (38in). Family Gruidae, species *Anthropoides virgo*

Demonetization, the ending of the practice whereby the value of a nation's currency is defined in terms of a precious metal such as gold or silver. Such metal, coins and paper money become no longer freely interchangeable. Such currency reform became widespread after WWI. The term also refers to the withdrawal from circulation of certain kinds of currency, which then cease to be legal tender

De Morgan, Augustus (1806-71), British mathematician. He wrote a number of textbooks, including *Elements of Arithmetic* (1840), and with his contemporary,

George BOOLE, contributed to the renaissance of studies in logic

De Morgan, William Frend (1839-1917), British potter. He revived many techniques of Oriental pottery, making brightly-coloured tiles and vases. Associated with the PRE-RAPHAELITE circle, he also wrote popular novels

Demosthenes (c.383-322 BC), Athenian orator and statesman. He achieved fame as a public speaker and devoted his life to speaking and fighting on behalf of the Greek states in their resistance to Philip of Macedon. His speeches include the *Philippics* and *On the Crown*. See also pp. 1205, 1209

Dempsey, Jack (1895-), US boxer, real name William Harrison Dempsey. He won the world heavyweight title from Jess Willard (1919) in Toledo, and lost it to Gene Tunney (1926) in Chicago. In a re-match with Tunney (1927), he lost after flopping Tunney because he did not go immediately to a neutral corner, which delayed the start of the referee's count

Denbighshire (Dinbych), former county of N Wales and now part of Clwyd. Although it is a mountainous area, the fertile valleys of the rivers Conway, Dee and Clwyd produce cereal crops and potatoes. Cattle, sheep, pigs and poultry are also raised there. Industries include tourism, timber and iron and steel. The county town is Denbigh, but Wrexham, as a mining and manufacturing centre, is more important. Pop. (1971) 184,824

Dendrite, short branching projection from a nerve cell or NEURON. It carries impulses to the cell body and transmits impulses to other nerve cells over short gaps called SYNAPSES. There may be more than one dendrite per neuron

Dendritic drainage, tree-like branching pattern of streams and their tributaries. The pattern is common in regions where the land is essentially flat and the rock is homogeneous

Dendrochronology, means of estimating time by examination of the growth rings in trees. This data can be related to wood used in buildings, for instance, and to the hydrology of the region where the tree it came from grew, thus fixing points in the climatic history of that region. Chronology based on the bristlecomb pine extends back over 7,000 years. See also p. 269

Deneb, or **Alpha Cygni**, remote and very luminous white supergiant star in the constellation of Cygnus. Characteristics: apparent mag. 1.26, absolute mag. -7.0, spectral type A2, distance 1,500 light-years. See also pp. 978-979, 1013, 1019, 1021

Denebola, second magnitude star in the constellation Leo (the lion), most easily seen during spring in the Northern Hemisphere. It is used as a reference star in navigation. See also p. 1011

Dengue, infectious virus disease transmitted by the *Aedes aegypti* mosquito. Occurring in the tropics and in the warm months in temperate areas, it produces fever, headache and fatigue, followed by severe joint pains, aching muscles and the appearance of a reddish rash. Recovery usually follows, although relapses are common. See also p. 1082

Den Haag. See HAGUE

Denier system, measure of the fineness of silk and nylon yarns. It is defined as the number of grammes weight of 9,000 metres of yarn

Denis, Saint (c.3rd century AD), patron saint of France. According to tradition, he was the first bishop of Paris and was martyred in Montmartre. He is often represented carrying his severed head in his hands. Feast, 9 October

Denis, Maurice (1870-1943), French painter. An important theorist, he joined in the NABIS' reaction against IMPRESSIONISM. He introduced symbolism into his work and gradually devoted himself to religious art

Denitrification, process that chemically reduces nitrites or nitrates to yield free nitrogen, nitriles, nitrogen oxides or ammonia. Denitrifying BACTERIA change the nitrogen of ammonia into free nitrogen that enters the atmosphere or soil. See also NITROGEN CYCLE

Denmark, small monarchy in W Europe occupying a peninsula and nearly 500 islands (100 inhabited). Although Denmark is known for its farm produce, it exports twice as many manufactured articles. The major industries are food processing, engineering, iron and steel and chemicals. The chief agricultural activity is the raising of pigs and cattle. Dairy produce is also important, as is the cultivation of grain, sugar-beet and potatoes. Fishing and tourism are other important economic activities. The capital is Copenhagen (København). Area 43,068sq km (16,628sq miles). Pop. (1975 est.) 5,060,000. Denmark joined the EEC in 1973. See also p. 2019

Denmark Strait, sea passage between SE Greenland and Iceland, linking the Arctic Ocean with the N Atlantic Ocean. In May 1941 the British battleship HMS Hood was sunk there by the German battleship Bismarck. Width: 209km (130 miles), length 483km (300 miles)

Denner, Johann Christoph (1655-1707), Polish maker of musical instruments. He improved the sureness of the flute's intonation and invented the modern clarinet in c. 1690-1700

Dennis, Nigel (1912-), British author. His work includes the novels *Boys and Girls Come Out to Play* (1949) and *Cards of Identity* (1955) and the dramatic essay *Jonathan Swift* (1964). His most successful play, *August for the People* (1962), is about the power of the press. *Excuses*, a volume of poetry, appeared in 1970

Denominator, common, number that is a multiple of the divisors of two or more fractions, and that allows the addition or subtraction of otherwise incomparable fractions. For example, for $\frac{1}{2}$ and $\frac{1}{4}$ the common denominator is 10, allowing the same fractions to be represented as $\frac{5}{10}$ and $\frac{2.5}{10}$ which can then be added or subtracted. Likewise the common denominator of $\frac{1}{3}$, $\frac{1}{4}$ and $\frac{1}{6}$ is 12, the common denominator of $\frac{1}{5}$ and $\frac{1}{8}$ is 40

Denonville, Jacques René de Brisay, Marquis de (1637-1710), governor of New France, Canada (1685-89). In 1687 he led an army against the Iroquois Indians and laid waste their settlements. Following this he invited a number of Iroquois to a peace conference, but sparked off further troubles when, albeit reluctantly, he captured and enslaved them

Densitometer, instrument for measuring the optical transmission or reflection (optical density) of a material such as a photographic film or plate. It is used in spectroscopy to determine the positions of spectral lines and bands and to measure their RELATIVE DENSITIES and intensities. **Density**, mass per unit volume of a substance, it is an indication of the concentration of particles within a material. The density of a solid or liquid changes little over a wide range of temperatures and pressures. Related to density is specific gravity, which is the ratio of the density of one substance to that of a reference substance (usually water) at the same temperature and pressure. The density of a gas depends strongly on both pressure and temperature. See also pp. 837, 838

Deat, Joseph Malahy (1849-1926), British publisher. With his son Hugh he planned EVERYMAN'S LIBRARY of 1,000 classics of literature

Dentine, hard yellow matter of all TEETH, which consists of crystals of calcium and phosphate. Man and other higher animals have tubular dentine, so-called because a line of dentine-producing cells (odontoblasts) surrounding the pulp, sends out tubules into the dentine, these transmit sensations to the nerve

Dentistry, profession concerned with the care and treatment of the mouth, particularly the teeth and their supporting tissues. As well as general practice, dentistry includes such specialties as oral surgery, prosthodontics, periodontics, orthodontics and public health. Scientific dentistry started in the 16th and 17th centuries in Germany and France when it became recognized as a separate profession, university courses were initiated and dental textbooks were published. Before that time barbers had performed most dental

services. Today the practice of dentistry is strictly controlled, there are special educational requirements and licensing procedures in all countries. See also **pp 1100-1101**

Dentition, the type, number and arrangement of teeth. An adult human being has 32 teeth: in each jaw are four incisors, two canines, four premolars, or bicusps, four molars, and, in most people over 18 years of age, two wisdom teeth. Man's teeth cut, grind and tear and are not adapted to any particular type of diet. See also **TOOTH**, **pp 1100-1101**

Denture, artificial substitute for teeth, usually made of plastic and occasionally reinforced with metal. Well-fitted and designed dentures can improve the appearance of the wearer as well as enabling him to chew food. A partial denture is also called a **BRIDGE**. See also **pp 1100-1101**

Denudation, in geology, all processes that result in the gradual wearing away or lowering of the surface material covering the base rock. It includes erosion, mass wasting and transport of material by water or wind.

Denver, largest city and capital of Colorado state, USA, on the South Platte River. Two settlements founded in 1858, Auraria and St Charles, were united in 1860 and named after the governor, James W. Denver. Today the city is the financial centre of the Rockies, and industries include tourism, machinery, meat packing and rubber goods. Population (1973) 515 593

Deodar, also called Indian cedar and by Hindus, the Tree of God. An evergreen native to the Himalayas, it also grows well in temperate climates. Its wood is used for timber and it yields a fragrant oil. Height to 61m (200ft). Family Pinaceae species *Cedrus deodara*

Deodorant, substance used to mask or destroy unpleasant odours. Cosmetic deodorants contain perfumes and mild germicides to inhibit the bacterial decomposition of sweat. They are usually combined with antiperspirants, substances such as aluminium chlorhydrate that prevent sweating. Household deodorants are used in the form of sprays (aerosols) or slowly evaporating solids or liquids.

Deontology, term used by Immanuel Kant to denote an ethical theory which holds that the rightness of an action is not necessarily dependent on the goodness it might produce. Deontology has been contrasted with **UTILITARIANISM**

Deoxyribonucleic acid. See **DNA**

Dependence, in psychology, the extent to which an individual needs others in order to function, as opposed to independence, functioning on one's own. Infants are totally dependent on their parents for satisfying basic survival needs, but most children progress towards some degree of independence as they grow up.

Depersonalization, in psychology a feeling, often pathological, of personal and sometimes general unreality. In sociology it refers to feelings of alienation from society, especially in industrial society. In philosophy, depersonalization is the rejection of beliefs in supernatural causes of natural phenomena.

Depilatory, substance used to remove body hair. Most depilatories are creams or pastes containing calcium thiocollate, a compound that breaks up the chemical structure of hair. They are also employed in tanning for removing hair from hides.

Deportation, expulsion from a country of an alien by a branch of the executive, in Britain by the Home Office. From the 15th century until 19th- and 20th-century penal reforms it was used as an alternative to capital punishment by several European countries, particularly Portugal, England and France.

Deposition, in geology, layering or placing of any material which may become rock. It is the accumulation of sediment, ore deposits and organic material by any natural agent that would result in stratification of rock-forming material. See also **pp 220**

Deposition, act of removing an individual, usually a monarch from office. In Britain,

kings such as Edward II (1327) and Richard II (1399) were deposed for what was held to be unconstitutional conduct.

Depreciation, decline in the value of an asset as it is spread over its economic life. It includes the decrease in value or usefulness because of wear and tear, obsolescence, or fall in market prices but does not cover unexpected losses due to accident or natural disaster. It is a way of measuring an asset's actual cost and actual value to the owner, either a business or an individual.

Depressants, variety of drugs which impair the functioning of the body, either by affecting a particular organ or by depressing the nervous system as a whole. They may be used to slow the action of the heart, to induce sleep, to mitigate pain or to relieve emotional tension.

Depression, term to describe a period of economic hardship, more severe than a recession. It is commonly measured by a fall in economic output per head of population, a decline in trade and a rise in unemployment. It may be accompanied by either falling or rising prices, although before the 1970s the coincidence of unemployment and inflation in industrialized western nations was rare. The term is almost always used to describe conditions in an industrial society which is subject to capitalism's cycle of growth and stagnation, although it may, as in Britain from 1875 to 1895, have special reference to agriculture. The first classical example of a capitalist depression occurred in Britain in the late 1830s and early 1840s, the so-called "Hungry Forties". The most severe and widespread depression was the Great Depression of the 1930s. See also **pp 1690-1691**

Depression, emotional state characterized by feelings of guilt, failure, worthlessness or rejection. Frequently a response to a difficult or boring situation, depression leads to remorse, self-recrimination and obsessive thoughts. Insomnia, loss of appetite and fatigue often occur. Manic-depression alternates periods of intense excitement with those of acute depression. Suicide is an extreme manifestation of the self-abnegation of depression.

Depression, in meteorology, a region of low atmospheric pressure with the lowest pressure at the centre. It usually brings unsettled or stormy weather. In the Northern Hemisphere, winds circulate anticlockwise in a depression; they circulate clockwise in the Southern Hemisphere.

Depressive neurosis. See **NEUROSIS**

Depressive psychosis. See **PSYCHOSIS**

Depressive reaction, psychological disorder with severe depression as its main symptom. It occurs after an individual has experienced a stressful or disturbing event, eg, loss of a loved one. He or she typically withdraws, feels helpless and worthless and may be unable to cope with daily life. This disorder responds to treatment with drugs and the support of sympathetic people. More severe forms may lead to attempted suicide and thus require more intensive treatment. See also **pp 1110-1111**

De Profundis, personal essay of confession and reminiscence by Oscar Wilde published in extracts in 1905, and in full in 1962. The title is a Latin phrase which means "out of the depths" and is a cry of wretchedness. It is taken from the first two words of Psalm 130 in the Latin version.

Depth charge, explosive canister detonated underwater by time fuses at predetermined depths and used by naval vessels and aircraft to attack submerged submarines.

Depth perception, ability of the eyes to locate the position of objects in three-dimensional space. The retina is two-dimensional, and information about depth is created in the brain. The brain uses "depth clues" which include such factors as linear perspective, PARALLAX, relative size and the slightly different view each eye has of the object. See also **pp 136-137**

De Quincey, Thomas (1785-1859), English essayist and critic. In 1822 he published his famous work *Confessions of an English Opium Eater* describing his

opium habit, which began while he was at Oxford University, and the effects of opium itself.

Derain, André (1880-1954), French FAUVIST painter, influenced by VLAMENCK, CÉZANNE and MATISSE, whose landscape paintings, before 1914, were painted in brilliant colour and Pointillist technique. His later style was influenced by Italian masters and his subjects became precisely drawn in subdued colours. See also **pp 1654, 1654**

Derby, Edward George Geoffrey Smith Stanley, 14th Earl of (1799-1869), leader of the British CONSERVATIVE PARTY from 1846 to 1868 and three times Prime Minister (1852, 1858-59, 1866-68). He resigned from PEELE's cabinet in 1845 in protest against the repeal of the CORN LAWS. His last government introduced the 1867 REFORM ACT.

Derby, Thomas Stanley, 1st Earl of (1435-1504), English noble. At BOSWORTH FIELD (1485) his large force was nominally on the side of Richard III, but took no part in the fighting. After the battle he crowned his stepson, the victorious Henry VII, King of England and in 1486 was made an earl.

Derby, town in Derbyshire, N England on the River Derwent 60km (37 miles) NNE of Birmingham. England's first silk mill was built there in 1719. Today it is an important railway junction and its industries include railway and aerospace engineering, textiles, ceramics and food processing. Rolls-Royce cars are made there. Pop (1971 prelim.) 219,300

Derby, The, English horse race. The most important of the CLASSICS, it is run in June over a 2.4km (1.5 mile) course at Epsom, and is open to three-year-old colts and fillies. It was first run in 1780 and was named after the Earl of Derby, who won the right to put his name to it on the loss of a coin. The race has given its name to events in other countries, such as the Irish Derby and the Kentucky Derby (USA).

Derbyshire, county in N central England. Low-lying in the S, it rises to the PEAK DISTRICT in the N, and is drained by the River Trent and its tributaries the Dove, Derwent and Wye. Agriculture is important and includes dairy farming, sheep and cattle rearing, wheat, oats and market gardening. There are coal deposits in the E and other industries include steel, textiles, paper and pottery. The main towns are Derby, Chesterfield and Alfreton. Area 2,631sq km (1,016sq miles). Pop 887,600.

Derg, Lough, either of two lakes in the Republic of Ireland. One is in Galway, Tipperary and Clare counties, on the Shannon River and is 40km (25 miles) long by 3 to 9.5km (2 to 6 miles) wide. The other is in SE county Donegal with an area of approx 26sq km (10sq miles).

Derivative, rate of change of a mathematical function with respect to a change in the independent variable. The derivative is an expression of the instantaneous rate of change of the function, in general it is itself a function of the variable. An example is obtaining the velocity and acceleration of an object that moves distance x in time t according to the equation $x=at^2$. In such motion the velocity increases with time (the object accelerates). The expression dx/dt , called the first derivative of distance with respect to time, is equal to the velocity of the object, in this example it equals $2at$. The result is obtained by considering a small time interval δt , over which the average velocity is $\delta x/\delta t$, and taking the limit of this as t becomes vanishingly small, the operation is called differentiation. The second derivative, written d^2x/dt^2 , is equal to the acceleration. Derivatives can similarly be used to find the slope of a curve at a particular point. See also **CALCULUS**, **DIFFERENTIAL EQUATION**, **LIMIT**

Dermatopora. See **EARWIG**

Dermatitis, inflammation of the skin. In acute form it produces redness, itching and blisters or oozing, in chronic form it causes a thickening and darkening of the skin and scales. In CONTACT DERMATITIS contact with a particular substance, such as soap or nettles, produces the reaction.

Dentition is the arrangement and classification of the teeth in humans and animals

Deodar - a very valuable timber tree known also as the Indian cedar or God tree

Depression, in 1936, 200 men marched to London protesting against unemployment

Depth charge, the shock wave from the explosion causes a submarine to collapse

Dermatology

Derrick, the lifting device which in its simplest form uses a pole and supporting ropes

Descartes proof of the existence of God ultimately turned out to be a circular argument

Desiccators of (2) the properties of certain chemicals to absorb a trace of moisture

Desman, this aquatic mole-like animal has dark brown fur which is lighter underneath

In atopic dermatitis (often associated with hay fever and asthma) excessive dryness occurs, with redness at the neck, elbows and knees. In stasis dermatitis heavy pigmentation and sometimes ulcers develop on the inner sides of the lower legs as a result of poor circulation. In neurodermatitis there is no known cause except the patient's repeated rubbing and scratching of the area. The term is also sometimes used for ECZEMA. See also pp 1074-1075

Dermatology, branch of medicine that deals with the diagnosis and treatment of skin diseases. See also pp 1074-1075

Dermis, the inner of the two main layers of the skin. Also known as the true skin, it is made up of connective tissue containing fibres that provide strength and toughness. It is richly supplied with blood vessels and contains many nerve endings, sensory organs and numerous glands. See also pp 150-151

Derrick, hoisting apparatus using a tackle rigged at the end of a beam. The name is derived from a 17th-century English hangman. In building construction, a derrick is a tall, three-legged structure erected to support a hoisting crane. In the petroleum industry, it is the tower over a bore hole that supports the tackle for drilling and hoisting. See also pp 438, 439, 446-447, 448-449, 456-457

Derry. See LONDONERRY

Dervish, member of a Muslim fraternity, not necessarily mendicant, resembling a Christian monastic order. The communities arose within Sufism and by the 12th century had established themselves strongly in the Middle East. The Bektashi order of Dervishes acted as companion to the Ottoman Janissaries, although as the Empire went into decline they became regarded as a reactionary influence and were eventually suppressed by Atatürk. A group of Bektashi are officially recognized in Albania, and were granted independent status after 1945. The chief devotion of the Dervish is *dhikr*, the remembering of God, a meditative rite used to remind the Dervish of his dependence on the invisible world of the spirit. Its encouragement of emotional display and hypnotic-like trances has earned the Dervish the epithets "whirling" and "dancing".

Derwentwater, lake in the Lake District in Cumbria, NW England, formed by a widening of the River Derwent. It contains the islands Rampsholme, Derwent Lord's and St Hubert's. Length approx 5 km (3 miles), width 2 km (1.25 miles).

Dery, Tibor (1894-1977), Hungarian writer. His works reflect his strong Socialist commitment and he was imprisoned 1957-60. They include the novel *Feketék* (1950-52) and the short stories *Ötvenhat* (1956).

DES. See DIETHYLENBESTROL

Desaguadero, river in W Bolivia. It rises in Lake Titicaca in the Andes and flows SE to the saline Lake Poopo, its upper course is used for irrigation. Length approx 322 km (200 miles).

Desai, Morarji Ranchhodji (1896-), Indian politician. From 1930 he devoted himself to the movement for Indian independence and was jailed by the British several times. After independence (1947) he was chief minister of Bombay (1952-56), minister of commerce and industry (1956-58), minister of finance (1958-63, 1967-69) and deputy prime minister (1967-69). He was ousted by Prime Minister Indira Gandhi in 1969 but regained power in 1977.

Desalination, extraction of pure water for drinking, industrial and chemical uses, or for irrigation, from water containing dissolved salts (usually sea water). The commonest and oldest method is to evaporate the water from a salt solution by DISTILLATION, and condense the vapour to form water. Another method is to freeze the salt solution, salt is excluded from the ice crystals which can then be melted. In the method of reverse osmosis, pure water only passes through a semipermeable membrane against which salt water is pressurized. Other methods are based on the migration of ions between electrodes. See also pp 543-552, 838, 839

Descant, in music, a high part (generally sung) that harmonises with the melody, often used to provide a variation in the singing of consecutive verses of a hymn.

Descartes, Rene (1596-1650), French philosopher and mathematician who was educated by Jesuits. He founded analytic geometry, he introduced CARTESIAN COORDINATES in the treatise that prefaced his *Discourse on Method* (1637). Here, and in his *Meditations* (1641), Descartes' method of deduction and intuition later known as Cartesianism, lead to modern metaphysics. By doubting all his ideas, he found that he reached one indubitable proposition "I am thinking" and from this it followed that he existed, hence, *cogito, ergo sum* - "I think therefore I am". Although mind and matter are distinct so that only ideas can be perceived, Descartes deduced the existence of an external world from his proofs of the existence of a perfect and consequently undeceiving God. See also DUALISM, pp 1436, 1884-1885

Descent of Man and Selection in Relation to Sex, The biological treatise published by Charles DARWIN in 1871. It explains his theory that man evolved from lower forms of life, primarily from ape-like ancestors. It did not cause the widespread outcry that his *Origin of Species* occasioned 12 years before, since that book's evolutionary thesis implied much of what the later work propounded.

Desse, town in central Ethiopia, capital of Flo province. Of strategic importance in the war between Ethiopia and Italy in the 1940s, it was taken by Italy in 1936 but restored to Ethiopia in 1941. Pop. (1970) 45,700.

Desegregation, elimination of laws or customs that separate people on such grounds as sex, age, race or religion. See also APARTHEID

Desensitization, medical procedure in which someone who is allergic to a certain substance (an allergen) is injected with it in a series of gradually increasing dosages in order to desensitize him or decrease his sensitivity. The term desensitization is also used to describe a type of treatment in psychotherapy. See p 1118

Desert, and region of the Earth, in any altitude characterized by scant, intermittent rainfall (25 cm (10 in) or less per year) and little or no vegetation. Cold deserts, areas almost permanently covered with snow or ice, extend over one sixth of the Earth's surface, and hot deserts over one fifth. Most desert regions lie between 20° and 30° N and S of the Equator, either where mountains form a barrier to prevailing winds, or where high pressure prevents precipitation. The SAHARA in Africa is the largest desert in the world. The term is more often applied to hot deserts, where agents of erosion have produced landforms unique to these areas of the Earth. See also pp 228-229, 316-319, 749

Deserted Village, *Oliver*, celebrated long poem (1770) by Thomas COLESMITH. It describes the peaceful English countryside and defends rural and conservative values against Whig imperialism.

Desert Fathers, early group of Christian hermits in Egypt, considered to be the first exponents of Christian monasticism. They preached the value of complete withdrawal from the world, and included St Antony and St Pachomius.

Desert pavement, coarse material, usually pebbles and gravel, that is generally unmoved by wind, forming a residual sheet on the rocky desert floor which can help prevent removal of finer material.

Desert Rats, popular name for the British 8th Army. The name comes from the jerboa (desert rodent) on the shoulder flash of the 7th Armoured Division. They became famous for their part in WWII especially at the Battle of EL ALAMEIN (October 1942) and the subsequent expulsion of the German forces from N Africa.

Desert Song, The operetta with lyrics by Oscar HAMMERSTEIN II and Otto Harbach and music by Sigmund ROMBERG. Originally produced on Broadway in 1926, it was made into films in 1929, 1944 and

1953. It contains many well known songs. **De Sica, Vittorio** (1901-74), Italian film director and actor. He is noted for his use of amateur actors in biting, realistic drama. Notable films directed by him include *Bicycle Thieves* (1948), *Unheralded* (1952), *Indiscretion of an American Wife* (1953), *Two Women* (1961) and *A Brief Vacation* (1975). He acted in *General Della Rovere* (1959).

Desiccator, chemical apparatus used for drying substances or for keeping them dry. It consists of a glass vessel with a tight fitting lid. Specimens are supported on a perforated platform above a lower chamber containing a desiccant, such as anhydrous calcium chloride.

Design Centre, name of two centres run by the Design Council as showcases for modern British consumer goods. The centre in London was opened in 1956, that in Glasgow in 1957. Both also feature exhibitions on specialist themes, eg architecture and dental health.

Design Council, body set up to "promote by all practicable means the improvement in design of the product of British industry". Founded (1944) as The Council of Industrial Design, it adopted its present title in 1972, by which date it was also involved in engineering design. The council runs the DESIGN CENTRES, maintains a design advisory and consultancy service and publishes the journals *Design* and *Engineering*. It also administers scholarships, organizes competitions and award schemes and works closely with other bodies in the field of design education.

Desman, aquatic mole-like animal with a flexible tubular snout, webbed hind feet and a vertically flattened scaly tail. It eats fish, insects and molluscs. Length, to 41 cm (16 in). Family Talpidae. See also p 342

Desmid, any of a group of tiny, freshwater, single-celled green algae. Desmids are characterized by perforations in the cell wall and highly symmetrical shapes not unlike those of DIATOMS. They have no silica skeleton. Order Zygnematales. See also pp 358-359, 358, 760

Des Moines, capital city of Iowa, USA, near the confluence of the Des Moines and Raccoon rivers. Founded in 1843 as a fort, it is now an industrial and transport centre for the Corn Belt. The city is protected from flooding by a system of dams and reservoirs. Industries: mechanical and aerospace engineering, chemicals, food processing. Pop. (1970) 201,403.

Desmoulin, Camille (1760-94), journalist in the French Revolution. His pamphlets such as *Revolutions de France et de Brabant* (1789) were widely read and contributed to the rising which led to the fall of the Bastille. He aligned with Georges DANTON and was guillotined during the REIGN OF TERROR.

Despensers, English noble family of wealth and influence in the late 13th and early 14th centuries. Hugh the elder (1261-1326) the principal adviser of EDWARD I after 1312 and with his son Hugh the younger (d 1326), used royal favour to build up their estates and gain the earldom of Winchester. They were principal objects of attack when ISABELLA and MORTIMER invaded in 1326 and were beheaded after Edward had been deposed.

Desportes, Philippe (1546-1606), French poet, disciple of the PLÉIADE. The melodic rhythms of his verse showed a strong Italian influence. He translated the Psalms and received several benefices from his patron, Henry III of France.

Despotism, absolute or autocratic rule by an individual, without legal sanction or popular consent. The term originated in ancient Greece and has been applied to dictatorial systems under which power was tyrannically and arbitrarily imposed and personal freedoms severely curtailed. The 18th century has been called the Age of ENLIGHTENED DESPOTISM, when a number of rulers, such as FREDERICK II of Prussia and CATHERINE II of Russia, exercised absolute power claiming that their regimes sought the improvement of the people they governed. See also pp 1458-1854

Des Prés, or Deprez, Joaquin, or Josse (c 1445-1521), Flemish composer of church and secular music. A member of the papal choir in Rome (1486-94), he later entered the service of LOUIS XI of France. He wrote three books of Masses, more than 100 motets, and several secular songs.

Desmarest, Jean Jacques (1758-1806), Haitian revolutionary and leader of the independence movement after the capture of TOUSSAINT LOUVERTURE. In 1803 he drove out the French and declared independence in 1804, changing the country's name from St Domingue to Haiti. As Emperor Jacques, his despotic rule lasted from 1804-06.

Dessau, city and river port in East Germany at the confluence of the rivers Elbe and Mulde. It was the site of Walter Gropius' BAUHAUS (school of architectural design) from 1925 until 1932. The city was almost destroyed in WWII. Industries: machinery, chemicals, paper, food processing. Pop (1970 est) 98,300.

Dessau, Paul (1894-1979), German composer and conductor. His works include films and orchestral music and the opera *The Trial of Lucullus* (1951) with libretto by Bertolt BRECHT, in honour of whom Dessau composed *In Memoriam Bertolt Brecht* (1955).

Desoer, Max (1867-1947), German philosopher. He saw a moral and social need for a general "science of art", in which the arts would be systematically classified and their relevance to other cultural areas investigated.

D'Estaing, Valéry Giscard. See **ESTAING, VALÉRY GISCARD D'**.

De Stijl. See **STIJL, DE**.

Destroyer, warship, smaller than a cruiser, usually equipped with guns, torpedoes, depth charges and missiles. It was evolved from torpedo boats by the Royal Navy in the 1890s and played a major role in both world wars convoying Allied merchant ships. The first nuclear-powered destroyer was built by the USA in 1962.

Detective fiction, literary form in which a crime (almost always murder) is solved by a detective, usually amateur, who is the hero of the story. The form achieved its peak interest, especially in Britain, in the years between WWI and WWII. The first great detective-story writer was Edgar Allan Poe, whose hero, C. Auguste Dupin, first appeared in *The Murders of the Rue Morgue* (1841). In Britain the first great detective novel was Wilkie COLLINS' *The Moonstone* (1868). The most famous and popular of 19th-century writers was Arthur Conan Doyle, whose hero the vain and imperturbable Sherlock Holmes, first appeared in *A Study in Scarlet* (1887). Since then a succession of detectives have become household names: G. K. CHESTER-LEWIS' Father Brown, Agatha CHRISTIE'S Hercule Poirot and Miss Marple, E. S. GARDNER'S Perry Mason and Dorothy Sayers' Peter Wimsey.

Detente, term in international relations, signifying the reduction of tension between states. It was utilized in the 1960s to describe the effort of the USA and the USSR to end the COLD WAR and, after the events of the CUBAN MISSILE CRISIS, to establish closer links of mutual understanding. Since 1969 detente between the two superpowers has been marked by the two Strategic Arms Limitation Agreements (SALT). The preliminary SALT II agreement was announced at Okeanskaya, near Vladivostok in 1974, and was detailed in early 1975. That was followed by the Helsinki agreement of 1975, by which 35 nations of Europe and North America agreed to uphold fundamental human rights and freedoms and to permit the free exchange of people and ideas. See also **DISARMAMENT**, pp 1792-1793.

Detergent, substance used for cleansing. Strictly, detergents include soaps as well as synthetic detergents (syndets), both of which have molecules that possess a long hydrocarbon chain attached to an ionized group. The hydrocarbon chain attaches to grease and other non-polar substances, the ionized group has an affinity for water. Substances of this type lower surface ten-

sions, ie they are surface active. The term is often used in the more restricted sense of synthetic detergents, of which there are several types, the commonest are salts of organic sulphonic acids. Domestic detergents often contain additives such as perfume and bleach. See also **SURFACTANT**, pp 580-581, 838-839, 838, 898, 898.

Detergent pollution, visual and chemical WATER POLLUTION of rivers and streams mostly by detergents used domestically. Seen as a thick foam on the surface, it is detrimental to water life and contributes to algal bloom. This type of detergent, usually high in phosphate, is being replaced by biodegradable detergents which are decomposed in sewage-treatment plants. See also **EUTROPHICATION**, p 581.

Determinism, philosophical thesis that every event is the necessary result of its causes. Everything has a cause, no event is purely accidental. It involves the notion that the human will is not free, that choice is illusory, and that how people act is determined. The thesis cannot be proved or disproved. Some theories of psychology are deterministic in seeing an individual as controlled entirely by his history.

Deterrence, in criminology, theory that the punishment of criminals serves as an example and makes others less likely to commit crimes. Arguments about the death penalty and imprisonment turn on the question of how far such measures deter potential criminals. Most criminologists believe that the certainty of being caught and punished is a better deterrent than the severity of punishment of those who are caught. See also pp 648-649.

Detonator, device using sensitive chemicals (initiating explosives) to set off less sensitive main charges (high explosives). The detonating charge is generally housed in a thin-walled metal or plastic, waterproof capsule, such as the "cap" at the base of a rifle cartridge. Detonators may be exploded electrically, by mechanical shock, or by igniting a fuse. See also pp 556, 582-583.

Detritus, in geology, sediment deposited by natural forces. It is classified by the size of the particles. See also **ALLUVIUM**.

Detroit, port in SE Michigan, USA, on the Detroit River just W of Lake St Clair, largest city in the state. It was founded as a French fort and trading post in 1701 and named Fort Pontchartrain. The British captured it in 1760 and used it as a base during the American War of Independence. Detroit served as territorial then state capital from 1805 to 1847. It suffered a severe fire in 1805, and was then rebuilt to a plan of the governor. It was lost to Britain in the war of 1812, but retaken by American forces in 1813. A major Great Lakes port and rail centre, Detroit is the headquarters of General Motors, Chrysler and the Ford Motor Company. Industries: steel, pharmaceuticals, food processing, machine tools, tyres, paint and motor vehicles. Pop (1970) 1,512,891.

Dettingen, Battle of (27 June 1743), engagement in the War of the AUSTRIAN SUCCESSION in which Anglo-German forces, led by GEORGE II of Britain, defeated the French army. It was the last occasion on which a British monarch went into battle in person.

Deus ex Machina, Latin term meaning "the god from the machine". It refers to the device in Greek and Roman drama by which a god appears to resolve the plot. The "machine" was a crane which raised and lowered the actor involved.

Dias, João de (1830-96), Portuguese poet. His volumes of poetry include *Flores do campo* (1869) and *Campo do flores* (1893) and his primer, *Cartilha maternal* (1876), is still used to teach reading in Portugal.

Deuterium oxide. See **HEAVY WATER**.

Deuterium, isotope (D or H^2) of hydrogen whose nuclei contain a neutron in addition to a proton. Every million hydrogen atoms in nature contain about 156 deuterium atoms. Deuterium occurs in water as D_2O (heavy water), from which it is obtained

by electrolysis. Heavy water is used as a moderator in some fission reactors and it could become a fuel in fusion reactors. Mass no 2, at wt 2.0144. See also pp 814-815, 886-887.

Deuteron, nucleus of a DEUTERIUM (heavy hydrogen) atom, consisting of one proton and one neutron. The nucleus of ordinary hydrogen contains one proton only. See also pp 814-815.

Deuteronomy, biblical book, fifth and last of the PENTATEUCH. Three discourses ascribed to MOSES shortly before he died frame a code of civil and religious laws. The book attempts to explain the religious meaning of the events described in the previous books, GENESIS, EXODUS, LEVITICUS and NUMBERS, and appeals for fidelity to the Mosaic Law.

Deutsch, Otto Erich (1883-1967), Austrian-born British musical biographer and bibliographer. He was an authority on Handel, Mozart and, especially, Schubert, for whom he produced a complete catalogue.

Deutzia, genus of flowering plants, mostly shrubs native to Asia and cultivated elsewhere as ornamentals, they are related to the HYDRANGEA. They bear clusters of white single or double flowers. The leaves are oval and pointed, with a slightly toothed edge. Family Hydrangeaceae.

Deva, the all-encompassing word for god in the VEDAS, the earliest religious texts of India. There were 33 of these gods, 11 for each of the three world categories - sky, air, and earth. Some of the nature gods of Vedic poems appear in present-day HINDUISM, they include Surya (the sun) and Varuna (the sky).

De Valera, Eamon (1882-1975), US-born Irish statesman. He was active in the movement for Irish independence and after the Easter Rebellion of 1916 was elected president of the SINN FEIN Party while imprisoned in England. He opposed William COSGRAVE's Irish Free State ministry and founded the FIANNA FAIL Party in 1924. He defeated Cosgrave in 1932 and remained head of Ireland's government (with two brief interruptions) until 1959, when he became president of the Republic of Ireland. He retired in 1973. See also pp 1780-1781, 1780.

De Valois, Dame Ninette (1898-), Irish-born ballerina and choreographer, real name Edna Stannus. She danced with Diaghilev's BALLETS RUSSES (1923-26) and was appointed ballet director of Dublin's Abbey Theatre. In 1931, she founded the Sadler's Wells Ballet School, which later became the Royal Ballet which she directed (1956-63).

Devaluation, lowering the value of one nation's currency with respect to that of another or to gold. The decision to adjust the currency downwards is made by the central government when the nation is having balance-of-payments problems. Devaluation stimulates a nation's exports and decreases its imports by increasing the purchasing power of foreign currencies.

Devanagari, or Nagari, Indian script developed in the 7th century AD and used for Sanskrit, Hindi and Marathi among other languages. It is written from left to right and although it has vowels and consonants it is often written syllabically without the use of vowels.

Developed countries, term used to describe those countries where industrial development has made possible a standard of living which may be termed affluent. In such countries the literacy rates are high as are the gross national products and per capita incomes, with an even spread of wealth rather than the extreme differences seen in developing or third world countries. The developed countries are chiefly the nations of North America, Europe and Australasia.

Developer, photographic, solution that converts the invisible image formed on a photographic emulsion during exposure into a visible image. The developer works by converting the silver salts in the emulsion of the film or plate into metallic silver. Commonly used developers consist of a solution of metal ($CH_3NH_2C_6H_5OH$) and hydroquinone, $C_6H_4(OH)_2$, to which a preservative, an alkali and a restrainer are

Destroyers are small naval vessels armed with torpedoes, guns and depth charges.

Detente: Russian and American delegates at the resumption of the SALT talks in 1976.

Detergent pollution forced the development of chemicals that bacteria break down.

Detroit has a major problem of racial tension as almost half the city's population is black.

Developing countries

Devil, a 16th century woodcut showing the devil Beel before the gates of hell

Bernadette Devlin broke a parliamentary rule when she delivered her maiden speech

Devon countryside is more suitable to small farming than large mechanical cultivation

Devon cattle, Red Ruby is the name of the smallest north county breed

added. The preservative arrests deterioration of the developer and the restrainer reduces fogging during development. Various formulations are used for specific purposes. See also pp 628-629.

Developing countries. See **THIRD WORLD**.
Deventer, Sir Jacob Louis van (c.1874-1922), Boer military commander. He was a guerrilla leader in the South African War (1899-1902) and later worked for the unity of the various South African states. He fought against the Germans in South West Africa and E. Africa during WWI.

Devereux, Robert, 2nd Earl of Essex. See **ESSEX, ROBERT DEVEREUX, 2ND EARL OF**.
Devi, supreme HINDU goddess. She is also known by the names Uma, Parvati and Ambika (in her benevolent aspects) and Kali (in her destructive aspect).

Deviance, in the social sciences, anything that departs from or conflicts with the standard norm. Deviant behaviour differs markedly from socially accepted attitudes, moral standards and general behaviour. In considering both "deviation" and "norm", the group context must be taken into consideration, eg members of a teenage gang might consider respect for the law to be "deviant". See also pp 1840-1845.

Deviated septum, abnormality of the muscular wall (septum) that separates two cavities. Such an abnormality can interfere with the normal functioning of an affected organ, and may require surgery as in the case of a deviated heart septum.

Deviation, standard, in statistics, an average measure of the variability of a set of numerical values from the MEAN of the set. If the values are bunched together around the mean, the deviation tends to be small; if they are widely dispersed, the deviation tends to be large.

Devil, in many religions an evil spirit. In Christianity the devil is the chief of the fallen angels cast out of heaven for their pride, or some other sin. There was little mention of the devil in the Old Testament, but from the biblical account of Christ's temptation in the desert it became common to regard the devil as the tempter who sought to win men's souls away from God. In the Middle Ages it was believed that the power of the devil could be manifested physically, and that he presided over Hell, where souls were made to suffer for their sins.

De Villiers, Dawie (1940-), South African rugby union halfback whose 25 international appearances (1962-70) included a record 22 as captain. A graduate of Stellenbosch University, where he studied for the ministry, he represented Western Province.

Devils, The, or The Possessed (1872, trans. 1914), novel by DOSTOEVSKY about a group of revolutionaries whose beliefs lead them to commit arson, murder and suicide.

Devil's coach horse, large, dark-coloured beetle and the largest member of the family Staphylinidae. It has strong concealed wings and is found in or near decaying organic matter including carrion and dung. Length to 2.8cm (1 in). Species *Ocyptus olens*.

Devil's Island (Île du Diable), smallest and southernmost of the Îles de Salut in the Caribbean Sea, off the coast of French Guiana. It was a French penal colony from 1852 until 1938.

Devine, George (1910-65), British actor, director and theatre manager, noted for his part in founding the English Stage Company, which he directed at the Royal Court Theatre, London, from 1956 to 1965.

Devis, Arthur (1711-87), British painter of decorative portraits and conversation pieces, often portraying squires with their families in gardens or parks.

Devlin, Josephine Bernadette (1947-). Northern Irish politician. A radical socialist and Catholic Irish nationalist, she sat as the Independent Unionist representative for Mid-Ulster at Westminster from 1969 to 1974.

Devolution, War of (1667-68), conflict over the Spanish Netherlands, engineered by LOUIS XIV using a dispute over his dowry

from Marie Thérèse (daughter of the King of Spain) as a pretext. After an easy French victory, the Dutch joined England and Sweden in the TRIPLE ALLIANCE and forced the return of much of the territory to Spain. See also pp 1448, 1448.

Devon, county in SW England, bounded by the English Channel (S) and the Bristol Channel (W). It is a hilly region that includes Dartmoor and Exmoor, and the principal rivers are the Ex, Tamar, Dart and Teign. Beef and dairy cattle are important and industries include tourism, fishing, textiles, pottery and clay-mining. The county town is Exeter. Area 6,711 sq km (2,591 sq miles). Pop. 942,000.

Devon cattle, breed of horned, dark-red domesticated cattle reared for both meat and milk, yields of which are fair. The breed was originally developed in Devonshire, England, and has been introduced to the USA and Argentina. See also pp 724-725.

Devonian period, the fourth-oldest period of the PALAEZOIC era, lasting from 395 to 345 million years ago. It PALAEZOIC era, lasting from 395 to 345 million years ago. It is sometimes called the Age of Fishes. Numerous marine and freshwater remains include jawless fishes and forerunners of today's bony and cartilaginous fishes. The first known land vertebrate, the amphibian *Ichthyostega*, appeared at this time. Land arthropods included scorpions, mites, spiders and the first insects. Land plants consisted of tall CLUB MOSSES, scouring rushes and ferns. See also pp 184, 227, 227, 268, 269.

Devon Island, arctic island off the extreme N coast of Canada. Lying at the head of Baffin Bay S of Ellesmere Island and N of Baffin Island it forms part of the Northwest Territories. Area approx 54,030 sq km (20,861 sq miles).

De Vries, Hugo (1848-1935), Dutch biologist who introduced the concept of MUTATION into the study of GENETICS. In 1900, with Karl Correns and Erich Tschermak, he rediscovered Gregor MENDEL's work on heredity. He later wrote *The Mutation Theory* (1901-03), which influenced later concepts of the role of mutation in evolution. See also pp 188-189.

De Vries, Peter (1910-), US novelist and poet, frequent contributor to *The New Yorker*. His first publication was *No, But I Saw the Movie* (1952); in 1974 he published *The Glory and the Hummingbird*.

Dew, water droplets formed, usually at night, by condensation on vegetation and other surfaces near the ground. Hoar frost is formed when temperatures are below freezing. Fog also deposits moisture on exposed surfaces.

Dewar, Sir James (1842-1923), Scottish chemist and physicist who carried out research into materials at extremely low temperatures. He built a device that could produce liquid oxygen. He invented Dewar flasks (household varieties are Thermos flasks), which were capable of storing low-temperature liquid oxygen for longer periods than was previously possible. He first liquefied and solidified hydrogen, and reached a temperature of 14° above absolute zero.

Dewberry, perennial fruit-bearing plant of the family Rosaceae, similar to a blackberry but with weaker trailing stems. The fruit, a source of iron and vitamin C, is thought to possess a finer flavour than that of the blackberry. Species *Rubus caesius*. See also pp 710-711.

De Wet, Christian Rudolph (1854-1922), Boer general and political figure. A skillful guerrilla commander, under CRONJE during THE SOUTH AFRICAN WAR (1899-1902), he later held office in the South African Government and championed Boer nationalism.

Dewey, John (1859-1952), US educator, philosopher and psychologist, who worked at Columbia University (1904-29). He was a founder of PRAGMATISM and modern FUNCTIONALISM, and strove to make the social sciences deal with the practical problems of education and mental disturbance. He had a profound impact on US educational practice and the devel-

opment of applied psychology. His books include *The School and Society* (1899) and *Experience and Education* (1938).

Dewey, Melvil (1851-1931), US librarian, who created the dewey decimal system. He established the first library training school of Columbia College and was its librarian (1883-89). He was also a founder of the American Library Association (1876).

Dewey decimal system, means of classifying books, created by Melvil dewey in 1876, based on the decimal principle. It is popular because of its subject currency and simplicity. There have been 18 revisions in the system. See also MM p 216.

Dewi. See **DAVID, SAINT**.

De Wint, Peter (1784-1849), British landscape painter in oils and watercolour, influenced by Thomas GIRTIN. De Wint's watercolour landscapes approach those of Cox in their quality and subtle variations of light.

Dew point, the temperature at which a vapour begins to condense, as when water vapour in the air condenses into cloud when the air becomes saturated with the vapour.

Dew pond, water that collects in a hollow through the accumulation of dew, moisture that condenses from the air on a cool night. Farmers sometimes deliberately create a dew pond by spreading straw or leaves in a natural hollow, on which dew can condense.

Dexter, John (1925-), British theatrical director. Notably, he has produced many of Arnold Wesker's plays, including *Chips with Everything* (1963). He has also been responsible for several spectacular stage productions.

Dexter, Ted (1935-), British cricketer. A majestic batsman who hit the ball with tremendous power, he played in 62 Test Matches 1958-68 (4,502 runs, average 47.89), 34 times as captain. A useful bowler and brilliant fielder, he played for Cambridge University and Sussex.

Dextran, stable, water-soluble polysaccharide sugar. It is used as a substitute or extender for blood plasma in transfusions.

Dhahran (Az-Zahrán) town in E Saudi Arabia on a headland in the Persian Gulf. Oil was discovered there in 1938 and it is a terminus of the Transarabian pipeline and the headquarters of the Arabian American Oil Company. Pop. 12,500.

Dharma, sacred law or duty in Hindu tradition. Virtue lies in following one's Dharma, which varies with one's caste and stage in life. In BUDDHISM the Dharma is the doctrine of Buddha; in JAINISM it is The Good as the principle of motion. See also HINDUISM.

Dhaulagiri, Mt., fifth-highest peak in the world, in the Himalayan Mts, N central Nepal. It was first climbed in 1960 by a Swiss expedition led by Max Eiselin. Various rivers, including the Gandak, rise on its slopes. Height 8,177m (26,827ft).

Dhole, rare, yellow, brown or grey wild dog native to central and E Asia; it preys chiefly on rodents and other small animals, but packs have been known to attack larger mammals such as deer and even to drive tigers from their prey. Length (without tail) to 1m (3 ft). Family Canidae, species *Canis lupus*.

Dhow, sharp-bowed Arab sailing craft, with one or two masts and slanting triangular (lateen) sails, used in the Indian Ocean and the Red Sea. In larger dhows, called baggalas, the mainsail is much larger than the mizzen sail.

Diabetes insipidus, disease characterized by extreme thirst and excessive output of very dilute urine. It is caused by a decrease in the secretion of the hormone VASOPRESSIN, also known as the antidiuretic hormone (ADH), which may be due to damage to the HYPOTHALAMUS. Left untreated by antidiuretic drugs it can result in dehydration, reduced blood volume, shock and even death. See also pp 1076-1077.

Diabetes mellitus, common metabolic disorder in which the body's inability to produce adequate amounts of the hormone INSULIN results in a disease characterized by inability to process carbohydrates. It may also affect many other body organs.

and functions. Susceptibility to diabetes mellitus is inherited, although the disease usually develops with obesity or infection, and is slightly more common in males. A non-hereditary form is produced by cancer of the pancreas.

Insulin is normally secreted by the islets of Langerhans in the pancreas. In diabetes caused by a diseased pancreas, too little insulin is produced and severe symptoms result. In diabetes mellitus that begins in adult life (generally after age 40), the effectiveness and speed of release of insulin from the pancreas is often disturbed, producing minor (in some cases, almost no) symptoms. In diabetes mellitus, the body cannot handle the sugar end-products of CARBOHYDRATE and convert them to energy compounds. The excess sugar is excreted in the urine and signs such as frequent urination, a dry mouth, extreme thirst, weakness, loss in weight and blurred vision can result. Diagnosis depends on urine and blood tests as well as special glucose tolerance tests. The disease cannot be cured but it can be treated with carbohydrate-limited diet, exercise and the administration of drugs - either insulin injection or synthetic oral drugs - to lower blood sugar levels. See also pp 155, 1076, 1077.

Diaghilev, Sergei Pavlovich (1872-1929), Russian ballet impresario. He was active in the Russian artistic avant-garde after 1898 and moved to Paris, where he formed the revolutionary BALLETUS RUSSES company in 1909. He attempted to unite music and scenery with the movement of the dance. His company assembled many talented artists, dancers and musicians, including NIKOLAI STRAVINSKY and FOKINE. See also pp 1758-1759.

Dialectical logic, philosophical concept of G.W.F. HEGEL (1770-1831). Hegel argued that ordinary logic, governed by the law of contradiction, is static and lifeless. In the *Science of Logic* (1812-16) he claimed to satisfy the need for a dynamic method, whose two moments of thesis and antithesis are cancelled and reconciled in a higher synthesis. Logic was to be dialectical, or a process (movement) of resolution by means of conflict of opposing categories. In short, thought was as "living" as organic nature itself. See also DIALECTICAL MATERIALISM.

Dialectical materialism, the philosophical basis of Marxism. Karl MARX (1818-83) agreed with G.W.F. HEGEL that the course of history was logically dialectical - ie change occurred in terms of the opposition of thesis and antithesis, leading to synthesis. Marx believed that Hegel was wrong, however, to define the basis of dialectics as spirit or reason. For Marx, the proper dialectical subject was material experience. According to his theory of historical materialism, mind (soul, reason) was derived from material, economic or social realities. See also DIALECTICAL LOGIC.

Dialecticians, Chinese school of Forms and Names (400-220 BC), of which *Hui Shi* and *Kung-Sun Lung* are typical representatives. They analysed the relations of things to their names. The longest and most authentic text known is the *Kung-Sun Lung Tzu*. The sophisticated work of this group was largely disregarded by later Chinese schools.

Dialysis, process for separating a COLLOID from a dissolved substance by virtue of their different rates of diffusion through a semi-permeable membrane. In the ARTIFICIAL KIDNEY the unwanted (smaller) molecules are separated out. Electrodialysis employs a direct electric current to accelerate the process, especially useful for isolating proteins. See also p 1078.

Diamond, native element, crystalline form of carbon (C). It is found in volcanic pipes and in alluvial deposits as cubic system octahedral (diamond-shaped) crystals. It is brilliant, transparent to translucent, colourless or of many hues including yellow, green, blue and brown, depending on the impurities contained. This form of carbon is the hardest natural substance known, its hardness and brilliance make it unsurpassed as a gem. Bort, a variety of diamond inferior in crystal and

colour, and carborando, an opaque grey to black variety called black diamond, as well as all other non-gem varieties, have applications in industry. Industrial diamonds are used as abrasives, bearings in precision instruments such as watches, and in the cutting heads of drills for mining. Other uses for them are as cutting heads of diffraction grating-ruling engines and as the stylus of high-fidelity sound record-players. Synthetic diamonds, made by subjecting graphite with a catalyst to about 7×10^5 N/sq m (1 million lb/sq in) pressure and temperatures of about 3,000°C (5,400°F), have been made since 1955, but are fit only for industrial applications. Diamonds are weighed in carats (0.2 gm) and in points (1/100 carat). The largest diamond mines are in South Africa. Hardness 10, sg 3.5. See also pp 260, 893.

Diamond Challenge Sculls, the blue ribbon of singles sculling. It has been held annually at the Henley Royal Regatta since 1844, at which time it was of domestic interest only. Since the 1890s it has been dominated by non-British oarsmen. From 1957, the Australian Stuart MacKenzie won the event six consecutive times.

Diamond Lil (1928), theatrical comedy written by and starring Mae West, set in the Californian Gold Rush.

Diana, in Roman mythology, the virgin huntress and patroness of domestic animals. Initially a woodland goddess, she was rapidly identified with the Greek ARTEMIS, the moon goddess and sister of APOLLO. With strong associations as a fertility deity she was invoked by women to aid conception and childbirth. The lower classes and slaves regarded her as their protector.

Diana of the Ephesians, goddess worshipped at Ephesus, Asia Minor. She was originally derived from a Greek earth goddess but later became merged with the Roman goddess Diana. Her temple was one of the wonders of the ancient world. See also p 1904.

Diane de Poitiers, Duchesse de Valentinois (1499-1566), mistress of HENRY II of France. Although she was much older than the king, his love for her served to overshadow the queen, CATHERINE DE' MEDICI.

Dianthus. See CARNATION.

Diapason, in Greek and medieval musical theory meaning 'through all the notes', ie the octave. The diapason stop on an ORGAN is the main foundation stop which produces the most characteristic tone of the instrument.

Diaphragm, sheet of muscle that separates the abdominal cavity from the cavity of the chest. During breathing it relaxes and allows the chest to subside, when breathing in it contracts and bears down, causing the chest cavity to enlarge. See also pp 158-159.

Diaphragm. See BIRTH CONTROL.

Diarrhoea. See DYARRAHEA.

Diarrhoea, the frequent elimination of loose, watery stools, often accompanied by cramps and stomach pains. Diarrhoea is a symptom, caused by a functional disorder, fatigue, food allergy or lack of vitamins, by a generalized bodily disorder such as kidney disturbance or overactivity of the thyroid gland, or inflammation or infection of the lower bowel caused by bacteria, viruses or other agents. A mild short attack of diarrhoea, serious in children but not in adults, can be treated by a bland diet, more severe and longer-lasting attacks and those accompanied by fever or other signs should be treated by a doctor. See also pp 1081, 1083.

Diary, literary record of events and observations kept by an individual at the time of their occurrence, either for his private satisfaction or self-consciously for later publication. The earliest known diary of real worth is CAESAR's account of the Gallic wars. Diaries are of interest either for the information which they contain for historians or for the beauty of their prose. Of the former C.C. Greville's diaries of the reign of Queen VICTORIA are unsurpassed. Of the latter there is none more popular than Francis KILVERT's diary

of a country parson. When the two qualities are combined, as in the diaries of Samuel PEPYS and those of Jules and Edmund GONCOURT, the result is a literary masterpiece. See also LETTERS, MEMOIRS.

Diary of Anne Frank, record of the two years (1942-44) spent by Anne Frank (1929-45) and her family in a sealed-off room in Amsterdam to escape Nazi persecution. It was published in 1947. It is a poignant account of Jewish suffering.

Diary of a Nobody, book by George and Weedie Grossmith, originally serialized in *Punch*. The diary is Mr Pooter's, a lower-middle-class clerk, and its laconic comic style pokes fun at his pathetic attempts to remain dignified through the ups and downs of suburban life.

Diaspora, Jewish communities outside PALESTINE. The dispersion of the Jews began when large numbers of them were sent into exile as a result of the Assyrian and Babylonian conquests (722 and 597 BC). Although CYRUS THE GREAT allowed Jews to return from Babylonia in 538 BC some of the exiles remained behind. In the 3rd century BC significant Jewish communities existed in Alexandria and Antioch. The destruction of Jerusalem in AD 70 by the Romans accelerated the process, and Diaspora Jews spread to all parts of the world, far outnumbering those within Palestine. Their religious and cultural centre, however, remained Palestine, where they finally succeeded in establishing the state of ISRAEL as a Jewish national home in 1948.

Diastole, the part of the cardiac cycle during which the HEART muscle is relaxed and the heart is filling with blood. See also pp 152-153.

Diastrophism, large-scale changes in the earth's crust. It includes INTUSSION and METAMORPHISM and the large movements that produce mountain ranges, ocean basins and continents. In the past diastrophism was sometimes used to describe a localized event, but the term now refers to large-scale phenomena on a global scale.

Diathermy, medical treatment which uses heat generated by high-frequency (short wave) alternating electric current. The heat stimulates local blood circulation and tissue repair. It is used to treat back pain, to aid muscle and tendon repair, and is often used in eye and neurosurgery.

Diatom, any of a group of tiny microscopic single-celled algae (class Bacillariophyceae) characterized by a shell-like cell wall made of silica. The shell (frustule) consists of two halves that fit together. Diatom shells occur in a wide variety of highly symmetrical shapes. They live in nearly every environment that has water and is exposed to sunlight, including virtually all bodies of salt and fresh water and even soil, damp rocks and tree bark. The microscopic shells of long-dead diatoms accumulate in, for example, diatomite (kieselguhr), a mineral with abrasive absorbent and refractory uses.

Diatomaceous earth, sediment formed from the skeletons of diatoms, microscopic marine plants. The deposits are almost pure silica and often form large thick beds on the ocean floor.

Diatonic, musical scale which uses seven of the 12 notes of the OCTAVE, the notes moving in the TONIC SOL-FA progression. It has been the basic scale of Western POLYPHONIC music since the 16th century. See also CHROMATIC, MUSICAL NOTATION.

Diaz, Bartholomew (c 1450-1500), also known as Bartolomeu Dias, Portuguese navigator, the first European to round the CAPE OF GOOD HOPE. In 1487, under the commission of John II of Portugal, Diaz sailed three ships around the African continent, thereby opening the route to India. He was part of the expedition of 1500 of Pedro Alvares Cabral that discovered Brazil, but he was drowned on the voyage. See also pp 1068-1069.

Diaz de la Peña, Narcisse-Virgile (1808-76), French landscape painter, a member of the BARBIZON SCHOOL. He also painted mythological scenes, a favourite subject being a nude Venus, with Cupid and nymphs.

Diaz del Castillo, Bernal (c 1492-c 1581), soldier who served with CORTÉS

Diaghilev, his production of *The Rite of Spring* caused a riot when it opened in 1913.

Dialysis, a kidney machine removes waste artificially from the patient's blood.

Diana is usually portrayed as a huntress with bow and arrow and hunting dogs.

Diatoms are tiny algae which form an important link in the food cycle of aquatic creatures.

Diazepam

Charles Dickens is honoured as a supreme novelist and biting critic of Victorian society.

Emily Dickinson received her inspiration from the Bible and the natural world.

Denis Diderot devoted much of his life's work to compiling the French encyclopaedia.

Dien-Bien-Phu, the bitter struggle that ended French presence in Indochina.

known for his *The True History of the Conquest of New Spain*, written 30 years after the event but not published until 1632. Dürer put less emphasis on the role of Cortes in the conquest of Mexico than had earlier writers.

Diazepam, tranquilizer in widespread use, as Valium. It is a benzodiazepine as is Librium. It acts as a skeletal muscle relaxant and has the side effects of drowsiness and fatigue, and possibly ataxia (inability to co-ordinate movements).

Dibdin, Charles (1745-1814), British composer and singer. He wrote many songs (eg *Tom Bowling*) that gained wide popularity. He also composed stage entertainments containing songs that had considerable public appeal.

Dibdin, Thomas Frognall (1776-1847), British bibliographer, whose books included *Bibliomania* (1819), *Library Companion* (1824) and *Bibliographical Antiquarian and Picturesque Tour in the Northern Counties of England and Scotland* (1838). He catalogued what became the John Rylands Library, Manchester.

Dibusi, Klaus (1947-), Austrian-born Italian diver who, after winning a silver medal in 1964, dominated the highboard at the next three Olympic Games (1968, 1972, 1976), the first such gold medal hat-trick in diving history. Also a silver medalist at springboard (1968), he won the world and European titles.

Dice, small cubes of wood, ivory, bone or stone used in board games or in gambling. A cube has its six faces numbered by dots from 1 to 6, so placed that the numbers on opposite faces add to 7. The British learned to gamble with dice from their Roman conquerors. Such games continued to be popular in the Middle Ages, although frowned upon by the Church.

Dichloromethane, colourless liquid which is used as a solvent for fat, grease, etc., as a cleaning fluid and as an inhalation anaesthetic. Its formula is CH_2Cl_2 with a molecular weight of 84.94. It is prepared by chlorinating methane. Properties: b.p. 34.75°C (103.5°F), m.p. -95°C (-129°F) and s.g. 1.34 at 15°C . See also p.791.

Dichromatic vision, common form of colour blindness.

Dickens, Charles (1812-70), British novelist. He began his writing career as a parliamentary reporter for the *Morning Chronicle*. His first great success was the series of satirical pieces which appeared in the press after 1833, collected in 1836 as *Sketches by Boz*. They were followed by the sporting sketches collected as *The Posthumous Papers of the Pickwick Club* (1836-37). His first novel was *Oliver Twist* (1838), his other novels include *Dombey and Son* (1848), *Turpin and Son* (1848), *David Copperfield* (1850), *Bleak House* (1853) and *Great Expectations* (1861). See also index, vol. 1, pp. 1574-1575.

Dickens, Monica (1915-), British writer, resident in the USA, the great-granddaughter of Charles Dickens. She wrote amusing autobiographies based on her life as a cook, in *One Pair of Hands* (1939) and as a nurse, in *One Pair of Feet* (1942) and *Time to Make the Tea* (1951). Her novels include *Mariana* (1940) and *The Heart of London* (1961).

Dickinson, Emily Elizabeth (1830-86), US poet. Although she lived an isolated life to the age of 23, she then became a total recluse, writing more than 1000 short mystical poems in secrecy. Considered among the finest writers in the USA, these explored rich imagery to explore a world of emotion and beauty in simple things. See also p.1772.

Dickinson, Goldsworthy Lowes (1862-1932), British writer and political theorist. He wrote *The Greek Way of Life* (1896) and was involved in the creation of the League of Nations. His *The International Anarchy* 1904-14 was published in 1926.

Dick-Read, Grantham (1890-1959), British obstetrician whose theories revolutionized obstetrics. In his book *Natural Childbirth* (1933) he suggested that anaesthetics should not be relied upon in childbirth which need not be unduly painful if the mother follows a course of prenatal relaxation exercises. The book caused

much controversy. Between 1949 and 1953 he practised in South Africa.

Dicotyledons, larger of the two subclasses of flowering plants (ANGIOSPERMS) characterized by two seed leaves (cotyledons) in the seed embryo. The leaves of dicotyledons are usually net-veined and their flower parts are in fours or fives. Most common garden plants are dicotyledons. The smaller subclass contains MONOCOTYLEDONS. See also pp.370-377.

Dicoumarin, or dicoumarol, anticoagulant drug used to reduce or retard blood clots. See also p.1067.

Dictator, ruler of a state whose power is not limited by law or constitution. The word is Roman in origin, when it meant an extraordinary magistrate in the empire. He was appointed to quell civil disturbances or to meet a military crisis before which the normal civil authorities felt themselves incompetent. His term of appointment was limited, originally, to only six months. The modern dictator shares with his Roman ancestor the ability to control the nation's armed forces but also extends his authority over every aspect of the national life in order to exercise a totalitarian control.

Dictatorship, absolute rule by an individual or group without the consent of the governed. In many modern dictatorships all power resides in the dictator, with representative assemblies either abolished or existing as mere formalities. Personal freedom is severely limited, censorship is generally enforced, education is tightly controlled, and legal restrictions on governmental authority are abolished. See also pp.1854, 1855.

Dictatorship of the proletariat, stage that Karl Marx felt must precede the introduction of pure Communism, during which all remaining capitalist thoughts and attitudes would be weeded out. In this stage the state owns the means of production and directs the production of goods and services. The few capitalist procedures, eg wage payment based on productivity that survive in this stage are limited.

Dictionary, book that lists, generally in alphabetical order, the meanings of words. Some enable words in one language to be translated into words of equivalent meaning in another language. A dictionary may be general - including all the commonly used words in a language - or specialized, containing words used in a particular discipline such as science or music. See also p.622-623.

Dictionary of National Biography, a biographical encyclopaedia of important British historical figures. Work on it was started in 1882 and its editor until 1891 was Sir Leslie Stephen, who contributed many articles to the first 26 volumes. It was completed in 1961 and reissued in 22 volumes in 1968-69; supplements have been published every ten years.

Dictum, in law, both the judgment in a case settled by arbitration and the saying or opinion of a magistrate uttered during the hearing of a case. A dictum not immediately relevant to the case before the magistrate is called an *obiter dictum*.

Dietsynptera, insect order including mantids and cockroaches. It is comprised of two sub-orders. Blattaria (cockroaches) with front legs adapted for running and Mantodea (mantids) with front legs adapted for seizing prey. Some species may attain a length of 10cm (4in). See also pp.36-37, 40, 310.

Diderot, Denis (1713-84), French philosopher and man of letters. He was imprisoned in 1749 for irreligious writings and later assumed direction of the *French Encyclopedia* (1751-72). *On the Interpretation of Nature* (1754) and *D'Alembert's Dream* (1760) reveal his scientific materialism, and *Jacques the Fatalist* (1796) and *Rameau's Nephew* illustrate his determinism. He also made noteworthy contributions to art and literary criticism. See also pp.1466-1477.

Didjeridu, musical instrument of Australian aborigines. It is a hollow piece of wood of about 1.5m (5ft) which is blown into. **Dido**, in Greek and Roman legend the founder of Carthage. Carthage prospered and Dido's hand was sought by the King of

Libya. To escape him she stabbed herself and died on a funeral pyre. Virgil made Dido a contemporary of Aeneas, and attributed her suicide to Aeneas's decision to abandon her at Jupiter's command.

Dido and Aeneas (1869), only opera by Henry Purcell, with libretto by Nahum Tate, based on the story in Virgil's *Aeneid*. It is considered an early masterpiece of English opera, notable for its dramatic characterization and beautiful melodies. See also pp.1452, 1453.

Didot, Firmin (1764-1836), most eminent member of a distinguished French family firm of printers, founded in 1713. He developed the first successful stereotype process (in 1795), his father François-Ambroise Didot (1730-1804) invented a system, which is still in use for establishing type sizes.

Didrikson, Mildred ("Babe") (1914-51), US athlete. She won two gold medals in track and field events in the 1932 Olympic Games, and after 1934 turned to golf. She won the British amateur title in 1947 and the US Women's Open three times.

Diederichs, Nicolaas (1903-78), South African economist and politician. He represented the Lusberg constituency in 1958-74, and has been Minister of Economic Affairs, Mines and Finance.

Diefenbaker, John George (1895-1979), Canadian politician. A homesteader and lawyer in Saskatchewan he was elected to the House of Commons in 1940. He served as the Progressive-Conservative Prime Minister (1955-63) and had a reputation for his oratory and skill in cabinet affairs. He was opposition leader from 1963-67.

Diego-Suarez (Antsirane), town in Madagascar on Diego-Suarez Bay, location of a French naval base. It was discovered in 1513 by Diego Soares. Export of coffee, maize and cattle. Pop. (1975 est.) 241,200.

Dieldrin, brown, solid chlorinated naphthalene derivative ($\text{C}_{12}\text{H}_6\text{Cl}_6$) which is used as a contact insecticide and prepared by the oxidation of aldrin with peracids. It is insoluble in water and is prepared as an emulsion or powder.

Dielectric, electrical insulator, especially one that separates two conductors, as in a capacitor. The permittivity of a dielectric is a measure of the extent to which it can resist the flow of charge. The dielectric strength (usually measured in V/mm) is the maximum field in which the dielectric can withstand without breaking down, becoming ionized. For many low-power applications, such as tuning capacitors in radios, air is used as the dielectric. See also p.886.

Diels, Otto Paul Hermann (1876-1954), German chemist. He discovered (1906) the suboxide of carbon (C_3O_2), studied the structure and synthesis of cantharidin (a poison contained in the body fluid of blister beetles) and did research on steroids (solid, higher alcohols such as cholesterol). He was professor of chemistry (1916-48) at Kiel University and jointly awarded the Nobel Prize for chemistry (1950) with Kurt Alder with whom he discovered (1928) the synthesis of dienes (organic compounds containing two double bonds) known as the Diels-Alder reaction.

Diem, Ngo Dinh (1901-63), Prime Minister of South Vietnam (1954-63). A nationalist opposed to both the Communists and the French, he was appointed premier of South Vietnam in 1954. At first he received strong US support, but corruption and setbacks in the war against the Communists led to growing discontent with his government. With covert US support army generals staged a coup in 1963 in which Diem was murdered.

Diemen, Anthony (Anton) van (1593-1645), Dutch colonial administrator, governor general in the East Indies (1636-45). He sponsored JASSMAN'S voyages of exploration to many islands, after him the island (now Timor) that he discovered in 1642. See also p.1602.

Dien-Bien-Phu, site of a decisive battle fought in 1954, in which the Viet Minh defeated French forces and secured the independence of South East Asia from

French rule. The French established a military stronghold at Dien-Bien-Phu in 1953, hoping to lure the Viet Minh into battle. In a masterpiece of logistics, the Vietnamese (under General GIAP) surrounded the French forces and used heavy artillery to batter them into submission in a siege lasting 55 days.

Dieppe, town in Normandy, N France, at the mouth of the River Arques on the English Channel. Of strategic importance in the wars between England and France it was raided by Allied troops, mainly Canadians, in 1942. It has a 13th-century church and a 15th-century chateau. A commercial centre, it has fishing and tourist industries. Pop. 30,000.

Diesel, Rudolf (1858-1913), German inventor who developed, patented and built the diesel internal combustion engine (named after him). He established a factory in Augsburg, which made DIESEL ENGINES. See also ENGINE, RAILWAYS. DIESEL FUPL pp 420-421, 427, 507.

Diesel-electric railway. See RAILWAYS. **Diesel engine,** internal combustion engine in which air for combustion is first compressed so that its temperature increases sufficiently to ignite fuel injected directly into the cylinders. For this reason it is also called a compression-ignition engine. The fuel and air mixture burns rapidly and expands to drive the pistons. Diesel engines usually have an electrical circuit for heating the cylinders during starting, once the engine has fired this circuit may be switched off. The engine is stopped by cutting off the fuel supply. See also pp 420-426, 427, 427.

Diesel fuel, or diesel oil, petroleum product heavier than paraffin but lighter than heating oil, used to power diesel engines in industrial and agricultural vehicles such as lorries, buses, tractors, locomotives and ships. There are many grades of diesel fuels which, unlike petrol, burn unevenly. They are graded against standardized mixtures of hexadecane and alpha methyl naphthalene to establish a cetane number. A cetane number of 30 to 45 is desirable. See also pp 426, 427.

Diet, food and drink consumed by a person or animal. The human diet falls into main groups of nutrients necessary for the maintenance of health: PROTEINS, CARBOHYDRATES, FATS, VITAMINS and MINERALS. An adult requires daily about one gramme of protein for each kilogramme of body weight. Beans, peas, fish, eggs, milk and meat are important protein sources. The body breaks these down into amino acids from which it synthesizes its own protein. Carbohydrates (starches and sugars), stored in the body as glycogen and fat are the chief sources of energy and are found in cereals, root vegetables and sugars. Carbohydrates make up the bulk of most diets. Fats in the diet such as butter and vegetable oils, are a concentrated source of energy and aid in the absorption of the fat-soluble vitamins (vitamins A, D, E and K). Vitamins function as coenzymes in important body processes. Minerals such as calcium, potassium, sodium and iron are essential.

Diet, legislative assembly or administrative council, principally important in German history. CHARLES IV established the Diet of the Holy Roman Empire by his Golden Bull of 1356. The diet comprised three estates: the seven electors (of the Holy Roman Emperor), other lay and church nobility, and representatives of the imperial cities - each of which met separately. Approval by each estate and the consent of the emperor were required on all matters. The most important of the diet's infrequent assemblies were at Nuremberg (1467), Worms (1521) and Augsburg (1548). After the Treaty of Westphalia (1648) the diet lost much of its legislative power and importance. See also pp 1402.

Dietary laws, instructions, either secular or religious, which stipulate what foods may or may not be consumed under certain conditions. Such laws are one of the many ways in which a social group maintains its identity. Many Hindus, for example, practise vegetarianism, and Muslims undertake ritual fasting. In

Judaism, such laws are called *Kashrut*. They prohibit certain foods entirely and indicate that others must be prepared in a certain way. The term kosher signifies acceptable foods.

Dietetics, specialized study of the human diet and nutrition. A dietician plans what people should eat when they are ill, making sure they get what they need to make them well.

Diethylstilbestrol (DES), non-steroid, synthetic oestrogen (female sex hormone). It is used as a drug in cattle feeds as a growth stimulant, and has been tried experimentally on women in a "morning after" contraceptive pill and (in the 1950s) as an agent to prevent miscarriage. The drug was, however, found to have cancer-causing potential and its use is now strictly limited. Some girls born to women who took DES during pregnancy developed a rare and often fatal form of vaginal cancer. **Dietrich, Marlene** (1904-), film-star and cabaret singer, b. Maria Magdalena von Losch, in Germany. Her glamorous image evolved in films directed by Josef von Sternberg, eg *The Blue Angel* (1930) and *Blonde Venus* (1932). Other notable films included *Destiny Rides Again* (1939) and *Rancho Notorious* (1956). See also pp 1752-1753, 1753.

Dietz, Robert Sinclair (1914-), US geophysicist. He proposed a theory of sea-floor spreading in 1961, which has since been confirmed. He is also known for his studies of the Moon's physical features and of meteorite impact on rocks.

Differential, small change occurring in the value of a mathematical expression due to a small change in a variable. If $f(x)$ is a function of x , the differential of the function, written df , is given by $f'(x)dx$, where $f'(x)$ is the derivative of $f(x)$. See also pp 792.

Differential, in a motor-car, a set of circular gears that connect the half-shafts and the propeller shaft. It allows for the difference in the speeds of rotation of the drive-wheels while cornering, and also transmits power from the engine to the wheels. See also pp 449, 497.

Differential association, social theory of Edwin H. Sutherland (1883-1950) which states that criminal behaviour is learned in much the same way as other kinds of behaviour: exposure to criminal attitudes. Individuals learn to break the law. See also pp 1772-1773.

Differential calculus. See CALCULUS. **Differential equation,** equation containing derivatives, eg $dN/dt = A/N$, where N is the number of people in a population, t the time, A a constant and dN/dt the derivative of population with respect to time. This differential is a simplified equation for population growth. Differential equations are sometimes solved by integration. See also CALCULUS, PARTIAL DIFFERENTIAL EQUATION.

Differential geometry, type of GEOMETRY which uses CALCULUS notation to analyse geometric concepts such as curves and surfaces. For example, a curve such as the path of a projectile, or the orbit of a spaceship, can be described mathematically in terms of three mutually perpendicular vectors which vary independently along the length of the curve.

Diffraction, spreading of a wave such as a light beam or water on passing through a narrow opening or by the edge of an obstacle. It is evidence for the wave nature of light and is explained by INTERFERENCE. Diffraction is the reason that the shadow of an object merges from dark through grey to light. The interference pattern produced by Fresnel diffraction can be viewed on a screen placed before the light source, and the diffracting object. Fraunhofer diffraction uses a parallel beam of light which, after diffraction, is focused by a lens onto a screen. Diffraction is used to provide information on the wavelength of light and the structure of crystals. All waves, including sound and radio waves and X-rays are diffracted at obstacles. Diffraction accounts, for example, for the audibility of sound around corners. See also pp 832, 854, 860.

Diffraction grating, substrate consisting of parallel equidistant lines (as many as

1,500 per mm) for producing spectra by diffraction of light. Transmission gratings are ruled on glass and are transparent; reflection gratings are opaque - they are ruled on metal films. Such gratings are much used in SPECTROSCOPY. See also DIFFRACTION pp 854.

Diffusion, spontaneous flow of a substance in a mixture from regions of high concentration to regions of low concentration, due to the random motion of the individual atoms or molecules. Diffusion apparently ceases when there is no longer a concentration gradient, there is no net migration between regions. Its rate increases with temperature, since average molecular speed also increases with temperature. The process occurs quickly in gases, more slowly in solids. See also pp 836.

Diffusionism, in anthropology, theory of the spread of a culture or its artefacts from one culture to another. This spread may be achieved by migration, political control, trade or religious contact. The elements of a culture that are diffused will vary according to the manner in which contact between the cultures is achieved. The diffusion of techniques or ideas is often taken as evidence for contact between cultures where other evidence is lacking.

Digby, Sir Kenelm (1603-65), English diplomat, scientist and writer. He is said to have realized in 1661 that oxygen is necessary for plant life, but many of his other "discoveries" are no longer highly regarded. He was one of the first members of the ROYAL SOCIETY and a friend of DESCARTES and Sir Thomas BROWNE.

Digenis Akrites, 10th-century epic poem perhaps the most well-known literary production of the Byzantine Empire. It concerns the exploits of the hero Basil Digenis Akrites, who defended the empire's eastern frontiers.

Digestion, natural process of breaking down food into simpler chemical substances that can be absorbed by an organism. It provides nutrients and energy to keep an organism alive. Digestion occurs mainly by means of chemical agents called ENZYMES. See also pp 160-161.

Digestive system, group of organs of the body concerned with the digestion of foodstuffs, also known as the alimentary system. It begins with the mouth cavity which includes the teeth, tongue and salivary glands and continues into the pharynx, which connects with the oesophagus (gullet) that carries food into the stomach. The stomach leads to the small intestine, which then opens into the large intestine, or colon. After food is swallowed it is pushed through about 9m (30ft) of digestive tract by rhythmic muscle contractions and relaxations known as peristalsis. On its journey the food is transformed into a liquid that can be absorbed into the bloodstream and carried to the tissues of the body. Carbohydrates are changed to sugars (glucose); proteins to amino acids, and fats to fatty acids and glycerol. The indigestible parts are eventually eliminated from the body (as faeces) through the rectum, at the end of the colon. See also pp 160-161.

Diggers, millenarian social and religious sect in England in 1649-50, an extreme group of the LEVELLERS, who emerged in the NEW MODEL ARMY. They formed an egalitarian agrarian community at St George's Hill, Surrey, in 1649. It was destroyed the following year by local farmers. The main Digger theorist was Gerrard Winstanley, who proposed an immediate communalization of property to establish social equality in his book *Law of Freedom* (1652).

Diggers, name given to the gold prospectors from Europe and North America who went to Australia after the discovery of gold there in 1852. It was also a name given to New Zealand and Australian troops in WWI.

Digit. See NUMBERS.

Digit, significant. See SIGNIFICANT DIGIT.

Digital clock. See CLOCK.

Digital computer. See COMPUTER.

Digitalis, drug obtained from the leaves of the FOXGLOVE (*Digitalis purpurea*), used

Dieppe, the French Channel port, was the scene of a dramatic raid during World War II.

Diesel engines burn a less-refined fuel than and use no spark plugs to ignite the gas.

Marlene Dietrich in a scene from her famous German film *The Blue Angel*, made in 1930.

Diffraction rings, a pattern caused by interference as light travels through a tiny hole.

Digital signals

Dik-dik, the miniature African antelope which gets its name from its curious call

Isak Dinesen was the pseudonym of the Danish authoress Baroness Blixen-Finecke

Dinghy comes from the Hind. word *dingi*; the small boat used along the Indian coast

Dinosaur, *Diplodocus* was the longest land animal that ever lived, growing to 25m long

to treat heart disease. It increases contractions of the heart muscle and slows the cardiac rate. See also pp 1062, 1066

Digital signals, signals representing zeros and ones of the BINARY SYSTEM, transmitted by radio and translated by computer into dots of varying shades to produce pictures similar to half-tone newspaper photographs. See also p 636

Dik-dik, tiny African antelope with a soft grey to red coat and a tuft of hair on its forehead, its name is derived from its call. It may live singly or as part of a family or large group. The males have horns height 41cm (16in) at the shoulder. Family Bovidae, genus *Madoqua*. See also p 299

Dike, See DYKE

Dill, aromatic annual herb native to Europe and cultivated widely. Its small oval seeds and feathery leaves are used in cooking to impart a flavour similar to aniseed or caraway. Family Umbelliferae, species *Anethum graveolens*. See also pp 706, 708

Dillard, Harrison (1923-), American high hurdler who, as world record-holder, failed to qualify for his event in the 1948 vs Olympic team, entered the 100m instead, and won two gold medals (100m, 4 by 100m). In 1952 he won his own event, 110m hurdles, and another gold medal in the relay.

Dillon, John (1851-1927), Irish politician. He was a supporter of PARNELL and was in 1880-83 and 1885-1918. He was chairman of the Irish Nationalist Federation (1896) and became leader of the Irish Nationalist Party in 1918, just before it was eclipsed by SINN FEIN.

Dilthey, Wilhelm (1833-1911), German philosopher and one of the first to postulate a separation of the natural sciences and the structures of experience. As a result, he formulated a distinct methodology for the social sciences which emphasized the individual in the context of his past and present environment. Dilthey also developed the treatment of history from a cultural viewpoint which has been influential in the study of literature.

DiMaggio, Joseph Paul ("Joe"), (1914-), US baseball player. A hitter and centre-fielder for the New York Yankees (1936-42, 1946-51), DiMaggio scored a hit in a record 56 consecutive games in 1941 and had a lifetime batting average of 0.325. He was elected to the Baseball Hall of Fame in 1955.

Dimbleby, Richard (1913-65), British broadcaster. He was the BBC's first war correspondent and later presented current affairs TV programmes. He possessed great dignity and authority and was the BBC's radio and TV commentator on important state occasions.

Dimensions, in mathematics, properties called length, area and volume. A figure having length only is said to be one-dimensional, a figure having area but not volume, two-dimensional, and a figure having volume, three-dimensional. The number of dimensions of a figure is the same as the number of co-ordinates that are needed to determine the points of the figure. For example, in a plane which is two dimensional, two co-ordinates are required (x,y). In physics, the fundamental dimensions are mass, length and time. See also pp 782-783

Dimetrodon, extinct predatory reptile once found in N USA during the early and middle Permian period (225-280 million years ago). Its large dorsal "sail", formed by elongated vertebrae, may have served as a device for regulating the animal's body temperature. Length 3.5m (11ft). See also pp 280-281, 282-283

Diminishing returns, law of (law of increasing cost). In economics, states that as more and more of a variable input (e.g. labour) is added to the production process, which has other factors held constant, the additional total output per unit begins to decline after some point. When the first unit of labour (or any other input) produces ten units of output, the second unit of labour may produce only eight units of output. The third unit may produce only seven units, etc. While the total output tends to increase, the marginal output (addition to total output)

declines after some point. See also pp 1862, 1862

Dimetrov, See PERNIK

Dinaric Alps (Dinara Planina), SE extension of the Eastern Alps in Yugoslavia, along the E coast of the Adriatic Sea. They extend from Istria to Albania and include peaks over 2,400m (7,900ft). Length 640km (400 miles).

Dinaric subrace, hypothetical subdivision of the CAUCASIAN race, characterized by medium to tall stature, swarthy skin, usually black hair and eyes, a large convex nose, and flattened occipital regions of the skull. While not regarded as a distinct racial entity by most anthropologists, this type is seen as a variant of the Alpine race.

Dine, Jim (1935-), US painter, known for attaching objects, such as tools or shoes, to a painted canvas. His works include *Name Painting* (1935-63), painted 1968-69, which has the names of the people he knew during those years charcoalled across it.

Dinesen, Isak (1885-1962), pseudonym of Karen, Baroness Blixen-Finecke, Danish writer. Fascinated by Africa, she described her life on a coffee plantation in Kenya in *Out of Africa* (1937). Her collections of short stories include *Seven Gothic Tales* (1934), *Winter's Tales* (1942) and *Shadows on the Grass* (1960).

Dinghy, general term for any of a variety of small rowboats or sailboats originally used along the coasts of India. It is now also used for an auxiliary boat on yachts.

Dingle, the northernmost peninsula in County Kerry, SW Ireland. Slieve Mish is the chief mountain range. The town of Dingle, once a walled stronghold, is now a fishing centre. Pop 1,683.

Dingo, yellowish-brown wild dog found in Australia. It is thought to be a descendant of early domestic dogs that were introduced by Aborigines. It feeds mainly on rabbits and other small mammals, but may also attack sheep. Family Canidae, species *Canis dingo*. Pop 302,303.

Dinosaur, any of the large number of REPTILES that lived during the Mesozoic era between 225 and 65 million years ago. They first appeared during the Triassic period, survived the Jurassic and disappeared inexplicably at the end of the Cretaceous. There were two orders. The Saurischia ("lizard hips") included the bipedal carnivores and the giant herbivores, the Ornithischia ("bird hips") were smaller herbivores. Many theories have been advanced to account for the disappearance of the dinosaurs, the "terrible lizards". It is possible that, as the climate changed, swamps drained and vegetation altered, they were incapable of the sophisticated and swift adaptation required by their environments. *Diplodocus*, at 25m (82ft) long, was the longest land animal that has ever lived. See also pp 184-185, 280-283

d'Inzeo, name of two Italian brothers, Piero (1923-) and Raimondo (1925-), who between them won most major honours in the sport of showjumping. Piero, European champion in 1959, followed an Olympic bronze medal in 1956 with a silver in 1960, Raimondo, world champion in 1956 and 1960, won the 1956 silver and the 1960 gold. With the Italian team, they won a silver (1956) and three bronzes (1960, 1964, 1972). Piero won the coveted King George V Gold Cup in 1957, 1961 and 1962.

Diocese, administrative area over which a bishop is responsible. Larger dioceses may have two or more deans to help in administration, each responsible for several parishes.

Diocletian, Gaius Aurelius Valerius (245-313), Roman emperor (r 284-305). He was of humble birth and was proclaimed emperor by the army. He reorganized the structure of the empire to resist the barbarian threat, and ruled jointly with Maximian, Constantius I and Galerius. In 303 he ordered the last great persecution of the Christians. He retired in 305.

Diode, electronic component with two electrodes, used mainly as a rectifier. The semiconductor diode, which has largely replaced the electron-tube type, usually

has a single p-n junction. It allows current to flow freely in only one direction (positive or negative), but only a small current flows in the reverse voltage direction. A Zener diode blocks current flow until a critical voltage is reached, when it breaks down and conducts. See also pp 882-884

Diocotyledon plant, plant bearing either female, pistillate flowers (with carpels only) or male, staminate flowers (with stamens only), but not both.

Diogenes (fl 4th century BC), Greek cynic philosopher. As a youth he went to Athens and studied under Antisthenes. Diogenes' teachings founded the Cynic school of philosophy. He believed that the virtuous and happy life could be achieved only by rejecting all possible restrictions on personal freedom - material possessions, emotions and conventional values - and attaining self-sufficiency. By reducing personal needs to the minimum one can have mastery over the one real thing - one's soul.

Diogenes of Apollonia (5th century BC), Greek natural philosopher. He studied and taught in Athens during a transitional period of Greek thought, and tried to combine ancient ideas with the new biological observations. Like ANAXAGORAS, he believed that all things in the world are modifications of air, and further that this common harmony of air was due to an all-encompassing intelligence.

Diomed Islands, two islands in the Bering Strait. Big Diomed Island (Ratmanova) is a possession of the USSR and Little Diomed Island belongs to the USA. Between the two islands lies the USSR-US boundary and the INTERNATIONAL DATE LINE. The islands were discovered on 16 Aug. 1728 (St Diomed's Day) by Vitus Bering.

Diomedes, the name of two figures in Greek mythology. Diomedes, son of Tydeus and hero of ARKAS, was famous for his deeds at Troy where he wounded Aphrodite and Ares and captured the city's sacred image, the PALLADIUM. Diomedes, King of the Bistones, was thrown by HERCULES to his own man-eating mares. **Dione**, one of the ten known satellites of Saturn, the fifth of the ten, between Tethys and Rhea. Dione's period is 2 days, 17 hours and 41 minutes and its mean distance from Saturn is 377,000km (234,000 miles). It was discovered by Giovanni Cassini in 1684. See also p 965

Dionne, Narcisse Eutrope (1848-1917), Canadian historian and bibliographer who wrote a history of early Canada and compiled a definitive bibliography of Quebec, *Inventory chronologique* (1904-09). He also published historical studies of Jacques CARTIER and Samuel de CHAMPLAIN.

Dionysia, Greek religious festivals of Dionysus, the god of wine, corresponding but not equivalent to the Roman Bacchanalia. The great, or city, Dionysia were the most abandoned Lesser festivals were the Lenaia, the Anthesteria and the little or rustic, Dionysia.

Dionysius, the Areopagite (fl 1st century AD), first bishop of Athens, converted by St Paul. His name was used by a Palestinian writer of c 500 now known as Pseudo-Dionysius, whose NEO-PLATONIC mystical works had a great influence on the thinking of various scholars in medieval times.

Dionysius Exiguus (c 500-c 550), Roman monk and theologian, who worked out the method of calculating the date of Easter that was adopted by the Roman Church and is still in use. He compiled a collection of canon law that was widely used in the early Middle Ages.

Diophantus, See BACCHUS

Diophantus (AD 250), Greek mathematician who pioneered the solution of a type of indeterminate algebraic equation. The work in this area is known as Diophantine analysis. Of the 13 books with which Diophantus is credited, only six have survived. The standard edition in Greek was edited by Paul Tannery (2 vols., 1893-95).

Diopire, optical unit of magnifying power of a lens system. The power of a lens is equal to one metre divided by the focal length in metres. An algebraic sign (+

Disc cam

or) indicates whether the system is convergent or divergent - for example, a diverging lens of focal length 1.3 metre has a power of -3 dioptres. The power of a combination of lenses is the sum of their individual powers.

Dior, Christian (1905-57), French fashion designer. In the spring of 1947 he launched the new look which swept the fashion world. His was considered the leading fashion design house between 1945 and the mid-1960s.

Diorite, deep-seated igneous rock similar to granite in its texture but made up mainly of plagioclase feldspar and hornblende, biotite or augite. It is usually dark grey. See also pp 208-209, 209.

Dioscorides Pedanius (c AD 40-c 90), Greek botanist, physician and pharmacologist. He wrote *De materia medica*, the leading classical text on drugs and their use. It included detailed descriptions of plants and information on the specific use, dosage and method of administration of drugs made from them.

Diouf, Abdou (1935-). Prime Minister of Senegal since 1970. He was educated at St Louis, Dakar and Paris, and became a member of the Senegal Progressive Union in 1961. He was Minister of Planning and Industry (1968-70) and became a member of the National Assembly in 1973.

Dip, in geology, acute angle between the bedding plane of a rock strata and the horizontal surface of the earth. It is measured in degrees with a clinometer. See also p 267.

Dip, (or inclination) magnetic, angle between the direction of the earth's magnetic field and the horizontal. A freely suspended magnetic needle dips, with its north pole pointing down, at an angle of 71.5° to the horizontal in London. See also p 196.

Dip poles, imaginary points on the earth's surface where the direction of the earth's magnetic field is vertical - downwards at the north pole and upwards at the south pole - and are themselves offset in respect to the geomagnetic poles, each by a different amount so that the S dip pole is not exactly opposite the N dip pole. See also pp 196, 196-197.

Diphda or Beta Ceti, brightest star in the constellation of Cetus. An orange giant, it is believed to be variable in nature (characteristics: apparent mag. 2.04, absolute mag. -1.7, spectral type K1, distance 50 light-years. See also pp 978-979, 1016-1017).

Diphilus (fl c 160 BC). Greek playwright. He wrote 100 comedies, of which 60 survive. He was imitated by Menander and Plautus, and many of his plays were later reworked by the Romans.

Diphtheria, acute, contagious infection chiefly affecting children, and once common throughout temperate regions. The disease is caused by a bacterium *Corynebacterium diphtheriae*, which often enters through the upper respiratory tract. There it releases an exotoxin that produces symptoms of fever, chills, malaise, mild sore throat, hoarse cough and a thick coating of the upper respiratory tract by dead cells and bacteria. The body responds by producing antitoxin and recovery usually follows. Complications, including impaired function of the heart and peripheral nerves, may occur temporarily. Vaccination of children with diphtheria toxoid confers immunity. See also pp 1072, 1088.

Diplococcus, genus of BACTERIA characterized by gram-positive, spherical cells that grow in pairs. Some species are pathogenic, eg *Diplococcus pneumoniae* which causes pneumonia.

Diplodocus, extinct reptile that lived in USA during the Jurassic period (135-195 million years ago) - the longest land animal that has ever lived. It has a long slender neck and tail, and was a swamp-dwelling herbivore. Length 25m (82ft). See also pp 184-185, 280-281.

Diplonid, term to describe a nucleus which has its CHROMOSOMES in pairs, as in almost all animal cells except GAMETES.

Diplomatic service, corps of agents who are the official accredited representatives

of a government in a foreign, host state. Diplomats are appointed by the sovereign or chief executive and enjoy special protection and privileges. They are prohibited from activities such as espionage and are subject to expulsion for violating the laws of the country in which they are stationed. In cases where countries have no diplomatic relations, their interests may be represented by diplomats of other powers. See also AMBASSADOR, CHARGE D'AFFAIRES.

Diplopia, double vision, a disorder that can result from various diseases or from the action of certain drugs (including alcohol) on the central nervous system.

Diplopoda, class of arthropods found throughout the world; its members are called MILLIPEDES. Some attack plants, others are predatory. They may have as many as 200 pairs of legs.

Diptera, insect order including japygids and campodeids, the two-pronged bristle-tails. They are pale, blind insects that live in soil and feed on dying and living plant matter, often damaging growing plants. Length 5cm (2in). See also pp 36-37.

Dipnoi, order of CROSSOPTERYLIAN fish found in tropical waters of Australia, Africa and South America; it includes the COELACANTH, with its lobed limb-like fins, and the LUNGFISH, with its primitive lungs. See also p 56.

Dipole, molecular, separation of electric charge in a molecule. In a COVALENT BOND between two atoms the electron pair is not equally shared between them. In hydrogen chloride (HCl), the electrons are attracted towards the more electronegative chlorine atom, giving it a partial negative charge and leaving an equal positive charge on the hydrogen atom. Such dipoles contribute to the chemical properties of molecules. Magnetic substances have dipoles consisting of north and south poles; they may be ordered or disordered to give strong or weak magnetic properties. See also pp 894-895.

Dipper, bird associated with fast-flowing mountain streams, where it swims and dives for small fish and aquatic invertebrates. It has a thin straight bill, short wings and greyish-brown plumage. Length 19cm (7.5in). Family Cinclidae, genus *Cinclus*.

Dipsomania. See ALCOHOLISM.

Diptera, order of true flies. They have soft bodies and one pair of wings, the other being reduced to knob-like halteres. They have a complete life cycle: the adult lays eggs that hatch into LARVAE (maggots); these pupate and become adults. Within this order are many important pests, such as MOSQUITOES, ROSE FLIES and others that attack human beings, animals or crops or carry diseases. See also pp 36-37, 42-43.

Dirac, Paul Adrien Maurice (1902-), British physicist who devised a new version of QUANTUM MECHANICS. His equation (the Dirac equation) combines relativity and quantum-mechanics descriptions of electron properties. This results in accurate values and relates them to fundamental principles. He shared the Nobel Prize in Physics in 1933. See also pp 818, 818.

Direct evidence, in law a statement by a witness that an event or action did or did not occur. It is distinguished from indirect or CIRCUMSTANTIAL EVIDENCE in which the witness infers from one set of facts that another must or must not be true.

Directional aerial, radar or radio aerial for receiving or transmitting signals in one precise direction. A radio direction finder for example, has a rectangular loop in which which receives maximum signal when it is broadside to the station, and minimum signal when it faces the station end-on. The orientation of the antenna is indicated on a direction scale.

Direction finding (DF), in navigation, a method that determines position by the intersection of two projected bearing lines obtained from known landmarks. Radio or instruments tune in using a directional antenna to two radio signals from transmitters at known points.

Direct motion, orbital motion of a planet

comet or other heavenly body around the Sun or of a satellite around its primary in a west-to-east direction. Also the apparent west-to-east movement of a planet as seen from the Earth.

Directoire style, art style named after the DIRECTOIR which ruled France from 1795 to 1799. It marked a transition between the rococo style of Louis XVI and the more decorative style of the Empire. Neo-classical elements, derived partly from the recent excavations at POMPEII were combined with contemporary ideas, especially in dress and fashion. In all its aspects, particularly furniture, the style is exemplified by simple shapes which possess an economy of line.

Directory, Government of France according to the constitution of the year III (1795). It was headed by five directors who in general lacked the great political skill necessary to balance the conflicts of the age. They came to rely increasingly on the army, lost popularity and achieved little. After an army coup in Nov. 1799 the Directory was replaced by a CONSULATI by NAPOLEON. See also p 1551.

Diré Dawa, city in E Ethiopia on the Addis-Ababa-Djibouti railway. The city was founded in 1902 when the railway reached that point and its growth has resulted from trade brought by the railway. Industries: food processing, textiles, cement. Pop. (1970 est.) 60,000.

Dirigible, steerable airship. Circular balloons can be made to rise by throwing off ballast, or descend by venting gas from the envelope, but they are not steerable. The first dirigible, powered by steam, was invented in 1852 by Henri GIFFARD. See also pp 512-513.

Disaccharide, class of sugars (including common sugar) formed by the condensation of two monosaccharides with the removal of water. Cane-sugar, sucrose, $C_{12}H_{22}O_{11}$ is a disaccharide which, on hydrolysis with dilute acid, yields both glucose and fructose, monosaccharides each having the formula $C_6H_{12}O_6$. Lactose and maltose are other important disaccharides. See also p 906.

Disarmament, the reduction of armaments by nation states. The term refers principally to events since 1918 and especially to attempts since 1945 to reach international agreements to control arms production. The United Nations established the Atomic Energy Commission in 1946 and the Commission for Conventional Armaments in 1947. In 1952 the two were joined in the Disarmament Commission. It produced no results and the USSR withdrew in 1957. In Aug. 1963 a Test Ban Treaty, banning the testing of nuclear weapons above the ground, in the atmosphere and underwater, was signed by the USSR and the USA. They also signed a Non-Proliferation Treaty in 1968, which provided for an international inspectorate. The SALT talks between the USSR and the USA, produced the 1972 treaty on the limitation of anti-ballistic missile systems. The 1979 SALT 2 agreement, placing a ceiling on strategic delivery vehicles, has not yet been ratified. Talks are due to resume in 1982. See also pp 1792-1793.

Disasters of War, series of 65 powerful etchings by Goya made during the Napoleonic invasion of Spain (1810-13). Breaking new ground technically, their brutal realism expresses impassioned outrage at the violence and suffering of war.

Disc, in astronomy circular appearance of the Sun, Moon or a planet, especially when viewed through a telescope. It contrasts markedly with the sharp point source image of a star. See also p 976.

Disc, gramophone, grooved vinyl pressing containing recorded sound. The lateral disc was invented in 1887 by Emile Berliner and 78rpm shellac records were marketed by 1900. The long-playing 33rpm vinyl disc (1948) revolutionized the industry. Stereo came in 1956 and quadraphony 15 years later.

Disc cam, mechanical component that converts rotating motion into reciprocating (back-and-forth) motion. Most internal combustion engines use oval-shaped disc cams mounted on a rotating cam shaft to open and close the valves by displacing

Christian Dior with two of his models at a fashion show in London (1950)

Dippers dive for small fish in the waters of fast flowing mountain streams

Diptera, which means two wings, are the order of true flies such as the housefly

Directional aerials receive maximum signals when they are set at 90° to the transmitter

Discharge

push rods (cam followers). See also pp 426-427, 446

Discharge, in law, freeing of an offender at the discretion of a judge or magistrate. An offender may be discharged absolutely and treated as if he had not been convicted. Or he may be discharged conditionally without penalty, but told that if he is convicted within a given time (in Britain one to three years), he will be sentenced both for the original offence and the new one. When the sentence is only suspended, the original penalty is added automatically to a subsequent conviction.

Discharge, in medicine, any normal or abnormal loss of fluid from a part of the body. Normal discharges include the slight loss of fluid from the vagina or the expected discharge of mucus from the nose which accompanies a common cold or an allergy such as hay fever. An unexpected discharge, eg from the ear, vagina or penis, can be an early symptom of a serious disorder and should immediately be referred to a doctor.

Discharge tube, glass envelope containing gas at low pressure, which gives light due to the collision of electrons with gas molecules. Discharge lamps, filled with one or more of various gases, are used to give coloured light: mercury vapour gives purple, sodium vapour gives yellow and neon gives red. Early discharge tubes (called Geissler tubes) were used as toys. A FLUORESCENT LAMP is a discharge tube coated with a fluorescent substance. See also pp 813, 861, 891

Disciple, one of 12 close friends and associates of Jesus Christ during his lifetime, most of whom later became APOSTLES. They were: Peter, Andrew, James the Greater, John, Thomas, James the Lesser, Jude (or Thaddaeus), Philip, Bartholomew, Matthew, Simon and Judas Iscariot. See also pp 1244-1245

Discordance, in geology, the hiatus or eroded surface between two layers of rock. The time interval represented by the hiatus is more difficult to estimate than the rate of deposition of a layer. Nevertheless the hiatus must be considered when calculating the age of a rock formation. See also UNCONFORMITY, p 262

Discovery, HMS, ship used by R.F. SCOTT for a voyage of exploration to the Antarctic (1901-04). The journey explored the ROSS SEA and reached farther south ever before. The *Discovery* was later moored permanently in the River Thames, London, and opened to the public.

Discovery Bay, bay on the east coast of Australia, on the boundary between Victoria and South Australia, on the Indian Ocean. Port MacDonnell is located on the west shore. Length 72 km (45 miles), width 13 km (8 miles).

Discrimination, prejudicial treatment of an individual or group on the basis of race, religion, ethnic background, sex or age. In the broader, public sense, discrimination may take the form of housing restrictions, segregated community facilities and limited employment and educational opportunities. See also pp 1846-1849

Discus, in athletics field events, wooden or metallic disc weighing 2 kg (4 lb 6 oz) with a diameter of 22 cm (8.75 in), thrown by the competitor. Originally an ancient Greek athletic event, it was revived in 1896 for the first modern Olympic Games held at Athens.

Disease, impairment of health or abnormal functioning of an organism, affecting the entire organism or one organ or system of the body. A disease may be acute, producing severe symptoms for a short time, chronic, lasting a long time, or recurrent, with symptoms returning periodically. There are many types and causes of disease: infectious diseases, caused by harmful bacteria, viruses or other agents; hereditary and metabolic diseases; diseases of growth and development; diseases of the immunological system; neoplastic (tumour-producing) diseases; nutritional diseases; DEFICIENCY DISEASES; endocrine (hormonal) diseases; diseases due to particular physical agents, eg lead poisoning, circulatory diseases, and mental illness.

Treatment depends on the cause and

course of the disease but, in general, may be symptomatic (relieving symptoms but not necessarily combating the cause of the disease) or specific (attempting to cure the underlying cause of the disease using drug therapy). Surgery is also sometimes a method of treatment, as are radiation therapy, physiotherapy and psychotherapy. Prevention of disease involves eradication of disease-producing organisms, vaccines to confer immunity against disease, public health measures, careful medical attention and routine medical examinations. See also pp 1058-1099, 1106-1120

Disestablishment, the severing of the legal connection between the Church of England and the state. The movement in favour of it, led by Radicals and Dissenters, was powerful in the 19th century. The Irish Church was disestablished in 1869, the Welsh in 1914, although the latter act did not take effect until after WWI.

Disinfectant, usually liquid or solid substance used to kill micro-organisms that cause disease. The term is most often applied to fairly strong reagents that are used on inanimate objects, as distinguished from ANTISEPTICS, which are used on living tissues.

Disjunction, logical proposition produced by joining two simple propositions by the word "or". An example is the proposition

John is intelligent or John is modest; it is false if both parts are separately false, otherwise it is true. The disjunction is used in mathematics—in which the proposition is true if both components are true. In ordinary speech a second type, the exclusive disjunction, is also used expressing an alternative between the two components. The disjunction of two simple propositions, P and Q , is written $P \vee Q$, and read "P or Q". See also pp 790-794

Dislocation, in medicine, complete displacement of bones forming a joint accompanied by damage to supporting ligaments and the enclosing capsule. In physics a dislocation is a fault in the structure (lattice) of a CRYSTAL. See also pp 840-841, 1071

Dislocation of crystals, lattice flaw in a crystal structure which is classified according to type. The flaw is one dimensional and forms a line in the crystal. The two basic types of dislocation are the edge and the screw. The screw dislocation plays an important part in crystal growth, forming them into spiral ramps.

Disney, Walter Elias ("Walt") (1901-66), US film animator and studio executive. His cartoon features, animal, fantasy and adventure films are internationally renowned. His first success, *Steamboat Willie* (1928), was the first cartoon to use sound. It featured Mickey Mouse, who became the world's most famous cartoon character, rivalled only by another Disney character, Donald Duck. Among his notable films are *Snow White and the Seven Dwarfs* (1937), *Fantasia* (1940), *Dumbo* (1941), *Treasure Island* (1950), *The Living Desert* (1953) and *Mary Poppins* (1964).

Disneyland, US amusement park located in Anaheim, California. Created by film producer Walt Disney and opened in 1955, it features four main amusement areas: Adventureland, Frontierland, Fantasyland and Tomorrowland. There is also a Disneyworld in Florida.

Dispersion, colloidal. See COLLOIDAL DISPERSION

Dispersion, wave. See WAVE DISPERSION

Displaced persons, Europeans left homeless after WWII. Most displaced persons emigrated to the USA, and others returned to their homeland, or moved to Britain or Israel. Between 1948 and 1951 almost half a million refugees were allowed to enter the USA.

Displacement, in chemistry, replacement of one atom in a compound by an atom of a different element. See SUBSTITUTION

Displacement, in psychoanalysis, the mechanism in which there is a mental shift of meaning, fantasy or emotion away from one person or object (towards which it was originally directed) to another, usually neutral or less dangerous. A common instance is the displacement of anger, eg when a mother, angry at her husband

begins to shout at her child. In BEHAVIOURISM, displacement is the substitution of one response for another when the former behaviour is prevented in some way.

Displacement, in geology, the relative movements of two adjacent types of rock. It incorporates the direction of change and the specific amount of the movement. Lateral displacement is described as strike slip and strike separation, whereas vertical displacement is known as dip slip and dip separation. See also FAULT

Displacement, in nautical engineering, a measure of the size (TONNAGE) of a ship. See also p 474

Disposable personal income, in economics, portion of a person's earnings that remains after all taxes and financial commitments have been deducted.

Disproportionation, simultaneous oxidation and reduction of the same chemical substance. An example is the disproportionation of copper(I) chloride, involving oxidation to copper(II) chloride and reduction to metallic copper: $2\text{CuCl} \rightarrow \text{CuCl}_2 + \text{Cu}$. See also OXIDATION-REDUCTION

Disraeli, Benjamin, 1st Earl of Beaconsfield (1804-81), British Conservative politician and novelist. He helped to overthrow Robert Peel when the CORN LAWS were repealed in 1846. As Conservative leader in the House of Commons (1844-68), Disraeli was several times Chancellor of the Exchequer and guided the 1867 REFORM ACT through Parliament. He was Prime Minister in 1868 and again in 1874-80. He secured Britain's half share in the Suez Canal in 1875 and at the Congress of BERLIN (1878) forced Russia to surrender Turkish lands and gained Cyprus for Britain. His most famous novels are *Coningsby*, *Sybil* and *Tancred*. See also pp 1590-1591

Dissection, systematic cutting into plant or animal tissue, usually after death, to explore its anatomy or to discover abnormalities which may help in the understanding of the cause and effect of disease. It is the foundation of a proper understanding of how the healthy body works. See also POST MORTEM, pp 1061, 1096-1097

Dissenters. See NONCONFORMITY

Dissociation, mental process in which some thoughts, attitudes, experiences or parts of the personality lose their normal relationship to the rest of the mind and split off to function independently and separately. This occurs in reaction to some intolerable stress, anxiety or insurmountable difficulty. It enables the mind to cope, as the dissociated incompatible areas of experience do not then come into conflict. Externally, however, signs of psychological disorder will be apparent in such behaviour as MYSTICAL ideas, walking, FUGUE states, automatic writing and delusions. It may also lead on to the "split" or multiple personality. Whole areas of experience may also be repressed leading to AMNESIA. See also pp 1112-1113

Dissolution of the Monasteries (1536-40), abolition of English monasticism in the reign of HENRY VIII, devised and carried out by Thomas CROMWELL. The dissolution completed the break with the Church of Rome, but the main motive was financial, the confiscated property reverting to the king's possession. By an Act of Parliament of 1536, Cromwell sent commissioners to close the smaller monasteries and the larger ones were closed piecemeal, 1538-40. The dissolution caused some social disruption, since the monasteries were the greatest landowners in the country, but it is probable that the contemporary stories of ex-monks starving were exaggerated. New secular schools were set up to replace the education formerly provided by the monks and much of the land was sold by the king to the newly wealthy rural middle class. See also pp 1375, 1404-1405

di Stefano, Alfredo (1926-), Argentine-born footballer rated by many as the most "complete" player ever. From River Plate he went to the Millionarios club in Bogotá and then Spain, where he dictated the play and fortunes of Real Madrid from 1953-64. He played seven times for

Discus, the first throw of over 61m (200ft) was by the US athlete Alfed Oerter in 1962

Walt Disney originally visualised Disneyland as a prototype for an urban community

Benjamin Disraeli, the brilliant, flamboyant politician who remains an enigma to this day

Dissolution of the Monasteries: monks hiding treasure from Cromwell's agents

Argentina, 31 for Spain, and was European Footballer of the Year in 1957 and 1959.

Distemper, contagious, often fatal, disease of young dogs, wild canines and members of the weasel family. Symptoms: fever, shivering, muscular spasms and loss of appetite. Death is commonly caused by inflammation of the brain. Puppies can be immunized against distemper.

Distillation, extraction of a liquid by boiling a solution in which it is contained and cooling the vapour so that it condenses and can be collected. The method is used to separate liquids that are in solution, or liquid solvents from dissolved solids. Fractional distillation is the method used in oil refineries to separate the various fractions of crude oil. See also pp 440-441, 702-703, 818-819.

Distilled water, pure water prepared by boiling tap water and condensing the steam. It is essential for some chemical reactions, in which even the small traces of dissolved salts (such as the carbonates of calcium and magnesium) and other impurities present in tap water are intolerable. For many applications it is being replaced by de-ionized water. See also WATER SPLITTING.

Distilling, production of spirituous liquors by distillation, especially of alcohol (ETHYL ALCOHOL). This concentrates the alcohol in the distilled spirit, as yeast fermentation gives an alcoholic content of only about 15% in such drinks as wine. In distilling the alcohol is boiled off and may be later added as needed for the spirit's desired proof. See also pp 702-703.

Distortion, sound. See SOUND DISTORTION.

Distribution, in economics, portion of the total amount of the goods and services a society produces that each individual or group receives. Sometimes called personal distribution or income distribution in order to distinguish it from the marketing of commodities (physical distribution), it has been an important aspect of economic analysis since Adam Smith focused on the issue in the 18th century.

Distributive law, rule of combination in mathematics in which an operation applied to a combination of terms is equal to the combination of the operation applied to each individual term. Thus, in algebra and arithmetic, $3 \times (2 + 1) = (3 \times 2) + (3 \times 1)$; the multiplication is distributed over the addition. See also p 778.

Distributor, in a motor vehicle, an electrical device for distributing synchronized pulses of high voltage secondary current from the induction coil, via a rotating contact (rotor arm), to the various sparking plugs of an engine in their proper firing order. See also pp 426, 496.

District Council, local governing body in England and Wales of a county district which is not a borough. There are both urban and rural districts. Councillors are elected for a four-year term; metropolitan district elections are held for one-third of the seats for each year when there are no county council elections. Non-metropolitan districts can adopt the same system or choose to have elections for all the seats at once. The councils deal with matters such as public health, council-house building and the maintenance of minor roads.

District of Columbia, the state of the city of Washington, capital of the USA. It was ceded from the states of Maryland and Virginia and was originally 260sq km (100sq miles) in area. The part in Virginia was given back in 1846 and it is now 179sq km (69sq miles). The capital covers the entire area.

Ditching, aircraft, emergency method of landing a land plane on water. If the wind is heavy and seas are light, the ditching is made into the wind. If the seas are heavy, the aircraft is ditched parallel to the swell regardless of the wind. In either case the undercarriage is left in the retracted position.

Dithyramb, irregular poem or chant of a wild or inspired nature. Dithyrambs originated in ancient Greece as improvised choral lyrics sung at banquets in honour of Dionysus, the god of wine, and flourished between about 600BC and the 2nd century

AD. Later other gods were honoured and dithyrambs became important parts of theatrical presentations and festivals.

Dittersdorf, Carl Ditters von (1719-99), Austrian composer. His musical output was huge - 34 operas, more than 100 symphonies, and many concertos, sonatas and choral works. He was ennobled in 1773.

Diuretic, drug used to increase the flow of urine and, usually, its salt content. Diuretics are used to treat oedema, an over-accumulation of fluid caused by heart disease or other diseases, and abnormal kidney function.

Diurnal rhythm. See CIRCADIAN RHYTHM.

Dive, in aeronautics, steep descent of an aircraft with or without power at a greater airspeed than that normal for level flight. Dive bombing during WWI was accomplished by pointing the nose of the aircraft at a ground target, releasing the bomb, and executing a steep ascent. Steep dives or ascents produce stresses which can damage the airframe, unless it is specially designed to resist them. See also pp 518-519.

Diver (bird). See LOON.

Divergence, mathematical property of an infinite series (or sequence) of not having a finite limiting value. Such a series is said to diverge. The harmonic series, $1 + 1/2 + 1/3 + 1/4 + \dots$, is an example of a divergent series. See also CONVERGENCE.

Diverging lens. See LENS.

Divers. See DIVING BIRDS.

Diverticulitis, illness caused by inflammation of diverticula, (small "pouches" on the wall of the intestine), often caused by faecal matter obstructing the neck of the pouch. Symptoms include pain in the lower left side, cramp, nausea, vomiting, sometimes fever, malaise and alternating constipation and diarrhoea. If untreated (with antibiotics and a bland diet), abscess, haemorrhage and perforation of the intestinal wall can occur, and surgery becomes urgently necessary. See also p 1069.

Diverticulosis, common, often symptomless condition whose incidence increases with age, in which small spherical pouches protrude from the lower intestinal wall, most often from the sigmoid colon (just above the rectum). Inflammation of these pouches produces DIVERTICULITIS. It is thought to be caused by the low "bulk content" of diet. See also p 1068.

Divertimento, name for a collection of musical pieces for chamber orchestra used especially by HAYDN and MOZART. It indicates that the collection did not meet the formal criteria of a SUITE.

Dividend, that part of the net earnings of a public company that is paid to its stockholders. Usually paid regularly, the dividend is a percentage of the par value of the stock and is paid in cash in Britain whereas in the USA a dividend may be paid in other forms, such as bonds or stock.

Divination, foretelling the future or discovering what is unknown by interpreting various signs. Divination is a form of magic with worldwide distribution. Signs of the future are often thought to be found in the entrails of animals that are specially sacrificed. Other techniques include casting lots and palmistry. See also AUGURY, HARUSPICATION, OMEN, RHABDOMANCY, SCAPULARISMANCY. p 1890.

Divine Comedy (c 1307-21), allegorical narrative poem by DANTE ALIGHIERI. Through this work Dante established Italian as the literary language of Italy. It is divided into three parts: *Inferno*, *Purgatorio* and *Paradiso*, and consists of the author's imaginary tour of Hell, Purgatory and Heaven. He meets his contemporaries, historical figures and characters from mythology, the Bible and classical literature. It is written in *terza rima*, a complex verse form.

Divine right of kings, political theory, popular in 16th and 17th centuries in various European countries, that monarchs derive absolute and irresistible authority directly from God. Law is an instrument of grace, not a contrivance of human wisdom, so that the king is answerable only to God and is above all promulgated laws, including his own.

Diving, water sport in which acrobatic manoeuvres are performed off a spring

board or highboard. The several types of competition include the 1- and 3-m springboards and the 5-, 7.5- and 10-m firm highboards. The judging, based on points, is complicated and depends not only on the difficulty of the dive but also on the diver's movement at the start, the technique and grace of the flight and the entry into the water. See also SKIN DIVING, SWIMMING.

Diving, deep-sea, commercial or leisure activity dating from antiquity but popularized with the use of the diving-bell, diving suit and SCUBA (self-contained underwater breathing apparatus). SCUBA diving's growth dates from WWII with the use of the aqua-lung, patented by Jacques COURTES and Emile Gagnan in 1942. Divers receive air via a demand regulator from cylinders of compressed air worn on the back, and using masks, flippers and heat-retaining foam-rubber wet suits can reach depths of 50-60m (165-195ft). Underwater sports include spear-fishing and photography.

Diving beetle, predaceous aquatic beetle found throughout most of the world. It has thread-like antennae and long hind legs adapted for swimming. One of the most voracious fresh-water carnivores, the adult and larva feed on insects, tadpoles and small fish. Family Dytiscidae, genus *Dytiscus*. See also p 328.

Diving-bell, hollow structure providing a dry environment for underwater workers. Early diving-bells were bell-shaped, filled with compressed air, and open at the bottom to give access to the sea-bed. The BATHYSPHERE, which made its first dive in 1930, was spherical, made of steel, and could withstand considerable pressures, but it was restricted to depths within reach of supply and winch cables. It has been replaced by the bathyscaphe. See also pp 484-485.

Diving birds, any of various species of water birds that dive for their food. Loons are adept divers - they can dive to depths of 61m (200ft). Grebes, albatrosses, cormorants, kingfishers, pelicans and divers are also typical divers. Others include diving petrels, boobies and some ducks and geese.

Divisionism. See NEO-IMPRESSIONISM.

Division of labour, in economics, plan of production in which each individual, or group of workers specializes in a single phase of the production process. The performance of one, or a limited number of operations, is characteristic of today's mass production in both capitalist and socialist economies. See also p 1840.

Divorce, legal dissolution of a marriage. In Britain divorce was obtained by private Act of Parliament until 1857, when the Divorce Court was established. Adultery was the only ground for the action until 1937, when desertion, insanity and mental cruelty were added. Since 1971 the only ground has been the irretrievable breakdown of the marriage.

Diwali, Hindu festival during which homes are lit with numerous tiny clay lamps in commemoration of RAMA's defeat of RAVANA, a demon who sought to destroy the world. The story is symbolic of the return of light after the rainy season and the festival marks the resumption of pilgrimages, marriages and other social activities.

Dix, Otto (1891-1969), German painter and engraver but known for his series of etchings, *War* (1923) based on his experiences in WWI. He later developed into an ardent expressionist and satirist and, like George Grosz, attacked the corruption of post-WWI Germany. Dix suffered persecution during the Hitler regime. After WWII he painted numerous religious subjects. See also p 1655.

Dixieland, style of jazz music originating in New Orleans in the 1900s. It usually consisted of a steady beat with interweaving melodic lines and was played by a small group, typically clarinet, trumpet, trombone and rhythm section. KING OLIVER and LOUIS ARMSTRONG were two of its most famous exponents. See also p 1756.

Diyarbakir, city in SE Turkey, on the River Tigris, capital of Diyarbakir province. The

Distillation, the liquid into which the vapour condenses is free from dissolved impurities.

Distributor, the device that ensures the cylinders in an engine fire in the correct order.

Diving, a good high diver tucks himself into a tight knot if he uses control of a dive.

Dixieland is the traditional jazz music of New Orleans. The Original Jazz Band, 1922.

city was made a colony in AD 230 by the Romans, who named it *Amida*. It is an agricultural trade centre for a region producing fruit, cereal crops and cotton. Industries: textiles, gold- and silverwork, copper products. Pop. (1973) 180,237.

Dizziness. See **VERTIGO**

Djakarta, capital of Indonesia, on the NW coast of Java. It was founded (as Batavia) by the Dutch c. 1619 as a fort and trading post, and it became the headquarters of the Dutch East India Company. It became the capital after Indonesia gained its independence in 1949. An administrative, cultural, and educational centre, the University of Indonesia (1950) is in the city. Industries: ironworking, printing, timber. Exports: rubber, tea, quinine. Pop. (1977 est.) c. 1,785,000.

Djerba, île de, island off the SE coast of Tunisia, in the central Mediterranean Sea. An administrative district of Tunisia, it has Roman ruins and is believed to be the island of the Lotus-eaters described in the *Odyssey*. Exports: olive oil, dates. The main industry is fishing. Area: 510sq km (197sq miles). Pop. (1966) 62,445.

Djerid, Chott, salt-water lake in SW central Tunisia. It was known in Greek mythology as the birthplace of Athena. Area: approx. 4,920sq km (1,900sq miles).

Djibouti, independent nation in E Africa on the Red Sea, formerly the French territory of the Afars and Issas. A small country that gained independence in 1977, it consists mainly of stony desert. More than half of the population is nomadic, herding cattle, sheep and goats. There is some industry in the capital, Djibouti, which has developed as a trade centre at the terminus of a railway from Ethiopia. Area: 22,000sq km (8,494sq miles). Pop. (country) 226,000, (city) 70,000. See also p. 2241.

Djilas, Milovan (1911-), Yugoslav political writer and political leader. One of Tito's leading ministers, he supported his country's break with Moscow in 1948, but his criticisms of Tito's regime ended his political career (1954). He was jailed and on the publication of his book *The New Class: An Analysis of the Communist System* (1957) his prison term was extended, he was released in 1961. In the following year he was again imprisoned for his book *Conversations with Stalin*. He was finally released in 1966.

D-Lysergic acid. See **LSD**

Dmitri (d 1606), pretender to the throne of Russia, b. Yuri Otrepyev. After Tsar Fyodor I died in 1598 and was succeeded by Boris GODUNOV, Otrepyev (then a monk) claimed to be Dmitri, Fyodor's son and heir. The real Dmitri had died in 1591. Boris Godunov died in 1605 and Dmitri was proclaimed tsar after bringing about the death of Fyodor II, son of Boris. In 1606 Dmitri Vasily Shuysky led a revolt in which Dmitri was murdered.

DNA (deoxyribonucleic acid), molecule found in chromosomes and viruses that is responsible for storing the genetic code. It consists of two long chain polynucleotides shaped like a twisted rope ladder, the sides of which consist of sugar-phosphate chains and the rungs of linked nitrogenous bases. The sugar is 2-deoxy-D-ribose and the four bases are adenine, cytosine, guanine and thymine. The genetic code is stored in terms of the sequence of the bases, three bases coding for one amino acid. See also pp. 176-177, 907-911.

Dnepr. See **DNIEPER**

Dnepropetrovsk, city in the Ukraine (Ukrainskaja SSR), USSR, on the DNIEPER (Dnepr) river, capital of Dnepropetrovsk Oblast. It was founded in 1787 by Grigori Potemkin for Catherine II and named after the Ukrainian Bolshevik, Petrovski. It has a university and several colleges. Industries: iron and steel, mechanical engineering, chemicals, cement. Pop. (1975) 958,000.

Dnestr. See **DNIESTER**

Dnieper (Dnepr), river in Ukrainian Republic (Ukrainskaja SSR), USSR. Rising in the Valdai Hills, W of Moscow, it flows S through Belorussia and the Ukraine to the Black Sea, it is the third-longest river in

Europe. The Dneproges dam, completed in 1932, made the river navigable for its entire course. The Dnieper is linked by canal to the Bug River, and has several hydroelectric power stations. Length: 2,286km (1,420 miles).

Dniester (Dnestr), river in the Ukraine (Ukrainskaja SSR), USSR. It rises on the slopes of the Carpathian Mts and flows SE to the Black Sea SW of Odessa, part of its course forms the border between Ukrain-skaja and Moldavskaja. Navigation is hampered by irregular water levels. The Dniester formed the border between the USSR and Romania from 1918 until 1940. Length: 1,412km (877 miles).

Dobell, Sir William (1899-1970), Australian painter, sometimes regarded as the nominal leader of modern art in Australia. Dobell, who studied in London and Holland from 1929 to 1939, excelled in cruelly realistic portraits, influenced by HOGARTH. He was knighted in 1966.

Doberman pinscher, strong guard and police dog bred in Germany in the late 19th century. It has a long, wedge-shaped head and short erect ears. Its deep-chested body is set on straight legs. The smooth coat may be black, red or fawn. Height to 71cm (28in) at the shoulder.

Dobin, Alfred (1878-1957), German novelist. He was an expressionist writer and a socialist. In 1933 he left Germany to live in Palestine and the USA, although he returned after WWII. His work includes *Wadzek's Battle with the Steam Turbine* (1918) and *Mountains, Oceans and Giants* (1931), which deal with man's struggle with machines. His style of talking to himself was developed in the novel *Berlin Alexanderplatz* (1929).

Docetism, ancient Christian heresy, the doctrine that Christ did not have a material human body but that his birth, death and other earthly manifestations were merely illusions. This belief regarded as the first Christian heresy, reached its height in Gnosticism.

Dock, any of more than 200 species of flowering plants native to N. USA and Europe, especially curled dock (*Rumex crispus*). It has scaly brown flowers and oblong leaves with curly margins, from which its name is derived. Dock leaves are a country remedy for nettle stings. Family: Polygonaceae.

Dock, in marine engineering, artificial basin, floating or fixed, where ships are tended, also a wharf, or pier, or the waterway between two wharves, or piers. In a dry dock, water must be excluded by lock-gates, or ships must be hauled out of the water on to slipways for repairs, floating docks can tend ships at sea although it is more common that they are used in sheltered waters. See also pp. 536-537.

Dr Jekyll and Mr Hyde, The Strange Case of (1886), Victorian thriller by Robert Louis STEVENSON. The good Dr Jekyll changes himself at intervals by means of a potion into the loathsome Mr Hyde, and recovers with an antidote. The story turns on the discovery that the two characters are, in fact, two aspects of the same man. **Doctor Zhivago** (1957) novel by Boris PASTERNAK. It records the life of Yuri Zhivago, a Russian physician, from 1903 through the revolution and civil war until his death in 1929. The Soviet authorities made strenuous efforts to suppress the work and it was first published in Italy. In 1965 it was filmed by David Lean.

Doctrine of Four Causes, propounded by Aristotle in the *Physica*. Four causes concern the physicist, the material, the formal, the efficient and the final, although the last three often coincide and a physical explanation usually states the final cause or end of a process or its antecedent necessity. See also p. 1883.

Doctrine of signatures, principle of early medicine or magic whereby parts of the body are cured by means of natural objects with which they seem to have some physical characteristics in common. The theory is also called the principle of correspondences.

Documentary film, unscripted or "non-fiction" film. The term was first used in 1929 by John Grierson of Robert Flaherty's *Nanook of the North* (1921)

which portrayed at first hand Flaherty's experience of living among the Alaskan Eskimos. *Nanook* received world-wide acclaim and the documentary form was born. The documentary in the form of newsreels rivalled popular newspapers and now, in the days of television, has become the major means of news presentation. Donn Alan Pennebaker's *Don't Look Back* (1967) is another well-known documentary film, as is Marcel Ophüls's *A Sense of Loss* (1972).

Dod, Charlotte ("Lottie") (1871-1960), British all-round sportswoman who won five Wimbledon singles titles (1887, 1888, 1891, 1892, 1893), retired from competitive tennis at the age of 22, and went on to become All-England All-comers' golf champion. She represented England at golf and hockey and also excelled at archery and skating.

Dodd, Charles Harold (1884-1973), British theologian. He was professor of theology at Cambridge University (1935-49) and wrote *History of the Gospel* (1938). He helped to organize the New Translation of the Bible in the 1950s and 1960s.

Dodd, Sir Charles (1884-), British theologian. His view that the coming of God's kingdom was fulfilled in the Incarnation was given in his book *The Apostolic Preaching and its Developments* (1936).

Dodder, leafless, parasitic, twining plant with a thread-like stem and clusters of small yellow flowers. It feeds using haustoria, modified roots that enter the host plant. The dodder then releases its contact with the ground. Family: Convolvulaceae, species: *Cuscuta europaea*.

Dodecanese (Dhodhekanisos), group of about 20 islands in Greece, in the SE Aegean Sea, between W Turkey and E Crete. The capital and largest island is Rhodes (Ródos). The islands have been conquered and ruled since 1600 AD by many peoples including Greeks, Romans, the Crusaders, and the Knights of St John. Under Turkish control, from 1500 until 1912, they were seized by Italy in 1912 and passed to Greece in 1947. The main occupation is agriculture, including fruit growing, livestock raising, and diving for sponges. Pop. (1971) 121,017.

Dodge City, city in SW Kansas, USA, on the Arkansas River. It was founded in 1872 near Fort Dodge on the Santa Fe Trail, and it became a cowboy town, with Wyatt Earp and Bat Masterson among its marshalls. The distribution centre for a livestock rearing and wheat-producing region, its industries include farm tools and tourism. Pop. (1970) 14,127.

Dodgson, Charles Lutwidge (1832-98), British mathematics lecturer and author, better known by his pen-name Lewis CARROLL.

Dodgson, Stephen (1924-), British composer. His largest orchestral work is the *Sinfonietta* (1964). He has written many concertos, including one for guitar (1956) and a *Serenade* for viola and orchestra (1956).

Dodo, extinct, flightless bird that lived on the Mascarene Islands in the Indian Ocean. The last dodo died in about 1790. The true dodo (*Raphus cucullatus*) of Mauritius and the similar Réunion solitaire (*Raphus solitarius*) were heavy-bodied birds with large heads and large hooked bills. Weight: to 23kg (50lb).

Doenitz, Karl. See **DOMITZ, KARL**

Doensburg, Theo van (1883-1931), Dutch painter, writer, and critic, leader of the De Stijl movement and founder of its journal. He collaborated with architects such as JJ Oud to extend De Stijl principles to architecture and interior design. Doensburg taught at the Bauhaus (1921-23) and publicized DADAISM in The Netherlands.

Dog, domesticated carnivorous mammal closely related to the jackal, wolf and fox. Typically it has a slender, muscular body, long head with slender snout and triangular ears, small paws with five toes on the forefeet and four on the hind, non-retractile claws; and well-developed teeth. The dog walks on its toes with the heel, or hock, raised off the ground. Smell is the dog's most important

DNA, the master molecule of life: its structure contains the genetic code

Doberman pinscher are named after Louis Doberman, who developed the breed

Charles Lutwidge Dodgson, better known as Lewis Carroll, creator of Alice in Wonderland

Dodo, the fate of this bird is relevant to the aims and principles of modern conservation

sense, its hearing is also acute. The gestation period is 49-70 days and one or more young are born. Dogs developed from the tree-dwelling *Canis*, which lived about 40 million years ago, through intermediate forms to *Canis lupus*, which lived 15 million years ago. The dog was domesticated about 10-14 thousand years ago. There are approx. 400 breeds, one of the oldest is the Saluki, in existence for 5,000 years. Dog breeds are classified into sporting, hound, terrier, working, toy and non-sporting groups. Length body 34-135cm (13.4-53.1in), tail 11-54cm (4.3-21.3in), weight 0.9kg-68kg (2-150lb). Family Canidae, species *Canis familiaris*. See also individual breeds.

Dog-cart, light two-wheeled horse-drawn vehicle, with two transverse seats back to back. It was originally designed to carry sportsmen and their dogs. It is also the name of a cart drawn by a dog or dogs. These were sometimes used as small delivery carts or for children to play with. See also p 487.

Doge, title of the chief magistrate of Venice from 697 to 1797, and of Genoa 1339-1805. Despite an attempt in Venice in the 12th century to make the office hereditary, it remained elective, after the 14th century it carried an increasingly limited power.

Dogfish, SHARK found worldwide in marine waters. Generally greyish with white spots, it lacks a lower tail lobe. Dogfish are usually divided into two groups: spiny dogs, with a stout, sharp spine in front of each dorsal fin, and spineless dogs which lack a spine in front of the second dorsal fin. Length spiny, 0.6-1.2m (2-4ft), spineless, 7.3m (24ft). Suborder Squalidae. See also Chondrichthyes, pp 58-59, 744-745, 745.

Dogger Bank, extensive sandbank in the central North Sea between Great Britain and Denmark. It is an important breeding ground for a variety of fish, especially cod and herring. The water is shallow, 17m-36m (55-120ft) deep. Area 17,610sq km (6,800sq miles).

Doggerel, trivial verse written for comic or burlesque effect, generally loosely styled, irregular in metre and often badly written. The word can be applied to serious writing as a term of abuse.

Doggett, Thomas, Irish comedian who in 1715 originated DOGGETT'S COAT AND BADGE RACE on the River Thames for professional watermen.

Doggett's Coat and Badge Race, traditional sculling race on London's River Thames for watermen who have just finished their apprenticeship. Originated by Thomas Doggett and first rowed on 1 Aug. 1715 from London Bridge to Chelsea. It is the oldest sculling race in the world and carries as its prize a scarlet (formerly orange) livery with a silver arm badge.

Dogon, Negroid people whose traditional ancestral dwellings are in remote cave-villages in the Bandiagara district of the Mali Republic. Their patrilineal village society is based on subsistence agriculture, principal foods being millet and sorghum. Their religion is notable for its abstract concepts and a powerful creation myth.

Dog rose, wild rose that occurs in many varieties in woods and hedges, it is one of the commonest species in Britain. It has serrated leaflets, strongly curved thorns and white or pink flowers. Family Rosaceae.

Dog sled racing, sport popular in Alaska, Labrador and other Arctic regions of North America. Teams vary, as do the length and rules of the events, but five-dog teams predominate. These comprise a lead dog (point) who sets the pace for the two swing and two wheel (rear) dogs. The Alaskan Malamute, Husky, Samoyed and Eskimo are the most used breeds. An annual event is the World Championship Sled Dog Race in Anchorage, Alaska.

Dogwood, any of several small trees and shrubs in the genus *Cornus* of the dogwood family (Cornaceae). In the wild, flowering dogwoods are graceful, sparsely-leaved inhabitants of the dimly lit undergrowth of deciduous forests. Their small flowers, enclosed by four large,

petal-like, white bracts, bloom before the leaves open.

Doha (Ad-Dawhah), capital of Qatar, an independent Arab state on the Persian Gulf. It was a small fishing village until oil production began in 1949, since when it has developed into a modern city and trade centre. It has a Turkish fort dating from 1850. Pop. 95,000.

Doherty, Charles Joseph (1855-1931), Canadian jurist and political leader. He was Canadian minister of justice (1911-21). In WWI he worked to organize Canada's army, he was a signatory of the Treaty of Versailles (1919) and a delegate to the League of Nations (1920-21).

Doherty, name of two British brothers, champion tennis players, Reginald Frank ("Big Do") (1876-1919) and Hugh Lawrence ("Little Do") (1874-1910). Between them they won ten major singles titles, Reggie winning four consecutive Wimbledon championships (1897-1900) and Laurie five (1902-06), together they won eight Wimbledon doubles. In 1900 Laurie won the Olympic singles, Reggie the mixed doubles, and their superiority was such that Britain won the Davis Cup 1903-06.

Doherty, Peter (1914-), Irish footballer who played 16 times for Northern Ireland and was manager of the side that reached the 1958 World Cup quarter-finals. A gifted inside-forward, he helped Manchester City win the Football League (1937) and Derby County the FA Cup (1946).

Dohnányi, Erno (1877-1960), Hungarian composer, conductor and pianist. His works sometimes display elements of Hungarian folk music, as in the piano suite *Ruralia Hungarica* (1926). He also composed operas, concertos and orchestral pieces.

Doisy, Edward Adelbert (1893-), US biochemist. He did research which helped in the understanding of blood buffers, vitamins and metabolism, he isolated the female sex hormones estrone (1929), and estradiol (1935), was professor of biochemistry (1923-65) at St Louis University, and was awarded, with Henrik Dam, the 1943 Nobel Prize in physiology and medicine for his chemical analysis of vitamin K. **Dokuchaev, Vasily Vasilyevich** (1846-1903), Russian geologist who, at the close of the 19th century identified the basic determining factors in the morphology - structure or form - of soils, and thereby furthered the science of pedology (the study of soil and its unique biological, chemical and physical properties).

Dolce Vita, La (1959), Italian film directed by Federico Fellini. It starred Marcello Mastroianni, Anouk Aimée, Anita Ekberg and Yvonne Furneaux, and was a frank view of the empty pleasures of members of Roman society, it caused much controversy.

Dolel, Danilo, (1924-), Italian social reformer who was trained as an architect but in 1950 committed his life to working for the poor. After witnessing the death from starvation of a girl in Sicily, he fasted for a week to force the government to take action. He raised money for schools and community centres in Sicily, and campaigned for reform in the face of opposition from the government, the Church and the Mafia. In 1958 he received the Lenin Peace Prize.

Doldrums, region of the ocean near the Equator, characterized by calms, light and variable winds, and squalls. It corresponds approximately to the equatorial trough, a belt of low pressure around the Equator. **Dole**, distribution as a charity of food, money or clothing to the poor, a practice which dates from the Middle Ages. In Britain since WWI the term has been applied to the weekly payments from the state to the unemployed.

Dolerites, medium-grained INTRUSIVE rocks found in thin extensive sheet-like masses that are injected in or between the sedimentary rock layers, they lie vertically and horizontally and are called dikes and sills respectively. See also p 209.

Dolichocephalic. See CEPHALIC INDEX.

Dollin, Anton (1904-), British ballet dancer, real name Patrick Healy-Kay. He

joined Diaghilev's BALLETS RUSSES in 1921, becoming a principal dancer in 1924. He also danced with the Vic-Wells Ballet in London and the Ballet Theatre in New York. He was director and principal male dancer in companies he formed with Alicia Markova (1935-38, 1945-48) and in 1950 they formed London's Festival Ballet.

Dollar, standard monetary unit of the USA since 1792. It was derived from the decimal system of Spanish coinage based on the "dólar", which was the most widely used coin in the American colonies. Divided into a hundred cents, the value of the US dollar was based on the price of gold until 1934. Many other countries have adopted the dollar as their unit, including Canada, Hong Kong, New Zealand, Singapore, Australia and Liberia.

Dollfus, Audouin-Charles (1924-), French astronomer, a pioneer of high-altitude observation from balloons. An expert in planetary studies, he discovered Janus, the tenth satellite of SATURN, in 1966. See also pp 941, 964-965, 965.

Dollfus, Engelbert (1892-1934), Austrian chancellor (1932-34) who took office at a time when his country was close to economic collapse. In 1933 he dissolved the National Socialist Party, which had been calling for union with Nazi Germany. In 1934 he crushed the Social Democratic Party and assumed dictatorial powers. He was assassinated by Austrian Nazis.

Dollinger, Johann Joseph Ignaz von (1799-1890), distinguished German Roman Catholic church historian who held the chair of church history at the University of Munich from 1826 to 1873. He opposed the dogma of papal infallibility defined at the first VATICAN COUNCIL in 1870 and was excommunicated for it in 1871. He subsequently became identified with the independent German OLD CATHOLIC CHURCH, although he did not formally join it.

Dollard, John (1707-61), English optician and inventor. Self-taught in science, mathematics and languages, he devoted himself to the invention of an achromatic telescope, his efforts being rewarded with the Copley Medal of the Royal Society in 1756.

Doll's House, A (1879), four-act drama by Henrik Ibsen. Its story of a woman breaking away from her husband and family shows Ibsen's concern for the position of women in society and condemnations of the 19th-century bourgeois family.

Dolmen, megalithic monument comprising a large stone lintel supported by three or more upright stones. Dolmens were originally used as burial chambers and covered by mounds. They are most common in Cornwall and Brittany.

Dolmetsch, name of a family of British musicians. Arnold (1858-1940) began restoring old instruments and making copies in the 19th century. He gave authentic performances of little-known early music, mainly Renaissance and Baroque. Carl (1911-), a virtuoso recorder player, became director of the annual music festival at Haslemere, Surrey, in 1940, where the family make copies of old instruments, notably recorders and early flutes.

Dolomite, pearly-white or pink sedimentary rock, probably formed by the alteration of limestone by seawater. Also a carbonate mineral, calcium-magnesium carbonate, $\text{CaMg}(\text{CO}_3)_2$, found in dolomite rocks and metamorphosed rocks. Calcite-like rhombohedral system prismatic crystals, often intergrown, are found in hydrothermal veins. Hardness 3.5-4 s.g. 2.8. See also pp 218-219.

Dolomites (Dolomiti or Dolomiten), part of the Italian Alps, in NE Italy. They are composed of dolomitic limestone which has eroded to form a striking landscape. First climbed by the English in the 19th century, they are very popular with mountaineers and tourists. There are several hydroelectric power stations in the region. The highest peak is the Marmolada which rises to 3,342m (10,964ft).

Dolphin, small, toothed WHALE with a dis-

Doge, Giovanni Bellini's portrait of Doge Leonardo Loredan in the National Gallery.

Dogfish are probably so-called from 'the way they hunt voraciously in large packs'.

Dollar, the sign is thought to have originated from "pieces-of-eight" written /8.

Dolomites, the region of the Alps composed of the magnesium-calcium rock dolomite.

Dolphin fish

Gerhardt Domagk won the 1939 Nobel Prize for discovering the so-called "wonder" drug

Domineers, their emphasis on study produced such scholars as Thomas Aquinas

Domineers, although fairly new to Europe were known to the ancient Chinese

Domineers, the head of one of the three great statues of David from this master sculptor

met beak and slender body. Larger than the porpoise, it is the fastest and most agile of the whales. In captivity, the highly intelligent, bottle-nosed dolphin readily learns complicated tricks. Length to 4m (13ft). Family Delphinidae, species *Tursiops truncatus*. See also pp 89, 100, 101.

Dolphin fish. See **DORADO**.

Domagk, Gerhardt (1895-1964), German chemist. In 1927 he was made director of the research institute of the I. G. Farben industrial works. He is known for his discovery of the drug Prontosil, the forerunner of sulphanilamide, the first of the "wonder drugs" used to combat infectious diseases. He was awarded the Nobel Prize in physiology and medicine in 1939 for his discovery. See also pp 1092, 1092.

Domain, in mathematics, a set of values that can be assigned to the independent variable in a function or relation. The values of the dependent variable are called the range. For example, the function can be $y = x^2$. If x is 0, 1, 2, 3, ..., 3, etc. then y is 0, 1, 4, 9, 16, etc. The domain is $\{0, 1, 2, 3, \dots\}$, and the range is $\{0, 1, 4, 9, 16, \dots\}$.

Dombey and Son, (1847-48), novel by Charles Dickens. Written at a time of extensive industrial growth, it is set in the world of trade and commerce, and the effects of the development of railways are important to the plot.

Dome, in architecture, hemispherical roof. A development of the arch, it is most commonly used in cathedral architecture and was an important element in Byzantine styles. One of the earliest monumental domes belongs to the Pantheon, Rome. Eclipsed in importance in Gothic architecture, it was a significant element in Renaissance and Baroque styles and has survived the modern reinforced concrete slab used in vaulting.

Dome, lunar, any of several broad-based low mountains on the surface of the Moon, with gentle slopes and often a summit crater.

Doménichino (Zampieri) (1581-1641), leading Italian Baroque painter and architect. In 1602 he worked with Annibale Carracci on the Farnese Palace. Between 1621-23 he was chief architect of the Vatican. His landscape paintings, including *The Hunt of Diana and Landscape with St John Baptizing*, influenced Nicolas Poussin and Claude Lorrain.

Domenico Veneziano (c 1410-51), Florentine painter noted for his strong sense of colour. His work has been reassessed in recent times and his influence on the pictures of Piero della Francesca is now generally recognized.

Dome of the Rock, also known as Kubbet es-Sakhra, mosque and shrine built (685-705) by Abd al Malik on the Jewish temple site in Jerusalem. The dome covers the summit of Mt Moriah, from which the prophet is believed to have ascended to Heaven. The rock is also that on which Abraham was to have sacrificed Isaac. Its plan, the large magnificent dome is made entirely of wood. See also p 1282.

Domesday Book, two-volume village-by-village account of the population and wealth of England ordered by William the Conqueror in 1085 and completed the following year. The book is a unique record of medieval economic conditions and survives almost intact in the Public Record Office, London. The survey was intended to provide an accurate record of land ownership and of the value of each village and manor for the purposes of taxation, although some counties escaped it. The values of estates are compared with their values in the reign of Edward the Confessor, the social status of their inhabitants and number of plough-teams or value of the crops are also included. The survey was carried out by royal agents each covering a hundred (division of the shire). See also pp 1301, 1302, 1302.

Domestication of animals, breeding, training, taming and use of animals by man as pets, draught animals or for hides, wool, meat, milk and by-products such as manure. Animals that fit into one or more of these categories include CATTLE, SHEEP

DEER, CAMELS, PIGS, HORSES, BUFFALOES, OXEN, POULTRY, FISH, MINK and other fur animals, BEES and SILKWORMS, and household pets such as CATS and DOGS. As early as 9000 BC man began to organize settlements and kept a limited range of animals that suited his needs. Today SELECTIVE BREEDING is practised to improve the quality of farm stock. In the light of current predictions of human population growth, selective breeding is essential if demands are to be met. Totally new breeds may have to be developed, or man may have to look farther afield towards the domestication of alternative meat-producing animals. See also pp 722, 751.

Donett, Alfred (1811-87), British writer and New Zealand Prime Minister (1862-63). His period of residence in New Zealand (1842-71) inspired his epic poem *Ranolf and Amohia* (1872).

Dominance, in genetics, the tendency of one trait to be reproduced in preference to another. Brown eyes represent a dominant trait while blue eye colouring is a recessive trait. A child inheriting each of these traits from its parents will have brown eyes although retain the ability to pass on recessive genes to its children. See also p 178.

Dominance relationship, or pecking order, system by which different individuals within a social group are ranked or ordered in terms of status or "dominance". Most such systems in animal societies are based on strength or aggressiveness. In human societies, status commonly depends more on the acquisition of possessions or prestige.

Domingo, Plácido (1941-), Spanish tenor. He made his operatic debut at Monterrey, in Mexico, in 1961. He made his Metropolitan debut in 1968 and his Covent Garden debut in 1971, in *Rosca*. **Dominic, Saint** (c 1170-1221), real name Domingo de Guzmán, Spanish priest, founder of the Dominican Order. In 1203 Pope Innocent III sent him to France to preach to the Albigensians, who had fallen into heresy. He led a life renowned for sanctity, austerity and humility, and based his order on scholastic and democratic principles.

Dominica, largest island of the Windward group in the West Indies, in the Caribbean Sea, between Guadeloupe and Martinique islands, the capital and chief port is Roseau. It was named after "Jes dominica" (Sunday), on which day it was discovered by Christopher Columbus in 1493. Products: copra, bananas, fruit and tobacco. Area 290sq km (750sq miles). Pop 75,000. See also p 2241.

Dominican Republic, independent nation occupying the two-thirds of the mountainous island of Hispaniola in the West Indies. Mineral deposits are becoming an increasingly important export, although agriculture is still the mainstay of the economy. The main crops are sugar cane, coffee, fruit, cocoa and tobacco. The capital is Santo Domingo. Area 48,442sq km (18,703sq miles). Pop (1975 est) 4,697,000. See p 2241.

Dominican Friars. See **DOMINICANS**.

Dominicans, members of a Roman Catholic religious order, officially known as *Ordo Praedicatorum* (O.P.), founded by St Dominic, who gave definite shape to it at two general chapters at Bologna in 1220-22. They are also known as Friars Preachers or, in England, Black Friars (from the black mantle worn by them over a white habit) or, in France, Jacobins (from their first house in Paris which was under the patronage of St James - Jacobus in Latin). They are specially devoted to preaching and study.

Dominion, until 1947, title of some of the self-governing nations within the British Commonwealth of Nations after the Statute of Westminster of 1931. See WEST MINSTER STATUTES OF 1931.

Dominion Day (1 July), national holiday in Canada. It commemorates the establishment of the Dominion of Canada on 1 July 1867.

Dominion of Canada, official name of CANADA since the BRITISH NORTH AMERICAN ACT of 1867. Under confederation, the central government assumed powers of

tariff, taxation, defence and criminal law. Confederation paved the way for the inclusion in Canada of British Columbia (1871), Prince Edward Island (1873) and Newfoundland (1949). See also pp 1614, 1615, 1997, 2004.

Dominoes, game played with rectangular pieces. The standard game, played by 2 to 6 players, uses 28 pieces. Each piece is divided in half, each containing from 0 to 6 dots in every combination - 0-0, 1-1, 1-0, etc. The dominoes are played one at a time and must be placed next to a domino which has a corresponding number. There are various methods of play from winning simply by laying all one's pieces to a complicated scoring based on the number of factors of 3 or 5 that divide into the number formed by the sum of the dots of the end dominoes.

Domino, Fats (1928-), us pianist and singer, real name Antoine Domino. A New Orleans-born rhythm-and-blues performer he sold 23 million records between 1949 and 1960, most of which he also wrote. The most popular included *Don't Put a Shame* (1955) and *Blueberry Hill* (1956). Only Elvis Presley and the Beatles have sold more records.

Domino theory, tenet of US foreign policy formulated after WWII, often applied to South-East Asia. It is based on the assumption that if one country falls to Communist rule, its neighbours will inevitably succumb as well. The domino theory was one reason for US involvement in Vietnam and was subscribed to by the successive administrations of presidents Eisenhower, Kennedy, Johnson and Nixon.

Domitian (51-96), Roman emperor (81-96), second son of Vespasian, successor to Nerva. His rule was at first orderly but became cruel and tyrannical. He recalled Agricola from Britain, overpowered the senate and ruled as an absolute monarch. His repressive politics led to plots against him and a reign of terror. His wife, Domitia, arranged his assassination.

Domremy-la-Pucelle, village in France on the Meuse River. Joan of Arc was born there in c 1412, and her home is now preserved as a museum.

Don, Celtic mother goddess, the Welsh equivalent of Anu or Danu in Irish tradition. Her children included gods of the sky, the sea, and poetry and were locked in battle with the powers of darkness known as the Children of Lir.

Don, river in Ukrainian Republic (Ukrainskaja SSR), USSR, rising at Tula, it flows S then SW to the Sea of Azov. Rostov-na-Donu is the major port, near the mouth of the river. Annual floods are controlled by the Cmil anskuje Reservoir. The river is navigable for 1,370km (850 miles) and is an important shipping route for grain, timber and coal. Length 1,930km (1,200 miles).

Donald, William Henry (1875-1946), Australian journalist (editor of the *Far Eastern Review*) and adviser to Chinese national leaders including Sun Yat-sen and Chiang Kai-shek. After Chiang was kidnapped in 1936 Donald helped to negotiate his release.

Donald Bane, King of Scotland (r 1093-97). The first of a succession of weak kings to rule after the death of Malcolm III in 1093. As Malcolm's brother he was supported in his claims with the aid of he successfully seized Edinburgh castle. He was deposed by Duncan II but returned after Duncan's murder, only to be dethroned by Edgar in 1097. See also p 1316.

Donat, Robert (1905-58), British actor whose career was cut short through asthma. His sensitive performances were typified by *Goodbye Mr Chips* (1939), for which he won an Oscar. He also acted in *The Thirty-Nine Steps* (1935), *Lease of Life* (1954), which he also directed, and *The Inn of the Sixth Happiness* (1958).

Donatello (c 1386-1466), Italian sculptor, who worked in Florence and Padua and exercised a profound influence on Renaissance art. His wooden statue *Mary Magdalene* (1455), in the Baptistery, Florence, reflects the expressive and emotional qualities of his style. His *Zuccone*

(half-pate) *prophet* (c. 1436) exemplifies his use of realism in its portrayal of an ugly subject, while the bronze *David* (1435) shows his knowledge of Classical sculpture. Almost every major Florentine Renaissance artist has been influenced by Donatello, notably MASACCIO, CASTAGNO, BOTTICELLI and, above all, MICHELANGELO. Paduan artists such as MANTEGNA, learned from the technical skill of Donatello's work. Almost all subsequent schools have used some aspect of his work.

Donati, Giovanni Battista (1826-73), Italian astronomer who pioneered the spectroscopic study of the Sun and the stars. One of the first to analyze the spectrum of a comet, Donati concluded that comets are partly gaseous in their composition. He discovered six comets, including Donati's comet (1858).

Donatism, doctrine held by a schismatic body in the 4th century Christian Church in Africa that sacraments conferred by unworthy bishops or priests were invalid. The schism arose because of the refusal of the Donatists to accept Caecilian as Bishop of Carthage on his appointment in 311 on the grounds that he had been consecrated by bishops who had compromised the faith during the persecutions of the Emperor DIOCLETIAN. Donatism was condemned by the Synod of Arles (314), which asserted that the validity of the sacraments did not depend on the merits of the clergy administering them, Christ himself being the true minister of the sacraments.

Donatus, Aelius (mid-4th century AD), Roman grammarian and literary critic. He taught ST. JEROME, and in the Middle Ages his grammatical works *Ars Minor* and *Ars Secunda* were widely used, becoming the foundation of Latin grammar.

Donau glaciation, stage in the last ice age, the Pleistocene, which lasted from 250,000 years ago until 10,000 years ago. This age was characterized by several stages of glaciation separated by periods of milder climate. The Donau glaciation stage or Donau Glacial may be related to the Eburon glacial stage of N. Europe and Thurnian sequence of marine strata in Britain. See also p. 226.

Donbas. See DONETS.

Doncaster, city in South Yorkshire, NE England, on the River Don, 27km (17 miles) NE of Sheffield. It has a famous racecourse with an 18th-century grand stand. The Mansion House in the city centre is a fine example of Georgian architecture. Industries: coal-mining, railway engineering, mechanical engineering. Pop. (1971) 82,500.

Donce. See DONES.

Doneck. See DONETSK.

Donegal, county in NW Republic of Ireland, bounded by Northern Ireland (N) and the Atlantic Ocean (N and W). There is a rocky, indented coastline and much of the county is hilly, with the Fiume Moy in the NW and the Blue Stack Mts in the W. The chief rivers are the Finn, Foyle and Erne. Agriculture is the main occupation but only one third of the land is fit for cultivation, mainly in the river valleys where oats and potatoes are grown. Tourism and fishing are also important. Area 4,830sq km (1,865sq miles). Pop. (1971) 108,000.

Donets Basin, also called Donbas or Donack, major industrial region in the Ukraine (Ukrainskaja SSR), USSR, N of the Sea of Azov (Azovskoe More) and SW of the River Dnieper. It lies mainly in Doneck (Donetsk) and Vorosilovgrad oblasts, and extends E into Rostov oblast. The region produces 35% of the USSR's coal and is a major steel producer, being close to deposits of ferrous metals in the E Ukraine. Development of the region began c. 1870 and it is now one of the most concentrated industrial areas in the world. Area 25,900sq km (10,000sq miles).

Donets (Donetz), river in the Ukraine (Ukrainskaja SSR), USSR. It rises NE of Belgorod and flows SE to join the River Dnieper. Its lower course is navigable. Length 1,015km (631 miles).

Donetsk (Donetz), city in the Ukraine (Ukrainskaja SSR), USSR, on the River Kalymus, caput of Doneck oblast. It is

the largest city in the Donets Basin, a highly industrialized region. Formerly known as Yuzovka, it was developed after 1870 when British entrepreneur John Hughes founded an ironworks. Industries: iron and steel, engineering, chemicals. Pop. (1975) 950,000.

Dong, Pham Van (1902-), Prime Minister of North Vietnam (1954-). Active in Communist and nationalist organizations from the 1920s, he was imprisoned by the French (1929-36). He was a founder of the Viet Minh (1941), and fought against the Japanese and French. In 1954 he led the Viet Minh delegation at the Geneva Peace Conference and was appointed premier of North Vietnam. After Ho Chi-minh's death (1969), Dong's influence increased. See also p. 1779.

Dongen, Kees van (1877-1968), Dutch painter who settled in Paris and became a French citizen in 1929. His sensual use of colour showed the influence of FAUVISM. He became a fashionable portrait painter and created a feminine type who was thin and pale with vivid lipstick and an aura of wit and sophistication.

Don Giovanni (1787), two-act opera by Wolfgang Amadeus MOZART, commissioned by the city of Prague, Italian libretto by Lorenzo da Ponte, after Giovanni Bertini's opera and a medieval Spanish legend. Don Giovanni (baritone) tries to seduce Donna Anna (soprano). He kills her father, who is avenged by her fiancé Don Ottavio (tenor). A statue of the saint comes to life and finally drags the sinner to hell. See also p. 245.

Dongola (Dongolab), region in Northern province, Sudan. N. of Khartoum. It is the seat of Dongola (Dongolab) at Qadimah, which was the best strategic position because of its strategic position on a hill overlooking the River Nile. The first settlement there was established by the Egyptians during the New Kingdom (1570-1075 BC). It became the capital of the Nubian kingdoms in the 4th century AD. It was attacked by Muslims from Egypt in 641 and captured by the MAMLUKS in 1275. The capital was abandoned in 1366 when the Muslims recaptured it. Area of region 44,308sq km (27,521sq miles).

Donitz, Karl (1891-), German naval officer. In WWI he was commander of the submarine fleet until 1943. He then became grand admiral and commander-in-chief of the German navy until 1945, when Hitler named him as his successor to the Reich. He was sentenced to 10 years in prison by the Nuremberg tribunal in 1945.

Donizetti, Gaetano (1797-1848), Italian operatic composer. He wrote 75 operas, both comic and serious. These include *L'Elisir d'Amore* (1832), *Lucia di Lammermoor* (1835), *Roberto Devereux* (1837), *La Fille du Regiment* (1840) and *Don Pasquale* (1843). See also pp. 1582, 1598.

Don Juan, legendary Spanish philanderer. There are similar libertine figures in the legends and literature of many peoples. The story originated in the Middle Ages, but the earliest printed version is *The Rake of Seville* (1630) by Tirso de Molina. The story tells how Don Juan caps his amorous adventures by seducing the daughter of the commander of Seville whom he kills in a duel. Later, his victim's statue comes to life and drags him off to hell. Don Juan has been the hero of many different versions of his legend, e.g. M. J. R. play *The Stone Feast*, MOZART's opera *Don Giovanni*, and BROWN SYMPHONY poem *Don Juan*.

Donkey, domesticated ass, used by man since well before 3000 BC. Crossed with a horse it produces a MULE or a MINKY.

Donlevy, James Patrick (1926-), US-born Irish author. His first novel *The Ginger Man* was published in Paris in 1955 but did not reach Britain and the USA in unexpurgated form until 1963. It was produced in London as a play in 1959. His other works include *A Singular Man* (1963) and *The Onion Eaters* (1971).

Donne, John (c. 1572-1631), English poet and cleric. He was originally a Roman Catholic but was converted to Anglicanism and ordained in 1615. In

1621 he became dean of St Paul's Cathedral, London. His poems include love poems, satires and religious sonnets and are noted for their wit, extravagant imagery and passion. Although his work was well-known in his lifetime, the poems for which he is now famous were not published until 1633. See also p. 1417.

Donnelly, Martin (1917-), New Zealand cricketer whose left-handed stroke-play won post-war acclaim in England, where he played for Oxford University and Warwickshire as well as representing England once at rugby union. In seven Test Matches he scored 582 runs, at an average of 52.90.

Donoghue, Steve (1884-1945), British jockey, Champion jockey ten times (1914-23) and a great favourite with racegoers, he rode six Derby winners (1915, 1917, 1921, 1922, 1923, 1925) and twice won the Oaks (1918, 1937) and St Leger (1915, 1917). His most famous mount was *Brown Jack*.

Don Quixote de la Mancha (1605, 1615), novel by Miguel de CERVANTES, published in two parts. Cervantes combined tragedy and comedy in his portrayal of the adventures of an elderly country gentleman, Don Quixote, and his simple squire Sancho Panza. Don Quixote is an avid reader of chivalric romances and, like a knight of old, sets out to redress the wrongs of the world. Together they pass through a series of adventures which combine pathos with humour. The novel had a profound influence on later writers.

Doobittle, Dr. See LOFTING, HUGH.

Doobittle, Hilda (1886-1961), US poet. Her work appeared under the initials H.P. Her collections of verse include *Sea Garden* (1916), and *The Flowering of the Rod* (1946).

Doobittle, James Harold (1896-), US aircraft pilot who served in both world wars. Between the wars he became famous for his speed records. He commanded the first bombers that attacked Japan in 1942 and later, the 8th Air Force against Germany.

Doobittle Book. See DOMESTIC BOOK.

Doone, legendary family which lived on Exmoor, SW England, where its members roamed at will plundering local farmers. Described in R. D. Blackmore's novel *Lorna Doone* (1869), they had disappeared by the 17th century.

Doornkop, village of Transvaal, South Africa, 24km (15 miles) W of Johannesburg, famous because the forces of Dr. Star Jameson surrendered there on 2 Jan 1896. The JAMESON RAID was launched on 29 Dec 1895 from Bechuanaland to help the Uitlanders (foreigners) unrepresented in the Transvaal Parliament.

Doppelgänger, ghostly counterpart of a person. An encounter with one's double, who is invisible to others, signifies imminent death.

Doppler, Christian Johann (1803-53), Austrian physicist and mathematician, famous for his discovery of the DOPPLER EFFECT, which he first described in a paper on double stars published in 1842. He was educated in Vienna and he became professor of physics there in 1850.

Doppler effect, change in frequency of a wave, usually sound, light or radar, when there is relative motion between the wave source and the observer or detector. The amount of change depends on the velocities of the wave, source and observer. With a sound wave the effect is demonstrated by the drop in pitch of a vehicle's siren as it passes the observer. With light the velocity of the source or observer must be large for an appreciable effect to occur as when light is received from a rapidly receding galaxy, which has its spectral lines shifted toward the red end of the spectrum. See also RED SHIFT, DOPPLER RADAR NAVIGATION.

Doppler radar navigational system, essentially a range-finding radar navigational aid which relies on the DOPPLER EFFECT, i.e. a change in frequency (or wavelength) due to motion of an object relative to an observer. Electronic accessories are used to measure differences in frequencies, or the time taken by the echo of a signal to return (both are effectively the same), and

interpret them in terms of distances. Bats and dolphins locate prey and navigate by unconsciously making similar measurements from the echoes of the high-pitched sounds they emit.

DORA, full name Defence of the Realm Act (1914) Act conferring special, arbitrary powers upon the British Government for prosecuting the war against Germany. It gave the government extraordinary control over such matters as the press, employment in munitions factories and prices.

Dorado, tropical offshore marine fish. A favourite game fish, it has a squarish head and a forked tail, it eats FLYING FISH and its silvery, blue and yellow colours change when it is taken from the water. Length to 182cm (72in); weight: 30kg (60lb). Family Coryphaenidae.

Dorado, or the *Swordfish*, southern circumpolar constellation. It has no stars brighter than the third magnitude but it contains most of the Large MAGELLANIC CLOUD (Nubecula Major). See also pp. 1017, 1017.

Dorat, Jean (1508-88), French teacher and poet. His humanist ideas and knowledge of Classical literature greatly influenced the doctrines of the group known as the PLEIAD. He wrote Latin poems, some in imitation of PINDAR.

Dorati, Antal (1906-), Hungarian conductor and composer. He was principal conductor of the BBC Symphony Orchestra (1963-66) and the Stockholm Philharmonic Orchestra (1966-74). In 1975 he was appointed principal conductor of the Royal Philharmonic Orchestra. His compositions include the ballet *Magdalena*, and the cantata *The Way of the Cross*.

Dordrecht, city in SW Netherlands, on the River Mass (Meuse), 19km (12 miles) ESE of Rotterdam. Founded in 1008, it was the scene of the first congress of the Protestant provinces of The Netherlands in 1572, and of the Synod of Dort (1618-19). An important rail junction and river port, it has shipbuilding, machinery, clothing and chemical industries. Pop. 101,000.

Doré, Gustave (1832-83), French illustrator, painter and sculptor. Known best for his engraved book illustrations, many of them grotesque fantasies, he illustrated editions of Dante's *Inferno* (1861), *Don Quixote* (1862), and the Bible (1866).

Dorians, people who settled in Greece and conquered MYCENAE c. 1200 BC. This began a 300-year "dark age" in Greek history, of which little record remains. The Dorians added significantly to the development of Greek culture, especially its architecture. See also p. 1202.

Doric, earliest and simplest of the three Classical orders of architecture invented by the Greeks and imitated by the Romans. A typical Doric column had no base, a relatively short shaft with surface fluting meeting in a sharp angle (or edge) and a simple, unornamented capital. See also pp. 1210, 1210, 1212, 1213.

d'Orsola, Christian (1928-), French fencer. A left-hander, he won two Olympic gold medals (1952, 1956), four world championships (1947, 1949, 1953, 1954) and shared in four world and two Olympic team titles.

d'Orsola, Pierre (1920-), French showjumper who was the first civilian to ride in the national team and went on to become the first showjumper to win two Olympic individual gold medals. 1952 on *Alibaba*, and 1964 on *Lutteur*. In 1966 he won the world championship on *Pomone*.

Dorman, Sir Arthur (1848-1931), British engineer, co-founder of the steel manufacturing company of Dorman and Long. The company has built many major steel structures, particularly bridges (such as Sydney Harbour Bridge).

Dormancy, temporary state of inaction or reduced metabolism. Animals may become dormant by hibernating, dormant plant seeds for a time cease to grow or develop. An organism can return to a fully active state when conditions, such as temperature, moisture or day length, change. See also p. 304.

Dormouse, mouse-sized squirrel-like rodent of Eurasia and Africa that hibernates. Most dormice are active at night.

Dornier, Claude, or Claudius

Dover's white cliffs, the first sight of 'home' for Britons returning from the continent

Downing Street, a harmonium arrives at number ten for a new prime minister

Sir Arthur Conan Doyle smoking, a pipe less than his famous detective character

Dracaena, a dragon tree of this genus was reputed to have lived to be 6,000 years old

and sleep by day. They eat nuts, fruit seeds, eggs, insects and other tiny animals. Length 10-20cm (4-8in) excluding tail. Family Gliridae. See also p.307

Dornier, Claude, or Claudius (1884-1969), German aircraft manufacturer who designed and manufactured the first all-metal aeroplane. While working with Ferdinand von Zeppelin, the airship manufacturer, Dornier founded an aeroplane company and built wooden and metal planes which served in WWI. In 1929 he designed the Do-X, a 12-engined passenger aeroplane. After WWII, his company built US-designed aircraft.

Dorset, county in SW England, on the English Channel. It is traversed W to E by the North Dorset Downs and the South Dorset Downs (nearer the coast) and drained by the rivers Frome and Stour. The chief towns are Dorchester, the county town, Poole, Bournemouth and Weymouth. Agriculture is important and includes the cultivation of cereal crops and vegetables, and the raising of sheep, cattle, pigs and poultry. Industries: tourism, marble quarrying. Area 2,520sq km (973sq miles). Pop. (1971) 361,919.

Dorsey, name of two brothers, both popular US bandleaders. Jimmy (1904-57) was a clarinetist and saxophonist, and Tommy (1905-56) a trombone player. In 1953 they joined to form The Fabulous Dorseys.

Dort. See DORDRECHT.

Dortmund, city in W West Germany, a port on the Dortmund-Ems Canal. In the 13th century Dortmund flourished as a member of the HANSEATIC LEAGUE. It declined in the late 17th century but grew as an industrial centre from the mid-19th century. Coal is mined nearby and the city is an important iron and steel centre in the Ruhr industrial district. It was badly damaged in WWII. Pop. (1970) 632,317.

Dory, also called John Dory, marine fish found throughout the world. It is deep-bodied and has a large mouth. The species *Zeus faber* of the Mediterranean Sea and Atlantic Ocean is a valuable food fish. Length to 1m (3.3ft). Family Zeidae. See also pp.745, 745.

Dory, small narrow fishing-boat, about 6m (20ft) long. It has pointed ends, high flaring sides and a flat bottom. Engines, sails or oars are used for power, but dories are usually auxiliaries of larger craft.

Dosimeter, instrument used for measuring radiation dose, usually a pocket electronic. A quartz fibre, after being charged, is viewed against a scale, its deflection across the scale on discharge gives a measure of the dosage of radiation to which it was exposed.

Dun Pauson, John (1896-1970), US novelist. His first novel *Three Soldiers* appeared in 1921. In his later work - the trilogy *USA* (1937) - he developed various innovative techniques, including stream-of-consciousness writing and the use of contemporary headlines and biographies of prominent Americans. See also p.1772.

Dostoevsky, Fyodor Mikhailovich (1821-81), Russian novelist. After writing *Poor Folk* (1846) and *The Double* (1846) he joined a revolutionary group, was arrested, and sentenced to death in 1849. He was reprieved just before the time set for his execution and sentenced to four years' hard labour. He returned to St Petersburg in 1859 where he wrote *Notes from the Underground* (1864). After *Crime and Punishment* (1866) appeared he left Russia and travelled in Europe partly to escape his creditors. While abroad he wrote *The Idiot* (1868) and *The Possessed* (1871-72). His last major work was *The Brothers Karamazov* (1879-80).

Dotrice, Roy (1925-), British actor. He was with the Royal Shakespeare Company (1957-65). His one-man show, *Brief Lives*, ran for 200 performances in London in 1969, establishing a world record. **Dotterel**, wading bird of the plover family. The Eurasian dotterel (*Eudromias morinellus*) has a stocky body, short tail and mottled-brown plumage with a rust-coloured breast. Length 22cm (8.5in). Family Charadriidae.

Douai, town in N France, on the River

Sarthe 30km (19 miles) S of Lille. The town passed to France in 1668, having been a possession of the dukes of Burgundy and the Spanish Hapsburgs. At its Roman Catholic college the Old Testament of the Douai Bible was prepared in 1609. Industries: coal-mining, chemicals, iron products. Pop. (1968) 49,187.

Douai Bible, English translation (from the Latin Vulgate) of the Bible, authorized by the Roman Catholic Church for use after the Reformation. Gregory Martin, an Oxford scholar living in exile at the English college at Douai, France, was the main translator. The New Testament was published at Reims in 1582, the Old Testament at Douai in 1609-10. It was revised in 1749-50 by Richard Challoner.

Douala, chief port of Cameroon, W Africa, on the Bight of Biafra. It was the capital of the German Kamerun Protectorate from 1901 until 1916. Exports include coffee, cocoa and bauxite. Pop. (1970) 250,000.

Double bass, largest stringed instrument, usually with four strings tuned in fourths (E-A-D-G) and played one octave below the musical notation. It resembles a large violin but has sloping shoulders (it was originally a member of the viol family). The double bass is held vertically, with the player standing or sitting behind. A bow is generally used for classical music, but the strings are usually plucked in jazz. See also pp.1580, 1580.

Double bassoon, lowest-pitched woodwind instrument, sounding an octave below the bassoon, also called contrabassoon. It consists of a tube 5m (16ft) long doubled back on itself four times. The modern form of the instrument dates from the late 19th century.

Double galaxy, two adjacent galaxies orbiting around a common centre of gravity, rather like a BINARY STAR. The components are often linked by tenuous bridges of intergalactic matter.

Double helix, structure of DNA (deoxyribonucleic acid), the basic store of genetic information in the cells of each living organism. First demonstrated in 1953 by Francis Crick and James Watson, the knowledge of the structure of the DNA molecule has since revolutionized biological science. See also pp.907, 911, 911.

Double star, star that appears single when viewed with the naked eye but is really two stars close together. Double stars are either gravitationally associated BINARY STARS or simply the results of optical effects - two completely separate objects that happen to lie in or near the same line of sight when viewed from Earth. See also pp.988, 987.

Doublet, or gipon, close-fitting upper garment laced or buttoned down the front. It was worn by men over a linen shirt in the period 1400-1600. At times slits were cut to allow the blouse to puff through, and fur or other trim was added.

Double Vision. See DIPLORIA.

Doughty, Charles (1843-1926), British explorer, travel writer and poet. He travelled from Damascus to Mecca (1876-78), an account of which appears in *Travels in Arabia Deserta* (2 vols, 1888). His poetry includes *The Dawn in Britain* (6 vols, 1906) and *The Clouds* (1912).

Douglas, Lord Alfred Bruce (1870-1945), British poet, whose work includes the volume of verse *In Excelsis* (1924) and his *Autobiography*, (1929). He was an intimate friend of Oscar Wilde.

Douglas, Archibald, 6th Earl of Angus (c.1489-1557), Scottish noble. In 1514 he married Margaret Tudor, sister of Henry VIII of England and mother by a previous marriage of James V, boy-King of Scotland. With Henry's aid Angus ruled Scotland from 1526-28, but he was exiled in 1529 when James asserted his own authority. On James' death in 1542 Angus returned and helped to repel the English invasions of 1547-48.

Douglas, Gavin (c.1474-1522), Scottish poet, important in the emergence of Scots as a language distinct from English or Gaelic. One of the most proficient medieval poets, Douglas completed a rhymed couplet version of Virgil's *Aeneid* in Scots in 1513, the first translation of a classical

poem into an English-based language. See also p.1474.

Douglas, James, 4th Earl of Morton. See MORTON. **JAMES DOUGLAS, 4TH EARL OF DOUGLAS, Sir James** (1803-77), Canadian fur trader and political leader. He worked for the Hudson's Bay Company (1821-58) and established Fort Connolly in 1827 and Fort Victoria in 1842. He served as governor of Vancouver Island (1852-64) and of British Columbia (1858-64).

Douglas, Sir James de, Lord of Douglas (1286-c.1330), Scottish noble. He was Robert Bruce's greatest captain in his struggles against England. After Bruce died, Douglas took Bruce's heart on a pilgrimage to Jerusalem, and died crusading in Spain. See also p.1378.

Douglas, John Sholto (1844-1900), 9th Marquess of Queensberry who c.1867 gave his name and patronage to the rules of boxing drafted by John Graham Chambers. In 1895 he was acquitted of libelling the poet and dramatist Oscar Wilde, whose downfall followed.

Douglas, Kirk (1916-), US actor and producer, real name Issur Danielovitch Demsky. Throughout his career he has specialized in tough or dramatic parts, as in *Detective Story* (1951), *The Bad and the Beautiful* (1952), *Gunfight at the OK Corral* (1957), *Paths of Glory* (1957), *Spartacus* (1960), *The Arrangement* (1969) and *A Gunfight* (1971).

Douglas, Lloyd Cassel (1887-1951), US author. He was a Lutheran clergyman and wrote a number of novels, including *Magnificent Obsession* (1929). Several of his novels were based on the New Testament, such as *The Robe* (1942) and *The Big Fisherman* (1948).

Douglas, Norman (1868-1952), British author, best known for his first novel *South Wind* (1917), a satire on modern morality. He also wrote two non-fictional works, *Seren Land* (1911) and *Old Calabria* (1915).

Douglas, Thomas, 5th Earl of Selkirk. See SELKIRK. **THOMAS DOUGLAS, 5TH EARL OF DOUGLAS**, noble Scottish family of obscure origins. It first rose to prominence in about 1200 with Sir William de Douglas, a powerful landowner in Douglasdale, Lanarkshire. The title Earl of Douglas was first given in 1358 and another branch of the family were earls of Angus (1389) and Morton (1458). The family was prominent in Scottish politics until the Act of Union (1707).

Douglas, main town on the Isle of Man. A popular resort on the Irish Sea, it has the Tower of Refuge (1832) built by William Hillyar, the founder of the Royal National Lifeboat Institution, and the Manx Museum. Industries include light engineering and fishing. Pop. (1970) 20,400.

Douglas DC-3, early airliner. It first flew in 1935 and over the next ten years became the world standard airliner and the standard Allied transport in WWII. See also pp.515, 515.

Douglas fir, evergreen tree native to NW USA and Canada. An important timber pine, it is also grown in the E USA as an ornamental. Its bark is thick and corky and deeply grooved. Height to more than 76m (250ft). Family Pinaceae, species *Pseudotsuga taxifolia*. See also pp.367, 367, 715.

Douglas-Home, Sir Alec (1903-), British Conservative politician. Entering Parliament in 1931, he became Neville Chamberlain's parliamentary private secretary (1937-39) and subsequently held ministerial posts. He became 14th Earl of Home in 1951. He was appointed Foreign Secretary (1960-63), but had to renounce his peerage to become Prime Minister (1963-64). See also p.1772.

Douglas of Kirtleside, William Sholto Douglas, Lord (1893-1969), RAF commander. He was assistant chief of air staff in 1938 and became an air marshal in 1946. He served as chairman of British European Airways (BEA) from 1949 to 1964. He was raised to the peerage in 1948.

Douglas scales, two scales of numbers indicating surface conditions of the sea. One scale indicates the amount of swell

the other the conditions on the surface of the sea. In both scales numbers range from 0 (calm) to 9 (confused)

Doukhobors, Russian-Canadian religious sect. The name means literally "spirit-wrestlers". The Doukhobors seem to have originated in 18th-century Russia, preaching the inherent goodness of man without the intercession of organized religion. Persecution of them in Russia encouraged Leo Tolstoy to petition the Tsar to allow them to emigrate. With further help from the Quakers, 7,500 settled in Saskatchewan, Canada in 1899. They lived communally, following pacifist and vegetarian precepts. Now known as the Union of Spiritual Communities of Christ, their anarchistic nonconformity has tended to prevent their full assimilation into Canadian society.

Doulton, Sir Henry, (1820-97), British pottery manufacturer who introduced in 1846 stoneware drain-pipes instead of flint-bottomed brick drains. He later founded, near Dudley, Staffordshire, what were to become the largest pottery works in the world.

Douro (Duero), river in Spain and Portugal. It rises in N central Spain, flows W across Spain to form part of the border with Portugal, then through Portugal to the Atlantic Ocean near Porto. There are hydroelectric power plants along its lower course. Length 895km (556 miles).

Dove, cooing, plump-bodied bird found throughout the world except in polar and subpolar areas and on some remote islands. Doves are related to PIGEONS and have small heads, short legs and dense, varied plumage. They feed mostly on vegetable matter. Length 15-83cm (6-33in). Family Columbidae.

Dover, town in Kent, SE England, on the Strait of Dover. One of the cinque ports, Dover is a resort and an important cross-Channel ferry port. During WWI it was the centre of the British defence of the English Channel and an important naval base. Pop (1971) 34,322.

Dover, Strait of, sea passage between Dover and Calais, at its narrowest 32km (20 miles) across. Many invasions of both Britain and Europe have been centred on the Strait, which now forms one of the busiest shipping lanes in the world.

Dowding, Hugh Casswell Tremeneere (1882-1970), RAF commander. He served in the Royal Flying Corps in WWI, commanded Fighter Command (1936-40), a period including the Battle of Britain. He retired in 1942.

Dowiyogo, Bernard (1947-), President of Nauru since 1976. He is a member of the Nauru Party, set up in 1968 when Nauru became independent.

Dowland, John (1563-1626), English composer of songs and lute music. The most famous of his songs are the *Lachrimae*. He was also the most celebrated lutenist of his age.

Down, county in SE Northern Ireland, on the Irish Sea coast. A hilly region, it rises to the Mountains of Mourne in the SE, and is drained by the Upper Bann and Lagan rivers. The chief towns are Downpatrick, the county town, Bangor, Newry and Newtownards. Agriculture is important and includes the cultivation of cereal crops, potatoes and flax, and the rearing of sheep, cattle, pigs and poultry. Industries: textiles, food processing. Area 2,466sq km (952sq miles). Pop (1971) 311,266.

Downs and Out in Paris and London (1933), first book by George Orwell. In it he describes his experiences when he lived with some of the poorest members of society, first as a dishwasher in Paris and later as a tramp in London.

Downhill racing. See SKIDDING.

Downing, Sir George (1623-84), British diplomat. He was an MP (1654-59) and was appointed British minister at The Hague in 1657. DOWNING STREET is named after him. His grandson, also Sir George, endowed the Cambridge college which bears their name.

Downing Street, street in London, off Whitehall, containing the official residence of the British Prime Minister at No. 10, the Chancellor of the Exchequer at No. 11 and chief whip at No. 12. It was

named after Sir George DOWNING. **Downpatrick**, market town in E Northern Ireland, approx 34km (21 miles) SE of Belfast. It is a pilgrimage centre and St PATRICK is thought to have founded a church there c 440; St Patrick, St COLUMBA and St ALDOET were long thought to be buried there. Industry: textiles. Pop 8,400.

Downs, North and South, two chalk hill ranges in SE England, running parallel and separated by The Weald, an area approx 48km (30 miles) wide. The North Downs extend SE approx 161km (100 miles) from the outskirts of London, through Surrey and Kent, the South Downs extend approx 100km (65 miles), from E Hampshire through W Sussex to E Sussex. The hills provide some excellent pasture for sheep. The highest point is Leith Hill, rising to 294m (965ft).

Downs, The, anchorage off Deal, Kent SE England, between North Foreland and South Foreland in the English Channel. The area is sheltered by the Goodwin Sands. It was the scene of a naval battle between the Dutch and the Spanish in 1639 and between the English and the Dutch in 1666. Length approx 13km (8 miles), width 9.5m (6 miles).

Down's syndrome, commonly called mongolism, disorder which may include some of the following symptoms: thickened hands and feet, enlarged tongue, mental retardation, slanted eyes, small nose and heart or kidney malformations. Usually occurring in the first children of older women it is an autosomal abnormality, in which most cells have 47 rather than 46 chromosomes. See also pp 1060, 1115.

Dowry, economic transaction in which money or goods are given to the bridegroom on marriage by his father-in-law. This usually occurs in societies where women are considered economic burdens. The dowry system is not recognized in law in England and the US (except in Louisiana). See also MARRIAGE.

Dowsing, searching for underground water or minerals by using a divining-rod, usually a forked willow twig. Still widely used in many parts of the world, its actual basis is still disputed. The method is to hold the forks of the stick close to the body, and the horizontal stem is pulled down when the dowser walks over the water or mineral.

Dowson, Ernest Christopher (1867-1900), British poet. He was a member of the Decadent group, and a friend of W. B. YEATS. His works were published in 1896 and 1899. He died of consumption.

Doyle, Sir Arthur Conan (1859-1930), British novelist and physician. His novel *A Study in Scarlet* (1887) featured the first appearance of his famous character SHERLOCK HOLMES. Other Sherlock Holmes stories appeared in *The Adventures of Sherlock Holmes* (1892), *Memoirs of Sherlock Holmes* (1894) and *The Return of Sherlock Holmes* (1905). Among his other works were *The Lost World* (1912) and *The White Company* (1891).

D'Oyly Carte, Richard. See CARTE, RICHARD D'OYLY.

Drabble, Margaret (1919-), British novelist. Her first book was *The Summer Breeze* (1963). *The Milkstone* (1965) was filmed as *A Touch of Love* (1969) and in 1974 she wrote a biography of Arnold Bennett.

Dracaena, genus of ornamental plants. Most species have short stalks and long, pointed, oval leaves. The leaves are often striped with pink or purple along their length and the flowers, when present, are red, green or yellow. Family Agavaceae. **Drachenfels**, peak in the Siebengebirge range, W West Germany, on the E bank of the River Rhine. According to legend it is the site where SIGFRIED slew the dragon. The Drachenburg, a fortress now in ruins, was built there in 1117. Height 321m (1,053ft).

Drachenloch, Switzerland, site of a cave in which remains of Neanderthal man have been discovered. See also p 115.

Draco, or the Dragon, northern circumpolar constellation between the Great Bear and the Little Bear (Ursa Major and Minor). The brightest star is Gamma

Dracoris, or Etamin, of about the second magnitude. See also p 1010.

Drakon, Athenian lawgiver. In 621 BC he drew up laws famous for their severity, in which death was the punishment even for minor crimes. Most of his laws were repealed by SOLON.

Dracula, Count, central character and archfiend of the Gothic horror novel *Dracula* (1897) by Bram Stoker. He is depicted as a vampire who rests as a corpse by day, but emerges at night to feed on the blood of human beings. Dracula has more recently been identified with Prince Vlad "the Impaler", who ruled Rumania in the 15th century.

Draft. See CONSCRIPTION.

Drag, aerodynamic, force opposing the motion of an aircraft through the air either as the rearward component of the lifting force or as the friction of air over external surfaces and other parts of the aircraft (such as a fixed undercarriage) not associated with the development of lift. See also p 518.

Dragon, mythical scaly lizard, snake or worm-like fire-breathing monster. It is often depicted with bat-like wings, talons and a lashing tail, although in some traditions it has many heads or may change shape at will. It is often shown ravaging the countryside and slaying the inhabitants. Sometimes, as in the tale of St GEORGE and the dragon, it is used symbolically as the personification of Evil that Good must fight and conquer. In China and Japan the dragon is identified with a beneficial force of nature. Today the name can refer to certain species of lizards such as the KOMODO DRAGON, a monitor lizard. See also p 1900.

Dragonet, bottom-dwelling fish related to the COBY. It has a flattened body, a short snout and spines on its gill-covers. It burrows into sand and propels itself with strong fins. Order Perciformes, genus *Callionymus*.

Dragonetti, Domenico (1763-1846), Italian double-bass player and minor composer. He was one of the great virtuoso performers of the 19th century. He wrote several SONATAS, CONCERTOS and CAPRICCIOS for the double-bass.

Dragonfly, swift-flying insect of the order Odonata. It has a long slender abdomen that may be brightly coloured and two pairs of large membranous wings. Like the DAMSELFLY, it mates while flying in tandem. The nymphs, which emerge from eggs laid on water plants, are aquatic. Wingspan, to 17cm (7in). See also pp 36, 41, 328.

Dragoon, mounted infantryman originating in the late 16th century. The name derived from the short musket that they carried. Dragoons, who originally rode into battle but fought on foot, came to use tactics inseparable from those of the cavalry in the 18th century.

Drag Racing, American derivative of motor racing in which two matched machines accelerate over a straight quarter-mile strip from a standing start, reaching speeds of 320km/h (200mph) or more. It also has adherents in Europe, Australasia and Japan. Categories established by the American National Hot-Rod Association include Top Fuel and Top Gas (petrol). Eliminator, Funny Cars and Stock. The drag begins with orange flame and smoke enveloping the dragster as squealing tyres grab for traction; it ends seconds later with the billowing of a parachute.

Dragón, Osvaldo (1929-), Argentine playwright. His dramas criticize what he believes to be the problems of Latin American society - corruption, the generation gap and purposeless violence. His work includes *Hisionas para ser conadas* (1957), a series of one-act plays.

Drainage basin, also called a catchment area, region from which all precipitation such as rain and melted snow flows to a single stream or system of streams. By identifying such a basin, scientists can calculate DENUDATION rates and moisture balances from various hydrological measurements such as evaporation rates.

Drainage system, in geology, the system by which surface water is collected and

removed by streams, rivers and lakes. The pattern of drainage is determined by the type of rock and the slope of the land over which the water flows. See also pp 222-223.

Drake, Karl von, (1785-1851), German engineer who developed the hobby-horse or *draisienne*. His invention was exhibited for the first time in 1818 in Paris and it enjoyed great popularity until about 1830. The *draisienne* was the first practical form of the bicycle. See also p 488.

Drake, Edwin Laurentine (1819-80), US oil well drilling expert whose well, started in 1858 near Titusville, Pennsylvania, USA was first ever to produce oil. See also p 438.

Drake, Sir Francis (c 1540-96), English admiral and navigator, the first Englishman to sail round the world. He achieved fame raiding Spanish shipping and colonies in the Caribbean (1570-72). In 1577-80 he sailed west around the world in his ship the *Golden Hind*. He was knighted by Elizabeth I and made mayor of Plymouth in 1581. He made further raids against Spain (1585-87) and his seamanship and daring contributed greatly to the defeat of the Spanish Armada. See also pp 1410-1411, 1413, 1415.

Drakensberg Range, mountains in South Africa, extending through Natal, Lesotho, Orange Free State and Transvaal. The highest peak is Thabana Ntlenyana in Lesotho, rising to 3,485m (11,425ft). Length approx 1,130km (700 miles).

Drama, art form which probably derived from primitive religious rituals in which early man sought increased control over his environment. In the West, Classical Greek drama reached its peak in Athenian festivals held each spring and winter in honour of Dionysus (BACCHUS). Of these plays, which reached their peak in the 5th century BC, some 35 tragedies survive, representing the works of Aeschylus, Sophocles and Euripides, and the 11 comedies of Aristophanes. Greek tragedy maintained the unity of action, defined by Aristotle in his *Poetics*, in the production of such works as *Agamemnon*, *Oedipus Rex* and *Medea*. Classical Roman drama, such as Seneca's stoical tragedies and Plautus' comedies, relied heavily on Greek models and these, in turn, strongly influenced Renaissance drama, thus saw its greatest flowering in Elizabethan and Jacobean England, but was also significant in Spain. Drama of this period also had religious origins in the medieval MYSTERY PLAYS, which were based on Christian themes.

In the late 16th and early 17th centuries London saw the greatest and most varied works of drama since those of the Greeks, with the plays of Kyd, Beaumont and Fletcher, Marlowe's *Doctor Faustus* and *Tamburlaine the Great*, and above all the tragedies of Shakespeare, who also wrote lasting comedies and a series of history plays. His contemporary, Ben Jonson, wrote in the genre of the Comedy of Humours, examples of which are *Volpone* and *The Alchemist*, plays in which the protagonists personify physiological humours determining their personalities and behaviour. The *Revenge's Tragedy*, by Cyril Tournemire, was a common type of Jacobean drama known as the REVENGE PLAY of which *Hamlet* is also an example. In Spain at this time Lope de Vega wrote hundreds of plays on a variety of themes.

Drama also flourished in the France of Louis XIV with the neo-classical poetic tragedies of Corneille and Racine, examples of which are *Le Cid* and *Phèdre*, plays which adhered to the three unities of time, place and action, the 16th-century development of the Aristotelian unities. The comedies of Molière reflected the influence of the *Commedia dell'Arte*.

The twentieth century has seen another revival of drama, receiving its impetus from the Naturalistic plays of Chekhov, Ibsen and Strindberg, which deal with themes of alienation, and status of women, and other modern preoccupations. Modern drama is characterized by experiments in forms and styles,

Drammen

Dresden, an 18th century print of the beautiful city devastated by Allied bombs in WW II

Dress, neither was probably the first national costume were next to the skin

Dress instantly marks national identity and social status within a group

Dreyfus Affair, a crisis with out-moded the separation of church and state in France

anging through ARTAUD'S THEATRE IN CRUFTY, T. S. E. NOT S verse dramas and PIRANDELLO'S surrealism to the brevity of Samuel BECKETT'S *Heath*, which lasts for only 30 seconds.

Drammen town in SE Norway at the head of Drammens Fjord, the western branch of the Oslo Fjord, 32km (20 miles) SW of Oslo. It is an important timber exporting port. Pop. (1970 est.) 49,300.

Draper, John William (1811-82), US chemist, pioneer in spectral analysis and in photography. He took the first photographs of the Moon, in 1839, and was one of the first people to use DAGUERRÉ'S photographic process, taking the first successful photograph portrait in sunlight.

Draper, Ruth (1884-1956), US actress, noted for her gifted mimicry and dramatic monologues that she wrote herself. She used only a bare stage with very few props. She made her professional stage debut in New York in 1915.

Draughts, board game, called checkers in the USA, played between two people on a chess board (an eight by eight array of alternate light and dark squares). Each player starts with a set of 12 discs, called men, arranged on dark squares of the first three rows of his side of the board. The players take it in turn to move men one square diagonally forwards. A player may not move a man to a square already occupied by one of his own pieces, if that square is occupied by an opponent's piece it may be "jumped" (providing the next square on that diagonal is empty) and the opponent's piece removed from the board. A man reaching the opponent's back line can be "crowned" as a king (generally denoted by stacking one disc on top of another), which is able to move diagonally backwards as well as forwards. The object of the game is to capture all the opponent's men or to block them in such a way that none can move.

Dravidian, family of languages spoken in India by nearly ten million people. The four major Dravidian languages are Telugu, Tamil, Kannada (Kannarese) and Malayalam. Tamil is also spoken in Sri Lanka, another Dravidian language, Brahui, is spoken in Pakistan.

Drawbridge, or **bascule**, bridge with one or more spans that are hinged and counter-weighted, allowing the raising of the span, so that vessels may pass. Bascules have their origin in castle moat drawbridges. This type of bridge is common on canals in Britain and The Netherlands, the most famous example is probably Tower Bridge, London.

Drawing, the art of representation in chalk, crayon, charcoal, pen or pencil. The Egyptians made brush-drawn sketches on papyrus. During much of the Middle Ages drawing as an autonomous technique was mainly restricted to the pattern book used in workshops.

Drawing achieved independence as a means of artistic expression with LEONARDO DA VINCI. He considered his sketches like the rough drafts of poems, his unfinished drawings were used to suggest fresh ideas for major works. RAPHAEL was influenced by him and was considered a great natural draughtsman. MICHELANGELO'S drawing technique of close hatching resembled the marks made by the chisel. At this time Giorgio VASARI collected drawings to keep a record of the various styles of the artists. In the academy of the CARRACCI drawing was systematically cultivated. Among north Italians, Tintoretto produced some of the greatest drawings. In N Europe, Albrecht DÜRER was famed for his superb and varied drawings and Pieter BRUEGHEL for his studies of genre figures and landscapes. REMBRANDT, the Pre-Raphaelites, Edgar DEGAS, Vincent Van GOGH, Henri MATISS, Paul KLEE and Pablo PICASSO were all particularly interested in the art of drawing, as were the sculptors Auguste RODIN and Aristide MAILLOI. Among more recent artists who have shown interest is J.M.W.

Drayton, Michael (1563-1631), English poet. He was the author of a great number of historical, religious, pastoral and other verse which included the fine lyric *Silence*

There's No Help (1594) and *Polyolbion* (1612-22).

Dreadnought, HMS, one of the first of a class of British battleships launched in 1906. It was faster (maximum speed 21 knots), more heavily armoured and larger than its predecessors (displacement 21,407 tonnes), with steam turbine engines and a main armament of ten 12in calibre guns. These changes enabled the battleships to direct fire over long ranges and reduce the danger of torpedo attack. The *Dreadnought* class was followed by a class known as *Superdreadnoughts*, with even larger guns and displacements of about 27,000 tonnes. See also pp 568-569.

Dream, mental activity associated with the rapid-eye-movement (REM) period of sleep. It is usually a train of thoughts, scenes and fancies expressed in visual images and symbols rather than sound or language. On average, a person dreams for one-and-a-half to two hours during eight hours of sleep. The dream content is thought to be connected with body changes, eg eye movements become "watching" in the dream. Dreaming is a necessary restorative and assimilative process. People deprived of dream-sleep become irritable and disturbed. Since ancient times, dreams have been a source of prophecy and visionary insight or seen as soul-wandering or visitation by the gods. Although dreams are sometimes regarded as sinister and amoral, and are thus repressed, modern psychology (especially PSYCHOANALYSIS) aims at bringing people to terms with their dreams, seeing them as creative, educative, the playground of the mind, and an essential part of the whole personality. See also pp 130-132, 1120, 1892.

Dream of Gerontius, The, oratorio by Edward ELGAR. A setting of the poem by Cardinal Henry NEWMAN, it is scored for three solo voices, mixed chorus and orchestra. It was first performed at the Birmingham Festival in 1900.

Dream of the Rood (c 9th century), Old English poem about the Crucifixion. In it the Cross itself speaks, telling of Christ's agonies in harrowing detail. It occurs as fragmentary runic inscriptions on the 8th century Ruthwell Cross in Dumfriesshire, but the complete version is in the later Verulam Book.

Drebbel, Cornelius Jacobszoon (1572-1633), Dutch inventor who built the first submarine in 1620. It travelled along the River Thames, London, at a depth of 4.5m (12 1/2 ft). James I is reputed to have ridden in it. Covered with greased leather, the craft was propelled by oars through watertight flaps.

Dredger, ship or floating platform equipped for dredging, either to keep docks, harbours and river channels free from silt or for mining underwater. Dredgers are also used to rake up mussels or molluscs, crustaceans and other edible sea creatures from the sea-bed. See also pp 458-459.

Dredging, excavation of material from the bed of a river, harbour or other area of water to deepen it or remove a blockage. Dredging is also used in some surface mining, eg gold and tin, and it is sometimes profitable to flood an area in order to let dredgers operate. Huge dredgers are used in lakes for tin mining in Malaysia. See also pp 458-459.

Dreikanter, or ventifact, desert pebble with several flattened surfaces giving it a pyramidal shape, due to erosion by wind-blown particles. See also p 224.

Dreiser, Theodore Herman Albert (1871-1945), US writer, one of the foremost exponents of American naturalism. Many of his works describe the man's system of biological and social forces. His greatest work is considered to be *An American Tragedy* (1925), about a poor man driven to murder by his dreams of success. See also p 1772.

Dresden, city in SE East Germany, on the River Elbe, 161km (100 miles) S of Berlin, capital of Dresden province. Settled by the Germans in the 9th century, it was occupied by Prussia during the Second Silesian War and the SEVEN YEARS

WAR. It suffered severe damage from Allied bombing during WW II. Dresden china has been famous since the 18th century, although it is in fact manufactured in Meissen Industries. Optical and precision instruments, food processing, glass, chemicals and clothing. Pop. 506,100.

Dresden, common English misnomer since the 18th century, for the porcelain ware Meissen, named after its place of manufacture, near Dresden in Germany. **Dress**, clothing and decorating of the human body, practised since earliest times in most civilizations. The first use of dress is not known, but tools have been found on Neanderthal sites that were probably used for softening leather for use as clothing. The ability to weave was generally one of the earliest skills developed by agricultural rather than pastoral, societies.

The social and psychological purposes of dress have been much debated. The evidence of cave paintings and that derived from anthropological studies of primitive societies suggest that little distinction can be drawn between dress and other forms of body ornamentation such as painting and jewellery. The commonness of clothes in regions where they are not dictated by the climate suggests that warmth was not their primary purpose, although protection from thorns and from the sun may have been important. The convenience of having pockets and pouches may have been of equal practical importance to that of body-covering. It seems unlikely that dress is connected with any innate sense of modesty, since the parts of the body covered or exposed by dress vary greatly between cultures.

It is hard to study in detail the full history of dress within a culture. Records of clothing styles are rarely complete, but it is an apparently universal phenomenon that dress is a fundamental means of indicating status within a group and of preserving its identity in relation to outsiders. Thus the dress of the leading members of a society has habitually been heavily ornamented. In many cases, such as noble Chinese women whose feet were bound or 18th century European women who wore model ships in their hair or huge hooped skirts, dress has been a means of conspicuously indicating that the wearer was a member of the leisured classes. By contrast, the clothes of the less privileged have been practical and often anonymous in colour (since bright dyes were expensive and rare until modern times). Nevertheless, the existence of many peasant traditions of decorated clothes shows that probably the most basic psychological role of dress is to make the wearer attractive in the eyes of his or her peers.

The history of Western dress is usually told in terms of the changing fashions of the upper classes, whose clothes have sometimes been preserved or well documented in sculpture and painting. Despite the often extravagant vagaries of fashion, the dress of most of the population did not dramatically change until the Industrial Revolution introduced the first cheap mass-produced cotton clothes.

In ancient times, from the rise of Mesopotamia to the fall of Rome, the upper classes wore variations on two basic styles. The first was a cloth wrapped around the body, either as a kilt as in Egypt or a toga in Rome, and a tunic, worn either thigh-length or to the ground. Trousers were known in early times in India, Persia and Japan, and among the Scythians, but they were not adopted in the West until the Roman Empire extended to the colder climates of Britain and Germany. Nakedness was not unusual in ancient societies, particularly at sporting and religious festivals.

Trousers, worn under an abbreviated Roman tunic, were adopted in most of the barbarian kingdoms. The noble and warrior class tended to indicate their social superiority in their military dress, such as armour until the 14th century. Then clothes began to be shaped to the body and the idea of fashion emerged, dominated until the 19th century by the styles adopted in the European courts. In

the royal courts there arose a tradition of fantastic and fast-changing fashions that often had no connection with utility or convenience and were generally dominated by topical concepts of masculinity and femininity or current tastes in art or aesthetics. Laws delineating the type of dress that could be worn, and prohibiting extravagance, usually for moral or religious reasons (the sumptuary laws), had been common in medieval times, perhaps indicating that they were hard to enforce. In 17th-century England the Puritans, denouncing worldliness in dress, attempted to revive them.

In the 19th century the typical dress of the middle classes, with grey or black trousers, frockcoat and top hat for men, gradually became accepted by the nobility, and courtly styles were worn only on the most formal, usually evening, occasions. Working class clothes, which had not substantially changed since the Middle Ages, also came to be based on middle class models. The technological achievements of the 19th and 20th centuries, such as the development of synthetic materials, have made possible the availability of "fashion" to the population as a whole. But much fashion is still dictated by designers catering for the most wealthy, and there is little indication that they are any less powerful than before.

Dressage, complex manoeuvres executed by a horse in response to the subtle movements of the rider's hands, legs and weight. It has been adopted by the equestrian world generally as a test of horsemanship and of a horse's development and state of training. Dressage was first included in the Olympic Games held in 1912.

Drew, Charles Richard (1904-50), US physician. His research at the Columbia Medical Center in 1940 led to the discovery that blood plasma could replace whole blood transfusions. During WWII he supervised the American Red Cross blood-donor project but was not allowed to donate blood himself because he was black; his continuing protest led to a change in policy.

Drew, George Alexander (1894-1973), Canadian politician. He was a lawyer, field-commander in WWI and a jurist. He served as prime minister of Ontario (1943-48) and later led the Progressive Conservative Party in the Canadian House of Commons (1949-56). He was Canadian High Commissioner in Britain (1957-64).

Dreyfus Affair (1894), French scandal in which Alfred Dreyfus, an army officer and a Jew, was charged with treason. Convicted under forged evidence of sending military information to the Germans, Dreyfus was deported for life. Evidence incriminating a Major Esterhazy was suppressed, but under pressure from Dreyfus supporters, Major Hubert Henri, an accomplice, confessed to the forgeries and committed suicide. After a second trial Dreyfus was pardoned in 1899, but it was not until 1906 that he was fully cleared. See also p.1661, 1667.

Dreyse, Johann Nikolaus von (1787-1867), German gunsmith. He invented a breech-loading needle-gun in 1816, which was used in the Prussian army after 1848. See also p.557.

Drier, or drying machine, in industrial processes, device to remove liquids, usually water, from wet solids, using direct, indirect or radiant heat. Direct driers use hot gases flowing over the solid. Indirect drying is done by passage of heat to the wet solid through a wall, as in passing material through internally heated rollers. In radiant-heat driers the liquid evaporates upon absorption of infra-red rays.

Driers, substances added to drying oils to accelerate the rate at which they harden. They are used in paints, varnishes, etc. Commonly used compounds include the naphthenate or oleate salts of lead, cobalt or manganese.

Drift, in aeronautics, change in an aircraft's flight path over the ground caused by a crosswind. To correct for this drift, the pilot "crabs" or takes a heading some-

what upwind of his required course to offset the movement due to the wind.

Drift, in geology, gradual change in the land mass, related to soil creep. In oceanography it indicates slow oceanic circulation. Sedimentary drift is a general description of surface debris, which is carried by either a river or glacier. It may also indicate an accumulation such as a snowdrift or sand drift. CONTINENTAL DRIFT is the movement of continents.

Drill, large, gregarious, ground-foraging MONKEY found in the rain forests of Central W. Africa. It has a black face, dog-like muzzle and large teeth. Smaller and less brightly coloured than the MANDRILL, it is nevertheless powerful and aggressive. Length 82cm (32in). Family Cercopithecidae. See also BABOON.

Drilling fluid, in drilling oil wells, mud pumped down to cool the drill and which carries the loose debris to the surface. Drilling mud is pre-mixed to ensure the correct viscosity. See also p.438.

Drilling rig, platform carrying a derrick and all the associated equipment used for drilling for oil or natural gas below the sea floor. Most rigs have long legs (usually three or four) located on the sea-bed, with a working platform up to 30m (98ft) above the water. They are sited up to 200km (125 miles) offshore, often connected to the mainland by underwater pipelines. See also pp.416-417, 438-439, 448-449.

Drilling ship, vessel equipped with modified oil drilling rigs, designed to take core samples of ocean-bed sediments, and used for both scientific research and commercial exploration. See also pp.199, 483.

Drinkwater, John (1882-1937), British poet and dramatist. He wrote several successful historical dramas such as *Mary Stuart* (1921), and was a founder of the Birmingham Repertory Company.

Drip-feeding, introduction of liquid nourishment directly into the veins of a patient who is unable to eat or drink due to unconsciousness, weakness or illness. Glucose sugar solution is commonly drip-fed; it is contained in an inverted bottle, and passes under gravity through a tube which terminates in a vein - usually in the forearm.

Driscoll, Jim (1880-1925), Welsh featherweight boxer. An exponent of the classic British style based on an upright stance and a straight left, he won British and European titles but a "no decision" verdict prevented him from winning the world championship from Abe Attell in 1909.

Driver ant. See ARMY ANT.

Droeshout, Martin (1601-1650), English portrait engraver of Dutch parentage. His engraving of William Shakespeare, which appeared in the first folio of his plays (1623), is one of two authenticated portraits of the poet.

Drogheda (Droichead Atha), town in NE Republic of Ireland, in a County Louth. It was a Danish town in the 10th century. In 1395 the Irish princes of Leinster and Ulster surrendered there to RICHARD II. Oliver CROMWELL stormed Drogheda in 1649 and most of the inhabitants were killed. The Battle of the Boyne was fought there in 1690 and the town surrendered to William III. Industries: textiles, brewing, engineering, chemicals, fertilizers. Pop. (1971) 19,744.

Dromedary, large domesticated CAMEL, a pack and riding animal valued also for its hide, wool, milk and meat. It has a long neck and legs, wide feet suited to walking on sand and snow, and a single fatty hump on its back. Height to 2m (7ft) at the shoulder. See also pp.318, 319.

Drone, male BEE or ANT, a member of a social order of insects. Its function is to mate with the queen and it plays no part in the everyday activities of the hive or nest. For this reason, anyone who lives by the work of others can also be referred to as a drone. See also p.43.

Drone aircraft, pilotless aircraft, remotely controlled by radio signals from the ground or from another aircraft. Drones may be used to tow targets for gunnery practice or in aerodynamic research. They can also carry explosives and be used, for example, in anti-submarine warfare.

Drosophila, two-winged fly of the HOVERFLY family Syrphidae. It is black and yellow, resembling a stingless BEE, and this mimicry provides effective protection from predators. Species *Ensisalis tenax*.

Drongo, noisy, pugnacious, insect-eating bird of South Africa, SE Asia and Australia. It has a thick, hooked bill, bristled nostrils, a long forked tail, iridescent blackish plumage and, in some species, ornamental feathers and crest. Length: 18-38cm (7-15in). Family Dicruridae.

Drop hammer, tool employed in drop forging. The falling weight (often powered with steam or air pressure) of the hammer and the upper die forces heated, soft metal into a lower die, forging it to the desired shape.

Dropsy, old name for OEDEMA.

Drosophila, genus of about 1,000 species of small flies, commonly known as fruit-flies. They are short-lived and their cells contain only four pairs of chromosomes. They are much used in breeding experiments by geneticists because they reproduce rapidly and their lines of heredity can easily be traced after chromosome damage or mutation. Order Diptera. See also p.179.

Drought, condition that occurs when EVAPORATION and TRANSPIRATION exceed PRECIPITATION for long periods. Four kinds are recognized: permanent, typical of arid and semi-arid regions; seasonal, in climates with well-defined dry and rainy seasons; unpredictable, an abnormal failure of expected rainfall; and invisible, when even frequent showers do not restore sufficient moisture.

Drowned coast, or submerged shoreline, once a term indicating a complicated landform that had been above sea-level and therefore exposed to wind and water erosion but was subsequently submerged. More recent theory suggests that all continental shorelines are submerged or drowned coasts or estuaries.

Drowning, death caused by suffocation in water or other liquid. It can occur in only a few inches of water, and most drownings among non-swimmers happen in shallow water, often quite close to shore and safety. The suffocation is caused both by water preventing air from being taken in and by water being drawn into the lungs. After loss of consciousness, a drowning person's heart may continue to beat for several minutes. For this reason artificial respiration should be attempted immediately after rescue.

Drug, in medicine, a chemical substance used to cure, prevent or alleviate a disease or deficiency (or their symptoms), either physical or mental. Drugs can be taken orally, injected, inhaled or applied to the skin. Today most drugs are synthesized in the pharmaceutical industry, although some are still obtained from plants, animals or minerals. There are now an enormous number that act in many different ways. Almost all (except eye drops and local anaesthetics applied to the skin) enter the blood stream and circulate to the site of drug action. As a result various reactions may accompany the main action. These side-effects vary in severity but can be serious, eg the pain-killer morphine causes vomiting, constipation and other undesired results. Dosages must be carefully controlled since some drugs are toxic, and all are poisonous if administered in large quantities. Also some people have an ALLERGY to particular drugs. Drugs are now given extensive clinical trials and are tested on animals before passing into general use.

Essentially, drugs act by altering the speed of cell activities. CHEMOTHERAPEUTIC drugs kill or inhibit the growth of pathogenic organisms such as bacteria, viruses and fungi. They include ANTIBIOTICS, and Quinacrine and various synthetics which act against malaria and other parasitic infections. Other drugs affect various systems in the body. For example, stimulants such as AMPHETAMINES and depressants such as ANALGESICS, NARCOTICS, BARBITURATES and ANAESTHETICS act on various parts of the nervous system. DIURETICS increase the flow of urine, anti-

coagulants inhibit blood clotting, probably by preventing the formation of FIBRIN or PROTHROMBIN or by decreasing the availability of THROMBIN, muscle relaxants and stimulants, hormones such as INSULIN and THYROIDINE, CORTISONE, immunological agents used in disease prevention such as vaccines. Sedatives, HYPNOTIC DRUGS, anti-depressants and HALLUCINOGENS are used for treating emotional and mental disorders. These control the symptoms rather than cure the illness but can be effective when combined with other forms of treatment.

Drugs are also used to alter states of the healthy body and mind. Many natural drugs have been used like this for centuries, eg MARIJUANA, OPIUM, morphine, CAFFEINE and COCA. But whether they are condoned and what constitutes abuse varies from culture to culture. Continued taking of some of them, and also of some synthetic drugs, can lead to physical and psychological dependence and hence DRUG ADDICTION. See also pp.1064, 1067, 1080-1081, 1088-1093, 1110, 1116-1117.

Drug addiction, the chronic (continual) use of and physical dependence on a drug that is initially taken for its pleasurable effect on mind and body. If the drug dose is decreased or stopped the addict experiences withdrawal symptoms, vomiting, muscle cramps, convulsions and delirium. Addicts also develop a TOLERANCE to the drug so that increasing doses are required to achieve the same effect. Physically addictive drugs include narcotics, eg HEROIN and MORPHINE, and depressants, eg alcohol and BARBITURATES. Other drugs can induce psychological dependence. See also pp.1080-1081.

Druids, pre-Christian Celtic priests in ancient Britain, Ireland and Gaul, who also served as judges, magicians, diviners, healers and teachers. Their religion, which was strongly ritualistic, was polytheistic and included belief in the immortality of the soul. The earliest Druidic records date from the 3rd century BC, but the Druids probably existed far earlier. They enjoyed a high social position and held considerable political power, but were suppressed in Roman territories. See also p.1274.

Drum, percussion instrument, generally a hollow cylinder or vessel with a skin stretched across the openings and struck with hands or beaters. They were among the earliest musical instruments, examples have been found dating from 6,000 BC. Drums have a crucial role in African music, in which large groups of drummers achieve complex rhythmic effects. Drums often also have an important social role, as in the "talking drums" used to send messages. In India a pair of tunable drums is one of the basic instruments of the classical tradition of music. Drums first appeared in European Classical music as Turkish band instruments around 1750. During the 19th century by far the most important drums were TIMPANI (kettle-drums), although military drums such as the snare drum and bass drum were sometimes used for effects. In the 20th century the role of drums in Western music has greatly expanded.

Drumfish, or croaker, bottom-dwelling tropical and temperate marine fish. It uses its air bladder and attached muscles to make drumming sounds. The marine black drum (*Pogonias cromis*) generally grows to 1.2m (4ft) and weighs up to 65.7kg (29lb). Family Sciaenidae.

Drumlin, hill created by a GLACIER out of either debris or bedrock. Drumlins usually occur in groups. The head end points towards the retreating glacier and is steeper and higher than the tapering tail. They are ellipsoidal in shape and the long axis is parallel to the movement of the parent glacier. See also DEPOSITION, p.224.

Drummond, William of Hawthornden (1585-1649), Scottish writer, chiefly remembered for his verbatim notes of Ben Jonson's visit to Scotland in 1618 and for his personal tragedy - his fiancée died on the eve of their wedding.

Drummond, William Henry (1854-1907), Irish-Canadian poet. He began his career as a physician practising in the Canadian backwoods, and his poems

Drupe, or stone fruit

Drury Lane Theatre, London's oldest existing theatre, was built originally in 1663

John Dryden wrote biting satires in support of the newly restored King Charles II

Dublin, the Dáil buildings, the lower house of parliament of the Irish Republic

Duccio, his religious works show a loosening and softening of the rigid Byzantine style

mirror the outlook of rural French Canadians. His works include *The Habitant* (1897), *Johnny Courteau* (1901) and *The Voyageur* (1905).

Drupe, or stone fruit, any fruit with a thin skin, fleshy pulp and hard stone or pip enclosing a single seed. Examples are plums, cherries, peaches, olives, almonds and coconuts. See also p.688

Drury Lane Theatre, London's oldest existing theatre. It was built in 1663 as the Theatre Royal and rebuilt in 1674 by Christopher Wren after being burnt down in 1672. The present theatre, re-styled in 1812 to the design of Benjamin Wyatt, has housed most forms of entertainment from opera to the circus.

Druses, or Druzes, Middle Eastern religious sect. An offspring of the ISMA'ILIA Muslims, it includes elements of belief from other religions. The Druses originated in the reign of al-Hakim (996-1021), the sixth Fatimid caliph of Egypt. Al-Hakim claimed to be divine, and a cult grew up about him of which the Druses are a continuation. They are named after al-Darazi, the first to proclaim the cult publicly. Stressing pure monotheism, they maintained that al-Hakim would live in hiding until his re-appearance for the Last Judgment. They also emphasized, however, the possibilities of direct communication with divinity as a living presence. They were persecuted in Egypt and fought many wars against both Turks and local Christians, and revolted against French rule in Syria in the 1920s. Their number in the mid-1970s was estimated at about 320,000.

Dryads, in Greek mythology, nymphs of the woodlands and guardian spirits of trees. Depicted crowned with leaves and sometimes carrying axes, they are particularly protective of oaks.

Dry cell, electric battery, a type of small LECLANCHE CELL containing no free fluid. In the commonest type the electrolyte is ammonium chloride paste, the positive electrode a central carbon rod and the negative electrode the zinc casing. Dry cells are widely used in torches and portable radios. See also pp.869, 902

Dry cleaning, method of cleaning fabrics using special solvent fluids and soaps without water. It was discovered by accident in 1849 by a French tailor, Jullien-Ben, when he noticed the cleaning effect of some spilt turpentine. Introduced into Britain in 1866, it now uses non-flammable solvents in special machines (washing by hand was originally used). Clothes are washed with solvent and dried in a warm-air tumbler. Special solvents are used for some stains. See also p.898

Dryden, John (1631-1700), English poet and playwright. He became known with his *Heroic Stanzas* on Oliver Cromwell's death in 1658, this was followed in 1660 by *Astrea Redux* praising Charles II. He was poet laureate (1668-88) and wrote numerous fine plays, poems and essays. His poems include *Annus Mirabilis* (1667), *Abraham and Achiphel* (1681), *Mac Flecknoe* (1682), *The Hind and the Panther* (1687), and *Alexander's Feast* (1697). His best-known plays include *All for Love* (1677) and *Mariage à la mode* (1673).

Dry-dock, See dock

Dry farming, growing crops without irrigation where the rainfall is below 50cm (20in) a year. Water loss and soil erosion are minimized, eg every other year the land is not used for crops, in order to conserve moisture. Crop density is adjusted to suit the amount of water available and drought-resistant varieties of plants are used. See also p.662

Drygalski, Erich Dagobert von (1865-1949), German geophysicist. In 1892 he led a voyage to Greenland and headed the German Antarctic expedition (1901-03) reaching the area that he named Kaiser Wilhelm II Land.

Drygalski Island, small island off the Queen Mary Coast of Antarctica. It was named after the German explorer Erich von DRYGALSKI who first observed the island from a balloon in 1902.

Drying oil, natural oil, such as linseed oil or cottonseed oil, that slowly hardens in

air to form a tough film. Drying oils are extensively used in paints, varnishes, lacquers, printing inks and putty. They are unsaturated compounds that harden by oxidation or polymerization, a process accelerated by adding DRIERS.

Dryopithecus, extinct group of apelike animals, the ancestor of modern APES and of man. The Dryopithecines lived about 30 million years ago, mostly in tree-houses, and remains have been found in Europe, Africa and Asia. See also pp.108, 109, 109

Drypoint, engraving technique characterized by a furry line produced by the burr or ridge thrown up along the edge of the incision made on the copper plate. REMBRANDT was the greatest master of this medium. See also ENGRAVING, PRINTMAKING

Dry rot, FUNGUS "disease" that attacks timber, reducing it to a dry, crumbly mass. Despite its name it thrives in damp, unventilated places. It spreads rapidly carrying its own supply of moisture, and can be prevented by treating timber with fungicides.

Drysdale, George Russell (1912-), English-born painter who emigrated in childhood to Australia. He was among the first painters to depict the Australian landscape and its inhabitants in new semi-abstract terms.

DSDP (Deep-sea drilling project), US scientific programme sponsored by the National Science Foundation to obtain a core from the mantle of the Earth by drilling through the crust (The moho, or base of the crust, is thinnest under deep oceans). The core was expected to carry a continuous fossil and sediment record of the Earth's history. The project was suspended in 1966 but drilling was resumed in 1968. See also pp.199, 481

DSL, See DEEP SCATTERING LAYER

DSRT, abbreviation of "deep-sea reversing thermometer", used for determining the temperature at depth. See also p.483

DTs (delirium tremens), serious condition occurring most often when alcohol is abruptly withdrawn from an alcoholic, occasionally as a reaction to barbiturates or other drugs. It produces tremor, loss of appetite, terrifying dreams, various mental and nervous-system disturbances and, if severe, delirium. It is thought up to 20% of sufferers die. See also p.1080

Dualism, doctrine in philosophy and metaphysics that recognizes two basic and mutually independent principles - such as mind and matter, body and soul, or good and evil. Characterized by precise definition of concepts, dualism contrasts with MONISM, in which reality has a single ultimate nature. Both PLATO and DESCARTES were dualists, but more modern philosophers, influenced by the discoveries of science, have tended towards monism.

Dual Monarchy, See AUSTRO-HUNGARIAN EMPIRE

Duan, Le, See LE DUAN

Dubai (Dubayy), one of seven states forming the federation of United Arab Emirates, in E Arabia, on the Persian Gulf. A dependency of Abu Dhabi until 1833, it became a British protectorate in the 19th century. Oil was discovered in the early 1960s and its production is now the chief economic activity. The capital is Dubai. Area approx. 3,885sq km (1,500sq miles). Pop. (1968) 59,092.

Du Barry, Marie Jeanne Bécu, Comtesse (1743-93), French adventuress. She was mistress of, among others, Jean du Barry, who facilitated her rise under the false title of Comtesse du Barry, eventually engineering, through a marriage to his brother, her acceptance as last mistress of Louis XV of France. A great patron of the arts and normally politically inactive, she was executed by the Revolutionary tribunal for associations with the British and her aid to the émigrés.

Dubawnt Lake, lake in North-West Territories, N central Canada. Located N of the tree line, it is icebound for most of the summer. One of Canada's largest lakes, it covers 2,576sq km (1,000sq miles). The Dubawnt River flows through the lake then E to Baker Lake at the head of Ches-

terfield Inlet on Hudson Bay. Length 914km (580 miles).

Dubček, Alexander (1921-), Czechoslovak Communist Party secretary, leader of liberal reform movement during the late 1960s. He earned enthusiastic national support with his commitment to "the widest possible democratization". The USSR, however, viewed the reform programme as a threat to their economic domination of the country, and on 20-21 Aug. 1968 Warsaw Pact forces occupied Czechoslovakia. A purge of party leaders followed and Dubček was removed from office. See also p.1724

Dublin, county in E Republic of Ireland, in Leinster province, on the Irish Sea. Lying in the N, the land gradually rises to the Wicklow Mts in the S and is drained chiefly by the River Liffey. Beef and dairy cattle are raised and wheat, barley and potatoes are grown. The county town is Dublin, the capital of the Republic. Area 922sq km (356sq miles). Pop. (1971 prelim.) 849,500.

Dublin (Baile Átha Cliath), capital of the Republic of Ireland, at the mouth of the River Liffey on Dublin Bay. It was a Danish town until 1014 when Brian Boru defeated the Danes. They regained control, however, until 1170 when Richard Strongbow took Dublin for the English and the city became the seat of English government in Ireland. In the 19th century Dublin suffered much bloodshed in nationalist attempts to free Ireland from English rule. Strikes beginning in 1913 finally resulted in the EASTER RISING of 1916. The city has the Christ Church Cathedral (1053), St Patrick's Cathedral (1190), Trinity College (1591), University College (1908) and the ABBEY THEATRE (1904), and was the birthplace of George Bernard Shaw, James Joyce and Oscar Wilde. Industries: brewing, textiles, clothing, footwear, fertilizers. Pop. (1971) 567,900. See also pp.1314, 1469-1471, 1767, 2070.

Dublin Bay prawn, also called Norway lobster, commercially valuable lobster. It is often sold as "scampi". Order Decapoda, species *Nephrops norvegicus*. See also pp.31, 746.

Dubliners (1914), volume of short stories by James Joyce set in Dublin and presenting a "moral history" of Ireland. With precision and irony, the author evokes what he saw as the spiritual paralysis afflicting Dublin society. See also pp.1766, 1774.

Dubois, Marie Eugene François Thomas (1858-1940), Dutch anatomist and geneticist. He discovered the remains of JAVA MAN in 1890 while excavating caves on the islands of Sumatra and Java. He published his findings and returned to Europe, where he became professor of geology at the University of Amsterdam in 1895. See also p.112.

Dubuffet, Jean (1901-), French painter and sculptor. Among his best-known works are assemblages of glass, sand, rope and other junk arranged into crude shapes, which he called *poies*. He also collected the work of psychotics and others who were untrained (art brut, or raw art).

Duccio di Buoninsegna (c.1265-1315), Italian painter, the first great painter of the SIENNESE SCHOOL. He infused the rigid Byzantine style of figure painting with a new humanity and vivacity seen in that era only in Giotto's work, and with a superlative colour sense, feeling for composition and dramatic rendering of religious subjects. His major surviving works are the *Rucellai Madonna* (1285, Uffizi, Florence) and the *Maestà altarpiece* (1308-11, cathedral museum, Siena).

Duce, name taken by MUSSOLINI as leader (in Latin *dux*) of the Italian nation. His Latin origin was intended to make the title evocative of the past glories of Imperial Rome.

Duchamp, Marcel (1887-1968), French painter who caused a sensation in New York at the ARMOY SHOW (1913) with his *Nude Descending a Staircase*. He later helped found the DADA movement in New York, invented "ready-made" art, which treats commonplace objects as works of art, and he constructed many non-functional machines. Most of his works

are in Philadelphia, including his celebrated *The Bride stripped bare by her bachelors, even* (1915-23). See also pp 1684-685, 1684

Ducharme, Rôjean (1942-), Canadian novelist. His novels, which combine reality and fantasy, include *The Swallower* (1966), *L'océanisme* (1968) and *La fille de Christophe Colomb* (1969)

Duchem of Malfi, The, revenge tragedy by JOHN WEBSTER, first performed in 1613. Its powerful poetry evokes a uniquely macabre view of Renaissance corruption and violence. It has been performed often since its revival in the Romantic era

Duck, worldwide waterfowl valued as game and domesticated for its eggs and meat, which is high in nutritional value. Most ducks nest in cool areas and migrate to warm areas in winter. All have large bills, short legs, and webbed feet. Their colour is varied, and their dense plumage is underlaid by down and waterproof feathers. Dabbling ducks feed from the water surface, others dive for food. All strain seeds, aquatic insects, crustaceans and molluscs from the water with their flat bills. Most engage in complex courtship, lay a large clutch of eggs and are flightless during a post-breeding moult. There are seven tribes: eiders, shelducks, dabbling ducks, perching ducks, pochards, sea ducks and stiff-tailed ducks. Length 70-60cm (1-2ft), weight to 7.2kg (16lb). Family Anatidae. See also pp 80, 325

Duckbill. See PLATYPUS

Duckweed, family (Lemnaceae) of four genera including 25 species of tiny aquatic, monocotyledonous flowering plants. The flowers are almost invisible. Small flat discs replace the leaves. The watermeal (*Wolffia arrhiza*) is the smallest of all flowering plants

Ducornet, Elie (1831-1906), Swiss journalist who advocated pacifism. In 1891 he founded the International Peace Bureau at Bern, and with his fellow countryman Charles Gobat shared the 1902 Nobel Peace Prize

Ductless glands. See ENDOCRINE SYSTEM

Dudek, Louis (1918-), Canadian poet and publisher. In addition to writing his own poetry he founded the Contact Press (1952-67) and Delta Canada (1964-72), both of which published the work of young Canadian poets

Dudintsev, Vladimir Dmitriyevich (1918-), Soviet novelist. His works include the collected stories *With Seven Brothers* (1952) and the novels *Not by Bread Alone* (1956) and *Poplar on the Other Bank* (1967)

Dudley, Sir Edmund (c 1462-1510), English lawyer. Speaker of the House of Commons in 1504, he was a ruthless collector of taxes for HENRY VII. He was executed for treason by HENRY VIII

Dudley, John, Duke of Northumberland. See NORTHUMBRIA, JOHN DUDLEY

Dudley, Robert, Earl of Leicester. See HICESTER, ROBERT DUDLEY, EARL OF

Dudley, town and metropolitan district of the W central Midlands, England, 16km (10 miles) W of Birmingham on a ridge overlooking the Black Country. It is dominated by a castle. Today Dudley is a major coal mining centre. Pop. (1971) 185,535

Duesenberg, its car. In 1930 when it was introduced it was one of America's most expensive cars. It had a 'straight-eight' 6.4 litre engine which gave it a top speed of over 100 km/h (75 km/h). See also p 44

Dufay, Guillaume (c 1400-74), Burgundian composer, the leading member of the Netherlands school which then dominated Church music. The bulk of his compositions are MOTETS and settings of the liturgy

Duff, Alexander (1806-78), Scottish missionary in India who wanted to end Hinduism and persuade the people to accept the traditions and philosophy of the West. See also p 1617

Duff, Roger Shepherd (1912-), New Zealand anthropologist. His excavations led him to believe that the Māori hunter period was an early phase of MAORI (ie Polynesian) culture, rather than

representing a pre-Polynesian one, as had previously been thought

Duffy, Sir Charles Gavan (1816-1903), Irish-Australian statesman and writer. He helped found and edit the *Nation* (1842) and was tried for his political activities. He was acquitted and emigrated to Australia where he entered politics, becoming Prime Minister of Victoria (1871-72). He wrote *Ballad Poetry of Ireland* (1845), *Young Ireland - 1840-50* (1880-83) and *Conversations with Thomas Carlyle* (1892)

Duffy blood groups, method of 'typing' blood based on three genes, Fy^a, Fy^b and Fy^c. Fy^a and Fy^b are non-dominant alleles and Fy^c is recessive. Gene Fy^c is most frequent in Negroes (about 85%), only 3% of Europeans have it

Dufour, Guillaume-Henri (1787-1875), Swiss general and cartographer. As commander of the Swiss army he suppressed the 1847 SONDERBUND insurrection. He was one of the founders of the RED CROSS

Dufy, Raoul (1877-1953), French painter. An IMPRESSIONIST, Dufy converted to the style of FAUVISM early in his career (c 1905), under the influence of Henri MATISSE. His style changed again (c 1909) while he was with Georges BRAQUE at L'Estaque. He developed a bright, decorative, calligraphic style well suited to his subjects, such as racing and boating scenes

Duggan, Maurice (1922-), New Zealand writer. His short stories, noted for their experimental style, appeared in a collection, *Immanuel's Land* (1956)

Dugong, or sea cow, large plant-eating aquatic mammal found in shallow coastal waters of Africa, Asia and Australia. Grey and hairless, the dugong has no hind legs, and its forelegs have been modified into weak flippers. Length 2.5-4m (8-13ft), weight 270kg (600lb). Family Dugongidae. See also p 87

Dugout canoe, type of boat formed from hollowed-out trees, found all over the world in primitive maritime and riverine communities. The hull is hollowed by burning, chiselling or scraping and is streamlined on the exterior. An outrigger is sometimes added for stability

Duhamel, Georges (1884-1966), French playwright and novelist. He was a member of the Abbaté group, and his works reflected a deep humanism. *Civilisation* (1914-17) won the Prix Goncourt in 1918

Duiker, or duikerbok, small sub-Saharan African antelope usually found in scrubland. The female is larger than the male and occasionally carries stunted horns, the horns of the male are short and spiky. Duikers are grey to reddish yellow. Height up to 66cm (26in) at the shoulder, weight up to 17kg (37lb). Family Bovidae. Species *Livicapra grimmia*. See also p 310

Duikerbok. See DUIKER

Duisburg, city in W West Germany, at the confluence of the Rhine (Rhein) and Ruhr rivers. During WWII it was the centre of the German armaments industry, and suffered extensive damage. Today it is Europe's largest inland port and one of Germany's leading iron and steel producers. Other industries: textiles, chemicals, metal products. Pop. (1969 est.) 460,517

Dukas, Paul (1865-1935), French composer of orchestral music and the opera *Anane et Barbe Bleue* (1907). His best-known work is the orchestral piece *The Sorcerer's Apprentice* (1897)

Duke, European aristocratic title, ranking just below a prince. In the Middle Ages he was a leader in battle and the ruler of a county or small estate. The first English Duke was Edward, the Black Prince, made Duke of Cornwall in 1337

Duke, Geoff (1923-), British motor-cyclist who dominated grand prix circuits in the 1950s, first with Norton and later Cullera. Four times 500cc world champion (1951, 1953, 1954, 1955) and twice 350cc (1951, 1952) he brought a new approach to riding with his crouching style and one-piece leather clothing

Duke, Benjamin Newton and James Buchanan (1855-1929, 1856-1925), US industrialists, founders of the American Tobacco Company (1890). They contri-

buted heavily to Trinity College, Durham in North Carolina, renamed Duke University after them

Duke of Edinburgh. See PHILIP, PRINCE

Dulae, Edmund (1882-1953), French-born English illustrator, designer and painter. He is famous for his rich, fantasy-ridden watercolour illustrations for *The Arabian Nights* (1907), *Omar Khayyam* (1909), *Treasure Island* (1927) and many books of fairy tales

Dulbecco Renato (1914-), US virologist. He shared the 1975 Nobel Prize in physiology and medicine with David Baltimore and Howard Temin for his contributions to an understanding of the interaction between tumour viruses and the genetic material of the cell

Dulcimer, medieval stringed instrument originally Persian, with a flat, triangular sounding board and ten or more strings struck with hand-held hammers. It was the prototype of the psalterion and cimbalon

Dulles, John Foster (1888-1959), US Republican political leader. Before WWII he held various diplomatic posts. He helped to form the UN at the San Francisco Conference in 1945 and was US delegate there (1946, 1947, 1950). He was Secretary of State (1953-59) and a major influence on US policy during the COLD WAR. See also p 1739

Dulong, Pierre Louis (1785-1838), French chemist and physicist. He discovered the explosive nitrogen trichloride, and in 1819 he helped formulate Dulong and Petit's law of specific heats which aided in the determination of atomic weights

Dulong and Petit's law, physical rule stating that the product of SPECIFIC HEAT and ATOMIC WEIGHT is constant (about 6.2) for the heavier solid elements. The specific heat of an element was one of the easier values to measure during the early days of chemistry, and an approximation of the atomic weight could be made by dividing the specific heat by 6.2

Dulse, any of a group of large red seaweeds (genus *Rhodomenia*), especially *R. palmata*, that are used as food condiments. Dulses grow chiefly in cold northern seas. See also RED ALGAE

Duluth, Daniel Greysolon, Sieur (1636-1710), French-born Canadian explorer. He explored Lake Superior in 1678, founded Fort St Joseph in 1686, and was commandant of Fort Frontenac (1695-96). The city of Duluth, founded as a fort in 1679, is named after him

Duma, Russian representative council or parliament, established in 1906 in response to the political agitation of the previous year. The Duma met four times in 1906, 1907, 1912, 1917, but the tsar refused it any real power. It was abolished after the revolution of Oct 1917. See also p 1649

Dumas, Alexandre (père) (1802-70), French novelist and dramatist. Largely self-educated, his success began with his numerous romantic historical plays, such as *La Tour de Nesle* (1832). He won a large following with swashbuckling historical novels such as *The Three Musketeers* (1844), *The Count of Monte Cristo* (1844) and *The Black Tulip* (1850). See also pp 1574, 1577

Dumas, Alexandre (fils) (1824-95), French dramatist and novelist. The illegitimate son of Alexandre DUMAS (père), his first great success was *La Dame aux Camélias* (1852), a realistic view of the demi-monde milieu of Paris. His later plays, such as *Les idées de Madame Aubray* (1867), helped to provoke changes in French social laws. See also pp 1574, 1577

Du Maurier, Dame Daphne (1907-), British novelist, granddaughter of George DU MAURIER. She also wrote plays, short stories, and a biography of Branwell Brontë. Her popular novels include *The Loving Spirit* (1931), *Jamaica Inn* (1936), *The Glass Blowers* (1936), *Rebecca* (1938) and *Frenchman's Creek* (1941)

Du Maurier, George Louis Palmella Bussom (1834-96), British novelist, poet and artist. His major novels, based on his childhood in France, are *Peter Ibbetson* (1891) and *Trilby* (1894). His illustra-

Dugongs "breast feed" the calves and may have inspired the mermaid myth

Dulcimer, an instrument which developed via the clavichord, ultimately into the piano

Alexandre Dumas (fils), his illegitimacy explains the didactic tone in his work

Daphne du Maurier is one of a family of highly creative English writers, actors and artists

Du Maurier, Sir Gerald

sons which appeared in *Punch* and *Cornhill Magazine*, re-create the mid social satire of the novels.

Du Maurier, Sir Gerald (1873-1934), English actor-manager, the son of George DU MAURIER and father of Daphne DU MAURIER. He specialized in light comedy roles, and he managed Wyndham's Theatre (1910-25). He was knighted in 1922.

Dumbarton Oaks Conference (1944), meeting held near Washington, DC, by representatives of the USA, Britain, the USSR and China. The six-week meeting resulted in a plan for an international organization to preserve world peace after WWII. The structural proposals made at that meeting, especially on the composition and powers of the Security Council, became the basis for the UN charter of 1945. See also p.1784.

Dumbbell Nebula (M27, NGC 6853), planetary nebula in the constellation of Vulpecula. Irregular in shape, it is of about the 8th magnitude. It was discovered in 1764 by Charles Messier. See also p.985.

Dum-Dum, town in West Bengal state, India, a suburb of Calcutta. In the 19th century its arsenal was the first to produce a type of lead-nosed bullet (dumdums) shaped so that they inflict tearing wounds. Pop. (1970) 31,363.

Dumfries and Galloway, the southern most Scottish region, formed in 1975 from the former counties of Dumfriesshire, Kirkcubrightshire and Wigtownshire. It stretches from the S. and SW coasts of Scotland to the Southern Uplands. The chief towns are Dumfries, Lockerbie, Kirkcubright and Stranraer. Pop. (1974) 143,711.

Dumfries, county town of Dumfries and Galloway Region, S Scotland, on the River Nith. During the wars of Scottish Independence it was raided many times by the English because of its position close to the border. Robert Burns lived there and was buried in St Michael's Church in 1796, his house is now a museum. Industries: knitwear, hosiery, chemicals. Pop. 29,400.

Dumfriesshire, former county in S Scotland, N of the Solway Firth on the border with England, now part of Dumfries and Galloway Region. Sheep are raised on the uplands, and barley, oats and potatoes are grown in the valleys. Dumfries is the county town. Industries include coal-mining, limestone and sandstone quarrying, and salmon fishing. Area 2,784 sq km (1,075 sq miles).

Dumortierite, silicate mineral, hydrous aluminum borosilicate, $Al_3B_3Si_3O_{18}(OH)_4$. It is found scattered in metamorphic rocks, and occurs usually in fibrous masses, rarely as orthorhombic crystals. It is glassy to pearly violet or blue. Properties: hardness 7, s.g. 3.3.

Dumping, in economics, practice of selling goods abroad at prices below those in exporter's home market (after allowance for transport and other costs). Dumping is a competitive measure employed to shore up production levels during a business depression. It is also the method used to eliminate competing domestic producers in the export markets.

Dunant, Jean Henri (1828-1910), Swiss philanthropist. His account of the sufferings of the wounded at the Battle of Solferino appeared in 1862 with a plea for relief for wartime wounded. His campaign, to which he devoted all his fortune, succeeded in bringing about the Geneva Convention in 1864 which set down humane rules of conduct in war and established the international Red Cross. He received the first Nobel Peace Prize in 1901 with Frederic Passy. See also p.1651.

Dunaway, Faye, (1941-), US actress whose rise to stardom was enured by the success of Arthur Penn's film *Bonnie and Clyde* (1967). Her roles have revealed a flair for comic irony and for her part as a fanatical television producer in *Network* (1976) she received an Academy Award.

Dunbar, Paul Laurence (1872-1906), US author. His poems written in the dialect of Black people earned him the title 'poet of

his race'. He demonstrated a facility for a mixture of sadness and humour in *Lyrics of Lowly Life* (1896), about Southern Black life before the Civil War.

Dunbar, William (c.1460-c.1520), Scottish poet. He was a Franciscan, possibly a friar who later became a diplomat in the court of James IV. Dunbar was a poet of great versatility. His works include coarse satire - *The Two Marys*, *Women*, polished allegory - *The Golden Targe* - and moving elegy - *Lament for the Makaris*. See also p.1475.

Dunbar, Battle of (1650), victory of the English army under Cromwell over the Scots after the Scottish estates had proclaimed Charles II king. 3,000 Scots were killed.

Dunbartonshire, former county in W central Scotland, E of Loch Long, now part of Strathclyde Region. It has a mountainous terrain and Loch Lomond in the N is a great tourist attraction. The River Clyde flows through the S, the county town is Dunbarton. Industries: shipbuilding, textiles, light engineering. Area 627 sq km (242 sq miles).

Duncan, name of two kings of Scotland. Duncan I was the grandson of Malcolm II and was killed in a feud with Mac Beth in 1040. Duncan II (d.1094), his grandson was given as a hostage by his father Malcolm II to William I of England. With the help of the English and Normans he recaptured the Scottish throne briefly in 1093 from Donald Bane, but was killed the following year after his followers had been driven out. See also p.1316.

Duncan, Adam, 1st Viscount Duncan of Camperdown (1731-1804), British naval commander. He commanded HMS *Valiant* at the capture of Havana (1762) and was made an admiral in 1795. He was commander-in-chief of the North Sea fleet from 1795 to 1801.

Duncan, Isadora (1878-1927), US dancer, one of the greatest pioneers of, and influences on, modern dance. She lived in Europe for most of her life and achieved fame for her style of dancing, which was based on Greek Classical art. She died tragically when a scarf she was wearing caught in the wheel of a car and strangled her. She wrote an autobiography, *My Life* (1926-27). See also p.1759.

Dunciad, *The* (1728 and 1743), satirical poem by Alexander Pope ridiculing dullness in general, those authors he considers to be dull and other literary vices. In four books, Bayes (the contemporary poet laureate, Colley Cibber) is enthroned as king and succeeds in spreading soporific dullness over every aspect of contemporary life. See also p.1535.

Dundalk, port in NE Republic of Ireland in County Louth, near the mouth of Castletown River. Throughout its history Dundalk has been of strategic importance as a result of its location in a natural pass into Northern Ireland. Industries: brewing, engineering, textiles, exports cattle and grain. Pop. (1971) 21,672.

Dundas, Henry, 1st Viscount Melville (1742-1811), British politician. He was a member of Parliament from 1774 to 1802 and the chief electoral manager for Pitt's government in Scotland. In 1806 he was the last British official to be impeached. He was acquitted.

Dundee, city in Tayside Region, E Scotland, on the N shore of the Firth of Tay. It is an important port and a university town. It was a centre of the Reformation in Scotland in the 16th century. Industries: textiles, food processing, shipbuilding, engineering. Pop. (1974) 181,243.

Dundee, John Graham of Claverhouse 1st Viscount, See CLAVERTON JOHN GRAHAM OF.

Dune, hill or ridge of wind-blown particles, most often sand. Dunes are found wherever sandy particles carried by the wind are deposited. They occur in a variety of shapes depending on the direction of the wind, whether or not it is constant, and the surrounding landforms. See also p.229, 229.

Dunedin, city in Otago, a province in South Island, New Zealand. When Dunedin was founded in 1848 by Scottish Free Church settlers, the Gaelic name for Edin-

burgh was preferred in place of the planned 'New Edinburgh'. It is a hilly town on Otago harbour, enriched by gold-mining, and with modern industries such as chemical production, food processing and brewing. It is the site of the University of Otago (1871). Pop. (1971) 82,216.

Dunes, Battle of the (June 1658), engagement near the beach at Dunkirk in which the French, aided by English Commonwealth troops and led by the Viscount de Turin, defeated the Spaniards, assisted by English royalists under the Duke of York.

Dunfermline, town in Fife Region, a central Scotland, 21 km (13 miles) NW of Edinburgh across the Firth of Forth. It has an 11th-century abbey and was the birthplace of Andrew Carnegie. Dunfermline has the headquarters of Carnegie Trusts. The Royal Naval dockyards are nearby. Industries include textiles, coal-mining and engineering. Pop. 49,908.

Dung beetle, small to medium sized ARAB BEETLE that feeds on dung. Some species form balls of dung as food for their larvae. The beetles may roll the balls some distance before burying them in the ground. Family Scarabaeidae, (typical genus *Onthophagus*). See also pp.37, 43.

Dungeness, promontory in the most southerly part of Kent. It is a bank of shingle 24 sq km (9 sq miles) in area which extends 46 cm (18 in) each year. There is a lighthouse, signal station, bird sanctuary and a narrow-gauge railway.

Dunham, Katherine (1914-), US dancer and choreographer. In 1945 she founded the Katherine Dunham Dance Company and the Katherine Dunham School of Cultural Arts in New York City. Her choreography is based on ethnic ritual folk-stories and the everyday lives of Blacks in Africa, the Caribbean and the USA.

Dunite, ultrabasic igneous rock of colour ranging from light yellowish green to an emerald green, composed almost entirely of olivine. It occurs in South Africa, Sweden and the Dun Mountain in New Zealand, from which it takes its name. See also pp.209, 209.

Dunkirk (Dunkerque), city in Nord département, N France, on the Strait of Dover, 71 km (44 miles) SW of Lille. Founded before the 7th century it came under French rule in 1662. During WWII more than 300,000 Allied troops were evacuated from its beaches between 29 May and 4 June 1940, when the Germans broke through to the English Channel. Today it is a leading French port and a major iron- and steel-producing centre of Western Europe. Pop. (1968) 27,404. See also pp.1710, 1712.

Dun Laoghaire, port in E Republic of Ireland on the Irish Sea. It is a yachting centre and the main passenger port for Dublin. Formerly known as Kingstown, it prospered after the completion of a railway to Dublin in 1834. Fishing is the chief industry. Pop. (1971) 53,000.

Dunlin, small wading bird, the most common in Britain. It has a long downward curved bill and plumage that varies seasonally from mottled brown in summer to grey in winter. Length to 20 cm (8 in). Species *Calidris alpina*. See also p.325.

Dunlop, John Boyd, (1840-1921), Scottish inventor and pioneer of the pneumatic tyre. He was a veterinary surgeon in Belfast until, in 1888, he re-invented the pneumatic tyre (previously patented in 1846 by Robert Thompson but undeveloped). His invention replaced solid tyres.

Dunmow flitch award, ceremony still held at Dunmow in Essex. It originated in the early Middle Ages when Fitzwalter, a local squire, offered a flitch (side) of bacon to any man who a year and a day after his marriage, would swear before local worthies that he did not regret it.

Dunsany, Edward John Moreton Drax Plunkett, Lord (1878-1957), Irish playwright and novelist. He was active in the Abbey Theatre and his plays include *The Golden Doom* (1912) and *A Night at the Inn* (1916). Dunsany's mysterious chit-

Dumdum, this type of bullet which fragments on impact is now banned

Isadora Duncan abandoned the restrictions of formal dance for self expression

Dunfermline is the last resting place of many of the great kings and queens of Scotland

Dunkirk, a flotilla of craft rescued the British Expeditionary Force from its beaches in 1940

acters move through worlds of fantasy. **Dunsinane**, the most westerly hill of the Sidlaw Hills, in central Scotland. It was the scene of the defeat of MACBETH by Siward in 1054 and it has the ruins of a fortified castle before its castle. Height: 308m (1012ft).

Duns Scotus, John (c. 1265–1308), Scottish theologian and scholastic philosopher. A member of the Franciscan order, he was ordained in 1291 and subsequently lectured at Cambridge, Oxford and Paris. His principal works were commentaries on the writings of Peter LOMBARD. He founded a school of SCHOLASTICISM called Scotism. See also pp. 1328, 1474, 1524.

Dunstable, John (d. 1453), English composer of whom little is known. He gained European recognition in his time for his early experiments in COUNTERPOINT. Manuscripts of his works have been found in Italy.

Dunstan, Saint (c. 925–88), English monk and Archbishop of Canterbury (959–88). He was the first of a line of clerical advisers to royalty and held great power under King EDGAR. He spent time in exile under King EDRY and on his recall by King EDGAR brought Cluniac reforms to England and rose in his career to Bishop of London (957), then Archbishop of Canterbury. See also pp. 1288, 1289.

Dumster, Henry (c. 1612–59), English-born educationalist, first president of Harvard University, USA. He emigrated to New England in 1640 and was appointed president of the newly-founded Harvard University. He patterned the university on English secondary education but when he became a Baptist in 1654 was forced to resign.

Duodecimal system, number system with twelve as its base. It has advantages over the decimal system (base 10) inasmuch as one-third is recurring (0.3333...), as is two-thirds (0.6666...), but in duodecimal they would be 0.4 and 0.8 respectively. **Duodenum**, first section of the small intestine following the stomach, shaped like a horseshoe. The pyloric sphincter separates it from the stomach. Alkaline bile and pancreatic juices enter the duodenum and mix with intestinal secretions to aid the digestion of food. See also pp. 160, 161.

Duparc, Henri (1848–1933), French composer. He was a pupil of César FRANCK and, although not a prolific composer, he is remembered for the songs he composed of poems by Charles BAUDLAIRE, LEONCE DE LISLE and others.

Dupleix, Joseph François (1697–1763), French colonial administrator in India. He enlisted the Indians to aid the French in driving out the British in 1746. He was governor of Chandernagor (1731–42) and of all French possessions in India (1742–54). See also p. 1495.

Duplessis, Maurice Le Noblet (1891–1959), Prime Minister of Quebec (1936–39, 1944–59). He was elected to the Quebec parliament in 1927 and became leader of the Conservative Party (1933–35). He founded the Union Nationale Party which was nationalist, anti-labour and pro-farmer.

Duplicators, or copiers, machines that reproduce images such as the written word, drawings and photographs. They vary in size, operating process and quality of reproduction, but all are intended for quick, small-quantity copying where the high quality of large, cumbersome printing presses are not essential. However some duplicators, such as the offset-litho press, are capable of high-quality duplicating, some modern photostatic copiers give good-quality copies, others are capable of making coloured copies. See also pp. 616–617.

Du Pont, major US industrial company. It Du Pont built a gun-powder mill near Wilmington, Delaware (1802). When the family business became a corporation in 1899, it was one of the world's largest manufacturers of explosives. After WWI, the company diversified and began to make chemicals and other industrial materials.

du Pré, Jacqueline (1945–), British cellist, wife of Daniel BARENBOIM. Soon after

her London debut (1961) she was acknowledged throughout the world as a remarkable talent with a vigorous technique. Her interpretation of Elgar, Beethoven and Brahms drew special acclaim before illness cut short her career.

Dupré, Jules (1811–89), French painter, a member of the BARBIZON SCHOOL of painting. His work often showed a sombre or tragic interpretation of nature.

Dupré, Marcel (1886–1971), French organist and composer. He was a pupil of Charles WIDOR and won first prize in both piano and organ at the Paris Conservatory. He also composed many organ works. **du Preez, Frik** (1935–), South African rugby union lock forward who made a record 38 appearances for his country (1960–71). A superb lineout exponent, he also used his strength and size to formidable effect in loose play for both the Springboks and his province, Northern Transvaal.

Duque de Caxias, city in Rio de Janeiro state, in Brazil, on Guanabara Bay. It is an industrial suburb of Rio de Janeiro. Pop. (1970) 256,582.

Durable goods, consumer goods with a useful economic life of more than one year, eg houses, motor vehicles, refrigerators and other household appliances. During recessions purchases of durable goods are postponed (existing ones can be repaired), which prolongs the reduction in demand.

Duralumin, alloy of aluminium with copper, magnesium and manganese composed within the following limits, aluminium over 90%, copper – about 4%, magnesium – 0.5% to 1.5%, manganese – less than 1%.

Durand, Asher B. (1796–1886), US landscape painter, with Thomas COLE and others, a leading member of the HUDSON RIVER SCHOOL. He was a successful landscape engraver before becoming a painter, first of portraits and religious themes and later of Romantic landscapes influenced by 17th-century Dutch painters, eg HOBBEEMA.

Durango, state in NW Mexico. In the W, the Sierra Madre Occidental contains rich mineral deposits including silver, gold and lead. The plains of the E provide excellent pastures and in the fertile valley of the Nazas River cereal crops, cotton, sugar cane, tobacco and vines are cultivated. The capital is the city of Durango, which has timber, food processing, tanning and textile industries and is the leading commercial centre of the state. Area (state) 119,648sq km (46,196sq miles). Pop. (state 1970) 919,381, (city 1975) 191,034.

Durante, Jimmy ("Schnozzle"), (1893–1980), US comedian, full name James Francis Durante. He worked in music hall, theatre, films and television. As a member of the nightclub team Clayton, Jackson and Durante (1923–30), he appeared in the plays *Get-Rich-Quick Wallingford* (1932) and *Jumbo* (1935) and in the film version of *Jumbo* (1962).

Duras, Marguerite (1914–), French novelist and screenwriter. Her novels include *The Sea Wall* (1950), *The Sailor from Gibraltar* (1952), *Vice-Consul* (1966) and *Destroy, She Said* (1969), her screenplays, *Hiroshima Mon Amour* (1959).

Durazzo. See DURRES.

Durban, chief port of South Africa, on the N shore of Durban Bay, 483km (300 miles) SE of Johannesburg. The national convention initiating the 1910 Union of South Africa was held there in 1908–09. It has the University of Natal (1949) and the Natal University College (1960). Exports sugar, oranges, pineapples, wool, coal, maize. Industries: petroleum, textiles, motor vehicles, paint, sugar-refining. Pop. 721,265.

Durban July Handicap, South African weight-for-age horse race run over 104 furlongs at Greyville. First run in 1894, it is the richest event on the South African turf calendar, attracting millions of rand in betting.

Durbar, word used in India for court occasions or assemblies of notables. In the British era it was used for the festival which marked Queen VICTORIA's becoming

Empress (1876) and for the state visit of George V and Queen Mary (1911).

Durer, Albrecht (1471–1528), German painter, engraver and designer of woodcuts who worked in Nuremberg. Two visits to Italy at the time when it was being changed by the ideas of Leonardo and other Renaissance revolutionaries profoundly affected the work of Dürer, who made a personal synthesis of the N and S European traditions, one that deeply affected European art. His greatest single achievement was his book of woodcuts, *The Apocalypse*, which established him as the supreme graphic artist. His masterpieces of painting include *The Feast of the Rose Garlands*, *Adoration of the Trinity* and *Four Apostles*. See also pp. 1373, 1394, 1394, 1395.

Durey, Louis (1888–1979), French composer. He was, for a time, a member of Les six and composed predominantly small scale chamber works and songs.

Durga, in the Hindu pantheon, one of the names of the wife of SHIVA. Depicted as a 10-armed goddess, she is both destructive and beneficent but is worshipped today as a warrior against evil. Her festival, the Durga-puja, which occurs in September or October, is an occasion for family reunions. See also DEVI, p. 1255.

Durham, John George Lambton, 1st Earl of (1792–1840), British Whig statesman. A radical, he promoted reform in Britain, and served briefly as governor-general of Canada (1838). He produced a report in 1839 recommending internal self-government for Canada, which also became the basis of the British policy in other colonies.

Durham, town in Durham county, NE England, on the River Wear, 24km (15 miles) S of Newcastle-upon-Tyne. An episcopal seat, it is noted for its cathedral (1093), which contains the tomb of the Venerable Bede, a Norman castle (1072) and university (1832). The chief industry is carpet weaving. Pop. (1971 prelim.) 24,700. See also p. 1702.

Durham Report (1839), report on the government of Canada, written after the 1837 rebellion by Lord DURHAM. He was sent to Canada as governor-general in 1838. The report advocated the union of Lower and Upper Canada, internal self-government and the extension of the British system of responsible government (in which the cabinet is responsible to the legislature) to Canada. See also pp. 1610, 1610, 1614, 1702, 1702.

Durian, tree and its fruit native to South-East Asia. The tree has oblong leaves and yellowish-green flowers. The oval fruit contains a delicate, creamy-white pulp which has a sweet taste, although it has a pungent, repellent odour. Family Bombacaceae, species *Durio zibethinus*. See also p. 691.

Durkheim, Emile (1858–1917), French sociologist. With COMTE he believed that the methods of physical science could be used for the study of human society and is therefore considered to be one of the fathers of modern sociology. One of his most important theoretical works was *The Rules of the Sociological Method* (1895). See also pp. 1840–1841.

Durrell, Gerald Malcolm (1925–), British naturalist and author, born in India. He has written many books about his collecting expeditions including *My Family and Other Animals* (1956), which also tells of his boyhood in Corfu, and *A Zoo in My Luggage* (1960).

Durrell, Lawrence George (1912–), British novelist and poet. He has lived most of his life in Greece, Egypt and other Mediterranean countries and they have provided the inspiration for most of his writing. His major work is *The Alexandria Quartet*, a novel published in four parts: *Justine* (1957), *Balthazar* (1958), *Mountolive* (1958) and *Clea* (1960), other novels include *Tunc* (1968) and *Numquam* (1970).

Durrenmatt, Friedrich (1921–), Swiss dramatist. His works are characteristically ironic and display a nihilist, black humour. They include *The Visit* (1956), and *The Physicists* (1962). He has also written novels such as *The Pledge* (1958).

Jacqueline du Pré, whose brilliant musical career was cut short by multiple sclerosis

Jimmy Durante, the American musician and comedian in *It Happened in Brooklyn*

Durban, this busy commercial port is also a popular holiday resort in South Africa

Albrecht Dürer, supreme German painter and engraver, in this is *Fortune* (detail)

Durres

Durres, an aerial view of this graceful industrial city showing the Rhine Bridge

Dutch Wier, conflicts which resulted in the emergence of English naval power

'Papa Doc' Duvalier with his son 'Baby Doc' who relaxed his father's regime

Antonin Dvorak, the Czech composer best known for his *New World Symphony*

Durres, city in w Albania on the Adriatic coast; capital of Durres province. Founded in 625 BC as a joint colony of Corcyra and Corinth, it became an important trade centre. It is Albania's chief port and exports include grain, olive oil and tobacco. Industries: food processing, textiles and leather. Pop. 57,000.

Duse, Eleonora (1858-1924), Italian actress. She made her debut at the age of four in *Les Misérables*; at 14 she played Juliet. She acted in many countries in such plays as *Thérèse Raquin* and *La Dame aux Camélias*. She introduced several plays written by D'Annunzio and also gave notable performances in many of the works of Ibsen.

Düsseldorf, city in w West Germany at the confluence of the rivers Rhine (Rhein) and Düsseldorf, capital of North Rhine-Westphalia state. From the 14th to the 16th century it was the capital and residence of the dukes of Berg. It became part of Prussia in 1815 and was occupied by France from 1921 until 1925. Industries: chemicals, textiles, iron, steel. Pop. (1970) 663,586.

Dust Bowl, area of approximately 40.4 million ha (100 million acres) of the GREAT PLAINS in the USA that have suffered extensively from wind erosion. Due to drought, overplanting and mismanagement, much of the topsoil was blown away in the 1930s. Subsequent government soil conservation programmes, such as crop rotation, and strip planting have helped to restore productivity.

Dust devil, or dust whirl, brief, small scale whirlwind containing sand or dust. Only a few yards in diameter, the funnel may extend upward as far as 914 m (3,000 ft). It is caused by local atmospheric instability, eg by intense heating of the earth on a hot day.

Dust, galactic, dust found in the outer arms of spiral galaxies. It appears to be made up of minute particles, perhaps of graphite and ice.

Dust, interplanetary, material made up of minute meteoric particles orbiting the Sun. It is believed that sunlight reflected by such dust is the cause of ZODIACAL LIGHT.

Dust, interstellar. See INTERSTELLAR MATTER.

Dust, zodiacal. See DUST, INTERPLANETARY.

Dust collector, device used in industrial plants to collect dusts, such as silica, coal dust and asbestos, which can cause or aggravate respiratory diseases. Usually the exhaust ventilation of machinery is filtered and the harmful dust collected in bags. See also p 1065.

Dust extraction, removal of particles that are suspended in an atmosphere. It is essential in planetariums where the presence of dust would render the projected light beams visible, and in some industrial premises, eg some electronic assembly factories where satisfactory results depend on dust-free assembly. One method of extraction employs filters through which air in the atmosphere being controlled is continuously circulated. A second method is to scrub, or wash, the dust-laden air with water sprays. In electrostatic extractors, dust is attracted to charged plates arranged in a grid. See also AIR CONDITIONING.

Dust storm, violent storm laden with fine dust picked up by high winds sweeping in arid regions, where the soil is loose. Dust storms can smother crops and destroy pasturage. See also p 208.

Dutch barn, large oblong farm building, often open-sided, of simple modern frame and cladding construction and usually with a semicircular roof. Such barns have largely replaced haystacks for storing hay. See also p 659.

Dutch cap. See BIRTH CONTROL.

Dutch elm disease, highly infective fungus infection that attacks the bark of elm trees and spreads inwards until it kills the tree. It has been rampant since WWII.

Dutch East India Company. See EAST INDIA COMPANY.

Dutch East Indiaman, sailing ship which was introduced in the early 18th century; it developed from the GALLEON. These

broad, heavily armed and extremely robust merchant ships could be used as men-of-war, which suited their use by the Dutch. See also p 473.

Dutch East Indies, until 1949 the part of South-East Asia that is now Indonesia. This overseas territory of The Netherlands comprised the whole archipelago except Borneo and a Timor. Lying between the Pacific and Indian oceans, the islands were colonized by the Dutch from 1602.

Dutch Guiana. See SURINAM.

Dutch Wars, three 17th-century Anglo-Dutch naval conflicts arising from commercial rivalry. The first war (1652-54) stemmed from efforts to exclude the Dutch from England's trade. England was more successful in the fighting, but the peace treaty was inconclusive. The second war (1665-67) followed England's seizure of New Amsterdam (New York). The Dutch inflicted heavy losses and England had to modify her trade laws, but by the Treaty of BREDA (1667) both sides kept their colonial conquests. The third war (1672-74) arose from French ambitions in the Low Countries. France invaded The Netherlands with English support but the Dutch were victorious at sea and stemmed the French advance on land. England made peace (1674) and the war ended with French territorial gains in the Spanish Netherlands and with Dutch trade gains. See also p 1424.

Dutch West India Company. See WEST INDIA COMPANY.

Dutton, Clarence Edward (1841-1912), US geologist who developed the principle of isostasy, according to which the level of the Earth's crust is determined by its density. The rise of light materials forms continents and mountains, and sinking heavy materials form oceans and basins.

Duun, Olav (1876-1939), Norwegian novelist. He wrote in Nynorsk (New Norwegian) and used peasant dialects. His work dealt with the difficulties experienced by primitive people in adapting to modern conditions. *The People of Juok* (1918-23), a series of novels, is his best-known work.

Duval, Claude (1643-70), French highwayman who went to England in 1660 in the service of the Duke of Richmond. He was famous for his daring and his gallantry to the women he robbed. He was hanged at Tyburn and buried in Covent Garden Church, after lying in state in a tavern.

Duvalier, François ('Papa Doc') (1907-71), President of Haiti (1957-71), whose prominence as a public health specialist was a springboard to politics. Once elected, Papa Doc declared himself president-for-life and used voodoo worship and the feared TONTONS MACOUTES (an extra-legal vigilante group) to consolidate his dictatorship. Under his ruthless regime, the longest in Haiti's history, the country's economy severely declined.

Duvalier, Jean-Claude (1951-), President of Haiti (1971-). He succeeded his father and, like him, was declared president-for-life. He introduced several important reforms and disbanded the feared TONTONS MACOUTES.

Duve, Christian René de (1917-), Belgian cell biologist who shared with Albert CLAUDE and George PALADE the 1974 Nobel Prize in medicine for a detailed description of the structure and function of the cell and its parts. Analysis of biochemical activity in a cell led him to discover the lysosome, an organelle that acts as the 'stomach of the cell'.

Duveen, Joseph, Baron Duveen of Millbank (1869-1939), British art dealer, influential in determining art tastes during his lifetime, especially in the USA. He financed extensive additions to the TATE GALLERY, London, and subscribed to a new wing at the NATIONAL GALLERY and a wing for the Elgin Marbles at the BRITISH MUSEUM.

Du Vigneaud, Vincent. See VIGNEAUD.

Dvina, or Northern Dvina (Severnaya Dvina), river in N European USSR, formed at the confluence of the Suchona and Jug

rivers. It flows NW into Dvina Bay in the White Sea not far from Archangel (Archangel'sk). Length 750 km (465 miles).

Dvina, or Western Dvina (Zapadnaya Dvina) river in NW European USSR, rises in the Valdai Hills, flows S and then W through Belorussia and Latvia into the Gulf of Riga (Rūžskij Zaliv), an arm of the Baltic Sea. It is connected by canal to the Dnepr (Dnieper) River. Length 1,020 km (635 miles).

Dvořák, Antonín (1841-1904), Czech composer of the Romantic period. He adapted the spirit of Czech nationalism and folk music to a classical style. He composed in every form, but is especially known for his orchestral works, which include nine symphonies, two sets of *Slavonic Dances* and a number of suites and symphonic poems. His *Cello Concerto* (1895) is regarded as one of the supreme achievements in that form. He lived in the USA from 1892 to 1895, a stay which inspired his most popular work, the *Symphony in E minor* (From the New World). See also pp 1582, 1583.

Dwarf, in European mythology, a short, ugly evil but clever creature who hid from the light of day in rocks and caves. Dwarfs were skilled craftsmen and armourers, guardians of mines and minerals. The seven dwarfs in the stories of Snow White are probably the best-known in literature.

Dwarfism, condition in which a person is much below normal size and lacks the capacity for normal growth. Dwarfism is associated with several inherited disorders including CRETINISM, TURNER'S SYNDROME and ACHONDROPLASIA, a condition in which there is normal mentality and normal trunk but short arms and legs. It is also caused by chronic kidney disease and potentially treatable pituitary gland malfunctions in which too little growth hormone is secreted. Pituitary dwarfs generally have normal body proportions. See also p 1076.

Dwarf pen. See CHICKPEA.

Dwarf star, low-magnitude star in the main sequence of the HERTZSPRUNG-RUSSELL diagram. Dwarfs belong to the spectral classes G, K, and M, and are characterized by a small diameter and extremely high density compared with giant stars of the same spectral types. See also pp 978-979.

Dwarf star, carbon. See CARBON DWARF STAR.

Dwarf water buffalo. See ANOA.

Dyak. See DAYAK.

Dyce, William (1806-64), British landscape painter. He was influenced early in his career by the NAZARENES and introduced their ideas to the PRE-RAPHAELITE BROTHERHOOD, founded in 1848. His best-known work is *Pegwell Bay* (1860), a painting of extreme realism.

Dye, substance, natural or synthetic, used to impart colour to textiles, hair, wood etc. Their use dates back to the earliest times. Dyes are classified according to the way they are applied, which depends on the fibre dyed, or by their chemical composition. Direct dyes can be applied directly to the fabric; they are acidic or basic compounds that bind to fibres such as wool and silk. Indirect dyes require a secondary process to fix the dye in the fabric. Substantive dyes, sulphur dyes and vat dyes act directly, ingrain dyes and mordant dyes act indirectly. See also pp 584-585, 586, 590-591.

Dyeing, colouring of various materials especially textiles, leather and food. The natural dyes have been largely replaced by synthetic dyes, most of which are derived from coal tar. Alizarin comes from anthracene and indigo from aniline. Some materials such as silk and wool may be dyed by merely dipping them in the dye, but cotton, for instance, requires the use of a mordant, as do some dyes, such as alizarin. The mordant fixes the dye and may be common salt. Dyeing is an ancient industry, and the Phoenicians traded extensively in cloth dyed with Tyrian purple. The secret of the dye, which came from a species of mollusc, was known only to them. See also p 584.

Dyer, Jack (1913-), Australian Rules

footballer whose aggressive spirit and iron-hard physique earned him the name "Captain Blood". During 19 years with the Melbourne club Richmond he played 312 games as a ruckman or in attack. He was a noted tactician and innovator.

Dyfed, county in SW Wales, formed in 1974 from the counties of Cardigan, Carmarthen and Pembroke. It occupies a peninsula bounded by St George's Channel, Cardigan Bay and the Bristol Channel. It has a rocky, indented coastline where the Cambrian Mts reach the coast in the Mynydd Presceelly range. Agriculture is based on sheep and cattle rearing and the cultivation of oats, wheat and potatoes. Industries include fishing, timber, woollen textiles, tourism and oil refining. Area 5,765 sq km (2,226 sq miles). Pop. (1975 est.) 321,700.

Dyke, in engineering, barrier or embankment, usually constructed of earth designed to confine or regulate the flow of water. Dykes are used in reclaiming land from the sea by sedimentation, as practiced in The Netherlands, and are also of value as controls against river flooding (when they are called artificial levees). In early English usage, the term dyke also refers to a drainage ditch or a raised earthwork defence, as in OFFA'S DYKE. In geology a dyke (or dike) is an intrusion of igneous rock whose surface is different from that of the adjoining material. Dykes are usually vertical, and the patterns they exhibit are indicative of the stress fractures of the bed rock that they intruded. See also pp.204, 208.

Dyke, Sir Anthony van See VAN DYKE, SIR ANTHONY.

Dylan, Bob (1941-) US popular singer and composer. He taught himself to play the guitar, piano, autoharp and harmonica and became popular on concert tours and recordings in the 1960s. One of the originators of the folk rock movement, in music he has composed many songs including *Blowin' in the Wind* and *The Times They Are A-Changin'*. See also pp.1757, 1757.

Dynamics, in economics, change or changes occurring in economic conditions over a period of time. Dynamics is often used in equilibrium analysis in order to reveal the movement of the economic situation over time, such as the different rates of growth of population and food supplies. Dynamics is also important in simulation models, where changes affect the relationship through the movement over time. See also p.1862.

Dynamic testing, measurement of the forces exerted by moving bodies on resisting members. Such examples as the effects of cars moving over a bridge, landing shock on an aircraft's undercarriage and moving machine parts are all examples which require dynamic testing.

Dynamite, solid blasting explosive that contains nitroglycerine incorporated in an absorbent base such as charcoal or woodchips. Shock resistant but easily detonated by heat or percussion, it is used in mining, quarrying and engineering. Its properties can be varied by adding ammonium nitrate or sodium nitrate. It was invented by Alfred Nobel in 1866. See also p.583.

Dynamo, or generator, device that converts mechanical energy into electricity by the principle of ELECTROMAGNETIC INDUCTION. It consists of a number of copper coils each terminating on diagonally opposite sides of a COMMUTATOR formed on a cylindrical spindle the whole is called an armature. The armature is rotated within a magnetic field produced by a permanent magnet or, more usually, a pair of copper coils through which current from the dynamo is passed. Rotation of the armature causes a current to be induced in its coils. See also pp.869, 872-873, 876-877, 878.

Dynamometer, electrical measuring instrument in which a pointer is deflected as a result of the force exerted between fixed and moving coils, the pointer being attached to the latter. It has applications in ammeters, wattmeters and voltmeters. The term is also used for a torque meter measuring the power of rotating engines.

eg the brake horse power of a car engine. **Dyne**, unit of force in the cgs (centimetre-gramme-second) system of units. One dyne is the force that gives a mass of one gramme an acceleration of one centimetre per second per second. One newton equals 100,000 dynes.

Dysentery, infectious disease characterized by DIARRHOEA, intestinal bleeding, fever and, in severe cases, intestinal perforation, cramp and nausea. It is spread in contaminated food and water and can occur in epidemic form in crowded areas with poor sanitation, especially in the tropics. Bacillary dysentery, caused by BACTERIA, is usually treated with antibiotics. Amoebic dysentery, caused by a type of AMOEBA, is treated with the drug emetina.

Dysfunction, distinction in the highly refined sociological theory of STRUCTURAL FUNCTIONALISM that means any function or consequence of a social system, that lessens the system's adaptation to its setting thereby reducing its ability to survive.

Dyslexia, inability to read properly. Its specific causes are disputed, but it is probably due to some defect in the speech centres of the brain. Symptoms may include difficulty in writing, especially in spelling correctly. It is not a sign of low intelligence and some cases may benefit from special teaching. See also p.1115.

Dysmenorrhoea, painful menstruation, as distinct from normal menstrual discomfort or premenstrual tension. It can occur shortly after the first menstruation or later in life, and is characterized by cramp like pain in the lower abdomen and sometimes nausea.

Dyspepsia, indigestion or upset stomach occurring during or after a meal. The symptoms include wind, heartburn, excess acidity and, in severe cases, vomiting. It can be caused by eating too much too quickly, or by various disorders, such as peptic ulcers.

Dyspnoea, difficulty in breathing. It is sometimes a sign of heart failure but can be a sign of various other conditions.

Dysprosium, metallic element, symbol Dy, of the LANTHANIDS group. First identified in 1886 by Lecoq de Boisbaudran. Its chief ores are monazite and bastnaesite. It has few commercial uses. Properties: at. no. 66, at. wt. 162.5, m.p. 1,409°C (2,568°F), b.p. 2,335°C (4,235°F), density 8.56 g/cm³ (at 20°C).

Dystrophy, muscular, progressive degenerative disorder associated with the breakdown of muscle cells and of unknown cause. It is an hereditary complaint which begins in early childhood and affects boys more than girls. In most cases the muscles become rigid and there is a gradual wasting away of muscle tissue which may persist until middle age.

Dzerzhinsky, Ivan (1897-78), Russian composer, an occasional pupil of SHOSTAKOVICH. His operas, especially those based on victorians, *Don Quixote* have been extremely successful in the USSR.

Dzungarian Basin See ZHUNGARIAN BASIN.

Dzungarian Gates, pass in the Dzungarian Ala Tau mountain range in SW China that served as an important invasion route from Russia to China. The narrow and inhospitable pass was used by UIGHURS, KANS, and others.

E

E, the fifth letter of the alphabet, derived from the Semitic he which the Greeks adopted as the letter epsilon. E is a vowel and the most frequently used letter in written English. It has various connotations, depending on its position in a word. It may be long as in the fal-lah-gh this sound is much more frequently denoted by a double e, as in feed or short as in bed. At the end of a word it often modifies the sound of a preceding vowel, eg the short a in father becomes a long one in fate. In a few English words, as in receive, E takes on a clerk and servant connotation.

Ea, or Enki, in Mesopotamian mythology the god of freshwater (Apsu), which he filled with saltwater (Tiamat) was the source of all life. He became the lord of knowledge, magic art and science. He gave kings their wisdom and artisans their skill. According to one account, at the creation Ea was responsible for forming man out of clay. His earthly residence was considered to be the holy city of ERIDU. See also p.1907.

Eadfrith (d.721), bishop of Lindisfarne in Northumbria from 698. A disciple of ST CUTHBERT, he encouraged the writing of a biography of the saint by the Venerable BEDE. The LINDISFARNE GOSPELS are thought to be the work of Eadfrith.

Eadmer, or Edmer, of Canterbury (c.1060-1128), English monk, theologian and historian. An Anglo-Saxon by birth, Eadmer was a friend and confidant of ST ANSELM of Canterbury. His most important writings were a history of England for the previous 50 years (*Historia novorum in Anglia*), biographies of Anselm and other English saints, and a tract on the IMMACULATE CONCEPTION.

Eads, James Buchanan (1820-87), US engineer and inventor. He invented and used the diving bell to salvage sunken steamboats and their cargoes, and in 1847 formed the first ship salvaging business on the Mississippi River. Early in the US Civil War he built a fleet of armour clad gunboats to patrol the Mississippi.

Eagle, strong, carnivorous diurnal bird of prey. Sea and fishing eagles, including the bald and stellar eagles, are large birds frequenting American sea-coasts where they dive for fish and feed on small animals and carrion. Serpentine eagles are stocky raptorial birds, the large HART'S EAGLES inhabit tropical forests, some eagles indigenous to Asia and Africa are open country predators. True eagles (*Aquila*) have long hooked bills, broad wings and powerful feet with long curved claws. They are usually brownish black or grey with light or white markings. They nest high on sea-cliffs or island mountains, building massive stick nests lined with grass and leaves, called eyries. One or two light brown or spotted eggs are laid. Length 40-100cm (16-40in). Family Falconidae. See also FALCON, pp.74, 298, 315, 320, 332, 344-345.

Eakins, Thomas (1844-1916), US painter and photographer. Unrecognized for most of his lifetime, he is now regarded as one of the finest US portrait painters of the 19th century. Among his most famous paintings are *The Gross Clinic* (1875), *The Chess Players* (1876) and *The Swimmer's Hole* (1883). See also p.1595.

Ealdorman, Anglo-Saxon official appointed by the king to organize the defence of the shire. The office was not hereditary and carried no automatic grant of land. The ealdorman usually also presided over the shire courts. In the 11th century, the office was overtaken by that of the TOWNSMAN which often came the authority over several counties. The word is now Alderman.

Ealing Studios, British film studios founded in 1921, especially remembered for its production of films supervised by Michael Balcon in the decade after WWI. The highly popular "Ealing comedies" such as *Passport to Pimlico* (1949), *The Tentmaker Hill Mob* (1951) and *The Ladykillers* (1955) with original screenplays, realistic backgrounds, location exteriors and consistently fine performances from a succession of actors led by Alec Guinness typified the company's output. The studios themselves were sold in 1957.

Eames, Charles (1907-) US architect and designer. Eames is best known for his chairs of moulded plywood and reinforced plastic. He has also designed film sets. He collaborates with his wife and together they won the Kauffman International Design Award in 1960.

Eanes, General Antonio dos Santos Ramalho (1935-) President of Portugal since 1976. He had a military career overseas and became close friend of Gen Antonio Spínola, who was then president. He became Chief of Staff in Nov. 1975 and president in Spanish succession.

Dyke, the Great Dyke at Flushing, The Netherlands, has rows of protective wooden piles.

Bob Dylan, seen here talking to journalists at a press conference in Paris.

Dynamos convert the mechanical energy of a rotating armature into electric energy.

Charles Eames is an original and versatile designer, best known for his moulded chairs.

Ear

Ear, man's second most important sense organ, only the eyes being of greater service

Earthquake, sudden shock felt at the Earth's surface, there may be a million in a year

Earthworm, a common worm that helps the growth of plants by breaking down humus

Easter Rising, an abortive insurrection by Irish insurgents against British rule

Ear, organ of hearing and balance. It converts sound waves to nerve impulses that are carried to the brain, and maintains a sense of orientation and balance. In most mammals it consists of the outer, middle and inner ear. The outer ear carries sound to the eardrum, which separates the outer and middle ears. The middle ear has three tiny bones that pass on the sound vibrations to the inner ear, which contains the cochlea and organ of Corti, the essential hearing organ. Vibrations set up here stimulate the auditory nerve that transmits impulses to the brain. The inner ear also has organs that maintain orientation and balance. See also pp 138-139

Earhart, Amelia (1898-1937), US aviator. The first woman to cross the Atlantic as a passenger in 1928, she became the first woman pilot to make solo flights across the Atlantic in 1932 and from Honolulu to Oakland, California in 1935. In an attempt to fly around the world, she disappeared between New Guinea and Howland Island in the Pacific in 1937

Earl, British or Irish peer, next in rank above a viscount and below a marquis, the title dates back to the early 10th century, but it no longer confers any official power. The territory under the jurisdiction of an earl is called an earldom

Earl Marshal, in heraldry, the head of the English College of Heralds, the office is held in hereditary by the Dukes of Norfolk. The modern functions of heralds are to trace pedigrees, grant coats of arms and armorial insignia and to take part in official functions. The Duke of Norfolk is in charge of coronations and issues regulations on ceremonial costume

Engraving, Richard (1743-1822), British engraver who united the techniques of mezzotint with engraving. His engravings reproduced contemporary paintings

Early Bird, first commercial communications satellite, launched on 6 April 1965. It was a stationary satellite, ie, in a synchronous orbit so that it remained always over the same place about 35,400km (22,000 miles) above the mid-Atlantic. It could relay 240 telephone conversations simultaneously between North America and Europe

Early English, term for the first phase of English Gothic architecture. It followed the Norman style and preceded the decorated phase of English Gothic. Introduced in England through the spread of the French monastic orders, Early English began with Wells Cathedral (c 1180) and Lincoln (1192) and lasted until the late 13th century. The purest expression of Early English is Salisbury Cathedral (begun in 1220), the richest is Lincoln. It is characterized by longer, lower lines and less compact plans than are found in French Gothic; by the pointed arch, lancet windows without mullions, grouped in threes, fives and sevens, and piers made up of groups of clustered columns

Law, Wyatt Berry Stapp (1848-1929), US lawyer. In 1879 he went to the silver mining camp at Tombstone, Arizona, as the deputy sheriff. In 1881 he and his two brothers took part in the famous gunfight at the O.K. Corral. He also served as US marshal in Dodge City and in Wichita

Earth, third planet from the Sun, with one natural satellite, the Moon. The earth has outer radiation belts (VAN ALLEN RADIATION BELTS), an oxygen-rich atmosphere, and a lithosphere, or solid crust, beneath which is the mantle and the outer and inner core. Mean distance from the Sun, 149,600,000km (92,950,000 miles), mass, 5.976×10^{27} g; volume, 1.083×10^{27} cu cm, equatorial diameter, 12,756km (7,926 miles), polar diameter, 12,714km (7,896 miles); rotation period, 23hr 56min, period of sidereal revolution, 1.00004 years, the composition of the Earth's crust in order of abundance is oxygen, silicon, aluminum, iron, calcium, sodium, potassium, magnesium and titanium. See also SOLAR SYSTEM, pp 194-199, 244-245, 246-247, 942-943

Earthenware, vessels and other utensils or ornaments made of clay, fired at relatively low temperatures, resulting in porous, opaque pieces. Such items can be made

waterproof by glazing the surface. See also pp 546, 547

"Earth grazers", asteroids whose orbits cause them to pass close to the earth. The asteroids Eros and Hermes have come close to the earth. In 1937 Hermes brushed past the earth only 780,000km (485,000 miles) away.

Earthlight. See EARTHSHINE

Earth pillars, structures developed on valley slopes by rain denudation. They are columns of earth or clay often 6 to 10m (20-33ft) high capped by boulders which protect the material below from further erosion. Of frequent occurrence in mountain valleys, earth pillars are best exemplified in the Tyrol Mountains of Austria

Earthquake, number of rapid, consecutive, elastic waves in the earth. A major quake is usually preceded by a few foreshocks (small quakes) and followed by many minor aftershocks. The source of a quake may be shallow or up to 690km (430 miles) deep. The shallow quakes are thought to be the rapid release of slowly accumulated strain along fault lines extending over a wide region. The rupture of a fault and the friction between faulting rock surfaces produce the elastic waves. The origin of the accumulated strain is the subject of some debate. See also pp 202-203

Earthquake engineering, term used to describe the designing of structures such as buildings, dams and roads to minimize damage to them during quakes. Construction over fault lines are avoided and cushions of concrete or polymeric materials are used as foundations to help buildings float or slide during a quake without breaking in areas where strain build-up is evident

Earthquake prediction, branch of seismology dealing with the projection of possible quakes and their magnitude and location using past history of a region and measurement of the build-up of the strains in it and the time of the build-up. See also FAULT, SEISMOGRAPH, p 202

Earthshine, or **earthlight**, phenomenon most easily observed during the crescent phase of the Moon, when the darkened portion of the lunar disc is illuminated by an ashen light reflected onto it by the Earth. See also p 928

Earthworm, terrestrial and semi-terrestrial ANNELID having a cylindrical, segmented body with tiny bristles underneath. Most worms are a uniform red pink or brown, and are mainly subterranean in moist soil. Their burrowing loosens and aerates the soil, helping to make it fertile. Length 5cm-33cm (2in-11ft). There are several hundred species. Class Oligochaeta, genus *Lumbricus*. See also p 5, 18 19

Farwig, slender, flattened, brownish-black insect found in dark, dry crevices and under the bark of trees. There are some 900 species worldwide, winged and wingless, all have a pair of forceps at the hind end of the abdomen. Order Dermaptera, genus *Forficula*. See also pp 36, 40

Easement, legal right to use land belonging to another for a particular purpose. Common examples are access to land and the right to run a ditch for draining through it. It is also a right that can be invoked to prevent the owner of land from using his property in a particular way

East, Edward Murray (1879-1938), US plant geneticist, botanist and chemist whose work influenced in the development of hybrid maize. He worked to determine and control the fat and protein in maize

East, cardinal point on the horizon where the sun rises and therefore a term for the lands in that direction, especially east of Europe. The near east includes Turkey, Syria and Israel, the middle east Iraq, Iran and Arabia, the far east China, Japan and the East Indies

East Africa, part of Africa that includes Kenya, Uganda, Tanzania and Mozambique. Kenya and Uganda were British colonies, Tanganyika (now Tanzania) was German, and Mozambique Portuguese. In WWI the Allies took Tanganyika after Germany invaded Kenya

East African Community, association of 8 African nations, comprising Tanzania, Kenya and Uganda. The association was formed in 1967 to develop common economic goals and trade as well as social policies and services, such as transport and agricultural research. By 1974, it had virtually disintegrated

East Anglia, flat region of E England, made up of the counties of Norfolk and Suffolk. An Anglo-Saxon kingdom, its large area and the protection afforded by the fens made it one of the most powerful English kingdoms in the late 6th century. After the Vikings were defeated in 917, East Anglia became an earldom. The fertile agricultural land produces cereals, sugar-beet and vegetables, and cattle, poultry and horses are reared. Industries include market-gardening, tourism and fishing

East Bengal, region of the NE Indian subcontinent, on the Bay of Bengal. It was made part of East Pakistan in 1947, which became Bangladesh in 1971. The population is mainly Muslim. Area: 141,191sq km (54,514sq miles)

East Berlin. See BERLIN

Eastbourne, town in East Sussex, SE England, on the English Channel at the foot of the South Downs, 5km (3 miles) NE of Beachy Head. A popular resort, its industries include printing, light engineering and plastics. Pop (1971) 70,500

East Coast, statistical area in the North Island of New Zealand. It has a jagged coastline and a broad inland valley, the chief city is Gisborne. It has a large Maori population, whose farming is concentrated in the Ruatonga district

East China Sea, northern branch of the China Sea, bordered by Korea and Japan (N), China (W), Taiwan (S) and the Ryukyu Islands (SE). Area: approx 1,249,160sq km (482,300sq miles). Depth (max) approx 2,780m (9,120ft)

East Devon, county district in SE Devon, SW England, created in 1974 under the Local Government Act (1972). Area 817sq km (315sq miles). Pop (1974 est) 100,300

Easter, in the Christian liturgical calendar, feast of the resurrection of Christ from the dead on the third day after His crucifixion. It is the oldest and greatest Christian feast and is celebrated on the Sunday following the first full moon between 21 March and 25 April. It is generally believed to have superseded an old pagan festival for renewed life. The name "Easter" is of uncertain origin but has been connected with the Anglo-Saxon spring goddess Eostre. The popular custom of exchanging Easter eggs dates back to pre-Christian times

Easter Island (Isla de Pascua), island in the SE Pacific Ocean, approx 3,200km (2,000 miles) off the W coast of Chile, to which it belongs. Inhabited mostly by Polynesian farmers, the island is famous for its curious hieroglyphs and formidable statues carved in stone standing up to 12m (40ft) tall. Area: 119sq km (46sq miles). Pop 1,100

Easterlies, broad currents or persistent patterns of winds from the east, such as the tropical easterlies or trade winds and the equatorial and polar easterlies. The trade winds occur in the N and S margins of the tropics during the summer and cover most of the tropics during the winter. See also WESTERLIES

Easter Rising, rebellion by Irish nationalists against British rule, launched on 24 April 1916 (Easter Monday). Led by Patrick Pearse, Joseph Plunkett and James Connolly, about 1,200 men from para-military groups, chiefly the Irish Citizen Army, seized the General Post Office and other buildings in Dublin and proclaimed Ireland a republic. The British crushed the rising within a week and executed 15 of the ringleaders. Nationalist sentiment upsurged, renewed guerrilla fighting led to the establishment of the Irish Free State in 1921. See also p 1643

Easter Rite, ceremony performed in the Latin Church on Easter eve at which a new fire and a paschal candle, representing the new light of Christ, are lit. It may

derive from the annual renewal of the sacred fire in the Temple of Vesta which took place at the beginning of the year in Rome.

Easter tables, means of determining the date of Easter, first established by the Council of Nicaea (325) as the Sunday immediately following the 14th day of the paschal moon (the moon whose 14th day followed the vernal equinox). Since the Gregorian calendar (1582) Easter has fallen on the first Sunday after the full moon following the vernal equinox, hence not earlier than 22 March, nor later than 25 April.

East Germany. See GERMANY, EAST.

East Hertfordshire, county district in E HERTFORDSHIRE, England, created in 1974 under the Local Government Act (1972). Area 477sq km (184sq miles). Pop. (1974 est.) 104,400.

East India Company, name of several organizations set up by various Western European countries in the 17th century to trade east of Africa. The British company was set up in 1600 to compete for the East Indian spice trade, but competition with the Dutch led it to concentrate on India, where it gradually won a monopoly. Its supremacy over the French was assured by 1763. Although the British government assumed responsibility for its political direction in 1773, the company continued to administer the British colony in India until the mutiny (1857), after 1873 its functions were entirely taken over by the government. The Dutch company was founded in 1602, and set up its headquarters in Batavia (Jakarta) in 1619, exploiting the spice trade. It established a colony at the Cape of Good Hope in 1652. The company was dissolved in 1799, by which time its possessions had been incorporated into the Dutch empire and the company was almost bankrupt. The French company was founded by Louis XIV in 1664 and set up colonies on several islands of the Indian Ocean. It was established as a trading company in India in the early 18th century but, defeated by the English company for control of that region, it was abolished in 1789. See also pp 1413, 1435.

East Indies, archipelago of islands of various sizes, occupying a triangular area between the Malay peninsula, China, New Guinea and Australia. They range in size from the large islands of Borneo, Sumatra, Java, Celebes and Luzon to tiny islets. The main chain runs from Sumatra and Java to Timor, Borneo and Celebes are to the N across the Java and Banda seas, and the Philippines (Luzon, Samar, Mindanao, etc.) lie even farther N across the Celebes and Sulu seas. Most once belonged to The Netherlands, the Philippines to first Spain and then to the USA, Sarawak and Brunei (in NW Borneo) to Britain, and half of Timor was Portuguese. All are now part of independent nations, most of them in Indonesia.

East Kilbride, town in the Strathclyde Region, S central Scotland. Established by the New Towns Act of 1946, its industries now include motor vehicle and aircraft engines and electronic equipment. Pop. 63,500.

East Lindsey, county district in E LINCOLNSHIRE, England, created in 1974 under the Local Government Act (1972). Area 1,746sq km (674sq miles). Pop. (1974 est.) 99,800.

East London, (Oos-Londen), port of Cape province, South Africa, on the Indian Ocean. Founded in 1847 as a British military base during the KAFFIR WAR, its harbour was developed after 1886. The main exports are wool and fruit and the port's industries include fishing, textiles and food processing. Pop. 36,800.

East Lothian, former county in SE Scotland, E of Edinburgh between the Firth of Forth and the Lammermuir Hills, now part of Lothian Region. The major river is the Tyne. Sheep are grazed on the highlands and wheat, barley and potatoes are grown on the coastal lowlands. The main industries are fishing, distilling and coal-mining. The administrative centre is Haddington. Area 692sq km (267sq miles). Pop. 55,900.

Eastman, George (1854-1932), US photographic inventor and manufacturer, who created the basic materials for still and motion picture photography. He introduced machine-coated dry plates in 1880, paper roll film in 1884, celluloid roll film and the Kodak camera in 1888, and the Brownie, for children, in 1900. In 1892 he founded the Eastman Kodak Company. See also p 628.

East Pacific Rise, part of the mid-oceanic ridge and a region of seismic activity in the E Pacific Ocean. It is also known as the Albatross Cordillera. Shallow-focus earthquakes occur along the crest of the rise which is an area of SEA-FLOOR SPREADING. See also p 198.

East Riding, administrative area in the former county of YORKSHIRE, England, since 1974 most of the area has been part of HUMBERSIDE.

East Staffordshire, county district in E STAFFORDSHIRE, England, created in 1974 under the Local Government Act (1972). Area 388sq km (150sq miles). Pop. (1974 est.) 96,500.

Eastwood, Clint (1930-), US film actor and director. He made his name in Westerns with the television series *Rawhide* and later a series of Italian films including *The Good, the Bad and the Ugly* (1967). He then turned successfully to directing, with such films as *Play Misty for Me* (1971), *The Outlaw Josey Wales* (1976) and *The Gauntlet* (1977).

Easy Rider (1969), low-budget film produced by and starring Peter Fonda, directed by Dennis Hopper. Its story of two young drug peddlars on expensive motorbikes crossing the southern US mirrored the contradictions in the rebellious mood of American youth at the time.

Eau de Cologne, also called toilet water, scented solution consisting of alcohol and a perfume concentrate. Toilet waters were originally weak solutions of perfumes.

Ebbinghaus, Hermann (1850-1909), German psychologist whose work *On Memory* (1885) founded the scientific study of memory. Using himself as a research subject, he succeeded in describing the processes of learning, remembering and forgetting.

Ebbw Vale, urban district in Gwent, SE Wales, on the River Ebbw, 32km (20 miles) N of Cardiff. It is the centre of a region with industries which include coal-mining and steel. Pop. 26,000.

Ebionites, ascetic Judaeo-Christians who lived in communal poverty (the name means "the poor") S of the River Jordan, from the 2nd to the 4th century. Converted from Judaism originally by Jewish Christians rather than by Hellenistic Christians (such as St Paul), they used only St MATTHEW'S GOSPEL, emphasized Mosaic Law and stressed Christ's humanity and fulfilment of Old Testament prophecies. Two distinct groups developed: Pharisaic Ebionites and the Essenes, who tended more towards Gnosticism.

Ebonite, black vulcanized rubber, a hard material produced by combining rubber and sulphur, the sulphur forms numerous cross-links between the long polymer molecules, resulting in a rigid structure. It is commonly used in the manufacture of musical instruments. See also p 588.

Ebony, hard, fine-grained dark heartwood of various Asian and African trees of the genus *Diospyros* in the ebony family (Ebenaceae). The major commercial source of ebony is the macassar ebony (*D. ebenum*) of S India and Malaysia. Ebony is valued for woodcarving, cabinetwork, and parts of musical instruments.

Ebro, river in Spain which rises at Fontibre in the Catabrian Mts and flows SE. At Reinos it receives the Hija in a reservoir, and flows through Miranda de Ebro, Tudela, Mora and Tortosa. Formerly it was called the Iberus or Hiberus. Length 910km (565 miles).

Eccles, Sir John Carew (1903-), Australian physiologist. He made fundamental discoveries concerning the interaction of neurons, or nerve cells in the transmission of a nerve impulse. He shared the 1963 Nobel prize in physiology and medicine with Alan L. HODGKIN and Andrew F. HUXLEY.

Ecclesiastes, Old Testament book of aphorisms, probably by several authors, compiled under the literary pseudonym "the Preacher, the son of David". This appellation implies SOLOMON, but internal evidence makes quite clear that the book dates from after the BABYLONIAN CAPTIVITY. The single theme of the work is the vanity and emptiness of human life and aspirations, only faith in God relieves the cheerless and illusory conditions of the present life.

Ecclesiastical Commissioners. See CHURCH COMMISSIONERS.

Ecclesiastical Courts, system of courts set up after the Norman Conquest to deal with matters involving the Church, the clergy or religious offences, and some secular matters (until 1857). The highest penalty available to the courts was excommunication. In the 16th century appeals to Rome were forbidden, and the PRIVY COUNCIL became the highest ecclesiastical court. High Commission was also used as a means to ensure religious conformity.

Ecclesiastical History of the English People (*Historia Ecclesiastica Genus Anglorum*). See HISTORY OF THE ENGLISH CHURCH AND PEOPLE.

Ecclesiasticus, book of the APOCRYPHA. The work of Jesus ben Sirach (or ben Sira, or Siracides) in about 190 BC, and edited by his grandson in about 132, it was originally in Hebrew but found its way into the Greek bible and not the Jewish canon. Its theme is zeal for the Law, the liturgy of the Temple and the traditions of the Jewish wisdom literature.

Eccrine sweat gland, one of two types of sweat gland in mammals. In man and some apes, eccrine glands are the more numerous and are distributed generally over the body, not associated only with hair, as are APOCRINE GLANDS. See also p 151.

Echegaray y Eizaguirre, José (1832-1916), Spanish dramatist. A versatile and important figure, he contributed to the scientific, political and literary life of Spain. It was as a playwright that Echegaray was most influential, he won the Nobel prize in 1904. His plays dealt with issues of morality and social concern; among them were *O locura o santidad* (1877) and *El gran Galeoto* (1881).

Echidna, or spiny anteater, MONOTREME related to the PLATYPUS, found in Australia, Tasmania and New Guinea. The upper part of the body is spiny, and its snout forms an elongated beak. Length 30-77cm (12-30in). See also pp 88, 302, 303.

Echinoderm, phylum of spiny-skinned marine invertebrate animals thought to be related to the evolutionary stock that produces chordates. It is the only major phylum made up entirely of animals. They are radially symmetrical with five axes, and have calcareous skeletal plates in their skin. Their hollow body cavity (COELOM) includes a water vascular system and tube feet. They reproduce sexually, and produce a bilaterally symmetrical larva resembling that of chordates, regeneration also occurs. The more than 5,500 species include SEA URCHINS, SEA-CUCUMBERS, and STARFISH. See also pp 2, 50-51, 275.

Echo, in Greek mythology, an oread or mountain nymph condemned to speak only in echoes because her chattering had distracted the goddess HERA from the infidelity of her husband ZEUS. Unable to declare her love for the young NARCISSEUS, Echo pined away in solitude until her bones turned to stone and only her voice remained.

Echo, reflected portion of a wave such as sound or radar from a surface so that it returns to the source and is heard or observed after a short interval. Sound echoes are usually heard as the distorted repetition of a voice in a large empty room or over a valley. High notes provide a better echo than low notes. Echoes are useful in echo-sounding (used by bats and whales and by navigational equipment) but are objectionable in auditoriums, where they are eliminated by using absorbent material on the walls and avoiding curved surfaces that can focus echoes like a mirror. See also pp 646, 832.

East London, an early view of the fourth largest port of the Republic of South Africa

Echidna, a mammal that uses its strong claws to dig rapidly and bury itself for protection

Echinoderm, marine invertebrates, common on temperate and tropical seashores

Echo, the reflection of sound from an object; echoes can be used to determine distances

Echolocation, in animals, system of orientation used principally by whales and bats. Such animals emit a series of short, high-frequency sounds, most of which are beyond the range of human hearing. From the returning echoes that result from these sounds, the animals can accurately gauge the range and direction of nearby obstacles, enemies or prey. See also pp 58, 91.

Echo sounder, device that sends ultrasonic sound pulses through water and detects their reflection - from the sea bottom, schools of fish or any submerged object. Continuous chart recordings can provide a profile of the sea bottom. See also SONAR, pp 483, 646.

ECHO viruses, group of viruses found in the faeces of apparently healthy individuals, having the name Enteric Cytopathogenic Human Orphan. There are at least 28 types of these RNA-containing viruses. They are known to cause diseases such as aseptic meningitis and various respiratory tract diseases.

Eck, Johann (1486-1543), German theologian and defender of the papacy against German Protestant reformers. He publicly debated with Martin Luther in 1519 and was largely instrumental in securing the papal bull which condemned Luther in 1520. In 1530 he drafted the refutation of Lutheranism according to the AUGSBURG CONFESSION.

Eckermann, Johann Peter (1792-1854), German writer. Although himself an author and poet, he is best known for his relationship with Johann Wolfgang von Goethe. His *Gespräche mit Goethe*, a biographical study of Goethe, has been compared to Boswell's *Life of Johnson*.

Eckhart, Johannes (c 1260-1327), German Dominican theologian and mystic, also known as Meister Eckhart (or Eckehart), whose speculations on the union of the soul with God led to his being tried and condemned for heresy by the Papacy. His ideas influenced later Protestant thinkers. **Eclampsia**, rare disorder occurring in the last weeks of pregnancy, characterized by high blood pressure, swelling, excessive weight gain, convulsions, and albumin in urine. The cause is unknown. Treatment includes various drugs to control the symptoms. Delivery may be hastened or caesarean section performed.

Electicism, in philosophy, the combination of elements from different systems of thought without resolving conflicts among the systems. The method was favoured by Roman philosophers, including Cicero, some Renaissance thinkers and 19th-century philosophers led by Victor Cousin, who coined the term. Similar principles have been applied to painting and sculpture since the 16th century.

Eclipse, in astronomy, occurs when a celestial body temporarily obscures another, as seen from the Earth. The most familiar kinds are solar and lunar eclipses. A solar eclipse happens when the Moon passes between the Earth and the Sun so that the Sun's light is blocked from the part of the Earth on which the Moon's shadow, or umbra, falls. A lunar eclipse is caused by the Earth when it moves between Sun and Moon so that the Moon passes into the Earth's umbra, and cannot shine by reflected sunlight. Both kinds of eclipses can be total, when Earth or Moon pass completely into the other's umbra, or partial, when Earth or Moon remain partly in the other's partial shadow, or penumbra. If a solar eclipse happens when the Moon is at apogee (furthest point from Earth), its apparent size is less than the Sun's, and an annular or ring eclipse results, with the Sun appearing as a bright ring around the dark Moon. If Earth and Moon's orbits were in the same plane, solar and lunar eclipses would be monthly, occurring at new and full moons. But because the Moon's orbit is at an angle to Earth's, eclipses are possible only when the Moon crosses Earth's orbital plane and is in line with Earth and Sun. These conditions happen seven times a year at the most. To early peoples eclipses, especially of the Sun, were awe-inspiring events. It is not surprising that the knowledge that eclipses can be predicted added

greatly to the authority of its discoverers, the astronomer-priests of Chaldea (Mesopotamia). Today solar eclipses enable astronomers to make studies which are not normally possible, such as checking Einstein's theory of relativity. See also pp 928, 976-977.

Eclipsing variable or binary, regular variable star in which the light variations are the result of the star being a BINARY STAR, ie, consisting of a bright component with a darker companion. The two stars regularly pass in front of each other and are at maximum brightness when one is not eclipsing the other. The prototype of the best-known class of eclipsing variables is Beta Persei, or Algol. See also p 989.

Ecliptic, great circle on the CELESTIAL SPHERE, inclined at 23.5° to the CELESTIAL EQUATOR, ie, the yearly path of the Sun as seen from Earth or the Earth's orbit around the Sun. The plane of the ecliptic thus passes through the centre of both the Earth and the Sun. The planets (except Pluto) are always located near the ecliptic. See also p 1006.

Ecliptic co-ordinate system, astronomical co-ordinate system that refers to the plane of the ecliptic. The co-ordinates used are celestial latitude and longitude. Celestial latitude is the angular distance of a celestial body above (positive value) or below (negative value) the ecliptic, from 0° to 90°. Celestial longitude is the angular distance eastward along the ecliptic from the First Point of Aries or vernal equinox to the vertical plane through the celestial body, from 0° to 360°.

Ecology, or environmental biology, bio-ecology, biological study of relationships between living things and their environment. It is also the interactions of groups of organisms with each other and with their surroundings. See also pp 290, 292.

Econometrics, quantitative branch of economics, involving the application of statistics to economic problems, usually with the aid of computers.

Economics, study of how individuals in a particular society choose to allocate resources in order to produce the right proportion of goods demanded by that society. It involves studying methods of production to obtain maximum efficiency in the use of resources and deciding how material wealth is to be distributed. Ideally, economics also helps societies plan in such a way that future needs will be met. See also pp 1860-1863.

Economy, financial organization of the production and distribution of goods and services within a society or economic unit such as a household. Economic systems have varied greatly depending on the nature of available resources, labour and demand, the lines of communication, the forms of exchange and the level and type of technology. The two dominant and competing economic systems today are private-enterprise economy, or capitalism, and the centrally-planned economy.

Ecosphere, similar to BIOSPHERE, the total of all the ECOSYSTEMS of the Earth. The term BIOSPHERE is used solely to indicate the zone of life, but the term ecosphere includes the interaction of living organisms with their environment. See also pp 292, 293.

Ecosystem, or ecological system, functioning community of living things and their environment. It is a complete ecosystem only if it recycles elements, has a constant energy source, and can incorporate energy into organic compounds and pass it from organism to organism. See also p 292.

ECT (electroconvulsive therapy), electrical stimulation of the brain leading to convulsions, used primarily in the treatment of emotional disturbances. When current is applied the patient immediately loses consciousness, his body becomes rigid, and his breathing stops for a few seconds. Then a brief period of muscular convulsions occurs. After treatment, the patient has a temporary memory loss and may be confused. Six to eight treatments are often sufficient to affect a severe depression. See also p 1117.

Ectoderm, one of three so-called germ

layers of tissue formed in the early development of a fertilized egg. It is the outer layer of the BLASTULA and later develops, in most animals, into a skin or shell, a nervous system, lining tissue, parts of some sense organs, and various miscellaneous tissues. Other germ layers are the ENDODERM and MESODERM.

Ectomorph, type of human being of slight or delicate build, usually with a thin face, high forehead and receding chin. Most people are a combination of ectomorph, ENDOMORPH and MESOMORPH. See also p 1123.

Ectopic pregnancy, occurrence of a fertilized ovum outside the uterus - in the FALLOPIAN TUBE or elsewhere. The embryo cannot develop normally, and spontaneous termination of the pregnancy usually occurs. If it does not, serious injury for the mother may result if the condition goes unrecognized.

Ectoplasm, in biology, outer layer of the CYTOPLASM of a cell, it is usually semi-solid and transparent. The term is also used to refer to the apparently solid emanation that is believed to be produced by a spiritual medium in a trance.

Ecuador, republic in NW South America, which includes the GALAPAGOS ISLANDS. Until recently the country's economy depended largely on the export of bananas, but the discovery of oil in the late 1960s should strengthen it. The capital is Quito. Area: 270,670 sq km (104,506 sq miles). Pop. (1976 est.) 7,305,000. See also p 2022.

Ecumenical Council, ecclesiastical convention of worldwide Roman Catholic Church representatives, restricted to members of that Church since the REFORMATION. The pronouncements of such a council are considered infallible by Catholics. Twenty-one ecumenical councils have been called by various popes, the last being VATICAN II (1962-65). All Christians recognize the first seven councils, the last of which was held in NICAEA in 787. See also p 1790.

Ecumenical movement, movement aiming at the restoration of the lost unity of Christendom. In its modern sense the movement began with the Edinburgh Missionary Conference of 1910 and has continued to grow in strength, leading to the foundation of the WORLD COUNCIL OF CHURCHES in 1948. For a long time the Roman Catholic Church stood apart, but its attitude changed after the Second VATICAN COUNCIL (1962-65) and now it is as committed to the movement as are the other branches of Christendom.

Eczema, form of chronic DERMATITIS characterized by redness, oozing, blisters and itching. It can be caused by contact with a substance, such as poison ivy or detergent, to which the skin has been sensitized. More general eczema may occur with no identifiable cause, often in persons with histories of allergies. The treatment is local medication. See also ALLERGY, p 1074.

Edam, town in North Holland, Netherlands, 19 km (12 miles) NE of Amsterdam, near the Zuider Zee. Once a great port, it has many fine old buildings. The local cheese is also called Edam. Pop. (1970 est.) 18,200.

Edda, term applied to two manuscripts, one a collection of Old Norse poems - *Older Edda* or *Poetic Edda* - and the other a work by Snorri Sturluson - *Younger Edda* or *Prose Edda*. The *Older Edda* is dated c 1270, but includes poems as old as the 8th century. It contains epic poetic narrative featuring the traditional Germanic heroes and mythological subjects. The *Younger Edda* (early 13th century) was written as a manual of instruction for professional poets. It includes a section of myth and a section called the *Skalds*, which explains the use of diction, metre, alliteration, etc.

Eddery, Pat (1952-), Irish-born jockey who was Britain's champion jockey for four successive seasons (1974-77). In 1975, riding *Grundy*, he won the Derby, Irish 2,000 Guineas, Irish Derby and the King George VI and Queen Elizabeth Diamond Stakes.

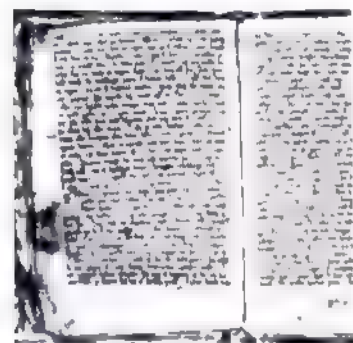

Eddington, Sir Arthur Stanley (1882-

Ectopic pregnancy, a misplacement of a fertilized ovum necessitating early termination

Edam, a view of the town showing the church of St Nicholas, rebuilt in 1602 after a fire

Edda, a page of manuscript from this work probably written during 1222-23

Sir Arthur Eddington, a British astronomer renowned for his studies of stellar motion

1944), British scientist who contributed to mathematics, relativity, cosmology and astronomy. He was professor of astronomy at Cambridge University and researched into the structure of stars. He also made significant contributions to the general theory of relativity, and was an eloquent popularizer of science.

Eddy, Mary Baker (1821-1910), American founder of CHRISTIAN SCIENCE (1879). She claimed to have rediscovered the secret of primitive Christian healing after an instantaneous recovery from serious injury in 1866. She expounded her system in the CS textbook, *Science and Health with Key to the Scriptures* (1875).

Eddy, Nelson (1901-67), US film star and singer. The highest paid singer in the US in the early 1940s, Eddy starred, often with Jeanette MacDonald, in many musical films including *Naughty Marietta* (1935), and *Bitter Sweet* (1940).

Eddy current, circulatory electric current induced in a conductor when subjected to a varying magnetic field. Eddy currents cause a loss of energy in AC generators and motors, the reaction between the eddy currents in a moving conductor and the field in which it moves retards the motion of the conductor. See also pp. 874-875.

Eddystone Lighthouse, stands on isolated rocks in the English Channel, S of Plymouth, SW England. The first Eddystone lighthouse was built in 1696. The present one is the fourth and was completed in 1882.

Ede, town in Gelderland, Netherlands, centre of the Dutch rayon industry and on the railway from Amsterdam and Utrecht to Arnhem. The nearby St Hubertus castle has an art collection. Pop. (1970 est.) 72,000.

Edelman, Gerald Maurice (1929-), US molecular biologist. He shared with R R PORTER in 1972 Nobel prize in physiology and medicine for his work on unravelling the chemical structure of the antibody gamma globulin. The determination of the structure of gamma globulin was essential to research on how antibodies function in the immunization system which recognizes and destroys invaders in the body.

Edelweiss, small perennial plant native to the Alps and other high Eurasian mountains. It has white, downy leaves and its small yellow flower heads are enclosed in whitish-yellow bracts. Family Compositae, species *Leontopodium alpinum*. See also pp. 320, 321.

Edema. See DROPSY.

Eden, Sir Anthony. See AVON, LORD.

Eden, in the Bible, garden created by God as the home of Adam and Eve, until they were banished for eating the forbidden fruit from the tree of knowledge. It is often equated with Paradise.

Edentate, any of a small order of North and South American mammals found from Kansas to Patagonia. The approximately 30 species include ARMADILLOS, sloths and ANT-EATERS. *Edentate* means "with all the teeth removed", but only the anteaters are truly toothless. See also ARDVAARK, pp. 86, 87.

Edgar (d. 1107), King of Scotland, crowned in 1097 after an English expedition led by his uncle, EDGAR (THE) AETHELING, deposed Donald Bane, King of Scotland. This victory established the dominance of the English language in Scotland. Edgar developed Edinburgh as his capital. **Edgar the Aetheling** (c. 1050-c. 1130) Anglo-Saxon prince, grandson of EDMUND IRONSIDE. Heir-elect to the English throne after HAROLD's death at Hastings in 1066, he submitted to the Normans, but was later involved in several unsuccessful raids on England from Scotland and Flanders. See also p. 1300.

Edgar the Peaceable (943/4-75), King of the English from 959 when he succeeded his brother as King of Wessex. A promoter of ecclesiastical reform, he was also the first English king to be crowned at what is still the coronation service. See also p. 1289.

Edgehill, Battle of, first encounter of Parliamentarians and Royalists in the ENGLISH CIVIL WAR. It took place on 23 October 1642. Although the Royalists were outnumbered (11,000 men to the

Parliamentarians' 13,000), the result was inconclusive. See also p. 1773.

Edgeworth, Maria (1767-1849), British novelist. She wrote *Practical Education* (1798) jointly with her father, Richard Lovell Edgeworth. Her novels, largely depicting Irish life, include *Castle Rackrent* (1800), *Belinda* (1801), *The Absentee* (1812) and *Ormond* (1817).

Edinburgh, capital city of Scotland, in Lothian Region, on the S shore of the Firth of Forth, Leith serves its port. The town grew steadily from the 11th century when Malcolm III made the castle his residence, despite being attacked by the English during the border wars. It became capital in 1437. JAMES IV was the first monarch to make Edinburgh his regular seat. After the Act of Union with England in 1707, Edinburgh retained the supreme courts of law. It flourished as a cultural centre in the 18th and 19th centuries around such figures as David HUME, Adam SMITH, Robert BURNS, and Sir Walter SCOTT. Places of interest include Holyrood palace, home of MARY QUEEN OF SCOTS, the Chapel of St Margaret, the city's oldest building, the home of Protestant reformer John KNOX, Princes Street and the castle. The University of Edinburgh was founded 1583. Industries: brewing, tourism, shipbuilding, chemicals, printing and publishing, and electrical engineering. Pop. 475,042. See also UNION, ACT OF (1707), pp. 1472-1473, 1768-1769.

Edinburgh, Duke of. See PHILIP, PRINCE. **Edinburgh International Festival of Music and Drama** (founded 1947), annual festival held in August-September in Edinburgh, Scotland. Rudolf Bing was its first artistic director. It quickly became one of Europe's most highly regarded festivals. A variety of "fringe" activities (drama, art and film exhibitions) has added to its appeal. See also pp. 1783, 1784.

Edirne (Adrianople), fortified city in NW European Turkey, 209km (130 miles) WNW of Istanbul, at the confluence of the Meric and Tundzha rivers. Founded by Hadrian in c. AD 125, the city passed to the Ottoman Turks in 1361 and was their capital until 1453. Captured by the Russians in 1829 and again in 1879, the Bulgarians in 1913 and ceded to Greece in 1920, the city was returned to Turkey in 1923. It is an agricultural trading centre, and its industries include textiles and tanning. Pop. (1965) 46,091.

Edison, Thomas Alva (1847-1931), US inventor. Although he received little formal education, he made many important inventions, including the telegraph, the phonograph (1877), the first commercial electric light (1879), and many improvements to the electricity distribution system. He worked for the US government during WWI on anti-submarine weapons. He lost control of most of his companies which were merged into the General Electric Company in 1892. See also pp. 636, 642, 1630.

Edmonton, capital of Alberta, Canada, on the N Saskatchewan river. It is an industrial and commercial centre, with coal-mining, natural gas and agriculture. Named after the original settlement Fort Edmonton, the town is also a railway centre. Pop. (1971) 434,116.

Edmund Ironside (c. 993-1016), English king. After the death of his father, ETHELRED II the Unready, the rather unpopular Edmund was proclaimed king in 1016. Edmund won several victories over his former barons and the rival claimant, the Dane CANUTE, before Canute defeated him. The two divided England, but Edmund, then ruler only of Wessex, died a month later.

Edmund, St (d. 869), King of East Anglia, canonized having allegedly been put to death by the Danes for refusing to give up his Christian faith.

Edmund of Abingdon, Saint (c. 1175-1240), English churchman and scholar, also known as Edmund Rich. Renowned as a teacher at Oxford, he preached in favour of the Sixth Crusade (1227) and subsequently became Archbishop of Canterbury (1234-40). He opposed King Henry III's favouritism towards foreign counsellors and died on his way to Rome

to state his case. He was canonized in 1247.

Edom, ancient kingdom of Palestine (12th century to 6th century BC) which was located astride the modern Jordan-Israel border, between the Dead Sea and the Gulf of Aqaba; it is sometimes called Idumea. Known for its iron and copper mines (Edom means "red earth"), it was supposed to have been originally settled by the descendants of ESAU.

Edred, or Eadred (d. 955) English king. He was crowned in 946 and strove successfully against the Norsemen to take back Northumbria as part of England.

Education Acts, legislation on which the British education system is based. The most important Acts are those of 1870, 1902, 1918, 1944 and 1976. The 1870 Act established a system of compulsory and free elementary education. In 1902 education became the responsibility of local education authorities. The 1918 Act set the school-leaving age at 14. The Act of 1944 established free secondary education within a system of grammar and secondary modern schools. And finally the 1976 Act required local education authorities to provide secondary education in comprehensive schools, raising the school-leaving age to 16. See also pp. 1573, 1707.

Educational psychology, branch of psychology that deals with the process of learning and the whole context in which it takes place - social, institutional and personal (including both teachers and pupils). It is generally taken to include attempts to measure intelligence and ability. See also pp. 1124-1125.

Education and Science, Department of (DES), British government department responsible for the promotion of education and the fostering of civil science in England. It is headed by the Secretary of State for Education and Science and its specific functions are the broad allocation of capital resources for education, the provision and training of teachers and the setting of basic standards in education. The Department works in co-operation with local education authorities which administer the day-to-day running of schools, and with the University Grants Committee which administers the universities. The Department derives from the Board of Education and was set up as the Ministry of Education by the EDUCATION ACT of 1944.

Education sentimentale, L', novel (1869) by Gustave FLAUBERT. Dealing with the passion of a young man for an older woman, the work is largely autobiographical. **Edward I** (1239-1307), King of England (r. 1272-1307). He won influence and fame suppressing the baronial revolt of 1263-65 against his father, HENRY III, and on a crusade (1270-72). He carried out important administrative, judicial and financial reforms, and contributed greatly to the development of Parliament by summoning frequent sittings and including commoners in them. Edward conquered Wales and incorporated it into England (1275-84). Although he conquered Scotland in 1296, the remainder of his reign was occupied with further Scottish revolts. See also pp. 1313, 1316-1318, 1342.

Edward II (1284-1327), King of England, (r. 1307-27). Edward's weak rule and reliance on favourites alienated his barons, who increasingly took control of the government, especially after the Scots decisively defeated Edward at BANNOCKBURN in 1314. He regained control in 1322 only to rely on new favourites. He alienated his queen, ISABELLA, who became the mistress of the exiled baron Roger Mortimer. These two invaded England in 1326, deposed and murdered Edward, and crowned his son Edward III. See also pp. 1313, 1317.

Edward III (1312-77), King of England (r. 1327-77). He became involved in unsuccessful wars with Scotland at the start of his reign, and his claim to the French throne after 1328 led to the outbreak of the HUNDRED YEARS WAR in 1337. Edward led several campaigns to France during which he took part in the battle of CRÉCY and the siege of Calais in 1346-47.

Eddystone Lighthouse: the fourth structure at its completion in 1882

Edelweiss is an alpine plant that grows well in gardens under lowland conditions

Edward I: a 19th-century lithograph of his first meeting his bride, Eleanor of Castile

Edward IV

Edward VI, a Protestant, tried to exclude his Catholic sister, Mary, from the succession

Eels are slippery and difficult to hold because of their copious covering of mucus

Egrets have long, silky plumes, which they employ in elaborate courtship rituals

Egypt is largely agricultural, cotton workers such as these being essential to the economy

At home he rallied the nobility behind his wars, he increased the scope of Parliament to improve its administration, and he enacted legislation limiting the powers of the papacy in 1351-53. Towards the end of his reign he fell under the influence of his mistress Alice Perrers, government was increasingly in the hands of Edward's

MINN JOHN OF GAUNT and EDWARD THE BLACK PRINCE. See also pp 1342-1349
Edward IV (1442-83), King of England (r 1461-70, 1471-83). He became leader of the Yorkist faction in the wars of the roses in 1460 and became king the following year after defeating the Lancastrians at the battle of Mortimer's Cross. He relied on the support of Warwick, who allied with the exiled Henry VI in 1470 and forced Edward himself into exile. Edward returned to defeat Warwick and Henry at Barnet in 1471 and kept his throne thereafter in relative peace. He was responsible for the reorganization of the Crown lands and attempted to build up the power of the Crown independently of the nobility. See also pp 1376-1377

Edward V (1470-83), King of England. He succeeded his father EDWARD IV, in April 1483. His uncle Richard, Duke of Gloucester, the regent, housed Edward and his younger brother in the Tower, the Lords and Commons proclaimed them illegitimate and crowned the duke RICHARD III. The two boys were probably murdered in August 1483 and have become known as the Princes in the Tower. See also p 1376

Edward VI (1537-53), King of England only legit male son of HENRY VIII who came to the throne aged only nine. His uncle the Duke of Somerset was his regent (1547-49), but after the display of symptoms of dissatisfaction with his rule and religious policy shown in KET'S rebellion of 1549 he was overthrown by the duke of Northumberland, who introduced a more fully Protestant policy. Edward died of tuberculosis at the age of 15. See also pp 1404-1405

Edward VII (1841-1910), King of Britain and Ireland (r 1901-10). The eldest son of Queen VICTORIA, he was generally excluded from government affairs by his mother. He turned his energies to social life, travel and sport, and was involved in several scandals. As king he restored court pageantry and became popular. He attempted to maintain European peace through personal contacts between rulers and contributed particularly to the growth of the Anglo-French alliance. See also p 1663

Edward VIII (1894-1972), King of Britain and Ireland, subsequently Duke of Windsor. In ww1 he served in the army. Soon after becoming king in 1936 he abdicated in order to marry an American divorcee. During ww2 he was governor of the Bahamas. See also ADDICTION, p 1707

Edward of Woodstock. See BLACK PRINCE
Edward, Prince Antony Richard Louis (1964-), third son and fourth child of Queen ELIZABETH II of Britain. He is third in line of succession to the British throne.

Edward the Black Prince (1310-76), outstanding English military commander, eldest son of EDWARD III. He distinguished himself in France at Crécy (1346) and led the English to victory at Poitiers (1356). He led several other expeditions in France, but as viceroy in Aquitaine (1362-71), he proved an unsuccessful ruler. In the 1370s he built up a faction against his brother JOHN OF GAUNT, but he died before he could ascend the throne.

Edward the Confessor (c 1002-66), King of England (r 1042-66). Edward was the half Norman son of Ethelred II, and spent much of his life in Normandy before succeeding to the throne. He suffered a serious revolt from earl Godwin in 1051-52. He also introduced many Normans to the English court and may have offered the throne to William of Normandy who later certainly claimed the offer had been made. He supervised the rebuilding of WESTMINSTER ABBEY. See also pp 1300-1301.

Edward the Elder (d 925), King of Wessex (r 899-925). He was son and successor

to ALFRED THE GREAT and after his father's death was responsible for the reconquest of the NANTAW in 920. He was considered overlord by the rulers of Northumbria and Wales. See also p 1288

Edward the Martyr (d 978), King of England (r 975-78). He was murdered, perhaps by his stepmother, after failing to establish control of his kingdom. After his death he was popularly regarded as a saint.

Edward, Lake, lake in central Africa, on the Zaïre-Uganda border, connected to Lake Albert by the River Semliki. It was discovered in 1889 by Henry STANLEY. Area 2,150sq km (830sq miles).

Edwards, Duncan (1916-58), British snooker player. A strongly built wing half of prodigious talent, he played 18 times for England (1955-57) and twice won League honours (1956, 1957) with Manchester United. He and seven of the famous 'Busby Babes' from the same team died in a plane crash at Munich airport in 1958.

Edwards, Gareth (1947-), Welsh rugby union scrum-half, at 20 the youngest captain of Wales. He later lost the captaincy but became Wales's most capped player with 49 appearances (1967-77). A member of the Cardiff club, he toured South Africa (1968-1974) and New Zealand (1971) with the British Lions.

Edwin, King of Northumbria (r 616-33). Overlord of all the English kings of 626, he was converted to Christianity in 627, bringing Roman Christianity to Northumbria. He was killed in battle by Penda of Mercia.

Edwy (d 959), King of Wessex (r 955-59). He quarrelled with ST BENEDICT who was subsequently exiled. He was succeeded by his younger brother Edgar.

EEC (European Economic Community), multinational economic and political organization dedicated to European development. Also known as the Common Market, its founder members were France, West Germany, Italy, Belgium, The Netherlands and Luxembourg, the UK, Irish Republic and Denmark joined in 1973, Greece in 1981. Established by the Treaty of Rome (1957), its purpose is to create a common economic approach to agriculture, employment, trade etc, and to give Western Europe more influence in world affairs through closer political co-operation. The first direct elections to the European Assembly were held in May 1979. See also p 1743

Feckhout, Gerbrand van den (1621-74), Dutch painter, a close friend, pupil and imitator of REMBRANDT. At first he mostly painted portraits based closely on the style of Rembrandt, but later he broadened his repertoire to include genre subjects in the manner of CARL TEN BORM.

Fel, marine and freshwater fish found worldwide in shallow temperate and tropical waters. Like some snake-like bodies dorsal and anal fins continuous with the tail and an air bladder connected to the throat. Length up to 3m (10ft). The various types include freshwater, moray, conger and snake eels. Order Anguilliformes. See also pp 57-58, 61, 62-63, 331, 340-341.

Fel grass, or grass wrack, flowering plant that grows in shallow water and on mud flats. It has long, grass-like leaves and spikes of inconspicuous flowers. Family Potamogetonaceae, species *Zostera marina*. See also p 332

Felworm, tiny, thread-like NEMATODE found throughout the world in soil and fresh and salt water. Unlike the earthworm, it is not segmented. Most species are parasitic on plants or other animals.

FEL (English as a Foreign Language) teaching methods through which foreigners are taught English, different from teaching English to English people. In Britain English is taught widely in private schools for adults, methods vary between direct audiovisual and conventional traditional grammar and translation.

FFTA (European Free Trade Association), multinational customs union established in 1959 in Stockholm. Comprised of Austria, Iceland, Norway, Portugal, Sweden and Switzerland, it seeks to pro-

mote free trade among its members. Competition has existed between the group and the EEC (European Economic Community) since both have essentially the same objectives, although the latter is more politically oriented. See also p 1743

Fgan, Patrick (1841-1919), Irish nationalist and US politician. He was an active member of the Irish Land League, but emigrated to the USA in 1883 to avoid arrest. There he gained political prominence, first as a Republican and after 1896 as a Democrat.

Fghert (d 839), King of Wessex, (r 802-39), sometimes considered to be the first king of all England, after 828 when he defeated Beornwulf of Mercia. After 836 he had to defend his lands against the first Danish invasions.

Fgg, Augustus (1816-63), British painter of social history subjects, whose popularity revived in the 20th-century fashion for Victorians. Typical of his style is the series of three paintings *Present in the Past* (SSA).

Fgg, or ovum, reproductive cell of female animals surrounded by protective jelly ALBUMEN, shell, CHORION, egg case or MEMBRANE, depending upon the species. It supplies a reserve of food in the form of a yolk for the EMBRYO; its nucleus supplies half the chromosome complement of a future embryo, and supplies almost all the CYTOPLASM upon union with the SPERM. The amount of yolk in an egg depends on when the embryo actively begins to feed. Bird and insect eggs each have a large yolk, mammalian eggs a much smaller one. The life-span of a mature human egg is 12-24 hours, sea urchin eggs 40 hours and those of most invertebrates, amphibians and fish, a few minutes. See also pp 77, 164-165

Fgyptlant. See ALGERINE

Fglantine, or sweetbrier, wild rose native to Europe. It has soft pink flowers, and its leaves and flowers have a spicy odour. Height to 1.8m (6ft). Family Rosaceae, species *Rosa eglantina*.

Egmond, Lamoral, 4th Count of (1522-68), Flemish general and statesman. In the service of PHILIP II OF SPAIN he defeated the French at Saint-Quentin (1557) and Gravelines (1558). Although himself a Roman Catholic, he protested against the Spanish persecution of Protestants in the Low Countries. In 1565 he took his protest to the king of Spain, to no avail. The new Spanish governor of the Low Countries, the Duke of Alba, had Count Egmond and Count Hoorn arrested on false charges of treason in 1567 and publicly beheaded in 1568. This led to open revolt in the Low Countries.

Egmont, Mt, dormant volcano near New Plymouth, North Island, New Zealand. Height 2,518m (8,260ft).
Ego, the self or the "I" which the individual consciously experiences. In psychoanalysis, according to SIGMUND FREUD, it is that conscious level of the personality that deals with all the demands and difficulties of the external world, and also mediates the internal demands made by the impulses of the id and by the SUPEREGO. There are many differing interpretations of the role, structure, development and disorders of the ego among the various schools of psychoanalysis. See also pp 1133

Egret, white heron of temperate and tropical marshy regions. It is known for its plumes, once popular for decorating hats. Egrets are long-legged, long-necked slender-bodied wading birds with dagger-like bills. They feed on small animals and nest in colonies. Height 50-100cm (20-40in). Family Ardeidae, genus *Egretta*.

Egypt, independent nation in NE Africa which also claims the Sinai Peninsula in SW Asia. Most of the working population is engaged in agriculture, cotton being the most valuable crop. Toll charges for the Suez Canal are still an important source of revenue, and tourism also provides a high income. Recently industrialization has increased and most industries are now nationalized. The capital is Cairo. Area 1,001,449sq km (386,659sq miles). Pop (1976 est.) 38,067,000. See p 2022

Egypt, ancient, civilization that emerged in the region of the Nile valley in the 4th millennium BC and continued until 30 BC, when the region was annexed to the Roman empire. The region comprised two separate kingdoms. Lower Egypt, in the Nile delta, with its capital at Heliopolis, and Upper Egypt, on the Nile N of the 2nd Cataract, with its capital at Thebes. The two kingdoms were united by Menes in c. 3100 BC. See also pp.1166-1167, 1180-1181, 1182-1183

Egyptian plover. See CROCODILE BIRD
Egyptology, study of ancient Egypt, its people and, primarily, its antiquities. Mystery still surrounds the famous pyramids, tombs, temples, art and religion of the ancient Egyptians. Important landmarks in the exploration and understanding of Egypt include the discovery of the ROSETTA STONE and the tomb of TUTANKHAMEN, and the moving of the temple at ABU SIMBEL.

Ehrenburg, Christian Gottfried (1795-1876), German biologist and founder of the science of micro-paleontology. Ehrenburg studied at Berlin University and travelled widely as a naturalist, identifying and classifying many terrestrial and marine plants and micro-organisms. He advanced the theory of "complete organisms", stating that all animals - even microscopic infusoria - have complete organ systems, it was later refuted.

Ehrenburg, Ilya (Grigoryevich) (1891-1967), Soviet novelist and journalist. He lived in Western Europe (1908-17, 1921-40) working as a journalist for several Russian newspapers. His novels, introducing Western European trends into Soviet literature, include the satirical *Julio Jurenito* (1919), *The Storm* (1948), and *The Thaw* (1954). See also THAW, THE
Ehrenstahl, David Klorer (1629-98), German born Swedish painter. His work, which includes allegorical portraits, still-lives and landscapes won him the title "father of Swedish painting".

Ehrlich, Paul (1854-1915), German bacteriologist. He shared with E. METCHNIKOFF the 1908 Nobel prize in physiology and medicine for his work on immunization, which included the development of basic standards and methods for studying toxins and antitoxins, with special reference to diphtheria antitoxins. His subsequent search for a "magic bullet" against disease and his discovery of SALVARSAN, a chemical effective against syphilis micro-organisms, introduced the modern era of chemotherapy (a term he coined). See also p.1092

Eichendorff, Joseph Freiherr von (1788-1857), German novelist and lyric poet. Among the greatest of German Romantic poets, his works inspired many composers. His main prose work is *Memoirs of a Good-for-Nothing* (1826).

Eichler, August Wilhelm (1839-87), German botanist who developed a system of plant classification eventually accepted worldwide. It included division of plants into four major classes. He helped to edit some 15 volumes on the flora of Brazil and published a 2-volume study of the comparative structure of flowers.

Eichmann, Adolf (1906-62), Austrian Nazi, head of subsection IV-B-4 of the Reich Central Security Office in WWII. He supervised fulfilment of the Nazi policies of deportation, slave labour, and mass murder in the concentration camps, which led to the death of some 6,000,000 Jews during the war. He escaped to Argentina in 1945, but was abducted by Israelis in 1960, tried and executed in Israel.

Eider, large sea duck found in northern regions of Europe and North America. Its down is used as a filling for pillows and quilts. In the breeding season the male grows striking black and white plumage. Family Anatidae, genus *Somateria*.

Eldede imagery. See PHOTOGRAPHIC MEMORY

Eiffel, Alexandre-Gustave (1832-1923), French engineer who established metal as an architectural material. His EIFFEL TOWER was the world's tallest structure until 1930.

Eiffel Tower, landmark built for the Paris exposition of 1889. Designed by Alexan-

dre-Gustave EIFFEL, the tower rises 300m (984ft) and has an iron frame. Lifts and stairs lead to observation platforms, and at the top is a TV transmitter. See also p.1658.

Eigen, Manfred (1927-), German chemist who shared the 1967 Nobel Prize in chemistry with R. G. W. NORRISH and G. PORTER. The techniques devised by Eigen is to disturb the balance by a chemical reaction near equilibrium and make measurements of colours emitted as the system relaxes into a new equilibrium state. These techniques have been used in the study of RADIATION chemistry, and in reactions that use ENZYMES as CATALYSTS.
Eiger, mountain peak in w central Switzerland, in the Bernese Alps, approx 16km (10 miles) SE of Interlaken. Height 3,975m (13,040ft).

Eigg, island of NW Scotland, one of the Inner Hebrides, S of Skye, W of Moray, Mull and the largest mainland port nearby. Area: 20sq km (12sq miles). Pop (1974 est.) 70.

Eight, The, group of US painters formed in 1907 to protest against the policies of the National Academy of Design. The group had little coherence but several members later established the ASHCAN SCHOOL, who, in 1913, organized the ARMSHOW in New York. This introduced modern European art to America, shocking audiences and critics.

Eight Masters of Tang and Sung, The, term traditionally used in Chinese schools for eight outstanding prose writers during the T'ANG (618-907) and SUNG (960-1279) dynasties. During the T'ang, Han Yu (768-824) and Liu Tsung-yan (773-819) instituted a return to the simpler style of several centuries earlier. The six other masters furthered this reform during the Sung. They were: Ouyang Hsiu, Wang An-shih, Su Shih, Su Hsün, Su Ché and Tséng Kung.

Eijkman, Christian (1858-1930), Dutch medical researcher and physician. In 1929 he shared with F. G. HOPKINS the Nobel Prize in physiology and medicine for his discovery of the antineuritic vitamin. Eijkman was the first to recognize a dietary deficiency disease, demonstrating that BERIBERI was produced by a lack of a certain dietary substance, later identified as vitamin B₁. See also pp.1060, 1061.

Findhoven, city in s Netherlands, on the Dommel River, approx 88km (55 miles) SE of Rotterdam. The city developed into an industrial centre after 1891 when the Philips Electrical Company was founded there. Industries: radio, electrical equipment, textiles. Pop (1974) 191,942.

Einhard (770-840), historian of the medieval Frankish empire. Born in Germany, Einhard was educated in Fulda, and later became an important scholar and diplomat at the court of CHARLEMAGNE. He is best known as author of the *Life of Charlemagne* (*Vita Caroli Magni*).

Einstein, Albert (1879-1955), German-American physicist, b. Germany. He published three important theoretical papers, the first contained a mathematical analysis of BROWNIAN MOVEMENT, the second concerned the application of QUANTUM THEORY to photoelectricity, for which he was awarded the Nobel Prize for physics in 1921, and the third contained the first publication of the Special Theory of RELATIVITY - a paper that completely revolutionized physics and led, through its equation of mass and energy, to the discovery of the atomic bomb. In 1916 Einstein produced his General Theory of Relativity, but died before completing his work on a unified field theory. Being a Jew, he left Germany when Hitler came to power, spending the rest of his life in the USA, becoming a US citizen in 1940. See also pp.858, 859.

Einsteinium, radioactive metallic element (symbol Es) of the ACTINIDES, first identified in 1952 as a decay product of U²³⁸ produced in the first large hydrogen-bomb explosion. Properties: at no 99, most stable isotope Es²⁵⁴ (half-life 276 days). See also TRANSURANIC ELEMENTS

Eindhoven, Willem (1860-1927), Dutch physiologist. He became professor at

Leiden University in 1886 and was awarded the 1924 Nobel prize in physiology and medicine for his work on the string galvanometer, the mechanism for the ELECTROCARDIOGRAM.

Eisenhower, Dwight David (1890-1969), 34th US president (1953-61). A professional soldier, he commanded the invasion of N Africa (1942) and the victorious Allied offensive in Europe (1944) to become a national hero. He was later appointed US army chief of staff, then NATO commander. As president he shared Harry S. Truman's global view of US responsibilities, often clashed with Russian leaders and presided over rising affluence at home. He used troops to force school integration in Arkansas and although he was humiliated by the U-2 INCIDENT (1960) and bequeathed the abortive BAY OF PIGS invasion of Cuba (1961) to his successor, he left office one of the most popular of all presidents. See also pp.1711-1748, 1792.

Eisenstein, Sergei (1898-1948), Soviet film director, technician, innovator and theorist. Although he completed just six films in 25 years (he frequently clashed with disapproving authorities), he remains one of the most influential artists in the history of film-making. He developed a strong intellectual and aesthetic style, enhanced by the incisive use of creative editing for narrative and expressive effect. His films are *Strike* (1924), *The Battleship Potemkin* (1925), *October* (or *Ten Days That Shook the World*, 1928), *The General Line* (or *Old and New*, 1929), *Que Viva Mexico* (unfinished, 1932), *Alexander Nevsky* (1938) and *Ivan the Terrible* (two of three parts completed, 1944-46). His translated writings include *The Film Sense* (1942) and *Film Form* (1949). See also MONTAGE, p.1683.

Eisteddfod, Welsh music and poetry competition held annually. Dating from the 7th century, eisteddfodau were revived in the 19th and have become important in preserving the Welsh language and cultural traditions. International eisteddfodau are popular tourist attractions and are not restricted to Welsh participants.

Elitoku, Kame (1543-90), Japanese painter. Probably trained by his grandfather Motonobu, he is best known for his decorative works of gigantic forms painted on gold-leaf backgrounds. The rulers Nobunaga and Hideyoshi were among his patrons.

Ejaculation, in biology, the sudden emission or spouting of fluid or seed from either the animal or vegetable system.

Ejector seat, device for escaping from an aircraft in an emergency. In order to PARACHUTE successfully from high-speed aircraft it is necessary to blow the seat and the pilot clear of the fuselage and tail section with an explosive charge. In hypersonic craft the pilot can be protected by separating the entire cockpit from the fuselage and parachuting the capsule and occupant together to the ground.
Ekaterrburg, city in the Russian Republic (Rossijskaja sssr) in the foothills of the Ural. In 1918 the Russian royal family was imprisoned and executed there. Renamed Sverdlovsk in 1924, it is now a leading producer of machinery. Other industries include gem cutting and metallurgy. Pop (1970) 1,026,000.

El, supreme god of the western Semites in ancient times, depicted by the Phoenicians as an elderly figure with a long beard. An all-encompassing nature deity with patriarchal authority over all the gods, he was the husband of Asherah and father of MARDUK, the Romans identified him with Chronos. By the time of the RAS SHAMRA texts, El had become the all-wise, all-just Creator.

Elahi, Chaudhri Fazal (1904-), President of Pakistan from 1973-1978. He became a lawyer in 1929 and joined the Punjab government (1947-56). He was a member of the National Assembly from 1962, becoming Deputy Speaker (1965) and Speaker (1971). He succeeded President Bhutto.

El Alamein (Al-'Alamayn), village in N Egypt, 104km (65 miles) W of Alexandria.

Ilya Ehrenburg, a Soviet writer who was among the first to criticize Stalin's regime

Eider, the female lays four to six eggs and covers them with down during incubation

Eiffel Tower, once the world's highest structure, was an observation post during WWI

Ejector seat, a pilot's escape mechanism, is essential in high-speed military aircraft

Elam

Elands browse in herds of up to 200 and can live for weeks without water during droughts

Gen. Bernard MONTGOMERY successfully attacked AXIS forces there and eventually drove them back to Tunisia, frustrating AXIS efforts to take Egypt. See also pp. 1710, 1711, 1713, 1713.

Elam, ancient country of Mesopotamia with its capital at SUSA. The Elamite civilization emerged around the 4th millennium BC, but did not attain prominence until c. 2000 BC when the Elamites took BABYLON. Their civilization flourished until the 7th century BC, when it succumbed to ASHURBANIPAL the Assyrian king. The Elamites were racially and culturally independent from most of the other peoples of Mesopotamia, but they adopted cuneiform characters. See also pp. 1164-1165.

Eland, largest living ANTELOPE native to central and southern Africa. Gregarious and slow moving, elands are nevertheless good jumpers. Both sexes carry heavy spiralled horns. Height up to 1.8m (5.8ft) at the shoulder, weight up to 900kg (1.984lb). Family Bovidae.

Plasmobranch. See CHONDROCTHYES.

Elastic materials. See ELASTOMERS.

Elasticity, capability of a strained material to recover its size and shape after deformation. STRAIN is determined by molecular structure. When external force (STRESS) is applied, molecular spacing changes. Stress is proportional to strain within the elastic limit, which depends on the material's composition. The ratio of stress to strain is a material's YOUNG'S MODULUS. See also HOOKE'S LAW.

Elastomer, substance that regains its original size and shape after being deformed. Elastomers include natural RUBBER and various synthetic materials with similar properties. All are polymers in which the molecular chains are folded, stretching the elastomer straightens the chains. See also pp. 389, 588.

Elat, seaport town in Israel, on the Gulf of AQABA. It is the site of a pipeline terminal sending oil to the Haifa refinery. Industries: fishing, tourism. Pop. 14,600.

Elâzığ (Kharpüt), town in E Turkey, capital of Elâzığ province. It is bounded by the Murat, Peri and Euphrates rivers. Industries include copper mining and hydroelectric power. Pop. (1973) 127,003.

Elba (Isola d'Elba), Italian island in the Tyrrhenian Sea, largest of the Tuscan Archipelago. The chief port and town is Portoferraio, on the N coast. The island is mountainous, and is a major supplier of Italy's iron ore, which has been mined since Etruscan and Roman times. NAPOLEON I was exiled there (1814-15). Industries: fisheries, wine, tourism. Area 223sq km (86sq miles). Pop. 27,500.

Elbe, river in central Europe. It rises as the Labe on the slopes of the Riesengebirge, NW Czechoslovakia, flows through Czechoslovakia, East and West Germany, entering the North Sea at Cuxhaven. In 1945 the river was made part of the demarcation line between East and West Germany. Length 1,167km (725 miles).

Elberfeld. See WUPPERTAL.

Elbrus, Mt (Gora Elbrus), two peaks in the Caucasus Mts, SW USSR, formed by two extinct volcanoes. The W peak is the highest in Europe, 5,633m (18,481ft). The E peak is 5,595m (18,356ft) high.

Elburz Mts (Alborz or Reshieh-ye Kūhā ye Aehorz), narrow mountain range in N Iran, along the S coast of the Caspian Sea, separating the dry inland plateau from the agriculturally rich coastal lowlands. The range includes Mt Damāvand, the highest peak in Iran, rising to 5,771m (18,944ft). Length 900km (560 miles).

El Cid. See CID, RODRIGO DIAZ DE BIVAR. **Elder**, in the Bible, man of authority among any of the twelve tribes of Israel, not specifically of religious importance but with a voice in the tribal council. The New Testament "elders" of the early Christian Church were later known as PRESBYTERS or priests.

Elder, shrub and small tree found world wide in temperate and subtropical areas. They have divided leaves and clusters of tiny white flowers. Their small berries are eaten by wildlife, they are also used in making wine, jellies and medicine. The

common European elderberry shrub (*Sambucus nigra*) has coarse-toothed leaflets, white flower clusters and purple berries, height 4m (13ft). There are 40 species. Family Caprifoliaceae. See also p. 376.

Eljarn, Kristján (1916-), Icelandic statesman and archaeologist. He was curator of the National Museum of Iceland (1947-68) and was elected president of Iceland (1968-80).

Edon, John Scott, 1st Earl of (1751-1838) British jurist. He was solicitor-general (1788-93), attorney-general (1793-99) chief justice of Court of Common Pleas (1799-1801) and chancellor (1801-27). He encouraged action to crush radical movements.

El Dorado, mythical city of fabulous wealth, supposedly located in the interior of South America, the focus of many Spanish expeditions in the 16th century. The name (meaning "The Gilded" or "The Golden One") also refers to a legendary South American king who daily powdered himself all over with gold dust.

Eleanor crosses. See ELEANOR OF CASTILE.

Eleanor of Aquitaine (c. 1122-1204), Queen consort of France and later of England. She married Louis VII of France, and accompanied him on the Second Crusade (1147-49). She was divorced in 1152 and married Henry, Duke of Normandy (later Henry II of England) and was the mother of Richard I and John.

Eleanor of Castile (c. 1246-90), Queen consort of England. She married Edward I in 1254 and gave him her half-brother's claim to Gascony. Edward made crosses to mark her funeral progress from Nottingham to London, and gave her a fine tomb in Westminster Abbey.

Eleanor of Provence (c. 1223-91), Queen consort of England who married Henry III in 1236, and was a great influence on him. Her French relatives and courtiers were unpopular at the English court. She returned to a convent in 1286.

Eleaticism, teachings of the Eleatic school of Greek philosophy. Founded in the 5th century BC by Parmenides and including ZENO OF ELEA, the school taught that absolute reality is immobile, immutable and indivisible. Change in the world which is perceived by the senses, is only apparent; reason alone knows the real essence.

Elecampane, stout, hardy perennial of the Compositae family, native to Eurasia and now common in many other parts of the world. It has a few large, yellow, daisy-like flowers, hairy stems and aromatic leaves and root. Height up to 1.2m (4ft). Species *Inula helenium*.

Election, a process of choosing candidates for political office. There are usually two stages: a party's candidate is chosen by local constituency party members; registered electors in the constituency then choose between the various party candidates by secret ballot. Depending on the system, voters may make only one choice (as in Britain) or rank the candidates in order of preference (as in Australia). Age, race and residency qualifications, set by law, govern a person's eligibility to vote. Candidates must also meet certain requirements. The maximum period between elections is determined by law or the constitution. In the USA, important judicial officers in some states are elected to office. In totalitarian countries, elections are a ploy between candidates of the only permitted party. See also p. 1854.

Electoral College, the body of US electors who, chosen by the electorates of the states, cast the votes which actually elect the president and vice-president of the USA. The system was devised in 1787 because the size of the country made it difficult for voters to know the candidates for national office. They therefore elected local men to choose them for them. Despite modern communications the college has survived.

Electors, in the Holy Roman Empire (German princes (usually seven) who chose the king of Germany and the emperor. The practice arose in the 13th century as the succession was often dis-

puted. See also pp. 1294-1295.

Electra (c. 418-414 BC), tragedy by SOPHOCLES. The heroine, Electra, helps her brother Orestes avenge their father Agamemnon's death by plotting to kill their mother Clytemnestra and stepfather Aegisthus. There is controversy about the historical and literary origins of this play. EURIPIDES wrote a similar play with the same title in 413 BC.

Electrical branch circuit, any electrical circuit that is an interconnected branch of the main circuit where Kirchhoff's network laws apply. These state that at any branch junction the sum of the currents flowing to that point is equal to the sum of the currents flowing away.

Electrical capacity. See CAPACITANCE, ELECTRICAL.

Electrical circuit, path provided for an electric current, composed of conducting devices and including a source of ELECTROMOTIVE FORCE that drives the current. Current flows according to several definite laws, the most important is OHM'S LAW. See also pp. 804, 809.

Electrical engineering, branch of ENGINEERING that deals with the practical application of ELECTRICITY, especially as related to illumination, communication, computers and automatic control of machinery. Electrical engineers are fully trained in the mathematics of electrical circuits and are involved in research, development, design, production supervision and improvement of production methods. See also pp. 428-429, 469.

Electrical panel box, wall-mounted junction for all the main and branch circuits of a house. Within it are usually terminals from the main power source and switches to all the outlets, along with the corresponding fuses or CIRCUIT BREAKERS.

Electrical switch, any device used to stop and restart the flow of CURRENT within an electrical circuit. The basic principle always involves an interruption and restarting of the conducting medium, usually the wiring. See also pp. 398, 804.

Electric arc furnace. See ELECTRIC FURNACE.

Electric cars, vehicles powered by electricity supplied by storage batteries. Displaced by cars with petrol engines after the 1920s, they caused interest again during the fuel shortage of the 1970s. They are still considered impractical, however, because of their relatively short travelling distances between recharges and their low speeds. See also pp. 498-499.

Electric chair, device used in CAPITAL PUNISHMENT. The prisoner is strapped into the chair and electrodes are fastened to the crown of his head, and one leg, through these is transmitted a high voltage shock. The electric chair was first used in New York in 1890.

Electric current, flow of ELECTRONS in a material, most familiarly in a metal wire. The current in a circuit was thought to flow from positive to negative, or from live to neutral, this convention is still used even though electrons are negatively charged. The flow is really in the opposite direction. Electric current is measured in AMPERES, one ampere being the passage through the medium of 6.25×10^{18} electrons per second.

Electric eel, fresh-water tropical fish found in South America. It is not a true eel. Its ribbon-like body is dark-brown to black and is bordered by an anal fin extending along its underside. Air is breathed at the water's surface. Electric organs make up 80 per cent of its body and produce charges of up to 600 volts. Length 2.9m (9.5ft). Family Electrophoridae (also called Gymnotidae), species *Electrophorus electricus*. See also pp. 61, 331.

Electric, or electrostatic, field, region surrounding an electric charge in which a force would be experienced by another charged particle. The force is attractive if the charges differ in polarity and repulsive if they are the same. The strength of the field due to charge Q at a distance r is equal to $Q/4\pi\epsilon_0 r^2$ where ϵ_0 is the permittivity of free space. The force that a charge q experiences in an electric field of

Elba, an Italian island of mild climate supports rich olive groves and vineyards

Elder, from whose stem the Greeks made a musical instrument called a sambuca

Electric eel, when excited, generates enough electric to stun a man or a horse

strength E is equal to qE . See also pp.866-867

Electric fish, several unrelated species of cartilaginous and bony fish that possess electric organs capable of producing abnormally high voltages. These can be used for attack, defence or navigation by ECHO-LOCATION. The ELECTRIC EEL (*Electrophorus electricus*) can deliver one or two amperes at about 600 volts, which could be enough to disable or even kill a man. See also pp.267, 267, 411

Electric flux, quantity of electricity displaced across an area in a DIELECTRIC medium, expressed as the product of the area and the component of the electric vector at right-angles to the area. See also GAUSS' LAW

Electric furnace, enclosure heated by ELECTRIC CURRENT. Electric furnaces are used for melting and producing metals such as alloy steels and refractory materials. Three main methods of heating are used: striking an arc between electrodes in the furnace, inducing EDDY CURRENTS in the material to be melted using an alternating magnetic field, and by passing a high current through the material, heat being produced by its resistance. An electric arc furnace is used for very high temperatures. See also p.397

Electric guitar, six or twelve-stringed instrument whose sounds are produced electronically. Electric guitars differ from acoustic guitars in having one or more electromagnetic devices (pickups) which generate a signal when the strings above them are plucked. The signal is then amplified and played through a loud-speaker. Electric guitars are widely used by pop groups.

Electricity, form of energy associated with static or moving CHARGES. Charge has two forms, positive and negative. Like charges repel each other and unlike attract, these forces are described by COULOMB'S LAW. Electric charges are acted upon by forces when they move in a MAGNETIC FIELD and this movement in turn generates an opposing magnetic field (Faraday's laws). Electricity and MAGNETISM are different aspects of the same phenomenon, ELECTROMAGNETISM. The flow of charges constitutes a CURRENT, which consists of negatively charged ELECTRONS travelling through a CONDUCTOR. For a current to exist in a conductor there must be an ELECTROMOTIVE FORCE (EMF) or POTENTIAL DIFFERENCE between the ends of the conductor. If the source of potential difference is a battery the current flows in one direction only (direct current, DC), whereas if the source is the mains the current changes direction twice every cycle (alternating current, AC). The AMPERE is the unit of current, the COULOMB is the unit of charge, the OHM the unit of RESISTANCE and the VOLT is the unit of electromotive force. OHM'S LAW and KIRCHHOFF'S LAWS (the summing of voltages and currents in a circuit) are the basic means of calculating circuit values. See also pp.866-869, 878-879

Electricity sources, supplies of energy that are converted into electricity. Most of our electricity comes from the chemical energy of fossil fuels - coal, oil and natural gas. A small proportion is converted from the nuclear energy of atoms. Chemical batteries and FUEL CELLS convert chemical energy into electricity directly. SOLAR CELLS convert the heat and light of the Sun's rays into electricity. See also ENERGY SOURCES, pp.424-425, 428-435

Electricity supply. See NATIONAL GRID

Electric light, artificial light produced by the flow of ELECTRONS in a wire or gas. Incandescent light, produced when a filament, such as tungsten-alloy wire, is heated, is richer in red light than is light from the Sun. In a fluorescent tube or vapour lamp, the electric current is carried by ions, electrically charged atoms, which also emit light.

Electric motor, electric rotating machine that converts electrical energy into mechanical energy by the interaction of a MAGNETIC FIELD with an ELECTRIC FIELD. Electric motors are convenient and comparatively quiet, and have replaced many

other forms of motive power. They may use alternating current (AC) or direct current (DC). The stationary part of the motor is called the stator, and the moving assembly of wire loops is known as the rotor or armature. See p.876

Electric ray, or torpedo, flatfish related to the SKATE, found in all tropical and temperate seas. Electric rays stun their prey with electrical charges of up to 200 volts produced by two large electric organs located on either side of the head. Family Torpedinidae, there are about 30 species. See also ELECTRIC EEL, ELECTRIC FISH, p.61

Electric shock, passage of high voltage electricity through the body, resulting in muscular spasms which can cause injuries such as broken bones and which may prevent an electrocuted person from letting go of a live wire accidentally grasped. Other injuries to the body can include severe burns at the points of contact, brain concussion and stoppage of the heart and breathing. Electric shock may be fatal unless treated immediately. See also ELECTRIC CHAIR

Electric storm. See also LIGHTNING, THUNDERSTORM, pp.249, 866

Electric unit, standard quantity in which electricity is measured. The domestic unit of electricity is the kilowatt hour. A fire rated at 1 kilowatt (1,000 watts) consumes 1 unit of electricity when it is switched on for 1 hour. A WATT is the power developed in a circuit when one AMPERE of electricity flows across a POTENTIAL DIFFERENCE of one VOLT.

Electrocardiogram, or ECG, amplified recording of small voltage changes occurring in the heart made with an instrument called an electrocardiograph. It is used for measuring stress to the heart, and monitoring cardiovascular diseases. See also p.8637

Electrochemical analysis, analytical techniques used by chemists in which ELECTROLYSIS of a solution is used to precipitate solids or release gases, the quantities of which correspond exactly to the amounts of electricity which is passed through the solutions in question. See also ELECTROCHEMICAL EQUIVALENT

Electrochemical equivalent, amount of any substance that is precipitated or consumed when 96,500 coulombs of electricity is passed during ELECTROLYSIS of a solution of the substance. This amount of electricity equals one FARADAY, named after its discoverer.

Electrochemical series, list of the metallic elements in order of their reactivity. The more reactive, such as sodium, occur near the top of the table, and the less reactive, such as gold, occur lower down. The gas hydrogen frequently behaves chemically as a metal and is placed in the table as a reference metal that is more electropositive than hydrogen will displace it from its solutions, less electropositive metals will not.

Electrochemistry, branch of physical chemistry concerned with ELECTROLYTES. It includes such topics as certain properties and reactions of ions in solution, the conductivity of electrolytes and the study of the processes occurring in electrochemical cells and in ELECTROLYSIS. See also p.902

Electroconvulsive therapy. See ECT

Electrocution, in CAPITAL PUNISHMENT, the infliction of the death penalty by passing high voltage electricity under controlled conditions through the body. Accidental electrocution can be fatal, depending on the voltage. An ELECTRIC SHOCK tends to be more severe if the victim is in contact with water. See also ELECTRIC CHAIR

Electrode, conductor through which an electric current flows into or leaves a medium. In ELECTROLYSIS, two electrodes - a positive (ANODE) and a negative (CATHODE) - are immersed in a liquid (ELECTROLYTE). In an electric arc furnace, arcing between two electrodes heats up the surrounding gas space. See also p.903

Electrodeposition, deposition of an adhering metallic coating onto an ELECTRODE by passing a direct-current (DC) low-voltage electric current through an

ELECTROLYTE. Its most common application is ELECTROPLATING. Zinc, nickel and chromium plate prevent corrosion on cars and household appliances; silver protects tableware; copper prevents case-hardening in steel. In this case the object to be coated is the electrode. See also ANODIZING

Electrode potential, measure of the tendency of a reaction at an ELECTRODE. An electrode of an element (M) placed in a solution of its ions (M^+) constitutes a half-cell. In general a POTENTIAL DIFFERENCE exists between the electrode and the solution, caused by reactions of the type $M \rightleftharpoons M^+ + e^-$. In practice it cannot be measured absolutely and standard electrode potentials are defined with reference to a hydrogen electrode under specified conditions of concentration, temperature and pressure. Such reactions are oxidations, and so the term OXIDATION POTENTIAL is often also used. See also ELECTROCHEMICAL SERIES

Electrodialysis. See DIALYSIS

Electrodynamics, in physics, study of moving electric currents and the relations between electric and magnetic fields. It began in the 19th century with the theoretical work of James Clerk MAXWELL, and later became part of QUANTUM MECHANICS

Electroencephalogram. See ELECTROENCEPHALOGRAPHY

Electroencephalography, study of the electrical activity of the brain. Electrodes are attached to the scalp to pick up the tiny oscillating currents produced by brain activity. The brainwaves are recorded as a continuous trace on a paper strip called an electroencephalogram (EEG). The instrument is used in brain research and in the diagnosis of EPILEPSY and other kinds of brain disorders. See also ELECTROCARDIOGRAM

Electroforming, making of metal articles by deposition of the metal in a mould by ELECTROLYSIS. A notable application is the manufacture of metal negative replica moulds for gramophone records, where the accuracy of the deposition process provides faithful sound reproduction. See also ELECTRODEPOSITION

Electroluminescence, production of light by certain substances, particularly phosphors, when they are placed in an alternating electric field. Part of the light from a fluorescent lamp is due to electroluminescence, the rest is due to PHOTOLUMINESCENCE

Electrolysis, chemical reaction caused by passing a direct electric current (DC) through an ELECTROLYTE. The reaction is the result of transfer of electrons at the electrode surfaces. The type of electron-transfer reaction occurring depends on the ELECTRODE POTENTIALS of ions present, and the electrode material may play a part in the reaction. For example, in electrolysis of copper salts with a copper anode, atoms of the electrode ionize and enter into solution $Cu \rightarrow Cu^{2+} + 2e^-$. Electrolysis is an important method of obtaining chemicals, particularly extracting reactive elements such as sodium, magnesium, aluminium and chlorine. See also pp.400, 890, 902

Electrolyte, liquid that can conduct electricity. In electrolytes the current is carried by positive and negative IONS rather than by electrons. These are present in fused ionic compounds, eg magnesium chloride, in solutions of ionic compounds and in solutions of acids and bases, which dissociate into ions. See also ELECTROLYSIS, p.902

Electrolytic solution, solution that is an ELECTROLYTE, ie a conductor of electricity. For example, a solution of sodium chloride contains sodium ions (Na^+) and chloride ions (Cl^-), which transport the current.

Electromagnet, magnet constructed from a soft iron core around which is wound a coil of metal wire. A magnetic field is set up when an electric current is passed through the wire, and disappears when the current is switched off. See also pp.872, 873

Electromagnetic field, region in which the

Electric fish generate sizeable voltages, which some use for navigation.

Electric guitars are cut from a solid piece of timber to avoid acoustic feedback.

Electrocardiogram is a record of a patient's heartbeat as a continuous trace on paper.

Electrodeposition, the principle employed in the process of commercial electroplating.

Electromagnetic induction

Electron demonstration apparatus used to measure the ratio of charge to mass

Electron tube the most familiar form of this device is the television cathode-ray tube

Electrophoresis is a way of electrically separating particles suspended in a liquid

Electroplating the rate of metal deposition depends on the current density

effect of an electromagnetic system can be detected. When a magnetic field of force vanes or changes, an electric field can always be detected. Conversely, when an electric field vanes, a magnetic field can always be detected. Either type of energy field can, therefore, be regarded as an example of an electromagnetic field.

Electromagnetic induction, use of MAGNETISM to produce electricity. If a bar magnet is pushed through a wire coil, an electric current is set up, or induced, in the coil, as long as the magnet is moving. This is the basic working principle of electricity GENERATORS, electric MOTORS and TRANSFORMERS. See also pp. 872-877.

Electromagnetic radiation, energy in the form of waves of a wide range of frequencies that travels through empty space at the speed of light, 299,792,588 km/s (186,201 miles per second), and through material media at different speeds. Light, radio waves, infra-red (heat), ultra-violet and X-rays are all examples of electromagnetic radiation. In general, electromagnetic waves are set up by electrical and magnetic vibrations, which occur universally in the atoms of matter. See also ELECTROMAGNETIC SPECTRUM.

Electromagnetic spectrum, distribution of different types of ELECTROMAGNETIC RADIATION with regard to either frequency or wavelength. It ranges from low-frequency (high-wavelength) radio waves, through infra-red (heat) waves, light (the visible spectrum), ultra-violet waves, X-rays, to very high frequency gamma rays. See also ELECTROMAGNETIC WAVES pp. 850-857.

Electromagnetic system of units. See ELECTROSTATIC AND ELECTROMAGNETIC SYSTEMS OF UNITS.

Electromagnetic waves, waves of energy composed of electric and magnetic fields vibrating sinusoidally at right-angles to each other and to the direction of motion, they are thus transverse waves. They travel in free space at a constant speed of 299,792,588 km/s (the speed of light), which is reduced when travelling through a denser medium, such as air or glass. These waves, which make up the ELECTROMAGNETIC SPECTRUM, are produced by the accelerations of charged particles. Electromagnetic waves can undergo REFLECTION, REFRACTION, INTERFERENCE, DIFFRACTION and polarization. Other phenomena, such as the absorption or emission of light, can be explained only by assuming the radiation to be composed of QUANTUM of energy rather than waves. See also pp. 850-857.

Electromagnetism, branch of physics dealing with the laws and phenomena that involve the interaction or interdependence of electricity and magnetism, such as the magnetic field produced by a moving charge. See also pp. 866-877.

Electrometallurgy, applications of ELECTROCHEMISTRY to METALLURGY. It includes the production and refining of metals by ELECTROLYSIS and such techniques as ELECTROPLATING, electrolytic machining and polishing, and ELECTROFORMING. In a wider sense, electrometallurgy includes other uses of electric current, as in alloy-steel production using an electric furnace. See also pp. 400-401, 902-903.

Electrometer, instrument having an electrical circuit for measuring differences of electric potential (voltages) without drawing appreciable current. Modern electrometers are essentially voltage AMPLIFIERS. See also VOLTMEETER.

Electromotive force (EMF), sum of the potential differences in a circuit, measured in volts. It is equal to the energy liberated when unit charge passes completely round the circuit in the direction of the resultant EMF. See also pp. 868-869, 872-873, 878-881, 884-885.

Electromotive series, table of chemical elements arranged vertically in decreasing order of their ELECTRODE POTENTIALS. The series illustrates the relative tendencies of metals to form positive ions in solution, the more electropositive metals being higher up the series. For example, metals higher than hydrogen displace hydrogen from acids by reactions of the type $\text{Ca} + 2\text{H}^+ \rightarrow \text{Ca}^{2+} + \text{H}_2$. The series is also called

the ELECTROCHEMICAL SERIES, especially in the context of relative abilities of elements to form ions in chemical reactions. See also p. 902.

Electromyogram, record of the electrical activity of muscles by means of electromyography (EMG). Muscles produce no currents when at rest, but during activity the currents generated enable a continuous trace of action potentials to be recorded. These traces are valuable for research and in diagnosis of muscle dysfunction.

Electron, lightest stable elementary particle (symbol e) with a negative charge, a rest mass of 9×10^{-31} kg (1/1836 that of the PROTON), and SPIN $\frac{1}{2}$. Discovered by J. J. Thomson in 1897, electrons are constituents of matter, moving around the NUCLEUS of an atom in complex orbits. In a neutral atom, their total charge balances that of the protons in the nucleus. Removal or addition of an atomic electron produces a charged ion. Chemical bonds are formed by the transfer or sharing of electrons between atoms. When not bound to an atom electrons are responsible for electrical conduction. Beams of electrons are used in several electronic devices, such as television tubes, oscilloscopes and electron microscopes. High-energy electron beams, from particle accelerators, are used in nuclear research. See also pp. 812-819, 866-869.

Electron configuration. See CONFIGURATION, ELECTRON.

Electron emission, liberation of electrons from the surface of a substance. It can occur as a result of heat (THERMIONIC EMISSION), light (PHOTOELECTRIC EMISSION), high electric field (field emission), bombardment by ions or other electrons (SECONDARY EMISSION), or it may result from RADIOACTIVE DECAY. In all cases, the electrons must acquire energy from the outside source in excess of the work function of the substance. Most valves and cathode-ray tubes depend on thermionic emission, whereas photoelectric cells rely on photoelectric emission. Field emission is important in the field-emission microscope and secondary emission is the principle used by electron multipliers and storage tubes. See also pp. 882-885.

Electron gun, in a CATHODE RAY TUBE such as that in a television receiver or an oscilloscope, device that emits electrons. The arrangement also focuses the electrons in a scanning beam on a fluorescent screen. A similar device in a television camera produces the video signal required to transmit the picture. See also p. 640.

Electronic brain, early name for the COMPUTER. The first completely electronic brain was ENIAC, developed at the University of Pennsylvania in 1945. ENIAC had some 18,000 vacuum tubes which made it unreliable and cumbersome. It was not until the invention of the TRANSISTOR in 1948 that computers of a significant capacity and reliability were built. With the growth of silicon-chip technology computers have become smaller, cheaper and more widely used. See also INTEGRATED CIRCUITS, pp. 466, 469, 849, 882-883.

Electronic circuits, electronic components wired together to form a unit capable of performing a particular function, such as detection or amplification of a signal or as a GATE in a logic circuit. The components commonly used in electronic circuits are resistors, capacitors, inductors and transformers in conjunction with thermionic valves or semiconductor devices (which have largely replaced valves). Wiring between components is largely by printed circuits, in which components are soldered to a board on which connections are made by narrow "tracks" of copper. See also pp. 880-885.

Electronic control system, control system based on ELECTRONIC CIRCUITS. Complex control systems rely upon computers, the control functions being carried out by logic circuits. These consist of GATES, which give a high output current when the input currents conform to a predetermined pattern. See also p. 464.

Electronic music, 20th-century genre of music employing electronic methods to

generate or modulate sounds. Although the first pieces produced on tape recorders were composed in the 1920s, the development of tapes after WWII stimulated much more complex electronic music. The invention of the music synthesizer capable of generating required sounds and filtering or modulating other sounds, was greatly explored, particularly by Karl Heinz STOCKHAUSEN, and in the 1960s it also became possible to use computers in the manipulation of complex electronic sounds. As well as pure electronic music, many composers such as Luciano BERRIO have added electronic taped music to the conventional orchestra.

Electronic musical instruments, 20th-century inventions producing sounds by means of electronic oscillators, photocells, electromagnetics, tape systems, etc. They include the Hammond, Novachord and Solovox organs, with variations such as the Theramin, Ondes Martenot, Moog synthesizer, and amplified ELECTRIC GUITAR popular in rock music.

Electronics, study and use of circuits based on the conduction of electricity through valves and semiconducting devices. John Fleming (1849-1945) invented the diode valve which was modified into the triode by Lee de Forest (1873-1961) in 1907. These devices, with further modifications and improvements, provided the basic components for all the electronics of radio, television, and radar until the end of WWII. A major revolution occurred in 1948 when a team at Bell Telephone Laboratories, led by William SHOCKLEY, produced the first semiconducting TRANSISTOR. Semiconductor devices are much lighter, smaller and more reliable than vacuum tubes. They do not require the high operating voltages of valves and they lend themselves to miniaturization in the form of integrated circuits. These characteristics have enabled electronic computers and automatic control devices to change the face of both modern industry and scientific research projects. See also pp. 462, 466, 468-638, 640, 882-885.

Electron microscope. See MICROSCOPE.

Electron tube, electronic device consisting of electrodes arranged within an evacuated glass tube, for special purposes a gas at low pressure may be introduced into the tube. The diode, used for rectification, consists of a negative CATHODE, which emits electrons when heated, and a positive ANODE or plate. The triode, used for amplification, has a perforated control grid between the cathode and the anode, a signal fed to the grid provides an amplified signal at the anode. Electron tubes have been largely replaced by TRANSISTORS and other semiconductor devices. See also pp. 882-883.

Electron volt, unit of energy (symbol eV) equal to the energy acquired by an electron in falling freely through a POTENTIAL DIFFERENCE of one volt. It is equal to 1.601×10^{-19} joules.

Electro-osmosis, flow of water caused when an electric current is passed through a porous clay or other porous material in a watery suspension. This phenomenon is caused by the formation of positive and negative ions, one type of which is bound to the clay while the other (in the water) moves towards the opposite electric pole. See also OSMOSIS, p. 899.

Electrophoresis, migration of electrically charged colloidal particles through a fluid from one ELECTRODE to another when an electromotive force is applied across the electrodes. It is used in the analysis and separation of colloidal suspensions, especially of colloidal proteins. It is also used as a means of depositing coatings of one material on another. See also COLLOID.

Electrophysiology, cardiac, study of the electrical activity of the heart muscle. When muscles contract and relax they produce electric currents. The heart produces the principal muscular currents and these are measured for diagnostic purposes by attaching electrodes to the outside of the body and connecting them to an ELECTROCARDIOGRAPH (ECG). See also ELECTROMYOGRAM.

Electroplating, deposition of a coating of

one metal on another by making the object to be coated the CATHODE in an electrolytic cell. POSITIVE IONS in the ELECTROLYTE are discharged at the cathode and deposited as metal ($M^+ + e \rightarrow M$). Electroplating is used to produce a decorative or corrosion-resistant layer, as in silver-plated tableware and chromium-plated motor-car parts. See also pp.398-399, 902-903

Electropolishing, electrolytic treatment of metals and alloys, usually in strong acid solutions, to produce a smooth, bright surface. It is the final surface treatment for some stainless steels and for polishing inaccessible surfaces of metal parts, eg inside gun barrels. Some alloys are electropolished before ELECTROPLATING. See also pp.878-879, 903

Electrorefining, purification of a metal by ELECTROLYSIS. Electrorefining is used to obtain 99.9 per cent pure copper. The cell has a copper sulphate ELECTROLYTE with a thin pure copper cathode, the impure copper is used as the anode. At the anode copper enters solution ($Cu - 2e \rightarrow Cu^{2+}$) and the reverse reaction occurs at the cathode. Thus the net result is a transfer of pure copper from anode to cathode.

Electroscope, instrument for detecting the presence of an electric charge. The commonest device is the gold-leaf electroscope, in which two gold leaves hang from a conducting support insulated from the case. A charge applied to the support causes the leaves to separate. See also p.634

Electrostatic field. See ELECTRIC, OR ELECTROSTATIC, FIELD

Electrostatic induction. See INDUCTION

Electrostatic and electromagnetism system of units, in electricity and magnetism, any of four systems of UNITS, based on different definitions of fundamental quantities, still in use. These include the centimetre-gram-second (cgs) electrostatic system, applied particularly to electrostatic problems, and the cgs electromagnetism system, for problems involving magnetic fields. These systems are combined in the Gaussian system of units and the international or SI system. See also CGS SYSTEM, MKS SYSTEM

Electrostatics, branch of physics which studies electrical charges, usually electrons, at rest, as on a charged metal sphere insulated from its surroundings, or on the insulated plates of a condenser or CAPACITOR. See also pp.825,866-867

Electrotype, name of a PRINTING process and also of a print made using it. In the process, a negative mould of the typeface or other surface to be printed is dipped in a bath of acid solutions where copper is electrodeposited onto it. The copper typeface is backed with TYPEMETAL to make the printing plate used on a press. See also ELECTRODEPOSITION, pp.612-617

Elegiac tradition, a literary form that originated in Greece in the 7th century BC. In classical literature, the term referred to poetry written in elegiac couplets concerning grand themes such as war, friendship and death. In modern usage, poems written in elegiac tradition need not follow a prescribed metrical pattern, but generally deal with the subject of death.

Elegy Written in a Country Churchyard (1750), contemplative poem by Thomas GRAY in quatrains of iambic pentameters. The poet, alone one evening in a country churchyard, reflects on the melancholy tombs around him, the ultimate futility of human endeavour and his own ultimate destiny.

Element, substance that cannot be split into simpler substances by chemical means. All atoms of a given element have the same ATOMIC NUMBER, and thus the same number of electrons - the factor which will determine chemical behaviour. The atoms can have different MASS NUMBERS and a natural sample of an element is generally a mixture of ISOTOPES. The known elements range from hydrogen (at no. 1) to Lawrencium (at no. 103). Other highly unstable elements have been prepared, but in insufficient quantity to study their chemistry. See also pp.888-894

Element 104, element with ATOMIC NUMBER 104, first claimed in 1964 by a

Soviet team at the Joint Institute for Nuclear Research at Dubna. They obtained the isotope of mass number 260 (half-life 0.3 seconds) by bombarding plutonium with neon ions. The element was named Kurchatovium after Igor Vasilievich Kurchatov, the former head of Soviet nuclear research. In 1969 an American team at Berkeley, California, obtained the isotope with mass number 257 (half-life 4-5 seconds) by bombarding californium with carbon nuclei. They proposed the name Rutherfordium after the New Zealand physicist, Ernest RUTHERFORD.

Element 105, element with ATOMIC NUMBER 105, first reported by a Soviet team at the Joint Institute for Nuclear Research at Dubna. They claimed the isotopes of mass numbers 260 and 261, as a result of bombarding americium with neon ions. In 1970 a team at Berkeley, California claimed the isotope 260 (half-life 1.6 seconds) obtained by bombarding californium with nitrogen nuclei. The Americans have suggested the name Hahnium after OTTO HAHN.

Elementary particles, "pieces" of matter that have not been subdivided. They are the basic constituents of matter and are distinguished from each other by their mass (usually expressed in equivalent energy units) and a set of QUANTUM NUMBERS, including charge and spin. They may be classified by their interactions into either HADRONS (mesons and baryons), which are subject to the strong interaction, or LEPTONS (electrons and neutrinos), which are subject to the weak interaction. Charged particles also undergo electromagnetic interactions. Many elementary particles have an associated antiparticle, which has the same mass, and a charge, BARYON number, and STRANGENESS equal in magnitude but opposite in sign. Of the large number of particles known, only the proton, electron, neutrino, neutron (when in a nucleus), their antiparticles and the photon are stable. The others decay after a characteristic lifetime to form stabler particles. When an elementary particle collides with its own antiparticle, mutual annihilation occurs, with the production of radiant energy. At high energies, particle-antiparticle pairs are produced. See also pp.812-819

Elementary subparticles. See SUBPARTICLES, ELEMENTARY

Elephant, largest land animal and the only living member of the mammalian family Proboscidea. It is native to Africa and India, the African bush elephant (*Loxodonta africana*) being larger than the Indian or Asian (*Elephas maximus* or *E. indicus*). A bull elephant may weigh as much as 7,000kg (15,400lb). They are herbivores, and browse widely in herds of up to 100, each elephant eating about 225kg (102lb) of forage daily. The tusks, the source of ivory, are elongated upper incisors with a length of about 3m (11ft) and a weight of up to 107kg (236lb). The trunk is an elongated nose and upper lip, at its tip are nostrils and finger-like projections. An elephant has acute senses of hearing, smell and touch. As an ENDANGERED SPECIES, it is now protected by law. In the wild it may live to the age of 80 but in captivity the life span is reduced to 60 years. Its only enemy is man. See also pp.87, 94

Elephant bird, one of a group of huge, extinct, flightless birds that lived in Madagascar up to about the mid-17th century. Height: to about 3m (10ft), weight: about 453kg (1,000lb). Genera *Aepyornis* and *Mullerornis*. See also p.77

Elephantiasis, tropical disease caused by parasitic invasion of lymph vessels, resulting in the swelling of legs and external genitals, and the thickening and fissuring of skin. The most common cause is a disease called FILARIASIS which results from infestation with small roundworms (*Filana*) carried by mosquitoes. The adult worms inhabit the lymphatic system. See also p.1082

Elephantine, island in s Egypt, in the River Nile below the Aswan Dam. It is the site of many ancient ruins and important archaeological finds have included the

Elephantine papyri, describing a Jewish colony (c.5th century BC), and the Nilometer, dating from the time of the Ptolemies, used to measure the depth of the Nile.

Elephant seal, largest type of SEAL, which breeds on the s California coast and in sub-Antarctic regions; it is so-called because of its large trunk-like proboscis. Elephant seals grow up to 5.5m (18ft) long and males weigh as much as 2.3 tonnes. The northern species is *Mirounga angustirostris*; the more numerous southern species is *M. leonina*.

Elephant's foot, tropical climbing vine native to South Africa. It belongs to the YAM family and has edible tuberous roots. Length: 3m (10ft). Family Dioscoreaceae, species *Dioscorea elephantipes*.

Elephant shrew, any of approx. 20 species of small insect-eating African mammals. They have long, pointed snouts, long tails and powerful hind legs. Length 9-32cm (3.5-12.6in). Family Macroscelididae. See also INSECTIVORE

Elevator. See LIFT

Elevator stage, theatre system of two stages vertically aligned inside a lift shaft that facilitates the speedy change of sets. While the set at stage level is being used, the other stage, either above in the attic or below in the basement, is prepared for the following scene. Devised in 1819 by Steele MacKaye for the Madison Square Theater, New York, it marked the beginning of modern mechanical stage-shifting devices.

Elf, in Germanic mythology small, mischievous fairy possessing great magic. Evil elves are grotesque creatures of the darkness. They milk farmers' cows and ride their horses all night, snuff out candles and prevent bread from rising. Superstition attributes to elves the practice of stealing human children and leaving instead a deformed or unpleasant changeling. Good elves love the woods and fields, where they dance and sing to the music of magic harps. They help a farmer's butter to form and his beer to brew.

Elgar, Sir Edward (1857-1934), British composer. His compositions cover a wide range: two symphonies, a violin concerto, a cello concerto and several orchestral and choral works, the grandest of the last being THE DREAM OF GERONTIUS. Of the five *Pomp and Circumstance* marches (1901-30), the middle section of the first is famous as the song *Land of Hope and Glory*. The "Enigma" Variations is his most often played work. See also pp.1583, 1754, 1754

Elgin, James Bruce, 8th Earl of (1811-63), Governor-General of Canada (1847-54). As MP he advocated responsible government for Canada. He encouraged trade with the USA and introduced liberal reforms.

Elgin, Thomas Bruce, 7th Earl of (1766-1841), British diplomat. He took the ELGIN MARBLES from Athens while he was on a mission in Constantinople. See also p.1486

Elgin, former county town of Morayshire, NE Scotland, on the Lossie River, since 1974 it has been part of Grampian Region. There is a 13th-century Gothic cathedral and Gordonstoun School is nearby. A market town, it has whisky distilling and woollen textile industries. Pop. 16,400.

Elgin Marbles, group of sculptures from the Acropolis of Athens including many of the friezes and the pediments of the PARNATHENON and one of the caryatids of the Erechtheum, collected by the 7th Earl of ELGIN and sold to the British Government in 1816. They are now on display in the British Museum, London. They form the largest surviving group of Classical Greek sculpture.

Elginshire. See MORAYSHIRE

El Greco. See GRECO, EL

Elhuyar, Juan José d', (1754-96) and **Fausto d'**, (1755-1833), Spanish scientists whose studies in mineralogy and metallurgy led to their discovery of TUNGSTEN in 1783. Subsequently Juan José perfected a method for amalgamating silver and mercury.

Eli, biblical high priest at Shiloh who

Electroscope's two gold leaves receive the same charge and mutually repel one another

Elephant bird, an extinct creature whose huge eggs held 450kg (2 gallons) of liquid

Elephant seal, almost exterminated through over hunting, is now back in numbers

EM, a small being of mythology thought to be responsible for many misfortunes

tutored the young Samuel in the service to God. The news of his sons' deaths and the capture of the Ark of the Covenant by the Philistines caused his death.

Elijah, biblical Tishbite prophet and teacher of ELISHA. He was bent on destroying idolatry and lived in poverty, performing miracles. He was fed by ravens in the wilderness and departed from the earth in a whirlwind. See also p.1191.

Elm Four-square Gospel Alliance, one of the PENTECOSTAL sects, founded in 1915 by George Jeffreys in Monaghan, Ireland. Whereas most Pentecostal groups maintain a congregational form of government, Elm differs from them by being more centralized.

Elmer, George (1819-80), British novelist, whose real name was Mary Ann Evans. Her romantic union with G.H. Lewes had a decisive influence on her work. Her novels, all realistic works about the problems of the provincial middle class, include *Adam Bede* (1859), *The Mill on the Floss* (1860) and *Silas Marner* (1861). *Middlemarch* (1871-72) is often considered her best work. See also p.1232.

Elmer, Thomas Stearns (1888-1965), British poet, b. USA. He moved to England in 1914 and became a British citizen in 1927, the same year he converted to Anglo-Catholicism. *The Waste Land* (1922) created a literary sensation with its unique, complex language utilizing literary allusions and mythical and religious symbolism to describe the emptiness of contemporary life. Later poems, notably *Ash Wednesday* (1930) and *The Four Quartets* (1936-43), held out hope through religious faith. See also p.1764.

Elmesthorpe. See LUDMANSING.

Elmish, biblical prophet of Israel, a disciple of ELIJAH. He anointed Jehu king over Israel, thus fulfilling the curse on AHAZ. **Elmish**, people at the top of any hierarchy, eg intellectual, social or political. Elites may contain the best in a particular human group - eg the strongest, the most highly trained, the most intelligent - or they may be made up of those who exercise a major share of authority or influence. See also p.1853.

Elizabeth I (1533-1603), Queen of England (r.1558-1603). She was the daughter of HENRY VIII and ANNE BOLEYN. During the reigns of EDWARD VI and MARY she was careful to avoid implication in political disputes and ascended the throne peacefully on Mary's death. She reintroduced Protestantism in 1559, broadly interpreted to ensure wide support. Throughout her reign she adhered to a small group of advisers, such as BURGHLEY and WALSHINGHAM, and despite constant demands on all sides that she should marry, she remained single. She led the country in its opposition to the threat of Spanish invasion in 1588. By a close identification between herself and the people, nurtured by regular journeys throughout the country, she won enormous prestige and loyalty that enabled her to withstand growing opposition in Parliament. See also pp.1403, 1408-1419.

Elizabeth II (1926-), Queen of the United Kingdom and head of the COMMONWEALTH OF NATIONS (r.1952-). She is the daughter of GEORGE VI, and married Philip Mountbatten, Duke of Edinburgh, in 1947. She served as a mechanic and lorry driver during WWII. She was crowned in 1953. Throughout her reign she has travelled extensively, especially around the Commonwealth, and she has encouraged closer contact than previously between the monarch and the people. She has four children, CHARLES, ANNE, ANDREW and EDWARD.

Elizabeth (1900-), Queen consort of GEORGE VI of Britain. She was Lady Elizabeth Bowes-Lyon until her marriage in 1923. She is the mother of Queen Elizabeth II of England and Princess Margaret.

Elizabeth of Valois (1545-68), Spanish queen, married in 1560 to PHILIP II, although originally considered for Philip's mentally unstable son, Carlos. She later became a figure of legend, in which she and Carlos were involved in an improbable, ill-fated love affair.

Elizabeth of York (1465-1503), Queen of England, wife of HENRY VII after 1486. By marrying her Henry aimed to reconcile the Yorkist and Lancastrian factions in the Wars of the Roses. She had four children. See also p.1400.

Elizabeth, in the New Testament, wife of Zacharias and mother of JOHN THE BAPTIST. She was related to Mary, mother of Jesus.

Elizabeth, city in NJ, New Jersey USA on Newark Bay, 8 km (5 miles) s of Newark. Settled in 1664 on land purchased from the Delaware Indians and a provincial centre in the 17th century, it was later the scene of important manoeuvres in the AMERICAN WAR OF INDEPENDENCE. Today it is a transport centre whose industries include chemicals and sewing machines. Pop. (1970) 112,654.

Elizabethan drama, drama staged in England during the reign of Elizabeth I (1558-1603). Elizabethan drama combines two movements in Western art and thought: classical and medieval. Also drawing from native forms of folk drama, Elizabethan drama is characterized by a spiritual vitality and the beginnings of doubt that the universe is harmonious and hierarchically ordered. Masters of the period include WILLIAM SHAKESPEARE (1564-1616), Christopher MARLOWE (1564-93) and Ben JONSON (1572-1637). See also pp.1416-1419, 1416-1419.

El-Jadida, seaport town in W Morocco, SW of Casablanca, on the Atlantic Ocean. Formerly called Mazagan, it was taken in 1502 by the Portuguese and reconquered by the Moroccans in 1769. Pop. 40,300.

Elk, name of two different species of deer: the European elk (*Alces alces*), known in North America as the moose, and the American elk, or wapiti. The elk, found in northern Eurasia, is the largest of all deer. Height at the shoulder to 1.9m (6ft), weight: 816kg (1,800lb). Family Cervidae. See also pp.291, 304-305.

Elkington, George Richards (1801-65), British chemist and industrialist who, with his cousin Henry Elkington, introduced the electroplating and electrogilding industries to Britain in 1840. He also established a copper-smelting works at Pembrey, s Wales.

Ellesmere Island, ice-capped island of North-west Territories, Canada, in the Arctic Ocean, NW of Greenland, second largest and northernmost island of the Arctic Archipelago. It has been the site of many geological, glaciological and geographical expeditions. Area: 212,688sq km (82,119sq miles).

Ellice Islands. See GILBERT AND ELLICE ISLANDS.

Ellington, Edward Kennedy ("Duke") (1899-1974), US jazz pianist and composer. One of the great figures of jazz history, he organized his first band in 1918 and continued at the forefront of the jazz world until the 1970s. His many compositions include piano suites, classic jazz band arrangements and many songs such as "Mood Indigo" (1930), "Caravan" (1937) and "I Got It Bad" (1941). See also pp.1756, 1756.

Elliot, Herb (1938-), Australian athlete. He lowered the world record in the mile to 3min 54.5sec and also established a world record at the 1,500-metre distance in 1958. At the 1960 Olympics he won a gold medal by improving his world record for 1,500 metres to 3min 35.6sec.

Ellipse, conic section formed by cutting a right circular cone with a plane inclined at such an angle that the plane does not intersect the base of the cone. When the intersecting plane is parallel to the base, the conic section is a circle. In rectangular Cartesian co-ordinates its standard equation is $x^2/a^2 + y^2/b^2 = 1$. Most planetary orbits are ellipses. See also p.786.

Ellipsoidal reflector, floodlight reflector that has two focal points, used in theatrical lighting.

Elliptical galaxy, type of regular GALAXY having either a globular or lenticular structure and characterized by the absence of spiral arms. Graded E0 to E7 according to increasing ellipticity, elliptical galaxies consist of old stars free of gas and dust.

Ellis, Henry Havelock (1859-1939), British psychologist and author. His seven-volume *Studies in the Psychology of Sex* (1897-1928) promoted the scientific study of sex and was important in changing public attitudes. He was also a pioneer in the study of dreams.

Ellis, Jan (1943-), South African rugby union loose-forward whose fast, tigerish displays and constructive forward play won him 38 international caps (1965-76), thus equalling du Preez's South African record. He played for South West Africa.

Ellis, Ruth (1926-55), last woman to be hanged in Britain before the suspension of capital punishment as the penalty for murder in 1965. A model, she was convicted of the murder of 25-year-old racing-driver David Blakely.

Ellis Park, rugby union ground in Johannesburg, South Africa, named after a local councillor. First used for rugby in 1928, it is Transvaal's home ground and the venue of South Africa's international matches. In 1953 a crowd of 95,000 people (a world record for a rugby match) watched the British Lions beat South Africa there.

Ellison, Ralph Waldo (1914-), US author. A short-story writer and essayist, he won a National Book Award in 1953 for his first novel, *Invisible Man* (1952). The book deals with the prejudice and hostility faced by a young black man in the USA.

Ellora, Shrines of, series of rock temples cut from a hill (6th-8th century). They serve the Buddhist, Hindu and Jain religions. The Hindu Kailasa temple, dedicated to the god Shiva, is the most magnificent. See also p.1255.

Ellsworth, Lincoln (1880-1951), US polar explorer. He financed the Norwegian explorer Roald AMUNDSEN, in 1911 the first person to reach the South Pole, and made a successful arctic flight with Amundsen from Spitzbergen over the North Pole to Alaska in 1926. In 1931 he explored vast regions of the Arctic Ocean and in 1935 made the first flight over Antarctica.

Elsworth Land, region of W Antarctica extending a from Byrd Land to the W coast of the Weddell Sea.

Elm, hardy, deciduous tree of north-temperate zones, often planted as a shade tree. Varieties include the American (*Ulmus americana*), English (*U. procera*) and Scotch elm (*U. glabra*). All are susceptible to the deadly DUTCH ELM DISEASE. Height over 30m (100ft). The smaller Chinese elm (*U. parvifolia*) and Siberian elm (*U. pumila*) are resistant to the disease. Family Ulmaceae. See also p.307.

Elmbridge, county district in N central SURREY, England, bordering on Greater London, created in 1974 under the Local Government Act (1972). Area: 96sq km (37sq miles). Pop. (1974 est.) 112,800.

Elmer Gantry (1927), novel by Sinclair LEWIS that exposes hypocrisy in the ministry through the career of a man who uses religion to gain himself fame and fortune.

Elongation, in astronomy, difference measured in degrees between the celestial longitude of the Sun and that of a planet or the Moon. In the case of inferior or superior conjunction, the elongation is almost zero; for quadrature, it equals 90°, for opposition it equals 180°.

El Paso, city and port of entry in W Texas, USA, across the Rio Grande from Ciudad Juárez, Mexico. Although there was a settlement nearby in 1598 (El Paso de Rio) there was no permanent settlement until 1827. Now a commercial centre, the city's industries include oil and copper refining and food processing. Pop. (1970) 322,266.

Elphinstone, William (1431-1514), Scottish prelate and Bishop of Aberdeen (1488) who was responsible for introducing the first printing press (Chapman and Millar's) into Scotland. In 1488 JAMES III made him Lord High Chancellor. Elphinstone was ambassador to France in 1491, and keeper of the privy seal from 1492. He founded King's College in 1494 which later became the University of Aberdeen.

El Salvador, republic in Central America bordered by Guatemala to the W and

Honduras to the N and a. The fertility of the upland plains allows the cultivation of coffee and sugar cane and agriculture is the chief occupation, although industrialization is progressing. The capital is San Salvador. Area, 21,393sq km (8,260sq miles). Pop. (1976 est.) 4,240,000. See p.2026.

Flammer, Walter Maurice (1904-), US theoretical physicist and geophysicist. He is noted for his investigation of the upper mantle of the earth. In 1925 he predicted electron diffraction and, in 1936, neutron diffraction.

Elbene. See IXELLE.

Elshimer, Adam (1578-1610), German painter. His most characteristic works are small-scale landscapes painted on copper, with biblical or mythological themes.

Flämare (Helsingør), city in E Denmark. Its castle, redesigned in the 17th century, was the setting for Shakespeare's HAMLET. Pop. 7,560.

Eluard, Paul (1895-1952), French poet, real name Eugene Grindel. When a SURREALIST (1919-38) he wrote *Capital of Grief* (1926) and *The Public Rose* (1934). He joined the Communist Party (1942) and fought in the Resistance. Later poems include *Poetry and Truth* (1942).

Elvstrom, Paul (1928-), Danish yachtsman whose dedicated approach to his sport brought him four Olympic gold medals (in the Firefly class 1948, and Finn 1952, 1956, 1960) and 11 world championships. 505 (1957, 1958), Finn (1958, 1959), Snipe (1959), Flying Dutchman (1962), Star (1966, 1967, 1974), 5.5m (1966) and Soling (1969).

Ely, Isle of. See ISLE OF ELY.

Elyot, Sir Thomas (c.1499-1546), diplomat and author, who served as ambassador to the court of the Holy Roman Emperor CHARLES V. On the first occasion (1531) his primary brief was to obtain Charles' consent to HENRY VIII's divorce. He wrote the *Boke called the Governour* (1531), a discussion of the education of a statesman, dedicated to Henry VIII. See also p.1416.

Elysium, in Greek mythology, the Elysian fields, the abode of blessed mortals after their removal from the Earth. It was not the place of the dead, but a realm to which heroes departed to live a life of happiness. HOMER located Elysium at the farthest ends of the earth on the banks of the river OCEANUS.

Elysium Planitia, volcanic plane of intermediate geological age on the planet MARS. It contains two large volcanic craters (calderas), Hecate tholus and Albor tholus, as well as a clearly marked dome, Elysium Mons. See also pp.945, 949, 949.

Emancipation, freeing from restriction, especially the granting of freedom to slaves, but also the improvement of the legal status of women and the increase in religious tolerance for Roman Catholics in Britain, during the last 150 years. In Russia the Edict of Emancipation (1861) was ALEXANDER II's proclamation of freedom to the serfs, under the edict the serfs were also granted land in return for redemption payments made by them to the state over the next 49 years. The scheme was not a success (see HC2 p.168, 168). In the USA, a proclamation of Emancipation was made by Lincoln on 1 January 1863, technically freeing only those slaves in the rebel CONFEDERATE STATES, but emancipation was made general by the 13th amendment to the constitution passed in 1865 (see also HC2 pp.151-152). In Britain the emancipation of slaves is usually referred to as the abolition of slavery.

Embargo, obstruction of the movement of cargo to prevent its delivery. In modern terms, it refers to complete suspension of trade with a country or withholding crucial goods, such as oil.

Embolism, blocking of a blood vessel usually by a blood clot, but also by a foreign body, air bubble or fat globule. Symptoms vary according to the organs affected and may be severe, eg a heart attack. ANTICOAGULANTS and surgery are treatments. See also ARTERIOSCLEROSIS, p.1066.

Embroidery, art of ornamenting textiles with NEEDLEWORK, although many other

decorative materials can also be added. Embroidery is not woven into a fabric but is sewn on an already finished cloth. About 300 different embroidery stitches exist, of four main types: flat, looped, chained and knotted. Decorative embroidery is an ancient art that has been used throughout the world to convey magnificence, sometimes, as in the BAYELX TAPESTRY, it has also served as a means to record real or imaginary events. In medieval times England was renowned for its embroidery, which was mainly ecclesiastical in inspiration, and during the Renaissance embroidery was an important art of many royal or ducal courts. There was also a tradition of less sumptuous peasant and folk embroidery, particularly in Europe. A fine example of this is the quilting of the early English settlers in America.

Embryo, multicellular organism, the developing stage of an animal or plant from its fertilization until the moment (in animals, hatching or birth, in plants, germination) when it is structurally able to live as an independent organism. In man, the term applies only during the first seven weeks of pregnancy, thereafter the term **FETUS** is applicable. An embryo may also be formed in the cleavage of an unfertilized egg by natural **PARthenogenesis**. In animals which reproduce sexually the embryo is formed when the nuclei of an egg (produced by the female) and a spermatozoon (produced by the male) fuse to form a single cell, called a **ZYGOTE** (the fertilized egg). The zygote then begins to divide into an embryo. The embryo undergoes rapid changes in which the cells differentiate themselves to form limbs and organs, according to both their genetic predisposition and the place in the developing structure in which they find themselves. In plants the embryo is found in the seed, the young bud or at the end of the root. In some plants it may be found in the seed leaves. See also pp.6-7, 164-166, 382-383.

Embryology, biological study of the origin, development and activities of an embryo. This science, in tracing the sequence of events from ovum (egg) to birth, follows the **ZYGOTE** through **CLEAVAGE**, **MORULA** stage, **BLASTULA** stage, and **GASTRULA** stage when two and then three layers, precursors of body organs, appear. See also p.165.

Emerald, variety of **BERYL**, varying in colour from light to deep green and highly valued as a gemstone. The colour is due to the presence of small amounts of chromium but the stone may lose its colour if heated. Emeralds were mined in Upper Egypt in 1650 BC; now they are found mainly in Colombia. See also p.261.

Emerson, Ralph Waldo (1803-82), US essayist and poet. In 1832 he resigned his pastorate and travelled to Europe where he met **CARLYLE**, **COLERIDGE** and **WORDSWORTH** and came into contact with German Romanticism. Emerson's book *Nature* (1836) expressed the principles of **TRANSCENDENTAL** thought. His belief in the soul, the unity of God with man and nature, self-reliance and hope appear in his *Essays* (1841, 1844), *Poems* (1847), *Society and Solitude* (1870) and many other works. See also p.172.

Emery, impure form of the mineral **CORUNDUM**, (aluminium oxide, Al_2O_3), that occurs as dark granules with **MAGNETITE** and **HAEMATITE** in them. An unusually hard mineral, it is used as an abrasive.

Emetine, **ALKALOID** ($C_{11}H_{16}N_2O_2$) used to induce vomiting. It is extracted from **IPECAC** root and is used in the treatment of some human parasitic diseases.

Emil and the Detectives, children's story by Ench KÄSTNER, which has proved lastingly popular with boys and girls in many countries. Published in Germany in 1929 it tells of the efforts of Emil and a group of friends to regain stolen money.

Emulgence Grise, name given to Pere JOSEPH, French diplomat, in reference to his pervasive influence over Cardinal RICHELIEU, principal minister of LOUIS XIII.

Dr Thomas ARNOLD, Florence NIGHTINGale and General GORDON.

Emma (1816), novel by Jane AUSTEN concerned with the smug, but lively and entertainingly interfering Emma Woodhouse, her misguided schemes for arranging the lives of her acquaintances, and her gradual realization of the consequences of her behaviour. See also p.1574.

Emmanuel, or **Immanuel**, name meaning "God (is) with us" given by the biblical prophet ISAIAH to the child who would be a sign from God of deliverance. In the New Testament, the Apostle Matthew refers to Jesus as Emmanuel. Devotional literature and hymns occasionally use Emmanuel synonymously with Jesus.

Emmes, city in Drenthe province, NE Netherlands. It is a market centre and textiles and electronic equipment are manufactured. Pop. (1970 est.) 79,700.

Emmental, fine Swiss cheese that takes its name from the valley of the River Emme in central Switzerland, a dairy-farming region where the cheese is produced.

Emmett, Robert (1778-1803), Irish nationalist leader, who hoped to destroy the 1801 Act of Union which placed Ireland under the British Parliament. In July 1803 he led an attack upon Dublin Castle, which was intended as a prelude to a French invasion to help the nationalist movement. His plot failed and he was arrested, tried and executed.

Emotion, human feelings involving complex mental and physical reactions. Primary emotions are anger, fear, grief, joy and pain. The subtlety and complexity of emotions mean that intuitive understanding (**EMPATHY**) or the systematic study of subjective experience is often the best way of comprehending their nature. However, emotions are associated with predictable physiological changes such as increased heart and breathing rates, sweating, dryness of the mouth and trembling. Physiological studies have indicated that the reticular formation in the brain is important for emotional changes greater emotional intensity involves greater nervous activity there. Some expressions of emotions, such as crying and smiling, appear to be unlearned. Other expressions are acquired from environmental culture, eg some people when angry react with violence, others may show anger only in their facial expression. See also pp.128, 1107, 1130, 1874, 1875.

Empathy, ability to know and experience what someone else feels by mentally putting oneself in that person's place. This feeling is part of a person's responses to works of art, especially novels and poetry, and also contributes to an actor's interpretation of a character.

Empedocles (c 490-430 BC), Greek philosopher. He attempted to harmonize **ELEATICISM**, the concept of permanent being, with **HERACLITUS'** teaching of constant flux. Teaching the doctrine of the four elements - earth, water, air and fire - and anticipating modern physics, he explained change as being alterations in the proportions of the four elements in the object. See also p.1216.

Emperor, title of the supreme head of an empire, deriving from the Roman *imperator*. The title was first given to Julius CAESAR, and was adopted again by CHARLEMAGNE when the HOLY ROMAN EMPIRE was set up; it was adopted by several European monarchs in the 18th century. **Emphysema**, accumulation of air in tissues, most often occurring in the lungs (pulmonary emphysema). Causes are unknown but air pollution and heavy smoking exacerbate the symptoms, which include wheezing, coughing and shortness of breath. Treatment can include **ANTIBIOTICS** and **INHALANTS** to relieve spasms and secretions, and breathing exercises. See also p.1064.

Empire State Building, skyscraper in New York. From its completion in 1931 to 1972, it was the highest building in the world, at 381m (1,250ft), or 449m (1,472ft) to the top of its television mast. It was designed by Shreve, Lamb and Harmon and is used for offices. Its name derives from the nickname of New York State. See also p.551.

Empire style, neo-classical style in interior decoration which started in Paris in about 1800 and spread throughout Europe by 1820. It made affected use of Egyptian and other ancient decorative motifs. In England it corresponded to the **REGENCY** style. In women's fashion it was exemplified by high-waisted dresses embellished with embroidery.

Empiricism, philosophical doctrine that all knowledge is derived from experience. It has been mainly developed by a school of British philosophers, **LOCKE**, **BERKELEY** and **HUME**, in reaction to the **RATIONALISM** of **DESCARTES**, **SPINOZA** and **LEIBNIZ**, who claimed that there is such a thing as *a priori* knowledge (or "innate ideas"). Thoroughgoing empiricists, such as the **LOGICAL POSITIVISTS** in this century, would argue that all ideas are reducible to sense impressions, with the exception of mathematics and logic which are simply the elaboration of certain rules, otherwise they are meaningless. See also pp.1885-1887.

Empson, William (1906-), British poet and critic. Empson expanded the ideas of I. A. RICHARDS in the critical work *Seven Types of Ambiguity* (1930). He wrote extremely detailed analyses of specific texts and poems, a technique that became known as the New Criticism. Empson's other critical works include *Some Versions of Pastoral* (1935), *The Structure of Complex Words* (1951) and *Milton's God* (1961).

Empyema, infection of the pleural cavity of the lungs which yields large amounts of pus. It is usually secondary to a lung infection and its treatment includes **ANTIBIOTICS** and drainage of the cavity. See also p.1064.

Ena Dispatch (1870), final cause of the FRANCO-PRUSSIAN War. The French were alarmed at the candidacy for the Spanish throne of Prince Leopold, a relative of WILHELM I of Prussia, and their ambassador requested assurance of the permanence of Leopold's refusal. Wilhelm declined and informed his prime minister, **BISMARCK**, of the conversation, who in turn published an insulting version of the conversation in a telegram, thus inflaming the French to war. See also p.1660.

Ena, large, dark-plumed, flightless Australian bird. A strong runner with powerful legs, it lives in groups and feeds mostly on plants. Large greenish eggs (8-10) are hatched by the male in a ground nest of grass and leaves. Height 1.5m (5ft), weight, to 54kg (120lb). Species *Dromicrus novaehollandiae*. See also p.303.

Emulsion, dispersion of fine droplets of one liquid in a larger volume of another liquid. Two types are generally distinguished: oil-in-water emulsions and water-in-oil emulsions. To stop the liquids separating out again it is necessary to add an emulsifying agent, such as soap. In milk, a natural oil-in-water emulsion, proteins are the emulsifying agents. In photography, a suspension of silver oxide or salts in a liquid is called, erroneously, an emulsion.

Enamel, decorative or protective glazed coating produced on metal surfaces, or a type of paint. **CERAMIC** enamels are made from powdered glass with the addition of various metal oxides to give colour and calx, a mixture of tin and lead, for opacity. The mixture is first melted, quenched and finely ground, and applied to the surface. Then it is fired to give a fused vitreous coating. Enamel paints consist of zinc oxide and lithopone, brown linseed oil, and high grade varnish. The finish is hard, glossy and highly durable. The term "enamel paint" is derived from its resemblance when dry to the finish found on ceramic-enamel products. See also pp.546, 585.

Enamel, in mammals, hard covering of the crown of the tooth, it is the hardest body tissue, but is not living and contains no nerves. Strongest at the biting edges, enamel varies in thickness and density over the tooth. See also pp.1100-1101.

Encaustic painting, method of painting in the ancient world and early Christian era,

Eliah, according to the Old Testament, ended a drought inflicted on the Jews by God

Elizabeth I was 70 when she died, older than any English sovereign before her

Ena, the American species winter in valleys, returning to the higher mountains in spring

Duke Ellington wanted to be a painter but lack of funds obliged him to become a café pianist

Encephalitis

using pigments mixed with hot wax. The technique, which has proved particularly durable, was used especially in Roman Egypt.

Encephalitis, viral disease of the brain and spinal cord which is usually epidemic. It is transmitted from animal to man by insects. Similar to the bacterial infection MENINGITIS, its symptoms include fever, headache, vomiting and a stiff neck and back, increasing to convulsions and possible paralysis. Accurate diagnosis by analysis of the spinal fluid is necessary to differentiate encephalitis from forms of meningitis which can be treated by antibiotics. Complete and spontaneous recovery is frequent.

Enchina, Juan del (c. 1468–c. 1529), generally held to be the earliest important Spanish dramatic writer. His works include adaptations of VIRGIL'S *Eclogues* in Spanish dialect (1498–1507 and 1513–14) and much music and lyrics, with which he closed his plays.

Encke, Johann Franz (1791–1865), German astronomer noted for his study of comets, one of which bears his name. Encke's comet has the smallest known orbit, passing close to the Sun every 3.30 years. Encke was director of the Berlin Observatory (1825–63). *See also* pp. 968, 969.

Enclosure, in English history, the fencing-in and appropriation by an individual of open fields previously subject to common rights, or of common grazing land. Enclosure began in the mid-12th century, reached its medieval peak in the 15th and early 16th centuries to create fenced pastureland, and recurred in the late 17th century and in 1750–1870, when it was endorsed by Parliament as a necessary prerequisite of introducing improved crop rotation. Enclosure was usually carried out by the local landowner or large farmers, and the loss of rights on the common land sometimes caused severe hardship in the peasantry. *See also* pp. 1330–1331, 1408–1409, 1464–1465.

Encomienda, right granted to the early Spaniards in Latin America to demand tribute, and initially also labour, from local Indians of a specified area in return for "civilizing" them. It did not imply a grant of land. Attempts to abolish the system failed, although it became less profitable in the 1600s. *See also* pp. 1370–1371.

Encounter therapy, in psychotherapy, relatively informal and unstructured kind of group therapy that replaces analysis with action, eg games, PSYCHODRAMA, confession, body touching and discussion. It is mainly beneficial to those who do not suffer from severe psychological disorders and aims at developing spontaneity and deeper inter-personal relationships. *See also* pp. 1120–1121.

Encyclical, letter sent to all churches of a particular area either, in the Anglican Church, by the bishops at the conclusion of LAMBETH CONFERENCES, or, in the Roman Catholic Church, by the POPE. A papal encyclical, although dealing with doctrinal matters, is not held to be infallible. Well-known modern encyclicals include Pope Leo XIII's *Rerum Novarum* (1891) on social justice, Pius X's *Pascendi* (1907) against MODERNISM, Pius XI's *Mit brennender Sorge* (1937) against German Nazis, and Paul VI's *Humanae Vitae* condemning artificial means of contraception. **Encyclopaedia**, compendium of knowledge, containing information in all fields (general) or in a particular field (specialist). Some of the first encyclopaedic works were by ARISTOTLE and PLINY, but the first modern work was probably John Harris's *Lexicon Technicum* (1704), which contained excellent bibliographies and cross-referencing. *See also* pp. 622–623.

Encyclopaedia Britannica, major reference book first published in three volumes (1768–71), edited by William Smellie. It has grown in size and reputation since then, and has been published in the USA since 1929. It was revised in 1974 into a 30-volume three-part structure: *Propaedia*, short-entry *Micropaedia* and long-entry *Macropaedia*.

Encyclopédie; ou, Dictionnaire raisonné

des sciences, des arts, et des métiers (1751–72), literary work of the 18th century, an embodiment of the spirit of ENLIGHTENMENT. The French *Encyclopédie* was intended to be a complete guide to useful knowledge. Its principal director, Denis DIDEROT, and eminent contributors hoped that the work would combat superstition and systematize knowledge. *See also* pp. 622, 1466–1477.

Encyclopedists, French philosophers who presented their rationalist, humanitarian and deist views that epitomize ENLIGHTENMENT thought through the *ENCYCLOPÉDIE* in the latter half of the 18th century. Encountering severe opposition from the religious and political establishment, the main editor, Denis DIDEROT, and such prominent thinkers as VOLTAIRE, ROUSSEAU and D'ALEMBERT helped to prepare the philosophical basis of the French Revolution which took place in 1789. *See also* pp. 622, 1466–1474.

Endangered species, animals or plants threatened with extinction in the foreseeable future as a result of man's activities. Nearly 1,000 different species of animals throughout the world, and 20,000 plants. Notable examples of animals at risk are porpoises, elephants and whales. **Endeavour**, ship in which Capt. James Cook made his first voyage of Pacific exploration (1768–71). He circumnavigated the two main islands of New Zealand, charted the coast of Australia and returned through the Torres Strait. The ship was not used for his later voyages. *See also* pp. 1602–1603.

Endell, August (1871–1925), German architect. He was one of the pioneers of MODERNIST architecture, and his best-known work was the Elvira Studio at Munich (1897–98), the exterior of which relied heavily on oriental styles of decoration.

Endemic, presence of a disease within a closed population, peculiar to that population. There may or may not be any clinical symptoms. For instance, cholera and plague are endemic in some parts of Asia.

Ender, Kornelia (1918–), East German swimmer. She set 23 individual world records at freestyle, backstroke, butterfly and medley and won four Olympic (1976), eight world (1973, 1975) and four European (1974) gold medals.

Ender, John Franklin (1897–), US microbiologist. He shared the 1954 Nobel Prize in physiology and medicine with Frederick C. ROBBINS and Thomas H. WELLS for their discovery of the ability of poliomyelitis viruses to grow in cultures of various types of tissues. This work was fundamental to the later development of the polio vaccine.

Endgame (1957, *Fr. Fin de Partie*), play by Samuel Beckett, translated by him into English in 1958. Three of its four characters are immobilized – two are in dustbins and one chair-ridden. Its bleak symbolism, stark setting and grotesque comedy powerfully evoke Beckett's nihilistic vision.

Endive, leafy annual or biennial plant widely cultivated for its sharp-flavoured leaves that are cooked or used raw in salads. It resembles LETTUCE, but its leaves are more substantial. There are two main types: curly endive, or escarole, with slender, wavy-edged leaves and a variety with broad, flat leaves. Family: Asteraceae, species *Cichorium endivia*. *See also* p. 686.

Endocarditis, inflammation of the lining of the heart. It is often caused by bacteria and is also associated with rheumatic fever. *See also* pp. 1066–1067.

Endocrine system, body system made up of all the endocrine (ductless) glands that secrete hormones directly into the bloodstream to control body functions. The endocrine system (together with the nervous system) controls and regulates all body functions. It differs from other body systems in that its ductless glands are not structurally connected to one another. The chief endocrine glands are the PITUITARY GLAND, located at the base of the brain, the THYROID GLAND, located in the throat, the PARATHYROID GLAND, also

located in the throat, the ADRENAL GLANDS, situated on top of the kidneys, the ISLET OF LANGERHANS in the pancreas, the sex glands (GONADS) in males and OVARIES in females. *See also* pp. 154–155.

Endoderm, or entoderm, innermost cell layer of embryos of higher animals. It forms the epithelial lining of the liver, pancreas, digestive tract and respiratory system. It is also the inner cell layer of a simple animal body.

Endogamy, in anthropology, marriage within a specific tribe or other social unit such as class or caste. It is basically an obligation, and may be strictly defined and enforced or merely be a social tendency. *See also* EXOGAMY, pp. 1828–1829.

Endometriosis, condition in which tissue resembling the uterine mucous membrane appears in other areas of the pelvic cavity, sometimes in the form of cysts or nodules. **Endometrium**, highly vascularized tissue that lines the uterus (womb), shed each month during menstruation. Upon conception it forms part of the placenta to maintain the developing foetus during pregnancy. *See also* p. 165.

Endomorph, type of human being of round or stout build, usually with a round face and short arms and legs. Most people are a combination of endomorph, ectomorph and mesomorph. *See also* p. 1123.

Endoscope, instrument used to examine the interior of the body through a natural opening. Generally a light source and lenses are included in a flexible tube. Examples include a gastroscop (for examining the stomach) and a cystoscope (for examining the urinary bladder).

Endosperm, tissue that surrounds the developing embryo of a seed and provides food for growth.

Endothermic reaction, chemical reaction in which heat is absorbed from the surroundings, causing a fall in temperature – eg in the manufacture of WATER-GAS from coal and steam. *See also* p. 908.

Energy, one of the great unifying concepts of physics. Energy is defined as the capacity for doing work and has many forms: mechanical, atomic, heat, chemical and others. It undergoes transformations: thermonuclear reactions in the Sun release solar energy, photosynthesis in plants stores this energy in chemical form, ingestion of the plant by animals allows muscles to transform this energy yet again into physical action. The concept of energy came into being with Galileo and Newton. Its conservation through all its transformations was established almost simultaneously by Joule, Rumford and Kelvin in the mid-19th century. The relationship between energy and mass of a particle was established in 1905 by EINSTEIN, who recognized that energy (*E*) and mass (*m*) could be transformed into each other according to the relation $E = mc^2$, where *c* is the velocity of light. *See also* p. 820.

Energy, conservation. *See* CONSERVATION OF ENERGY.

Energy sources, supply of energy for heat, light and power which we derive, ultimately, from the Sun. They include the fossil fuels such as coal, oil and natural gas, which are the remains of life that was dependent for growth in its day on solar energy, just as all forms of life are today. HYDROELECTRICITY also derives from solar energy, which maintains the circulation of water vapour in the atmosphere, wind power has the same source. The movements of tides and waves depend both upon solar thermal energy and also on the gravitational pulls of the Sun and Moon. We use solar energy directly for heating domestic water supplies, and for providing electricity from PHOTOCELLS. Other major sources are radioactive metals such as uranium and thorium, which provide NUCLEAR ENERGY. Future possibilities include the extraction of energy from water by thermonuclear processes, and tapping the heat of the oceans and the Earth's interior crust on a much larger scale than the geothermal exploitation of today. *See also* pp. 420–444.

Enesco, Georges (1881–1955), Romanian virtuoso violinist and composer. He studied in Paris with MASSENET and FAURÉ.

His compositions include three symphonies and an opera, *Oedipe*. One of his pupils was Yehudi MENUHIN.

Enfants Terribles, *Les* (1929), novel by Jean COCTEAU. Brother and sister, Paul and Elisabeth, create their own, unbalanced world, where they must follow the rules of the "game" that eventually leads them to destruction.

Engadine, mountainous region in E Switzerland in the valley of the River Inn, in the Rhaetian Alps. It consists of Lower Engadine (NE) and Upper Engadine (SW) and extends to approx. 100km (60 miles) from the Maloja Pass to the Austrian border. A region of spectacular scenery, it has several health and mountain resorts, including St. Moritz.

Engelbrektsson, Engelbrekt (1390–1436), Swedish national hero. He led a revolt against Eric of Pomerania, King of Denmark, Sweden and Norway. Engelbrektsson was a mine owner, but in 1434 he became leader of a peasants' and miners' uprising against the king. Engelbrektsson seized castles throughout eastern and southern Sweden until the diet of 1435 accepted his demands and made him regent.

Engels, Friedrich (1820–95), German political writer. He was a disciple of Karl MARX, with whom he formulated the theory of DIALECTICAL MATERIALISM. As agent in England of his father's textile business (1842–44) he wrote *The Condition of the Working Classes in England* (1845). He had met Marx in Europe during the early 1840s, and together they wrote the *Communist Manifesto* (1848). From 1870 to Marx's death in 1883, Engels supported Marx's research financially and continued to help him with his writings. Engels's materialist reorientation of Hegel's dialectics is most evident in his *Socialism, Utopian and Scientific* (1882) and *Anti-Dühring* (1878). *See also* pp. 1587, 1652.

Engine, any device or machine that converts one form of energy into another to provide useful mechanical motion. The term is, however, usually restricted to machines that burn fuels to provide power. Such machines include steam, petrol, jet and rocket engines, all of which convert the chemical energy of fossil or other fuels, and nuclear engines, which convert the nuclear energy of the atoms of their radioactive fuels. These engines are distinguished from electric motors and generators, energy converters which, in providing their power, do not alter the chemical or physical composition of matter. However, some engines of the near future such as ION ENGINES and SOLAR ENGINES, will not fit into this restrictive definition. Combustion engines of the present day are of two main kinds, external combustion engines and INTERNAL COMBUSTION ENGINES. External combustion engines burn their fuels externally to the chamber in which power is developed. In the steam locomotive, this chamber is the boiler. Steam raising with a boiler is the method also employed in marine nuclear engines such as those fitted in Soviet icebreakers and Polish submarines. Most conventional ships are at present fitted with oil-fired steam turbines. In both types, steam at high pressure, raised in boilers, is fed to a turbine housing where it expands to turn the turbine wheels. In gas turbines employed widely in industry, gases from fuels burned in a combustor, or other source, are fed to a compressor before being admitted to the turbine. In contrast to these external combustion turbine engines, the turbojet engines of aircraft are really internal combustion engines. In the standard turbojet, air enters at the front and is compressed by a rotary compressor before passing to a combustion chamber where it causes the fierce combustion of injected kerosene fuel. The exhaust blast not only provides thrust for the aircraft but also turns a turbine, which is coupled to and drives the air compressor. The turbofan engine differs in that it is also drawn into the engine by a fan, driven by the turbine, so that it passes along an annular space surrounding the

combustion chamber, expanding by heat and so providing extra thrust at the exhaust outlet. Ramjet engines have no moving parts, the air being compressed only by the fast forward movement of the aircraft; these are used only experimentally and can operate only at high speeds. Combustion reactions in a large rocket engine take place between liquid oxygen (oxidant) and a liquid fuel such as kerosene, smaller rockets usually employ solid chemical fuels. Because rockets carry their own oxidant, they, unlike jet planes, can travel in space, by the principle of REACTIVE THRUST. Most familiar of internal combustion engines are those of road vehicles. Most car engines are driven by petrol, the vapour of which, together with air, is ignited in the engine cylinders by a timed electrical spark. The expanding gases thrust a piston along the length of each cylinder, in a reciprocating movement, which, by the movement of various linked shafts and gears, is transformed into the rotary movement of the car wheels. In DIESEL ENGINES the explosion in the cylinder is achieved by compression only, diesels are generally rather heavier engines. The Wankel engine is a later development of the petrol engine and has, not many reciprocating pistons, but a single, rotary one. This is triangular in shape and rotates under the thrust of the combustion gases so that, at one point in its cycle, the petrol mixture is admitted, at another the gases are combusted, and at a third point they are exhausted from the cylinder. See also pp 420-435, 496-497, 498-499, 507, 519, 1022.

Engineering, application of scientific principles for many practical purposes such as the design and building of structures and the design and operation of machines and processes. For example, mechanical engineers design and test industrial machinery and vehicle engines; civil engineers prepare sites, design and construct bridges, tunnels and harbours, electrical engineers design and install mains electrical systems, electronic engineers design and build scientific instruments and design and install control systems, nuclear engineers have special knowledge of the installation and operation of nuclear reactors, and chemical engineers of the equipment and methods needed to contain large-scale chemical reactions. Between these many fields of engineering there is some overlap of interest and expertise. For this reason the academic training of all engineers starts with a thorough grounding in the fundamentals of science and continues with an education in general engineering subjects which overlaps to varying degrees the specialized training in the student's chosen field.

Engineering, chemical. See CHEMICAL ENGINEERING.

Engineering, genetic, deliberate alteration in the characteristics of an organism by controlled manipulation of its genetic make-up. From the 1940s onwards, knowledge of the hereditary or genetic make-up of simple organisms such as bacteria and viruses accelerated considerably. It was revolutionized in 1953 by the explanation of the structure of DNA - the "molecule of life" - by WATSON, CRICK and WILKINS. Not long after this genetic experiments with certain viruses and bacteria enabled microbiologists to characterize their genetic make-up more or less completely - that is, to state the structure of every one of their GENES, their positions in the DNA or RNA, and their certain or probable function in the life and reproduction of the microbe. With such exact knowledge of the genetic machinery of these simple forms of life, microbiologists could now hope to alter them in controlled and specific ways. To date, many completely novel viruses and radically altered strains of bacteria and fungi have been made in this way by artificial means. They have been manufactured either for purposes of pure research, or for practical reasons, including the increased production of antibiotic drugs, the investigation of drug resistance passed on between bacteria, and for microbiological warfare. See also HEREDITY, pp 670-671.

England, largest nation within the United Kingdom bounded by the North Sea (E), the English channel (S), Wales and the Irish Sea (W) and Scotland (N). The landscape is complex although in general the S and W is higher and geologically older than the S and E. Dairying is the most important agricultural activity. Industries are varied, but engineering and coal-mining are of great importance. The country trades mostly within the EEC which it joined as part of Britain in 1973. The capital is London. Area, 130,362 sq km (50,333 sq miles). Pop. (1976) 44,600,000. See also pp 2027-2033.

England, Church of. See CHURCH OF ENGLAND.

English Channel, arm of the Atlantic Ocean between France and Britain, it joins the North Sea at the Strait of Dover. A cross-channel train-ferry service between Dover and Dunkirk was started in 1936. Width, 30-160 km (20-100 miles), length 56 km (35 miles).

English Civil Wars (1642-46, 1648), conflicts between CHARLES I and his opposition in Parliament. The wars were originally fought between companies organized by individual commanders on each side, until Jan. 1645 when the Parliamentarian army was reorganized into the centralized new MODEL ARMY. The first war comprised a number of separate campaigns marked by many battles and skirmishes. The king was based in Oxford, and drew his main support from the north and west, and the Parliamentarians had their centre in London, and much of their support came from the home counties. The first main battle, at EDGEHILL in Oct. 1642, was indecisive, and little was achieved in the following year. In 1644 a Scottish army entered England on the Parliamentarian side, and Charles's army, led by his nephew Prince RUPERT, was beaten at MARSTON MOOR near York in July. The SELF-DENYING ORDINANCE of 1645 made Sir THOMAS FAIRFAX head of the Parliamentarian army in the place of the Earl of ESSEX, its demand that all the Parliamentarian officers should give up their commands was necessary for the reorganization of the army. Charles met a serious defeat at the hands of Oliver CROMWELL at Naseby (June 1645), and eventually surrendered to the Scots in May 1646. The second civil war broke out in Feb. 1648 after Charles escaped from custody and concluded an alliance with the Scots to support PRESBYTERIANISM. The uprising was crushed by Cromwell at PRESTON in Aug. 1648. See also pp 1422-1423.

"England expects that every man will do his duty", message given by Nelson before the Battle of Trafalgar (Oct. 1805). See also pp 606, 1554, 1555.

English setter, retrieving dog (sporting group), first bred 400 years ago in England. An outdoor dog, it has a long, lean head with a square muzzle, hanging lips and rounded ears that hang close to the head. The medium-length body and legs are graceful, and the straight, feathered tail tapers to a point. Average height 63 cm (25 in) at the shoulder, weight 27 kg (60 lb).

English Speaking Union, society founded in 1918 by Sir Evelyn Wrench to further the fellowship of the English-speaking peoples of the world.

English Stage Company, company formed in 1956 to produce plays by new playwrights. Its first director was George DEVINE, its first success OSBORNE's *Look Back in Anger*, produced at the company's home, the Royal Court Theatre, London, in May 1956.

Engraver beetle. See BARK BEETLE.

Engraving, intaglio (incised) printing process. Prints are made from metal plates into which linear designs have been made by a cutting tool. Ink is rubbed into the lines, and the remaining surface is cleaned. A sheet of damp paper is placed on the plate, backed by several layers of felt. The plate is then passed through an etching press which applies pressure enough to force the paper into the lines and receive the ink. The various intaglio processes such as ETCHING, AQUATINT, LINE ENGRAVING differ only in the way of incising the copper plate. In modern engraving, different processes are frequently combined in a single plate. See also PRINT-MAKING.

Enigma cipher machine, electrical machine with a typewriter keyboard which transposed the typed characters according to a prearranged random setting. Enigma was invented by Arthur SCHERBIUS in the 1920s and was the means by which the Germans transmitted their most secret information during WWII. The British could decipher Enigma messages early in the war but had to be careful not to make obvious use of the information received this way, so that the Germans would not stop using the system and thereby deprive the Allies of further information. See also p 607.

Enki. See EA.

Enkidu, in the EPIC OF GILGAMESH, a wild man created by the god Anu who at first lived among animals. Having attained some education he travelled to Uruk (the biblical Erech) to meet Gilgamesh. The two later killed a divine bull sent by Ishtar, after which Anu ended Enkidu's life. At the end of the epic, Enkidu's spirit returns to regale Gilgamesh with grim tales of the underworld. See also pp 1903, 1905.

Enlightened Despotism, term for the monarchical rule in 18th-century European states whose absolute rulers took pride in following the rational precepts of the ENLIGHTENMENT and thereby reforming the antiquated structure of feudal society. The two most famous examples are FREDERICK THE GREAT of Prussia and MARIA THERESA of Austria. See also pp 1466-1467.

Enlightenment, The, word used to describe the intellectual temper of Western Europe in the 18th century. It developed from the spirit of rational enquiry of the SCIENTIFIC REVOLUTION and from political theorists of the late 17th century AGE OF REASON such as LOCKE. Its centre was France, intellectually dominated by DIDEROT, VOLTAIRE and ROUSSEAU, but it had its representatives in Britain (HUME, ADAM SMITH), Germany (KANT) and America (FRANKLIN, JEFFERSON). Enlightenment thought supposed the susceptibility of nature to rational human investigation, opposed obscurantism and superstition, and therefore tended to DEISM in religion. Its belief in the perfectibility of man gave it its note of optimism. It found some political expression in ENLIGHTENED DESPOTISM but it also had a profound influence on the attitudes which produced the French and American revolutions in 1789 and 1776 respectively. See also pp 1466-1467.

Enlil, chief god of the Sumerian pantheon and later of Babylon and Assyria. He was guardian of the city of Nippur, the political and religious centre of southern Mesopotamia. As the god of mountains, air, storm and winds Enlil shared his dominion with first two then three great deities, but he alone was responsible for bringing the ME, or laws governing all existence. He was eventually displaced by MARDUK.

Ennius, Quintus (239-169 BC), early Latin poet, sometimes known as father of Roman poetry. He spoke Oscan, Greek and Latin, and taught as well as producing adaptations of Greek plays. The epic poem *Annales* was his principal work.

Enoch, name of several Old Testament figures. One was the father of METHUSELAH, to whom the pseudepigraphical Books of Enoch are ascribed (see also PSEUDEPIGRAPHIA). Another was CAIN's eldest son, whose name was given to the city built by Cain.

Enosis, Greek Cypriot demand, originating in 1878, for political union with Greece, which after WWII included a campaign of violence. In the late 1950s the Turks, alarmed at the prospect of enosis, put forward a counter demand for partition of the island, which they achieved by invasion in 1974. The movement found its greatest leader in Archbishop MAKARIOS III, it remains a vital political issue.

Enright, Dennis Joseph (1920-), British author. Collections of his poetry include *The Laughing Hyena* (1953), *Some Men are Brothers* (1960) and *The*

Terrible Shears (1973). His novels include *Academic Year* (1955) and *Insufficient Pappy* (1960).

Enriquez Gomes, Antonio (1602-63), Spanish poet, dramatist and satirist. While living in France he attacked the INQUISITION in *Politica angelica* (1647). On his return to Spain he worked chiefly as a playwright, but in 1660 his effigy was burnt at an AUTO DA FE, and in the following year he was arrested by the Inquisition. He died in prison.

ENSA (Entertainments National Service Association), British WWII organization established in 1938 to provide morale-boosting diversion for troops and civilians, and directed by Basil DEAN.

Enschede, city in E Netherlands near the border with West Germany, on the Twente Canal. Founded in 1118, it was devastated by fire in 1862. It has a university (1961) and a natural history museum. Industries: pharmaceuticals, textiles, paper, dairy products, brewing. Pop. (1974) 141,575.

Enstatite (MgSiO₃), orthorhombic mineral of the pyroxene group, commonly found in ultrabasic igneous rocks such as norites, pyroxenites, gabbros and peridotites. It varies from colourless to yellowish grey, shading to green if iron is present. Hardness, 5.5, s.g. 3.2-3.5.

Entail, in law, restriction of inheritance to a limited class of descendants (eg eldest sons) for at least several generations, its object being to preserve large estates which would disintegrate if inherited in equal parts by all the descendants. In the absence of descendants the entail terminates. The creation of entail estates was abolished in 1925.

Entebbe, town in central Uganda, E Africa, on NW shore of Lake Victoria, scene of Israeli commando raid in 1976 to rescue a hijacked jet liner. Founded in 1893 it was the capital of the British Protectorate of Uganda 1894-1962. The surrounding area produces coffee and cotton. Pop. (1969) 11,900.

Entente, diplomatic term first used in 1844 in the phrase *Entente Cordiale*, or cordial understanding (rather than a formal alliance), between France and England. It is more usually related to the TRIPLE ENTENTE brought about by agreements between France and Britain (1904) (which also became known as the ENTENTE CORDIALE) and Britain and Russia (1907). See also pp 1660-1663, 1664.

Entente Cordiale, name given to a series of agreements signed by France and Britain in April 1904. Quarrels about fishing rights off Newfoundland and about various spheres of colonial interest were settled. British paramountcy in Egypt and French in Morocco were recognized. The *entente* was the first step leading to the TRIPLE ENTENTE. See also pp 1660, 1663.

Enteritis, chronic or acute inflammation of the lining of the intestine. Its causes include the ingestion of irritant poisons, or infectious disease, mild to extreme diarrhoea, fever and abdominal pain are symptoms. Treatment usually includes a bland diet. See also GASTROENTERITIS, p 1068.

Enterokinase, enzyme released by the small intestine during digestion. It activates the digestive enzyme TRYPSIN.

Entoderm. See ENDODERM.

Entomology, scientific study of insects, including their relation to man. The ancient Greeks of the 4th century BC were the first serious entomologists, and ARISTOTLE coined the term *entoma* after which the science is named.

Entropy, quantity specifying the disorder or randomness of a system containing either energy or information. In THERMODYNAMICS it expresses the degree to which thermal energy is available for work - the less available it is, the greater the entropy. Energy can be extracted from a system only as it changes from a more ordered to a less ordered state. According to the second law of thermodynamics, in any process a system's change in entropy is either zero or positive. Thus the entropy of the universe is increasing. In INFORMATION THEORY, the entropy of a system is proportional to the lack of informa-

Enver Pasha sought to unite the Turkic people of Central Asia with the metropolitan Turks

Epée, a sword weighing up to 785 grammes (27oz) and 109cm (43in) long

Ephesus, a 19th-century lithograph of the ruined city with the cast e of Aescluk

Epicurus, a bust of the celebrated Greek philosopher in the Museo Nazionale in Naples

lion about that system. See also p 845
Enugu, city in se Nigeria, capital of East-Central state. It developed as a coal-mining town in the early 20th century. It is linked by rail to Port Harcourt, and its industries include textiles, steel, furniture and cement. Pop. 182,000

Enuma Elish, Old-Babylonian poem written in the 11th century bc. This epic on the creation of the world is sometimes known as the Babylonian Genesis. It describes the battle of the Babylonian god MARDUK against Tiamat (the force of chaos), Marduk's victory and his elevation to the status of ruling deity

Enumerated goods, products of the English colonies listed under the NAVIGATION ACT to be exported only through the mother country. Products affected included many raw materials such as tobacco, sugar and furs, as well as naval stores

Enver Pasha (1881-1922), Turkish military and political leader. Involved in the Young Turk revolution (1908), he became virtual dictator through a coup in 1913. He was instrumental in bringing Turkey into ww1 as an ally of Germany. When Turkey signed an armistice (1918), Enver fled to Berlin. He was killed leading an anti-Soviet expedition in Bukhara

Environment, forces and conditions that surround and influence living and non-living things (biotic and abiotic environments). Factors such as temperature, soil, atmosphere and radiation compose the abiotic environment, while food, plants, organisms and animals compose the biotic environment. See also p 292

Environment, Department of the (DOE), British government department responsible for a wide range of functions relating to the physical environment. Headed by a secretary of state, it is responsible for statutory and regional planning, inner city renewal, land policy, new towns, local government structure and finance, water and minerals, conservation of historic monuments, control of pollution and future planning. The secretary is assisted by the minister for housing as well as by the Property Services Agency, which provides government services relating to land, property and building

Enzymes, group of proteins that function as catalysts in biochemical reactions. Since they are not used up in these reactions they are effective in tiny quantities and, because they are highly specific, enormous numbers of them occur in nature. Many enzymes require the presence of accessory substances (COENZYMES) in order to function effectively. Enzymes are important in heredity, many genes function by producing specific enzymes. The names of most enzymes end in the letters "-ase" except for a few, such as pepsin, that retain older names. See also pp 155, 160, 161, 908, 910, 1068

Eocene Period, the second of the five epochs of the TERTIARY PERIOD from about 60-30 million years ago. The name implies the "dawn" of life in which the modern families appeared. The fossil record shows members of modern plant genera, including beeches, walnuts and elms, and indicates the apparent dominance of mammals, including the ancestors of camels, horses (notably Eohippus), rodents, bats and monkeys. The world climate was warmer than at the present time. See also pp 268, 269, 286

EOKA (Ethniki Organosis Kypriakou Agonos, National Organization of Cypriot Fighters), organization formed in Cyprus by Gen. GRIVAS, with the secret assistance of Archbishop MAKARIOS, in 1955. Its aim was to drive out the British rulers by guerrilla war and then to achieve union with Greece (ENOSIS). After heavy fighting the British left in 1959 and Cyprus became an independent nation

Eolian (or aeolian) formation, in geology, structure created by wind-transported material. It may be a dune on a riverbank or ripple marks in sand on a beach or desert, or the growth phase of dune building. It also can be used to describe shapes carved in rock by the wearing away of softer materials. See also BUTTE
Eolithic Age, or "Dawn Stone" Age,

name usually given to the earliest period of human history, in which man, or near-man, used fractured stone tools. These tools were so primitive that they are often hard to distinguish from naturally broken stones

Eoliths, crudely chipped stone flakes from very early or pre-PLEISTOCENE deposits. Once thought to be the oldest man-made tools, it is now generally accepted that they were chipped by natural agencies

Eos, in Greek mythology, the dawn-goddess, daughter of HYPERION and THEA. She drove through the sky in a horse-drawn chariot preceding Helios, the sun, her brother. Homer and other poets describe her as rosy-fingered and saffron-robed. Carved by APHRODITE because she dined with Ares, Eos was involved in a constant stream of hopeless love affairs

Eosinophil, white BLOOD CELL with an affinity for eosin, the red dye. In certain diseases, such cells increase in number

Eothen (1844), travelogue by A. W. KINGSLAKE. The name means "towards the dawn", and the piece is a sympathetic and imaginative account of the author's travels in the Middle East

Eotvos, Jozsef, Baron Von Vasarsmemy (1813-71), Hungarian statesman and author. He devoted his life to the democratization of Hungarian society and as education minister (1848, 1867-71) achieved useful reforms. His writings include the novels *A karthausi* (1839) and *A nyérek* (1857)

Epée, sharp-pointed narrow sword, without a cutting edge, developed in the 19th century for duelling and fencing practice. The modern epée is triangular in section, the handguard is bowl-shaped

Epeirogeny, in geology, form of DIASYROPHISM that results in the formation of large features of the Earth's crust such as continents and oceans, and the creation of large areas such as plateaus and basins within them. The movements that constitute epeirogeny are primarily vertical ones. In some processes that result in the formation (or deformation) of mountain topography, epeirogeny and OROGENY (main process by which mountains are formed) interact and overlap, making distinctions difficult. See also TECTONICS, p 214

Ephemeroptera, mayflies, which live for a long time as nymphs, but only a few hours as adults. The adult cannot eat or drink

Epheдрine, widely used drug, chemically similar to EPINEPHRINE (adrenaline). It stimulates the autonomic nervous system and is used to treat some allergies, to treat bronchial asthma by dilating bronchioles, to dilate pupils of the eyes, as a nasal decongestant and to treat low blood pressure

Ephesians, New Testament epistle dictated by St PAUL during his captivity in Rome. Addressed to the Christian Church at Ephesus, it outlines the profound doctrine of the mystical body of Christ and stresses unity in love and faith

Ephesus, ancient Ionian city of w Asia Minor. It was a prosperous port under the Greeks and Romans. Croesus, king of Lydia, captured it (c 550 bc), and Cyrus the Great (c 546 bc), Alexander the Great (334 bc), and the Romans (133 bc) later took the city. It was sacked by the Goths in AD 262. The COUNCIL OF EPHEBUS was held there in 431. It has a noted temple of Artemis (Diana)

Ephesus, Councils of, two assemblies of the early Christian Church. The first council (431) was called by THEODOSIUS II and condemned NESTORIANISM. The second council of 449, the Robber Council, was also called by Theodosius and acquitted EUTYCHES, an early MONOPHYSITE, of heresy, deposing instead his opponent Flavian, patriarch of Constantinople

Epheod, linen garment used in religious services in ancient Israel. A tunic worn by the high priest, it was sometimes also used for divination or for obtaining oracles showing God's will

Ephrem Syrus (c 308-373), Syriac churchman, a saint in the Roman Catholic and Eastern Orthodox churches. He wrote biblical commentaries and sacred

verses, which he used in converting the Syrians to Christianity and in combating heresies. Feast 18 June

Ephraim, Old Testament figure, younger son of Joseph, grandson of Jacob. The eponymous founder of one of the 12 tribes of Israel, Ephraim seized a large, fruitful tract of land for his people

Epic, long narrative poem in grandiose style in which heroes perform superhuman tasks of strength. The earliest known form of Greek literature, epics were originally used to transmit history orally. Using highly formalized language, they often involved gods, men and legendary battles. HOMER is the author of the two most famous epics, the *Iliad* and the *Odyssey*. Later examples include *BEOWULF*, VIRGIL's *Aeneid*, JOHN MILTON's *Paradise Lost* and EDMUND SPENSER's *Faerie Queene*

Epicanthic fold, or Mongolian eyefold, downward and inward fold of the upper eyelid over the inner corner of the eye, producing the so-called "slant" eye characteristic of numerous peoples of Asiatic origin, some American Indians and the Khoisan groups of southern Africa. See also p 120

Epicentre, spot on the Earth's surface directly above the focus of an earthquake. Depending on the character of the focus, the epicentre may be a small circle or a line. See also p 202, 203

Epic of Gilgamesh, incomplete Mesopotamian epic poem of the third millennium bc, in which the tragic hero GILGAMESH searches for the means to restore his friend Enkidu to life, but having found the flower of immortality with the help of his ancestor Utnapishtim (the Babylonian Noah), he loses it, and his misery is compounded by Enkidu's grim descriptions of the place of the dead. See also p 1162

Epictetus (fl c 50-500 bc), ancient Greek painter. A cup painter, he was one of the first to use the red-figure style. His work shows great draughtsmanship, perfectly fitting figures to the insides of cups

Epictetus, (AD c 55-c 135), Greek stoic philosopher. His teachings were recorded in *Discourses* and *Enchiridion* by his disciple, ARRIAN. An admirer of SOCRATES and DIAGENES, he stressed the brotherhood of man, so influencing Christian thought

Epic theatre, theory of dramatic presentation formulated in the late 1920s by Bertolt BRECHT and Edwin FISCHER. It tries to undermine the theatrical illusion through "distancing" effects in the use of costume, sets, songs, argument, "montage narrative" and explicative soliloquies. The audience is meant to view the events on stage objectively and critically. Epic theatre often carried a socialist message

Epicureanism, school of Greek philosophy founded by EPICURUS in the 4th century bc. Opposing the idealistic and sceptical mood of the times, Epicurus wanted to provide security in an unsure world. He grounded his system on the uncontested reality of sense experience, postulating pleasure and pain as the ultimate measures of good and evil. Intelligent choice from experience is necessary for the good life. The last known member of the school was Diogenes of Oenoanda (fl AD 200)

Epicurus (342-270 bc), Greek philosopher, founder of EPICUREANISM. Although only fragments of his works remain, his loyal disciples passed on his belief in man's freedom of action and his doctrines of friendship, peace of mind and spiritual enjoyment as goals of the good life

Epidauros, ancient city of Greece, in the NE Peloponnese. It has a 4th century bc theatre built on a hillside near the town, which is famous for its exceptional acoustics. Performances of Greek plays are still held regularly in the theatre. Epidauros was also the site of a temple of Asclepius, the god of healing. See also p 1208

Epidemic, uncontained rapid spread of a disease through a population. The study of epidemics includes the causes, patterns of contagion and methods of containing disease. Bubonic plague, smallpox and typhoid have been causes of epidemics; hepatitis, influenza and venereal disease are now concerns of epidemiologists

Epidermis, outer layer of skin that contains no blood vessels. It is made up of four cell layers, including the outer horny stratum corneum, which protects the delicate underlayers from injury and infection, and the inner Malpighian layer, containing cells to replace spent outer cells and the pigments responsible for skin colour. See also pp.150, 150-151

Epidoscope, optical instrument that projects an enlarged image of an object onto a screen. It is used to project transparent images such as slides and also opaque images such as the pages of a book.

Epididymis, network of ducts in the testes, where sperm cells mature and are stored. See also VAS DEFERENS, pp.164, 164

Epidoite, orthosilicate mineral, hydrated calcium iron-aluminium silicate $(Ca_2Fe_2(Al_2O_3)(OH)(Si_2O_7)(Si_2O_4))$. It is found in metamorphic and igneous rocks as monoclinic system prismatic crystals and fibrous or granular masses, typically pistachio green, glassy and brittle. Certain large crystals, 7.5-25cm (3-10in), are collector's items. Hardness 6-7, s.g. 3.4

Epidural anaesthesia, regional anaesthesia resulting from the disposition of a local anaesthetic such as procaine into the epidural space of the spinal cord. This space is between the fibrous membranes which surround and protect the spinal cord, and the vertebral canal. Epidural anaesthesia is increasingly being used to lessen or prevent pain during childbirth. See also p.169

Epiglottis, thin ridge of cartilage projecting upwards behind the root of the tongue. It blocks off the LARYNX during swallowing to avoid choking, ensuring that food passes into the OESOPHAGUS. See also pp.159-160

Epigram, Greek word meaning "inscription". In classical literature, the term refers to a brief Greek or Latin poem expressing, in a pointed, witty manner, a single thought.

Epigraphy, study of epigraphs (inscriptions on durable material such as stone and metal or citations in books). The science of epigraphy is particularly important to classical archaeologists who learn much about life in Greece and Rome through inscriptions on statues, monuments and buildings.

Epilepsy, brain disorder characterized by disturbances in consciousness, motor and sensory functions, often accompanied by convulsions (once commonly called fits). Epileptic seizures usually first manifest themselves in children between 3 and 15 years old, slightly more often in boys than in girls. The most familiar categories are *grand mal*, *petit mal* and psychomotor. *Grand mal* seizures, up to five minutes long, may be preceded by so-called auras, and may involve calling out, loss of consciousness and loss of muscular control. *Petit mal* attacks last up to 15 seconds and are milder, although there may be an almost unnoticeable loss of consciousness. Psychomotor attacks last up to three minutes, with confusion of motor and sensory abilities. Treatment may be with anti-convulsant drugs or education of the patient. See also pp.1073, 1111, 1117

Epinephrine, or **adrenalin**, hormone produced by the medulla of the adrenal glands. It is chemically a catecholamine, $C_9H_9(OH)_2CHOHCH_2NHCH_3$, and is secreted under conditions of stress to prepare the body for "fight or flight" by dilating the blood vessels, increasing the heart beat rate and blood-sugar level. Synthetic epinephrine, made from catechol, and the extract obtained from the adrenal glands of sheep and cattle are used in medicine. See also p.154

Epiphany, Christian feast, celebrated on 6 Jan. It originated in the East as an observance of the baptism of Jesus, sometimes also of his birth. In the West it became associated with the manifestation of Christ to the Gentiles.

Epiphyte, or **air plant**, plant that grows on another plant but is not a parasite. Epiphytes usually have aerial roots and produce their own food by PHOTOSYNTHESIS. They are common in tropical forests.

Examples are some ferns, orchids and Spanish moss.

Epirus (Ipeiros) province on the mainland of NW Greece, bounded by the Pindus Mts. (E) Albania (N and W) and the Ionian Sea (W). Arta is the administrative centre. This province occupies the southern portion of a region known in ancient times as the home of the oracle of Dodona. United under Pyrrhus in the 3rd century BC it was made a republic c.200 BC and fought with Macedonia against Rome. Plundered by Aemilius Paulus in AD 167 and subsequently occupied by the Serbs, the Albanians and the Turks in 1430, it became a semi-independent state controlled by Ali Pasha of Ioannina in the late 18th century. Epirus passed to Greece in 1881. N Epirus remains part of Albania. Products include dairy produce, olives, citrus fruit and rice. Pop. (1971) 11,000.

Episcopacy, system of church government in which bishops (Greek *episkopoi*) regarded as the successors of the original twelve apostles, are responsible for pastoral care in their own dioceses. The Anglican, Roman Catholic and Eastern Orthodox Churches maintain an episcopal structure. See also APOSTOLIC SUCCESSION.

Epistemology, branch of philosophy that critically examines the nature, limits and validity of knowledge and the difference between knowledge and belief. Although it dates from the early Greek philosophers, in the 17th century DESCARTES showed that many previously "philosophical" questions would be better studied scientifically, and that what remained of metaphysics should be absorbed into epistemology. See also pp.1880, 1886-1887

Epistles, 20 letters forming most of the middle section of the New Testament. More than half of them are attributed to the apostle PAUL. (The Epistle to the Romans contains the single most complete formulation of Paul's teachings.) Written in response to problems facing the first Hellenistic Christian congregations, some epistles contain instructions to specific communities, others were addressed to all Christians.

Epistolary novel, novel in the form of a letter or series of letters, popular in the 18th century. Samuel RICHARDSON established the English vogue for it with *Pamela* (1740) and ROUSSEAU used the form in *La Nouvelle Héloïse* (1761).

Epithalamium, nuptial poem derived from Psephenic verses, written to honour a bride and bridegroom and pray for their prosperity. The form was perfected by the classical poets Sappho, Anacreon, Pindar, Theocritus and Catullus. The most famous examples in English literature are Edmund SPENSER's *Epithalamion* and *Prothalamion*.

Epithelium, layer of cells, closely connected to form a membrane that covers every surface of the body (to give protection from contact with foreign matter). Epithelium covers not only the skin, but also various internal organs and surfaces such as the intestines, nasal passages and mouth. There are various types of epithelial cells, including cuboidal, columnar and squamous or flattened. Membranes may be one cell layer thick or many layers such as on the skin. Epithelial cells may also produce protective modifications such as hair and nails, or secrete substances such as enzymes and mucus. See also p.150

Epode, form of lyric poetry in which a long line of poetry is followed by a shorter one. It is often preceded by stasima, a pair of elaborate stanzas. Its invention is attributed to ARCHILOCHUS in 7th-century BC Greece.

Epoxy resin, any of a group of thermosetting polymers with outstandingly good mechanical and electrical properties, stability, heat and chemical resistance, and adhesion. Epoxy resins are used in casting and protective coatings. Popular epoxy resins are sold in two separate components, a viscous resin and an amine or anhydride hardener, which are mixed just before use. See also p.589

Epping Forest, county district in SW Essex, England, created in 1974 under the Local Government Act (1972). Area 345sq km (133sq miles). Pop. (1974 est.) 114,800.

Epping Forest, originally part of the great forest of ESSEX, England, famous for its hunting. The forest was almost entirely destroyed by ENCLOSURES, but a small part of it, now in NE London, was saved by the Epping Forest Act of 1871.

Epsom and Ewell, municipal borough in Surrey, SE England bordering on Greater London. In the 17th and 18th centuries Epsom's mineral springs made it a popular spa town, and EPSOM SALTS (magnesium sulphate) was prepared there in about 1618. The town is also noted for its racecourse on Epsom Downs and its public school, Epsom College, founded in 1855. Pop. 72,000.

Epsom salts, hydrated form of magnesium sulphate ($MgSO_4 \cdot 7H_2O$) found in nature in the mineral epsomite and in mineral waters, used in medicine as a cathartic. It was first prepared from mineral springs at Epsom, England.

Epstein, Sir Jacob (1880-1959), US sculptor who settled in Britain in 1905. His first major works were the 18 symbolical figures which decorated the BMA building in London. Other works are the bronze *Visitation* (1926), the marble *Genesis* (1930), the stone *Ecce Homo* (1934-35) and the alabaster *Adam* (1939).

Equator, imaginary circle on the Earth's surface that lies midway between the N and S poles and is the zero line from which latitude is measured. It divides the Earth into the Northern and Southern hemispheres.

Equator, celestial, great circle on the CELESTIAL SPHERE that lies directly above the Earth's equator. It is used as a reference to determine the position of a star using the astronomical co-ordinate system of right ascension and declination.

Equatorial bulge, enlargement in the equatorial region of a planet or the Sun as a result of distortion of the body caused by rotation. The equatorial diameter is thus greater than the polar diameter and the object is an oblate spheroid rather than a sphere. The bulge is most noticeable in rapidly rotating non-solid objects such as Jupiter. See also p.206

Equatorial co-ordinate system, astronomical co-ordinate system that refers to the plane of the CELESTIAL EQUATOR. Two sets of co-ordinates are used: right ascension and declination, and hour angle and declination.

Equatorial currents, currents of the Atlantic and Pacific oceans that flow near the Equator. As they move W, their waters deflect either N or S in a clockwise or anti-clockwise direction. Nearer the Equator is the equatorial countercurrent which flows E between the North and South Equatorial currents. See also p.235

Equatorial Guinea, Republic of, independent nation in W Africa. It consists of mainland Rio Muni, which supports 75 per cent of the population although it is largely underdeveloped, and the island of Macías Nguema Biyoga, where cocoa and coffee are grown on fertile volcanic soil. The capital is Malabo. Area 28,051sq km (10,830sq miles). Pop. (1976 est.) 316,000. See also p.2034

Equatorial mounting, common telescope mounting in which the telescope rotates about two perpendicular axes, one of which the polar axis, is parallel to the Earth's axis, and so points towards the CELESTIAL POLE. The steady movement of celestial bodies, due to the Earth's rotation, can be followed by a daily rotation of the telescope about this axis, usually by means of a clock drive.

Equatorial orbit, orbit in the plane of the equator of a rotating celestial body. Equatorial orbits for artificial Earth satellites are the most economical to achieve, since the spacecraft already has a velocity of about 1,600km/h (1,000mph) caused by the Earth's rotation. Only restricted portions of the Earth's surface may be visible in such an orbit. See also p.1026

Equestrian sports, term used to describe horse sports. Although it applies to flat racing and National Hunt racing, and embraces hunting, point-to-point and polo, it is commonly used with reference to the three Olympic equestrian disciplines: dressage, show-jumping and trials.

Epiglottis diagram showing the location of the flap of cartilage in the back of the throat

Epistolary novel, engraving by D. Chodowieck for Rousseau's *La Nouvelle Héloïse*

Epping Forest attracts early morning riders, seen here in a typical springtime setting

Equator; King Neptune seen during the traditional 'crossing the line' ceremony

Equidae

Erard, an instrument maker, flled to England during the French Revolution

Erasmus, seen here in a portrait by Hans Holbein the Younger in the Louvre, Paris

Erwin, an illustration to an 1872 edit of Samuel Butler's famous work

Erfurt, the Cathedral on the Petersberg, one of the best examples of German Gothic

(or eventing) Dressage tests a horse's training, development and ability to execute defined movements, show-jumping tests its speed and jumping ability over obstacles set in a confined area, trials, held over 1-3 days, tests its all-round ability at dressage, over obstacles across country and in show jumping

Equidae, horse family including one genus, *Equus*, with five subgenera - true zebra, Grevy's zebra, Asiatic wild ass, African wild (and domestic) ass, and wild (and domestic) horse. Class Mammalia, order Perissodactyla

Equigravitational point, location between two celestial bodies, such as the Earth and Moon, at which the sum of the two gravitational forces is zero. A space vehicle reaching this point will begin to accelerate towards the body it is approaching

Equilibrium, in economics, position at which the total demand for goods and services equals the total supply of those goods and services. In such a situation there tends to be neither inflation nor recession. The market price is set at such a level that the quantity of goods producers are willing to produce equals the quantity that consumers are willing to buy

Equilibrium, chemical. See CHEMICAL EQUILIBRIUM

Equilibrium constant, ratio of concentrations of products to those of reactants characterizing the CHEMICAL EQUILIBRIUM of a particular reversible reaction at a specified temperature

Equinox, either of the two days of the year when, everywhere on Earth, day and night are of equal duration. They occur on the two occasions when the Sun crosses the CELESTIAL EQUATOR, moving in either a northerly or southerly direction

Equisetales. See HORSETAIL

Equity, in economics, value of an item or business less any amount owed on it. Equity normally refers to the difference between a firm's assets and its liabilities. As the asset value increases relative to liabilities, the equity is greater. The ordinary shares of limited companies are known as equity shares

Equivalence principle, concept that energy and mass are equivalent and interconvertible according to the equation $E=mc^2$ (c is the velocity of light). See also RELATIVITY, p 858

Equivalent, electrochemical. See ELECTROCHEMICAL EQUIVALENT

Equivalent weight, weight of an element in grammes, that combines with 8gm of oxygen or its equivalent, eg the equivalent weight of hydrogen is 1 in forming water (H_2O). The equivalent weight of an acid is the weight that contains one gramme of acidic hydrogen. A similar definition is used for bases

Erard, Sebastian (1752-1831), member of a French family of musical instrument makers. The son of a cabinet-maker, in 1777 he constructed the first piano to be built in France and nine years later set up a branch workshop in London. Today, the firm's name of Erard is highly regarded among HARP and PIANO makers

Erastriatus (*c* 250 BC), Greek physician. He made important discoveries concerning the heart and brain, among which were his description of the heart valves and his idea of the heart as a pump. He described the motor and sensory nerves and the function of the epiglottis. See also p 1217

Erastianism, complete control of church affairs by the state. It is named after Thomas Erastus (1524-85), a Swiss physician and theologian, who denied that the Church alone had disciplinary powers, especially of excommunication. Hence "erastianism" is a distortion of his position, which assumed co-operation between Church and state

Erasmus, Desiderius (*c* 1466-1536), Dutch scholar, considered the greatest of the RENAISSANCE humanists. He was ordained as a Catholic priest in 1492. His *Enchiridion militis* (*Manual of the Christian Knight*) (1503) emphasized simple piety as an ideal of CHRISTIANITY and called for reform of the Church. *Praise of Folly* (1509) is a satire of late medieval society. His works had an early influence on

OTHER and other Protestant reformers but he himself sought change from within the Catholic Church and found the course of the REFORMATION at least as upsetting as the faults of the Catholic Church that he had criticized. In *On Free Will* (1524) he openly clashed with Luther. See also pp 1381, 1402

Eratothenes (*c* 276-*c* 194 BC), Greek scholar who first measured the earth's circumference by geometry. Eratothenes administered the LIBRARY OF ALEXANDRIA and was renowned for his work in mathematics, geography, philosophy and literature. See also pp 794, 916, 1217, 1514

Erbium, metallic element (symbol Er) of the LANTHANIDE SERIES, first isolated in 1843 by C. G. Mosander. Its chief ores are monazite (a phosphate) and bastnaesite (fluorocarbonates). The element is used in some specialized alloys and erbium salts are used as pink colourants for glass. Properties at no 68, at wt 167.26, m.p. 1,522°C (2,772°F), s.g. 9.045 (25°C), b.p. 2,510°C (4,550°F), most common isotope Er^{167} (33.41%)

Erçilla y Zuniga, Alonso de (1533-94), Spanish writer remembered for his epic poem *La Araucana* (1569-89). The poem concerns the uprising of the Araucanian Indians of Chile against their Spanish conquerors

Erch (Uruk), ancient Sumerian city of S Mesopotamia, on the River Euphrates. It is the site of modern Warka, Iraq. It prospered *c* 5000 BC, and became the capital of Lower Babylonia. See also p 1163

Erchtheum, temple in the ACROPOLIS, built between 420 BC and 405 BC. It is made of Pentelic marble, and may have been designed by MNESEKLES. It is perhaps the best example extant of the Greek Doric order

Erection, swelling of the PENIS caused by a rush of blood into its spongy tissue

Erewash, county district in SE DERBYSHIRE, England, created in 1974 under the Local Government Act (1972). Area 109.4 km (42.4 miles). Pop. (1974 est.) 100,600

Erewhon (1872), satirical novel by Samuel BUTLER. Higgs, the narrator, discovers the utopian country of Erewhon (an anagram of "nowhere"). Butler exposes the hypocrisy of Victorian society by means of an ingenious paradox

Erfurt, city in SW East Germany, 102 km (64 miles) NW of Leipzig, on the River Gera, capital of Erfurt province. One of Germany's oldest cities, first mentioned by St Boniface in the 8th century, it has the site of the Krämerbrücke (Merchants' Bridge) dating from 1325. Martin LUTHER lived there as an Augustinian monk (1505-08) and there is a 12th-century cathedral. Industries: optical instruments, precision tools. Pop. (1975) 203,190

Erg, unit of energy in the metric cgs (centimetre-gramme-second) system of units. One erg is the work done by a force of one dyne acting through a distance of one centimetre. One joule equals 10 million ergs

Ergonomics, application of physiological and psychological principles to man-machine systems. It is used to design machines, tools, and work areas that take into account the physical and psychological limitations of human beings

Ergosterol, organic chemical compound, a STEROID, found particularly in yeast and other fungi. When irradiated with ultraviolet light it reacts to form many compounds

Ergot, fungus (*Claviceps*) disease of rye plants and other small grasses. Part of the fungal body contains alkaloids that are generally poisonous to man but when purified and in appropriate doses can be used medicinally. Ergotamine is used to treat migraine headaches, and ergonovine to induce uterine contractions to eject the afterbirth

Erhard, Ludwig (1897-1977), German politician and economist, largely responsible for West German economic recovery after WWII. He was chancellor of West Germany from 1963 to 1966 and after his resignation was made honorary chairman of the CHRISTIAN DEMOCRATS

Erica, genus of more than 500 species of mostly low, evergreen shrubs comprising

true heaths and heathers. Most of the species are native to Africa, but many grow on moors in Britain and other parts of Europe. Blossoms are colourful and tube-shaped or bell-shaped. Family Ericaceae

Ericsson, John (1803-89), US inventor. He went to the USA from Sweden in 1839 to build ships for the navy. During the AMERICAN CIVIL WAR, he constructed a new type of ironclad ship, the *Monitor*. The battle between the *Monitor* and the Confederate ironclad ship *Virginia* (formerly *Merrimack*) made him a Union hero

Ericsson, Lief (*fl* 1000), Norse explorer, son of ERIC THE RED. He is said to have discovered and wintered in Vinland on the North American continent (*c* 1000) when, on a voyage from Norway to bring Christianity to Greenland, he was blown off course. The probable site of his landing is in Nova Scotia. See also p 1290

Eric the Red (*fl* 10th century), Norse explorer and discoverer of Greenland. He was exiled from Norway and Iceland for manslaughter, and went on a voyage of discovery during which he found Greenland in 982. He took colonists from Iceland to establish permanent settlements in 986. See also p 1290

Eridu, ancient Sumerian city and the modern site of Abu Shahrain, S Iraq. Iraqi excavations (1946-49) indicate that Eridu dates from 5000 BC, making it the oldest known settlement in S Mesopotamia. Ruined temples decorated with silver lapis lazuli and painted pottery dating from 3500 BC have been found. See also pp 1158, 1162

Erie, city in NW Pennsylvania, USA, on Lake Erie. It was first settled by the French in 1753 and then occupied by the British in 1760. Pennsylvania's only port on the Great Lakes, it exports timber, coal, iron ore, petroleum, grain and fish. Industries: machinery, plastics, paper. Pop. (1970) 129,322

Erie, Lake, one of the Great Lakes in North America, bordered by Ontario (W), New York (E), Ohio and Pennsylvania (S) and Michigan (SW), part of the Great Lakes-St Lawrence waterway. Discovered in 1669 by the French explorer Louis Jolliet, it is the shallowest and second smallest of the Lakes. Industrial cities on its shores have polluted it, but government regulations are now aiding its recovery. Area 25,667 sq km (9,910 sq miles); max depth 64 m (210 ft)

Erie Indians, also known as the Cat Nation, sedentary tribe of Iroquoian speaking North American Indians who once occupied W Ohio, W New York and NW Pennsylvania. Formerly numbering 15,000, they were almost wiped out in a war with the Ojibwas (1653-56). The few hundred survivors joined the Seneca tribe

Erigena, Johannes Scotus (*c* 810-77), Irish philosopher and theologian. Little is known of his life. His major work, *De Divisione Naturae* (*c* 862-66), discusses the doctrine of creation

Erik II Magnusson (1268-99), King of Norway (1280-99), also called "Prest Hater". He continued the war against Denmark (1280-95) begun by his father, MAGNUS VI. In 1282 he married Marjatta of Scotland, in 1293 he married Ingeborga Bruce, sister of Robert Bruce of Scotland

Erik Bloodaxe (*d* 954), King of Denmark, Norway and Sweden (r 930-34). In 934 he was driven from Norway for his cruelty and injustice. He was given charge of Northumbria by AETHELSTAN, and ruled at York until slain in battle

Erikson, Erik Homburger (1902-), US psychoanalyst and historian, b Germany. He pioneered the use of Freudian psychoanalysis in treating children. He is a leading exponent of the psycho-historical school of history, having written the psychoanalytical studies *Young Man Luther* (1958) and *Granville's Truth* (1970)

Eris, ancient Gaelic name of Ireland, still often used poetically. According to legend, Eris was a mythical Irish queen

Eriyres. See FURIES, THE

Eris, in Greek mythology, the spirit of discord. She appeared as the only uninvited goddess at the wedding of Thetis and Peleus and threw among the guests an

apple addressed "To the fairest." When Hera, Athena and Aphrodite each claimed it, Zeus ordered the Trojan prince Paris to decide. His choice of Aphrodite led to the Trojan War.

Eritrea, province in n Ethiopia, on the Red Sea. The capital is Asmara and the chief ports are Asseb and Mesawa. It was under the control of Ethiopia until the Ottoman Empire took it in the 16th century. During the 19th century Ethiopia fought Egypt and Italy for control of the region, but Italy claimed it after 1890, and used it as a base from which to attack Ethiopia in 1935. Since 1962 Eritrea has been part of Ethiopia, but Eritrean separatists do not accept the union, and fighting between Eritrean nationalists and Ethiopian troops was particularly savage in the mid-1970s. Area: 117,599sq km (45,405sq miles). Pop. 1,836,800.

Erlach, J.B. Fischer von. See FISCHER VON ERLACH, J.B.

Erlanger, Joseph (1874-1965), US physiologist. In 1964 he shared the Nobel prize in physiology and medicine with H.S. GASSER for discoveries regarding the highly differentiated functions of single nerve fibres.

Erlkönig, in German legend a goblin king who haunted the Black Forest and exercised a malignant and fatal influence upon people, and especially children, by offering alluring promises that led to their destruction.

Ermine, small, slender mammal called a stoat in Eurasia and short-tailed weasel in North America. Ermines have short black-tipped tails and a brown coat that turns white in winter. Length: 23cm (9in), weight: 240gm (10oz). Family Mustelidae, species *Mustela erminea*.

Ermine Street, Roman road that ran from London through Ware, Royston, Huntingdon, Ancaster and Lincoln to York. It was one of the four roads given special protection by William I, and the name was applied indiscriminately to other Roman roads. Ermine was probably a Saxon personal name, given centuries after the road was built.

Ernest Augustus I of Hanover (1629-98), the first elector of Hanover (1692-98). He created the ninth imperial electorate by uniting Hanover and Brunswick-Lüneburg. His son became King GEORGE I, first king of both Hanover and Great Britain.

"Ernie", acronym of *Electric Random Number Indicator Equipment*, the device housed at Lytham St Annes in Lancashire, England, which selects the numbers of winning PREMIER SAVINGS BONDS. Numbers are selected every week and the holders of the numbered bonds win cash prizes. In addition, specially large prizes are distributed once each month.

Ernst, Max (1891-1976), German painter and sculptor. Founder of a dada group in Cologne (1919), he later became prominent in the SURREALIST movement. He developed the form known as frottage, in which rubbings are made on paper held over various textured surfaces, to express his often fantastic and disturbing visions. His most important works include *L'Elephant Célèbre* (1921) and *Two Children Threatened by a Nightingale* (1924). See also pp 1684, 1685.

Eros, in Greek mythology, god of love, identical with the Roman Cupid. Initially a personification of cosmic harmony being the son of Chaos, he was later depicted as a beautiful and playful youth with a bow and arrows, servant of his mother Aphrodite and insurer of passion. He married Psyche, a mortal.

Eros, elongated asteroid with irregular shaped orbit, discovered in 1898 by Carl Witt. In 1931 and 1975 it approached to within 24 million km (15 million miles) of the Earth. Longer diameter 27km (17 miles), mean distance from the Sun 232 million km (144 million miles), mean sidereal period 1.76 yr. See also p 954.

Eros, popular name for the Shaftesbury Memorial Fountain at Piccadilly Circus, London. Built in honour of the philanthropist Lord Shaftesbury and executed by the sculptor Sir Albert Gilbert, it was unveiled in 1893.

Erosion, in geology, alteration of land-forms by gradually wearing them away and transport of the debris via wind, water, glacial movement, gravity and living organisms. Erosion can have disastrous economic results, eg the blowing away of topsoil, the weathering of man-made structures and the alteration of water systems. See also DENUDATION, GEOMORPHOLOGY, pp 220-222, 228.

Erosion channel, trench cut in the landscape due to rapid runoff of surface water, generally in areas unprotected by vegetation. In and zones this form of erosion produces flat-floored channels called *arroyos*; in humid areas V-shaped gullies are the usual shape.

Erosion control, protection against loss of surface soil for agriculture, forestry, landscaping and recreation. Agricultural mismanagement, overgrazing and deforestation have destroyed major portions of the Earth's surface by exposing them to erosion by water and wind. Methods to prevent erosion include zoning of land to limit grazing, TERRACING, contour cultivation, strip-cropping, litter-covering of cultivated soil, and the planting of trees as wind-breaks. See also SOIL CONSERVATION.

Erratic, or erratic, in geology, unstratified and frequently loose rocks, eg a rock- ing boulder, of all sizes. They are too large to have been stream-carried and are assumed to have been carried to their present locations by glacial action.

Erse, name given by Lowland Scots to the CELTIC LANGUAGE of the people of the w Highlands which is Irish in origin (the Middle English word *erisch* means "Irish").

Erucic acid, fatty acid ($C_{22}H_{42}O_2$) occurring in many vegetable oils such as rapeseed and mustard. When pure it is a colourless, crystalline solid, insoluble in water. Properties: s.g. 0.86, m.p. 33.4°C (92.1°F), b.p. 381.5°C (718.7°F).

Eruption, emission of volcanic materials either on land or under the sea. Any volcanic material constitutes an eruption, whether it is violent or calm, eg leaking of lava material from volcanic fissures. Constructive processes (such as FOLD and FAULT formation) resulting in the appearance of new material is also eruptive. See also pp 204-205, 212.

Ervine, St John Greer (1883-1971), Irish playwright, novelist and critic. He was manager of the ABNEY THEATRE, Dublin (1915-16). His plays often set in Lister, included *Mixed Marriage*, first produced in 1911, *The First Mrs Fraser* (1928) and *Boyd's Shop* (1936). He worked as a drama critic on both the *Observer* and the *Morning Post*.

Erysipelas, contagious skin infection caused by a *STREPTOCOCCUS* bacterium. Symptoms include pain and heat in the affected part, and coarse skin rashes which become red and shiny and appear swollen. See also pp 1074-1075.

Erythema, redness of the skin caused by congestion of the capillaries, sometimes due to infection. Symptoms include tingling and pain. See also pp 1074-1075.

Erythrocyte, non-nucleated (usually disc-shaped) red blood cell, containing the pigment haemoglobin, that carries oxygen to the tissues and gives the blood its red colour. Normal human blood contains an average of five million such cells per cubic millimetre of blood, but the number is generally slightly higher in men and lower in women. See also pp 152-153.

Erythromycin, generic name of an antibiotic used to treat infections caused by streptococci, staphylococci, pneumococci and other gram-positive bacteria.

Erzgebirge (Krušnéhory, or Ore Mts), range extending along the border of Czechoslovakia and East Germany. Uranium, lead, zinc, tungsten, tin, copper, bismuth, antimony and arsenic are the chief metals whose ores are now mined there. The highest peak is Klínovec, 1,244m (4,080ft). Length: 161km (100 miles).

Erzurum, city in NE Asian Turkey, capital of Erzurum province. It was known as Theodosiopolis in the 5th century AD and was an important Byzantine frontier fortress. It was captured by the Ottoman Turks in the early 16th century. The first

Turkish Nationalist congress was held there in 1919. Industries: agriculture, metal goods. Pop. (1973) 151,590.

Esaki, Leo (1925-), Japanese physicist who developed the tunnel diode, a semiconductor which allows electrons to cross normally impassable electronic barriers. Ivar GIAEVER extended Esaki's research to the field of superconductivity, which led to the Josephson effect. For this work they shared the 1973 Nobel Prize in physics with Brian JOSEPHSON. The tunnel diode, also called Esaki diode, has found extensive applications which include its use in computer information storage.

Esarhaddon, King of Assyria (r. 681-669 BC), son of Sennacherib. He crushed revolts and defeated the Chaldeans, who ruled BABYLON. He conquered Egypt (675-669 BC) and dominated ELAM. His son ASHURBANIPAL succeeded him. See also pp 147, 147.

Esau, Old Testament figure who, after a hard day's work, sold his birthright (his future inheritance as elder son) for refreshment to his scheming brother Jacob, later called Israel. The story probably derives from an attempt to give an ancient background to the enmity between the Israelites and the EDOMITES.

Esbjerg, port in SW Denmark, on the North Sea, on the Jutland peninsula. The city grew in the 19th century when its port was constructed. Industries: shipbuilding, fishing, cement. Pop. 76,000.

Escalator, electrically powered moving stairs, driven by chain and sprocket and held in the correct plane by two tracks. It is usually inclined at 30° and limited to a total rise of up to 18m (60ft). As the steps approach the landing, they pass through a protective comb-like device. Escalators are used to carry pedestrians between floors in busy areas such as large stores, office buildings and underground railway stations. The Otis Elevator Company exhibited the first escalator in 1900 at the Paris Exposition. See also pp 457, 457.

Escalator clause, stipulation in a union-management work agreement that provides for an automatic upward adjustment in wages when the retail price index (or similar cost-of-living gauge) rises by a predetermined amount. It is designed to protect workers from the effects of inflation.

Escape energy, rocket, energy required by a rocket to reach ESCAPE VELOCITY and become free from the gravitational field of a star, planet, satellite or stellar system. Disregarding atmospheric friction, the escape energy at any distance R from a mass M for a rocket of mass m is mMG/R , where G is the gravitational constant. See also p 1023.

Escapement, mechanical device for the interaction of oscillating and circular motion, in which a toothed wheel alternately engages and escapes the oscillating member. The mechanism is used in clocks and watches in which the escapement intervenes between the drive (spring or weight) and the regulating device (balance wheel or pendulum).

Escape tower, spacecraft, launching-pad structure attached to the top of a manned space vehicle. It contains an escape rocket used to pull the CAPSULE containing the astronauts away from the launch vehicle in an emergency. The blast from the escape rocket is vented to the side to protect the astronauts. The tower is jettisoned after normal ascent.

Escape velocity, rocket, minimum velocity required to free a rocket of the gravitational field of a celestial body or stellar system. Escape velocities are, for the Earth 11.2km/sec (7mps) and Moon 2.4km/sec (1.5mps). They can be calculated from the formula $v = \sqrt{2GM/R}$, where G is the gravitational constant, M the mass of the planet or system and R the distance of the rocket from the centre of mass of the system. See also p 1023.

Escarpment, or scarp, steep slope of a continuous cliff face or a plateau, produced by faulting and differential erosion. Loosening of rock by wind or water produces spectacular cliff faces such as the Grand Canyon. See also pp 222, 223.

Eschatology, in systematic theology, the

Ermine once provided the fur for trimming the robes of the European nobility.

Eros, in the art of antiquity, was depicted first as a youth but, later, as an infant.

Escalator, the first inclined elevator was patented by Jesse W. Reno in 1891.

Escape tower is designed to rescue astronauts in danger.

Escheat

Escorial has an art collection that includes works by El Greco, Titian and Velázquez

Eskimo spears tips fashioned for hunting marine mammals is their principal diet

Esperanto, devised by Ludwik Zamenhof means in that language 'one who hopes'

Essen, badly damaged by Allied bombing during WWII, has been largely rebuilt

formalized doctrine concerning the end of time. It comprises the study of teaching and theory on the coming of the kingdom of God and the consequent final destiny of each individual soul. The term was first used in the 19th century.

Escheat, in feudal English law, the legal right of the lord of the land to claim property where there is no apparent heir. The law of escheat was abolished in England in 1925.

Esch-sur-Alzette, town in Luxembourg, 16km (10 miles) sw of the city of Luxembourg, close to the French border, on the River Alzette. It is an industrial centre with iron and steel works and railway communications with France, Belgium, Germany. Pop (1970 est.) 27,600.

Escorial, Spanish monastery and palace near Madrid. Built 1563-84 for Philip II by the architects Juan de Toledo and Juan de Herrera, it comprises a massive and austere group of buildings arranged in a square plan and dominated by church towers and a dome. The palace has a notable art collection of Spanish and Netherlandish work.

Esdra's, two books of the Bible, at the beginning of the Apocrypha. Esdras I includes parts of Chronicles II, Ezra, and Nehemiah. Esdras II, also known as the Ezra Apocalypse, is the product of Jewish Christian apocalyptic thought and employs the typical imagery of apocalyptic literature.

Esenin, Sergey. See YESENIN.

Estahán. See ISFAHAN.

Esk, river in sw Scotland formed at the confluence of the Black Esk and White Esk rivers in Dumfries. It flows roughly s and enters the Solway Firth in Cumbria. Length 45km (28 miles).

Esker, sand and gravel ridge of gentle slope. It is formed from debris carried by streams that ran under or through an old, almost stationary glacier or a retreating one. See also pp 224, 225.

Eskilstuna, city in SE Sweden, 72km (45 miles) w of Stockholm. A commercial centre in the 12th century, it prospered in the 17th and 18th centuries when an iron and steel industry was developed. There is a 12th-century church and a technical college in the city. Industries: steel, machine tools, engineering. Pop 67,500.

Eskimo, Algonquian Indian for "eaters of raw flesh", referring to the aboriginal inhabitants of Arctic and sub-Arctic regions. They have developed cultural and linguistic characteristics distinct from North American Indians. Their language, for example, is related only to that of the Aleut. Eskimos have Mongoloid features and originally migrated from Asia. They have adapted themselves extremely well to harsh climates and are some of the most proficient hunters in the world. They rely on sea mammals, particularly seals, for food, tools, clothes and oil, and they also catch reindeer and fish. They have considerable artistic skill and fashion objects from stone, ivory and bone. Today approx 25,000 live in Alaska, 15,000 in Canada and 40,000 in Greenland. See also pp 121, 123, 1830, 1832.

Eskişehir, city in NW central Turkey, capital of Eskişehir province. It is the site of the ancient Phrygian city of Dorylaeum. Industries: farm and railway equipment, sugar-refining, cement. Pop 173,900.

Esmeraldas, river, town and most northerly province of Ecuador. The river is 242km (150 miles) long and its chief tributary is the Guallabamba. The town, pop (1972 est.) 67,022, is on the coast, it is a trading centre. The province, area 14,711sq km (5,680sq miles), consists of a coastal plain and foothills, pop (1971) 184,800.

ESP, extra-sensory perception, a parapsychological phenomenon. The term covers alleged psychic cognitive such as clairvoyance, telepathy and precognition. The events that believers in the existence of ESP posit, such as the perception of one person of the thoughts of another, or the ability to predict what will happen in the future, are not explainable by the traditional methods of physical science. They have, even so, been the subject of serious investigation, beginning with the establishment in 1882

in London of the Society for Psychical Research. See also SPIRITUALISM, pp 1892, 1893.

Esparto, or **needlegrass**, coarse grass, native to Spain and N Africa, used for making ropes, cord and paper. There are about 150 species. Heights to 0.9m (3ft). Family Gramineae, genera *Stipa* and *Lygeum*.

Esperanto, artificial language devised in 1887 by a Polish doctor, Ludwik Zamenhof, in the hope that it would become the language of international communication. Its spelling and grammar are consistent, and its vocabulary is based mainly on that of w European languages. There are 22 international professional organizations that use Esperanto. See also pp 1878, 1879.

Espinel, Vicente (1550-1624) much-travelled Spanish novelist and poet who is said to have invented the *decima*. This stanza form consists of 10 lines of eight syllables each. Espinel's best known work is a picaresque novel *Vida de Marcos de Obregón*.

Espinosa, Pedro (1578-1650), Spanish poet who took holy orders and lived for a time as a hermit. He is best known for *Fábula del Genio* and for his translation of the psalms. He also wrote prose satires and published an important anthology of contemporary poetry (1605).

Espionage, the act of obtaining secret information, especially for one nation about the political, military and industrial matters of a rival. It was engaged in by both the Egyptians and the Greeks. Although regarded nowadays as accepted practice, the risks are great and penalties for those agents who are detected are severe. It is an activity in which, in peacetime and war, a single individual can prove highly effective, aided as he is today by all manner of sophisticated technical devices. See also COUNTER-ESPIONAGE.

Espoo (Esbo), town of Uusimaa province, Finland, 18km (11 miles) w of Helsinki. It is in an area of flat valleys and clay hills. By 1968 it was connected to Helsinki by a motorway. The town is growing rapidly. Pop (1973) 110,107.

Espinozeda, José de (1808-1842), Spanish Romantic poet. Active in the liberal revolutions of the 1830s, he fought in France (1830) and Spain (1835, 1836) and wrote many poems on the themes of patriotism and freedom. The autobiographical *Canto a Teresa* (1841) is a fine example of Spanish Romanticism.

Equire, or squire, in FEUDALISM, term for a knight's assistant or for an apprentice knight. The word originally meant "one who bears arms". In the 17th century it came to mean a country gentleman, below the nobility.

Esquirol, Jean Etienne Dominique (1772-1840), French pioneer in the humane treatment of the mentally disturbed. He was appointed inspector-general for the University of Paris medical faculty (1823) after founding the first instructional clinic in psychiatry (1871). He wrote the first modern work on clinical psychology, *Des Maladies Mentales* (1938).

Exand Pasha (c 1863-1920), Albanian political leader who aided the YOUNG TURKS in their agitation of 1908 for reform of the OTTOMAN EMPIRE. He represented Albania in the new legislature but later turned against the Turks in search of Albanian independence. When this was achieved in 1913, he had a chequered career in the new state, finally being exiled when the Austrians invaded in 1916. He was assassinated in France.

Essay, short, non-fictional composition, written expressing a personal point of view. The essay form originated with the French writer Montaigne in the 16th century. Famous British essayists include Abraham Cowley and Francis Bacon in the 17th century, Joseph Addison and Henry Steele, Henry Fielding, Dr Samuel Johnson and Oliver Goldsmith in the 18th century, Matthew Arnold, Charles Lamb and William Morris in the 19th century. Noted US essayists include in the 19th century Ralph Waldo Emerson, Henry David Thoreau and Oliver Wendell Holmes, and

in the 20th century Clarence Day, James Thurber, George Santayana, Dorothy Parker, Christopher Morley and E. B. White.

Essay Concerning Human Understanding, An (1690), philosophical treatise by John Locke. Locke argued that all human knowledge is derived from experience, without the senses, nothing can be known. The senses supply the data that the mind extends into ideas by reflection. By restricting knowledge to possible experience, Locke suggested the path of modern EPISTEMOLOGY. See also pp 1886, 1887.

Essay on Man (1734), long poem in four parts, written in rhyming couplets of iambic pentameter by Alexander Pope. It attempts to give a poetic summation of the prevailing philosophical "optimism" of the AGE OF REASON.

Essen, city in w West Germany on the River Ruhr, 30km (18 miles) nne of Düsseldorf. The city grew up around a 9th-century Benedictine convent. From the 13th to the 18th century it was a small imperial state ruled by the abbess of the convent, before being annexed to Prussia in 1803. The city has an 11th-century cathedral. Industries: iron and steel, glass, textiles, chemicals. Pop 674,000.

Essenes, Jewish religious sect which existed in Palestine from the 2nd century BC to the end of the 1st century AD. The members of the sect, usually composed entirely of men, lived in communal groups isolated from the rest of society. Sharing all their possessions, they stressed ritual purity and were stricter than the Pharisees in their observance. A secrecy developed about the sect, and they shunned public life as well as temple worship. The Dead Sea Scrolls may have been their work.

Essex, Robert Devereux, 2nd Earl of (1566-1601), English courtier and soldier. He won great favour with ELIZABETH I by a successful attack on Cadiz in 1596. He was made earl marshal in 1597 and lord-lieutenant of Ireland in 1599. He led a unsuccessful rebellion against Elizabeth in 1601 and was executed for treason. See also p 1409.

Essex, Robert Devereux, 3rd Earl of (1591-1646), British soldier. He took command of the Parliamentary armies at the onset of the English Civil War in 1642. He resigned in 1645 when the Parliamentary forces were reorganized into the new MODEL ARMY.

Essex, county in SE England. Low lying on the E coast, the land rises to the NW providing pasture for dairy- and sheep-farming. Wheat, barley and sugar-beet are all important crops and there is some market gardening supplying the London area. Industries include machinery and electrical goods. The main towns are Chelmsford, the county town, Colchester and resorts such as Southend-on-Sea and Clacton. Area 3,674sq km (1,419sq miles). Pop (1976) 1,426,200.

Estaint, Valéry Giscard d' (1926-), French politician. He was born into a patrician, landowning family and in 1956 was first elected as a *député*. He was minister of finance in 1962-66 and 1969-74. In May 1974, as the candidate of the Right - his party, the Independent Republicans, are the allies of the Gaullists - he defeated François MITTERRAND to become the third president of the Fifth Republic and was defeated by him in the 1981 election.

Estate, property or interest held by a person in a property, usually land. The term applies especially to the property, possessions and effects bequeathed in a will, but applies also to modes of tenure such as FREEHOLD and LEASEHOLD - the principle in that case being that no one except the Crown can own land absolutely in England.

Estate, social, in feudal societies, a rigidly defined social stratum. The population is divided into a hierarchy of ruler, nobles, clergy, vassals and serfs. In France the Third Estate comprised all those who were neither nobility nor clergy.

Estates-General, national assembly composed of separate divisions, or "estates", each historically representing a different social class. In France the Assembly was

divided into three estates – clergy, nobility and commoners – representing the three major divisions of European society before the FRENCH REVOLUTION (1789). The upper classes traditionally allied against the Third Estate but in 1789 all three united in their refusal to dissolve the assembly at the command of Louis XVI, thus precipitating the revolution. The Dutch parliament still retains the name *Estates-General*. See also p.1550

Estevanico (c.1500–39), Moroccan guide for explorers Panfilo de NARVAZ and Cabeza de VACA. He was one of four survivors of the party that explored the Florida coast in 1528. In 1539 he guided Fray MARCOS into New Mexico, but was killed by Indians.

Este, Italian aristocratic family that ruled in Ferrara (13th–16th centuries) and in Modena and Reggio (15th–16th centuries). An important GUELPH family, with the rule of Niccolò III (1393–1441) the Este were established as one of the foremost families in Europe. Ercole I (r.1471–1505) and his son, Cardinal Ippolito I (d.1520), were both patrons of the poet Ludovico Ariosto, who dedicated his *Orlando Furioso* to the cardinal. Alfonso II (r.1559–97) was connected with the patronage of the poet Torquato TASSO.

Ester, any of a class of organic compounds formed by reaction between an alcohol and an acid. The commonest type, those formed from carboxylic acids, have the general formula $RCOOR'$. Simple esters are fragrant and volatile compounds, and are used as flavourings. FATS are esters of glycerol and long-chain carboxylic acids. See also SAPONIFICATION.

Esterházy family, Magyar clan whose many prominent members since the 16th century contributed greatly to the histories of Austria and Hungary. Paul (1635–1713), elected palatine of Hungary in 1681, was prominent in the defence of Vienna and the reconquest of Hungary from the Turks. His grandsons, Paul Anton (d.1762) and Nicholas Joseph (d.1790) were great art patrons, notably of Joseph HAYDN.

Estes, Sleepy John (1904–77), US blues singer and guitarist. With Robert JOHNSON and Blind Willie McTELL, Estes established a tradition of unsentimental but highly personal and moving lyrical blues writing.

Esterhazy, Old Testament book narrating how the legendary heroine queen Esther averted the mass killing of her people, the Jews, by the Persians in Babylon. The Persian king had been advised by his grand vizier Haman (Aman) that the Jews were a pernicious race and should be exterminated. Haman's overthrow is celebrated at the Jewish feast of Purim, though the feast is older than the book. Nothing is known of the author.

Estivation, ability of certain organisms, including snails and some rodents, to spend the summer in a dormant state. In desert areas it serves as a survival mechanism during water and food shortages.

Estournelles de Constant, Paul Henri Benjamin Riquelme (1852–1924), French diplomat and politician. He worked for international conciliation and disarmament first as a diplomat and then as a politician, becoming a *député* in 1895 and being elected to the French senate in 1904. He was a delegate at the HAGUE PEACE CONFERENCES of 1907 and in 1909 with Auguste BERNAERT he was awarded the Nobel Peace Prize.

Extremadura (Extremadura), region of w central Spain, on the Portuguese border, crossed by the Tagus and the Guadiana rivers. It was the birthplace of the conquistadors FRANCISCO PIZARRO and Hernán CORTÉS. Today sheep and pigs are reared in the area and its industries include timber and coal-mining. Pop (1970 est.) 2,656,200.

Estuary, coastal region where a river mouth opens into the ocean and fresh water from the land is mixed with salt water from the sea. Many estuaries are drowned river valleys, perhaps formed after a rise in sea-level at the end of an ice age. They usually provide good harbours

and are often breeding grounds for many kinds of marine life.

Eta, Japanese minority group, generally regarded as the lowest caste in traditional Japanese society. Thought to be descendants of groups such as butchers and tanners, associated with the taking of life, they are still shunned by many Japanese.

Eta Carinae, irregular variable star in the constellation of Carina. Surrounded by nebulosity, it reached magnitude –0.8 in 1843 and was the second brightest star in the sky, but it is now invisible to the naked eye. It is an extremely remote object of an unusual spectral class not yet fully analysed. Apparent mag. 7.7. See also pp.978, 992–993, 1014–1015, 1018.

Eta meson, uncharged ELEMENTARY PARTICLE (η) with zero spin. It is grouped under the HADRONS (one of the three main groups).

Etching, method of INTAGLIO (incised) printing used especially for reproducing black-and-white designs. The etching process allows a more freely drawn figure than does an ENGRAVING process. First the artist covers the metal plate, usually copper, with an acid-proof ground made of a mixture containing bitumen, beeswax and resin. Next, the design is drawn on to the grounded plate with an etching needle so that the lines penetrate the ground. The plate is then placed in an acid that eats away the exposed line. To create shading, the etcher places an acid-resistant varnish over the desired areas and once again immerses the plate to allow the acid to incise more deeply the still exposed lines. When the plate is finished, it is rolled with ink and placed in an etching press to be printed. Corrections and changes can be made by covering the plate with a new ground and reworking it. See also PRINT-MAKING.

Ethane, gas with the chemical formula CH_3CH_3 , and which is therefore a member of the alkane group of HYDROCARBONS. With no taste or odour, it is a minor constituent of natural gas. See also SATURATED COMPOUND.

Ethanol. See ETHYL ALCOHOL.

Ethelbald (d.757), King of Mercia (716–57). By 731 he controlled all of England s of the Humber River. He also encouraged the development of the church by making large grants of land and freeing ecclesiastical lands from most obligations to the king.

Ethelbert (d.616), King of Kent who came to power in 560. His attempt to extend his kingdom westwards was thwarted in 568 by the West Saxons, but by the late 6th century he was the strongest ruler in England s of the Humber River. He was the first Christian king in Anglo-Saxon England and allowed AUGUSTINE and his monks to settle and preach in Canterbury. He also founded the see of Rochester.

Ethelbert (d.866), King of Kent and Wessex, an elder brother of ALFRED THE GREAT. He succeeded to the throne of Kent in 858 and to that of Wessex in 860, thus uniting the two kingdoms. During his reign the Danes sacked Winchester.

Ethelfleda (d.918), daughter of ALFRED THE GREAT, known as "Lady of the Mercians". She married Ethelred, Ealdorman of the Mercians, whom she succeeded in 911. She joined her brother, EDWARD THE ELDER, to recover English territory from the Danes and captured Derby in 917 and Leicester in 918.

Ethelfrith (d.616), King of Northumbria. He united the kingdoms of Bernicia and Deira, inflicted defeats on the Britons near the Forth in 603 and again near Chester (613–16) and laid the foundations of Northumbrian political dominance in England. He was killed by supporters of his successor, EDWIN of Deira.

Ethelred (d.871), King of Wessex and Kent (865–71). With his younger brother ALFRED, he assisted the Mercians in resisting a Danish invasion in 868. When the Danes attacked Wessex, he defeated them at Ashdown in 871. He was succeeded by ALFRED.

Ethelred II (968–1016), King of England (978–1013, 1014–16), called the L. ready (from the Old English "ev" rede

or counsel"). He suffered continually from Danish attacks, and in 994 he began to pay off the raiders with money raised by the DANEGELD. The Danes returned nevertheless in 997 and a massacre of Danes in 1002 brought retaliation from the Danish King Sweyn who conquered England in 1013. Ethelred was made king again on Sweyn's death, but was succeeded by Sweyn's son Canute. See also p.1289.

Ethelwold, Saint (c.908–84), Bishop of Winchester after 963, and leader of the Benedictine monastic reform. He was a friend of St Dunstan and of Oswald, and earned the name "The Father of Monks" by founding many abbeys, among them Chertsey and Ely. See also p.1186.

Ethelwulf (d.858), King of Wessex (r.839–55). He successfully defended his realm against Danish attack, and in 852 he subdued N. Wales. In 855 he travelled to Rome with his fifth son ALFRED. As he returned from that pilgrimage he married Judith, daughter of Charles II of France. Thereafter he allowed his son Ethelbald to rule Wessex, while he ruled in Kent where a third son, ETHELBERT, succeeded him.

Ether (diethyl ether), colourless volatile inflammable liquid ($C_2H_5OC_2H_5$) prepared by the action of sulphuric acid on ethanol followed by distillation. It is used as an ANAESTHETIC (although less than previously), industrial solvent and fuel additive. Diethyl ether is a typical member of the ethers with the general formula ROR' , where R, R' are hydrocarbon radicals. Properties: m.p. –116.2°C (–117.2°F), b.p. 34.5°C (94.1°F).

Ether, in physics, hypothetical medium that was supposed to fill all space, even inside matter, and to offer no resistance to motion. It was postulated as a medium to support the propagation of electromagnetic radiations, but its existence was disproved by the MICHELSON-MORLEY EXPERIMENT. See also pp.856–857, 857.

Etherege (Etherege), Sir George (c.1635–91), English dramatist. He borrowed from Molière the mixed verse and prose form of his *The Comical Revenge, or Love in a Tub* (1664). His most famous play, *The Man of Mode* (1676), satirized the new dandyism.

Ethical Movement, international movement founded in 1876 in New York by Felix Adler, emphasizing the supreme importance of moral values independent of religious belief. The membership is small but intellectually influential and encourages community service. It enforces no definite ethical system, and other religious affiliations may be held. The first English branch, the South Place Ethical Society, was founded in 1888.

Ethics, study of human conduct in the light of moral principles, also called moral philosophy. Because moral statements, such as "Abortions are wrong", differ fundamentally from factual statements, such as "It is not raining today", they are a source of philosophical debate, and moral philosophers have sought to establish basic principles for making moral judgements. These may be metaphysical, such as KANT's system, religious, social, such as the UTILITARIAN'S "the greatest good for the greatest number", or individual, such as the intuitionists who claim that everyone has an innate moral sense. See also pp.1150–1151, 1888–1889.

Ethiopia, independent nation in NE Africa, on the Red Sea, formerly an ancient empire. Its ruler HAILE SELASSIE was deposed in 1974 and replaced by a left-wing military junta. Coffee is the most valuable export although barley and maize are also grown and cattle are raised. Industries include brewing and cement and some gold is mined. The capital is Addis Ababa. Area 1,221,900sq km (471,776sq miles). Pop. (1975 est.) 27,946,000. See also p.2035.

Ethnic group, in sociology, any social group that shares a complex of characteristics distinguishing it from the larger society of which it is a part. Such groups are usually based on national origins, religion, language, culture or race. In many instances people of one ethnic group prefer to live in the same neighbourhood. **Ethnocentrism**, preference for one's own

Estuary of the River Forth, one of the most famous in the world – at Edinburgh

Etching, in which acid "eats" a design in a metal plate for a single-colour printing

Ethelred II, a portrait of this early English king taken from a rare coin of the time

Ethiopia, a dwelling typical of those found in the Rift Valley at Sidamo, southern Ethiopia

Ethnography

culture. All human groups have an unconscious and sometimes a conscious tendency to assume that their own culture is superior to others. Ethnocentrism is an automatic, emotional response, not a rational one. See also DISCRIMINATION, PREJUDICE, p. 1846

Ethnography, study of the culture of a race of human beings, generally a single ethnic group or society. Ethnographers gather anthropological data by direct observation during a period of residential fieldwork. They participate in the group's economic and social life and interview its members. See also ANTHROPOLOGY, ETHNOLOGY, p. 1847

Ethnolinguistics, study of the interrelationship of language and culture in the present as well as the ancient past. Social organization and lifestyles of ancient peoples are deduced from studying their vocabularies. Edward Sapir, the US anthropologist, suggested that people see the world as their language presents it to them.

Ethnology, comparative study of cultures. Using material from two or more societies, ethnology can attempt to cover the entire cultural range or concentrate on a single trait. Historical ethnology was developed in the late 19th century in an attempt to trace cultural diffusion. Ethnologists now concentrate on cross-cultural studies. See also pp. 122-123, 1846-1847

Etology, study of animal behaviour, first outlined in the 1920s by Konrad Lorenz of Austria and Nikolaas Tinbergen of The Netherlands. Ethologists study natural processes that range across all animal groups, such as courtship, mating and self-defence. Field observations and laboratory experiments are both used. See also pp. 8-9

Ethyl alcohol, or ethanol, colourless volatile liquid (C_2H_5OH) produced by the fermentation of various items including molasses, grains, fruits and vegetables or by the catalytic hydrogenation of ethylene. Its many uses include beverages, cleaning solutions, rocket fuels, cosmetics and pharmaceuticals. Properties, s.g. 0.789, m.p. $-117.3^\circ C$ ($-179.1^\circ F$), b.p. $78.5^\circ C$ ($173.3^\circ F$)

Ethyl chloride, anaesthetic agent (C_2H_5Cl), less irritating than ether, but explosive and used only in limited ways, eg. to produce sleep before ether is administered.

Ethylene (ethene), colourless gas ($CH_2=CH_2$) derived from the cracking of propane and other compounds. Vast quantities of the gas are used annually for the manufacture of polyethylene, or **POLYETHYLENE**. Ethylene is also used widely for many other chemical syntheses.

Ethyl ether. See **ETHER**

Etna, Mount, active volcano on the E coast of Sicily, Italy. It is the highest active volcano in Europe and the highest mountain in Italy, s of the Alps, its height fluctuates because of volcanic activity. Pindar and Aeschylus described the first known eruption in 475 BC and other major eruptions occurred in 1169, 1669 and 1971. The fertile lower slopes are used for agriculture. Height approx. 3,340m (10,958ft).

Eton College, English public school founded in 1440 by Henry VI, and situated in Eton, near Windsor, Berkshire. Eton has educated a high proportion of Britain's statesmen, writers and nobles.

Eton lives. See **RIVES**

Eton Wall Game, form of football unique to the famous British Public School. For two teams of ten players (originally 11), it is fought on a narrow strip 3.6-4.5m (12-15ft) wide and 108m (354ft) long alongside a brick wall, the object being to reach the opponents' end and touch the ball against the wall (a *shy*). This achievement merits a throw or kick at goal, but with goals a rarity, shies invariably determine the result.

Etruria, ancient region in Italy, bounded by the River Tiber, the Apennines, and the Tyrrhenian Sea. The **ETRUSCANS** migrated probably from Asia Minor c. 900 BC and formed several city-states. Their civilization reached a peak c. 500 BC but

was gradually taken over by Rome. See also pp. 1222-1223

Etruscans, ancient inhabitants of ETRURIA who developed a sophisticated society and empire by 500 BC. Their racial origins are obscure. They first developed a religious confederation of independent city-states based on Volturni, and attained cultural unity by the 7th century BC. Much of their naturalistic art and skilled metalwork, like their language, derives from traditions quite unlike those of the rest of the Mediterranean world. By 500 BC their influence was spread throughout the major islands of the W Mediterranean and coastal Spain, and they controlled Umbria and central Italy. They came into conflict with the Greeks, and despite early successes, their authority began to wane in the late 5th century. At the same time Celtic invasions halted their northward expansion and the Samnites forced them from Campania. The Romans adopted many features of Etruscan civilization before they overtook the Etruscan strongholds, such as **VESUVIUS** in 496 BC. Etruscan independence ended entirely in 88 BC during the struggle between **SULLA** and **MARIUS**. See also pp. 1222-1224

Etty, William (1787-1849), British painter. Known primarily for his studies of nudes, he was greatly influenced by the work of **ALBENS** and **TITIAN**.

Etymologiae, or *Twenty Books on Origins*, 6th-century encyclopaedia by **ISIDORE** of Seville (570-636). It colated much of the work of previous encyclopaedias, and for its time is noteworthy for its emphasis on the liberal arts and medicine rather than on the Bible.

Etymology, branch of **PHILOLOGY** dealing with the history and derivation of words. The word *telephone*, for example, is a combination of the Greek derivatives *tele* (distant) and *phone* (sound). The word *coach*, by contrast, is derived from the city of Kocs, in Hungary, where coaches were first used.

Euboea (Εββοία), mountainous island of SE central Greece, in the Aegean Sea, separated from the mainland by the Gulf of Euboea. It is the second-largest island in Greece, and Khalkis is the administrative centre. It was under Athenian domination 506-411 BC and taken by Philip II of Macedon 338-191 BC. After the fall of Rome, it was held successively by the Byzantines, the Venetians and the Turks (1470-1830), and it was incorporated into Greece after independence was declared (1830). Today its industries include livestock, grapes, timber, grain, marble-quarrying, lignite and magnesite-mining. Area 3,654sq km (1,411sq miles). Pop. (1971) 163,017.

Eucalyptus, group of trees commonly known as gum trees, native to Australia and cultivated in warm and temperate regions. They are valuable sources of hardwood and oils. Generally they have tall, slender trunks, sometimes covered with exuded gum, bluish or whitish leaves, flowers without petals and woody fruits. Height to 122m (400ft). Included in some 600 species are the Australian mountain ash (*Eucalyptus regnans*), Tasmanian blue gum (*E. globulus*), ghost gum (*E. papuana*) and the ironbark (*E. leucoxylon*). Family **MYRTACEAE**. See also p. 308.

Eucharist, from the Greek for "thanksgiving", central act of Christian worship and thanksgiving at which the priest and congregation partake in Holy Communion - one of the principal sacraments. The Eucharist is a commemorative reenactment of the Last Supper at which Christ blessed bread and wine and gave them to his disciples saying, "Take and eat this is my body. Drink this, all of you, for this is my blood. Do this as a memorial of me." Among Roman Catholics the rite is also called **Mass**, among Protestants, the **Lord's Supper**. Since the REFORMATION, the mode of Christ's presence in the eucharistic elements has been one of the chief points of controversy among the Churches, but recent years have seen an increasing doctrinal widening of horizons. See also **CONSUBSTANTIATION**, **TRANSUBSTANTIATION**.

Fucken, Rudolf Christoph (1846-1926), German philosopher who was awarded the 1908 Nobel Prize for literature. He believed that a transcendental spirit and nature unite in man. His works include *The Meaning and Value of Life* (1909), *Individual and Society* (1923) and *Socialism: An Analysis* (1921).

Euclid (fl. c. 300 BC), ancient Greek mathematician about whom little is known except that he taught at Alexandria during the reign of Ptolemy. He is remembered for his text books on geometry, especially *The Elements*, which was first printed in 1482 in a Latin translation from the Arabic. His other works include *Data* (on geometry) and *Phaenomena* (on astronomy). Several books have been lost. See also pp. 771, 776-777.

Euclidean geometry. See **GEOMETRY**. **Euclid of Megara**, (c. 450-374 BC), founder of the Megarian school of philosophy, the main influence on which was **SOCRATES**. The influence of **ELATISM** is also evident in Euclid's emphasis on the unity of goodness.

Eugene of Savoy (1663-1736), French prince and general in the service of the **HOLY ROMAN EMPIRE**. He entered Austrian service in 1683 and fought the Turks at Vienna (1683) and Zenta (1697). In the War of the Spanish Succession (1702-13), his victories over the French included **BLenheim** (1704), **Oudenarde** (1708) and **Malplaquet** (1709), all won with the Duke of Marlborough. His greatest victory was over the Turks at Belgrade in 1718.

Eugene Onegin (1823-33), romantic novel in verse by Alexander Pushkin. It develops the character of Onegin as a prime example of the "superfluous man".

detached, arrogant and cynical. It inspired the three-act opera (1879) of the same name by Peter Ilyich Tchaikovsky.

Eugenics, study of human improvement by genetic means, founded in the 19th century by Francis Galton. Its main proposed means of improving the inherited characteristics of the human species is through the careful selection of parents. Positive eugenics encourages parents who are above average mentally and physically to have more children. Negative eugenics proposes that those with less desirable or below average qualities should have fewer. What should be considered "desirable" traits remains a problematical and difficult ethical judgement. As a social movement eugenics was discredited in the early 20th century due to its association with racist views. Advances in genetics, psychology, medicine and demography have meant that eugenics has become more specific in its proposals and more aware of its limits. People known to have defective genes that could cause physical or mental disorders in offspring can be warned of the facts in terms of social responsibility and may even be encouraged to avoid having children. However, the genetic inheritance of personality traits cannot yet be accurately predicted. See also pp. 178-179, 1151.

Eugenie (1826-1920), consort of Napoleon III, and French empress. Born of a Spanish father and American mother she became the wife of Louis Napoleon shortly after he declared the second empire in 1852. Regent in her husband's absences at war (1859, 1865, 1870), her influence as a Catholic and conservative was often felt in French affairs. After being deposed in 1870 she fled to England, with the Prince Imperial (her only son). After his death (1879), she retired from public life and, apart from frequent travels abroad, remained in England.

Eugenius, name of four popes. Of the two most notable, **Eugenius III** (r. 1145-53) born as Bernardo Paganelli, was a Cistercian who tried to reform the clergy but was driven out of Rome (1146-49, 1150-52) by Arnold of Brescia. He promoted the disastrous Second Crusade. **Eugenius IV** (r. 1431-47), born as Gabriele Condulmer in c. 1383, disputed the authority of the Church hierarchy meeting at the Council of Basle (1431-37) and tried to uphold the supremacy of the papacy, despite

Eugenie, French empress of great beauty whose political influence was calamitous

being driven from Rome in 1434-43.
Euglena, flagellate protozoan found in fresh water. It has an elongated body that appears green because of its approx. 15 chloroplasts. There is a characteristic "eyespot" and a single flagellum. It moves by beating the flagellum and by alternately elongating and contracting its body to produce a squirming motion. It has both plant and animal features. Most common is *Euglena gracilis*. Class Mastigophora. See also pp 181, 350.

Eulachon, or candlefish, marine SMELT of inshore temperate waters or cold seas of the Northern Hemisphere. It has oily flesh and was used by American Indians to make torches. Length 30cm (12in). Family Osmeridae, species *Thaleichthys pacificus*.

Eulalia, tall perennial grass native to SE Asia and widely cultivated for lawn or border ornamentals. It has white plume-like flower clusters and striped leaves. Species *Miscanthus sinensis*. Also, perennial grass of Australia and SE Asia, important as fodder. Genus *Eulalia*. Family Gramineae.

Eulalius (d 423), antipope from 418-419. He and BONIFACE (418-422) were chosen by different factions of the clergy to succeed ZOSIMUS as pope. Although his claim was initially supported by the Emperor HONORIUS, he disobeyed the latter by entering Rome before a council had settled the dispute. He was banished to Campania, and Boniface was elected.

Euler, Leonard (1707-83), Swiss mathematician. After studying under BERNOULLI in Basle he was appointed professor in St Petersburg and later in Berlin. His mathematical expertise was wide-ranging and he published more than 800 papers on subjects such as mechanics, algebra, optics and astronomy. See also EULER DIAGRAM, ELLER'S THEOREM p 802.

Euler, Ulf Svante von (1903-1971), Swedish physiologist. He shared the 1971 Nobel Prize in physiology and medicine with JULIUS AXELROD and BERNARD KATZ for work on the chemistry of nerve transmission. Euler demonstrated that the nerve endings of sympathetic nerves release the chemical noradrenaline, which transmits the nerve impulse.

Euler-Chelpin, Hans Karl August von (1873-1964), Swedish bio-chemist who researched into the effects of ENZYMES in the fermentation of sugars. For this work he shared the 1929 Nobel Prize in chemistry with SIR ARTHUR HADWEN. Euler-Chelpin also investigated the chemical structure of several VITAMINS. In 1906 he became professor of chemistry at Stockholm University.

Euler diagram, simple diagram used in logic to illustrate SYLLOGISMS. Classes of objects are represented by circles so that, for example, a premise of the type "some *a* is *b*" can be represented by overlap of these circles. See also VENN DIAGRAM p 802.

Euler's theorem, in solid geometry, states that for any polyhedron (many-sided solid figure) $V - E + F = 2$, where *V* is the number of vertices, *E* the number of edges and *F* the number of faces of the polyhedron. The theorem is named after the Swiss mathematician LEONARD EULER (1707-83). See also pp 798, 802.

Eunuch, castrated man, once frequently used as the keeper of a harem in the Orient. Employed since ancient times as servants in royal and wealthy households, especially in the Byzantine and Ottoman empires, eunuchs were often obtained through the African slave trade. A eunuch who sang in a choir or an opera was called a CASTRATE.

Eunuchoidism, deficiency of testicular function which, before puberty, retards development of genitals, and of secondary sex characteristics (facial hair, deepening voice). It can also occur after puberty with milder effect. See also p 1134.

Euonymus, genus of deciduous or evergreen shrubs and woody vines found in Europe, E Asia and North and Central America. Most have green branches, opposite (and sometimes variegated) leaves and inconspicuous flowers. The

fruits are orange-red. There are about 176 species. Height to 6m (20ft). Family Celastraceae.

Euphonium, brass musical instrument with valves. Invented in 1843, it was derived from the cornet and the valved bugle. It is pitched in C or B \flat in England, and orchestral parts for tenor tuba are often played on it. It is related to the TUBA, which it resembles in shape, and is the highest in pitch of that group of instruments.

Euphorbia, genus of widespread, varied plants of the SPURGE family. Most grow as herbs or shrubs and often have an acrid, milky juice in the stems. Flowers are usually small and inconspicuous with colourful bracts. Family Euphorbiaceae.

Euphotic zone, uppermost layer of oceans. Much light penetrates this comparatively shallow zone, and many green plants and herbivores are found there, and often sea-dwelling mammals. See also pp 340, 341.

Euphrator (fl c 360 BC), Greek painter and sculptor. He painted great canvases for the Stoa of ZEUS at Athens. He sculpted in both bronze and marble.

Euphuism, highly mannered style of English prose, heavy in SIMILES, METAPHORS, ALLITERATION and other literary devices. The word derives from the *Euphuus* of JOHN LYLY, published in 1580.

Euphrates (Firat, or Al-Furat), river formed by the confluence of the rivers Murat and Karasu. It flows from E Turkey across Syria into central Iraq, where it joins the River Tigris. The ancient civilizations of Babylonia and Assyria developed along the lower Euphrates, and it was the site of the cities of BABYLON and UR. Length 3,598km (2,235 miles). See also pp 1158, 1159, 1161.

Eupolis (c 455-c 410 BC), Greek playwright. Considered a major writer of comedy, he earned praise for his inventiveness, patriotism, and satirical humour. Titles of 17 plays and fragments survive.

Eureka Stockade, name given to the armed rebellion of Australian gold-diggers at Ballarat, Victoria, on 3 Dec 1854. Miners' grievances about exploitative administration of the goldfields culminated in some 150 diggers forming a stockade to resist government authority. The diggers opened fire on a contingent of 280 police and troops but were quickly overcome with about 30 men killed. None of the rebels was subsequently convicted.

Eurythmics, system of musical and dance training which has influenced ballet and acting. Developed by the Swiss Emile JACQUES-DALCROZE in the early 20th century, it is developed from a set of gymnastic exercises in response to music.

Euripides (c 480-430 BC), Greek playwright. With AESCHYLUS and SOPHOCLES, he is considered to be one of the three great writers of Greek tragic poetry. He was married and lived in Athens, but otherwise little is known of his personal life. The plots of his plays are complicated and his ideas were sometimes controversial and held to be offensive. His language is simple. His heroes, whether gods or mortals, are portrayed with sceptical candour. Only 18 (or perhaps 19) of his 92 plays have survived. His first play was produced in 455. He won the competition for tragedy at the annual festival of Dionysus only four times, but his reputation grew after his death. Among the extant plays are *Alcestis* (438), *Iphigenia in Tauris* (c 411) and *Phoenician Women* (c 408).

Eurobond, bearer security to underwrite a loan in the EUROCURRENCY market, made for a greater amount and longer period than can be accommodated in a normal Eurocurrency operation. A Eurobond is usually underwritten by an international syndicate.

Eurocurrency, currency redeposited or lent, usually for not more than six months, in a country in which it is not the domestic currency. The Eurocurrency market is centred in Europe, chiefly London. See also p 1787.

Eurodollar, dollar redeposited in a bank outside the USA, usually in Europe. Because of the relative stability of the dollar, it is the currency most prevalent in the EURO CURRENCY market, which is often

also called the Eurodollar market. See also p 1787.

Europa, beautiful Phoenician princess of Greek legend. She was abducted and ravished by ZEUS who appeared to her as a white bull and carried her across the sea to Crete after she playfully climbed upon his back. She bore three sons, including MINOS, King of Crete, where she was worshipped as Hellous.

Europa, satellite of Jupiter, one of the GALILEAN SATELLITES. Diameter 3,600km (2,200 miles), mean distance from Jupiter 671,000km (417,000 miles); mean sidereal period 3.55 days. See also p 964.

Europa Nostra ("Our Europe"), organization formed in 1963 to foster the preservation of national monuments and historic sites. It was formed as a federation of many organizations with similar aims in 17 European countries. Its principal function is to rally public opinion in support of its objectives.

Europe, second smallest continent, comprising the western fifth of the Eurasian land mass. It is separated from Asia by the Urals (E), the Caspian Sea and the Caucasus (SE), the Black Sea and the Dardanelles (S), and from Africa by the Mediterranean Sea.

Land. Europe is dominated by the great alpine mountain chain, the principal links of which are the Pyrenees, Alps, Carpathians, Balkans and the Caucasus, traversing the continent from W to E. Mt Elbrus 5,633m (18,481ft), in the Caucasus and Mont Blanc 4,807m (15,771ft), in the Alps are the two highest peaks. Between the Scandinavian peninsula and the Alpine chain is the great European plain which extends from the Atlantic coast in France to the Urals. Much of the plain is fertile farm land, but it also includes areas of forest, steppe, lakes and tundra. To the S of the Alpine chain are the Iberian, Italian and Balkan peninsulas. Major European islands include the British Isles, Sicily, Sardinia, Corsica and Iceland.

Structure and geology. Much of N Europe is made up of large sedimentary plains overlying an ancient pre-Cambrian shield area, outcrops of which remain in N Scandinavia, Scotland and the Urals. There are worn down Palaeozoic highlands in places. Many upland areas of N Europe, N of the Alps, were formed during the Carboniferous period, including Ireland, the moorlands of Devon and Cornwall, and the Pennine chain in England. S Europe is more youthful, geologically speaking. Alpine folding began in the Oligocene period and Europe's major mountain systems were formed at this time.

Lakes and rivers. The major rivers of Europe are, from W to E, the Tagus, Garonne, Loire, Rhône, Rhine (Rhein), Elbe (Labe), Oder (Odra), Danube (Donau) and the Volga (3,750km, 2,330 miles long). Europe's longest river, the Caspian is the world's largest lake with an area of 393,896sq km (152,083sq miles).

Climate and vegetation. Europe's climate varies from sub-tropical to polar. The Mediterranean climate of the S is dry and warm. Much of the land is scrub, especially maquis, and there are some hard wood forests. Further N the climate is mild and quite humid, being moderated by prevailing westerly winds and the Gulf Stream of the N Atlantic. The natural vegetation is mixed forest but this has been extensively changed by man. In central Europe the climate is continental and there is a much greater range of temperature. Mixed forest merges into boreal, or northern, forest with large stands of conifers. In SE European USSR there is wooded steppe and grass steppe merging into semidesert to the N of the Caspian Sea. In the far N lies the tundra, an almost permanently snow-covered area.

Animal life. Domestic animals are of native origin, although the wild ancestors of the dog, horse and cow are now extinct. Carnivorous mammals include the wolf, fox, brown bear, lynx, stoat, wildcat, otter, shrew and several species of bat. Rodents include squirrels, rats, lemmings and voles. There are several species of deer and wild sheep and goats in the Mediter-

Euglena can develop in such numbers that it forms green or red patches on water.

Euonymus, when this shrub flowered it was said in the Middle Ages to foretell plague.

Euripides holds the mask of tragedy in this statue in the Museo Vaticano, Rome.

Europe is a continent of varied terrain, the Bernese Alps being typical of Switzerland.

ranean areas. The tortoise is found in the SE and Gibraltar has the only European monkey (BARBARY APE). There are great numbers of birds and insects, and all the common species of amphibians. Reptiles include various species of snakes and lizards. There are many freshwater fish including salmon, eel, pike, sturgeon, trout and perch.

People The racial origin of European peoples is not clear-cut. They are usually characterized according to what is called "ethnic type" but this is based on physical traits of the present population. The majority of European languages fall into three groups, Germanic, Latin (Romance) and Slavic, all of which are Indo-European in origin. Other languages include Finno-Ugric, spoken in Finland, Hungary and parts of European USSR; Maltese (Semitic) and Basque (Christianity is dominant among religious faiths. In general, the central Europe is Roman Catholic, the SE, Greece, Romania and Bulgaria, is Orthodox. The most important non-Christian religion is Islam practised in Yugoslavia, Albania, Bulgaria and Turkey.

Economy Approx. half the land of Europe is agriculturally unproductive because of climate, relief, soil, or urbanization. A quarter is forested, and timber and its associated industries are particularly important in Scandinavia and the mountainous areas of E Europe. Fishing is of moderate importance in the Mediterranean, but a major industry of countries bordering the Atlantic Ocean and the North Sea. Of cultivated land, two-thirds is arable and cereals are the principal crop. Wheat is the most important, replaced by oats in the N and sometimes maize in the S. Rice is grown with the aid of irrigation. Sheep are grazed on many upland areas but dairy farming is by far the most important form of animal husbandry. In Mediterranean areas many fruits, early vegetables and vines (mainly for wine) are cultivated.

Europe produces over a third of the world's coal and three-quarters of that is mined in Britain, West Germany and Poland. Iron ore is mined in many parts of Europe, in particular in France and N Sweden. Other mineral deposits include bauxite, mercury, lead, zinc and potash. Romania was the largest producer of oil in Europe, until the countries bordering the North Sea, especially Britain, began to exploit their resources. Several countries in central Europe also have oil fields. Europe is highly industrialized and manufacturing employs a high proportion of the work force. There are many industrial areas, but the largest are to be found in W central Europe, in particular in and NE France, the Ruhr district of West Germany and around the North Sea ports of Antwerp, Amsterdam, Rotterdam and Hamburg. There are other major industrial regions in Britain, N Italy and central European USSR.

Recent history After WWII the countries of Europe became divided into two ideological blocs. Eastern Europe dominated by the USSR, and Western Europe, closely aligned with the USA. The resulting rivalry was known as the COLD WAR. NATO was established to act as a deterrent to the spread of COMMUNISM, the WARSAW PACT was formed in reaction to this by the eastern nations. Several economic organizations, in particular the EEC (Common Market), have worked towards economic unity. Eastern European countries have an equivalent organization called COMECON. At the end of the 1960s and during the 1970s tension between East and West eased and relations greatly improved. However, the early 1980s saw this tension increase once again.

Area approx. 10,360,000sq km (4,000,000sq miles)
Highest mountain Mt Elbrus (USSR) 5,633m (18,481ft)
Longest river Volga 3,750km (2,330 miles)
Population (1973 est.) 640,000,000
Largest cities Moscow (7,734,000); London (7,028,000); Paris (2,289,000). See

also pp.296-297, 304-307, 320-321, 324-325, 1924-1925

Europe, Statute of the Council of (1949), agreement which established the COUNCIL OF EUROPE. During WWII, calls for a European council came from several nations and in 1947 various bodies joined to form the International Committee of the Movements for European Unity. Its work led to the first Congress of Europe which met at The Hague in May 1948. The 16 nations which sent delegates to the Congress agreed in principle to an economic and political union. The Council of Europe formally came into existence in May 1949, constituted, by the statute, on the British plan of government-appointed ministers, rather than the Franco-Belgian plan of a supra-nationally elected assembly. The statute omitted defence from the Council's competence, which covered economic, social, cultural, scientific, legal and administrative matters.

European Athletics Championships, tournament in which athletes from European countries compete in the recognized track and field events, plus the marathon. Gold, silver and bronze medals are awarded for 1st, 2nd and 3rd places. The championships were first held in 1934 in Turin - for men only; in 1938, men went to Paris, women to Vienna, they held the first combined meeting at Oslo in 1946. The championships were held every four years until 1966, when a three-year cycle was adopted, only for the four-year cycle to be resumed after the 1971 championships in Helsinki.

European Atomic Energy Community (Euratom), economic organization founded in 1958. The community was formed in order to co-ordinate nuclear research and production among West European nations. The member states are pledged to provide for the free movement of nuclear raw materials, capital for investment, specialists and equipment. The community has wide executive powers to act on behalf of its members. It is administered by the Commission of European Communities and operates nuclear reactors in Belgium, West Germany, Italy and The Netherlands. See also pp.1742-1743

European Coal and Steel Community (ECSC) (1951), body formed according to the Schuman Plan, so named after the French foreign minister who proposed the idea in 1950. The member states were originally the same six who formed the EUROPEAN ECONOMIC COMMUNITY. They pledged themselves to co-operate in the production of steel and coal by providing a unified market for coal and steel products and a unified labour force. Restrictions on imports and exports were removed. Between 1953 and 1961 steel production by the ECSC increased by over 80 per cent while its price rose by only 4 per cent compared with 40 per cent in the USA. The executive machinery which the Council established paved the way for the formation of the EEC, into which it was incorporated in 1967. See also pp.1742-1743

European Convention on Human Rights, agreement to protect the rights of the individual, signed by the COUNCIL OF EUROPE in 1950. It arose from the postwar desire to mitigate the action of national dictatorial regimes. In 1948 the Congress meeting at The Hague proposed the convention. It came into force in 1953 and has been ratified by 15 states. The convention listed 12 basic rights, including the right to life, to a fair trial, to peaceful assembly and association, and to freedom from slavery and torture. There have been five additional protocols adding seven further rights, the fourth (in force from 1968) including the guarantee of the right to freedom of movement within a country and the right to freedom of residence. See also HUMAN RIGHTS

European Cup (football), familiar name of the European Champion Clubs' Cup, a knockout soccer competition for clubs who have won their national League the preceding season, plus the holder. On each leg of the competition teams drawn together play each other twice (at home and away) until the final, which is held at a

neutral venue. Real Madrid of Spain won the first five finals (1956-60).

European Cup (athletics), official name the Bruno Zauli European Cup, an international team championship in which six countries qualify for separate men's and women's finals. Each team has one representative per track and field event, the result being determined by awarding from 6 to 1 points for finishing 1st to 6th. Designed to assess a country's all-round strength, it began in 1965 as the Europa Cup and was held three-yearly from 1967-73, when a four-year cycle was adopted.

European Cup-Winners' Cup, knockout soccer competition for clubs who have won their national cup the preceding season, plus the current holder. Like the EUROPEAN CUP it is played on a home-and-away basis until the final, which is held at a neutral venue. It began in season 1960-61.

European Defence Community, attempt in the early 1950s to form an integrated, supranational army in Western Europe. The idea arose from the French desire to control German rearmament and the concern of the USA to combat the USSR. Belgium, France, West Germany, Italy, Luxembourg and The Netherlands signed a treaty in May 1952 providing that each country should contribute troops to a unified army. But in France a two-year struggle with the conservative opposition, led by Charles de Gaulle, ended in the failure of the French assembly to ratify the treaty. Combined with Britain's refusal to join, the French decision killed the plan.

European Economic Community. See EEC

European Free Trade Association. See EFTA

European Football Championships, soccer competition for national teams of UEFA countries, contested every four years over a two-year period. It began in 1958-60 as the European Nations Cup. The first two championships used a knockout system but with its increased popularity a league system was introduced from 1966-68. The winner of each group qualifying for the quarter-finals. In these and the group matches teams meet each other twice, at home and away, the semi-finals and final are staged in one country.

European Nuclear Energy Agency, body to promote international co-operation in the use of nuclear energy for peaceful purposes. It was formed by the Organization for European Economic Co-operation in December 1957, the same year as the European Atomic Energy Community, on the advice of the report written by Louis Armand, chairman of the French State Railways. That report drew attention to Europe's dwindling energy resources and advised that nuclear energy could be properly developed only by co-operation in technical matters and research. In 1969 the agency began an ambitious programme to develop fuels for high-temperature power reactors. In 1972 it became the OECD (Organization for Economic Co-operation and Development) Nuclear Energy Agency.

European Postal Union, body to co-ordinate postal services, established in 1959. It issued the first European stamp at a preliminary meeting in 1956. It was joined by the "Six", the member nations of the COUNCIL OF EUROPE, and by eight other nations.

European Southern Observatory, astronomical observatory at Cerro La Silla, a mountain peak in Chile. It is run by a group of European nations. It has a 3.6m (11.9ft) reflecting telescope, one of the largest in the world.

European Space Research Organization (ESRO), organization founded by several European nations in 1962 to promote international co-operation in space research. Australia was admitted in 1965.

Eurpium, metallic element (Eu) of the lanthanide group, first isolated as the oxide in 1896 by Eugene Demarcay. Its chief ores are monazite (a phosphate) and bastnaesite (a fluorocarbonate). The metal is used in the manufacture of television screens and as a neutron absorber in

reactors. Properties at no 63, at wt 151.96, s.g. 5.25 (25°C), m.p. 822°C (1,512°F) b.p. 1,597°C (2,907°F), most common isotope Eu^{151} (52.18 per cent). **Eurydice**, in Greek mythology, a nymph married to the semi-divine singer and lyre-player ORPHEUS. When she died from a snake bite, the inconsolable Orpheus braved the journey to the Underworld and charmed HADES into agreeing to release Eurydice. But Orpheus lost her for ever when in impatient excitement he broke his promise not to look at her before they emerged from Hades. See also pp.1908-1909.

Eusebio, Ferreira da Silva (1942-), Portuguese footballer. Known as the 'Black Panther', he was the top scorer in the 1966 World Cup (9 goals) and his precise shooting made his club Benfica a European force in the 1960s. He was named European Footballer of the Year in 1965.

Eustachian tube, mucus-lined tube that connects the middle ear and the pharynx, equalizing internal and external pressures. It may also carry infection from the throat to the middle ear. See also p.138.

Eustachio, Bartolomeo (1520-74), Italian anatomist. A professor of medicine in Rome and the pope's physician, he introduced the study of anatomical variations. The EUSTACHIAN TUBE which leads from the middle ear to the throat is named after him. See also pp.138, 1437.

Euston Road School, school of painting and drawing founded in London in 1937 by William COLDSTREAM, Victor PASMORE and Lawrence GOWING. They stressed the value of an objective approach to nature, influenced by SICKERT and CÉZANNE, rather than the prevalent abstract or surrealist styles. The school was closed in 1949.

Euthanasia, inducing the painless death of a person, often through the administration of a drug. Commonly known as mercy killing, it is illegal in most countries. An associated practice is the withholding of treatment which would uselessly prolong life.

Eutrophication, in geology, process by which a stream or lake becomes rich in inorganic nutrients by run-off from the land and by artificial means. Compounds of nitrogen, phosphorus, iron, sulphur and potassium are vital for plant growth in water, in excess, however, they overstimulate the growth of surface algae and micro-organisms. Light penetration and oxygen absorption are also necessary for eutrophication. See also pp.760-761.

Eutyches (c.378-c.454), early church leader and heretic. In 448 he was accused of the heresy of denying the human nature of Christ and recognizing only his divine nature. As the first real MONOPHYSITE, he was deposed by St Flavian, Patriarch of Constantinople, he was acquitted by the Robber Synod at Ephesus (449), but was deposed and exiled at the Council of Chalcedon (451).

Eutychianus, Saint, POPE (r.275-83) of whom almost nothing is known.

Evacuation, withdrawal of troops or inhabitants from an area in an emergency where injury or loss of life is threatening. Evacuation procedures are planned by civil defence specialists where there is danger of such calamities as earthquakes, volcanic eruptions, flooding, the escape of noxious materials or enemy attack.

Evangelicalism, in Christian usage, a term with several connotations: (a) in a broad sense it has been applied to PROTESTANTISM as a whole because of its claim to base its doctrines strictly on the Gospel; (Greek *euangelios*, 'good news' or 'gospel'); (b) in Germany and Switzerland the term 'Evangelical Church' is sometimes used to denote the Lutheran denomination as distinct from Calvinist bodies, which are termed 'Reformed'; (c) in the Church of England, evangelicalism denotes the school - often called low church - which stresses personal conversion and witness of salvation by faith in the atoning death of Jesus Christ.

Evangeline (1849), narrative poem by Henry Wadsworth LONGFELLOW. Based on the expulsion of Acadian settlers from Canada during the French and Indian

Wars, it is a story of two lovers, Evangeline and Gabriel, who are separated.

Evangelist, from the Greek *euangelos* 'bearer of good news', one who preaches the Gospel, announcing the good news of redemption through Jesus Christ, and the hope of everlasting life. The word also applies by extension to the authors of the four gospels: MATTHEW, MARK, LUKE and JOHN.

Evans, Sir Arthur John (1851-1941), English archaeologist. He excavated the ruins of the city of KNOSSOS in Crete and found evidence of a Bronze Age civilization, which he named the MINOAN AGE. He also made several discoveries of pre-Phoenician script. He wrote *The Palace of Minos* (4 vols, 1921-36).

Evans, Caradoc (1878-1945), Welsh novelist (real name David Evans) whose bitterly satirical attacks on the bigotry and parsonage of his compatriots appeared in *My People*, *Stories of the Peasantry of West Wales* (1915) and his novels *Nothing to Pay* (1930) and *Waspas* (1934). They were deeply resented by the Welsh. After 1940, however, he wrote short stories generally praising his countrymen.

Evans, Dame Edith (1888-1976), British stage and screen actress. While with the Old Vic (1925-26, 1936) she played a variety of roles, including Katharina in *The Taming of the Shrew* and the Nurse in *Romeo and Juliet*. Some of her best remembered roles were Mrs Millamant in Congreve's *Way of the World* (1924, 27) and Lady Bracknell in Wilde's *The Importance of Being Earnest* (1939, filmed in 1952). She received great acclaim for her West End role in Enid Bagnold's *The Chalk Garden*, and was awarded the New York Film Critic's Award for her performance in *The Whisperers* in 1967. Her last stage appearance was a lively one-woman show in 1974.

Evans, Sir Geraint (1922-), Welsh baritone. After studying at the Guildhall School of Music, London, he made his debut at Covent Garden in 1948. He has sung with all the famous leading European and US opera companies and has developed a large and distinguished repertoire of both modern and traditional operatic roles. See also p.1771.

Evans, Gil (1912-), US jazz pianist, composer and arranger, b. Ian Ernest Gilmore Green. He arranged music for Claude Thornhill and others in the 1940s and Miles DAVIS in the 1950s.

Evans, Godfrey (1920-), Kent and England cricketer who in 91 Test Matches (1946-59) made 219 wicket-keeping dismissals (173 caught, 46 stumped), a Test record that stood until Alan KNOTT beat it in 1976. During his first-class career he dismissed 1,060 batsmen (811 caught, 249 stumped).

Evans, Mary Ann. See ELIOT, GEORGE.

Evans, William John (Bill) (1928-), US jazz pianist. He played with Tony Scott and Miles DAVIS in the 1950s, as well as with George Russell and Charlie Mingus. He then formed his own successful trio in 1959. He is widely regarded as one of the most original and significant jazz pianists of the 1960s.

Evaporated milk, tinned milk product being between 25 and 33% solids and having 8% fat, more than twice as concentrated as fresh milk. It is made by sterilizing milk concentrate in the tin at 116°C (240°F). This process gives it the off-white colour and particular taste and consistency. It is used in cooking and has the advantage of keeping well even after the tin has been opened.

Evaporation, or vaporization, process by which a liquid or solid becomes a vapour. The reverse process is CONDENSATION. Solids and liquids cool when they evaporate because they give up energy (LATENT HEAT) to the escaping molecules. In chemistry, evaporation is the concentration of a liquid by boiling off vapour, usually prior to the formation of crystals. The rate of evaporation is speeded up by increased heat, stirring and by prompt vapour removal. See also p.838.

Evaporator, area to be cooled - such as the freezing compartment and the interior of refrigerators. The refrigerant (eg FREON

or ammonia) evaporates, absorbing heat from the surroundings. Evaporators are built with large surface areas to allow maximum heat absorption. See also p.603.

Evaporite, mineral deposit of precipitated salts, formed by the evaporation of saline lakes or confined volumes of salt water usually in previous geological eras. They are important sources of gypsum, anhydrite, rock-salt, sylvite and small amounts of nitrates and borates.

Evapotranspiration, combined processes of EVAPORATION and TRANSPIRATION in which water is transferred from the Earth's surface to the atmosphere. It is a key factor in the water balance. Water or ice is evaporated by the Sun's rays and by the wind, and plants are cooled by transpiration. See also p.838.

Evarestus, St, POPE (r.99-107) who appointed clergy to the 25 parishes in Rome. He is said to have been martyred. **Evatt, Herbert Vere** (1894-1965), Australian politician. He was attorney-general and minister for external affairs (1941-1949) and later a delegate to the United Nations General Assembly (1946-48), where he was president between 1951 and 1960. He was leader of the Australian Labor Party.

Eve, in GENESIS, first woman, created by God from Adam's rib to be his companion and wife. Her name probably means 'life'. See also ADAM AND EVE, MS pp.184, 219.

Evelina, or The History of a Young Lady's Entrance into the World, EPISTOLARY NOVEL published anonymously by Fanny BURNEY in 1778. It completely abandoned the contemporary picaresque style and in its spontaneity, acute social observation and detailed descriptions of domestic life anticipated the work of Jane AUSTEN.

Evelyn, John (1620-1706), English diarist. His writings include *Sculptura* (1662) on engraving, *Sylva* (1664) on tree-growing, *Navigantia and Commerce* (1674) and his *Diary* (first published 1818), which is a vivid account of life in 17th-century England. See also p.1428.

Evening primrose, any of various annual biennial or perennial plants of the genus *Oenothera*, many of which are native to North America. They have yellow, pink or white flowers that open in the evening. Height 1.8m (5.9ft). Family Onagraceae.

Evening star, planet, not star, visible near the horizon in the early evening. It appears as a brightly shining object that does not twinkle. Although Mars, Jupiter and Saturn occasionally appear as evening stars, the term most often refers to Venus which shines so brightly as to be sometimes visible during daylight.

Everest, Sir George (1790-1866), British surveyor-geographer after whom Mt Everest is named. He went to India when he was only 16 and began his career of exploration and surveying in that country. Many of the boundaries of modern India are based on his work.

Everest, Mount, highest mountain in the world, in the central Himalayas on the borders of Tibet and Nepal. The first successful attempt to reach the top was accomplished on 29 May 1953 by a British expedition led by Sir Edmund HILLARY and Tenzing Norgay of Nepal. There had been eight previous attempts. Named after George Everest, the first surveyor-general of India, its Tibetan name is Chomo-Langma, or Mother Goddess of the World. Height 8,848m (29,029ft).

Everglades, large tract of marshland in Florida, USA, extending from Lake Okechobee to Florida Bay, it includes the Everglades National Park. The region is made up of mangrove forests, saw grass, hummocks (island masses of vegetation) and water, and supports tropical animal life including crocodiles, alligators, egrets and bald eagles. Area approx. 10,000sq km (4,000sq miles).

Evergreen, plant that retain its green foliage for a year or more (deciduous plants lose their leaves every autumn). Evergreens are divided into two groups: narrow-leaved, or CONIFERS, and broad-leaved. Conifers include fir, spruce, pine,

Eurydice, a painting by G. F. Watts of one of the greatest love stories in Greek mythology

Sir Arthur Evans by W. Richmond, Evans was president of the Society of Antiquaries

Evening primrose has stalks of scented yellow flowers 3 to 10cm (11-4in) across

Everglades, water diversion and building in this area has endangered many animals

Everlasting flowers

Evesham, Battle of where the body of de Montfort was grossly mutilated

Exchequer, the British Chancellor Denis Healey, saying to present his budget

Exeter Cathedral is the most westerly Gothic cathedra in England

Exhibition, The Great, Queen Victoria and Prince Albert arriving at the Crystal Palace

hemlock and juniper. Among the broad leaved evergreens are holly, magnolia, box, cherry laurel and rhododendron. But not all conifers are evergreens, an exception is the deciduous larch.

Everlasting flowers, types of flowers that retain their colour and shape when dried. Best known are those of the everlasting flower or immortelle (*Helichrysum bracteatum*), with daisy-like yellow, brown, purple or white blooms. Other popular plants include globe amaranth, *Statice*, *Lunaria* and *Xeranthemum*. They are excellent for flower arrangements.

Evershed, John (1864-1956), British astronomer who, in 1919, discovered the horizontal flow of gases from the centre of sunspots, called the Evershed effect. He studied in various Indian observatories, later building his own laboratory at Ewhurst (1925).

Evert, Christine Marie, see LLOYD, CHRISTINE MARIE

Everyman's Library, successful series of universal classics founded by J.M. Dent and named after the morality play line:

Everyman, I will go with thee, and be thy guide. The first fifty books were published in 1906 at one shilling each, the thousandth volume appeared fifty years later. By 1977 total sales exceeded 55 million copies.

Evesham, Battle of (1265), final battle of the BARONS WARS, in which Simon de Montfort, Earl of Leicester, the rebel leader, was defeated and killed by Edward son of the ineffectual Henry III. See also p 1312.

Evidence, testimony by witnesses, items from the scene of a crime, or forensic or scientific information given by experts in a court of law, to establish the facts of a case. Evidence is chiefly of two kinds: it can be DIRECT EVIDENCE or it can be CIRCUMSTANTIAL EVIDENCE.

Evil, man's concept of wickedness, wrong-doing and sin, it is a relative term, the meaning of which depends on the nature of the good it opposes. This good, in turn, is the perfection or integrity of being, moral, material and spiritual. Evil therefore functions on three levels. Moral evil is regarded as a sin, an action committed with the conscious intention of doing wrong, physical evil affects a nature, and metaphysical evil results from absence of perfection, the mere finitude of created beings. A theological dilemma arises from the contradictory nature of good and evil: if God is almighty and good, yet evil exists. The Devil is commonly used to personify the source of all evil, which was once also associated with dragons and other monsters, insanity and physical deformity. Over the ages the conflict between good and evil - light against the darkness - has dominated man's beliefs and imagination.

Evil Eye, belief in the power of a human glance to inflict harm. This belief is widespread in Christian, Jewish and Muslim traditions and in primitive societies. See also pp 1890-1891.

Evolution, theory that organisms originate from simpler forms of another organism and that a new species is the end of gradual development and change from the simpler forms. Early work on evolutionary theory was initiated by Jean LAMARCK during the early 1800s, but it was not until Charles DARWIN wrote *The Origin of Species* during the mid-1800s that the theory was considered worthy of argument. Present-day evolutionary theory is derived from the work of Darwin and MENDEL and maintains that in any population or a gene pool, there are random mutations in genetic forms and characteristics. Most species reproduce in greater quantities than their environment can support, so only those members best adapted to the environment survive. When mutated characteristics provide survival advantages, mutants survive to pass on these new characteristics. In this way a species effects gradual changes to adapt and survive in a competitive, and often changing, environment. See also NATURAL SELECTION, pp 182-185, 186-189, 284-287.

Evolutionary socialism, the belief that

SOCIALISM can be introduced through the ballot box, ie that government can be an instrument of reform. This gradual approach contrasts with the traditional Marxist view that socialism can be brought about only by the violent overthrow of capitalism.

Evora, market town in se central Portugal, capital of Evora district. It has a ruined temple of Diana, a Romanesque 13th-century cathedral and a Roman aqueduct. Pop (1970) 47,806.

Ewald, Johannes (1743-81), Danish lyric poet. His dramatic poem *Adam and Eve* (1769) was followed by *Rolf Krage* (1770), a drama based on legend. The song "King Christian stood by the Loft's Mast" from Ewald's opera *The Fishermen* (1779), is Denmark's national anthem.

Fahbank, Thomas (1792-1870), inventor of the household carpet sweeper, b Durham, England. Emigrating to New York in 1819, he made his money manufacturing metal tubing and retired in 1836 to concentrate on writing books on mechanics and science. After travelling in South America (1845-48) he helped to found the American Ethnological Society. See also p 602.

Ewing, James Alfred (1855-1935), Scottish physicist and engineer. He observed and identified hysteresis, the lag in effect when forces acting on an object are changed, and invented a number of instruments to test magnetic properties.

Ewing, William Maurice (1906-74), US geophysicist. First to take seismic measurements in open seas (1935), he aided understanding of marine sediments and ocean basins. He proposed that earthquakes are associated with central oceanic rifts and took the first deep-sea photographs (1939).

Ewins, Arthur James (1882-1957), British chemist, he was one of the discoverers of sulphapyridine, a SULPHONAMIDE derivative used to treat pneumonia. He also discovered other medicinal compounds including pentamide which was one of the first drugs to combat sleeping sickness.

Forth, Hans (c 1520-after 1573), Flemish painter. Known primarily for his precise portraits of English nobility, he was greatly influenced by Hans HOLBEIN who preceded him as Henry VIII's court painter.

Evry, Ray (1873-1937), US athlete who overcame paralysis to win eight Olympic gold medals in the now defunct standing jump events: high, long and triple jumps in 1900 and 1904, high and long jumps in 1908. He also won the high and long jumps at the 1906 Interim Olympic Games.

Exchange, Bill of, see BILL OF EXCHANGE. **Exchange rate**, in finance the rate at which one nation's currency can be converted to that of another. It varies according to the fluctuations registered on the world's foreign exchange markets. Changes in the exchange rate can be influenced by such factors as a nation's BALANCE OF PAYMENTS, political developments and speculation in money markets. See also pp 1866-1867.

Exchange theory, theory of social behaviour associated with Georg SIMMEL, stating that people enter into and maintain relationships because doing so brings them a reward. The reward may be intrinsic to the relationship, eg love or friendship, or extrinsic to it, eg advice, help or economic advancement. See also pp 1840-1841.

Exchequer, branch of the medieval CURIA REGIS, which kept the royal accounts in England. In the mid-13th century the increase in its business required it to stay in one place, not move about with the king's household. It "moved out of court" to become its own separate department of finance. Its chief officer is called "chancellor" because it was originally a court, but its legal function was abolished in 1873. It gets its name from the chequered cloth on which its accounts were done. See also p 1312.

Exchequer, Chancellor of the, see CHANCELLOR OF THE EXCHEQUER.

Exchequer Court of Canada, one of two Canadian federal courts. It has jurisdiction over revenue, property and other

affairs of the crown. In certain cases an appeal can be made from the Exchequer Court to the Supreme Court, its companion federal court.

Excise, see CUSTOMS AND EXCISE.

Excited state, condition of an atom ion or molecule, when its energy level is higher than that of the ground (lowest) state. For example, an atom can be in an excited state having absorbed a photon. The increased energy causes one of the electrons to occupy an orbital of higher energy, the atom may restore its former state by various emissions. See also pp 812-813.

Exclusion principle, Pauli, basic law of quantum mechanics, proposed by Wolfgang PAULI in 1925, stating that no two electrons in an atom can possess the same energy and spin. More precisely, the set of four quantum numbers characterizing certain elementary particles called fermions must be unique. In atoms these numbers specify an electron's spin direction, orbital shape and the energy level at which it resides, or would reside, in a magnetic field. See also p 887.

Exclusive Brethren, religious sect formed when the PLYMOUTH BRETHREN split into the Exclusive and Open Brethren in 1849 over a controversy on the human nature of Christ and on church government. Their teaching is the same as that of the Plymouth Brethren, and they have a conservative outlook on the Bible, and puritanical moral views.

Excommunication, formal expulsion from the community, sacraments and rites of a religious body, largely abandoned by Protestants but retained by Jewish congregations and the Roman Catholic Church. In the days when the Church held great temporal (as well as spiritual) authority, excommunication was a severe punishment for heresy or blasphemy.

Excretion, elimination of waste materials from the body, particularly nitrogenous wastes which would be toxic if allowed to accumulate. In mammals these wastes are excreted mainly as urine, and to some extent also by sweating. Carbon dioxide, a waste product of metabolism, is excreted mainly through the lungs during breathing. Defaecation, strictly speaking, is not excretion, faeces are mostly material that has never been part of the body.

Executor, person on whom responsibility for execution (or carrying out of the provisions) of a will rests. Normally the executor is named in the will by the testator. The executor's duties are to arrange the funeral of the deceased, to pay outstanding debts and to distribute the property among the beneficiaries according to the deceased's wishes, in addition to settling any disputes about the will.

Executive privilege, right invoked by the US president to justify withholding information from Congress or the courts often on the grounds of confidentiality, national security or the public interest. The precedent was set by George Washington in 1794 when he refused to give Congress certain documents. During the WATERGATE scandal (1973-74) Richard Nixon claimed executive privilege initially in refusing to surrender tapes of White House conversations.

Exekias (fl 6th century BC), Athenian vase painter, the most famous and probably the best of the black-figure painters. His known works include such scenes as Ajax and Achilles playing dice and Dionysus sitting in his boat.

Exeter, county town of Devonshire, England, a city on the River Exe 60km (37 miles) NE of Plymouth. Despite bombing during WW2, many ancient buildings remain, including the twin-towered cathedral and a guildhall. Pop (1971) 95,598.

Exeter Book, manuscript, copied c 975, containing the largest extant collection of Old English poetry. The manuscript was probably copied from an earlier book, and was given to Exeter Cathedral by Bishop Leofric. It contains both religious and secular verse, as well as 95 riddles.

Exhibition, The Great (1851), display of British and foreign manufactured goods held in Hyde Park, London, and

organized by Prince ALBERT. The exhibition was housed in the CRYSTAL PALACE and was intended to demonstrate the benefits of industry and international peace and trade. It had more than 6 million visitors. See also p 1590

Existentialism, term associated with various philosophers and writers, all of whom are concerned with the individual and his relationship with the universe or with God. Most of its adherents hold the belief that "existence precedes essence" - ie that man is completely free to create his own destiny and is in no way determined by forces outside his control. The beginnings of the modern movement can be seen in the theological writings of Søren KIERKEGAARD, later developed by Karl JASPERS, Martin HEIDEGGER's and Jean-Paul SARTRE's writings show the influence of PHENOMENOLOGY. The novelist Albert CAMUS and the Christian thinker Gabriel MARCEL are also linked with existentialism. See also p 1885

Exit the King (*Le Roi se meurt*) (1962) long one act play by IONESCO in which he explores the nightmare of ultimate death as an imminent necessity. In a relatively straightforward style departing somewhat from his totally absurdist manner, he gives a controlled allegorical account of the progressive demise of the supposedly ageless King Bérenger and his court. In the London production of 1963, Alec GUINNESS gave a powerful performance as the king. **Exmoor**, moorland plateau in NW Somerset and N Devon, SW England. It is mainly rough open pasture supporting sheep and wild ponies. It lies within Exmoor National Park and its highest point is Dunkey Beacon, 520m (1,705ft).

Exobiology, study of environmental conditions and possible biochemical and evolutionary pathways to life beyond Earth. It is concerned with such experiments as creation of amino acids from electrical discharges in methane-ammonia atmosphere, eg primeval Earth or present Jupiter, or survival of bacteria or mosses under Martian conditions. The Viking lander (1976) was designed to test Martian soil for gaseous byproducts of metabolic activity. See also VIKING MISSION.

Exodus, biblical book, second book of the PENTATEUCH, named by Greek translators after its account of the flight of the Israelites from slavery in Egypt after the plagues had forced the pharaoh to release them. The book is divided into two sections, the first historical narrative and the second legislative directions. See also pp 1190-1191

Exogamy, in anthropology, the practice of marrying outside a particular social group. This restriction always applies to close relatives and in some cultures is extended to wider kinship groups. Some have explicit rules about who cannot marry whom, including incest taboos, whereas in others it is a vaguer obligation. See also ENDOGAMY, pp 1828-1829

Exophthalmos, abnormal protrusion of the eyeball caused by oedema (SWELLING) ANEURYSM, or disorder in the ENDOCRINE SYSTEM. Onset may be sudden or gradual depending on the cause.

Exopterygota, sub-class of insects which develop into adults by a gradual series of moultings, such as EPHEMEROPTERA.

Exorcism, ritual expulsion of evil spirits from a person, place or thing, usually performed by a priest, witch doctor or sorcerer. Exorcism is a practice common to many religions. In the Christian church it is performed by means of the LAYING-ON OF HANDS and incantation, in other religions whippings or sacrifices may be necessary in addition.

Exoskeleton, protective and supporting outer covering of an animal's body. It may be made of CHITIN, as in the case of crustaceans, or of horny plates, as in the carapace of the tortoise.

Exosphere, outer shell in the atmosphere from which light gases can escape. See ATMOSPHERE.

Exothermic reaction, CHEMICAL REACTION in which heat is evolved, causing a rise in temperature. A common example is COMBUSTION. See also ENDOTHERMIC REACTION, pp 908-909

Expanding universe, theory of the origin and direction in time of the Universe. Physicists have attempted to explain the red-shift phenomena of some stars as resulting from a single, huge explosion which causes these stars to be moving away from our section of the Universe. The red shift occurs when, due to the DOPPLER EFFECT, the perceived wavelengths of light from some stars are lengthened because of their outwards movement. There is also the opposite effect, a blue-shift, but this does not occur as often. Today the balance of opinion is in favour of the theory of the expanding universe. See also 'BIG BANG', THE, pp 857, 914-915, 1001

Expansion, mathematical process of replacing an expression by a sum of a finite number of terms, or by an infinite series. For example, the expression $(x+1)(x+3)$ can be expanded to x^2+4x+3 , the function $\sin x$ can be expanded into the converging series $x - x^3/3! + x^5/5!$. See also BINOMIAL THEOREM.

Expansion, coefficient of, ratio of the rates of change of volume to temperature (at constant pressure), or of volume to pressure (at constant temperature). For a gas, the coefficient of expansion is usually large, for a solid, it is much smaller.

Expansion chamber. See CLOUD CHAMBER. **Ex parte**, application in a judicial proceeding made by someone who is not a party to the proceeding but who has an interest in the matter. It can also apply to an application made by someone in the absence of the person against whom the application is made, as in an *ex parte* INJUNCTION.

Experimental psychology, use of experimental methods in psychological investigations. Close observation, careful recording and other scientific techniques are easiest to carry out in a laboratory, but psychologists also use them in clinics, schools or the community at large.

Explorer 1, first of a series of US scientific satellites. It was launched in 1958 and the programme continued into the 1970s. The early Explorers provided information about the radiation zones surrounding the Earth that are now known as the VAN ALLEN BELTS. See also pp 1026-1034

Explosive decompression, sudden drop in pressure of an aircraft or spacecraft cabin due to meteorite puncture or system failure. A pressure drop to below 47mm Hg (pressure of water vapour at 38°C) results in the boiling of body liquids. Lungs collapse completely within a few seconds, blood pressure drops and the large bowel relaxes. Anoxemia (lack of oxygen in blood) and embolisms (blood-clots blocking blood vessels) result.

Explosives, substances that react rapidly and violently releasing heat, light, sound and shock waves. Chemical explosives are mostly highly nitrated compounds or mixtures that are unstable and decompose violently with the evolution of much gas. Nuclear explosives are radioactive metals the atoms of which can undergo fission or fusion to release vast amounts of radiant energy and shock waves. See also pp 582-583

Exponent, superscript number placed to the right of a symbol indicating its power, eg in $a^4 (= a \times a \times a \times a)$, 4 is the exponent. Certain laws of exponents apply in mathematical operations. For example, $3^2 \times 3^2 = 3^{2+2} = 3^4$, $3^4 \div 3^2 = 3^{4-2} = 3^2$, $(3^2)^3 = 3^{2 \times 3} = 3^6$, $3^{-1} = 1/3$. **Ex post facto law**, law of retrospective effect that punishes a person on conviction for an offence that was not punishable at the time it occurred.

Expressionism, movement in the arts in the early 20th century, mainly in Germany. It was characterized by its stress on heightened and violent emotions and an emphasis on inner vision, balance of design was replaced by distortion for this purpose. It represented a reaction to naturalism and realism, opposed any form of idealism and was influenced by psychoanalysis. Many expressionists were violently anti-bourgeois. The movement in painting used dramatic colours and agonized scenes, it was developed by the BLAU REITER and die BRUCKE groups before WWI

after 1945 in the USA it lost its illustrative content and developed into ABSTRACT EXPRESSIONISM. Expressionist film laid stress on heavily contrasted light and shade, it was best achieved in the CABINET OF DR. CALIGARI, and in the works of Fritz LANG, STRINDBERG and KAFKA are often considered expressionist writers, and SCHOENBERG and WEBERN are typical expressionist musicians. See also pp 1654-1655

Expressionist theatre, theatrical style originating in Germany and popular in Europe and America throughout the 1920s. A reaction against theatrical realism, its beginnings are in August STRINDBERG's later works, especially *The Ghost Sonata* (1916). It attempted to present emotional rather than apparent reality and used symbols and bold psychological interpretations of people and events. Two important expressionist playwrights are Ernst TOLLER (1893-1939) and Elmer RICE (1892-1967).

Expresso Bongo (1958), British musical play by Wolf Mankowitz and Julian More which satirized the personalities and manipulations of the popular music industry. The stage production starred Paul Scofield, a film with Cliff Richard and Lawrence Harvey appeared in 1959.

External combustion engine. See ENGINE.

Extinction, in behaviouristic psychology the gradual diminution of the conditioned response resulting from the withholding of the unconditioned stimulus or the reinforcing reward.

Extinction, part of the evolutionary process of natural selection in which certain species of plants and animals die out to be replaced by others. All organic life is enriched by this process, as opposed to wanton destruction by man, which depletes irreplaceable species.

Extraction, in chemistry, physical separation of a liquid or solid mixture by selectively dissolving some components with a solvent. Specific ingredients for perfumes and flavourings may be extracted from plant oils. Proteins are separated from carbohydrates in soya beans by controlled solvent extraction to produce soya protein isolates. See also pp 898, 899, 902

Extrapolation, in mathematics, method of finding values beyond those that are measured. Most of economics is extrapolation, in that statistics are compiled up to the present year, and using them as a guide, decisions are made concerning future years. A simple graph such as a straight line can be extrapolated because it is assumed to be continuous. See also INTERPOLATION, p 785

Extrasensory perception. See ESP. **Extrinsic factor**, or Vitamin B₁₂, provides cobalt, a trace element needed in ERYTHROCYTE formation, deficiency results in PERNICIOUS ANAEMIA. See also INTRINSIC FACTOR, p 1067

Extrovert, personality type characterized by "out-going" behaviour, the opposite of introvert. According to Hans EYSENCK extroversion-introversion is one of the basic dimensions of PERSONALITY. This theory was based on statistical analyses. The term was popularized by Carl JUNG. See also pp 1122-1123

Extrusion, in geology, the breaking-out of igneous material from below the Earth's surface. Any volcanic product reaching the surface becomes extrusive material, whether it is ejected through a volcano's cone or through pipe-like channels or fissures in its crust. In industry extrusion is the forcing of metals (eg magnesium, copper, aluminium, their alloys or plastics) at optimum temperature through a die to make rods, tubes and various hollow or solid sections. See also FLOW-CASTING, pp 589, 589

Fyadema, Gnassingbe (1935-), President of Togo since 1969. He was in the French Army (1953-61), mostly in Indo-China and Algeria, he was commissioned in 1963.

Fyck, van, two brothers, Flemish painters Jan (d. 1441), acclaimed founder of Flemish painting, worked mainly at the courts of John of Bavaria and Philip the Good until 1430, when he settled in Bruges. His best-known works are the altarpiece of

Existentialism, Jean Paul Sartre, one of the principle exponents of this philosophy

Exmoor National Park, much of it lies more than 300m (1 000ft) above sea level

Explorer 1 exploded at an altitude of 15,000m (50 000ft) after 76 minutes of flight

Explosives, preparations for a hydrogen bomb test on Christmas Island in 1957

Eyes consist, in essence, of an iris, a lens and a light sensitive retina

Edward Eyre, after whom a lake and a major highway in Australia are named

Ezekiel, a Jewish prophet who lived at the time of Nebuchadnezzar

Factories, an aerial view taken in 1960 of the extensive Vauxhall Motor Works at Luton

the Church of St Bavon, Ghent, which includes the *Adoration of the Lamb* (completed in 1432), and the *Arnolfini Wedding* (1434), both of which display intricate detail and clear realism. He is said to have perfected the manufacture and technique of oil paint. His elder brother Hubert (d. 1426) worked in Ghent and assisted his brother on the St Bavon altarpiece. No other works are known definitely to have been painted by him. See also p.1384, 1384

Eye, sense organ of vision. It converts light energy to nerve impulses that are transmitted to the visual centre of the brain. Most of the mass of each eye lies in a bony protective socket, called the orbital cavity, which also includes muscles and other tissues to hold and move the eye and associated structures, such as the lachrymal apparatus which produces tears. The eyeball is spherical and composed of three layers, the sclera (white of the eye), which contains the transparent cornea, the choroid, which connects with the iris, pupil and contains blood vessels to provide food and oxygen, and the retina, which contains rods and cones for converting the image into nerve impulses. The aqueous humour (a watery liquid between the cornea and iris) and the vitreous humour (a jelly-like substance behind the lens) both help to maintain the shape of the eye. See also SIGHT, pp.136-137

Eyebright, any of several small annual and perennial plants widely distributed in N and S temperate and subarctic regions. They have terminal spikes of white, yellow or purple flowers. European eyebright (*Euphrasia officinalis*) got its name because it was formerly used to treat eye diseases. Family Scrophulariaceae

Eyre, Edward John (1815-1901), British explorer and colonial administrator. He began explorations in Australia in 1833, gaining an intimate knowledge of the Aborigines. Later, positions in the governments of New Zealand and some lesser islands led to the governorship of Jamaica in 1864. His allegedly brutal suppression of a black uprising in 1865 caused his controversial dismissal.

Eyre, Lake, salt lake in NE South Australia. It is the lowest point on the continent, 12m (39ft) below sea-level, and the largest salt lake in Australia. Area 9,324sq km (3,600sq miles), max depth 1.2m (4ft).

Eyre Peninsula, long peninsula in S South Australia, on the Great Australian Bight w of Spencer Gulf. Sheep are reared and there are large deposits of iron ore. Length approx 320km (198 miles).

Fysenck, Hans Jürgen (1916-), English psychologist. He devised the Fysenck Personality Inventory, to isolate the components of personality. He is also widely known as an advocate of BEHAVIOUR THERAPY. See also pp.1182-1183

Ezekiel, Old Testament prophet to whom the Book of Ezekiel is ascribed. Before he went into exile he was violently opposed to apostasy. During the exile he received God's message and became the third and last of the "greater" Old Testament prophets, the successor of ISAIAH and JEREMIAH.

Ezra, in the Old Testament, a continuation of Chronicles I and II. It records the priest Ezra's journey from Babylon to Jerusalem to spread the law of Moses. It also includes an account of the rebuilding of the Temple, part of the city's restoration after it was destroyed by Nebuchadnezzar, and a census of Ezra's companions on his trip to the Holy City.

F

F, sixth letter of the alphabet, derived from the hook-shaped Semitic letter *faw*. It is said to have had the sound of a w in pre-classical Greek (the letter *digamma*) and it was the Romans who first gave it an f sound. It almost always has the same

sound in English (and is sometimes doubled), although it is pronounced like a t in *of*. In some English words ending in /f/ (such as *hoof*) the /f/ changes to a v in the plural (*hooves*).

Fabbi, Diego (1911-), Italian religious dramatist, strongly influenced by MARCELLO, who expressed his devout beliefs and concept of "tragic Christianity" in plays such as *Inquisition* (1950), *Family Trial* (1954) and *Between Two Thieves* (1955). Although these have been widely performed in Europe and South America, they have seldom been presented to English-speaking audiences.

Fabergé, Peter Carl (1846-1920), Russian jeweller. Following training as a goldsmith and jeweller he was apprenticed in Frankfurt-on-Main. In 1870, he took over his father's business, making decorative objects in gold and precious stones, and winning international reputation for his designs of flowers and animals. He made many jewelled Easter eggs for European royalty, designing the first for Tsar ALEXANDER III in 1884. Fabergé worked until he left Russia after the revolution of 1917. See also p.891

Fabian, Saint, Roman pope (236-50). He reorganized the Church in Rome and provided for ecclesiastical government by presbyters and deacons. He was martyred during the persecution of Christians by the Emperor DECUS.

Fabian Society, British socialist society of non-Marxists founded in 1883, who believed that SOCIALISM should be attained through gradual political change. With George Bernard Shaw and Sidney and Beatrice Webb as members, the society gained widespread recognition and helped found the LABOUR PARTY (1906). See also p.1694

Fabius Maximus Verrucosus, Quintus, called *Cunctator* ("delerator") (d. 203 bc), Roman consul and dictator. He is famed for his strategy of avoiding pitched battle while conducting harassing raids during the Second PUNIC WAR, a tactic that wore HANNIBAL's forces to exhaustion. See also p.1225

Fable, literary genre in the form of a short allegorical tale which is intended to convey a moral. The characters are often animals, whose words and deeds are used to satirize those of human beings. The oldest extant fables are the Greek tales of AESOP and the Indian stories of the *Panchatantra*. Other collections of fables were made by Jean de LA FONTAINE, John GAY and Ivan KRYLOV.

Fabre, Jean Henri (1823-1915), French entomologist. He made accurate and important studies of the anatomy and behaviour of insects and arachnids, especially bees, ants, beetles, grasshoppers and spiders. He emphasized the importance of the theory of inherited instincts in insects. His most important work was embodied in the ten volumes of his *Souvenirs Entomologiques* (1879-1907).

Fabrizio, See GENTILE DA FABRIANO
Fabrizius, Hieronymus (1537-1619), Italian anatomist, also called Girolamo Fabrici. He was a pupil of Gabriello FALLOPIUS, whom he succeeded as professor of anatomy at Padua in 1562. His book, *On the Formed Foetus* (1600), describes his pioneering research in embryology. Fabrizio also gave the first complete description of the valves in veins, although he misunderstood their function.

Fabritius, Carel (1622-54), Dutch painter. An outstanding pupil of REMBRANDT, his works include portraits, still lifes and animals. He died in the disastrous explosion of the Delft powder magazine, which also destroyed most of his paintings.

Facial expressions, form of non-verbal communication which can give information to an individual concerning the emotions and feelings of another person. Facial expressions are similar across a wide range of cultures, each of the primary emotions, such as fear, happiness and anger, has a unique expression that can be recognized world-wide. Non-verbal communication preceded speech in the evolution of man, Charles DARWIN suggested that emotions and their expression played a central role in the develop-

ment of man and the primates, enabling them to build complex social structures. See also pp.1874-1875

Facies, in geology, all the features of a rock or stratum of rock that show the history of the rock's formation. The term is often used to distinguish the age by the facies. The term is also applied to gradations of igneous rock. See also PE p.126

Facsimile transmission, system by which graphic material such as printed matter, photographs or drawings can be transmitted by telephone or radio. The graphic matter is scanned and translated into electric impulses that are transmitted and retranslated on a synchronized receiver, which prints a facsimile copy. See also p.835

Factor analysis, in statistics and PSYCHOMETRICS, mathematical method for reducing a large number of measurements or tests to a smaller number of 'factors' that can completely account for the results obtained on all the tests, as well as for the correlations between them. See also INTELLIGENCE TEST

Factories, buildings erected for the efficient manufacture of large quantities of goods by a group of workers. The name derives from "factor", meaning an agent who buys and sells for an employer. Although existing before the Industrial Revolution, factories became common at the end of the 18th century with the development of the textile industry in N England. They quickly replaced cottage industry, hitherto the production system, and workers thereafter used the tools and worked the hours of their employers, rather than their own. Factory manufacturing was revolutionized in the 1790s by the American ELI WHITNEY who introduced interchangeable parts, a development that led to the moving assembly line of Frederick W. Taylor and Henry FORD's notion of mass production. These steps to improve the efficiency of factories were based upon the need for scientific management, and the integration in one building of all aspects of the production of goods. In recent times, the task of an individual worker in a factory has become increasingly that of a controller of mechanical effort. See also pp.388-389, 454-455

Factory Acts, series of laws in Britain regulating hours and conditions in factories. The first acts concerned only the textile trades. The Act of 1802, the work of the elder Peel, limited the hours of work for children and the Act of 1819 forbade the employment of children under the age of nine. They were ineffective, because enforcement was left to local magistrates. The 1833 Act, applying to all textile works except those weaving silk, set up a central body of inspection and was therefore more effective. In 1847 the hours for women and children were restricted to ten per day. In 1850 and 1853 a limit was also placed on working hours for male labour. Since then there have been many Factory Acts for all industries. See also pp.1572-1573

Factory farming, rearing of livestock such as calves for veal, poultry and pigs in large, densely populated factory-type enclosures. Feeding is usually regulated and automatically dispensed, and the emphasis is on "mass-production". See pp.656-657

Factory ship, ship equipped to process whales or fish at sea. Fishing and whaling vessels bring their catch to the factory ship instead of having to return to port with it.

Faculae. See SUNSPOT

FA Cup, annual knockout football competition for member clubs of England's Football Association. It was inaugurated in 1872. Qualifying rounds began early in the season but 1st and 2nd Division clubs do not enter until the 3rd round in January. The final at Wembley in May is seen by millions in many countries on television.

Fadden, Sir Arthur William (1895-1973), Australian politician. He became leader of the Country Party early in 1941, and served as prime minister, August-October 1941. He retired from the leadership of the party in 1958.

Fadeyev, Alexander Alexandrovich (1894-1956), Russian novelist. His military experiences in the civil war are reflected in *The Nineteen* (1927) *The Young Guard* (1945), although revised several times, was criticized by the Communist Party and Fadeyev lost his status in the Party. In 1956 he committed suicide.

Faeces. See **EXCRETION**

Faenza, city in central Italy on the River Lamone. **FAIENCE OF MAJOLICA**, a type of ceramic, has been made there since the 15th century. Pop. (1971) 54,733.

Faerie Queene, The (1589-96), unfinished allegorical poem by Edmund SPENSER. The six published books of the planned 12 relate the allegorical story of Prince Arthur's quest to Fairyland, and his encounters. The form of the poem is Spenser's invention - known as the Spenserian stanza - and *The Faerie Queene* is the most successful example of this verse form. See also pp.1416-1417.

Faeroe Islands, group of 22 volcanic islands in the N Atlantic Ocean between Iceland and the Shetland Islands. They have belonged to Denmark since 1380 and were granted home rule in 1948. Fishing, whaling and sheep-rearing are the most important activities. Area: 1,339sq km (540sq miles). Pop. (1975 est.) 41,000. See pp.2035-2036.

Faunir, in Scandinavian mythology, a giant who turned himself into a dragon to guard a pile of gold he had obtained by murdering his father, Hreidmar. Siegfried slew him and by tasting his blood understood the speech of birds.

Fahrenheit, Gabriel Daniel (1686-1736), German physicist and instrument-maker. He invented the alcohol THERMOMETER (1709), the first mercury thermometer (1714) and devised the FAHRENHEIT TEMPERATURE SCALE, for which he is chiefly remembered. He also showed that the boiling points of liquids vary with changes in atmospheric pressure and that water can remain liquid below its freezing point. **Fahrenheit temperature scale**, system for measuring temperature based on the freezing point of water (32°F) and the boiling point of water (212°F). The interval between them is divided into 180 equal parts. To convert °C to °F, °C = (°F - 32) x 5/9.

Faience, BATHENWARE covered with a decorative opaque white GLAZE made with tin oxide. The technique and designs of 14th-century Italian MAJOLICA influenced the development and refinement of French faience in subsequent centuries. Fine baroque figuring, elaborate scrollwork and floral designs were characteristic of 18th-century work, and the Rouen faïences produced distinctive stiff lace-work patterns. Until that century, colours were restricted to the few that could withstand high kiln temperatures. Because of the greater durability of creamware and PORCELAIN, little faience was manufactured after the early 19th century.

Fainting, or **syncope**, temporary impairment of consciousness accompanied by general weakness of the muscles. An attack may be preceded by giddiness, sensory distortions, nausea, pallor and a profuse cold sweat. Its causes may include an insufficient flow of blood to the brain, change in the blood's composition, emotional disturbances, and injury to the heart or other organs.

Fairbairn, Steve (1862-1938), Australian oarsman whose controversial coaching methods revolutionized rowing in the early 20th century. In 1926 he founded London's Head of the River race on the Thames.

Fairbanks, Douglas, two US film stars Douglas Sr (1883-1939) founded UNITED ARTISTS films (1919) with Charlie CHAPLIN, D W GRIFITH and Mary Pickford, whom he married. His swashbuckling acrobatics and breezy charm made him an idol for millions and enhanced such adventures as *The Mark of Zorro* (1920), *The Three Musketeers* (1921), *Robin Hood* (1922) and *The Thief of Baghdad* (1924). Douglas Jr (1909-) had a very successful career through films such as *The Dawn Patrol* (1930), *Catherine the Great* (1934), *The Prisoner of Zenda* (1937), *Gunga Din*

(1939), and *That Lady in Ermine* (1948). **Fairbanks**, city in central Alaska, on the Tanana and Chena rivers, 403km (250 miles) N of Anchorage. It was founded in 1902 after the discovery of gold. The oil pipeline laid in the 1970s has accelerated the city's growth. Industries include gold, timber and coal-mining. Pop. (1970) 22,640.

Fairbridge, Kingsley (1885-1924), South African explorer. His family moved to Rhodesia in 1896 and much of his life was spent in journeys around that country. His autobiography was published in 1927.

Fairburn, Arthur Rex Dugard (A. R. D. Fairburn) (1904-57), one of the first distinguished New Zealand poets. His satirical and lyric verse collections include *Domino*, *The Voyager*, *Strange Rendezvous* and *Three Poems*.

Fairey, Sir Charles Richard (1887-1956), British aircraft manufacturer, who founded the Fairey Aviation Co in 1915. This company produced such famous aircraft as the Firefly, Albacore and Swordfish. Fairey also invented the wing flap. **Fairfax of Cameron, Thomas, 3rd Baron** (1612-71), English soldier. He was commander-in-chief of the Parliamentary Army (1645-50) at the end of the Civil War. A popular commander, he won the decisive victory at Naseby (1645). See also p.1422.

Fairs Cup, European association football competition. It began in 1955 as an inter-city competition and in 1971 was renamed the UEFA Cup.

Fairy, in mythology, magical, often mischievous being, usually depicted as a tiny person with wings. In recent time faires have been shown as pretty and gentle creatures, but their past is far more sinister. Once they were genuinely feared and were believed capable of frightening revenge on anyone who offended them. See also ELFS.

Fairy ring, circle or ring of fungi commonly *Marasmius oreades*, that appears seasonally in lawns or meadows. In folklore the area enclosed was said to be the dancing ground of faires. See also p.354.

Fairy tale, fantastic story involving wondrous, often magical elements, characters and occurrences. Many such tales have descended from a worldwide oral tradition, from literary origins or have interchanged between the two, undergoing numerous adaptations in the process. The term includes such popular folktales as *Little Red Ridinghood* and *Cinderella*, both of which were collected by Charles PERRAULT in his *Stories or Tales of Olden Times*. *Tales of Mother Goose* (1697), and the stories recorded by the Brothers GRIMM, in their *Fairy Tales* (1812-22). The form was popular with 19th-century writers such as Oscar WILDE, Charles KINGSLEY, John RUSKIN and Hans ANDERSON, whose work derives from folk legends.

Faisal, name of two kings of Iraq. Faisal I (1885-1933) fought against the Turks with T.E. LAWRENCE in WWI. In 1920 he was proclaimed King of Syria, but in the same year was ousted by the French. He was made King of Iraq by the British in 1921. On his death Faisal I was succeeded by his son Ghazi, who died in 1939 and was followed by his young son, Faisal II (1935-58). He was killed in the revolution which finally overthrew the Iraqi monarchy.

Faith healing, use of some inner or spiritual force to effect a cure. In Christianity present-day healing can be traced back to the miracles of the Holy Spirit performed through Christ and his apostles, as recorded in the New Testament. Prayers and rituals for the purpose are found throughout the history of man.

Fakir, Muslim or Hindu monk or wandering mendicant. Fakirs are commonly thought to possess special powers, and to be able to perform magic and incredible feats of endurance, such as walking on fire.

Falange, Spanish political party founded in 1933 by José Antonio Primo de Rivera (son of the Spanish dictator). Modelled on other European fascist parties, it became the sole legal political party after the

forces of FRANCISCO FRANCO won the SPANISH CIVIL WAR. Its power declined in later years and during free elections in 1977 it suffered a major defeat. See also p.1705.

Falashas, ethnic group in Ethiopia, probably descendants of early converts to JUDAISM. Their form of religion relies solely on observance of the OLD TESTAMENT works with no later traditions or interpretations. They speak local dialects and form a sort of inferior caste, some Falashas have emigrated to Israel.

Falcon, widely-distributed bird, hawk-like bird of prey, sometimes trained by man to hunt game. Falcons have keen eyesight, short hooked bills, long pointed wings, streamlined bodies, strong legs with hooked claws, longish tails and grey or brownish plumage with lighter markings. The females are much larger than the males. Falcons hunt by day, feeding on insects, smaller birds, rodents and other small animals on the ground. They can kill on the wing, with their feet. They lay two to five brown-spotted white eggs, often in abandoned nests. Length: 15-64cm (6-25in). Family Falconidae. See also pp.72-78, 297, 319, 323.

Falconiformes, order of birds of prey, including VULTURES, HAWKS, EAGLES and FALCONS. See also pp.72-73.

Falconry, sport in which FALCONS are used to hunt birds and small animals. The falcon is taken when young to be trained. The falconer wears a glove upon which the hooded falcon sits. When the hood is taken off, the falcon makes straight for the quarry, but leaves the prey untouched after the kill, returning to the falconer's wrist. Falconry attained its greatest popularity in late medieval and early modern Europe, and was one of the chief pastimes of royalty.

Falkirk, largest town of Central Region, Scotland, lying on a ridge of the Firth of Forth 18km (11 miles) SE of Stirling. Its chief industry is coal mining. Edward I defeated Wallace (1298) and Bonnie Prince Charlie defeated General Hawley (1746) there. Pop. (1974 est.) 36,589.

Falkland Islands (Islas Malvinas), group of islands E of Argentina in the S Atlantic Ocean. It includes two large islands, East and West Falkland, and 200 smaller islands, administered as a British Crown colony. The main activity is sheep-farming and wool and hides are exported. The capital is Stanley. Area: 11,961sq km (4,618sq miles). Pop. (1975 est.) 2,000. See p.2036.

Falkner, John Meade (1858-1932), British poet and novelist. He is best known for his adventure story, *Moonfleet* (1898), but he also wrote the historical works *A History of Oxfordshire* (1899) and *Durham Cathedral* (1929).

Falla, Manuel de (1876-1946), Spanish composer who developed the Spanish nationalistic style by using Spanish folk songs as the basis for many of his compositions. Among his popular works are the opera *La Vida Breve* (1905), *Nights in the Gardens of Spain* (1916) for piano and orchestra, and the music for the ballets *El Amor Brujo* (1915) and *The Three-Cornered Hat* (1919).

Fall of the House of Usher, The (1839), tale of terror by Edgar Allen POE. It is about the last descendant of the House of Usher, Roderick, who is driven mad by the sense of impending doom that pervades his ancestral home.

Fallopian tube, or **oviduct**, either of two narrow ducts leading from the upper part of the uterus into the pelvic cavity and ending near each ovary. After ovulation, the ovum enters and travels through the fallopian tube where fertilization can occur. The fertilized ovum, or embryo, continues into the uterus where it becomes implanted. If the fertilized ovum remains in the tube, an ECTOPIC (or tubal) PREGNANCY occurs. If fertilization does not occur, the ovum is shed along with uterine lining at menstruation. Conception can be prevented by removing or somehow closing the fallopian tubes. See also BIRTH CONTROL. pp.164-165.

Fallopian, Gabriello (1523-62), Italian anatomist who became professor of anat-

The Faerie Queene, an early woodcut to April, a section of the Elizabethan poem

Fairfax a parliamentarian who defused the Restoration

Fairy rings gradually grow larger, rings up to 65m (213ft) wide having been found

Fallout, atomic

Fallow deer. A species now semi-domesticated in British parks and reserves

Falstaff an 1893 design for Act III, Scene 1 of Giuseppe Verdi's opera

Famagusta a view of the Church of St Nicholas, now the mosque of St Sophia

Fantin-Latour. a self portrait by this painter friend of Corot, Delacroix, Ingres and others

omy and botany at Padua in 1551. His book *Anatomical Observations* (1561) contains the first descriptions of the FALLOPIAN TUBES (from the ovaries to the womb) and the SEMI-CIRCULAR CANALS.

Fallout, atomic, radioactive contamination in the atmosphere following a leakage or accident at a nuclear reactor, or explosion of a nuclear weapon. Large wind-borne particles fall to earth after a few hours, sometimes up to several hundred km from the source, lighter particles entering the troposphere are detected after a longer period at about the same latitude as the source. Any particles entering the stratosphere eventually fall over the earth's surface, often many years later. See also pp 1148-1149.

Fallow deer, medium-sized DEER native to Asia Minor and parts of Europe. The coat is usually spotted white in symmetrical rows, with white patches on the underparts and rump, the spots tend to disappear in winter. The males have broad antlers. Height 91 cm (3ft) at the shoulder. Species *Dama dama*.

Fabianinus, Titus Quinctius (c 238-174 bc), Roman statesman and military leader who helped to establish the Roman protectorate over Greece. His victory at Cynoscephalae in Macedonia (197) against Philip V proved the superior tactics of the Roman legions over the Macedonian phalanxes.

False pregnancy, also called pseudocyesis, a rare phenomenon that occurs in women who greatly desire a baby. Menstruation ceases and there may be an enlargement of the breasts and abdomen, "morning sickness" and, later, labour pains. The affected woman believes she is pregnant. It is an example of the mind influencing hormone secretion, treatment is by psychotherapy.

False teeth. See DENTURES.

Falsetto, register of the voice specially produced at the LARYNX to enable a male adult to sing in the ALTO range, or to yodel. All males are capable of producing this high voice, but the technique must be practised. See also COUNTER TENOR.

Falstaff, (1893), opera in three acts by Giuseppe Verdi, libretto by Arrigo Boito. It is based on the Shakespearean plays, *The Merry Wives of Windsor* and *Henry IV* in which Falstaff was a protagonist. It was first produced at La Scala, Milan.

Famagusta (Ammokhostos), town on the east coast of Cyprus, it has a natural harbour and is connected to Nicosia by rail. Various fortifications, a castle, a cathedral (now a mosque) and other buildings remain of its medieval greatness. Pop. (1971 est.) 43,600.

Fame, George (1943-), British singer and jazz organist, real name Clive Powell. During the 1960s he played popular versions of American urban BLUES and now works mainly in cabaret.

Familiar spirit, small demon said to attend a witch. It is commonly shown as a cat, toad or an imaginary being that lives on the witch's blood drawn through a special teat. In witch trials these teats, which in reality were probably warts or moles, were expected to be insensitive to pain, although their very presence was enough to convince authorities of the witch's guilt.

Family, in biology, the systematic classification of living organisms, a taxonomic category ranking above a genus and below an order. The earliest use of this form of classification appears in the work of Carl Linnaeus (*Systema Naturae*, 1758). In 1901 the International Rules of Zoological Nomenclature were established, the Commission for which now acts as a court to determine new or altered classifications. Family names are printed in Roman (ordinary) letters with an initial capital (eg, Felidae, the cat family), whereas genus names are usually printed in italic letters, also with a capital (eg, *Felis*, the genus to which the domestic cat belongs).

Family, unit of social organization comprising in its simplest form parents and their children. This form of the family, known as the nuclear family, has been regarded as the basis of all societies. In many parts of the world, close ties, often

deriving from the cohabitation of several related nuclear families, have created the extended family. The role of the family is both reproductive and economic - in Europe until the 19th century the family was often dominated by a head of the family who assumed responsibility for all its other members. Changing economic relationships introduced by the Industrial Revolution, the emancipation of women and the growth of state education have tended to alter this traditional family structure. See also pp 1828-1829, 1832.

Family planning. See BIRTH CONTROL.

Family therapy, in psychotherapy, treatment of emotional disturbance or mental illness in the context of the family, not as a disorder of an individual member. It involves direct involvement between the family and the therapist, often for a considerable time. See also p 1121.

Fan, light, flat manual costume accessory, especially used by women for cooling the face. Rigid fans, usually made from feathers, were used by the Assyrians, Egyptians, Romans and the medieval church. More elaborate folding fans probably originated in Japan, reached Europe by the 9th century and arrived in England from Italy during the reign of Henry VIII. By the 17th and 18th centuries, fans had become ornate and expensively fashionable accessories with ivory, gold and silver sticks and mounts of paper, parchment or lace. France was always the chief centre of production.

Fan. See ALLUVIUM.

Fangio, Juan Manuel (1911-), Argentine racing driver. One of the best drivers in the sport's history, he was five-times winner of the world championship (1951, 1954-57) and on his retirement in 1958 had won a total of 24 grand prix.

Fanny by Gaslight (1940), romantic historical novel by Michael Sadleir describing the career of a British cabinet minister's illegitimate daughter.

Fanny Hill (1748-49), novel by John CLARELAND, first issued in two volumes. It is an account, told in her own letters, of the seduction and subsequent career of a London courtesan. Suppressed on publication, it was seized as pornography as recently as 1963 in England.

Fanon, Frantz Omar (1925-61), French West Indian psychiatrist and theorist of Third World revolution. He left Martinique in 1956 to work for the Algerian nationalists, and wrote *Black Skin, White Masks* (1952) and *The Wretched of the Earth* (1961), in which he outlined his hopes for a peasant revolution against Western colonialism.

Fanshawe, Sir Richard (1608-66), English politician and writer. He assisted the Royalists during the ENGLISH CIVIL WAR and made a verse translation of *The Lusiads* from the Portuguese in 1655.

Fantail. See MGRON.

Fantasia (1940), US animated film, directed by Walt Disney, that visually interpreted themes from classical music (conducted by Leopold Stokowski) in eight cartoon sequences. It was one of the first films to be accompanied by stereophonic sound.

Fantasy, in psychology, spontaneous activity of the imagination, including daydreaming and hallucination. It may involve several of the senses. Controlled or directed activity of the imagination is generally regarded as creativity. Fantasy is not directed towards a definite goal, but is part of ordinary thinking. It is commonly associated with autism and is an integral part of play in children and in adults.

Fanti, black African people of Ghana. Numbering approx 250,000, they follow a matrilineal system of political succession and material inheritance, and a patrilineal system of military and spiritual succession. They were middlemen in trade between the African interior and Europeans on the coast and they became embroiled in conflicts with the Ashanti. They were first aided and later dominated by British colonists.

Fantin-Latour, Ignace Henri Jean Théodore (1836-1904), French painter. Noted for his realistic group portraits, including *Homage to Eugène Delacroix*

(1864), he also did still lifes and lithographs illustrating the music of Wagner and others.

Fanzago, Cosimo (1591-1678), Italian architect and sculptor. A master of the Baroque style, among his fine work is the church of S. Giuseppe degli Scalzi, Naples (c 1660).

FAO. See FOOD AND AGRICULTURAL ORGANIZATION.

Faraday, Michael (1791-1867), British physicist and chemist. He acquired his scientific education through reading and from lectures given by Sir Humphrey DAVY at the Royal Institution in London where in 1825 he became director of the laboratories. He liquefied chlorine, discovered benzene and two "chlorides" of carbon and enunciated the laws of electrolysis (FARADAY'S LAWS). Moving from chemistry to electricity, he discovered electromagnetic induction, made the first dynamo, built a primitive electric motor, and studied non-conducting materials (dielectrics). The unit of capacitance (the farad) is named after him. See also pp 991.

Faraday's laws, two fundamental principles in science. Faraday's laws of electrolysis state that (1) the mass of a substance liberated (or the extent of chemical change) at an electrode in an ELECTROLYTE is proportional to the current passing and the time for which it passes, and (2) the masses of different substances liberated or deposited are in proportion to their chemical equivalent weights. Faraday's law of induction states that, when the magnetic flux through a circuit changes, an electromotive force (emf) is induced in the circuit proportional to the rate of decrease of magnetic flux. See also pp 1636-1637.

Farce, light comic drama typified by its unrealistic and exaggerated characterizations, its improbable plot lines and an emphasis on simple humour. Modern farce is a 19th-century invention and was developed by Arthur PINERO and Ben Travers in England and Eugène LABICHE and Georges FEYDEAU in France.

Fard, Wallace D. (c 1877-1934), US politician. He moved to the USA from Arabia before 1930 and founded the BLACK MUSLIM movement before his disappearance in 1934.

Far East, countries of E and SE Asia. They include China and Japan, Korea, Manchuria, Mongolia, eastern Siberia, Vietnam, Laos, Cambodia, Thailand, Malaysia, Burma, the East Indies (including the Philippines) and various other former European dependencies.

Farwell to Arms, A (1929), novel by Ernest HEMINGWAY. Frederic Henry, an American ambulance driver in Italy during WWI, falls in love with Catherine Barkley, an English nurse. Eventually he and Catherine desert and escape to Switzerland, where she dies giving birth to their child.

Far From the Madding Crowd (1874) romantic novel by Thomas HARDY. Bathsheba Everdene marries the dashing Sgt Troy, who is murdered by a jealous farmer, Boldwood. The tale ends happily, with Bathsheba's marriage to the shepherd Gabriel Oak, who loves her selflessly throughout.

Fargo, William George (1818-81), US businessman. Having been a messenger and post rider, he organized with Henry WELLS a carrier service with routes between Buffalo and the West in 1844. Wells, Fargo & Company then set up an express service between New York and San Francisco to cater especially for the gold rush. Fargo was the secretary of the company, which merged with two others to form the American Express Company in 1850. Wells Fargo still operates as a San Francisco bank.

Farinelli, Carlo Broschi (1705-82), Italian male soprano, one of the most notable of the 18th-century "castrati" - Italian male singers who were sopranos as the result of childhood castration. His debut in 1722 was a sensation and from 1737 to 1759 he was the official singer to the Spanish royal court.

Farman, Henri (1874-1958), French aviation pioneer and manufacturer. In

1908 he won a prize for the first circular flight of 1km (0.6 miles) and in 1909 he established a flight record of 179km (112 miles). In 1912 he founded an aircraft factory which later became one of the largest in Europe and with his brother Maurice established the first air passenger service between London and Paris.

Farmer, Ken (1910–), Australian rules footballer of great goal-kicking prowess. He kicked 100 goals a season 11 times was South Australia's top goalscorer 1930–40, and in a 224-games league career kicked 1,419 goals.

Farmer's Wife, The (1916), play by Eden Philpotts. A rural comedy first produced in Birmingham, it later ran at the Royal Court Theatre, London, for more than 1,300 performances.

Farming. See AGRICULTURE.

Farming, collective, socialized farming in which a number of smallholdings are worked co-operatively as a single unit and ownership vested either in the community or the state. Collectivization of farms was introduced in the USSR in the 1930s and in the People's Republic of China in the 1950s. A similar system – the *kibbutz* – prevails in Israel.

Farnborough, town in N Hampshire, England, famous for the Farnborough Air Show. About 51km (32 miles) SW of London, it is the site of the Royal Aircraft Establishment, where experimental work in aeronautics is carried out. Pop. (1971 est.) 41,233.

Farne Islands, group of islands in NE England, off the coast of Northumberland. The National Trust maintains a bird sanctuary on them.

Farnese, celebrated Italian family which established itself among the Roman aristocracy. Through the military skill of Ranuccio Farnese (d.c. 1460), who defended the PAPAL STATES and won the gratitude of EUGENIUS IV, his son Alessandro became Pope PAUL III in 1534 and his illegitimate son Pier Luigi (1503–47) was created first duke of Parma and of Piacenza after 1545 Pier Luigi's grandson Alessandro (1545–92), also duke of Parma and Piacenza, served PHILIP II of Spain as governor-general of The Netherlands from 1578. The line ended with the death of Antonio in 1731.

Faro, the most southerly town of Portugal, situated on the Atlantic coast, capital of Faro province. It has a large shallow harbour, from which agricultural products are exported. Pop. (1970) 30,269.

Faro Islands, Faroes. See FAEROE ISLANDS.

Farouk (1920–65), King of Egypt (r. 1936–52) son and successor of King FUAD I. He opposed the Wafd party and failed to expel the British defeat in the Arab-Israeli conflict (1948) led to his abdication after a coup by dissident military officers in 1952. Egypt became a republic less than a year later.

Farquhar, George (1678–1707), Irish dramatist. His comedies were distinguished by humour combined with depth of character. *The Beaux Strangers* (1707), still frequently revived, opened at the Haymarket Theatre, London, shortly before he died. See also p. 1471.

Farrar, Frederic William (1831–1903), British clergyman. He was headmaster of Marlborough College (1871–76), archdeacon of Westminster (1883–95) and then dean of Canterbury until his death. He wrote a *Life of Christ* (1874) and *Life of St Paul* (1879).

Farrell, James Gordon (1935–), British novelist. He won the Faber prize for *Troubles* (1970), set in Ireland in the 1920s. He won the Booker prize for *Siege of Krishnapur* (1973).

Farrell, James Thomas (1904–), US novelist. His trilogy about Studs Lonigan (1932–35), set in a poor Irish community in Chicago, is typical of his harshly realistic treatment of modern city life. Much of his work is in a subjective, stream-of-consciousness style.

Farrelly, Bernard ("Midget") (1944–), Australian surfer who won the world championships in 1964 (Sydney) and was runner-up in 1968 (Puerto Rico) and 1970 (Sydney).

Farrer, William James (1845–1906),

Australian agriculturalist, b. England. He emigrated in 1870 and developed several new varieties of wheat in New South Wales after 1886.

Fars (Farsistan), mountainous province of SW Iran. The ruins of Persepolis, an early Persian capital, are in this region. The present capital of the area is Shiraz. Area 133,385sq km (51,500sq miles). Pop. (1966) 1,439,804.

Farthing, British coin worth a quarter of a penny or 1/960 of a pound sterling. It was introduced in 1279 and was a silver coin until 1613. After 1856 farthings were the coins of smallest value, they were withdrawn from circulation in 1960.

Farthingale, padded roll or a heavy metal frame worn around the hips by women from the 16th century to make their wide skirts stand out. A form of farthingale known as a pannier or hoop skirt, made of osier reeds or whalebone, reappeared in the early 18th century. Farthingales were revived again in the 1830s, when they became round and even bigger.

Fasces, symbol of state power in ancient Rome, depicted as a bundle of rods into which an axe is set. The emblem was adopted by the Italian Fascist Party in 1919. See also p. 1226.

Fascism, nationalistic, totalitarian and anti-communist movement founded in Italy by Benito MUSSOLINI in 1919. The term was also used of later regimes established by Adolf HITLER in Germany (1933) and Francisco FRANCO in Spain (1936). A reaction to the Russian Revolution (1917) and the subsequent spread of communist influence, the movement based its appeal on the fear of instability among the middle-class financial and property-owning interests and on a wider social discontent. Basic to fascist ideas were glorification of the state and total subordination to its authority; suppression of all political opposition, preservation of a rigid class structure, stern enforcement of law and order through a powerful police system, and the supremacy of the leader as the embodiment of high ideals. An aggressive militarism aimed at achieving national greatness was also generally stressed. Unlike communism, it lacked a consistent, rational philosophy and the character of fascist regimes varied accordingly. In Italy, the Fascist Party, which governed 1922–43, was organized in a military manner, its black-shirted members using the ancient Roman salute. The name was derived from *fasces*, symbol of authority in the Roman Empire. Discredited by defeat in WWII, fascism has been relegated to a minor role in the politics of western Europe. See also NATIONAL SOCIALISM, pp. 1704–1705.

Fashoda Incident (1898), diplomatic struggle between France and Britain for control of Egypt's Upper Nile. Britain sought control of continuous territory from Egypt to South Africa, and France wanted a route from the Atlantic Ocean to the Red Sea. Their respective expeditions, led by Britain's KITCHENER and Major MARCHAND, met at Fashoda, Sudan. Wishing to maintain equitable relations with Britain because of growing German power, the French withdrew.

Fassbinder, Rainer Werner (1946–), German film director. He began to make films in 1969, and his many productions are made in Munich on a small budget with a regular group of actors. He became known internationally for *The Bitter Tears of Petra von Kant* (1972), and *Fear Eats the Soul* (1974).

Fast, Howard (1914–), US author. A prolific writer, many of his novels are about the American Revolution, including *Conceived in Liberty* (1939) and *April Morning* (1961).

Fast Breeder Reactor. See REACTOR, FAST BREEDER.

Fastnet Race, classic off-shore race for ocean yachts. It was first held in 1925. Sailed every two years during Cowes Week, it covers a distance of 968km (603 miles) from the Isle of Wight to the Fastnet Rock off the SW coast of Ireland and back to Plymouth. Since 1957 it has been part of the Admiral's Cup series. In 1978 the race was badly hit by storms.

Falstaff, Sir John (c. 1378–1459), English soldier and administrator. He fought at AGINCOURT (1415) and elsewhere in France (1417–40). He featured in the Paston letters, which detail his investment of large war profits in English estates. Shakespeare borrowed his name, and no doubt some of his attributes, for Falstaff. **Fat,** semi-solid organic substance made and used by animals to store energy and shield them from the cold. Fats are soluble in organic solvents such as ether, carbon tetrachloride, chloroform and benzene. They are esters of glycerol with a carboxylic (fatty) acid such as palmitic, lauric and stearic acid, which have 12 to 18 carbon atoms. Vegetable oils are similar to fats, but are viscous liquids rather than semi-solids, and have a higher proportion of molecules with double chemical bonds in the carbon chain – i.e. they are unsaturated. See also LIPID, SOAP, pp. 60–61; 162, 906–909, 1061.

Fates, in Greek mythology, the three goddesses of human destiny. Called the *Moirae* by the Greeks, they correspond to the Roman *Parcae* and the Germanic *Norns*. Clotho spun the thread of life, Lachesis (chance, measured it) and Atropos, the inevitable, cut it.

Father Brown, The Innocence of (1911), collection of short stories by G.K. CHESTERTON, in which a mild middle-aged priest, Father Brown, solves a series of crimes and mysteries through his quick observation and understanding of human nature.

Father lasher, short-spined, marine species of bullhead, common in the Arctic and Atlantic Oceans. It has a large head and lacks a swimbladder. It is a voracious predatory fish that feeds on crustaceans and the eggs and larvae of commercial fish. Species *Myoxocephalus scorpius*.

Fathers and Sons (1862), novel by Ivan TURGENEV which analyses the social changes that were taking place in Russia in the mid-19th century.

Fathers of the Church, ecclesiastical writers of exceptional orthodoxy and holiness from c. 90 to c. 750. The term derives from the Greek notion of the teacher as father and the early church's view of the bishop as the spiritual father of his flock. The term was first used in the 4th century in reference to the bishops of the Council of Nicaea (325), and in the 5th century the Fathers were cited in the Christological controversies. Augustine was the first to refer to a layman, Jerome. Other great Fathers include Ambrose and Gregory the Great in the west and Basil the Great in the east.

Fathom, unit used in measuring depth, especially of water. One fathom equals 1.83m (6ft). It is also a quantity of material which has a cross-section six feet square but varies in length. Originally it was the distance spanned by a man's arms.

Fatigue, in physiology, inability to function at normal levels of physical and mental activity. Muscle fatigue results from the accumulation of LACTIC ACID in the muscle tissue and the depletion of GLYCOGEN (stored carbohydrates). It is often associated with depression or with illnesses such as HEPATITIS and ANAEMIA.

Fatigue, metal, weakening of the crystalline structure of a metal due to repeated rhythmic straining, bending or vibration. It can cause superficial cracks which may spread inwards, causing the metal to crumble. Components have to be designed to reduce and delay fracture due to metal fatigue. See also pp. 840, 841.

Fatima (606–632), daughter of the prophet MUHAMMAD, wife of ALI. Fatima and Ali felt deprived of their rightful inheritance by ABU-BAKR, first Muslim Caliph after Mohammed's death. Their disappointed followers, the SHI'AH sect of ISLAM, honour Ali as the rightful successor to Mohammed and offer devotion to Fatima similar to that offered the Virgin Mary in Roman Catholicism.

Fatima, village of W central Portugal where three children had a vision of the Blessed Virgin Mary in 1917. It is now the site of the shrine of Our Lady of the Rosary of Fatima. It was visited in 1967 by Pope Paul VI.

Fascism. Mussolini and Adolf Hitler in Rome during the Führer's state visit in 1938.

Footrace in 1977, a view of yachts jockeying for position on the starting line.

Fates, a painting of the three goddesses by Michelangelo in the Pitti Gallery, Florence.

Fatima, the first pilgrimage took place in 1927 and the basilica was begun in 1928.

Fatty acids

Faust, in a drawing by Franz Stassen entering into his covenant with Mephistopheles

Fauvism, a typical example of this movement is a landscape by the French artist Derain

Feather, the barbs branch out from the shaft like the branches of a tree

Gustav Fechner attempted to solve the problems of psychology scientifically

Fatty acids, organic chemical compounds, so called because they are present widely in nature as constituents of fats. They are monobasic acids (ie, they contain a single carboxyl acid group ($-\text{COOH}$)). The term fatty acids is sometimes restricted to the series of saturated acids having the general formula $\text{C}_n\text{H}_{2n}\text{COOH}$, eg, acetic acid, CH_3COOH , and palmitic acid, $\text{CH}_3(\text{CH}_2)_{14}\text{COOH}$, the latter being a common fat constituent. Also present in fats, and also often called fatty acids, are unsaturated acids having one or more double bonds. These include oleic acid, $\text{CH}_3(\text{CH}_2)_7\text{CH}=\text{CH}(\text{CH}_2)_7\text{COOH}$, both types have molecules shaped like a long, straight chain. See also **FATS**, **LIPIDS**, **SATURATED COMPOUNDS**, p.906

Faulkner, Brian (1921-77), Northern Irish politician. A member of the Unionist Party (Protestant), he was Minister of Home Affairs (1959-63), Commerce (1963-69), and Development (1969-71). He was Prime Minister of Northern Ireland (1971-72) and helped establish a new coalition administration of Catholics and Protestants, which he headed in 1974. This was brought down by a general strike later that year. See also p.1781

Faulkner, William (1897-1962), US author. With *Sartoris* (1929), his third novel, he created Yoknapatawpha County, the setting of most of his future works. The primary themes of the so-called Yoknapatawpha Saga include the relationship of the past to the present and the effects of the disintegration of traditional Southern US society. He was awarded the 1949 Nobel Prize in literature. His other works include *The Sound and the Fury* (1929), *Sanctuary* (1931), *Absalom, Absalom!* (1936), and *The Reivers* (1962). See also pp.1772, 1773

Fault, in geology, a fracture in the Earth's crust along which movement has occurred. Many earthquakes are caused by the rapid slipping of tectonic plates along faults, eg the San Francisco earthquake of 1906. See also pp.198, 198-199, 212-214, 266

Fauna Preservation Society, organization formed to help to conserve wildlife throughout the world. In the British Isles it is particularly concerned with reptiles, mammals and amphibians. It was founded in 1903 as the Society for the Preservation of the Wild Fauna of the Empire.

Fauré, Gabriel Urbain (1845-1924), French Romantic composer whose works are characterized by their intimate and restrained quality. They include many songs, such as *Clair de lune* (1889), chamber music, such as his *Élégie* (1883) for cello and piano, and the *Requiem Mass* (1887), in memory of his father. His pupils included Maurice Ravel and Nadia Boulanger. See also p.1582

Faust (1808, 1831), drama by Johann Wolfgang von Goethe based on the legend of Dr Johann Faustus (1488-1541). There is also a play by Christopher Marlowe (c.1588) and an opera by Gounod (1859) on this theme. The Goethe play is in two parts with a prologue. Faust promises to forfeit his soul to Mephistopheles in exchange for one moment of perfect contentment. Only finally does Faust realize that contentment lies in helping others; he pronounces himself perfectly contented and dies. Although he should really forfeit it, however, his soul is taken into heaven. See also pp.1548, 1577

Fauves, term coined in 1905 by the art critic Louis Vauxcelles to describe the group of artists led by Matisse. See also **FAUVISM**

Fauvism, art movement of Paris in the early 1900s. It had little artistic vogue and lasted only a few years. Fauvist paintings are characterized by their rapid brushwork and brilliant flat colours, based on the work of Gauguin and van Gogh but conveying a higher degree of violence. The movement originated when a group of painters around Matisse, most of whom were pupils of Moreau, exhibited in 1905 and were dubbed *fauves* (wild beasts) by the critics. The artists involved included Rouault, Marquet, Vlaminck, Derain, Braque, Dufy and van Dongen. Their

paintings were mostly land- or townscapes, still lifes and figure compositions. The group exhibited together again in 1906 but subsequently lost its coherence. Some of the group turned to cubism and others to expressionism. See also pp.1654, 1655, 1654-1655

Favart, Charles-Simon (1710-92), French playwright. He was the author of several short farces and one of the originators of a new form of light musical comedy, the *opéra-comique*. His works include *La Chéruse d'Esprit* (1741), and *La Belle Arsène* (1773).

Fawcett, Dame Millicent Garrett (1847-1929), British suffragette leader, from 1897 to 1919 the president of the National Union of Women's Suffrage Societies. She was also one of the founders of Newnham College, Cambridge, one of the first women's colleges in Britain.

Fawcett, Percy Harrison (1867-c.1925), British explorer. He surveyed the frontier between Brazil and Bolivia in 1906-08, and returned to South America after WWI. He disappeared with his son on an expedition to the interior of Brazil.

Fawkes, Guy (1570-1606), English conspirator in the Gunpowder Plot, who was discovered with barrels of gunpowder in the Houses of Parliament on the night of 4-5 Nov. 1605 for which he was tried and executed in 1606. He was a Roman Catholic who fought in the Spanish Netherlands from 1593 to 1604. See also p.1420

Fayum, region of N Egypt, W of the River Nile. Archaeological remains date back to the Neolithic period. Canals for irrigation were dug in the early 2nd millennium BC. See also p.1158

Fazzan, region in Libya, in the Sahara, bordering Algeria. It is mostly desert with some oasis settlement. Exports include palms and dates. Area approx 551,171 sq km (212,807 sq miles).

FBI (Federal Bureau of Investigation), US organization for investigating violations of federal law, especially those concerning internal security. Its findings are reported to the attorney-general and various attorneys throughout the USA for decisions on prosecution. It was established in 1908, when it was called the Bureau of Investigation. Under the directorship of J Edgar Hoover (1924-72) it was reorganized and renamed the Federal Bureau of Investigation in 1933.

"FE", See **BIRKENHEAD**, F E SMITH
Fealty, in the feudal system, the loyalty and obligations due to a king or lord by his vassal, or the specific oath of loyalty and consent taken by the vassal. In the 9th century fealty meant refraining from participation in any action that endangered the lord's life or property. By the 11th century the positive duties of a vassal to his lord were established, including personal military service, financial obligations and other forms of personal service. The oath of fealty was followed by an act of homage and, if the granting of a fief was involved, by the rite of investiture. See also p.1338

Fear, intense emotional state aroused by anticipation of pain or injury from some event. Some capacity for fear is desirable and adaptive because it can lead to the avoidance of or escape from harmful events. Abnormally strong or inappropriate fears, however, can become **PHOBIAS**. See also pp.155, 1131

Feather, one of the skin appendages that makes up the plumage of birds. Feathers are composed of the fibrous protein **KERATIN**. Body contour feathers grow in demarcated skin tracts separated by bare areas. Short, fluffy down feathers insulate the body and long contour feathers make up the wing and tail surfaces. Contour feathers have a central shaft with paired interlocking branches. These are moulted (shed and replaced) at least once a year. See also pp.74-7

Feathering, in aviation, adjusting the propeller of an aircraft in flight so that the blades are aligned most nearly to the direction of flight. Feathering is usually done to reduce drag in the event of engine failure so that the propeller does not continue to "wind-mill".

February, the second month in the Gregorian calendar, consisting of 28 days except in leap years, when it has 29. **FEBRUUS** was the Roman god of purification and February, as the last month in the reformed Roman calendar (c.790 BC), thus represented purification before the new year. The 29th day was added to every fourth year in the Julian calendar to make it agree better with the solar year. In the French revolutionary calendar February corresponded to parts of the months of "rain" (*Pluviose*) and of "wind" (*Ventose*).

February Revolution (1848), French insurrection that overthrew the government of Louis-Philippe and set up the second republic. The Revolution was the result of a rising in Paris following the economic crisis of 1847-48 and agitation for parliamentary reform; the leadership comprised bourgeois radicals and working-class revolutionaries. The revolution inspired similar uprisings throughout Europe in the same year, but the republic ended by 1851. See also p.1586

Febvra, in Roman mythology, a god of purification, probably adopted from an Etruscan god of the dead. February was the month of the dead in Rome.

Fechner, Gustav Theodor (1801-87), German physician and psychologist who helped found experimental psychology by using objective, precise methods to study psychophysics - the relationships of physical stimuli to sensation and perception. Fechner's law states that the relationship between the strength of a stimulus and the perceived intensity of a sensation is logarithmic.

Federal Bureau of Investigation. See **FBI**
Federalism, political system that allows states united under a central government to maintain a measure of independence. The USA is the best-known example of a federal state, although Australia, Canada and India also have federal systems. A federal government has supreme authority, but the component states have a considerable amount of autonomy in such matters as education and health.

Federal Republic of Germany. See **GERMANY, WEST**
Federation Cup, women's international team tennis championship contested annually on a knockout basis. Teams are limited to three players, contests are decided by two singles and a doubles. First held in London in 1963, it has been dominated by the USA and Australia.

Federation of British Industries. See **CBI**
Federmann, Nikolaus (c.1501-42), German explorer who trekked through the Andes in the 1530s.

Fee, in the feudal system, a **FIEF** or grant of land to a knight in exchange for specific military services to his lord. A fee varied in size according to the quality of the land but in Norman England it often corresponded to five hides (an Anglo-Saxon unit of land theoretically equalling the amount of land needed to provide for a single peasant family).

Feedback, in technology, the process of returning a part of the output energy of a device to the input. In negative feedback the output energy is arranged to cause a decrease in the input energy. A governor is a negative feedback device, the output being coupled to the input so that constant speed is obtained, irrespective of load. In positive feedback, the output energy reinforces the input energy. This occurs when a loudspeaker feeds into a microphone coupled to the same amplifier as the loudspeaker. The amplifier oscillates producing a high-pitched "scream" in the loudspeaker. See also pp.464-465.

Feed line, theatrical technique often used in comedy, whereby a character speaks a line of which the sole purpose is to permit a humorous reply.

Feijoa, small genus of South American shrubs or trees closely related to the **GLAVA**. It has opposite leaves and whitish blossoms that develop into edible fruits about 5 cm (2 in) long, oblong, and green marked with red. Family *Myrtaceae*, species *Feijoa sellowiana*.

Feininger, Lyonel (1871-1956), US

painter who taught at the BAUMHAUS (1919-33). His work shows a strong cubist influence. In 1937 he returned to the USA, where his style reached its richest form in such watercolours as *Dawn* (1938).

Faisal I. See **FAISAL**

Felidae, cat family usually taken to consist of six genera (there is disagreement on the exact classifications) and 36 species of carnivores, ranging from the domestic cat to the tiger. The so-called big cats include the lion, tiger, leopard, jaguar, puma and cheetah, the last-named being the only member of the family with non-retractable claws. See also pp 315, 318.

Felipe, León, pen name of the Spanish poet León Felipe Camino Galicia (1884-1968). He wrote simple, direct verse on moral and religious themes. His works include *Versos y oraciones de caminante* (1917) and *Antología rota* (1920-47).

Felix, the name of five popes and antipopes. Little is known about Felix I, Saint (c. 269-74). Felix II (d. 365; antipope 355-58) was elected after the enforced exile of Pope Liberius and forced to return on his return. Felix III, Saint (d. 492, r. 483-92) instigated the Acacian Schism (484-519) by excommunicating Acacius, the Patriarch of Constantinople (for supporting the Monophysite Peter Mongus). Felix IV (d. 530, r. 526-30) is remembered for the church of Saints Cosmas and Damian in Rome, formed from two pagan shrines. Felix V (1383-1451; antipope 1440-49) formed the order of St Maurice and was elected by the Council of Basel in 1439. On his abdication he was made a cardinal.

Fellini, Federico (1920-), Italian film director, famous for the macabre satire of his films which were often autobiographical. His major films include *La Strada* (1954), *La Dolce Vita* (1960), *Idiot* (1967), *Satyricon* (1969), *Roma* (1972), *Amarcord* (1974) and *Casanova* (1977). See also p 176.

Fell running, demanding form of cross-country running practised mostly in the highland regions of N England and Scotland. Races over "out and home" and circuit courses vary in distance from 2.4-6.4 km (1.4-4.0 miles), but as not all routes are defined, map- and compass-reading are further attributes of the experienced fell runner.

Felony, in British law, indictable criminal offence. Originally punishable by death, felonies were for long distinguished from misdemeanours, ie crimes of a less serious nature. The distinction was abolished by the Criminal Law Act (1967).

Felspars, or felspars, group of common aluminium silicate minerals, principal constituents of igneous rocks. Orthoclase and microcline are potassium felspars of monoclinic and triclinic system crystals, respectively. Members of the plagioclase series (sodium and calcium felspars) have physical properties similar to microcline, but with crystals frequently twinned. Several are cut as gems: amazonite, a green form of microcline, moonstone, white with a bluish stain, is an alkali felspar, labradorite, an iridescent red, blue or green is a plagioclase variety, and sunstone is a spangled variety, frequently reddish. Hardness 6-6.5, sg 2.5-2.8. See also pp 208, 258, 259, 260, 894.

Felucca, lateen-rigged narrow sailing boat used in the Mediterranean and on the Nile. A felucca may have two or three masts, a rudder at either end and can be propelled by oars. Shallow-draft vessels, they are light and fast and have been used since ancient times.

Feminism, movement which aims at political, social and economic equality of women with men. Feminism is rooted in the ideas of the Enlightenment of the late 18th century, it gathered momentum in the 19th century with the rapid economic and social changes arising from the INDUSTRIAL REVOLUTION. In 19th-century Britain, women were legally forbidden to hold public office, to vote or to own property if married until the MARRIED WOMEN'S PROPERTY ACT. Women were

regarded as physically, socially and intellectually inferior to men. The SUFFRAGETTES aimed at universal suffrage, or a vote for each man and each woman, and they were linked with early socialism. The PANKHURSTS, Emmeline and her daughter Christabel, Millicent FAWCETT, and her sister Elizabeth Garrett ANDERSON were leading members of the feminist movement. In 1928 universal suffrage was finally granted. In the 1960s came the next resurgence in feminism, known at first as WOMEN'S LIBERATION. This movement sought deeper changes in economic, social and political structures, and a need was seen to eliminate sexual preconceptions of female dependence. In the 1970s, various equal pay acts were passed in many countries, and legislation was enacted to end discrimination against women in respect of goods, services and employment.

Feminists, women who actively advocate equality with men in all respects. The first important feminist document in the English language was *The Vindication of the Rights of Women* (1792) by Mary Wollstonecraft. The early feminists believed that equality would follow if they obtained the vote for women, an aim which was fulfilled in 1928 in the UK. This failed to achieve true equality, and the 1960s wave of feminists aimed for the total psychological, social, economic and political emancipation of women and their acceptance on equal terms with men. Leading feminists and their written works include Simone de BEAUVOIR (*The Second Sex*, 1949), Betty Friedan (*The Feminine Mystique* 1963), Kate Millet (*Sexual Politics*, 1970) and Germaine Greer (*The Female Eunuch*, 1970).

Femur, upper-leg bone, extending from the pelvis to the knee. It is the longest and strongest bone of the human skeleton. Its rounded smooth head articulates with the pelvis at the acetabulum, or hip socket, its large flattened lower end - which can be felt on both sides of the knee - articulates with the tibia, the larger of the lower leg bones. See also p 146, 147.

Fen, tract of low-lying marshy land where peat is formed below the surface. The soil is only slightly acid and much drainage is needed before a fen can become arable. The term is usually applied to the swampy Wash area (The FENS) in E England where most of the land is at or below sea-level.

Fenby, Eric William (1906-), British composer and arranger who for six years acted as musical amanuensis to Frederick DELIUS and assisted in the completion of his last works such as *A Song of Summer* and the third violin sonata (both 1930). Fenby's own studies of Delius appeared in 1936 and 1971.

Fencing, sport of attack and defence with FOIL, EPÉE or SABRE. It is conducted on a strip or mat (*piste*) 14m (46ft) long and 2m (6ft 7in) wide, in 1973 a *piste* of 24m (78ft 9in) was allowed for the sabre. Fencers wear wire-mesh masks, and jackets, gloves and breeches generally made of canvas. The tip of the weapon is blunted and points are scored by touching the opponent.

Fénélon, François de Salgnae de la Mothe (1651-1715), French churchman and philosopher. He was tutor to the Duke of Burgundy in 1689 but lost favour owing to his espousal of QUIETISM - a variety of Roman Catholic mysticism - and his *Télémaque* (1699), a satirical work critical of the government of Louis XIV.

Fenian movement (Irish Republican Brotherhood), Irish nationalist organization set up in 1858 by James STEPHENS. It sought independence from Britain by revolution, and most of its support came from the urban lower classes. After several abortive plots the leaders were arrested in 1867, and the focus of Fenian activity moved to the USA, where there were many Irish who had left Ireland during the famine of the 1840s. Under the leadership of John Devoy and John O'Neill, the Irish Fenians invaded Canada in 1866. The movement continued underground until WWI, when it was superseded by SINK FEIN. See also p 1642.

Fenian Uprising, attempts to invade Canada in June 1866 and May 1870 by the

FENIAN MOVEMENT. The US Government arrested the Fenian leaders and sent a military force to halt the raids in order to appease British interests.

Fennel, tall, perennial herb of the parsley family, native to S Europe. All parts are aromatic, and the seeds and extracted oil are used to add a liquorice flavour to medicines, liqueurs and foods. The height of the cultivated plant about 1m (3ft). Family Umbelliferae, species *Foeniculum vulgare*. See also pp 706, 708, 709.

Fens, lowland region of E England 117km (73 miles) long and 46km (35 miles) wide lying W and S of the Wash. This marshy area was first drained in the 17th century and is now under intensive cultivation, producing fruit and vegetables.

Fenshan. See **KAOSHUNG**

Fenton, Roger (1819-69), British pioneer photographer whose carefully composed portraits and landscape studies earned him enduring acclaim. In 1855 he became one of the first war photographers with a series of more than 350 plate photographs of the CRIMEAN WAR, many of them taken under very dangerous conditions, including *The Valley of the Shadow of Death*.

Feodor, name of three tsars of Russia. Feodor I (1557-98) became tsar in 1584, he was the last of the Rurik dynasty. He took little part in government affairs, which were controlled by Boris GODUNOV. Feodor II (1589-1605) was the son of Boris and ruled only briefly, on his father's death, from April to June 1605. He was murdered by supporters of the "false Dmitry", who took the imperial throne. Feodor III (1661-82) became tsar in 1676. In his reign the Westernization of Russia was begun, especially the introduction of Roman Catholic religious doctrines and Latin literature.

Ferber, Edna (1887-1968), US author. Her novels include *So Big* (1924), *Show Boat* (1926), which was made into a musical, and *Giant* (1952). She also wrote several successful plays with George S. KAUFMAN, including *Dinner at Eight* (1932) and *Stage Door* (1936).

Fer-de-lance, widely distributed Central and South American lance-headed viper. It has black-edged, light diamond markings on a brown ground colour. Its fast-acting venom is usually fatal to humans. Length, to 2.1m (6.9ft). Family Viperidae, species *Bothrops atrox*. See also SNAKE.

Ferdinand, name of three Holy Roman Emperors. Ferdinand I (1503-64) was emperor (1556-64) and King of Bohemia and Hungary (1526-64). He never really controlled Hungary, where he had to pay tribute to Sultan SULAIMAN I to retain his title. He had a strong hold on Bohemia and began the process of re-conversion to Catholicism, while in Germany he warred against the Protestants with varying success, finally ending in the religious truce of the Peace of AUGSBURG (1555). In 1546 his elder brother, CHARLES V, abdicated and Ferdinand became emperor. Ferdinand II (1578-1637) was Holy Roman Emperor (1619-37) and King of Bohemia (1617-37) and Hungary (1618-37). The THIRTY YEARS WAR, precipitated in 1618 by a revolt against his rule in Bohemia, dominated his reign. Ferdinand III (1608-57) was Holy Roman Emperor (1637-57), King of Hungary (1626-57) and Bohemia (1627-57). In 1648 he accepted the Peace of WESTPHALIA, ending the Thirty Years War. See also p 1407.

Ferdinand I (1793-1875), Emperor of Austria (1835-48), King of Hungary (1830-48). This weak sovereign let Prince METTERNICH govern for him. Faced with revolutions in Hungary, Italy and Vienna, he was forced to abdicate and flee in 1848.

Ferdinand, name of two kings of Aragon and Sicily. Ferdinand I (c. 1379-1416) was King of Aragon and Sicily (1412-16). In 1410 his uncle, Martin, died leaving vacant the thrones of Aragon and Sicily which Ferdinand eventually took in 1412. ALFONSO V, his son, succeeded him. Ferdinand II (Ferdinand the Catholic) (1452-1516) was King of Aragon (1479-1516), of Castile and Leon (as Ferdinand V) (1474-1504), of Sicily (1468-1516) and of Naples (1504-16). In

Fermanagh, a view of Enniskillen, the county town where clothing is manufactured

Ferns grow almost anywhere in the world; this tree fern is in a Cameroons' jungle

1469 he married ISABELLA I and in 1474 he became joint ruler of Castile and Leon. In 1479 he inherited Aragon from his father. With Ferdinand and Isabella became rulers of a united Spain after they had expelled the Moors from Granada in 1492. In the same year they also expelled the Jews and sponsored the voyage of Christopher Columbus to the New World. In 1478 they had established the Spanish Inquisition. Ferdinand gained much territory in Italy during his struggle there for supremacy over France in the Italian Wars (1511-13). In 1512, he occupied the kingdom of Navarre and absorbed it into that of Castile. See also pp.1282-1283.

Ferdinand I (1861-1948), Prince (1887-1908) and Tsar of Bulgaria (1908-18). In 1908 he declared Bulgaria independent of the Ottoman Empire and himself the tsar. With Russian backing he allied Bulgaria with Serbia, Greece and Montenegro in the first Balkan War (1912-13), which ended Turkish dominance in the Balkans. But in the second Balkan War (1913), Greece and Serbia joined with Romania and Turkey in defeating Bulgaria. Most of Macedonia was lost to Greece and Serbia. In 1915 Bulgaria joined the CENTRAL POWERS in WWI. After defeat in the war, Ferdinand abdicated in favour of his son Boris III. See also pp.1664-1665.

Ferdinand, name of five kings of Castile and Leon. Ferdinand I, or Ferdinand the Great, (d.1065) was King of Castile (1035-65) and Leon (1037-65). He successfully fought the Moors, making vassals of the rulers of Seville, Toledo and Saragossa. Ferdinand II (d.1188) was King of Leon (1157-88) and successor of ALFONSO VII. Ferdinand III (1199-1252) was King of Castile (1217-52) and Leon (1230-52). His mother renounced her rights to Castile in his favour in 1217 and when his father, ALFONSO IX, died in 1230 Ferdinand united the two kingdoms. He had a marked success against the Moors, at his death all of Spain except Granada had been Christianized. He was canonized in 1671. Ferdinand IV (1289-1312) was King of Castile and Leon (1295-1312). He took Gibraltar from the Moors in 1309. For Ferdinand V, see FERDINAND II of Aragon. See also pp.1282-1283.

Ferdinand V. See FERDINAND II of Aragon. **Ferdinand I** (1423-94) was King of Naples from 1458 to 1494. His succession was not recognized at first, but after war with the pretender John of Anjou, Pope PIUS II recognized him. A rebellion by nobles in 1485, backed by Pope INNOCENT VIII, was suppressed. Ferdinand II (1467-96) was King of Naples from 1495 to 1496. With Spanish aid he expelled French occupation forces in the Italian Wars. His sudden death the same year allowed the Spanish to usurp the throne. For Ferdinand III, see FERDINAND II of Aragon, and for Ferdinand IV, see FERDINAND I, King of the Two Sicilies.

Ferdinand, name of two kings of Portugal. Ferdinand I (1345-83) reigned from 1367 to 1383. His overwhelming ambition for the throne of Castile kept Portugal in almost continuous warfare with that country. A series of crushing settlements were ended when his daughter and heir married JOHN I of Castile. Ferdinand II (1816-85), king consort of Portugal (1836-53), was regent to his son, PETER V, until he came of age. In later years he was offered the Greek (1862) and then the Spanish (1869) crowns.

Ferdinand I (1865-1927), King of Romania (1914-27). He became king when his uncle, CAROL I, died in 1914. Although the Romanians were crushed by the armies of the CENTRAL POWERS in WWI, Ferdinand had won the loyalty of his people and he returned from exile in 1918. He was crowned in 1922. By the terms of the peace treaties, Romania more than doubled its territory, although many of the settlements were disputed.

Ferdinand, name of two kings of Spain. Ferdinand VI (1713-59, r.1746-59) succeeded Philip V and forced his stepmother Elizabeth FARNSESE into retirement. He kept Spain out of the SEVEN YEARS WAR

until he died. Ferdinand VII (1784-1833) became king in 1808, was deposed in the same year and was restored in 1814. His rule grew more reactionary and he set off the CARLIST wars by abolishing the law of succession to allow his daughter Isabella to succeed him. See also pp.1553-1562. **Ferdinand**, name of two kings of the Two Sicilies. Ferdinand I (1751-1825, r.1815-25) was king of Naples as Ferdinand IV (1759-1806) and of Sicily as Ferdinand III (1806-1815). His reign in Naples was interrupted in 1799 and 1806-15 by a French republican occupation. A repressive reactionary ruler, he combined his kingdoms in 1816 to form the Two Sicilies. Ferdinand II (1810-59, r.1830-59) initially considered a liberal relapsed into repressive despotism. The popular revolution of 1848 led to a constitution that he soon revoked. His isolationist rule weakened his kingdom, which joined a united Italy in 1860.

Ferdinand, name of three grand dukes of Tuscany. Ferdinand I de Medici (c.1549-1609, r.1587-1609) resigned his cardinalship to succeed his brother Francesco. His marriage to Christine of Lorraine in 1589 provided a counterbalance to Spanish influence in Italy. Ferdinand II de Medici (1610-70, r.1627-70) was a weak ruler, and Medici extravagance was allowed to drain the family fortune. In 1657 he set up the Accademia del Cimento, the first academic institution for the sciences. Ferdinand III (also Archduke of Austria) (1769-1824, r.1790-1824) had his reign interrupted by French occupation (1799-1814); he was noted for his enlightened and liberal rule.

Ferenczi, Sándor (1873-1933), Hungarian psychoanalyst. Influenced by FREUD, Ferenczi extended psychoanalysis to include permissive therapy, in which neurotics were encouraged to release their pent up emotions.

Ferguson, Adam (1723-1816), Scottish philosopher and historian. Professor of philosophy at Edinburgh University from 1759 to 1785, he was associated with the "common-sense" school of philosophy. His major work was *The Principles of Moral and Political Science* (1792).

Ferguson, Harry (1884-1960), British engineer who designed and pioneered the development of agricultural machinery, especially the Ferguson tractor. In the late 1930s he joined Henry FORD in the manufacture of tractors in the USA.

Ferguson, Howard (1908-), British composer. His first published works were performed at the Gloucester Festival in 1934. He is best known for his violin and piano sonatas and the *Partita for orchestra* (1935-36).

Ferguson, Sir Samuel (1810-86), Irish poet and antiquary. His poetry, including *Lays of the Western Gael* (1865), *Conary* (1880) and *Deirdre* (1880), was based on Irish legends.

Ferguson, William Gow (c.1632-c.95), Scottish painter of still lifes; he spent most of his career in The Netherlands.

Ferguson, Sir Bernard Edward (1911-1980), British soldier. A brigade commander in Burma in WWII, he was director of combined operations of the British army in 1945-46. He served as Governor General of New Zealand from 1962 to 1967.

Ferlinghetti, Lawrence (1919-), US author. A BEAT GENERATION poet, in 1953 he opened the City Lights bookstore in San Francisco and began publishing the works of Beat authors such as Allen GINSBERG. His own works include *A Coward Island of the Mind* (1958) and *Starting from San Francisco* (1961).

Fermanagh, county in SW Northern Ireland. It is hilly in the NE and SW and these areas are devoted largely to grazing. It is an agricultural region and the county town is Enniskillen. Area, 1,852sq km (715sq miles). Pop. 50,000.

Fermat, Pierre de (1601-65), French mathematician. With Blaise PASCAL he helped to formulate the theory of probability and, by showing that light travels along the shortest optical path (Fermat's principle), he laid the foundation for geometric optics.

Fermentation, energy-yielding process by which sugar and starch molecules, catalyzed by enzymes or micro-organisms such as yeast, are broken down anaerobically. Old-established uses, where the major products are carbon dioxide and ethanol, include bread-making, wine- and beer-brewing, cheese maturation and drug manufacture. Fermentation is a major metabolic degrading process where the products may differ due to different enzymes directing the last stages. The intoxicating effect of crushed fruits stored in a warm place may have been known as early as 4000 BC. See also pp.679, 698, 703-748.

Fermi, Enrico (1901-54), Italian physicist who worked mainly in the fields of atomic behaviour and structure, and QUANTUM THEORY. He showed that transmutations may be caused by neutron bombardment of elements and constructed the first atomic pile. He was awarded the 1938 Nobel Prize in physics, the element FERMIUM was named after him.

Ferrium, radioactive metallic element (symbol Fm) of the ACTINIDE group, first identified in 1952 as a decay product of U^{235} after it was produced in the first large hydrogen bomb explosion (1952). Properties at no. 100, most stable isotope Fm²⁵⁷ (half-life 80 days). See also TRANSURANIC ELEMENTS.

Fern, TRACHEOPHYTE or non-flowering plant that produces spores instead of seeds. They take many forms. Most ferns grow in warm, moist areas, there are about 10,000 species. The best-known genus *Platium* (BRACKEN) grows on moorland and in open woodland. Ferns are characterized by two perennial generations: the conspicuous sporophyte that possesses leafy fronds, stems, rhizomes and roots and reproduces by minute spores usually clustered on the leaves, and the inconspicuous gametophyte that resembles tiny moss and produces sperm and ova. Fronds unroll from curled "fiddle-heads" and may be divided into leaflets. Ferns were growing during the Devonian period, some 400 million years ago. Class Filicinae. See also pp.350, 351, 364-365.

Fernandel (1903-71), French film comedian, real name Fernand-Joseph Desiré Constantin. He came to prominence in 1932 in *Le Rosier de Madame Husson*, and won renown with his portrayals of Don Camillo during the 1950s.

Fernández de Córdoba, Gonzalo (1453-1515), Spanish general, known as the Great Captain, who negotiated the surrender of the Moors in Granada in 1492. During the Italian wars he was a commander of the troops of FERDINAND and ISABELLA. He became the first viceroy of Naples after 1502.

Fernández, Juan (c.1536-c.1604), Spanish navigator and explorer. He discovered and tried to colonize the Juan Fernández Islands W of Chile, descendants of the goats left by colonists were found by Alexander SELKIRK 150 years later.

Fernando Póo (Macías Nguema Biyogo), island in the Bay of Biafra, off the coast of W Africa. Discovered in 1472 by Fernão do Po, the island was ceded to Spain from Portugal in 1778 and is now a province of EQUATORIAL GUINEA. It exports cocoa, coffee and copra. The capital is Malabo formerly Santa Isabel. Area, 2,018sq km (779sq miles). Pop. 61,200. See p.2034.

Ferrar, Nicholas (1592-1637), English divine. After working for the Virginia Company (1618-25), he founded a religious community at Little Gidding, Huntingdonshire, where he studied the scriptures. The community was closed in 1647 for its HIGH CHURCH tendencies.

Ferrarese School, artistic school of the northern Italian Renaissance, originating in the late 15th century. Its leading artists included Cosimo TURA and ROBERTO, and in the early 16th century the Dosso brothers. Its style was austere, influenced by the work of MANTEGNA.

Ferreira, António (c.1528-69), Portuguese playwright and poet. He was greatly influenced by the Italian Renaissance and his studies of the classics and

produced the earliest Portuguese tragedy *Ignês de Castro* (1558). He wrote several comedies and a volume of poetry, *Poemas Lusitanos* containing over 100 sonnets.

Ferrer, José (1909-), US producer, director and actor. On stage he acted in *Phello* (1943), *Cyrano de Bergerac* (1946) and *The Shrike* (1952) and played in many films, notably *Cyrano de Bergerac* (1950), for which he received an ACADEMY AWARD, *The Caine Mutiny* (1954) and *Enter Laughing* (1967).

Ferrera, Andrea (or Andrew Ferrara), colloquialism for a high quality Scottish broadsword, greatly prized by Highlanders in the 17th and 18th centuries. There is much controversy about its origins. Sir Walter Scott conjectured that such swords were named after a specific Andrea dei Ferrara, others hold the name derived simply from the Latin for "smith".

Ferret, semi domesticated albino form of the polecat. Ferrets are small, carnivorous weasel-like animals. They have a long neck, slender bodies, long tails, short legs, pink eyes and all white fur. They are agile killers, used by hunters to kill rats and flush rabbits from their burrows. Body length 36cm (14in), weight 700g (1 1/2lb). Family Mustelidae, species *Mustela putorius*. See also WEASEL.

Ferris, Cro (1634-89), Italian Baroque painter from Rome. He completed unfinished frescoes of his master Pietro da Cortona in the Pitti Palace, Florence, and produced religious frescoes of his own in Bergamo and the altarpiece of St Ambrose Rome.

Ferrier, John Henri Fliz (1910-), Surinam politician. He was prime minister of Surinam (1955-58), and president from 1975-1980 when ousted by the army.

Ferrier, Kathleen (1912-53) British contralto. The beauty of her voice brought her international fame as a concert and opera singer before her early death from cancer. Benjamin Britten, in particular, wrote for her and she sang the title rôle in the first performance of *The Rape of Lucrece* (1946) by him at Glyndebourne, where she also received acclaim as Orpheus in *GLUCK'S ORPHEUS*.

Ferrite, one of the crystalline forms (ALLOTROPES) of the metal iron (Fe), present together with other forms in steel, wrought iron and cast iron. It is also called α -iron, and has highly magnetic properties. The name ferrite is also given to chemical compounds such as nickel ferrite (NiFe_2O_4), and zinc ferrite (ZnFe_2O_4) found naturally in rocks and also synthesized as magnetic materials. See also FERROMAGNETISM.

Ferro-alloys, combinations of silicon, manganese, chromium, molybdenum, vanadium, titanium and several other elements, added to molten steel to confer such properties as greater strength and corrosion resistance. Individually they are named after their major constituents, eg ferrochromium contains about 70% chromium, about 6% carbon and about 2% silicon as well as iron. See also ALLOY.

Ferroelectrics, crystalline materials which are naturally electrically polarized. Within the crystal of such a material lie regions or domains which are spontaneously polarized in specific directions, although these directions can often be changed by the application of an electric field. All ferroelectrics are also piezoelectrics, this leads to many applications of the materials in research and industry, eg as special ceramics. See also PZT.

Ferromagnetism, form of MAGNETISM exhibited by substances (such as iron, cobalt and nickel), with high magnetic permeabilities. See also pp 870-871.

Ferron, Jacques (1926-), Canadian author. A doctor, he wrote many plays, as well as novels and stories. His works include the short-story collection *Tales from the Uncertain Country*, which won the Prix du Gouverneur Général in 1964.

Fertile Crescent, historic region in the Middle East. It extends across the N part of the Syrian desert, and is watered by the rivers Tigris and Euphrates. The first great civilizations developed there.

Fertility, in mythology and religion, the sacred power of procreation in nature, it is

associated with fruitfulness and abundance. Fertility rites are common in agricultural societies where rituals may be performed to ensure a plentiful harvest. The rituals and associated images make great symbolic use of human sexuality. See also pp 1901, 1906.

Fertility drugs, substances administered to increase the likelihood of conception and pregnancy. One of the many causes of female sterility results from insufficient secretion of pituitary hormones, and this malfunction is often treated with either human chorionic gonadotropin or clomiphene citrate, although use of the latter has resulted in multiple births. In males, sterility may be due to sperm deficiency, although there are many causes, treatment depends on the cause of sterility but in some cases involves the administration of ANDROGENS. In cases where fertilization of the ovum does occur, but where the uterine lining is unable to support the developing foetus, the hormone progesterone may be used. But there are many cases of infertility which drugs cannot correct. Examples are those arising from anatomical disorders such as blocked FALLOPIAN TUBES in females or obstructed sperm ducts in males.

Fertilization, process in the REPRODUCTION of plants and animals, in which impregnation of an egg nucleus by a sperm nucleus forms a ZYGOTE. Stages of fertilization are penetration - sperm enters the egg - and fusion of egg and sperm nuclei. After fertilization, the zygote begins to divide. Fertilization can be external (as in fish and amphibians) or internal (reptiles, birds and mammals). See also FERTILITY. pp 6, 7, 164, 165, 382, 383.

Fertilizer, soil or artificial substance added to soil, containing chemicals to improve plant growth. Manure and compost were the first fertilizers. Other natural substances, such as bonemeal, ashes, guano and fish, have been used for centuries. Modern chemical fertilizers, containing principally compounds of nitrogen, phosphorus and potassium in powder or liquid form are now widely used. Specialized fertilizers also contain other, including trace, elements. See also pp 660-661, 664-665, 668-669, 754.

Fes (Fez), city in N central Morocco approx 242km (150 miles) ENE of Casablanca. Founded in 790, it is a sacred city of Islam containing many mosques. Industries: leather goods, metal-working. Pop. 290,000.

Fescue, GRASS native to the Northern Hemisphere and widely cultivated for pasture and fodder. Some species, such as red fescue (*Festuca rubra*), are also used in lawns. The short, five-leaved sheep fescue (*F. ovina*) grows in dense tufts on mountains and forms turf in sandy soil. Family Gramineae. There are about 100 species.

Fessenden, Reginald Aubrey (1866-1932), US engineer and physicist who was a pioneer in depth-finding and radio. Fessenden developed a new type of wireless system using continuous waves. He invented the high frequency alternator, the electrolytic detector, a system of radio telephony, the heterodyne system of radio reception and the fathometer.

Festival of Britain (1951), exhibition of British trades and arts, held to celebrate the centenary of the Great Exhibition. It was held on the South Bank of the River Thames. Built for the occasion, the Royal Festival Hall remains the centre of London's musical life. See also p 1719.

Fête galante, French 18th-century genre of painting in which courtiers are depicted amusing themselves in dancing and general dalliance in parks and other sylvan settings. WATTEAU, of whose work the term was first used (1717), was the outstanding painter in this genre, LANCRET and J B F RATER were his principal imitators.

Fetti, Domenico (1589-1624), Italian painter. His painting, mainly in the Venetian style, displayed the CHIAOSCURO technique and much of his work comprised small genre paintings of contemporary life taken from biblical themes.

Fetish, object possessing supernatural powers. Its power derives either from a deity or consecration or from a spirit

lodged within it. Claws or amulets may be fetishes. They are often carried around, especially by witch doctors, as sources of magical power.

Fetishism, in psychiatry, sexual perversion in which a particular object, eg a shoe, or a part of the body, eg the foot, becomes an essential aspect of sexual arousal and gratification. The fetish may replace a man or a woman as a sexual object. See also p 11.

Feudal system, social system that prevailed in most of Europe from the 9th century to the late Middle Ages, based on the tenure of land according to the mutual personal obligation between a vassal and his lord. The system varied widely in practice from country to country and in England was most uniformly practised after 1066. The feudal system originated in the necessity to provide for a permanent group of knights to assist the king in his wars. All land was theoretically owned by the monarch and leased out to his tenants-in-chief in return for their loyalty, attendance at the king's court and military assistance, and they in turn let out fiefs to knights in return for military service and other obligations. The Church too was sometimes required to render military service for the land it held. Many men owed fealty to more than one lord, and as the estates that carried specific obligations changed hands, men sometimes became tenants-in-chief for one estate while still vassals for another. In the later Middle Ages military service was often commuted to money payments, as war became more highly organized during the HUNDRED YEARS WAR, a new system ("bastard feudalism") of temporary obligations based on indentures replaced the more permanent land-based system. See also pp 1292, 1338-1339.

Feuerbach, Ludwig Andreas (1804-72), German philosopher. He developed G W F HEGEL's "idealism" in a materialistic direction, and applied Hegelian canons to a critique of religion in *The Essence of Christianity* (1840). God, he argued, was the alienated essence of man. Karl MARX extended Feuerbach's thesis from religion to society as a whole.

Fever, elevation of the body temperature above normal - 37°C (98.6°F) for adults caused by infection and numerous other disorders. Fever can be reduced medically (with drugs) or mechanically (by sweating or cooling), but the cause should be determined first.

Feverfew, bushy Eurasian perennial plant now widely naturalized. It has fine-lobed aromatic leaves and small white flower heads borne in open clusters. It was formerly used as a remedy for fever, hence the name. Height to 60cm (2 1/2in). Family Compositae, species *Chrysanthemum parthenium*.

Feydeau, Georges (1862-1921), French playwright. He wrote many lightly-constructed and extremely popular farces, with absurd plots and sparkling dialogue. Amongst these plays were *La Dame de chez Maxim* (1899) and *L'Hotel du Libre Echange* (1894).

Feynman, Richard Phillips (1918-), US physicist. He worked on the atomic bomb during WWII, then on quantum electrodynamics, where his invention of Feynman diagrams greatly facilitated the solution of electromagnetic interactions between elementary particles. For this work he shared the 1965 Nobel Prize in physics with Julian Schwinger and Shin'ichirô TOMONAGA.

Fez. See FES.

Fianna Fail (Warriors of Eyre), Irish political party formed by Eamon DE VALERA in 1926 to oppose the treaty of 1921 that created the Irish Free State. The party controlled Irish politics almost continuously from the 1930s to 1973, and has sought complete independence of all of Ireland, revitalization of the Gaelic language, and economic improvement in the Republic of IRELAND. See also pp 780, 1781.

Fiat, international conglomerate, based in Italy. In terms of sales in the early 1970s, it is one of the top three motor vehicle manufacturers in Europe, also producing

Ferret, a relative of the weasel, may be various colours but its eyes are invariably pink.

Kathleen Ferrier performing at the Usher Hall during the Edinburgh Festival of 1949.

Fes, showing the sheep market beside the ramparts in this ancient Moroccan capital.

Festival of Britain, a view of the Fairway with the Dome of Discovery on the right.

Fiddler crab's large claw, if caught during fighting, can be broken off to a low escape

Fidelio, a scene from the production of the opera at La Scala, Milan, in 1960-61

Field of the Cloth of Gold, a painting by Hans Holbein at Hampton Court

Grace Fields, when aged 66, rehearsing for the Royal Command Performance of 1964

ron and steel. It employs about 330,000 people. See also p.494

Fibiger, Johannes (Andreas Grib) (1867-1928), Danish pathologist. He was awarded the 1926 Nobel Prize in physiology and medicine for his discovery of a type of rat cancer that he produced experimentally by constant irritation of a nematode worm. The work suggested that further research would be worthwhile.

Fibonacci, Leonardo (c.1170-1240), Italian mathematician. He wrote *Liber abaci* (c.1200), the first Western work to propose the adoption of the Arabic numerical system. He produced the mathematical series known as the FIBONACCI SERIES.

Fibonacci series, sequence of numbers each term of which is formed by the addition of the two terms preceding it, thus (1, 1, 2, 3, 5, 8, 13, 21, the next number being 34, the sum of 13 and 21 and so on). The sequence is named after Leonardo FIBONACCI, the Italian mathematician who devised it. The sum of the ratios of each Fibonacci number to the preceding one converges to the GOLDEN MEAN which is $(\sqrt{5} + 1)$. Many natural forms - spiral shells and leaf systems - are delimited by the Fibonacci series. See also p.137

Fibre, man-made, fibre made from a synthetic resin (plastic) by forcing it through a fine nozzle (spinneret). The resin is melted and extruded through the spinneret or first dissolved in a solvent which is removed, either by hot air or by a liquid coagulating bath. The result is a monofilament which can be woven into textiles, made into rope, etc. Many textiles, particularly for clothing, use both man-made and natural polymer fibres woven together. Synthetic fibres are polymeric materials having long-chain molecules. Many types, with various properties, exist including nylon and other polyamides, polyesters and acrylics. Nylon, the first synthetic fibre, was introduced in 1938. See also pp.590-592, 896

Fibre, natural, naturally occurring fibrous material that can be made into yarn, textiles, carpets, rope, felt, etc. Natural fibres are made-up of long narrow cells. Animal products are based on protein molecules; they include wool, silk, mohair, angora and horsehair. Vegetable fibres are based mainly on cellulose; they include cotton, linen, flax, jute, sisal and kapok. Asbestos is a natural, inorganic fibre. Another class of fibres, including rayon and acetate, is obtained from natural products (usually cellulose) modified chemically. See also pp.590-592

Fibre-glass, spun glass used as a continuous filament in textiles and electrical insulation, and in a fibrous form to reinforce plastics or for sound or heat insulation. Molten glass is drawn through spinnerets or spun through holes in a revolving disk. Combined with layers of resin, fibre-glass is a popular medium for car bodies, boats, aircraft parts and containers. It resists heat, corrosion, rot and most chemicals and can be, weight for weight, stronger than steel. See also pp.403, 591

Fibrillation, small involuntary contraction of muscle, most often associated with heart disorders. Symptoms of the more common atrial fibrillation include irregular heart rate and pulse. Ventricular fibrillation can be fatal.

Fibrin, insoluble fibrous protein that polymerizes during the blood clotting process to form the basic meshwork of the blood clot. See also FIBRINOGEN pp.136-147

Fibrinogen, soluble protein synthesized by the liver and released into the bloodstream. It is converted to FIBRIN (an insoluble protein) by THROMBIN (an enzyme) during the blood clotting process. See also pp.156-157

Fibroblast, type of living cell found in the connective tissues of the body. Fibroblasts are mobilized to restore tissue damaged as a result of injuries. The elongated or irregularly shaped cells lay down the fibrous protein COLLAGEN and other structural materials of the connective tissues. See also p.157

Fibro-cartilage, form of CARTILAGE found mainly in parts of the skeleton that are subject to extreme physical tension or

compression. These include intervertebral discs and the parts of tendons that are attached to the ends of the long bones. Fibro-cartilage consists largely of the fibrous protein COLLAGEN.

Fibroid, synonymous with fibromyoma but referring usually to benign uterine tumours. The tumours are mixtures of fibre and muscle.

Fibrositis, term describing a type of muscular rheumatism resulting from inflammation of fibrous tissue or a strained muscle going into spasm, and characterized by general or localized pain and muscle stiffness. The term is rarely used by doctors.

Fibula, smaller of the two lower leg bones. It extends from the knee region to the ankle, ending in the projection that may be felt on the outer side of the ankle. See also TIBIA, p.147

Fichte, Johann Gottlieb (1762-1814), German philosopher. He explored transcendental idealism in his *Critique of Practical Reason* (1788) and embraced romantic nationalism in his *Addresses to the German Nation* (1807-08). He stressed the role of the "ego", which becomes aware of its own freedom and its unity with the absolute.

Ficino, Marsilio (1433-99), Italian philosopher. He was a Greek scholar and founder of the Florentine Academy and promoted the study of Plato. Although he was a humanist, he had leanings toward mysticism. His *Theologica Platonica*, a synthesis of Greek mysticism and Christianity, was influential in the 16th century. See also p.1380

Fiddler crab, crustacean found throughout the world that burrows in sandy beaches and drier parts of salt marshes. It is named after the male's huge claw used for signalling during courtship and mating season battles. The other claw (the "bow") is small. Width to 25mm (1in). Family Ocypodidae, genus *Uca*. See also p.325

Fidel Defensor. See DEFENDER OF THE FAITH

Fidelio, full name *Fidelio oder die eheliche Liebe* ("Fidelio, or Wedded Love"), opera by BEETHOVEN, first performed at Vienna in 1805 with the Leonore overture No. 2. The final version, with the Fidelio overture, was not produced until 1814.

Fiduciary, relationship in which a person holds something in trust for another and has rights and powers which he is obliged to exercise for that other person. He may not derive any benefit or profit from the relationship except with the other's knowledge. The relationship of a solicitor and client is fiduciary.

Fiduciary issue, issue of banknotes with out the bullion reserve to back them. The Currency and Banknotes Act 1954 authorizes the Bank of England to issue notes up to a limit set by the Treasury. The issue of notes without adequate reserves can lead to chronic inflation, as occurred in Germany in the 1920s.

Fief, in the FEUDAL SYSTEM, an area of land granted by a lord to his vassal as a reward for past services or in exchange for future military and other services and loyalty. The lord kept the ultimate rights to the land, while the vassal had its use and most of the profits from it. See also p.1338

Field, Cyrus W. (1819-92), US financier and promoter of the first trans-Atlantic telegraph cable. After two unsuccessful attempts the cable was laid by the steamship, *The Great Eastern*, in July 1866. Field also developed the Wabash railway with JAY COULD. See also p.635

Field, John (1782-1837), Irish composer and pianist who settled in Russia. He wrote mostly piano music, including seven concertos and 18 nocturnes that influenced Frédéric CHOPIN. See also pp.1471-1482

Field artillery, light- and medium-sized ARTILLERY pieces, such as guns, mortars and HOWITZERS, used in close support of troops engaged in battle. See also pp.560-561

Field emission. See ELECTRON EMISSION

Fieldfare, large European THRUSH that frequents wooded regions but feeds in open country in winter. It has a blue-grey

head and rump, chestnut back and white under-wing flashes. Length: 25.5cm (10in). Species *Turdus pilaris*.

Fielding, Henry (1707-54), British novelist. He wrote comedies such as *Historical Register for the Year 1736* and later took up political journalism. His novels include *Joseph Andrews* (1742), and *Tom Jones* (1749). See also pp.1478, 1479

Fielding, William Stevens (1848-1929), Prime Minister of Nova Scotia (1884-96) and Canadian Minister of Finance (1896-1911, 1921-25). Fielding was a Liberal and supported trade with the USA in the Knox-Frieding Pact (1911).

Field Marshal, senior rank in most European armies, symbolized by the award of a decorated baton. The modern rank dates from the early 19th century, when NAPOLEON I named some of his generals *maréchal de l'Empire*.

Field mouse. See MOUSE

Field of the Cloth of Gold (1520), conference between HENRY VIII of England and FRANCIS I of France held near Calais. Despite the great ostentation that won the occasion its name, the two kings failed to make the hoped-for alliance against the Holy Roman Emperor CHARLES V. See also p.1374

Fields, Gracie (1898-1979), British comedienne best known for her performances of comedy songs and sentimental ballads. She began her career in music hall as a child and became popular during WWII. She retired to the Isle of Capri with her third husband, Boris Alperovici.

Fields, W. C. (1880-1946), US music hall and film comedian, real name William Claude Dukerfield. He was famous for his portrayal of hard-drinking, misanthropic braggarts in such films as *Tillie's Punctured Romance* (1928), *My Little Chickadee* (1940) and *Never Give a Sucker an Even Break* (1941).

Field spaniel, breed of sporting dog developed in Britain by crossing the cocker and Sussex spaniels. Its silky coat may be flat or wavy, always a solid colour, usually black, but also red-brown. Height 46cm (18in), weight 18kg (40lb).

Field sports, term embracing those activities involving the pursuit of game. Fox hare, otter, and stag hunting, beagling, hare coursing and deer stalking, each with its own unique traditions and rituals, are all field sports. They are also called blood sports and come under heavy criticism from humanitarian opponents to the killing of animals. Those practising field sports claim they are performing an essential task by reducing numbers. Field sports also include equestrian events, angling and shooting.

Field trials, competition for hunting dogs. They are divided into five categories: beagle, hound, pointing dog, retriever and spaniel trials. In each of these the animal on land and/or in water, must perform one or more manoeuvres in the sighting, retrieving and returning of game. Field trials originated in the 17th century in England, where events are now governed by the Kennel Club.

Fiennes, Ellis (1662-1741), English diarist. Her diaries, published in 1888, give a vivid description of England between 1685 and 1703 she travelled extensively in England and enthusiastically detailed the places she visited. She also described the coronations of JAMES II, WILLIAM AND MARY and QUEEN ANNE.

Fieschi, noble medieval family of Genoa. In the mid-13th century they developed GUELPH inclinations and alliances with Angevin kings of Sicily, when Simbaldo Fieschi became Pope INNOCENT IV. These factors shaped the family destiny until the great statesman Andrea Doria put Genoa into the control of the Emperor in 1528 and the line ended Ottobono Fieschi became pope as ADRIAN V in 1276, and Caterina Fieschi (1447-1510) was later canonized as St Catherine of Genoa.

FFA, Fédération Internationale de Football Association, the governing body of soccer. It was formed in 1904 by representatives from seven European nations, today it is world-wide with six confederations: Africa, Asia, Europe (UEFA), North and Central America and the Caribbean

(CONCACAF), Oceania and South America (CONMEBOL). It organizes the four-yearly FIFA World Cup.

Fife, former county and, since 1975, region in central Scotland between the firths of Tay and Forth. The land is mostly low-lying and the principal crops are cereals, sugar-beet and potatoes, cattle and sheep are also reared. Industries include coal mining and shipbuilding. The main towns are Kirkcaldy and Dunfermline. Area 1,305sq km (504sq mi). Pop. (1975 est.) 336,700.

Fife, shrill-toned musical instrument related to the flute, but with a smaller barrel and usually six fingerholes, sometimes with keys like the piccolo. It has been used with drums in military music since the Crusades.

Fifteen, The. See JACOBITE REBELLIONS.

Fifth Column, saboteurs, spies and other non-uniformed para-military elements active behind the battle area, working to undermine the enemy's cause. The term dates from the SPANISH CIVIL WAR (1936-39) and described Republican sympathizers in Madrid at the time when four Republican columns were advancing on the city.

Fifth Monarchy Men, religious sect which flourished in England during the COMMONWEALTH and PROTECTORATE. The members' belief, derived from the fifth kingdom prophesied in Daniel 2:36-45, was in the imminent reappearance of Christ and the establishment of his new monarchy on earth. After two attempted uprisings, in 1657 and 1661, the sect's leaders were executed.

Fig, tree or shrub of the mulberry family, growing in warm regions, especially from the eastern Mediterranean to India and Malaysia. The common fig (*Ficus carica*) has tiny flowers without petals that grow inside fleshy receptacles, these become the thick outer covering holding the seeds, the true fruit of the fig tree. Height to 11.8m (39ft). Family Moraceae. See also p 176.

Fighters. See AEROPLANE.

Fighting fish, also called betta, or Siamese fighting fish, fresh-water tropical fish of Indo-China and the Malay Peninsula. It is popular in home aquariums because selective breeding has produced brilliantly coloured specimens with long, flowing fins. Males will fight each other until exhausted or injured. Length 5-7.5cm (2-3in). Family Anabantidae, species *Betta splendens*.

Figurative art, term used to apply to paintings and sculptures that represent recognizable objects or human beings. The term non-figurative art is often used instead of the term 'abstract art'. Semi-abstract paintings such as those of the Cubists are figurative paintings, insofar as they were loosely based on an objective image.

Figure skating. See ICE SKATING.

Figwort, common name for any of 3,000 or more plant species of the genus *Scrophularia*. They are perennial herbaceous plants distributed throughout the world. Most species have a strong smell and bear small, greenish-yellow or purple flowers. Family Scrophulariaceae.

Fiji, republic made up of more than 800 islands and inlets in the S Pacific Ocean. Discovered by TASMAN in 1643, the islands were annexed by Britain in 1874. It became independent in 1970 and now has dominion status within the Commonwealth. The main products are copra, sugar and rice. The capital is Suva. Area 18,272sq km (7,055sq miles). Pop. (1975 est.) 573,000. See also pp 1602, 1603, 1702, 2016.

Filament lamp, incandescent electric light first developed by Thomas ALVA EDISON. Edison's lamp used a carbon filament and was made in 1879. The bulb was partially evacuated. Modern filament lamps comprise tungsten-coiled filaments inside an evacuated glass envelope or bulb.

Filariais, group of tropical disorders caused by infection with a nematode worm, *Filaria*, carried by mosquitoes. The lymph glands are often involved, with swelling and impaired circulation in the infected region preceding lymphatic inflammation. Drug treatment reduces

the symptoms. See also ELEPHANTIASIS.

Fluorister, method of frustrating the action of a legislative assembly by making long speeches. It has particular reference to debates in the US senate, where the device of reading long passages from the Bible has been used by conservative senators from the south to prevent the passing of liberal legislation.

Filippo, Eduardo de (1900-), Italian playwright and actor. His dialectical comedies, most of which deal with his life in his birthplace, Naples, include *Questi fantasmi* (1946) and *Napoli milionaria* (1945). He also wrote *Saturday Sunday*, *Monday* and *Filumena*, produced in London in 1973 and 1977 respectively. *Il paese di Pulcinella*, a volume of verse, was published in 1951.

Film festivals, gatherings at which new films are shown to critics and members of the industry, prizes are usually awarded. These important gatherings provide a showcase for new productions and a spur to foreign sales. The Venice Film Festival was first held in 1932, Cannes following in 1947. The other top festivals include West Berlin (from 1951) and Moscow (1935, revived 1957), which alternates with Karlovy Vary, Czechoslovakia (1954). New York, Cork and Edinburgh also hold highly regarded festivals. There are also specialist festivals, such as those held at Trieste (for science fiction) and Oberhausen, West Germany (short films).

Film, photographic, sensitized strips of cellulose acetate or other plastic, coated on one side with a light-sensitive emulsion, used to record photographic images. The emulsion of a black-and-white film consists of a suspension of finely divided grains of silver bromide in gelatin. After exposure the film is kept in darkness until the latent image is made visible by developing and fixing. Film is rated according to its 'speed' or sensitivity to light. This is a measure of the size of the silver bromide grains contained in the emulsion. A 'fast' black-and-white film (high ASA or DIN numbers) gives rise to a grainy, high-contrast image, whereas 'slower' film captures a greater range of tones. Within the two rating systems an ASA number of 50 is equivalent to a DIN number of 18. See also pp 628, 633.

Filter, device for separating solid particles from a liquid or gas. The process is known as filtration. Many complex forms of filter have been devised for various uses. Most cars have a number of filters, for air, petrol and oil. These operate either by trapping solid particles in porous materials such as paper or meshes, or by circulating the material to be filtered through a maze, the pockets of which trap particles, as in the air filter.

Filtration, process of removing solids from liquids by passage through a suitable medium such as filter paper, glass wool or sand. See also pp 898, 899.

Final Solution, policy adopted by HITLER by 1942 to exterminate the Jewish race systematically. Before this time he planned other means of dealing with the Jews, such as transporting them to Madagascar. The adoption of the final solution led to the full utilization of extermination camps such as AUSCHWITZ.

Finance, in economics, loaning and borrowing of capital to facilitate the purchase, manufacture, development or distribution of goods and services. Finance takes many forms, ranging from the supply of capital necessary to build a power station to that needed to buy furniture. Loans of money are paid back with interest expressed as a percentage over varying lengths of time.

Finbackwhale. See RORQUAL.

Finch, Peter (1916-77) British actor. He played in many stage productions after 1949, but he was most famous for his strong film performances, including roles in *The Trials of Oscar Wilde* (1960) and *Far From the Madding Crowd* (1967). He died shortly after completing *Network*, for which he was awarded a posthumous Oscar.

Finch, any of a family (Fringillidae) of small or medium-sized birds, including SPARROWS, CARDINALS, CANARIES, BUNTINGS

and GROSBEAKS. They are found in most parts of the world, except for Australia, New Zealand and the Pacific islands. Most have a cone-shaped bill and feed on seeds, although some eat fruit or insects. Some British 'finches', such as the bullfinch and goldfinch, belong to another family, Ploceidae.

Fine Gael, Irish political party. It was founded in 1933 as a successor to the party under William COSGRAVE which had held power since the inception of the IRISH FREE STATE. The party has four times held office in coalition with the Labour Party, in 1948-51, 1954-57, 1973-77 and from 1981. In the latest government its leader, Dr Garrett Fitzgerald was made prime minister. See also pp 1780, 1781.

Fingerprint, pattern of ridges in the dermis or deeper skin on the end of the fingers and thumbs. Fingerprints are specific to an individual and remain unchanged in pattern throughout life, for this reason they are useful as a means of identification. Criminological use was first made in Argentina in 1888. The Gaton-Henry system was adopted by Britain's Scotland Yard in 1901, and is the most widely-employed system in the world. Dactyloscopy, the technique of fingerprinting, involves the cleaning of the fingertips in a solvent such as ether, drying them and then rolling each on a glass surface coated with black printer's ink. Each may then be 'printed' on to a prepared index card. They may be categorized by the loops, arches and whorls made by the ridges in the dermis. Methods of classifying and filing fingerprints using a computer are being introduced. See also pp 651, 627, 650, 651.

Finland (Suomi), republic in N Europe. Most of the country is low-lying, characterized by many lakes and rivers. There are also thousands of offshore islands. Only a small percentage of land is cultivated, as the economy has always depended on timber and forest-based industries. Area: 337,009sq km (130,092sq miles). Pop. (1976 est.) 4,774,000. See p 203b.

Finland, Gulf of, a part of the Baltic Sea, between Finland and the USSR. The chief ports are Leningrad and Tallinn in the USSR, and Helsinki in Finland. Width 72-137km (45-85 miles), length 419km (260 miles).

Finlay, Carlos Juan (1833-1915), Cuban physician who suggested in 1881 that yellow fever was spread by the mosquito. In 1900 a US medical delegation headed by Walter Reed went to Cuba to help confirm the hypothesis.

Finnegans Wake (1939), novel by James JOYCE. A Dublin pub-keeper's dreams portray the cyclical history of civilization, in which Joyce employs the stream of consciousness technique. Its linguistic complexity makes it demanding for the reader. See also p 1774.

Finney, Albert (1936-), British stage and film actor. He became known for his performances in modern plays such as *Billy Liar* (1960), and John OSBORN's *Luhrer* (1961), and has made a number of films including *Tom Jones* (1963) and *Gumshoe* (1971). He has also acted in many classical productions, such as *Hamlet* and *Tamara Lane* with the National Theatre of Great Britain as well as directing the film *Charlie Bubbles*.

Finney, Tom (1922-), British footballer who won 76 national caps (1946-58) in four different positions, scoring 30 goals. He played for Preston North End from 1946-60 and is best remembered as a skilful winger.

Finn Mac Cumhail, or Finn MacCool (fl. 2nd or 3rd century AD), semi-mythical Irish leader of a group of soldiers known as the Fenians. Their exploits were recorded in many ballads and poems, including those said to have been by OSSIAN.

Finnmark, most northerly county in Norway, bounded by Finland (S), the Arctic Ocean (N), the Barents Sea (E) and the USSR (SE). The chief occupations are fishing, farming and mining. The capital is Vadsø. Area 48,648sq km (18,783sq miles). Pop. (1972 est.) 77,100.

Fife, an instrument thought to have been taken to Britain from Switzerland in the 1500s

Fighting fish are so belligerent that one will even attack its own reflection in a mirror

Filtration using paper and a funnel, still commonly used in chemistry laboratories

Finch, some of whose species are brilliantly coloured although most are dull as songwriters

Ronald Firbank was little regarded in his lifetime, but his work is now more popular

Fire extinguisher, different types are required, depending on the material burning

Firefly, attracted by flashing lights, is one of the few insects to find a mate by sight

Fire of London in an engraving after a painting of the great disaster by Liaven Verschour

Finno-Ugric languages, group of AGGLUTINATIVE LANGUAGES spoken by more than 22 million people in Finland and Norway, in Estonia and Karelia (in the USSR), in various areas at the end of the Volga river and each side of the Ural Mts (also USSR) and in Hungary. The Finnic branch includes Finnish, Estonian, Lappish, Mordvinian, Mari, Komi, Votyak, Cheremiss and Zynan; the Ugric branch comprises Hungarian, Osyjak and Mansi (Vogul). Although together with the SAMOYED languages, Finno-Ugric is said to make up the URALIC sub-family, efforts have been made to relate the group to several ancient tongues, notably Sumerian.

Finsen, Niels Ryberg (1860-1904), Danish physician. He studied the physiological effects of light, particularly the blue end of the spectrum. He set up a clinic in Copenhagen to study light therapy for skin diseases, and was awarded the 1903 Nobel Prize in physiology and medicine.

Finzi, Gerald (1901-56), British composer. He wrote chiefly vocal works, including *Dies Natalis* (1939), a setting of passages from Thomas Traherne, and *Intimations of Immortality* (1950), a setting for tenor, chorus and orchestra of the WORDSWORTH ode.

Fjord, or fjord, narrow, steep-walled inlet on a sea coast. Fjords are found in glacial regions, and so it is assumed that these deeply-cut valleys were formed by GLACIERS as they moved towards the sea. See also pp 224 225, 224 225.

Fir, any of a number of evergreen trees of the MME family, native to cooler, temperate regions of the world. They are pyramid-shaped and have flat needles and erect cones. Species include the silver and balsam firs. Height, 15-91m (50-300ft). Family Pinaceae; genus *Abies*.

Firbank, Ronald (1886-1926), English novelist. His novels, predominantly in dialogue, have little plot or characterization and are marked by an absurdist wit. They include *Vainglory* (1915), *Caprice* (1917), *The Flower Beneath the Foot* (1923) and *Sorrow in Sunlight* (1925).

Firdausi (935-1020), Persian poet, real name Abul Kasim Mansur. Little is known about his life, but he wrote the *Shah Nama* (Book of Kings), an epic poem of more than 50,000 couplets about the history of Persia. The work, which created the traditions of Persian poetry, was presented to Mahmud of Ghazni in 1010.

Fire, combustion of inflammable materials, usually accompanied by flames or smoke. Chemically it is an example of rapid oxidation, and an abundant supply of air or oxygen is generally necessary for a fire to continue to burn. Primitive man learned to control fire for warmth, cooking, making pottery and metal-working. Although fundamental to much technology, uncontrolled it can cause great devastation. The power of fire has always fascinated man and influenced his beliefs and imagination. See also pp 387, 392 393 396.

Firearm, weapon from which a projectile is fired, generally by the expansion of gases after the rapid combustion of gunpowder or other explosive. Although occasionally used to describe an ARTILLERY piece, the term generally means a small arm - a weapon carried and fired by one man or a small group of men.

Firearms were used in Europe in the 14th century. They were, however, ineffective in close combat until c 1425, when a primitive trigger to bring a lighted match into contact with the gunpowder charge was invented. Such firearms, called MATCHLOCKS, were heavy and cumbersome, and needed a constantly lit match. The lighter FLINTLOCK (which used the spark produced by flint striking steel to ignite the powder) superseded the matchlock in the mid-17th century and became the main infantry weapon for more than 100 years. Cavalry of this period often used the efficient, but more expensive, WHEEL LOCK.

At the end of the 18th century most firearms were still single-shot muzzle-loading and smoothbore, working on much the same principle as 14th-century

guns. During the 19th century there were great changes. In 1805 the Rev Alexander Forsyth discovered the explosive properties of mercury fulminate, and together with the percussion cap invented in 1815 it provided a surer, more efficient means of detonation, permitting the development by 1865 of both the centre-fire cartridge (which has basically been the type of ammunition used in firearms ever since) and breech loading, not previously practicable.

Another major 19th-century advance was rifling, the cutting of spiral grooves along the inside of a barrel to make the bullet spin in flight, thus vastly increasing accuracy. The technique had been tried centuries before, but it was not until 1849 and the invention of the snare rifle that rifling became practical for a mass-produced weapon.

During the 1830s Samuel Colt perfected the revolver, a PISTOL which could fire several shots without the need to reload. By the 1880s magazine RIFLES were also in use, and were made more effective when a bolt action was incorporated after 1884.

The next step was towards a weapon that could fire a continuous stream of bullets. Manually operated systems had been tried (eg the GATLING GUN), but the first modern MACHINE GUN was the MAXIM GUN, invented in the 1880s, which used the recoil energy of the fired bullet to push the next round into the breech and recock the weapon. Guns of this type dominated the trench warfare of WWI, and by WWII more portable automatic weapons, light machine guns such as the BREX GUN and SUB-MACHINE GUNS, were in use.

Most 20th-century firearms operate on principles established in the 19th century. Newer developments, under the stimulus of the emergence of aerial warfare and the TANK, include gas-operated rifles, recoilless rifles, firearms with several rotating barrels and extremely high rates of fire and small firearms that use explosive bullets. See also pp 556-559, 556-559 1668 1810.

Firebird (1910), ballet in three scenes by Michel FOKINE with music by Igor STRAVINSKY, first produced in Paris by the BALLETS RUSSES. The story is taken from a Russian fairy-tale about Ivan, a prince who captures the Firebird. In return for her freedom she gives him a magical feather with which he may summon her in time of danger.

Fireblight, highly infectious and destructive disease that attacks apples, pears and related fruit trees, causing a blackened, scorched appearance of leaves and twigs. Other symptoms of the disease, caused by the bacterium *Erwinia amylovora*, include cankers on the stems and discoloured flowers and fruit. Control of the disease is difficult and involves spraying the affected plants with antibiotics. Some tree varieties are resistant to the disease.

Firebrick, brick formed in a variety of shapes for use in structures, such as furnace linings, which are exposed to high temperatures. Firebrick is composed of FIRECLAY and other non-metallic, high-melting-point minerals, particularly those rich in silica, aluminium oxide, magnesium and carbon.

Fire brigade, body of professional FIRE-FIGHTING personnel. Although references to such bodies date possibly back to 4000 BC in China and to the 1st century BC in Rome and while English legislation paid special attention to the use of fire-resistant building materials in 1189 and 1212, it was not until after the Great Fire of London (1666) that regular bodies of firefighters drawn from the ranks of Thames watermen were established. Even these, such as the Phoenix (1680) and the Hand-in-Hand (1698) were not officially appointed bodies but affiliated to the fire assurance companies who retained them, and strictly forbidden to assist householders whose property was not insured with their respective employers. In 1709 and 1774, Parliament insisted that London parishes should provide engines and "proper ladders of one, two and three storeys high", but no real provision was

made for operating such equipment until in 1832 the brigades of more than 30 rival insurance companies were merged into the London Fire-Engines Establishment.

In 1904, the London Fire Brigade came under the aegis of the LCC and further legislation in 1938 anticipated the severe demands of WWII and insisted on keener co-operation between local brigades supported by well-trained part-time volunteers. In most countries this formula has been adopted and endorsed by the OICB and the International Technical Committee for the Prevention and Extinction of Fire (CTIF).

In Britain the 63 fire authorities employ about 34,000 professional firemen assisted by 17,500 (1977) part-timers. West Germany has 59 such brigades, in addition to the Brigade des Sapeurs-Pompiers in Paris, which was founded by Napoleon in 1811. France maintains forces whose maximum operational radius is no more than 11km (6.8 miles). Australian protection is in the hands of local boards comprising state government, local authority and insurance interests.

Fireclay, clay that can withstand high temperatures without becoming deformed. It is used for making FIREBRICK, crucibles and many refractory shapes. Fireclay approaches KAOLIN in composition, better grades contain at least 35% alumina (Al₂O₃) when fired.

Fireclamp, in coal mining, inflammable and explosive gas emitted by coal seams. It is composed mostly of methane (CH₄) but also contains some hydrogen, oxygen and carbon dioxide, and occasionally a little ethane (CH₃CH₃). Fireclamp has caused many disastrous pit explosions; it is detectable with a Davy lamp (after Sir Humphry DAVY), the flame of which elongates when the gas is present.

Fire extinguisher, any device used to put out a fire - including a blanket or a bucket of water or sand - but especially a canister filled with chemicals, usually including liquid carbon dioxide, under high pressure, and halogenated hydrocarbons such as carbon tetrachloride, the vapours of which are heavy and so effective in smothering flames. A different kind of chemical extinguisher sprays powdered sodium bicarbonate which, when heated by the flames, releases carbon dioxide and water. Others spray a mixture of water and a foaming agent.

Firefighting, broad term that includes the prevention, detection and extinguishing of fire, especially when lives, property or ecosystems are threatened. Fire prevention involves the control of fire hazards in industry and the home; it includes regulations to produce fireproof materials for the manufacture of goods. Fire protection involves the detection and extinguishing of fires and includes measures aimed at the reduction of losses of life and property. It therefore involves the compulsory provision of fire escapes, fire extinguishers, organized fire drills, fire-fighting personnel, and overhead heat-sensitive equipment in large buildings, designed to sound an alarm or turn on sprinklers if a fire starts. Public firefighting vehicles carry water, flame-retarding foam, ladders and heavy equipment to deal with most problems that could arise at the scene of a fire. At large airports these appliances or tenders may be specialized to carry enormous quantities of foam-producing chemicals to smother fires that result from the spillage of fuel. See also p 599.

Firefly, light-emitting beetle found in moist places of temperate and tropical regions. Organs underneath the abdomen usually give off rhythmic flashes of light that are typical of the species. The luminous larvae and wingless females of some species are called glow-worms. Length to 25mm (0.9in). There are 1,600 species. Family Lampyridae.

Firenze. See FLORENCE.

Fire of London (2-6 Sept. 1666), fire that destroyed most of the City of London. It started in a baker's shop in Pudding Lane, on a site now marked by The Monument, and a strong east wind spread it quickly through the closely-packed wooden

houses. The fire provided an opportunity (which was never completely realized) for rebuilding London on a more spacious plan. See also p.1429.

Fire-proofing, impregnation of inflammable materials such as household carpets, curtains and theatre hangings and scenery with fire-retarding chemical solutions containing such salts as ammonium sulphate and ammonium phosphate. Lightweight textiles can be fire-proofed with similar solutions. See also asbestos.

Firestone, Harvey Samuel (1868-1948) US industrialist. He founded the Firestone Co. in Akron in 1900, and was the first to manufacture the pneumatic tyres used on the Ford Model T car. In 1926 he founded rubber plantations in Liberia.

Fireworks, or pyrotechnics, controlled explosives (and their spectacular display) that are intended for visual rather than destructive effects. They range from light and sparkle-emitting capsules and coils, to rockets that burst into miniature "galaxies of stars" after a short near-vertical flight. Fireworks began with the ancient Chinese, who first used them in the 8th or 9th centuries. They spread to Europe in the 12th and 13th centuries, along with the military uses of gunpowder. Besides gunpowder, potassium chlorate mixtures came to be used as explosives and propellants, iron filings and magnesium and aluminium powders were incorporated to provide sparkle and brilliance, and fireworks were coloured brightly by the inclusion of salts of the metals sodium (yellow), barium (green), strontium (red) and copper (blue). Fireworks find various applications in Very lights and distress rockets and flares. See also pp.582-583.

Firing, heating of ceramics until they are chemically changed; the process prevents a return to the plastic state. Many ceramic clays contain matter that must vitrify (fuse) to render the ware non-porous. This may require temperatures of up to 1,450°C (2,650°F). Firing is done in kilns, or ovens. See also pp.546-547, 596.

Firn, hard-packed mountain snow that has been converted into granular ice in a mountain glacier and, with an accumulation of broken rock materials at its base, digs out round basins called cirques. See also pp.224, 224.

First aid, emergency attention administered by a person without sophisticated medical training. Some form of training is, however, advisable in order to learn the few basic techniques that may help to save life.

First of June, Battle of the (1794), naval engagement between British and French fleets off the coast of Brittany. The French under Louis Villaret de Joyeuse protecting a convoy of US ships carrying grain to Brest, were attacked by Admiral Richard Howe. The convoy escaped but the French lost six ships.

First World War. See WORLD WAR I.

Firth, Sir Raymond William (1901-) British anthropologist. Born in New Zealand, he carried out much of his work in the Pacific region. He was professor of anthropology at London 1944-68, and wrote *Human Types* (1938) and *Social Change in Tikopia* (1959).

Firth of Clyde. See CLYDE, FIRTH OF.

Fischer, Emil Hermann (1852-1919), German chemist who was awarded the 1902 Nobel Prize in chemistry for his work on the synthesis of sugars and purine substances. His important organic chemistry research contributed substantially to the knowledge of purines. He was the first to recognize the importance of stereochemistry and he was fundamental in establishing enzyme chemistry. He synthesized glucose and fructose in addition to several other sugars.

Fischer, Ernst Otto (1918-), German chemist. He became professor of chemistry in Munich in 1957 and was awarded the Nobel Prize in chemistry in 1971 jointly with Geoffrey Wilkinson for their work on organometallic chemistry.

Fischer, Hans (1881-1945), German biochemist who received the 1930 Nobel Prize in chemistry for his structural studies of CHLOROPHYLL and of the red blood pig-

ment haem. His research indicated the close relationship between these two substances, and he was able to synthesize haem and almost completely to synthesize one of the chlorophylls. He also studied CAROTENE.

Fischer, Johann Michael (1692-1766), German architect. His best-known work is the BENEDICTINE abbey church at Ottobeuren (1748-67) which has an exuberantly designed interior. His rococo style is also seen in the church at Rottam-Inn (1760) and the Church of St Anna in Munich (1727-36).

Fischer, Robert James ("Bobby") (1943-), US chess player, world champion (1972-75) and US champion (1958-60, 1962-63). A temperamental and controversial competitor, in 1975 he refused to defend his world title.

Fischer von Erlach, Johann Bernhard (1656-1723), Austrian architect who combined PALLADIAN and other styles to create a new style, AUSTRIAN BAROQUE. His many notable palaces and churches include the Schönbrunn Palace (1696-1711), and the Karlskirche (1716), both in Vienna.

Fischer-Dieskau, Dietrich (1925-), German baritone. One of the foremost operatic singers of the 20th century, he was an extremely versatile singer, appearing in recitals, as soloist with orchestras, in operatic roles and in recordings. He is also an outstanding interpreter of LIEDER.

Fish, cold-blooded, aquatic vertebrate animal characterized by fins, gills for breathing, a streamlined body almost always covered by scales or bony plates on to which a layer of mucus is secreted, and a four-chambered heart. Fish are the most ancient form of vertebrate life, with a history of about 450 million years. They reproduce bisexually and fertilization may be external or internal. The eggs develop in water or inside the female, according to species. Fish have lateral line organs, which are fluid-filled pits and channels that run under the skin of the body. Sensitive fibres link these channels to the central nervous system and detect changes of pressure in the water and changes of strength and direction in currents.

About three-quarters of all fish live in the sea, the remainder are freshwater species that live in lakes, rivers and streams. A few fish, such as SALMON and EELS migrate freely between salt and fresh water habitats. There are more than 22,000 species of bony fish and they represent about 40% of all living vertebrates. They are divided into 34 orders and 48 families. The classification of fish varies. They are usually divided into two superclasses, AGNATHA, which are jawless fish, including the HAGFISH and LAMPREY, and PISCES. PISCES are divided into two main classes, Chondrichthyes (cartilaginous fish), including the subclasses Elasmobranchii (SHARKS, SKATES and RAYS) and Holocephali (CHIMERAS); Osteichthyes (bony fish), including subclasses of soft-rayed fish (ANGLERFISH and LOBFISH), and the higher bony fish. See also pp.5, 55-61, 63, 184, 276, 341, 738-745, 754, 760.

Fishbourne, Roman palace in Sussex, England, dating from the 1st century AD. It is one of the largest Roman palaces outside Italy, and was probably built for a British chieftain, Cogidubnus, who supported the Romans. It has several fine mosaic floors and a formal garden. The palace was destroyed by fire in the 3rd century and not rediscovered until 1960.

Fisher, Saint John (c.1489-1535), English Roman Catholic prelate. Fisher opposed HENRY VIII's proposed divorce from CATHERINE OF ARAGON in 1529. He was tried and executed for denying that Henry was supreme head of the church under the Act of Supremacy. He was canonized in 1935.

Fisher, Andrew (1862-1928), Australian politician, b. Scotland. He entered the first federal parliament in 1901 as a Labor member and was Prime Minister in 1908-09 and 1910-13. He was Australian high commissioner in London 1916-21.

Fisher, Herbert Albert Laurens (1865-1940), British statesman and historian. As President of the Board of Education

(1916-22) his education bill of 1918 established compulsory education in England to the age of 14.

Fisher, John Arbuthnot ("Jackie"), 1st Baron Fisher of Kilverstone (1841-1920), British naval officer. He achieved prominence in the Crimean and China wars (1859-60). As First Sea Lord (1904-15), he reorganized and re-equipped the Royal Navy. He resigned in opposition to the disastrous Gallipoli campaign of WWI.

Fisher, large, long-tailed MARTEN of North America that has commercially valuable fur, which is brown to black with white-tipped outer hairs. Good climbers and carnivorous, fishers are among the few known predators of porcupines. Length 1m (3.5ft); weight: to 6.8kg (15lb). Family Mustelidae, species *Martes pennanti*. See also SAMT.

Fishing, popular fresh-water or marine sport. The two basic types of fresh-water fishing are fly-casting and bait-casting. The object is to "play" the fish rather than reel it in forcibly, so the equipment used for rods and reels is light. Bait is either live (worms, insects or minnows) or artificial (flies or lures), and bait-casting requires a sturdy rod and reel. Salt-water fishing generally requires heavier rods and reels, and includes trolling and casting from the beach, or trolling and sea-bed fishing. Fishing is also a major industry and provides food and employment for many maritime nations. See also pp.1930-738, 739, 744-745.

Fishing cat, small wild cat of forests and grasslands of South-East Asia. It lives on the banks of streams from which it catches fish, rodents and birds are also taken as prey. Length 1.6m (3.4ft) overall. Family Felidae, species *Felis viverrina*.

Fishing eagle. See EAGLE, OSPREY.

Fish louse, common parasitic CRUSTACEAN found on the skin or in the gill cavities of fresh-water fish. It has a flattened body, one pair of compound eyes and a shield-like carapace. It uses a poisonous spine and two suckers on its jaws to attach itself to the host. Order Branchiura.

Fiske, Bradley Allen (1854-1942), US naval officer and inventor. He invented an electrically powered turret, turbine-driven torpedo, telescopic sight and electric rangefinder, the latter used successfully in the battle of Manila Bay in 1898.

Fission, form of asexual reproduction in which the parent cell divides into two or more daughter cells. Binary fission produces two equal daughter cells (as in bacteria and blue-green algae). Multiple fission produces 4, 8 or 16 daughter cells each developing into a new organism. See also pp.10-11.

Fission, nuclear. See NUCLEAR ENERGY.

Fistoulari, Annot Grigorevich (1907-), Russian conductor. At the age of seven, he conducted Tchaikovsky's sixth symphony in Kiev. In 1937 he made his first tour of the USA, after which he was associated with the London Philharmonic Orchestra.

Fitch, John (1743-98), US inventor. In 1787 he built what is believed to be the first US steamboat. He constructed and operated another steamboat on the Delaware River (1787-90), having secured exclusive rights to operate in New Jersey, Pennsylvania, New York, Delaware and Virginia.

Fitch, Ralph (fl.1583-1611), English explorer. He travelled overland to India in 1583, and traded with Mogul emperor AKBAR. Three years later he became the first European to visit Burma and Siam.

Fitness, physical, capacity of the body to withstand stress, to perform work and to resist disease. The type of fitness required by an individual depends on the types of stress he must overcome. Short spells of maximum effort lasting less than 10 seconds require anaerobic fitness, which is the state in which the body can function without oxygen in the blood. Aerobic fitness is required for efforts of longer duration. Orthostatic fitness gives the body the ability to adjust to a sudden change in posture.

Fitt, Gerard (1926-) Northern Irish politician. He represented Belfast West at Westminster as a Social and

Firing of china and ceramics is today carried out under highly mechanized conditions.

Emil Fischer was a chemist who taught at the university of Berlin from 1892 until his death.

Fisher, a member of the weasel family, also known as Pennant's marten and black cat.

Fishing, some bait hooks, floats, nets, rods and other tackle used in this popular sport.

Flagellants, the bishop's streamer reads "They sacrifice to Satan, and not to God."

Flamboyant style, by the middle of the 15th century, dominated French architecture

Flamingo mates once a year, its single egg taking about 30 days to hatch

Bud Flanagan, the comedian, as a debutante for a scene in *Clown Jewels*

Democratic Labour Party member since 1966. He was leader of the party from 1970-1979 and was the only SDLP candidate to be returned at the two elections of 1974. He was also a member of the Northern Irish Constitutional Convention of 1975-76. He now sits as a Socialist.

Fitzgerald, Edward (1809-83), British author and translator. His most noted achievement was his free translation from the Persian of the *Rubaiyat of Omar Khayyam* (1859). He also translated *Calderon* (1853) and *Aeschylus* (1865).

Fitzgerald, Ella (1918-), US jazz singer who won world acclaim for her smooth, effortless style in jazz, blues and popular "standards" by George Gershwin and Cole Porter. Her first hit song was *A Tisket a Tasket* (1938). A cabaret and concert-hall artist, she has toured many countries and made numerous recordings. **Fitzgerald, Francis Scott Key** (1896-1940), US author. He began his first novel, *This Side of Paradise* (1920), while in the army, which he entered in 1917. This book, with *The Beautiful and the Damned* (1922), established him as a chronicler of the "Jazz Age". During most of the 1920s he lived in Europe mingling with wealthy and sophisticated expatriates. His masterpiece, *The Great Gatsby*, was published in 1925. His last novels were *Tender is the Night* (1934) and the unfinished *The Last Tycoon* (1941). See also pp. 1773.

Fitzgerald, Garret, Prime Minister of Eire from 1981 and leader of the Fine Gael Party.

Fitzgerald, George Francis (1851-1901), Irish physicist who researched into electrolysis and electric waves and who is noted for his electromagnetic theory of radiation. As an explanation of the MICHELSON-MORLEY EXPERIMENT, he suggested the theory that objects change length (the Lorentz-Fitzgerald contraction) due to their movement through the ether.

Fitzgerald, James Edward (1818-1896), New Zealand politician and journalist, b. Britain. He was leader of the House of Representatives in New Zealand's first parliament. He founded the Christchurch newspaper *The Press* in 1857.

Fitzgerald, Robert David (1902-), Australian poet. His work, such as *Between Two Tides* (1952) and *This Night's Orbit* (1953).

Fitzherbert, Maria Anna (1756-1837), wife of GEORGE IV of England when he was Prince of Wales. They were wed secretly in 1785, but the marriage was illegal by the Royal Marriages Act (he being underage). She lived with him until 1803 and remained close to him after his official marriage to CAROLINE OF BRUNSWICK.

Fitzroy, Robert (1805-65), British naval commander, explorer and meteorologist. He was captain of the *Beagle* (1828-36), on which CHARLES DARWIN served as naturalist, and assisted Darwin in writing an account of the voyages. He later served as governor-general of New Zealand (1843-45).

Fitzroy, two rivers in Australia. One, in a central Queensland, is formed by the confluence of the Dawson and Mackenzie rivers. It flows e to the Pacific Ocean at Rockhampton. Length 290km (180 miles). The second, in a Western Australia, rises in the King Leopold Mts and flows w and nw to King Sound.

Fitzsimmons, Robert ("Bob") (1862-1917), British-born boxer who began his career in New Zealand and earned world fame in the USA. He was world middleweight champion (1891-97), and took the world heavyweight title from JAMES J. CORBETT (1897) but lost it to JAMES J. JEFFRIES (1899). He later became world light-heavyweight champion (1903-05).

Fitzwilliam, William (1526-99), English political figure. Lord deputy of Ireland (1572-75, 1588-94), he suppressed rebellions caused by the "plantation" scheme of settling Scots and English in Ireland.

Fiume. See **RIEKA**.

Five, The, or "The Russian Five", group of prominent Russian composers who consciously promoted nationalism in Russian music in the late 19th century. Its

members were MILI BALAKIREV, Alexander BORODIN, Cesar CUI, Modest MUSORGSKY and Nikolai RIMSKY-KORSAKOV. See also p. 1583.

Five-leaved sheep fescue. See **FESCUE**.

Five Nations Indians. See **SIX NATIONS INDIANS**.

Fives, game in which players alternately hit a small cork-and-rubber ball against a wall with a gloved hand. There are three major kinds: Eton, Rugby and Winchester, named after the British schools where they were devised. Eton fives is played to eccentric rules by two pairs in a three-walled court incorporating a buttress and step. This resembles the playing conditions of the early 19th century, when boys hit a ball against the chapel wall. Only the serving side can score, first to score 12 wins, usually in five games. Rugby and Winchester fives are played as singles or doubles in a four-walled court, the Winchester variation having a small buttress on the left-hand wall. Usually the first to score 15 (or sometimes 11) wins in Rugby fives and only the receiver can score, in Winchester fives it is the server. **Five-year Plan**, series of economic goals, especially those set by the USSR. Introduced by JOSEPH STALIN in 1928 to develop the country as quickly as possible, the ultimate aim was an agriculturally and industrially self-sufficient nation. The idea was to increase production by setting targets for manufactured goods and agricultural products, bonuses were given when quotas were reached ahead of time. Other Communist countries as well as some developing nations have adopted the practice as a spur to economic growth. See also p. 1678.

Fixation of nitrogen, chemical or biological process that converts atmospheric nitrogen into useful or life-supporting chemical compounds. In industry, nitrogen is fixed using the HABER PROCESS to make ammonia. In biology, certain bacteria and blue-green algae fix nitrogen, either freely in the soil or as symbionts in the roots and other parts of higher plants. See also **NITROGEN CYCLE**.

Fixer, photographic, solution in which photographic film or paper is immersed after development to remove unexposed and unreduced silver halide and render the image stable. Sodium thiosulphate (hypo) is usually used, often acidified to avoid staining. See also pp. 629, 629.

Fizeau, Armand Hippolyte Louis (1819-96), French physicist, the first to accurately determine the speed of light in both air and water. Fizeau also took (with Léon Foucault) the first clear photograph of the sun. He researched the polarization of light, the expansion of crystals and the DOPPLER EFFECT, and looked for methods of increasing the life of Daguerotypes.

Flag. See **TRIS**.

Flag, symbol of national identity deriving from earlier standards of personal or local significance. The modern national flag has its origin in the standards of the rulers and armies of ancient Middle Eastern civilizations, the oldest flag in existence being a metal one from Iran, about 5,000 years old. See also pp. 1956, 1963.

Flagellants, sinners who regard flagellation, or being flogged, as a means of doing penance. The now almost obsolete practice has at various times been part of many religions. The earliest Christian flagellants were active in the 4th century, in the mid-13th century they became widespread in Germany and Italy. Fear of the BLACK DEATH in the 1340s caused itinerant flagellant groups to become common throughout Europe, but as they went from town to town imploring the populace in general to repent, mortify themselves and be saved, usually under the direction of a priest, they may have been disease-carriers themselves. They were condemned by the pope in 1349. Flagellation reappeared for a time under the auspices of the JESUITS in the 16th century.

Flagellate, any of numerous single-celled organisms that possess, at some stage of their development, one or several whip-like structures (flagella) for locomotion and sensation. Most have a single nucleus and many have a thin firm covering (pel-

licle) or a jelly-like coating composed of cellulose or chitin. They are divided into two major groups, the phytoflagellates resemble plants, the zooflagellates resemble animals. Reproduction is by mitosis (asexual) or sexual, involving the production of GAMETES. Flagellates may be solitary or colonial. See also pp. 174, 175.

Flageolet, originally a French 17th century instrument, although English flageolets were produced in the 19th century. Similar to the recorder and penny whistle, it is now largely obsolete.

Flagstad, Kirsten (1895-1962), Norwegian soprano. She first performed in 1913, but was little known outside Scandinavia until her debut at the METROPOLITAN OPERA in 1935. She was famous for her performances of WAGNER and was the first director of the Royal Norwegian Opera (1958-60).

Flaherty, Robert Joseph (1884-1951), pioneer US director of documentary films. In Canada he made *Nanook of the North* (1922) about Eskimo life, followed by *Moana* (1926), an idyllic treatment of Samoa. Other major films include *Imperial Britain* (1932) and *Louisiana Story* (1948). See also pp. 1760, 1760.

Flambard, Ranulf (d. 1128), English state official and ecclesiastic. He was the keeper of the seal under WILLIAM I and the chief minister of WILLIAM II. In 1099 he was made Bishop of Durham, but fled to France to escape the persecution of HENRY I. In 1101 he was restored to his bishopric. **Flamboyant style**, final phase of French GOTHIC architecture (14-16th century). The name comes from the flame-like forms of the elaborate tracery used in cathedrals, as on the west facade of Rouen cathedral (1370). See also p. 1352.

Flamen, priest dedicated to a single god in the polytheistic religion of ancient Rome. A patrician, he would offer sacrifices under the supervision of a chief priest, wearing a conical cap called an apex. **Flamenco**, traditional song, dance and instrumental music of Andalusia, s Spain. Flamenco consists of improvisation within strict rules. There are three types of song, of which the most demanding is the *cante jondo*. The dances epitomize pride, pose and sensuality. Songs and dances are accompanied by handclaps, finger-snapping and a series of complicated and rhythmic rolls on the guitar.

Flame test, in chemistry, test for the presence of metallic elements whose main spectral emission lines give characteristic colours in a Bunsen flame. A salt of the metal is introduced into the flame by means of platinum wire first dipped in hydrochloric acid. Some metals and their colours are: lithium, red; sodium, yellow; potassium, lilac; strontium, crimson; barium, apple-green; copper, blue-green; lead and arsenic, blue. See also p. 904.

Flamingo, long-necked, long-legged wading bird of tropical and subtropical lagoons and lakes. The birds have webbed feet and a plumage that varies in colour from pale to deep pink; their wings have black feathers at the edges. Their bills have fine hair-like filters which strain muddy water from the aquatic plants and small marine animals on which the birds feed. Flamingos nest and wade in groups. Height, to 1.5m (5ft). Family Phoenicopteridae.

Flammarion, Nicolas Camille (1842-1925), French astronomer and popularizer of his subject. He studied the Moon's craters and the canals of Mars. In later life he turned to psychical research. **Flamsteed, John** (1646-1719), British astronomer, the first Astronomer Royal (1675). His book *British Catalogue of Stars* contained a record of his observations and listed nearly 3,000 stars; it was the most accurate of the time and became the standard work for many years.

Flanagan, Bud (1896-1968), British comedian, real name Robert Winthrop, famous for his partnership with Chesney Allen from 1920 and their later association with the Crazy Gang. With his old fur coat and battered straw boater, Flanagan popularized many songs, including *Run Rabbit Run* and *Underneath the Arches*.

Flanders (Vlaanderen, or Flandre), former county in w Belgium and France, encompassing the modern boundaries of e and w Flanders provinces, Belgium, and a portion of France's Nord département. By the 13th century the Flemish cloth industry was the most important in Europe, and the area prospered. The industry declined in the late 15th century and the area was incorporated into the Spanish Netherlands in 1584. Louis XIV annexed portions in 1668 and part of the region was ceded to France (1797), but was later awarded to The Netherlands. Its strategic position has made it a battleground since the Middle Ages. See also pp 1384-1385, 1384, 1385.

Flannan Islands (Seven Hunters), group of seven uninhabited islands off nw Scotland, 32km (20 miles) nw of the Isle of Lewis.

Flare, solar. See SUN.

Flashback, film technique in which chronological continuity is broken to show relevant action from the past. Visual signs such as momentary fades are often used to indicate a flashback. The technique has been used in many films since the 1930s, notably in *CITIZEN KANE* (1941).

Flash bulb, in photography, small glass bulb filled with finely shredded aluminium and a small amount of magnesium; it is ignited by electricity to produce a high-intensity flash of light of short duration as a photograph is taken. It is used either as a substitute for or supplement to available light. See also p.631.

Flashlight. See FLASH BULB, TORCH.

Flashpoint, lowest temperature at which an inflammable liquid heated under test conditions gives off sufficient vapour to be ignited (as a flash) when a flame is applied.

Flat, in musical notation, an accidental or sign placed before a note or immediately after the clef to indicate that the note it refers to should be sounded a semitone lower. It is designated by the sign ♭.

Flat feet, condition in which the arches of the feet are lowered, often accompanied by other distortions in foot structure. It frequently causes pain in the instep, and arch supports may be prescribed to alleviate the condition.

Flatfish, any of more than 500 species of bottom-dwelling, mainly marine fish found throughout the world. Most flatfish have oval flattened bodies. Both eyes are on the upper side, the "blind" lower side is generally white. Examples include the halibut, flounder, plaice, dab, turbot and sole. Order Pleuronectiformes. See also p.62.

Flatford Mill on the River Stour, oil on canvas painting by John CONSTABLE, dated 1817. *Flatford Mill* is a development of the traditional realistic qualities of the earlier *Boat Building* (1815) and is infused with an exhilarating, original and truthful treatment of light peculiar to the English countryside. It is now in the Tate Gallery, London.

Flathead Indians, term applied to many North American Indian tribes, from their custom of deforming the heads of infants to develop an elongated skull to a socially desirable shape. The term is used most commonly to refer to the chinook. Inhabitants of the Flathead Reservation in Montana, also called Salish Indians, never followed this practice, although they were referred to as "flatheads" by neighbouring tribes that shaped their heads in a pointed style.

Flats, in the theatre, units of scenery made of stretched canvas or hardboard mounted on wooden batten frames and usually erected in various combinations to provide a three-dimensional stage set.

Flatworm, simple, carnivorous, ribbon-like creature which, having no circulatory system and sometimes no mouth or gut, feeds by absorption through its body wall. Most are aquatic. The *FLUXUS* and *TAPETUM* are both parasites of man and animals. Order Platyhelminthes. See also pp.16, 17, 1061, 1069, 1082, 1083.

Flaubert, Gustave (1821-80), French novelist. He spent most of his life in Rouen among the provincial bourgeoisie who inhabit most of his novels. He wrote *The Temptation of St Anthony* (1847),

Madame Bovary (1857), *Salammbô* (1862) and *Sentimental Education* (1869).

Flax, slender, erect, flowering plant cultivated for its fibres and seeds. After harvesting the stems are retted (soaked in water) to soften the fibres, which are spun into yarn to make linen. The seeds yield linseed oil. Family Linaceae. See also pp. 712, 713.

Flaxman, John (1755-1826), British artist and sculptor. He is best known for his memorial sculptures, including those of Sir Joshua Reynolds and Lord Nelson (in St Paul's Cathedral, London); he also illustrated the works of Homer, Dante and others.

Flea, any of 1,000 species of wingless, leaping insects found throughout the world. All fleas are external parasites on warm-blooded animals. In moving from one host to another they can be important carriers of disease. Length, to 1cm (0.4in). Order Siphonaptera. See also pp. 36, 37.

Fleabane, any of about 250 species of plants of the genus *Erigeron* that grow in temperate climates. Most have lance-shaped leaves and daisy-like flowers with yellow central discs and white, yellow, pink or purple ray florets. Some species are cultivated in gardens. Height, to 1m (3.3ft). Family Compositae.

Flea-beetle, any of several small beetles, found throughout the world, whose enlarged hindlegs make them excellent jumpers. They feed on leaves and some are regarded as serious pests of crops. Family Chrysomelidae.

Fletcher, Herman James Ebro (1884-1915), British poet and playwright. His Foreign Office service in the Middle East influenced the character of his poetry already evident in *Bridge of Fire* (1907). His verse play *Hassan* was extremely successful when it was produced in 1922 with music by DEBUS. He died of tuberculosis.

Fledermaus, Die (1874), three-act opera by Johann Strauss junior, German libretto by C. Haffner and Richard Genée. Baron von Eisenstein (tenor) is wanted by the police, who go to his house and mistakenly arrest Alfred (tenor), lover of his wife Rosalinde (soprano). Eisenstein and his friend Falke (baritone) then attend a ball given by Prince Orlofsky (mezzo-soprano). Rosalinde and her maid Adèle (soprano) are also there, and much champagne and revelry lead to complications for all.

Fleet prison, historic prison set up in London in the 12th century. It was a frequent object of attack during London rebellions, and later became notorious as a debtors' prison. Fleet prison was closed in 1842 and demolished in 1844.

Fleet Street, London street which, since the late 17th century, has been the centre of British newspaper journalism. In the early 18th century it was the home of the coffee-house literary circles associated with such men as Jonathan Swift, Alexander Pope and Dr Samuel Johnson.

Fleming, Sir Alexander (1881-1955), British bacteriologist. He shared with Howard Florey and Ernst Chain the 1945 Nobel Prize in physiology and medicine for his part in the discovery of penicillin and its therapeutic effect. In 1928 Fleming noticed that a mould, identified as *Penicillium notatum*, liberated a substance that inhibited the growth of some bacteria. He named it penicillin. However, the importance of this discovery was not recognized until Florey and Chain had done further research. See also p.1092.

Fleming, Ian Lancaster (1908-64), British novelist. After a career as a journalist and banker, he wrote 13 escapist spy thrillers about James Bond, secret agent '007', which won great popularity for their realistic detail, and sexual and violent fantasy. They include *From Russia with Love* (1957), and *Goldfinger* (1959). Many were later filmed.

Fleming, Sir John Ambrose (1849-1945), British electrical engineer. He invented the thermionic valve which was the basis of almost all early radio receivers and transmitters, television receivers and computers. The first valves were rectifiers,

or diodes (two electrodes in an evacuated glass envelope, which permitted current to flow in one direction only). See also p.884.

Fleming's rules, in physics, ways of remembering the relationships between the directions of the current, field and mechanical rotation in electric motors and generators. In the left-hand rule (for motors) the forefinger represents field, the second finger the current, and the thumb, motion, when extended at right-angles to each other the appropriate directions are indicated. The right-hand rule applies the same principles to generators. See also pp.876, 877.

Flemington, famous racecourse in Melbourne, Australia, where on the first Tuesday of November the world-renowned Melbourne Cup is run. In winter it is the venue of Australia's Grand National Steeplechase. The course dates from 1840 and was named after a local butcher whose sheep was opposite.

Flemish, one of the two official languages of Belgium (the other being French). It is spoken mainly in the northern half of the country, by about half the population. Flemish is virtually the same language as Dutch, but for historical and cultural reasons is called Flemish in Belgium and Dutch in The Netherlands. See also pp. 1878, 1879.

Flemming, Walther (1843-1905), German pioneer in the study of cytology and expert in anatomy. He researched and published material on the fatty tissues of the body and, in 1880, was first to describe the longitudinal splitting of chromosomes, so contributing to genetics.

Fletcher, Andrew (1655-1716), Scottish politician. He was adviser to the Duke of Monmouth on his invasion of England (1685). He opposed union of Scotland and England under English rule and worked for a federal union. After the Act of Union (1707) he retired from politics.

Fletcher, Sir Banister Flah (1866-1953), British art historian. He published his best-known work, *History of Architecture on the Comparative Method*, in 1896. It is still a standard work.

Fletcher, John (1579-1625), English dramatist and poet. With Francis Beaumont from about 1607 to 1616 he wrote romantic tragicomedies, including *The Knight of the Burning Pestle*, *Phylaster*, *The Maid's Tragedy*, *A King and No King* and *The Scornful Lady*. He may have collaborated with Shakespeare on *Henry VIII* and *The Two Noble Kinsmen*. See also p.1419.

Fleur-de-lis, in heraldry, symbol used in ancient India, Egypt and many other countries, but most often associated with the French royal family. It is said to represent three lily petals tied together.

Fleurs du Mal, collection of poems by Charles BAUDELAIRE, published in 1857 (revised 1861 and 1868). In style the poems herald the symbolist age, in content they celebrate the symbiosis of beauty and evil. See also p.1577.

Flicker, type of woodpecker found in the USA. It cuts nest-holes in trees but does not drill into wood for food. Its slender, curved bill is used to find insects on the ground. Family Picidae.

Flight, travel through the air. The two main requirements for flight are THRUST - to give forward motion and overcome air resistance (DRAG), and LIFT - to overcome the earthward pull of gravity. A bird's wing, powered by muscles anchored to the breastbone, provides both thrust and lift, mostly on the downstroke. A bird's flight is controlled by manipulation of its flight feathers; balance and steering are provided by the tail feathers. In an aeroplane, thrust is provided by an engine-driven propeller or by the rapid emission of hot expanding gases from jet engines. Lift is provided by specially shaped wings (AEROFOILS) which pierce the air so that it passes the aerofoils faster on the top surfaces (where it exerts reduced pressure), and slower on the under surfaces (where it exerts increased pressure). See also HELICOPTER, pp.74, 512-513, 518-526.

Flightless birds, large, non-flying birds, often they have only weak or poorly-

Flatfish lie on one side, both eyes being located on the 'upper' side of the head.

Flea, the species that lives on human beings can jump as far as 33cm (13in).

Flicker is a handsome bird named after its call, which sounds like the word 'flicker'.

Flight, most birds fly below 900m (3,000ft) but some geese can cross the Himalayas.

Flight simulator

Flora, her head distinguished by a flora crown, adorned many Roman coins

Howard Florey travelled widely during WWII studying possible uses of penicillin

Florida, an aerial view of the Miami resort area including part of Miami beach

Flounder is a name given to a flatfish in general, except the sole and the halibut

developed wings. Most have strong legs, and have evolved some way for efficient movement by walking, running or swimming. The ostrich, rhea, cassowary, emu, kiwi and penguin are all flightless birds. Others, such as the New Zealand wrens and some rails, fly only with difficulty. The woa of New Zealand and the podo of Mauritius were both flightless birds, but were hunted to extinction by man. See also pp 72 73, 327 744, 766

Flight simulator, device that duplicates the instrument behaviour and physical attitude of an aircraft in flight, used for training pilots and aircrew. A more sophisticated simulator, in addition to having an exact replica of the controls of a particular aircraft, may also have a visual display of the terrain being "flown over" to contribute to realism

Flight testing, method of determining capabilities and limitations of an aircraft or component part under actual conditions of flight. Although most research and experiment is done in the laboratory or by computations of a machine (computer), eventually all equipment must be tested in its true environment. For example, although the LUNAR MODULE flew satisfactorily in earth orbit, a test mission was flown in lunar orbit before the actual moon landing

Flinders, Matthew (1774-1814), British navigator. He explored and charted the Australian coast (1795-1803) and sailed round Tasmania (1798)

Flinders Island, island off the NE coast of Tasmania and Australia in the Bass Strait. The largest of the Furneaux group. Its industries include tin-mining. Area 1,992sq km (769sq miles). Pop. 1,000

Flinders Ranges, mountain system in s Australia, extending NNE from Gladstone to the area between the Torrens and Frome lakes. It is a rich mining area. The highest point is St Mary's peak, 1,189m (3,900ft). Length 419km (260 miles)

Flinders reefs, coral group outside the Great Barrier Reef, off NE Australia. It lies between the coastal cities of Cairns and Townsville

Flinders, river in N Australia that rises in the Great Dividing Range. It flows NW and N to the Gulf of Carpentaria and its main tributaries are the Saxby and Cloncurry rivers. Length 837km (520 miles)

Flint, Sir William Russell (1880-1969), British painter. His best-known works are watercolours of semi-nudes in Spanish or French settings

Flint, city in s Michigan, USA. Founded in 1819 as a fur-trading post, it is now one of the world's major car manufacturing centres. GENERAL MOTORS CORP. was founded there in 1908, the city now ranks second to Detroit in motor car production. Pop. (1973) 181,684

Flint, SILICA rock, a granular variety of QUARTZ of a fine crystalline structure. It is usually smoky brown or dark grey, although the variety known as chert is a paler grey. It commonly occurs in rounded nodules and is found in chalk or other sedimentary rocks containing calcium carbonate. Flint was used by Stone Age peoples to make weapons and tools

Flint, mineral of great importance to man during the STONE AGE. When struck a glancing blow, flint can be flaked, leaving sharp edges appropriate for tools and weapons; two flints struck together produce a spark which can be used to make fire. During the PALAEO-LITHIC AGE man learnt how to use the flakes, as well as the central core. So great was the need for flint that flint mines were sometimes dug, eg Grimes Graves in Norfolk. See also pp 391 770 771, 1174

Flint clay, hard, flinty fireclay. It is a KAOLINITE, usually found at greater depths than most clays. It is used almost exclusively in the production of firebrick and crucibles

Flintlock, muzzle-loading firearm, invented c 1550. The firing mechanism consisted of a flint held in a vice (called the cock) which struck a piece of steel (the frizzen or battery) when the trigger was pulled, the resulting spark ignited gunpowder in a priming pan which then set off the charge in the breech of the barrel. Cheaper and lighter than its predecessor

the MATCHLOCK, the flintlock was the main weapon of European armies from 1700-1830. See also pp 556 556

Flintshire (y Fflint), former county of N Wales, since 1974 part of Clwyd. It had two separate parts, and ran from the Clwydian Hills to the Dee estuary. The capital was Mold. Pop. (1971) 175,396

Float glass process. See GLASS

Floating currency, in economics, modern trend whereby a currency, such as the dollar or the pound, is neither devalued nor revalued (upwards), but is left to increase, or decrease, in relation to other currencies according to its worth on the foreign exchange market. Sterling is a floating currency, unlike some other European currencies which are fixed until forced to devalue, or revalue

Flocculi, or **plages**, cloudy markings on the Sun's disc which are visible on spectroheliograms. They appear to be chromospheric phenomena, clouds of calcium or hydrogen associated with SUNSPOTS. See also p 974

Flooden, field in N Northumberland, NE England, scene of the Battle of Flooden (1513), in which an English force led by the Earl of Surrey defeated JAMES IV of Scotland. See also p 1379

Flood, The, primeval deluge, according to the Bible sent by God as a punishment on all the inhabitants of the Earth. Only NOAH, his family and a pair of every living creature, contained in the floating Ark, were spared to start Creation anew. Similar myths occur in many cultures, from the American Indians to the Australian aborigines, another version is the Mesopotamian EPIC OF GILGAMESH. Together with this anthropological evidence, some archaeological and geological indications would seem to suggest that a catastrophe of this nature and magnitude may actually have taken place

Flood, Henry (1732-91), Irish politician. He entered the Irish Parliament in 1759 and took leadership of the nationalist movement. His influence was weakened by his accepting office in the British government in 1775 and by his opposition to CATHOLIC EMANCIPATION

Floodlight, light beams of high intensity, produced by electric lamps with reflectors. Most often used to illuminate the stage in theatres and concert halls, floodlights are used to illuminate buildings, monuments and outdoor night-time games

Floodplain, level land alongside a river consisting of alluvium deposited by the river when in flood. Such plains usually have extremely fertile soil and are often used, as near the River Nile, for intensive cultivation. See also pp 220 221

Flora, in Roman mythology, personification and goddess of springtime and of budding fruits, flowers and crops. Depicted garlanded with flowers, she was honoured as a fertility goddess in the Floralia at the end of May, a bawdy festival

Florence (Firenze), city in central Italy, on the Arno River, capital of Firenze province and Tuscany Region. It was the site of a Roman military colony and by the 12th century had become a trading and industrial centre. Although in following years the GUELPHS and GIBELINES fought for control of the city, under MEDICI rule in the 13th and 14th centuries it became the cultural and artistic centre of western Europe. Notable buildings include the Church of Santa Croce and the Uffizi gallery. Industries: ornamental glass and pottery, tourism. Pop. 457,000. See also pp 1340, 1340, 1386 1387, 1382 1383 1382 1383, 1388 1389

Florence, school of, artistic movement of the Renaissance which began with GIORGIO in the 14th century and included FRANKLIN (DONARDO), MICHELANGELO, BOTTECELLI and RAPHAEL. It reached its finest achievements in the early 15th century and again in the decades around 1600. Not all the artists of the school were born in Florence but all found patronage there and worked in a recognizably Florentine style, which laid stress on the purity of line and composition rather than on colour. See also pp 1382 1383, 1382 1383 1388 1389

Florey, Baron Howard Walter (1898

1968), British pathologist, b. Australia. He shared, with A. FLEMING and E. B. CHAIN, the 1945 Nobel Prize in physiology and medicine for his part in the development of PENICILLIN. Florey isolated the antibacterial agent from the mould discovered by Alexander Fleming. This made possible the large-scale preparation of penicillin. See also p 1092

Florida, state in the extreme SE USA, occupying a peninsula between the Atlantic Ocean and the Gulf of Mexico. At the tip there is a chain of small islands, the FLORIDA KEYS, stretching W. The subtropical climate has encouraged both tourism and agriculture, the chief products being citrus fruits, sugar cane and maize. Industries have developed since WWII and focus on the John F. Kennedy Space Center at CAPE CANAVERAL. The state capital is Tallahassee. Discovered in 1513, the first permanent settlement in Florida was at St Augustine. Originally Spanish, the land passed to the English in 1763 and was returned to the Spanish in 1783. The Americans purchased Florida in 1819 and although the state seceded from the Union in 1861 it was little affected by the AMERICAN CIVIL WAR. It developed rapidly after 1880 when forest clearing and drainage schemes were begun. Area 151,670sq km (58,560sq miles). Pop. (1975 est.) 8,357,000. See also p 2161

Florida Keys, chain of small coral and limestone islands extending off the SE tip of Florida in a curve to the SW. The more significant islands are Key West, Key Largo, Long Key, Vaca Key and Big Pine Key. It is a resort area, with some commercial fishing. Length approx 342km (150 miles)

Florin, coin, originally gold, first used in Florence in the 13th century. Florins have been used in several European countries, including The Netherlands and Britain. The florin was introduced into England by EDWARD I with a value of six shillings, between 1848 and 1971 it was worth two shillings (10 new pence)

Florio, John (c 1553-1625), English writer, of Italian parents. He compiled an Italian-English dictionary, *A World of Words* (1598), published a translation of MONTAIGNE's essays in 1603, and taught Italian at the court of James I

Flory, Paul John (1910-), US chemist whose discovery of a method of analysing POLYMERS accelerated the development of plastics and earned him the 1974 Nobel Prize in chemistry. With Wallace H. CAROTHERS he developed the first nylon and a synthetic rubber, neoprene. Flory also discovered similarities between the elastic properties of organic tissues and plastics

Flotation, process used to separate minerals in which the ore is treated so that it floats and can be skimmed off. Crushed rock and powdered ore is dosed with chemicals which cause the ore particles to become water-repellent. The aqueous suspension is then aerated. The ore particles cling to the air bubbles and rise to the surface, forming a foam which is skimmed off the waste sinking to the bottom. It is used to concentrate sulphide and oxide ores

Flotilla, fleet of small ships, or a small fleet. The word is Spanish in origin, a diminutive of *flota*, a fleet. In a navy, a flotilla is two or more squadrons of small warships

Flotsam and jetsam, items of property found abandoned at sea. They, and the finder's legal rights to them are defined in Britain by the Merchant Shipping Act (1894). This defines flotsam as goods found floating on the sea's surface, jetsam as goods specifically jettisoned in order to lighten a vessel in danger of sinking. The phrase "flotsam and jetsam" is also used frequently in a figurative sense for unwanted articles

Flounder, marine flatfish found in the Arctic, Atlantic and Pacific oceans. It is grey, brown or green on the upper, sighted, side, the blind underside is nearly white. It is an important food fish. Length to 90cm (35in). Order Pleuronectiformes, species *Platichthys flesus*. See also pp 62 762

Flour, finely ground meal made from cereal grains, seeds of leguminous plants or various nuts. Flour used for baking bread, cakes and biscuits comes from cereals. The degree of whiteness varies according to the bran content and some commercial flours are "bleached" to make them whiter. Self-raising flour contains added BAKING POWDER. Flour-milling has been practised for at least 8,000 years. See also p 678

Flow, solid, in geology, the slide, flow or creep of solid, unsuspended material downwards on a slope. The movement within the solid is achieved by rearrangement between or within its particles.

Flow chart, graphical method used in scheduling computer programs and other complex tasks involving several interdependent stages. Various tasks or activities are listed within circles interconnected by directional time-sequence (flow) lines. Critical path analysis determines the minimum program time. Flow charts must be updated as variations in predictions occur. See also p 466

Flower, **Robin Ernest William** (1888-1946), writer and translator, b. England of Irish parents. He worked at the British Museum (1906-44) and wrote a fragment of a history of Irish literature, *The Irish Tradition* (1947). Among his other works are *Poems and Translations* (1931) and *The Western Island* (1944).

Flower, reproductive structure of a flowering plant. It has four sets of organs set in whorls on a short axis (receptacle). Typically the sepals are leaf-like structures that protect the bud, they form the calyx. The petals, often brightly coloured, form the corolla, the stamens are stalked by anthers (pollen sacs), the carpels form the pistil with an ovary, style and stigma. Flowers are bisexual if they contain stamens and carpels, and unisexual if only one of these is present. Reproduction occurs when pollen is transferred from the anthers to the stigma. A pollen tube grows down into the ovary where fertilization occurs and a seed is produced. The ovary bearing the seed opens into a fruit and the other parts of the flower wilt and fall. See also pp 382, 383

Flower animal. See ANTHOZOA

Flowering plant, any of about 250,000 species of plants that produce FLOWERS, FRUITS and SEEDS. Such plants include most herbs, shrubs, trees, fruits, vegetables and cereals. Their seeds are protected by an outer covering and as a result botanists classify them as ANGIOSPERMS, meaning plants with enclosed seeds. Angiosperms are further subdivided into two main groups, MONOCOTYLEDONS, plants that grow from seeds with only one seed leaf, and DICOTYLEDONS, plants with two leaves for each seed. Many flowering plants are valuable for food, timber and their medicinal properties. See pp 382-3

Flu. See INFLUENZA

Fludd, Robert (1574-1637), English mystic philosopher who was strongly influenced by Paracelsus. Fludd became a ROSECRUCIAN and helped to spread ROSECRUCIAN doctrines in England at the same time attempting to reconcile them with 17th century science. He believed that an all-pervading substance called ether was also present in human blood. Some of his ideas were given in his *Anatomiae Amphitheatrium* (1623).

Flugelhorn, brass musical instrument similar to the CORNET, but with a wider bore, larger bell and a mellower tone. It is most often used in military bands and jazz ensembles.

Fluid flow, behaviour of a moving fluid, determined by its velocity, pressure and density. These three quantities are related by three basic equations: the equation of continuity which relates the amount of fluid flowing into a given space with the amount flowing out of that space, EULER'S equation of motion, which shows how the velocity of the fluid changes with time at a given point in space, and the ADIABATIC equation, which describes the exchange of heat between different parts of the fluid. In incompressible fluid flow, which applies to most liquids, these equations

take on a particularly simple form. Compressible flow equations are necessary for high-speed aerodynamic calculations. Often a fluid is treated as "ideal", meaning that no internal friction or viscosity is supposed. The equations for realistic fluids are so complicated that complete solutions to most problems do not exist; numerical solutions must be attempted by computer techniques. See also SU p 78

Fluidics, use of fluids - gases or liquids - in controlling and actuating devices, to carry out switching and amplifying operations more familiarly associated with electronic circuits. Fluidic circuits were developed in the USA in the 1960s for use in rocket and aircraft guidance. See also pp 547, 831

Fluidization, powdering of a solid so that it can be processed as if it were a fluid. The technique not only allows solids to be conveniently transported, but also hastens gas-solid reactions - the gas is injected from below and the powder is suspended to form a fluidized bed, an ideal condition for industrial drying or roasting.

Fluid mechanics, study of the behaviour of liquids and gases. Fluid statics includes the study of pressure, density and the principles of PASCAL and ARCHIMEDES. Fluid dynamics includes the study of streamlines, BERNOULLI'S equation, and the propagation of waves. Engineers use fluid mechanics in the design of bridges, dams and ships. Physicists use fluid mechanics in studying the structure of the atomic nucleus and it has been used by astronomers to explain the spiral structure of the galaxies.

Fluid mining, method of obtaining minerals which involves dredging or HYDRAULIC MINING. Gravel (placer) deposits containing ore can be broken down with high-pressure streams of water or flooded so that dredgers with digging and processing equipment can operate. Many off-shore deposits, including gold, tin, iron-bearing sands, shell and gravel, are mined by dredging. See also p 459

Fluke, FLATWORM and an external or internal parasite of man and other animals of the phylum Platyhelminthes, class Trematoda. Adult flukes have suckers for attachment to the host, and a complicated reproductive system. Human infection can result from eating uncooked food containing encysted larvae, or penetration of the skin by larvae in infected waters. The worms may enter various body organs such as the liver, lungs and intestines, causing oedema (swelling) and decreased function, or the flukes may remain in the bloodstream. Treatment is difficult. See also pp 16, 17

Fluorescence, emission of radiation, usually light, from a substance, the atoms of which have acquired energy from a bombarding source of radiation, usually ultra-violet light or electrons. When the source of energy is removed the fluorescence ceases. With phosphorescence, which is produced by a similar process, the emission persists for a short time. Mercury vapour is a fluorescent substance used in motorway lights, television tubes use fluorescent screens. See also pp 861, 891

Fluorescent lamp, glass tube coated on the inside with a chemical phosphor and containing, at low pressure, small quantities of mercury. When an electric current is passed through the tube, the atoms of mercury emit ultra-violet radiation, which impinges on the phosphor coating, causing it to glow brightly. See also DISCHARGE TUBE FLUORESCENCE p 861

Fluoridation, addition of inorganic fluorides, usually sodium fluoride to the water supply to about one part per million, with the intention of strengthening teeth and reducing their decay. Since its inception in the 1930s fluoridation has been adopted in many countries, including Britain, the USA, Canada, Australia and New Zealand. See also pp 163, 1087, 1100

Fluoride, any salt of hydrofluoric acid (HF), more particularly, fluoride compounds added to drinking water or tooth paste in order to build up resistance to tooth decay. This protection appears to result from the formation of a fluoro-phosphate complex in the outer tooth layer,

which become resistant to penetration by acids made by mouth bacteria. See also p 1100

Fluorine, gaseous element (symbol F) of the halogen group, isolated in 1886 by Henri Moissan. Chief sources are FLUORSPAR and CRYOLITE. The element obtained by ELECTROLYSIS, is the most electronegative of all elements and attacks many compounds. It is used in making FLUOROCARBONS and in extracting URANIUM. Properties at no 9, at wt 18.9984, density 1.696 g dm⁻³, m.p. -219.6°C (-363°F), b.p. -188.14°C (-306.65°F), most common isotope F¹⁹ (100%). See also HALOGEN, pp 163, 891, 1100

Fluorite, halide mineral, calcium fluoride (CaF₂) found in sedimentary rocks and pegmatites. It has cubic system crystals with granular and fibrous masses and is brittle, glassy, and colourless when pure. Hardness 4, s.g. 3.1. It is used as a flux in steel production where it is called fluorspar or fluor.

Fluorocarbon plastics, plastics made from a class of chemically inert compounds composed entirely of carbon and fluorine. The best-known is the resin polytetrafluoroethylene, or PTFE. They are valued for their non-flammability, low chemical activity, low resistance to friction and low toxicity. See also p 589

Fluorocarbons, technically chlorofluoromethanes, used as propellants in some AEROSOL spray cans and as refrigerants (freons). They are highly volatile and inert gases, yet in the STRATOSPHERE they are broken down by sunlight to release chlorine atoms. These can react with ozone, so reducing the OZONE LAYER that protects organisms from dangerous quantities of solar ultra-violet rays. Due to this effect, new propellants have been developed for aerosols. See also p 757

Fluorspar. See FLUORITE

Flute, woodwind musical instrument. Air is blown across a mouth-hole near one end of a straight tube held horizontally across the mouth, holes covered by keys arranged in the BOHRM system provide a range of three octaves, permitting rapid scales and trills. The tone is mellow in the lower register and brighter in the higher. See also p 1580

Flux, in ceramics, any substance that promotes VITRIFICATION when mixed with clay. When the ware is fired, the flux melts, filling the porous clay form. As the piece cools, it hardens, becoming glossy and non-porous. Fluxes include felspathic rock, silica, and borax. In METALLURGY, a flux is added to the charge of a smelting furnace to purge impurities from the ore and to lower the melting point of the slag. See also p 546

Flux, magnetic, lines of force or of magnetic induction in a magnetic field. These lines can be seen as the closed curves followed by iron filings placed near a magnet. The direction of the flux at any point is the magnetic field, and the closeness of the flux (number of flux lines in a given area) is a measure of the magnetic field strength. See also MAGNETISM, pp 825, 870-877

Fly, any of a large order (Diptera) of two-winged insects that range from midges 1.6 mm (0.06 in) long to robber flies more than 76 mm (3 in) in length, the order includes mosquitoes, horseflies, fruitflies, gnats and tsetseflies. There are between 60,000 and 100,000 species and they are found in every part of the world. Adult flies have compound eyes and sucking mouthparts. Many are pests and spreaders of disease, especially horseflies, mosquitoes and tsetseflies. The common HOUSEFLY is species *Musca domestica*. See also pp 37, 42, 43, 179

Fly, river in Papua New Guinea, in the SE of New Guinea island. It rises in the Victor Emmanuel Range, flows S and SE into the Gulf of Papua and forms part of the boundary with West Irian, Indonesia. Length 1,046 km (650 miles).

Fly agaric, also called fly amanita, poisonous (but rarely fatal) toadstool, common in open woods and pastures. It has a broad orange or scarlet cap with prominent white 'warts'. The stem is white with rings at the base. Species *Amanita muscaria*. See also pp 307, 350, 355

Robert Fludd used faith healing as well as orthodox medical treatment

Flugelhorn is a brass instrument - a B-flat with a range of some 2½ octaves

Fluke, the diagram shows the progress of a fluke from snail, through fish to man

Fluorescent lighting is often used for decorative illumination, as in Luna Park, Rome

Fly-ball governor

Flying boats, now little used, were highly influential on aircraft design before WWI

Flying Dutchman, a sketch by Johann Kent sky for a production of Wagner's opera

Michel Fokine, a drawing of Tamara Karsavina, one of the great interpreters of his work

Folk-dances began with primitive man and were probably a form of communication

Fly-ball governor, mechanism which controls the rate at which an engine operates first invented by James Watt in 1788. Two weights suspended on rods from a vertical shaft – which is connected to the part of the engine whose rotational speed is to be governed, eg road speed engine speed, – will move outwards under centrifugal force, causing the rods to activate a control valve which will reduce the required rotational speed. See also p 465

Flycatcher, any of several small birds of the order Passeriformes, found throughout the world, that catch insects in mid-flight. The most common species in Britain is the spotted flycatcher (*Muscicapa striata*). It is greyish brown and inhabits gardens and woodlands. It feeds from more exposed branches than other flycatchers, flying erratically with frequent changes of direction when catching insects. It rarely alights on the ground, preferring to perch on fences and low branches. Length 14cm (5.5in)

Flying. See FLIGHT

Flying boat, aeroplane designed to take-off from and land on water. It has a boat-shaped fuselage strong enough to withstand the impact of the water and of sufficient buoyancy to remain afloat. Usually each wing has a stabilizing pontoon float, which is retractable in the latest flying boats. See also p 514

Flying bomb, also known as buzz-bomb or doodlebug, popular names for the German V-1 missile, launched against England in 1944. The V-1 was a pilotless aircraft, powered by a pulse-jet engine with a guidance system composed of a distance-measuring device, a gyro-compass and an altimeter. In 1944 Germany also developed the V-2, a long-range ballistic missile carrying a 1-tonne warhead to a range of 320km (200 miles) on a ballistic arc trajectory with an altitude of 95–110km (60–70 miles). It was powered by a mixture of liquid oxygen and ethyl alcohol, and it was the precursor of postwar missiles. See also p 563

Flying dragon, gliding lizard native to South-East Asia and the East Indies. It has elongated ribs that support extensible skin folds, these are spread for gliding from tree to tree. Length approx 20cm (8in). Family Agamidae, species *Draco metanotus*. See also p 71

Flying Dutchman (1843), three-act opera by Richard Wagner, with the composer's German libretto after Heinrich Heine. A Dutch ship's captain, Vanderdecken (bantone), is under a curse to sail until he finds a maiden faithful unto death. He sails to the home of Norwegian Captain Daland (bass) and is betrothed to his daughter Senta (soprano). Believing her to be unfaithful, he sails away. Senta affirms her faithfulness by drowning herself, the cursed ship disappears and the ghosts of the lovers are united forever.

Flying fish, tropical marine fish found worldwide. It is dark blue and silver and uses its enlarged spineless pectoral and pelvic fins to glide above the water surface for several metres. Length to 45.7cm (18in). Family Exocoetidae, species *Cypselurus opisthopus*. See also pp 60–61

Flying fox, fruit-eating bat with a fox-like head that lives in South-East Asia. The largest of all bats, it does substantial damage to fruit crops. Length to 40cm (16in); wingspan to 1.5m (5ft). Genus *Pteropus*. See also p 312

Flying lemur, or colugo, nocturnal gliding mammal of SE Asia. It climbs trees and can glide from branch to branch on "wings" formed from the membranous skin between its outstretched limbs. Its common name comes from its resemblance to the lemur. Order Dermoptera, genus *Cynocephalus*. See also p 312

Flying saucers, also called unidentified flying objects (UFOs), unusual phenomena in the sky, commonly believed to be of extra-terrestrial origin. The term is not restricted to saucer-shaped objects, nor does it encompass only aerial phenomena. Reports have been documented, often pictorially, since ancient times. With the development of aeronautics and astronautics the number of sightings has

increased enormously. There have been various rational explanations, including optical floaters (in the observer's eye), weather balloons, aircraft, fire balls, clouds and artificial satellites. Some of these are unsatisfactory.

Flying shuttle, re-usable space-craft system developed in the late 1970s. The first flight occurred in 1981 and was a complete success. The shuttle is launched into orbit like a conventional rocket but can coast back to earth like a glider. It is also known as the space shuttle. It is expected to inaugurate commercial space flights.

Flying snake, small arboreal snake of South-East Asia, India and Sri Lanka whose spectacular leaps from tree to tree have inspired its inaccurate name. It glides rather than flies, launching itself almost horizontally, flattening its body against wind resistance to land gently in the branches of the trees. Species *Chrysopelea ornata*.

Flying squirrel, small gliding rodent that lives in forests of Eurasia and the USA. It glides by means of furry flaps of skin that stretch out flat and taut on both sides of the body when the limbs are extended. Genus *Pteromys*. The African flying squirrel is of a separate genus (*Anomalurus*). See also pp 92, 304–311

Flynn, Errol (1909–59), US film actor, b Tasmania. He made his name with *Captain Blood* (1935), and won worldwide fame for his romantic, swashbuckling heroes, as in *The Adventures of Robin Hood* (1938). His autobiography, *My Wicked, Wicked Ways* was published in 1959.

Flywheel, massive solid or heavy-rimmed wheel attached to a machine's drive shaft to minimize fluctuations in rotational velocity and to store energy. The inertia of the large wheel tends to absorb energy in the effective portion of an engine's cycle and to release energy in the least effective portion of the cycle. The flywheel was initially developed by James Watt.

Foam, suspension of gas bubbles separated from each other by thin films (0.1–1mm thick) of liquid or solid. Foaming is not possible in a pure liquid and a promoter must be added – such as soap or proteins, which are used in such edible foams as marshmallow.

FOB, or **free on board**, in business, stipulation that the buyer of a product assumes responsibility for paying the product's transport charges. The buyer also chooses the method of transport.

Focal length, distance from the midpoint of a curved mirror on the centre of a thin lens to the focal point of the system. For converging systems it is given a positive value, for diverging systems, a negative value. See also pp 852–853

Focal point, point on the axis of a lens or curved mirror to which incident light rays, parallel and close to the axis, are converged (real focus) or from which they appear to be diverged (virtual focus) after reflection or refraction. See also pp 852–853

Foch, Ferdinand (1851–1929), French marshal. In WWI he was a commander in the battles of the Marne (1914), Ypres (1914, 1915) and the Somme (1916). In 1918 he became commander-in-chief of the allied armies, shaping their victory over the Germans. See also p 1673

Focus, either of two points on the major axis of an ellipse such that the distance from one focus to any point on the ellipse and back to the other focus is constant. See also pp 914–915

Foetus, or **fetus**, embryo in a mammal after the main adult features are recognizable. In human beings it dates from about 8 weeks after conception. See also pp 66–167

Fog, or **mist**, water vapour in the atmosphere condensed at or near the ground, as opposed to water vapour condensed as clouds. Fog forms when moist air is cooled below its dew point. See also p 25

Föhn, warm, dry wind on the lee or down-wind side of mountains tending to produce aridity. Mistral, sirocco and chinook are names for Föhn winds.

Foil, light weapon with a tapering quadrangular blade and small bell-shaped guard used in fencing. The target area in

foil is the trunk of the body. Women are restricted to fencing with the foil only.

Fokine, Michel (1880–1942), Russian-born choreographer. His concern in ballet for unity of music, drama, dancing and décor was revolutionary in the early 1900s. He became chief choreographer for Diaghilev's Ballets Russes in Paris (1909). Leaving Russia in 1918 he lived in New York from 1923, becoming naturalized in 1932. His best-known works include *Les Sylphides*, *Firebird*, *Petrushka* and *Don Juan*. See also pp 1758–1759

Fokker, Anton Herman Gerard (1890–1939), pioneer Dutch aircraft designer and industrialist. He founded his own aircraft works in Germany in 1912, which made fighter planes used by Germany in WWI, and designed an interrupter gear system that enabled a machine gun to be fired through the propeller. In 1922 he emigrated to the USA where he concentrated on making commercial aircraft.

Fold, in geology, pronounced bending in a layer of rock. Folds are defined according to their axes. Thus an upfold, which is an arch, is an anticline, a downfold, a syncline. The fold system may be symmetrical (in neat waves), asymmetrical, overturned or recumbent (with the axis of the fold parallel to the horizon). A single folding is a monocline. See also p 212

Foley, John Henry (1818–74), Irish sculptor. He executed the statue of Prince Albert in the Albert Memorial in Kensington Gardens, London.

Foliation, crude layering of rocks produced under compression. The layering is approximately parallel to the bisecting planes of folds, and often results in the rock splitting because of the parallel orientation of the mineral layers. Mica and slate are good examples of foliation.

Folic acid, yellow crystalline derivative of glutamic acid (formula $C_{10}H_{17}N_2O_6$) forming part of the vitamin B complex and used in the treatment of anaemia. The coenzyme tetrahydrofolic acid is derived from folic acid.

Folle à deux, literally "double madness", name in psychology for a delusion shared by two people, usually a husband and wife or two sisters.

Folies-Bergère, Parisian music hall famous for its extravagant revues. Built in 1869, it has provided the setting for many great French entertainers, including Maurice Chevalier and Fernandel.

Folio, largest sheet of paper used in publishing. A book made of folio sheets folded once is a folio edition. In English law a folio is a document of 72 words or, for parliamentary and chancery documents, 90 words. In US it is one of 101 words.

Folk-dance, local traditional dance form, sometimes with roots in an ancient ritual or festival. The term applies to the traditional dances of the peoples of any area, large or small, from a town to a nation. Examples are the Helston Furry (Floral) Dance and the Irish jig.

Folklore, the lore of the common people, or the traditions, customs and beliefs of the people as expressed through non-literary tales, songs and sayings. In contrast to "literature", which is transmitted through the printed page, "folk literature" has an oral source and is transmitted primarily through memory and tradition. The best-known study of folklore is Sir James Frazer's anthropological study *The Golden Bough* (1890).

Folk-music, music deriving from, and expressive of, a particular national, ethnic or regional culture, nearly always originally vocal and usually (some would say always) unable to be attributed to a composer or even a definite period. Its main theme is usually the history of a people, or dramatic or everyday events in that history, so that folk-songs are usually narrative in content. Their origin is almost always peasant (as distinct from the urban provenance of "art songs"). The musical structure is the simple repetition of a tune (with or without chorus), sometimes with a freedom of rhythm which adheres more to the natural metre of the word than to the more formal requirements of composition. Nearly always the main musical

interest in folk song is in the melodic line though POLYMETRIC vocal folk music occurs more often in Eastern European countries. The words and music of the same folk-song may show extreme variation from region to region. An unconscious expression of common experience, folk-tunes are often incorporated into the art of formal composition by composers BARTOK and KODALY in Hungary, BRITTEN and VAUGHAN WILLIAMS in England, GRIGI in Norway, DVORAK in Bohemia and VERDI and FALLA in Spain. Some modern writers of popular music, such as BOB DYLAN, have applied the folk idiom to their compositions.

Folk-tale, the most prevalent type of folkloric literature. Folk tales are stories that have developed independently of the written word, and which deal with a wide variety of subjects - myths, fables, fairy tales and more rarely, stories loosely based on historical characters and events.

Folk theatre, drama or entertainment that uses folklore, traditional and regional material and is performed by actors who are generally performed by natives of rural areas and may be impromptu. Elements of folk drama - music, dance or social themes - are often incorporated in more professional dramatic works.

Folkways, traditional patterns of behaviour including habits and customs, which characterize a particular culture or social group. They exercise a strong though unconscious influence on the behaviour of each member. The term was first used by W. G. SUMNER in 1906.

Folsom Man, prehistoric inhabitants of North America who fashioned a characteristic fluted stone spear point. The first such Folsom point was found near Folsom, New Mexico in 1926 along with the bones of extinct mammals such as the mastodon. The Folsom finds were of great importance, raising anew the question of how long man has lived in North America. Some authorities believe Folsom Man lived approx. 10,000 years ago.

Fon, Kwa-speaking people of s Benin (Dahomey) and Nigeria. Their polygamous patrilineal society is based on subsistence farming with a market system using cowrie shells as money. Hunters form a class with special social and religious status, while ancestor-worship is an important element in their religion.

Fonda, Henry (1905-), US actor. His first film was made in 1935; he has received acclaim for his roles in many films including *Young Mr Lincoln* (1939), *The Grapes of Wrath* (1940), *Twelve Angry Men* (1957) and *Fireweed* (1967). His stage successes include *The Corn Maidens*, *Court Martial* (1953) and *Twelve the Noon* (1958).

Fonda, Jane (1917-), US film actress. The daughter of Henry Fonda, she has starred in such films as *Period of Adjustment* (1962), *Joy House* (1965), *Barefoot in the Park* (1967), *They Shoot Horses Don't They?* (1969) and *Alone* (1971).

Fontaine, Jean de la. See LA FONTAINE. **Fontainebleau**, resort town in s France in the Forest of Fontainebleau, 56 km (35 miles) SE of Paris. Its palace long a royal residence was begun by FRANCIS I and became one of the glories of French Renaissance architecture. It is now the presidential summer residence. The town was headquarters of the military branch of NATO from 1945 to 1965. Pop. 18,000.

Fontana, Carlo (1834-1914). Italian architect. An apprentice of BERNINI, he designed many chapels, tombs and altars. Typical of his work is the façade for S. Marco to al Corso (1683) in Rome.

Fontana, Domenico (1543-1607). Italian architect and engineer who undertook much replanning of Rome. He designed the Lateran Palace and parts of the Vatican and helped finish the dome of St Peter's Cathedral. With his brother he designed the great aqueduct of Acqua Leone (1587).

Fontane, Theodor (1819-98), German novelist. He wrote journalism, poetry, theatre criticism and travel books before his first novel, which was written at the age of 56. His masterpiece is *Elli, Briefe*

(1895), about the decay of Berlin society. **Fontanelle**, membranous space between the edges of the cranial bones in the SKULL of an infant. The fontanelle closes as the cranial bones grow towards each other. By the age of two years they are joined but the seams between the bones do not completely fuse until old age.

Fontanne, Lynn. See LUNTS, TIM. **Fonteyn, Dame Margot** (1919-), British ballerina. Trained at the Sadler's Wells Ballet School, she became a member of the ROYAL BALLET (1934-59). She has been a guest artist with every major US and European ballet company. Late in her career she continued to dazzle audiences, especially in her appearances with Rudolf NUREYEV. She has been acclaimed as one of the most exquisite classical dancers of this century. See also pp. 1758-1759.

Foochow (Fuzhou or Fu chow), port in s China on the Min Ch'iang river, capital of Fukien province. The city received its name during the Tang dynasty (618-907). It was one of the first treaty ports to be opened to foreign trade (1842) and thereafter it flourished as a major port and China's largest tea-exporting centre. It declined, however, in the early 20th century because of silting of the river and a lessening demand for tea. In 1949, after the Communist takeover, the port was blockaded by the USA and Chinese Nationalist Industries chemicals, textiles, food processing paper, tea. Pop. 900,000.

Food, material containing essential nutrients taken into an organism to maintain life and growth. These include PROTEINS, FATS, VITAMINS, MINERALS and CARBOHYDRATES. Foods from animals include meat, eggs, fish, shellfish, milk and fat. Plant foods include cereals, tubers, legumes, nuts, vegetables, fruits, oils and sugars. Plants themselves produce carbohydrates through the process of PHOTOSYNTHESIS. See also pp. 750-751, 754-755.

Food additive, substance introduced into food for a variety of purposes. Additives fall into four categories: some enhance the flavour (some, such as sodium benzoate, are preservatives); some, such as colourings, enhance the appearance; and some restore or increase the nutritional value. **Food and Agriculture Organization (FAO)**, oldest of the UN specialized agencies established at the end of WWII to try to improve world nutrition and eliminate hunger; technical aid is given on co-ordinated projects. There is a biennial FAO conference.

Food chain, transfer of food energy through a series of organisms, each organism eating the member below it. Its main sequence is from green plants (producers) to herbivores (primary consumers) and then to carnivores (secondary consumers). Decomposers such as acids, bacteria and enzymes act at each stage and at the end of the chain, breaking down waste and dead matter into forms that can be absorbed by plants, so perpetuating the chain. See also pp. 757, 761, 763.

Food poisoning, disorders that can be caused by a number of organisms, the most common being SALMONELLA. Such organisms are most frequently ingested from animal products such as meat, seafood and eggs. Symptoms include abdominal pain, DIARRHEA, nausea and fever vomiting may also occur. The symptoms usually appear within 8 to 48 hours after eating the infected food and usually subside within two to five days, although diarrhoea may persist for longer. Treatment includes rest, fluids to prevent dehydration and no food until cramps and vomiting subside. See also BOTTISM, GASTROENTERITIS, p. 1086.

Food preservation, treatment of food stuffs to prolong the time for which they can be kept before spoiling. The oldest methods are those of smoke-curing and heat drying. Both of which preserve meat by removing water and adding protective outer layers, and salting, pickling and fermentation, which preserve food chemically. Chemical preservatives, such as sodium benzoate, can also be added to foods. In canning, meats and vegetables are sterilized by heat after being sealed

into airtight tins. Storage at 5°C (41°F) prolongs the life of foods temporarily, and DEEP FREEZING at -5°C (23°F) or below for much longer periods. In the modern technique of freeze drying, water is removed from foods without raising their temperature, so that they can be fully reconstituted when required. The packing of foods in sealed plastic containers is a method of temporary preservation. See also pp. 732, 748-749.

Fool, character in Elizabethan drama based on the traditional court jester or fool. He was usually dressed in motley, or parti-coloured costume with close-fitting cap and bells, and was expected to comment satirically on the actions and concerns of his principals. Typical fools are found in Shakespeare's *King Lear* and *Twelfth Night*. See also p. 419.

Foolscap, sheet size of writing or printing paper, 13½ by 17 in (34.2 × 41.2 cm), or 13½ by 8½ in when folded. It originally bore a watermark that depicted a jester's or fool's cap. This sheet size is gradually losing favour as the international paper sizes are brought into use; the accepted equivalent is A4, 29.7 by 21 cm (11½ × 8½ in).

Foot, family name of five people who have made distinguished contributions to British public life. Isaac (1880-1960) was a Liberal politician who resigned from government office in 1932 in protest against protectionist policies. His sons include Sir Dingle (1905-78), a Liberal MP (1931-45) who joined the Labour Party in 1956 and was solicitor-general (1964-67). Hugh Lord Caradon (1907-), who after a distinguished career in the colonial service became Minister of State for Foreign and Commonwealth Affairs and UK representative at the United Nations (1964-70). John Baron Foot (1909-), solicitor who was created a life peer in 1967, and Michael, see below.

Foot, Michael (1913-), leader of the Labour party since 1980. He was acting editor of the *London Evening Standard* (1942) and twice editor of the *Tribune* (1948-52, 1955-60). He was secretary of state for employment (1974-76) and then became leader of the House of Commons. **Foot**, in poetry, unit of verse metre. Each foot is composed of a group of two or more syllables, some of which are stressed. Most commonly used feet are anapest, DACTYL, IAMB and TROCHEE.

Foot-and-mouth disease, also known as aphthous fever, contagious viral disease of cattle, pigs, sheep and other cloven-hooved animals. Its symptoms include fever, blisters on the mucous membranes (especially the mouth and hooves), loss of weight and appetite and drooling. A vaccine is available, but it does not guarantee prevention. Foot-and-mouth disease rarely occurs in man, although he can be a carrier, as can rats, dogs, birds and frozen meats. Epidemics cause losses of livestock but quarantines and slaughter of diseased animals help control it.

Football, American, game unique to the USA. It is played over four 15 minute quarters between two teams of 11, who play padded players using an oval, rugby type ball. Free substitution is allowed from up to 40 in professional football. The field of play is rectangular, 100 yds (91.4 m) long including the end zone behind the goal-lines. The area between the goal-lines 91.4 m (300 ft) is divided at 45.7 m (150 ft) intervals by lines marked across the pitch so that it resembles a gridiron. In college football, the H-shaped goalposts stand on the end line; in the professional game they overhang the goal line. Points are scored by touchdown (6), field goal (3), or conversion (1 or 2). A safety, when a defender is caught in possession in his end zone is worth two points. Play moves in a series of downs, which begin with a scrimmage line. The team in possession has four downs in which to gain 9.1 m (30 ft) by running or passing or the team loses possession. Players protect the ball carrier by blocking with their forearms or bodies, but he is the only one who may be tackled. The touchdown is scored by running with the ball over the goal-line or catching a forward pass in the end zone.

Fontainebleau, a view of the palace and its historic front court and stairway

Carlo Fontana, a detail of the façade of the Church of S. Marcello in Rome

Fool, the origin of this character in drama can be found in Muslim and early Irish times

Football, American style being played with customary vigour in a London park in 1969

Football, association

Football, rugby, a moment during the game. France won against a world all star team.

Foot binding, illustration of the method of binding and the resulting deformity.

Forbidden City, a winter view of the former home of the emperors.

John Ford was awarded the Presidential Medal of Freedom in 1973.

Football, association, also called soccer ball, game played in most parts of the world in which two teams of 11 players attempt to force a round ball into their opponents' goal. It is played on a rectangular pitch of maximum size 120 by 90m (390 × 300ft), minimum 90 by 45m (300 × 150ft). The goals, two uprights surmounted by a crossbar, are 7.32m (24ft) wide by 2.44m (8ft). Only the goalkeeper may handle the ball, and then only in the penalty area of the goal he is defending; the other players may play the ball in any direction with any other part of the body, although essentially it is kicked or headed. Infringements of the laws, such as foul play, handling, offside and obstruction, are penalized by a direct or indirect free kick. A direct free kick to the attacking side in the defending penalty area is a penalty – a direct kick at goal from 11m (36ft) with only the goalkeeper defending. The game is played over two 45-minute periods and is controlled by a referee, who may caution or even send off players guilty of serious offences or persistent infringements. Football as known today developed in 19th-century England, where the first rules were formulated and in 1863 the Football Association was founded. In 1872 England played Scotland in the first-ever international match; the Scots were to have an important influence on the game, introducing the passing game and professionalism. The legalization of professionalism in 1885 led to the inauguration of the FOOTBALL LEAGUE Championship in 1888. The game was soon to spread beyond Britain, and in 1904 FIFA was formed to control the sport at world level. Football has been played at the Olympic Games since 1908, and in 1930 the four-yearly World Cup was first held. Football tactics have changed greatly since the early days with the old player-formation of goalkeeper, two full-backs, three half-backs, and five forwards giving way to a more fluid manner of positioning in which players found themselves labelled defenders, midfield men and strikers. Substitution of players for tactical reasons or in event of injury is permitted, the number varying with competition rules.

Football, Australian. See AUSTRALIAN RULES FOOTBALL.

Football, Canadian, game similar to American football but with variations to the rules. The Grey Cup is the highlight of the professional season. The principal differences are that teams have 12 players, are allowed only three downs and play on a larger field – 100 by 59.4m (330 × 195 ft). See FOOTBALL, AMERICAN.

Football, Gaelic. See GAELIC FOOTBALL.

Football, rugby, ball game for two teams in which the oval ball may be handled as well as kicked. There are two codes, union and league, but the purpose in each is the same, to touch the ball down in the opposition in-goal area for a try, which allows a kick at the H-shaped goal (a conversion). Kicks must pass over the crossbar between the line of the posts. Players may not pass the ball forward or knock it on to the ground when attempting to catch it. The field of play is rectangular, 100m (330ft) long and 55–68m (180–225ft) wide, and play consists of two 40-minute halves.

Rugby union, which developed as part of football until the 1860s, is a 15-a-side game restricted to amateurs. A team comprises eight forwards and seven backs (replacements (two) are allowed in the event of injury). Breakdowns in play are restarted with a scrum or a lineout, both contested by the forwards, and infringements are penalized by a scrum or an indirect or direct penalty kick. Points are awarded for a try (4), conversion (2), penalty and dropped goals (3 each). Rugby union is most popular in Britain, France, South Africa, New Zealand and Australia, but its following is increasing in other countries.

Rugby league, which began as a breakaway movement from rugby union in northern England in 1895, is a 13-a-side game for professionals and amateurs. There are six forwards and seven backs.

tactical substitutions (two) are allowed. Played mostly in England, Australia, New Zealand and France, it differs from union in permitting tackled players to retain possession and play the ball back to a team mate for a number of tackles limited by the "play-the-ball" rule. Breakdowns in play are restarted by a scrum, there are no lineouts. Points are awarded for a try (3), goal (2) and dropped goal (1).

Football League, annual championship administered by the body of the same name for 92 English and Welsh member clubs divided into four divisions: 22 each in I and II, 24 each in III and IV. Teams within a division play all the others twice, at home and away, getting two points for a win and one for a draw. A system of relegation and promotion operates between the divisions. The League was first contested in the 1888–89 season.

Foot binding, the practice of compressing girls' feet with tight bandages to restrict foot growth. This custom made the feet deformed and almost totally useless, forcing women to remain in the home. Common in all classes of Chinese society, the practice was abolished by the Communists when they came to power. It was meant to produce an elegant gait.

Foote, Robert Bruce (1834–1912), British geologist and archaeologist who spent 33 years in India on its geological survey. He founded the study of the subcontinent's prehistory and discovered many historic sites. Many of his postulates were confirmed by later excavations.

Footlights Club, theatrical company at Cambridge University founded in 1883, which presents its own revue annually. It has been a vehicle for many talented British writers and actors, including Alan Bennett, Eleanor Bron, Peter Cook and John Cleese.

Foppa, Vincenzo (c. 1427–1515), Italian painter. The dominant painter of Lombardy prior to Leonardo da Vinci, he painted religious subjects. In his treatment of colour and light, he was influenced by Jacopo del Pollaiuolo.

Forain, Jean Louis (1852–1931), French illustrator and painter. He is best known for his cartoons and caricatures attacking social injustices and for his etchings, largely on religious subjects. In style, he is highly reminiscent of Daumier.

Foramen magnum, cavity at the base of the skull through which the spine passes. In the gorilla it is positioned towards the back, whereas in man it is set well forward. See also p. 146.

Foraminifera, amoeboid protozoan animals that live among plankton in the sea. They usually have multi-chambered chalky shells called tests which may be spiral, straight or clustered and vary in size from microscopic to 5cm (2in) across, according to species. Many survive as fossils and are useful in geological dating. When they die their shells sink to the ocean-floor to form large deposits, which are the source of chalk and limestone. Order Foraminifera. See also pp. 53, 227, 238, 267, 482.

Forbes, Bryan (1926–), British film director, real name John Clarke. Starting as an actor, he became a script-writer, notably for *The League of Gentlemen* (1959) and *The Angry Silence* (1959). As director his films included *Whistle Down The Wind* (1961), *The L-Shaped Room* (1962) and *The Whisperers* (1966). His authorized biography of Edith Evans, *Ned's Girl*, appeared in 1977.

Forbes, George William (1869–1947), New Zealand politician. He became leader of the United Party and Prime Minister in 1930, and led a coalition government (1931–35). He set up work camps for the unemployed during the Depression.

Forbes-Robertson, Sir Johnston (1853–1937), British actor-manager. He made his first stage appearance in 1874, and later toured England and America. In 1895 he became manager of the Lyceum Theatre in London, where he played *Hamlet* in 1898 and many other roles until his retirement in 1913.

Forbes, Stanhope Alexander (1857–1947), Irish painter of rustic genre scenes,

landscapes and historical subjects. After studying in France, he founded a school of art in Newlyn, Cornwall, in 1899. Typical of his work is *The Fish Sale on a Cornish Beach*.

Forbidden City, walled area of Peking, China. It contains the former imperial palaces of the Ming and Manchu dynasties dating from the 15th century, and was so named because the public used not to be able to enter. It is now a large museum, containing many art treasures.

Force, loosely speaking, a push or a pull. A force acting on a body may (1) balance an equal but opposite force or combination of forces to maintain the body in equilibrium, (2) change the state of motion of the body (in magnitude or direction) or (3) change the shape or state of the body. There are four basic forces in nature. The most familiar, and the weakest, is the gravitational force, a force that attracts inversely as the square of the distance between any two masses. The gravitational force between the Earth and an object accounts for the objects weight. Much stronger is the electromagnetic force which also follows the inverse-square law and may attract or repulse. Two other forces are recognized, both operating only on the sub-atomic level. The weak nuclear force associated with the decay of particles is intermediate in strength between the gravitational and electromagnetic force, whereas the strong nuclear force associated with the "glue" that holds nuclei together is the strongest force known in nature. See also pp. 822–826.

Forcing, in horticulture, speeding up the development of a plant or a part of a plant, usually by providing heat and moisture. Forcing, using a greenhouse, is a method by which vegetable growers can get produce to market before those who raise plants in the open. It is still often used to accelerate the blooming of plants (eg daffodils and tulips) raised from bulbs.

Ford, Ford Madox (1873–1939), British novelist, poet and critic, real name Ford Madox Hueffer. He influenced such writers as Ezra Pound, Joseph Conrad and D. H. Lawrence through his editorship of *English Review*. His chief work is the tetralogy *Parade's End* (1924–28).

Ford, Gerald Rudolph (1913–), 38th President of the USA (1974–77). He trained as a lawyer, and after naval service in WWII he was elected (1948) as a Republican to the US House of Representatives. He became Vice-President in Dec. 1973, and replaced Richard Nixon as President in Aug. 1974. He was defeated by Jimmy Carter in 1977. See also pp. 1748–1749.

Ford, Henry (1863–1947), car manufacturer and industrialist. He developed a petrol-engined car in 1892 and founded FORD MOTORS in 1903. He brought out the economical Model T in 1908. He initiated the conveyor-belt assembly line in 1913 and introduced the eight-hour day with a \$5 minimum wage. In 1936 he established the FORD FOUNDATION, now worth more than \$3,000 million. See also p. 492.

Ford, John (c. 1886–1940), English playwright who, with Cyril Tournier, pioneered post-Jacobean drama. His major plays included *The Broken Heart* (1930), *'Tis Pity She's a Whore* (1933), *Love's Sacrifice* (1933) and *Perkin Warbeck* (1934). Common themes are incest and thwarted passion, and the plays emphasize differences between public and private morality.

Ford, John (1894–1973), US film director. He won Academy Awards for best director for *The Informer* (1935), *The Grapes of Wrath* (1940), *How Green Was My Valley* (1941) and *The Quiet Man* (1952). His other films include *Stagecoach* (1939), *The Horse Soldiers* (1959) and *Chevyenne Autumn* (1964). See also p. 1753.

Forde, Daryl (1902–73), British anthropologist. His work on North American Indians and on various ethnic groups in Nigeria, described in his book *Habitat, Economy and Society* (1934), was extremely influential.

Ford Foundation, philanthropic body that makes grants to individuals and institutions, mainly in the USA with the aim of

advancing human welfare. Its main areas of involvement are education, social matters and the arts. Henry and Edsel Ford set up the foundation in 1936.

Ford Motor Company, major US-based manufacturer of motor cars, trucks, industrial machinery and sophisticated products for use in electronics and space exploration. Founded by Henry Ford in 1903, it is now a public company with numerous plants in the USA and abroad.

Forebrain, one of the three primary parts of the developing brain, clearly distinguishable, together with the midbrain and hindbrain, in the early embryo, but which became overlaid in the adult human by the cerebral hemispheres, which are massive developments from the forebrain. See also MS p 4.

Forecasting, weather, technique of anticipating and describing future weather for a given time and place. There is a three-fold classification depending on the length of the period covered. Short-term forecasts cover the next 24 hours and include wind velocity, cloud cover and temperature. Medium-range forecasts (look two to five days ahead and contain information on the dominant circulatory conditions - the paths of cyclones and anticyclones). Long-range forecasts cover periods of five days and more ahead and are really more extensive medium-range forecasts. Pressures and circulatory patterns are usually given as averages. Artificial satellites have increased the accuracy of weather forecasting, especially when dealing with severe turbulences such as hurricanes.

Foreclosure, deprivation of the right to redeem or continue to hold a mortgage. When a person has failed to pay a mortgage on time, the mortgagee (the one who has lent the money) is legally entitled to foreclose, ie to take possession of the mortgaged property and sell it to recover the amount lent.

Foreign and Commonwealth Office, British government department. In 1964 the Plowden Report recommended that the overseas services of the FOREIGN OFFICE and the COMMONWEALTH (RELATIONS) OFFICE be joined. In 1965 the two offices were combined in a single diplomatic service, managed by the Diplomatic Service Administration Office. In 1968 that office and the Foreign and Commonwealth offices were merged in a single Foreign and Commonwealth Office under one secretary of state, the first of whom was the Labour minister Michael Stewart.

Foreign Legion, French, skilled professional military group of mixed national origin, created in 1831 to serve in French colonies. After fighting in the two world wars and later French colonial struggles, the Legion moved its headquarters from Algeria to France in 1962.

Foreign Office, British Government department which ceased to exist in 1968 when it was joined with the COMMONWEALTH (RELATIONS) OFFICE. It began as an independent department in 1782, when the Secretary of State for the Northern Department became the Secretary of State for Foreign Affairs, and after that date was one of the three chief departments of state, along with the Treasury and the Home Office. See also p 1600.

Foreland, North and South, two chalk headlands in Kent. North Foreland is the NE corner of Thanet, South Foreland, 5 km (3 miles) NE of Dover, is the E extremity of the North Downs.

Foreman, George (1949-), US boxer. He won the Olympic gold medal (heavyweight) in 1968. He defeated Joe Frazier for the world heavyweight championship in 1973 and lost it to Muhammad Ali in 1974.

Forensic medicine, branch of science that deals with the relations and applications of medical facts to legal matters. It mainly concerns itself with cases of insanity, injury, paternity or violent death. See also p 650.

Forensic science, also called medical jurisprudence, the application of medical, scientific or technological knowledge to the investigation of crimes. It permits minute examination of available evidence on the basis that every criminal leaves

clues of some kind, however microscopic. Forensic medicine involves examination of living victims and suspects, as well as the pathology of the dead. The cause of death, if there is doubt, is established at an autopsy. Forensic science developed in the early 1900s in England as a product of police work and medicine. Most branches of the sciences may be involved in some way. See also pp 650-651.

Foreshortening, in painting, the illusion of depth achieved by recording the distortion seen by the eye when an object or figure is seen in the distance or at an unusual angle. The closest object or part of it may be unusually large and the more distant object or part unusually small. This skill was mastered by Renaissance painters, beginning with Masaccio's application of scientific perspective in 1425.

Forest, extensive wooded area preserving some primitive wildness. Tropical rain forests lie in the equatorial rain belt and are made up mainly of closely packed, broad-leaved evergreen trees and vines. Hardwood forests comprise mainly deciduous trees with a long growing period in warm, moist regions. Softwood forests are found in colder and temperate areas and are mainly of conifers. See pp 292, 304, 306.

Forest Hills, tennis stadium on Long Island, New York, that staged the US lawn tennis championships 1915-20 and 1924-77. The grass courts were replaced by clay in 1975. A feature of Forest Hills is its horseshoe-shaped stand.

Forest, Lee de. See DE FOREST, LEE. **Forester, Cecil Scott** (1899-1966), British author best known for his sea stories. He gave up a career in medicine and turned to writing fiction. His popular novel saga about Horatio Hornblower, a naval officer during the Napoleonic Wars, began with *The Happy Return* (1937). His other works include *The African Queen* (1935) and *The Gun* (1933).

Forest of Dean. See DEAN, FOREST OF. **Forestry**, science of managing areas of woodland with their associated waters and wastelands. The main aim of forestry is to raise timber, but conservation of soil, water and wildlife is also a consideration. Systematic management probably began in Germany in the 16th century, where forests were divided into sections for timber-felling and regeneration, to sustain annual yields. Education in technical forestry began in western Europe in the 19th century. Natural forests once covered nearly two-thirds of the world's land surface, but clearances for farming have reduced this figure to barely a third today. See also pp 714-715.

Forestry Commission, UK national forestry authority charged with promoting the interests of forestry, the development of afforestation and the production and supply of timber in the UK. The primary afforestation programme is being developed in the Highlands of Scotland. **Forests**, lands in Britain which, from the time of WILLIAM I, were set aside for hunting and shooting and were subject to the forest laws. Forest laws and the special privileges granted to landowners by them fell into disuse in the late 17th century. New Forest, Hampshire, is an ancient royal forest. See also p 1330.

Forever Amber (1944), best-selling English novel by Kathleen Winsor. Set in Restoration England, it is the epic story of Amber St Clare, a fictional mistress of Charles II. It was made into a film in 1947.

Forfar, market and county town in Scotland. In 1975 it became part of the Tayside region. Its industries include jute, linen and rayon. Pop (1971) 10,500.

Forfarshire (Angus), former Scottish county N of the River Tay, incorporated in Tayside in 1975. It comprised part of the Grampians in the NW, with Sidlaws to the S. Dundee, Forfar, Arbroath and Montrose are the chief towns.

Forgery, making of a fraudulent imitation of a document or artefact. In the UK forgery is a serious crime punishable by imprisonment, and the forgery of a deed, will or banknote may be punishable with imprisonment for life.

Forget-me-not, any of about 50 species of

hardy perennial and annual herbs of the BORAGACEAE family, found in temperate parts of Europe, Asia, Australasia and North America. The typical five-petalled flowers are sky blue but may change colour with age. Genus *Myosotis*.

Forging, shaping of metal articles by hammering or pressing metal blanks between pairs of forging dies. The upper die is attached to the ram of a forging hammer or press so that it can be raised and dropped (with or without additional pressure) against the rigidly supported lower die. Most metals are forged hot, but cold forging is also practised. See also pp 406, 408.

Form, in philosophy, can refer to various concepts. According to PLATO's theory of Forms or Ideas, forms are eternal, immutable objects of the intellect, not part of the world as perceived by the senses. ARISTOTLE believed that every object consisted of matter which was shaped into a form. This form could change, but the basic matter from which it is composed could not. In logic, the form of a proposition is the type to which it belongs, such as the negative or the universal. It is contrasted with the content, the subject matter of a proposition. See also pp 1880-1881.

Formaldehyde, colourless suffocating and poisonous gas (HCHO) prepared commercially by the catalytic oxidation of METHANE or METHANOL. It was discovered by August von HOFMANN in 1867. It is used in the manufacture of plastics, and as a germicide, preservative, reducing agent and corrosion inhibitor. Most formaldehyde is in the form of formalin, an aqueous solution containing 35-40% of formaldehyde. Chief properties: m.p. -92°C (-131.6°F); b.p. -19°C (-1°F).

Formalhaut, or Alpha Piscis Austrini, giant star in the constellation PISCES AUSTRINUS. Characteristics: apparent magnitude 1.16; absolute magnitude 1.9; spectral class A3; distance 23 light years. See also pp 978-1016.

Formby, George Jr (1904-61), British music-hall comedian noted for his direct Lancashire humour and saucy songs such as *When I'm Cleaning Windows*, which he performed to his own high-speed ukelele accompaniments. Primarily a performer in variety, he also made 22 films between 1936 and 1948.

Forman, Milos (1932-), Czech film director whose films present a humorous view of fundamentally serious problems. He made several films in Czechoslovakia, including *Fireman's Ball* (1967), before moving to the USA in 1968. Since then he has made *Taking Off* (1971), about the generation gap between a young girl and her parents, and the award-winning *One Flew Over the Cuckoo's Nest* (1976), based on a novel by Ken Kesey.

Formica, trademark for a plastic material that forms a hard, smooth, heat- and stain-resistant surface for furniture and wallboards. Layers of resin-impregnated paper are bonded together under heat and pressure. The top sheet is patterned and coloured, frequently with a wood grain. See also p 588.

Formic acid (methanoic acid), colourless fuming liquid (HCOOH) prepared by treating sodium formate with sulphuric acid and distilling it. It occurs in the stings of ants. It is used in the making of paper, textiles and leather. Properties: s.g. 1.22, m.p. 8.3°C (46.9°F); b.p. 100.8°C (213.5°F).

Formosa. See TAIWAN. **Formia**, in anatomy, arch or fold of tissue, many of which occur in the body, eg in the brain and the innermost region of the vagina. See also p 129.

Forrest, Sir John, 1st Baron Forrest of Bunbury (1847-1918), Australian politician and explorer. He explored much of Australia's interior (1869-70, 1874) becoming surveyor general of Western Australia in 1883, he was also Western Australia's first premier (1890-1901). He held several posts in the Australian Commonwealth government.

Forsmann, Werner (1904-), German physician and physiologist. He shared the 1956 Nobel Prize in physiology and medicine with A. F. CURNARD and D. W.

Foreign Legion soldiers, mostly Europeans and Americans, in Paris in 1939

Forget-me-not is a favourite flower of poets and is a symbol of constancy between lovers

Forging is the hammering process by which metal hot or cold, can be shaped

George Formby with his dog, Punch, rehearsing for a number in *Zip Goes a Million* in 1951

Forster, Edward Morgan

E. M. Forster's works contrast those who live by convention with those who live by instinct

RICHARDS This was belated recognition for his development of the cardiac catheter, a tube which is inserted into a vein in the arm and pushed through it until it reaches the heart. It is used in the diagnosis of heart and lung diseases.

Forster, Edward Morgan (1879-1970), British novelist. He wrote six novels: *Where Angels Fear to Tread* (1905), *The Longest Journey* (1907), *A Room with a View* (1908), *Howards End* (1910), *A Passage to India* (1924) and the posthumously published *Maurice* (1971). *Aspects of the Novel* (1927) is a collection of lectures in literary criticism. *Abinger Harvest* (1936) and *Two Cheers for Democracy* (1951) are collections of essays on literature, society and politics. **Forster, John** (1812-76), British journalist and biographer. He wrote an extensive survey of contemporary politicians and was appointed editor of the *Daily News* in 1846. He is best known for his memoir of Charles Dickens (1872-74).

Forster, William Edward (1818-86), British Liberal politician who entered Parliament in 1861. He was the minister responsible for the 1870 Education Act, which established compulsory state elementary education.

Forsyth, Rev. Alexander John (1769-1843), Scottish inventor of the first operable percussion cap for the ignition of gunpowder. He developed his first percussion cap, which used mercury fulminate, in 1805 and by 1807 he had improved the system to work in existing weapons. The cap greatly increased the efficacy of firearms, and Forsyth received a pension from the British government. See also p.556.

Forsyth, James (1913-), British poet and dramatist. His plays, many with religious themes, include *Heliose* (1951), *The Pier* (1958) and a nativity play, *Emmanuel* (1960). He also dramatized C. S. Lewis's *The Screwtape Letters* (1942) as *Dear Wormwood* (1961).

Forsythia, genus of hardy deciduous shrubs of the olive family Oleaceae, named after the British botanist William Forsyth. They are commonly cultivated in temperate regions. The masses of small yellow flowers look like golden bells and appear in early spring before the leaves. Height to 3m (9ft).

Fort Albany, fur-trading post of the HURON'S BAY COMPANY in Ontario. The fort was established in 1679 by Charles Bayly who had started trading there in 1675. It was held by the French (1686-93), and was a key trading centre dominating the fur trade on the Albany River.

Fortaleza (Ceard), port city in NE Brazil, 435km (270 miles) NW of Natal. Founded in 1609 it is the capital of Ceará Industries: sugar-refining, textiles, soap, shipping. Pop. 842,200.

Fort-de-France, port city and capital of Martinique, French West Indies, on Fort-de-France Bay. It was settled in 1762 by the French although it remained undeveloped until the beginning of the twentieth century. It is now a popular tourist resort. Pop. 99,000.

Fort Garry. See WINNIPEG.

Forth, river in Scotland, formed by the junction of Duchray Water and the Avonduh, 1.5km (1 mile) W of Aberfoyle. It meanders down the Carse of Forth W of Stirling to the Firth at Kincardine.

Forth, Firth of, estuary of the Forth, beginning at Kincardine and extending 77km (48 miles) to the Isle of May. It widens to 30.5km (19 miles) N of Musselburgh, but is only 13.5km (8.5 miles) wide N of North Berwick.

Forth Bridge, railway bridge over the Forth estuary, Scotland, opened in 1890. It is a cantilever structure with towers reaching to 110m (361ft) above the water. Length 2,498m (8,196ft). The adjacent road bridge, opened in 1964, is a suspension span 1,006m (3,300ft) long.

For the Fallen (1914), poem by Laurence Binyon dealing with the unfading glory of those who died in WWI. A patriotic poem, it can be contrasted with the later, disillusioned war poetry of Wilfred Owen.

Fort Knox, US Army post and depository of most of the nation's gold bullion. The

fort, in Kentucky, was set up as a military establishment in 1917, and its vaults for the department of the treasury were built in 1937.

Fort Sumter, fort in South Carolina, USA, the scene of the first hostilities of the AMERICAN CIVIL WAR. In 1861 it was the only post in South Carolina still controlled by the federal government. LINCOLN sent reinforcements but the Confederates attacked and took it in two days. See also pp.1628-1629.

Fortuna, originally Roman fertility goddess. Later, after being identified with the Greek Tyche, she became goddess of chance or luck and was worshipped as Jupiter's first-born daughter, bearer of prosperity and increase.

Fortune Theatre, London playhouse opened in 1600, managed by Edward ALLEYN and Philip MENSLOWE. THOMAS DEKKER, GEORGE CHAPMAN, and THOMAS HEYWOOD all wrote plays for the Fortune in competition with SHAKESPEARE, who was at the Globe Theatre. It was demolished in 1649. See also p.1418.

Fort Worth, city in N central Texas, USA, 53km (33 miles) W of Dallas. It was settled in 1843 and the US army established a post there in 1847. The area is famous for its oil and cattle, and since WWII an aircraft industry has also developed. Other products include processed food. Pop. (1973) 359,542.

Forty-ninth parallel, boundary line between the USA and Canada from Lake Superior to the Pacific coast. It was agreed in 1818, but only as far as the Rocky Mts. the Oregon Territory being left to the joint administration of Britain and the USA. In 1846 it was extended to the coast by the Treaty of Oregon.

Forum, in Roman towns, chief market and public gathering place. In Rome it originated in the 6th century BC and was set in a valley from the Capitoline hill along the Quirinal, Oppian and Palatine hills. It held many civic buildings including basilicas and temples, the *curia* (senate-house), 'treasury and triumphal arches. See also pp.1224, 1227, 1232.

For Whom the Bell Tolls (1940), novel by Ernest HEMINGWAY. Taking its title from a poem by John DONNE, it presents an optimistic vision of men's inevitable involvement with each other. It takes place during the SPANISH CIVIL WAR and concerns an American hiding in the mountains with a band of guerrilla fighters.

Foss, Lukas (1922-), US composer and conductor, b. Germany. He is known for his AVANT-GARDE compositions, particularly those, such as *Elytres* (1964), that experiment with ALEATORIC MUSIC.

Fosse Way, British Roman road, running between Lincoln and the S Devon coast. The line of the road in AD 47 marked the boundary of the original Roman province of Britain which was guarded by a line of forts. Its name derived from the *fosse*, or ditch, that formed the frontier. See also pp.1234, 1235, 1238.

Fossil, any direct evidence of the existence of an organism more than 10,000 years old. Fossils mostly consist of original structures, such as bones or shells, or wood, often altered through mineralization or preserved as moulds and casts. Imprints such as tracks and footprints are also fossils. Leaves are often preserved as a carbonized film outlining their form. Occasionally organisms are totally preserved in frozen soil (mammoth), peat bogs and asphalt lakes (woolly rhinoceroses), or trapped in hardened resin (insects in amber). Fossil excrement, called coprolites, frequently contains undigested and recognizable hard parts. Very few animals and plants that die become fossilized. Since fossils reveal evolutionary changes through time, they not only provide a picture of the past but are essential clues for geologic dating. See also pp.270-287, 270-287, 262-265.

Foster, Brendan (1948-), British long- and middle-distance runner. A strong-running strategist, he won the 5,000m in the 1974 European Championships and was third in the 1976 Olympic Games 10,000m. He held world records at 2 miles and 3,000m.

Foster, Myles Birke (1825-99), British painter and engraver. In the 1850s he illustrated many books, including Longfellow's *Hyperion* (1853), but in about 1860 turned his attention to landscape watercolours.

Foster, Stephen Collins (1826-64), US songwriter. Influenced by the Negro spiritual, his songs were extremely popular but he had little business sense and died in poverty. They include *Camptown Races* (1850), *Old Folks at Home* (1851), *My Old Kentucky Home* (1853) and *Jeanie with the Light Brown Hair* (1854).

Fotheringhay, village in Northamptonshire, central England, on the River Nene. It has the ruins of a 12th-century castle which was the birthplace of RICHARD III and the scene of the execution in 1586 of MARY, QUEEN OF SCOTS. Pop. 172.

Foucault, Jean Bernard Léon (1819-68), French physician and physicist. He proved that the Earth spins on its axis, worked on a method to measure the absolute velocity of light and in 1850 showed that it is slower in water than in air. He also noted the occurrence of eddy currents ('Foucault currents'). See also pp.856-857.

Foucault pendulum, heavy metal bob hung from a long, fine wire, first used by Jean Foucault to demonstrate the Earth's rotation. As the Earth turns on its axis the plane of swing of the pendulum, as observed from the Earth's surface, rotates because of the heavy bob's inertial resistance to change of absolute direction, until it has returned to its original orientation. Its period of rotation depends on its latitude; in London it rotates in 30 hours. See also INERTIA, p.451.

Fougasse, (1887-1965), British cartoonist, real name Kenneth Bird. He is remembered chiefly for the small comic stick figures in his cartoons for *Punch*, of which he was editor (1949-53). During WWII his posters promoting various national causes gained him widespread fame.

Foundry, workshop in which metals are processed by melting and casting in moulds. Up to the 18th century, foundries were usually small, mainly casting gun barrels and bells. From 1760, however, they grew in size as the use of coke provided an efficient fuel to heat large furnaces. Foundries became increasingly sophisticated, especially where iron and steel were concerned, after the innovations of men such as COKE and BESSEMER. See also pp.396-397, 408-409.

Fountains Abbey, Cistercian abbey, now in ruins, 5km (8 miles) N of Harrogate in the West Riding of Yorkshire, England. Founded c.1132, it was suppressed in 1539 during the Reformation, at which time it housed 30 members in addition to an abbot and prior.

Fouquet (Fouquet), Jean (c.1420-c.80), French court painter. His work is monumental and sculptural in character, with figurings modelled in broad planes. Notable works include his portrait of CHARLES VII (c.1447), BOOKS OF HOURS (1450-60) and the *Pietà* at Noyans. See also pp.1287, 1337, 1396.

Four Freedoms, expression of post-WWII goals made by Franklin D. ROOSEVELT in his State of the Union Address of Jan. 1941. They were: freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear. Some of these were echoed in the ATLANTIC CHARTER of 1941.

Four Horsemen of the Apocalypse, allegorical figures described in the biblical Book of REVELATION (6:1-8). The first horseman rides on a white horse, he carries a bow and is given a crown of conquest. The second is on a red horse, he has the power to take peace from the earth, and is given a sword. The third is on a black horse and carries a pair of balances, and the fourth is on a pale horse and is Death, who has unlimited power to destroy.

Fourier, Jean (1768-1830), French mathematician and physicist, scientific adviser to Napoleon in Egypt from 1798 to 1801. His later work on the mathematical analysis of heat flow led to his devising what is known as the FOURIER SERIES.

Forsythia is a popular shrub with gardeners because it grows well in almost any soil

Forum, in Rome, was used for meetings and athletics and had galleries for spectators

Fossils, even in early writings there is a realization that they are a clue to evolution

Fournier, Pierre Simon (1712-68), French typefounder and typographer who was the first to modernize traditional typesetters. He contributed to *Dictionnaire Encyclopédique*.

Fournier, Pierre (1906-), French cellist. He studied at the Paris Conservatory and became a teacher there (1941-49). He made his debut as a soloist in 1928 and was acclaimed for his performances of works by ELGAR, BACH, BRAHMS and DEBussy.

Four Quartets (1943), poem by T. S. ELIOT. Its four sections, originally published individually, are *Burnt Norton* (1936), *East Coker* (1940), *The Dry Salvages* (1941), and *Little Gidding* (1942). They reflect the poet's conversion to Anglo-Catholicism.

Four-square Gospel Alliance. See MCPHERSON, ALMEE SAMPLE.

Four-stroke cycle, power cycle that is completed after four journeys by a reciprocating piston, used in most motor car and lorry engines. First, the piston descends to admit the fuel-air mixture (intake stroke). Second, the piston rises, compressing the mixture (compression stroke). Third, the mixture is ignited by spark or compression, and expanding gases from the explosion force the piston downwards (ignition or power stroke). Fourth, the piston again rises to expel the spent gases from the cylinder (exhaust stroke). See also TWO-STROKE CYCLE. pp 42-43.

Four-stroke engine. See ENGINE.

Fourteen Points (1918), Woodrow Wilson's unsuccessful plan for peace after WWI. Several points were included in the Versailles treaty, and Wilson's dream of a LEAGUE OF NATIONS was realized. See also p 1672.

Fourth dimension, time considered as an additional dimension, together with the three dimensions of space, in a full description of the motion of a particle. In RELATIVITY theory this four-dimensional framework is called SPACE-TIME. See also p 858.

Fourth estate, name often given to the press - people who gather, write and edit news. The phrase was first used by Thomas Babington MACAULAY when he wrote (1828) of the House of Commons that "the gallery in which the reporters sit has become a fourth estate of the realm", thus making an addition to the term THREE ESTATES - the lords spiritual, lords temporal and commons.

Fourth of July, US Independence Day and national holiday in celebration of the adoption of the American Declaration of Independence of 4 July 1776. The day has been a holiday since that time.

Fowl, generally any gallinaceous or similar bird such as the pheasant or turkey, or more commonly the domestic chicken. See POULTRY.

Fowler, Henry Watson (1858-1933), British lexicographer and grammarian. He is known for *A Dictionary of Modern English Usage* (1926), and other writings such as *The King's English* (1906).

Fowles, John (1926-), British writer whose novels make strong comments on English ethical and social mores. *The Collector* (1963), *The Magus* (1966) and *The French Lieutenant's Woman* (1969) have been made into films. *Daniel Martin* (1977) was also a bestseller.

Fox, Charles James (1740-1806), British Whig politician who entered Parliament in 1768. In 1770-72 he was a lord of the Admiralty and in 1773-74 a lord of the Treasury. In 1782 he became foreign secretary in ROCKINGHAM's government and in 1783 formed a coalition government with Lord NORTH. Thereafter he led the small Whig opposition to the long government of PITT, returning to office as foreign secretary briefly in 1806. See also pp 1544-1545.

Fox, George (1624-91), English religious leader, founder of the Society of Friends (QUAKERS). He embarked upon his evangelical calling in 1646 in response to an "inner light". He was imprisoned eight times between 1649 and 1673. In 1671-72 he travelled to America to visit Quaker colonies there.

Fox, Neil (1939-), British rugby league player who, as a powerful centre, won 29 caps for Britain (1959-69). He began his career in 1956 with Wakefield Trinity and by the mid-1970s had amassed more than 5,000 points.

Fox, Sir William (1812-93), New Zealand politician. As Prime Minister he opposed moves to abolish New Zealand's provincial government and staunchly supported prohibition.

Fox, any of several canines of the dog family. The red fox (*Vulpes vulpes*) is typical. Distinguished by its sharp features, rather large ears and long bushy tail, it feeds on insects, fruit, carrion and any small animal it can overpower. Height 38cm (15in) at the shoulder; weight about 9kg (19lb). Family Canidae. See also pp 89, 304, 307, 318, 322.

Foxe, John (1516-87), English Anglican clergyman and historian. He was exiled during Mary I's persecutions, returning in Elizabeth I's reign to write his monumental *Acts and Monuments of these latter and perillous Dayes*, known as *Foxe's Book of Martyrs* (1563), a graphic description of religious persecutions from John WYCLIFFE to Thomas CRANMER. See also p 1405.

Foxglove, any of a genus (*Digitalis*) of hardy Eurasian biennial and perennial plants with long, spiky clusters of two-lipped, tubular flowers. The common biennial foxglove (*D. purpurea*), source of the heart stimulant digitalis is widely grown for its showy white, rose, purple or blue flowers. Family Scrophulariaceae.

Foxhound, medium-sized dog (sporting group) used in foxhunting. The coat is short and smooth, the ears droop and the tail is carried erect. The colour is black, tan and white. Foxhounds are noted for their speed and stamina. The American foxhound, recognized as a separate breed, is sligher than the English variety. Height 53.3-63.5cm (21-25in) at the shoulder.

Fox hunting, field sport in which a fox is pursued across country by hounds, horsemen and horsewomen. A hunt is controlled by the master of hounds, the hounds by the huntsman, helped by whippers-in. Traditionally, if a fox is killed, its head, feet and tail (mask, pads and brush) are cut off and presented to members of the hunt, and its body given to the hounds.

Fox terrier, popular hunting dog (TERRIER group) recognized in two varieties: the smooth and the wire-haired. It has a narrow, tapered head, V-shaped, drooping ears, a short, straight-backed body, straight legs and a high-set tail carried erect. The coat is predominantly white in both varieties. Standard height 39.5cm (15.5in) at the shoulder; weight 7-8kg (15-18lb).

Fox-trot, ballroom dance popularized by the husband-and-wife dancing team of Vernon and Irene Castle in the early 20th century. Performed to a 4/4 beat, it is based on the two-step, but has a syncopated, rather than even, rhythm.

Foyle, river and lough of N Ireland. The River Foyle is formed from the rivers Finn and Mourne, which come together at Lifford. It flows past Londonderry and enters the tidal Lough Foyle.

Fraction, quotient written in the form of one number divided by another, eg $\frac{1}{2}$. In general, a fraction is $\frac{a}{b}$ where a is the numerator and b the denominator. If a and b are whole numbers the quotient is a simple fraction. If a is smaller than b , it is a proper fraction; if b is smaller than a , it is an improper fraction. In an algebraic fraction the denominator, or the numerator and denominator, are algebraic expressions, eg $\frac{x^2}{x^2+1}$. In a complex fraction both the numerator and denominator are themselves fractions. See also pp 778-779.

Fracture, break in a bone. A compound fracture is one in which the bone has broken through the skin. During healing the break must be immobilized for a period of time that depends on the age and size of the bone, and the complexity of the fracture. See also p 157.

Fragonard, Jean-Honoré (1732-1806), French painter. He was a student of Jean

CHARDIN and François BOUCHER. He used many different styles, but is best known for the lighthearted spontaneity of his amorous scenes, rustic landscapes and decorative panels.

Frame, Janet (1924-), New Zealand short-story writer and novelist. Her works, set in New Zealand, explore the situation of contemporary women. They include *The Lagoon* (1951), *A State of Siege* (1966) and *The Rainbirds* (1968).

Frame of Reference, mathematical co-ordinate system for describing events in space and time with respect to a given observer. In the theory of RELATIVITY, this frame of reference is four-dimensional, and the description of events in other frames of reference depends on the relative velocities and accelerations of those frames with respect to the frame of reference of the observer. See also p 858.

Frampton, Sir George James (1860-1928), British sculptor. His work includes the statue of Peter Pan (1912) in Kensington Gardens, London.

Franc, monetary unit of France, Belgium, Switzerland and Luxembourg as well as of the African Financial Community (CFA) and the French Pacific Community. It is divided into 100 centimes.

France, Anatole (1844-1924), real name Anatole François Thibault, French author. He achieved recognition with the novels *The Crime of Sylvester Bonnard* (1881) and *Thais* (1890). He supported Emile ZOLA in the DREYFUS AFFAIR, and his writing grew more political, eg in the novels *Contemporary History* (1896-1901) and *Penguin Island* (1908). He was awarded the 1921 Nobel Prize in Literature.

France, republic in W Europe, s of Britain, N of Spain, and W of Germany, Italy, Switzerland and the Low Countries. It is slowly rising in the N and W with highlands to the S and E. The country's richest resource is its soil, and important products include wheat, grapes, soft fruits and butter and cheese from dairy herds. Although the industrial areas were devastated during WWI, post-war reconstruction turned France into a leading industrial nation, producing steel, pig iron and chemicals. A member of the EEC. The capital is Paris. Area, 547,026sq km (211,207sq miles). Pop. (1981 est.) 53,800,000. See p 2037.

Francesca, Piero della. See PIERO DELLA FRANCESCA.

Franch-Comté, historic region of E France, its capital was Dole until 1674 and Besançon thereafter. It was founded in the 12th century as the "free county" of the Burgundians, and throughout the Middle Ages was disputed between the Holy Roman Empire, France, Burgundy, Spain and Switzerland. After Louis XIV's conquest of 1674, it was finally recognized as part of France in 1678.

Franchise, business activity based upon an agreement between two parties that one will market the product of the other under specific conditions. It is common in the marketing of convenience foods (such as ice cream) where the supplying company may furnish almost everything except labour and some of the capital.

Franchise, right or privilege conferred on an individual or body by government, principally, in politics, the right to vote. In Britain the modern basis of the franchise dates from the 1832 REFORM ACT, which replaced the hotch-pot of medieval qualifications by a uniform set of qualifications. Broadly, the 1832 Act enfranchised the urban middle class, the 1867 Act the urban working class, and the 1884 Act agricultural labourers. All adult males (age 21) and women of age 30 were enfranchised in 1918, women of age 21 in 1928 (The first country to give women the vote was New Zealand, in 1893). The voting age in Britain was lowered to 18 in 1969. See also pp 1544-1545, 1571-1640, 1641.

Francis, name of two Holy Roman emperors. Francis I (1708-65) was also Duke of Lorraine (1729-35) and of Tuscany (1737-65). In 1736 he married the Hapsburg heiress MARIA THERESA. Her accession in 1740 precipitated the War of the AUSTRIAN SUCCESSION. In 1745 Francis suc-

Fourth of July, an American soldier watches beacon fires lit in celebration of peace.

George Fox, Quakers were named from his advice to 'tumble at the word of the Lord'.

Fox terrier was originally bred to follow a fox into its burrow and then drive it out.

Fractures are generally located by X ray and may sometimes need fixing with pins.

Francis

Francis of Assisi was portrayed by a friar in *The Little Flowers of St Francis*

César Francis received recognition in his later years only but his admirers include Debussy

Frankenstein, a still from the film of 1931 with Boris Karloff as the monster

Benjamin Franklin never sought public office but was one of the USA's best diplomats

ceeded Charles VII as emperor, but was ineffectual, the real ruler was his wife Francis II (1768-1835) was the last Holy Roman emperor (1792-1806) and Emperor of Austria (1804-35). Repeatedly defeated by France, in 1806 NAPOLEON forced him to dissolve the empire, but he had already proclaimed himself Austrian emperor. In 1810 his daughter Marie-Louise married Napoleon, but in 1813 Austria rejoined the anti-French coalition. Although Francis presided over the Congress of Vienna, since 1809 Austrian affairs had been run by Prince METTERNICH. See also p.1560.

Francis, name of two kings of France. Francis I (1494-1547, r.1515-47) was a candidate for Holy Roman Emperor in 1519 but was defeated by CHARLES V of Spain. He then fought four wars against Charles - 1521-25, 1527-29, 1536-38 and 1542-44 - mainly in Italy, allying himself at different times with England, the papacy, Venice, Florence and the Turkish Sultan Sulaiman I. He lost all the wars and much territory, including Burgundy. His absolutist rule saw the flourishing of the French Renaissance and the persecution of the WALSINGHAM. Francis II (1544-60, r.1559-60) reigned for only 17 months. He married Mary Stuart whose uncles Francis, Duc de Guise, and Charles, Cardinal of Lorraine, ruled the kingdom. See also pp.1374, 1374, 1397, 1397, 1432, 1432.

Francis, name of two kings of the Two Sicilies. Francis I (1777-1830) became king in 1825. He showed liberal sympathies towards the CARBONARI rising of 1820 and opposed Austrian intervention in Naples, but on his accession he became an extreme reactionary and asked for greater Austrian presence. Francis II (1836-94) acceded to the throne in 1859 and was the last Bourbon King of Naples. He fled before GARIBOLDI's army in 1860, was deposed by the plebiscite of 1861 and went into exile in Rome, France and Austria.

Franciscans, orders of friars following the rule of St FRANCIS OF ASSISI, which was approved by Pope Innocent III in 1209. They comprise the Observants, now known as the Friars Minor; the Friars Minor Capuchin, who were allowed to return to the strict observance of the primitive rule early in the 16th century; the Conventuals; and the Poor Clares, an order of nuns founded by St Francis and St Clare. Originally called Greyfriars, Franciscans now wear brown robes. See also pp.1321, 1321.

Francis, Dick (1920-), British writer of crime fiction. He was once a steeple-chase jockey and his novels, such as *Dead Cert* (1962) and *Bonerack* (1971), are often about people and situations connected with horse racing.

Francis Joseph I, (1830-1916), Emperor of Austria (1848-1916), King of Hungary (1867-1916). He succeeded his uncle Ferdinand, who abdicated during the REVOLUTIONS OF 1848 and quickly brought the revolutions under control, defeating the Hungarians under KOSSUTH and the Italians under VICTOR EMANUEL II of Savoy (both in 1849). But he lost Lombardy to Savoy in 1859 and in the AUSTRO-PRUSSIAN WAR (1866) lost Venetia to Italy, and Austria's prestige among the German states declined. In 1867 he was forced to grant Hungary co-equal status with Austria in the Dual Monarchy. He died in the midst of WWI two years before the complete collapse of his empire. See also p.1561.

Francis of Assisi (c.1182-1226) founder of the itinerant order of the FRANCISCAN Friars, Roman Catholic saint (1228). Born Giovanni de Bernardone, the son of a wealthy merchant, in 1205 he renounced his worldly life for one of poverty and prayer. In 1209 he received permission from Pope Innocent III to begin a monastic order. The Franciscans were vowed to humility, poverty and devotion to aiding mankind. In 1212 he established an order for women, the Poor Clares, and in 1221 a lay fraternity. Like his brother friars he travelled widely, going to Egypt, Spain and to the Holy Land in 1219-20. In 1221

he gave up leadership of his order and later retired to his birthplace, Assisi in Italy. In 1224 he received the STIGMATA. He became revered for his love of man and nature, and is often depicted preaching to the birds. See also p.1321.

Francis of Paola, Saint (1416-1507) founder of the Order of Minors Friars, formed in 1435. Charles VIII of France built a friary for the Order at Plessis-Tours, where his dying father, Louis XI, had been assisted by Francis in 1482. The friars were vowed to perpetual fasting. Francis was canonized in 1519.

Francis of Sales, Saint, (1567-1622), Roman Catholic divine. A renowned preacher, he was a leader of the COUNTER-REFORMATION in Savoy. His first mission was to Chablais where he converted many from CALVINISM. In 1602 he was appointed Bishop (in exile) of Geneva. With Jeanne de Chantal he founded the Visitation Nuns. *Introduction to the Devout Life* (1609) is his best-known work.

Francistown, city in NE Botswana, on the railway from Cape Town (South Africa) to Bulawayo and Salisbury in Zimbabwe (Rhodesia). It is situated 161km (100 miles) SW of Bulawayo. Pop. (1971) 19,000.

Francis Xavier, Saint (1506-52), JESUIT missionary, often called the Apostle to the Indies. He was an associate of ST IGNATIUS OF LOYOLA, with whom he took the vow founding the Society of Jesus. From 1541 he travelled through India, Japan and the East Indies, making many converts. He died while on a journey to China.

Francium, radioactive metallic element (symbol Fr), discovered in 1939 by Marguerite Perey. It occurs naturally in uranium ores and is a decay product of actinium. It is quite rare and its chemical properties are unknown, but it is thought to resemble CAESIUM. Properties: at no 87, most stable isotope Fr²²³ (half-life 22 min). See also ALKALI ELEMENTS.

Frank, César Auguste (1822-90), French Romantic composer, b. Belgium. He wrote major works for the organ and is best remembered for the *Symphonic Variations* for piano and orchestra (1885), and the popular *Symphony in D Minor* (1888). See also pp.1582, 1583.

Frank, James (1882-1964), US physicist, b. Germany. Frank studied and taught at German universities. With Gustav HERTZ he experimented with electron bombardment of gases, providing support for Niels BOHR's theory of atomic structure and information for Max PLANCK's quantum theory. He and Hertz shared the 1925 Nobel Prize in physics. In 1935 he went to the USA, became a US citizen and ultimately worked on the development of the atomic bomb.

Francisco, Francisco (1892-1975), Spanish general and dictator of Spain (1939-75). He joined the 1936 military uprising that led to the SPANISH CIVIL WAR and assumed leadership of the FALANGE party. By 1939, with the aid of Nazi Germany and Fascist Italy, he had won the war and became Spain's dictator. He kept Spain neutral in WWII, after which he presided over Spain's accelerating economic development and kept rigid control over its politics. He declared Spain a monarchy in 1947 with himself as regent. In 1969 he designated JUAN CARLOS as heir to the throne, and he became king upon Franco's death. See also p.1705.

Francia, historic region of Germany around the River Main. It was a duchy of the East Frankish kingdom after 843 and was later divided among several ecclesiastical princes, of whom the bishop of Würzburg was one of the most powerful. Much of Francia became part of Bavaria in the 19th century.

Franco-Prussian War (1870-71), conflict in which BISMARCK, Chancellor of Prussia, engineered a dispute with France on the Spanish succession as a pretext for invading France, in alliance with the other German states, in Aug. 1870. The French were disastrously defeated at SEDAN in Sept. and NAPOLEON III abdicated. According to the terms of the peace of March 1871 Alsace and Lorraine were ceded to

the new German Empire. See also pp.1588, 1660.

Frangipani, group of shrubs and small trees native to Central America and the West Indies and now grown in other warm regions. They have fragrant white, yellow, pink or red flowers and a poisonous milky sap. A perfume of the same name is prepared from one species. Family Apocynaceae, genus *Plumeria*.

Frank, Anne. See DIARY OF ANNE FRANK. **Frankau, Gilbert** (1884-1952), British poet and novelist. After experimenting with novels in verse and poems in *Poetical Works* (1923), he wrote various prose novels, including *Peter Jackson*, *Cigar Merchant* (1919) and *The Love Story of Alette Brunton* (1922).

Frankel, Benjamin (1906-1973), British composer. An accomplished composer of film scores, he wrote music for *The Importance of Being Earnest* (1952) and *London Belongs to Me* (1948). His other compositions include orchestral and chamber works that display technical versatility and marked emotional introspection.

Frankenstein (1818), novel by Mary Wollstonecraft SHELLEY. Its 'gothic' horror story centres around a monster which Frankenstein created from corpses. Unloved because of his revolting appearance, the monster takes revenge on Frankenstein. The monster has been the inspiration for several films and has been most notably played by BORIS KARLOFF, who starred in the definitive 1931 film version.

Frankfurt-on-Main (Frankfurt-am-Main), city and port in central West Germany, on the River Main 27km (17 miles) N of Darmstadt. Founded as a Roman town in the 1st century, it later became one of the royal residences of CHARLEMAGNE. It was annexed by Prussia after 1866. Industries: chemicals, electrical equipment. Pop. (1974) 663,422.

Frankincense, also called olibanum, gum resin extracted from the bark of trees of the genus *Boswellia*, found in Africa and Arabia. It is burned as incense, and the fine spicy oil extracted from the resin is used as a fixative in perfumes.

Frankland, Sir Edward (1825-99), British chemist who formulated the theory of valence which states that each element may be assigned a whole number (eg 1, 2 or 3) or valency which represents the number of hydrogen atoms with which an atom of the element will combine. He also discovered, with Sir Joseph N. LOCKYER, the gas helium.

Franklin, Aretha (1942-), US singer. She rose to stardom in 1966 with *I never loved a man (the way I love you)*, a million-selling record. She is known as 'The Queen of Soul'.

Franklin, Benjamin (1706-90), US inventor. He published *Poor Richard's Almanac* (1732-57). He invented the Franklin stove and experimented with electricity. He spent a total of 16 years in England before the American War of Independence, attempting to reconcile Britain and the colonies. He was a delegate to the Second Continental Congress and helped to draft the Declaration of Independence. He was postmaster general in 1775-76. Sent to France (1776-85), he helped to bring that country into the war on the American colonists' side. See also p.1466.

Franklin, Sir John (1786-1847), British rear admiral and Arctic explorer. He fought at the Battle of Copenhagen (1801) and the Battle of Trafalgar (1805). He later commanded two explorations of the North American coast (1819-22 and 1825-27), for which he was knighted. In 1845 he led an Arctic exploration in search of a northwest passage in which he and all his crew died.

Franklin, Stella Maria Miles (1879-1954), Australian novelist. *My Brilliant Career* (1901), is a fictionalized account of her early life. She travelled widely, returning home to write *All That Swagger* (1936), probably her best work.

Franklin, district and northernmost region in Canada. Founded in 1895, it is part of Canada's North-West Territories. It encompasses all the numerous islands of

the Canadian mainland, the Boothia and Melville peninsulas and the districts of Mackenzie and Keewatin. Area 1,422,644sq km (549,253sq miles). See p 2004

Franks, Germanic people who settled in the region of the River Rhine in the 3rd century. Under Clovis they overthrew the remnants of Roman rule in Gaul in the late 5th century and established the MEROVINGIAN empire. The empire was later divided into the kingdoms of Austrasia, Neustria and Burgundy, but was reunited by the CAROLINGIANS, notably by CHARLEMAGNE. The partition of his empire into the East and West Frankish kingdoms is the origin of Germany and France. See also pp 1268, 1269, 1286, 1287

Franzen, Frans Mikael (1772-1847), Swedish poet and scholar, b Finland. He is best known for the poems such as *Det nya Eden* (The New Eden, 1794)

Franz Josef Land (Zemlya Frantsa-Iosifa), archipelago in the Arctic Ocean, part of Archangel'sk oblast, USSR. A group of approx 187 islands, it includes Alexandra Land, George Land and Graham Bell Island. Area: 20,720sq km (8,000sq miles)

Frasch process, named after the German-born chemist Herman Frasch, a method of mining sulphur by pumping superheated water and air into the sulphur deposits, melting the mineral, and forcing it to the surface. The process was first put to practical use in Louisiana and made the USA independent of imported sulphur

Fraser, Dawn (1937-), Australian swimmer who won the 100m freestyle event at three successive Olympic Games (1956, 1960, 1964), plus a 4 x 100m relay gold medal in 1956. The first woman to swim 100m in less than 1 minute, she set 27 individual world records

Fraser, John Malcolm (1930-), Australian politician. He entered Parliament in 1955 and after a series of cabinet appointments from 1966 to 1971, he became both leader of the Liberal Party and Prime Minister

Fraser, Peter (1884-1950), New Zealand politician, b Scotland. He emigrated to New Zealand in 1910. He helped to organize the SOCIAL DEMOCRATIC Party and its successor, the LABOUR Party. He was elected to Parliament in 1918 and became minister of education, health, marine and police in the Labour government in 1935. He was prime minister from 1940 to 1949

Fraser, Simon (1776-1862), Canadian explorer and fur trader. He moved to Canada from the USA in 1784 and joined the Northwest Company in 1792. He extended their trade routes west to British Columbia (1805-08) and founded a string of trading posts. He also explored the Fraser River and the Red River

Fraser, river in s British Columbia, Canada. It rises in the Rocky Mts and flows NW then S around the Caribou Mts and into the Strait of Georgia. It was discovered in 1793 by Alexander Mackenzie and explored in 1808 by Simon Fraser. Length 1,368km (850 miles)

Fraud, in law, deception or misrepresentation of facts in order to obtain an advantage by unfair means. It is commonly an element of specific crimes such as impersonation, misrepresentation or obtaining money by false pretences. Withholding or concealing facts injurious to another person may also constitute criminal fraud

Fraunhofer, Joseph von (1787-1826), German physicist and optical instrument maker. His studies of the dark lines (Fraunhofer lines) in the solar spectrum helped to establish the science of spectroscopy. Although he mapped the positions of these lines, he was unable to explain them. He also invented a DIFFRACTION grating device. See also pp 813, 978

Frayn, Michael (1933-), British writer. His first novel was *The Tin Men* (1965). He also wrote *Towards the End of the Morning* (1967) and the plays *The Two of Us* (1970) and *Alphabetical Order* (1975)

Frazer, Sir James George (1854-1941), Scottish anthropologist, folklorist and classical scholar. His major work is *The Golden Bough: A Study in Magic and Reli-*

gion (1890) which held that the history of thought is a logical progression from the magical through the religious to the scientific

Frechette, Louis-Honoré (1839-1908), Canadian poet and politician. He served in the Canadian Parliament (1874-78). His poetry includes *La voix d'un exilé* (1866-68), *Les fleurs boréales* (1879) and *La Légende d'un peuple* (1887)

Frederick, name of three Holy Roman emperors. Frederick I (c 1123-90) was a HOHENSTAUFEN, Holy Roman Emperor (1155-90), King of Germany (1152-90) and King of Italy, called "Barbarossa" (Red Beard). He restored order in Germany by appeasing the feuding nobles. He spent 30 years trying to restore imperial power in N Italy and was in conflict with successive popes before the Lombard League defeated him in 1176 and he was reconciled with pope Alexander III. Frederick II (1194-1250), also a Hohenstaufen, Holy Roman Emperor (1220-50), King of Germany (1211-20), King of Sicily (1198-1250) and King of Jerusalem (1229-50), continued the power struggle with the popes and maintained his control of Germany. His rule in Sicily showed him to be a brilliant lawmaker, administrator, warrior, multilingual diplomat and patron of the arts and sciences. Frederick III (1415-93), Holy Roman Emperor (1452-93) and German king (1440-93), lost several territories early in his reign which were later regained. He reconciled his power with that of the papacy, and by marrying his son Maximilian to Mary, heiress of BURGUNDY, gained an enormous inheritance for the HAPSBURG. See pp 1294, 1295, 1310, 1311

Frederick V (1596-1632), elector palatine (1610-23) and King of Bohemia (1619-20), called the Winter King. In 1619 the Bohemian nobles deposed Emperor Ferdinand II and replaced him with Frederick. He lost both titles at the Battle of the White Mountain (1620)

Frederick, name of nine kings of Denmark and Norway. Frederick I (1471-1533), r Denmark 1523-33, Norway 1524-33, discouraged war with Sweden and tolerated the spread of Lutheranism in Denmark. In the reign of Frederick II (1534-88, r 1559-88) Denmark prospered peacefully. Frederick III (1609-70, r 1648-70) fought unsuccessful wars with Sweden and established absolute monarchy. Frederick IV (1671-1730, r 1699-1730) failed to recover Sweden, but gained Schleswig and, at home, instituted reforms. Frederick V (1723-66, r 1746-66) was ineffective but his ministers introduced successful economic policies. Frederick VI (1768-1839, r Denmark 1808-39, Norway 1808-14) became regent in 1784 and introduced land reforms. In the Napoleonic Wars he was at first neutral, then supported France. He had to cede Norway to Sweden in 1814, and in 1814 set up elected provincial assemblies. Frederick VII (1808-63, r Denmark 1848-63) introduced a constitution and was involved in the SLESWIG-HOLSTEIN question. Frederick VIII (1843-1912, r 1906-12), Frederick IX (1894-1972), who ruled 1947-72, altered the succession law so that his daughter, Margaret, could succeed him

Frederick, name of two kings of Prussia. Frederick I (1657-1713), was elector of Brandenburg as Frederick III (1688-1713) and the first King of Prussia (1701-13). He assumed the title of king with the approval of his ally the Holy Roman Emperor Leopold I. Frederick II (1712-86, r 1740-86), called Frederick the Great, adopted an aggressive policy towards Austria. He made Prussia a major European power through his involvement in the War of the AUSTRIAN SUCCESSION (1740-48), the SEVEN YEARS WAR (1756-63) and the War of the BAYERN SUCCESSION (1777-79). He acquired Pomerania in the first partition of Poland (1772). Frederick carried out many internal reforms but his government was autocratic and over-centralized. A great patron of the arts, he wrote extensively in French and was a good musician

Frederick Augustus, name of two kings of Saxony. Frederick Augustus I (1750-1827) was first elector (1768-1806) and then king (1806-27). He entered the war against France, but after the Prussian defeat at Jena in 1806 he made a separate peace with Napoleon, who approved the title King of Saxony and made him Grand Duke of Warsaw. He lost much of his kingdom to Prussia at the Congress of VIENNA (1815). Frederick Augustus II (1797-1854; r 1836-54) was co-regent with his uncle Anton from 1830 and instituted the 1831 constitution, but as king resisted further change. He repressed a revolt in 1849 with the aid of Prussia

Frederick Henry (1584-1647), Prince of Orange-Nassau. Son of WILLIAM THE SILENT, in 1625 he became stadtholder of the United Provinces. Under his rule the stadtholdership was accepted as hereditary for the House of ORANGE. In 1635 he allied with France and Sweden against the Hapsburgs during the THIRTY YEARS WAR and campaigned against Spanish strongholds in The Netherlands

Fredericksburg, Battle of (1862), victory for Confederate Gen Robert E. LEE's Army over Maj Gen Ambrose Burnside's Union Army. Lee's men stopped 14 attacks, killing or wounding nearly 13,000 of the 114,000 Union men. Lee lost about 5,300 of his 72,500 troops

Frederick William, name of four kings of Prussia. Frederick William I (1688-1740, r 1713-40) founded its rigidly organized military and administrative systems. He doubled his standing army to 80,000 men further centralized the government and seized part of Swedish Pomerania. Frederick William II (1744-97, r 1786-97) joined the alliance against France in 1792 but made peace in 1795 to consolidate his acquisitions in the east as a result of the partitions of Poland (1793 and 1795). He kept an extravagant court and left the country virtually bankrupt. His son, Frederick William III (1770-1840; r 1797-1840), was forced to declare war on France in 1806, but suffered a crushing defeat at Jena. After the Peace of Tilsit in 1807, major reforms were carried out by his ministers, Barons Stein and Hardenberg. Later, allied with Russia, Prussia took part in the final defeat of Napoleon. After 1815 he joined the HOLY ALLIANCE and, growing more reactionary, refused to grant a constitution. His son Frederick William IV (1795-1861, r 1840-61) gave way at first to the 1848 revolution, calling a constituent assembly, but he later dissolved this and issued a conservative constitution. His schemes for German unity foundered and because of mental problems, following a stroke, his brother William became regent in 1858

Frederick William (1620-88), elector of Brandenburg (1640-88) and the Great Elector. At the Peace of Westphalia (1648), which ended the THIRTY YEARS WAR, he acquired Eastern Pomerania and by intervention in the war (1655-60) between Poland and Sweden, won recognition of his sovereignty over Prussia formerly a Polish fief. He also built up the Prussian army, curtailed the privileges of the nobility and fostered trade

Fredro, Alexander (1793-1876), Polish dramatist who wrote witty ironic comedies such as *Sluby Panieński* (Maiden's Vows, 1832). He was successful until silenced in 1835 by a patriotic attack on his cynicism. **Free Churches**, Protestant Churches which are independent of the established Church of a country. In 1896 in England, where the established Church is ANGLICAN, the BAPTISTS, CONGREGATIONALISTS, METHODISTS and PRESBYTERIANS formed a National Council of the Evangelical Free Churches. Such Churches generally have a minimum of hierarchy, are largely organized by their congregation, and emphasize the importance of preaching and witness. **Free Church of Scotland**, Church formed as a result of the secession of nearly a third of the established Church of Scotland at the Disruption of 1843. After joining with the United Presbyterian Church in 1900 and becoming the United Free Church of Scotland in 1929 a minority of this group

Fraser river, famous for its salmon, drains almost a 1 of southern British Columbia

Frederick the Great at the Battle of Mollath where he defeated the Austrians

Fredericksburg, a view of the town, with demolished bridge after the Civil War battle

Frederick William's policies laid the foundations of Prussian dominance

Free city

Free-fall parachuting, low temperatures and heavy equipment make this a hardy sport.

Free French, members of the Women's Army being saluted by General de Gaulle.

French bulldog, whose coat is usually brindle with white patches but may be mainly white.

French horn, there are four of these instruments in most modern symphony orchestras.

approved reunion with the Established Church, retained their independence and kept the name United Free Church.

Free city, description used since the Middle Ages of European cities recognized as autonomous states, exempt from duties and taxes and under imperial or international protection. Hamburg, Bremen and Lübeck held this status in Germany until the 1930s. Danzig (Poland) and Fiume (Yugoslavia) were, for a time, free cities under the LEAGUE OF NATIONS.

Freedman, Barnett (1901-58), British painter and lithographer. He designed many posters and book illustrations and the postage stamps for the Jubilee of George V in 1935. He was a war artist during WWII.

Freedom of a city, honour inherited or bestowed by a town or city corporation on distinguished individuals. It dates from the Middle Ages when it was acquired by birth, marriage, apprenticeship to a freeman, gift or purchase, and this is still so in the acquisition of the freedom of the city of London. In the modern ceremony a person is granted the freedom of a city by being presented with a key symbolizing his right to come and go at will.

Freedom of the seas, fundamental principle of international law affirming that no state has sovereignty over the seas beyond its territorial waters. It guarantees the right to fish and sail on the high seas, to fly over them and to lay cables and pipelines.

Freedom of Worship. See RELIGIOUS TOLERANCE.

Free enterprise, in economics, system in which market forces alone decide what goods are produced and the prices at which they are sold and who consumes them. Individual firms may combine resources for production, and individual consumers may buy what they wish. Significant government control of the economy is absent.

Free-fall parachuting, or skydiving, sporting activity in which parachutists delay opening their parachutes until a series of acrobatic manoeuvres have been performed. Competitions are for solo, pairs and team jumps.

Free French, group formed by Charles DE GAULLE on the creation of the VICHY GOVERNMENT in 1940. Its purpose was to continue French opposition to Germany. Operating outside France, the group was soon aligned with internal resistance groups. The Free French aided the Allies throughout the war, forming a provisional government after the D-DAY invasion.

Freehold, legal term describing an estate held for an indefinite period, hence in practice implying absolute ownership. The idea of freehold dates back to feudal times, when only the monarch could own land. An unlimited, inheritable, tenancy of this land was known as an estate in fee simple, or freehold. See also LEASEHOLD.

Freeling, Nicolas (1927-), British writer of DETECTIVE FICTION. His first novel was *Love in Amsterdam* (1962), in which he introduced the hero of his stories, the Dutch detective, van der Valk.

Freemasonry, secret fraternal order, most popular in Britain and countries once within the British Empire. It evolved from the medieval guilds of stonemasons and cathedral builders. When cathedral building declined, honorary members were admitted to increase the numbers. In 1717 the first Grand Lodge (meeting place) was founded in England. Historically associated with liberalism and although not a formally Christian institution, freemasonry teaches morality, charity and law-abiding behaviour. Freemasons, all adult males, believe in God and the immortality of the soul. A member enters the order as an apprentice, becomes a fellow of the craft and finally a master mason. It is estimated that there are one million masons in Britain.

Free radicals, highly reactive molecules containing an unpaired electron, formed by the splitting of a chemical bond (usually by short-wave radiation). Such radicals are indicated by a dot, eg methyl CH₃. They are usually short-lived (less than 1ms) and are important intermediates in such reactions as combustion.

Freesia, genus of perennial herbs of the iris family, native to South Africa. Species of freesia are widely cultivated for their fragrant yellow, white or pink tubular flowers. They are grown in cool greenhouses for winter blooming.

Free speech, in Elizabethan England, the right of members of Parliament to initiate discussion on any issue. During the 17th century the term came to mean the right of anyone to discuss any question without hindrance. John MILTON was an early proponent of this concept of free speech in AREOPAGITICA (1644).

Freelonia, seaport and capital city of Sierra Leone, W Africa. It was founded in 1787 by freed slaves from England, Nova Scotia and Jamaica and was the capital of British West Africa 1808-74. It exports diamonds and its industries include cigarettes and oil-refining. Pop. 178,600.

Free Trade, term usually used to describe commerce conducted between nations without restrictions on imports and exports. In modern history its origins lie in the 19th-century attack, especially in Britain, on the traditional MERCANTILIST control of trade. The repeal of the CORN LAWS (1846) and the Anglo-French free-trade treaty (1860) were the chief marks of the mid-Victorian faith in free trade. After WWII Britain again became a protectionist nation. Free-trade agreements in the 20th-century have been made within limited areas - EFTA and the EEC - or have been limited in scope - GATT.

Free verse, verse with no regular metre and no apparent form, relying primarily on cadence. The unsystematized rhythm is close to that of prose. WHITMAN and RIMBAUD were early users of free verse, which has become common in the 20th century.

Freeway. See ROAD.

Free will, capacity to choose a course of action, where such choice exists. It has been asserted as the basis of man's superiority among living creatures, and its long tradition in Western law and moral thought has Greek origins in the work of SOCRATES. It is frequently contrasted with DETERMINISM.

Freeze-drying, technique used to preserve foods. Water is removed from the frozen substance at a low temperature under high vacuum, avoiding the concentration effect that occurs when a solution is evaporated slowly in normal freezing. Freeze-drying is better at retaining the flavour and nutritional value of foods and is used commercially for meat, fish and instant coffee. See also FROZEN FOODS, p.749.

Freezing, solid phase in the reduction of temperature of a liquid. The steady removal of heat from a liquid is accompanied by a steady drop in temperature until the liquid's FREEZING POINT is reached. Freezing points of liquids are always given at standard or atmospheric pressure, and the Celsius temperature scale gives the freezing point of water as 0°C. In the Fahrenheit scale (F) it is 32° and in the Kelvin scale (K) it is 273°. The quantity of heat extracted from one kilogramme of water as it freezes is known as the latent heat of water. Absolute zero (0°K, -273.16°C) is the point at which all things freeze and all motion stops.

Freezing point, temperature at which a substance changes phase from liquid to solid. The freezing point for most substances increases somewhat as pressure increases. The reverse process, from solid to liquid, is melting; melting point is the same as freezing point. See also p.838.

Frege, Gottlob (1848-1945), German philosopher. He was a professor of mathematics at Jena from 1879 until he retired during WWII, and with George BOOLE was one of the founders of modern symbolic logic. Frege attempted to derive all mathematics from logical axioms in his *Foundations of Arithmetic* (1884).

Freighter, ship designed to carry dry cargo or freight. The most modern cargo freighters are CONTAINER SHIPS, which carry pre-packed steel containers delivered to the quayside by trains or lorries, and the BACAT (barge aboard catamaran) vessels, which carry steel lighters or barges. See also p.474.

Fremantle, seaport in SW Australia, at the

mouth of the Swan River. Its exports are wool and wheat. Pop. 25,300.

Fremont, John Charles (1813-90), US explorer and general best known for his exploration and mapping of the OREGON TRAIL in 1842. He served as senator from California (1850-51) and was the first Republican presidential candidate.

French and Indian War (1754-63), name given to the SEVEN YEARS WAR by the American colonists, referring particularly to the part of the war fought in America, in which the French and the Indians were allies against Britain. It began two years before the general European conflict.

French Antarctica, small enclave in Australian territory known as Adélie Land, between 136°E and 142°E. In Jan 1840 J S C Dumont d'Urville discovered the coast when attempting to reach the magnetic pole.

French bulldog, good-tempered dog bred from toy English bulldogs in France in the 1860s. It has a large, square bulldog face with a short nose, prominent lower jaw and thick, hanging lips. Its broad-based, erect ears distinguish it from the larger bulldog. The body is short, the legs are stout and muscular and the short tail is straight. Average height 30.5cm (12in) at the shoulder, weight 8.5-12.7kg (19-28lb).

French Canadians, Canadians whose first language is French. The French founded the first settlement in Canada in 1605. Immigration declined after 1675, yet today they comprise 31% of the population. After 1763 French Canadians defended their language and culture with success. But the 1837 rebellions, opposition to WWI and urban industrialization after WWII weakened their influence. Only in Quebec have they succeeded in preserving their social autonomy.

French Guiana, French overseas département on the NE coast of South America. Most of the population lives along the coastal region as tropical forest renders much of the inland area uninhabitable. Economically the country is dependent on France although the exploitation of bauxite deposits could alter this. The capital is Cayenne. Area 91,000sq km (35,135sq miles). Pop. (1975 est.) 60,000. See p.2043.

French Guineas. See GUINEA.

French horn, brass musical instrument. It has a flared bell, long coiled conical tube, three or four valves and a funnel-shaped mouthpiece. Its romantic mellow tones were favoured by Richard WAGNER, Johann BRAHMS and Richard STRAUSS. See also pp.1581, 1587.

French India, French colonies in India. The French East India Company (1664-1769) acquired Pondicherry on the coast below Madras. Pondicherry remained a French post until 1954.

French marigold. See MARIGOLD.

French Polynesia, group of more than 100 islands in the S Pacific Ocean, including the Society Islands and the Marquesas. See p.2043.

French Revolution, set of events which took place in France between 1789 and 1799. It began in June 1789 when an ESTATES GENERAL met at Versailles during a political crisis caused by attempts to tax the nobility. Representatives of the Bourgeoisie demanded reform and proclaimed themselves a NATIONAL ASSEMBLY, the government could not resist because the people of town and country rose in revolt. In October 1791 the LEGISLATIVE ASSEMBLY was installed. Faced with growing internal and external pressure, it declared war on Austria in April 1792, and was soon in conflict with most other European states. The war hastened political change. In August 1792 LOUIS XVI was deposed, and the National Convention met in September to proclaim a republic. After a period of rivalry between JACQINS and GIRONDINS (Nov 1792-June 1793) strong central government was imposed during the REIGN OF TERROR and Louis was executed. This was followed by the confused THERMIDOREAN REACTION (July 1794-Oct. 1795). In 1795 rule by the DIRECTORY began, and continued until 1799 when the CONSULATE brought the

decade of revolution to an end. See also pp 1550-1551, 1550-1551

French Revolutionary Wars (1792-1802), series of wars between France and other European states. France declared war on Austria in April 1792, and defeated an invading army at VALMY in September. In 1793 more states, including Britain, entered the war, forming the First Coalition. Although in desperate straits during 1793, the French government managed to keep its forces intact and gradually moved over to the offensive, winning the battle of Fleurus in June 1794, after which the First Coalition broke up. Austria was forced to make peace at Campo Formio (1797), leaving only Britain in the war against France. In 1798, a second Coalition was formed, including Russia, Austria and Britain. Russia withdrew in 1799, however, the Austrians, defeated at MARENGO and Hohenlinden, concluded the Treaty of Lunéville in 1801, and the British signed the Treaty of Amiens in 1802. See also pp 1550-1551, 1551, 1552

French Shore Question, Anglo-French dispute over fishermen's rights off Newfoundland. The Treaty of Utrecht (1713) ended French territorial claims to Newfoundland, but allowed French fishermen to use parts of the coast for drying and processing. The ENTENTE CORDIALE (1904) eliminated shore rights, but permitted some French fishing in Newfoundland waters.

French Somaliland. See DUBOUT

French West Africa, former federation of eight French overseas territories. It includes the modern republics of Dahomey, Guinea, Ivory Coast, Mauritania, Niger, Mali, Upper Volta and Senegal. The federation was dissolved in 1959.

Freneau, Philip (1752-1832), US poet and newspaper editor. He became known for his satirical anti-British verse, such as *The British Prison Ship* (1781), during the AMERICAN WAR OF INDEPENDENCE.

Freons, trade name for certain compounds of carbon, fluorine and sometimes other elements used as refrigerants, AEROSOL propellants, cleaning fluids and solvents. They are all clear, stable and inert liquids. Examples are Freon-11 (CCl₃F), Freon-12 (CCl₂F₂) and Freon-14 (CF₄). Freons have been implicated in the destruction of the ozone in the ionosphere. See also PE p 147, MM p 253

Frequency, rate of occurrence. In statistics, the number of times a numerical value, event, or special property occurs in a population in a given time. In physics, the number of oscillations occurring in a given time, including those of sound and light waves, swinging PENDULUMS and vibrating springs. Frequency is the reciprocal of PERIOD. See also HERTZ, pp 838, 797, 838, 839, 832, 862

Frequency modulation (FM), variation of the frequency of a transmitted radio CARRIER WAVE by the signal being broadcast. The technique gives radio reception fairly free from static interference. See also pp 862, 863, 862

Frege, John (1740-1807), British antiquarian who discovered Stone Age implements at Hoxne, Suffolk, in 1790 and discerningly attributed them to "a very remote period indeed, even beyond that of the present world."

Frères du Pont, religious order formed in France by a group of priests to design and build lasting bridges. The Pont d'Avignon, built in 1177 over the River Rhône with 21 arches, was the most famous of this order's work. See also pp 532-533

Frescobaldi, Girolamo (1583-1643), Italian composer and organist, reputedly the greatest organist of his age. He was organist at St Peter's Rome, 1608-28. Most of his compositions were for the organ.

Fresco painting, method of painting on freshly spread plaster while it is still damp. In true fresco, or *buon fresco*, the paint combines chemically with the moist plaster so that, when dry, the painted surface does not peel. Dry fresco, or *fresco secco*, involves the application of paint in a water and glue medium to a dry plaster wall. It does not last as well as true fresco.

Fresnay, Pierre (1897-1975), French

actor and producer, real name Pierre-Jules-Louis Audenbach. He established himself as a leading actor at the Comédie-Française in 1915 and thenceforth pursued a long and varied career both on the stage and in films, most notably in Jean Renoir's *La Grande Illusion* (1937).

Fresnel, Augustin Jean (1788-1827), French physicist and engineer. His pioneer work in optics helped to establish the wave theory of light. He researched into the conditions governing interference fringes in POLARIZED LIGHT, studied double refraction and devised a way of producing circularly polarized light.

Frets, in music, the raised lines across the finger-boards of stringed instruments (such as the guitar), signifying the position of notes on the scale. They are not simply guides to intonation, they also give to the strings, when "stopped", the resonance of "open" strings by counteracting the softening effect of the finger tips.

Freud, Anna (1895-), psychoanalyst, youngest of Sigmund FREUD's six children, b. Austria. She has spent most of her adult life in Britain. She applied PSYCHOANALYSIS to the development of children, was an early user of play THERAPY and wrote a number of books, including *Normality and Pathology in Childhood* (1968).

Freud, Lucian (1922-), British painter. He had his first one-man exhibition in 1944. He paints with a meticulous realism, chiefly portraits, but also surrealist-like canvases of plants and animals.

Freud, Sigmund (1856-1939), Austrian physician and founder of PSYCHOANALYSIS. With JOSEF BREUER he developed new methods of treating mental disorders - free association and the interpretation of dreams. These methods derived from his positing the existence of the ID, EGO and SUPER-EGO and therefore emphasizing the unconscious and subconscious as agents of human behaviour. He developed theories of the NEUROSES involving childhood relationships to one's parents and stressed the importance of sexuality in both normal and abnormal behaviour. He thus established PSYCHOLOGY and PSYCHIATRY on a pseudo-scientific basis. His works include *The Psychopathology of Everyday Life* (1904), *The Ego and the Id* (1923) and *Civilization and its Discontents* (1930). See also pp 1106, 1120

Freudian psychology, theoretical framework developed by Sigmund FREUD in this practice of the therapeutic method of psychoanalysis. Freud believed that each personality had a tripartite structure: the ID, the unconscious emotions, desires and fears which may surface in dreams or madness, the EGO, the conscious rationalizing section of the mind, and the SUPER-EGO, which may be compared to the conscience. As he saw it, a very young baby is largely ID, full of unchecked desires, the ego develops from the ID, enabling the child to negotiate realistically with the exterior world. The super-ego evolves as the child adapts (internalizes) the moral values of society. The ego comes to mediate the selfish needs of the ID and the idealistic demands of the super-ego. The adoption of a satisfactory super-ego is dependent on the resolution of the OEDIPAL COMPLEX and other barriers to development.

Freya, in Nordic mythology a fertility and mother goddess, one of the most ancient of Scandinavian deities, her name means "Lady". Perhaps originally even a moon goddess, drawn across the sky by two cats or two boars, she eventually became goddess of love and was often confused with the Teutonic equivalent goddess FRIGA.

Freyberg, Bernard Cyril, 1st Baron Freyberg, (1889-1963), military figure of the Commonwealth. Born in Britain and educated in New Zealand, he won a VICTORIA CROSS in WWI and commanded New Zealand troops during WWII. He was governor-general of New Zealand from 1946 to 1952.

Freycinet, Louis-Claude de Saulces de (1779-1842), French explorer. He explored the s. Australian coast (1800-1805), made maps and wrote a report of this expedition. In 1817 he commanded another expedition on the *Uranie*, and

gained valuable additions to natural history, published in *Voyage Around the World* (13 vols, beginning 1824).

Freyja. See FREYA

Friar, member of certain religious orders. The four main orders, the DOMINICANS, FRANCISCANS, CARMELITES and AUGUSTINIANS, were founded in the 13th century. Friars differ from cloistered monks in their widespread outside activity and greater centralization. See also pp 1321, 1322

Friar's balsam, compound tincture of benzoin. It is used as an inhalant in boiling water, internally, a few drops are swallowed with sugar against colds, and externally, it is used to cover abrasions.

Fribourg, town in w. Switzerland, 27km (17 miles) sw of Berne on the River Saane. It is the capital of the Fribourg canton. Founded in 1157, the town passed to the houses of Kyburg (1218), Hapsburg (1277) and Savoy (1452), finally becoming a member of the Swiss Confederation in 1481. Today its products include cheese and chocolate. Industries: metal-working, chemicals. Pop. (1970) 39,659.

Frick, Wilhelm (1877-1946), German politician. He was the Nazi parliamentary leader and minister of the interior (1933-43). The chief drafter of the 1935 NUREMBERG LAW, he was convicted of war crimes and hanged.

Fricke, Peter Racine (1920-), British composer living in the USA. His works include concertos for the violin and the viola, four symphonies and an oratorio, *The Vision of Judgement*.

Friction, resistance encountered when surfaces in contact slide or roll against each other, or when a fluid flows along a surface. Friction is directly proportional to the force pressing the surfaces together and the surface roughness. The friction opposing motion equals the moving force up to a certain point, called the limiting friction, after which slipping occurs. Static friction is the value of the limiting friction just before slipping, kinetic friction is the value just after slipping and is slightly less than static friction. Fluid-viscous friction is velocity-dependent as well as affected by the materials. See also FRICTION, COEFFICIENT OF pp 822, 845

Friction, coefficient of, number associated with any two materials characterizing the force necessary to slide or roll one along the surface of the other. If an object has a weight N and the coefficient of friction is μ , then the force f necessary to move it without acceleration along a level surface is $f = \mu N$. The coefficient of static friction determines the force necessary to initiate movement, the coefficient of kinetic friction determines the (lesser) force necessary to maintain movement.

Friday, sixth day of the week. The English name is derived from that of the Norse and Teutonic goddess Frigg or FRUGA. The crucifixion of Jesus Christ on the sixth day has given Friday its penitential nature in the Christian Church, and until 1966 Roman Catholics were not supposed to eat meat on that day.

Fried, Alfred Hermann (1864-1921), Austrian pacifist. He founded the German Peace Society in 1892 and tried to introduce a legislative means of maintaining peace in the world. He won the Nobel Peace Prize with Tobias ASSER in 1911.

Friedman, Milton (1912-), US economist. An important and influential member of the Chicago school of economics, he supported monetary policy as the best means of controlling the economy. His works include *A Monetary History of the United States 1867-1960* (1963), written with Anna Schwartz and a key book in monetary economics, *A Theory of the Consumption Function* (1957), *Essays in Positive Economics* (1953) and *Capitalism and Freedom* (1962). He was awarded the 1976 Nobel Prize in economics. See also MONEY MARKET

Friedrich, Caspar David (1774-1840), German painter. One of the greatest German Romantic painters, he created eerie, symbolic landscapes, such as *Shipwreck on the Ice* (1822) and *Man and Woman Gazing at the Moon* (1824). See also p 1578

Fresco painting, th a example of the art form is a detail in the Cathedral of St Sophia, Kiev

Sigmund Freud's *The Interpretation of Dreams* caused a storm in medical circles

Fribourg, a general view of the Swiss city showing the River Saane

Milton Friedman has been sharply critical of Britain's economic policies

Friendly societies

Frigates were first built in England in 1852 this is HMS Protector ready for Arctic duty

Frigatebird, a sea bird that can blow up the scarlet pouch under its bill like a balloon

Fritillary, most species of which fly from June to August and are found in light woods

Frog, there are about 2,000 different species, the largest being the African Goliath frog

Friendly societies, associations established in Britain to provide insurance against sickness, old age and funeral expenses. They were started in the 17th century and in the 18th century became a conventional alternative to parish relief and charitable assistance. Thereafter they spread quickly and were, in the Victorian age, the most important form of working class insurance.

Friends, Society of. See QUAKERS.

Fries, Elias Magnus (1794-1878), Swedish botanist who developed one of the first systems for the classification of fungi. His system is still a basis for classification. See also pp.352-353.

Friese-Greene, William (1855-1921), English inventor. In 1890 he patented a combination camera-projector that used sensitized material on rolls - the first practicable motion picture camera.

Friesz, Achille Émile Othon (1879-1949), French painter. His most successful paintings were FAUVIST in style, most notable among these being the *Portrait of Fernand Fleuret* (1907).

Frigate, small warship used to protect fleet and merchant ships from submarine attack. Most frigates are less costly than destroyers, and they are usually less well-armed, although some modern vessels carry guided missiles. In the 18th century a frigate was a three-masted sailing vessel with up to 50 guns, the forerunner of the modern cruiser. In WWII the term applied to versatile swift escort ships. See also pp.566, 569.

Frigatebird, powerful sea bird that soars over tropical and subtropical oceans and steals food from other birds. It has a small, dark body, the male has a scarlet throat sac that inflates in display. It lays one chalky white egg in a nest on a bush or rock on an oceanic island. Length 101cm (40in). Family Fregulidae. See also NW p.76.

Frigga, in Norse mythology, the wife of the great god ODIN and the supreme goddess. She was depicted as the loving mother of BALDER but also as an argumentative and deceitful wife.

Frigidity, lack of sexual desire in women, or the inability to enjoy sexual intercourse. Failure to achieve ORGASM is a narrow definition of the term. Occasional frigidity is a normal reaction to various temporary stresses. Habitual frigidity almost invariably stems from deep-seated psychological causes. Treatment usually takes the form of counselling or psychoanalysis. See also IMPOTENCE.

Fritled lizard, pale brown Australian lizard with a fold of skin that spreads into a ruff when the mouth is opened in aggressive display. The cartilaginous frill has serrated edges with red, black and brown spots. It can be raised to 20cm (10in). Length to 90cm (35in). Family Agamidae, species *Chlamydosaurus kingi*.

Frioli, Charles Rudolf (1879-1972), US composer, b. Prague. He moved to the USA in 1906. He was chiefly a writer of musical comedies and operettas, such as *The Firefly*, *You're in Love* and *Rose Marie*.

Fringe benefits, compensation to employees in addition to wages, involving non-cash payments. They may be granted as part of a COLLECTIVE BARGAINING contract or freely provided by the employer. They include such things as insurance policies paid for by the employer, a company car, time off with pay, special buying privileges, etc. In some companies their value may equate as much as 25% of annual salary.

Fringe medicine, non-orthodox medical treatments which may or may not be accepted by the current medical establishment. Acceptability depends on the authority of the diagnosis. Examples include OSTEOPATHY, CHIROPRACTIC, HOMEOPATHY and ACUPUNCTURE, practitioners of which may also have conventional medical training.

Fringillidae, bird family of about 125 species comprising finches, crossbills, seed eaters and bramblings. They occur in Europe, Asia, Africa and the Americas, and have sturdy, seed-eating bills, cup-shaped nests and pale blue eggs spotted with brown. See also pp.304,321,327.

Frisch, Karl von (1886-), Austrian zoologist. He shared with K. LORENZ and N. TINBERGEN the 1973 Nobel Prize in physiology and medicine for his pioneering work in ETHOLOGY. He deciphered the "language of bees" by studying their dance patterns in which one bee tells others of the hive the direction and distance of a food source. In his earlier work he showed that fish and bees see colours, fish can hear and that bees can distinguish various flower scents. See also p.8.

Frisch, Max (1911-), Swiss novelist and dramatist. His plays are experimental in form and often satirical. For example, he attacked dictators in *The Chinese Wall* (1946), the average man's unquestioning acceptance of things in *The Fire Raisers* (1953); and anti-Semitism in *Andorra* (1961). The novels *Stiller* (1954) and *A Wilderness of Mirrors* (1964) are concerned with man's quest for identity.

Frisch, Ragnar (1895-1973), Norwegian economist who aided the development of econometrics by his application of statistics to economic theory. Innovation in this field earned Frisch and Jan TINBERGEN the first Nobel Memorial Prize in economics in 1969. Frisch founded the Econometric Society in 1931 and was professor of economics at Oslo from 1927 to 1965.

Frisian Islands, chain of islands in the North Sea, off the coast of Western Europe, owned by The Netherlands, West Germany and Denmark. Stock-raising and fishing are important to most of the islands, which are also popular as tourist resorts. See pp.1928,2043.

Frith, William Powell (1819-1909), British painter. His best-known works are minutely detailed crowd scenes from contemporary life, such as *Derby Day* (1858). See also p.1595.

Fritillary, common name for several genera of butterflies including large fritillaries, or silverspots, of the genus *Speyeria*, which have silver markings on the underside of their wings, and small fritillaries of the genus *Boletia*. The larvae (caterpillars) are largely nocturnal. Family Nymphalidae.

Fritillary, common name for numerous species of hardy, perennial plants of the genus *Fritillaria* of north temperate regions. In many species the large, drooping, often solitary flowers have a strikingly chequered appearance. Family Liliaceae.

Friuli, historic region of NE Italy, bordering Austria and Yugoslavia (N and E), the Adriatic Sea (S) and the Veneto region (W). It was under Roman rule from the 2nd to the 6th century AD, when it became a Lombard duchy. It later belonged in turn to the Hapsburgs, Venetians and Austrians. In 1866 and 1918 Italy received those portions of the territory it now holds.

Friuli-Venezia Giulia, region in NE Italy.

Formed after WWII, it encompasses the provinces of Udine, Pordenone, Gorizia and Trieste. It was granted limited autonomy in 1963. The capital is Trieste. Agriculture is most important, although there are some industries including oil refining and textiles. Area 7,846sq km (3,029sq miles). Pop. 1,225,901.

Frobenius, Leo Viktor (1873-1938), German ethnologist and authority on prehistoric art. He developed a three-stage theory of cultural evolution, and made many research trips to Africa. He wrote more than 60 important works, eg *The Voice of Africa* (1912-13).

Frobisher, Sir Martin (c.1535-94), English navigator and explorer. He attempted to discover the NORTH-WEST PASSAGE and on an expedition in 1576 discovered Frobisher Bay, Canada. He returned twice (1577-78), primarily in search of gold. He served with DRAKE and HAWKINS in the defeat of the Spanish ARMADA.

Froding, Gustaf (1860-1911), Swedish poet, noted as an innovator, as in his use of colloquial vocabulary in lyric poetry. His works include two volumes of poems, *Gustar and Concertina* (1891) and *New Poems* (1894).

Froebel, Friedrich Wilhelm August (1782-1852), German educator and influential educational theorist. His main

interest was in pre-school age children, and in 1841 he opened the first KINDERGARTEN. He stressed the importance of pleasant surroundings, self-directed activity, physical training and play in the development of the child.

Frog, tailless AMPHIBIAN, found throughout the world. Frogs have long hind limbs, webbed feet and external eardrums behind the eyes. Most begin life as fish-like larvae (TADPOLES) after hatching from gelatinous eggs usually laid in water. Some frogs remain aquatic, some are terrestrial, some live in trees and some burrow underground. Most have teeth in the upper jaw and all have long sticky tongues attached at the front of the mouth to capture live food, usually insects. Length 2.5-30cm (1-12in). Subclass Salientia (or Anura), divided into 17 families, the most typical genus is *Rana*. See also TOAD.

Frog-bit, floating aquatic plant of ponds and ditches in Europe and Asia. The smooth, rounded leaves and small, white flowers are borne on long stalks. Species *Hydrocharis morsus-ranae*.

Frog hopper, any of various small, hopping insects whose eggs and young are covered with a protective frothy mass called cuckoo spit. Adults are triangular and grey, greenish or brown. They feed on plants. Length to 1.5cm (0.6in). Order Homoptera, family Cercopidae.

Frogmouth, bird related to the NIGHTJAR and named after the gape of its mouth. It is a native of bush and forested regions of South-East Asia and Australia. Family Podargidae.

Frobsart, Jean (1337-c.1404), French poet and chronicler. He travelled widely in Europe, visiting several famous courts in Scotland, England, Italy and France. He is perhaps best known for his *Chronicle*, a lively though inaccurate account of Europe between 1325 and 1400.

Fromm, Erich (1900-1980), psychoanalyst and writer. Born in Germany, he moved to the USA in 1934. Fromm applied PSYCHOANALYSIS to the study of peoples and cultures, stressing the importance of interpersonal relationships in an impersonal industrialized society. His books include *Escape from Freedom* (1941) and *The Art of Loving* (1956) which has become a classic of its genre.

Fronde (1648-53), series of civil reactions against the growing power of the French monarchy. The Fronde of the PARLEMENT (1648-49) started when ANNE OF AUSTRIA, acting as regent for Louis XIV, proposed to reduce the salaries of high court officials. The Fronde of the Princes (1650-53) was a rebellion of the nobility. The Great CONDÉ inspired riots and war against the king but was defeated. The crown's victory established absolute monarchy in France. See also pp.688-691, 710.

Front, in meteorology, the interface between two air masses of different temperatures or of different densities. A polar front separates cold and warm air masses that have originated in polar and tropical regions, it often creates cyclonic disturbances that dominate the weather. Cold fronts occur as a relatively cold and dense air mass moves under warmer air. With a warm front, warmer air is pushing over colder air and replacing it. An occluded front is composed of two fronts: a cold front overtakes a warm or stationary front, occlusion occurs and a wave cyclone often develops, with cyclonic weather changes. With a stationary front, air masses remain in the same areas and the weather is mostly unchanged. Fronts of various kinds are often depicted on weather maps and referred to in weather broadcasts. See also pp.248, 253.

Front de Libération de Québec, neo-Marxist separatist movement in the Canadian province of Quebec. The Front was started by students who were dissatisfied with the Parti Québécois. In 1963 its members set bombs in urban areas and in 1970 they kidnapped James Cross, the British trade commissioner, and murdered Pierre Laporte. The movement was then driven underground by the War Measures Act of the federal government. **Frontenac** (et Palluau), Louis de Baude, comte de (1620-98), Governor-General

of New France (1672-82, 1689-98) His rule was autocratic and he was recalled in 1682 In his second term, Frontenac repulsed an English attack in 1690 and briefly attempted an attack on New York He encouraged LA SALLE's explorations and extended French rule to Lake Winnipeg and the Gulf of Mexico

Frontenac. See PELOTA

Frost, in meteorology, atmospheric temperatures below 0°C The visible result of a frost is usually a deposit of minute ice crystals formed on exposed surfaces from dew and water vapour In freezing weather the "degree of frost" indicates the number of degrees below freezing point When white hoar-frost is formed, water vapour changes from its gaseous state to a solid, without becoming a liquid A frost is referred to as white or black, depending on whether or not white hoar-frost is present

Frost, Robert Lee (1874-1963), US poet His volume of lyric poems *A Boy's Will* (1913) and that of narrative poems *North of Boston* (1914) were enthusiastically received in Britain, establishing his reputation He received the Pulitzer Prize for poetry in 1924, 1931, 1937 and 1947

Frost, Terry (1915-), British painter He worked in the abstract style, in a group that was centred in St Ives, Cornwall, in the 1950s, simplifying natural images to flat shapes and colours

Frostbite, freezing of living body-tissue either superficially or penetrating beneath surface cells It causes defective circulation and the breakdown of the tissue In severe cases the tissue dies and GANGRENE may set in First-aid treatment involves rapid rewarming of the affected area

Froude, James Anthony (1818-94), British historian His 12-volume *History of England from 1529 to 1888* was the first scholarly treatment of the Tudors He was regius professor of history at Oxford University (1892-94)

Frozen foods, foodstuffs preserved by freezing Food kept at 5°C (41°F) deteriorates only slowly because bacterial growth is greatly retarded Deep-frozen at 5°C (23°F) or below, many foods will keep indefinitely Delicate foodstuffs such as soft fruits can be preserved by rapid DEEP-FREEZING methods which prevent the growth of large ice crystals in the fruits that would otherwise destroy their texture In FREEZE-DRYING, water is evaporated from foodstuffs at low temperatures, to preserve them indefinitely See also FOOD PRESERVATION

Fructose, white crystalline sugar (C₆H₁₂O₆) that occurs in fruit and honey It is made commercially by the HYDROLYSIS of beet or cane sugar and is used in foods and medicine See also p 906

Fruit, seed-containing mature OVARY of a flowering plant Fruits serve to reproduce and spread plants and are important to human beings and animals as food They can be classified as simple, aggregate or multiple Simple fruits, dry or fleshy, are produced by one ripened ovary of one pistil and include legumes (peas and beans), nuts, apples, pears and citrus fruits Aggregate fruits develop from several simple pistils, examples are raspberry and blackberry Multiple fruits develop from a flower cluster, each flower produces a fruit which merges into a single mass at maturity, examples are pineapples and figs Fruits provide vitamins, acids and salts, and as such form an important part of the human diet Vitamin C, found especially in citrus fruits, helps to develop sound bones and teeth Calcium, iron and phosphorus are also provided by fruits for a healthy well-balanced diet See also pp 688-691 710

Fruit bat, any of about 160 species of nocturnal, fruit- or nectar-eating, tropical bats Species have an independent clawed second digit They rely on sight, rather than echo location for orientation, and are capable of powerful, sustained flight Wingspan to 1.5m (5ft) Family Pteropodidae See also FLYING FOX

Fruit fly. See DROSOPHILA

Frustration, prevention of the satisfaction of an aroused physiological, psychological or social need It may be imposed from the

outside or may originate from within a person, as in setting goals beyond one's ability Frustration may lead to increased effort, to anger or to aggressive behaviour According to some psychoanalytic theories AGGRESSION is always a sign of some sort of frustration

Fry, Christopher (1907-), British dramatist, real name Christopher Harris His blank-verse plays are often set in ancient or medieval times They include *A Phoenix Too Frequent* (1946), *The Lady's Not for Burning* (1948) and *Venus Observed* (1950)

Fry, Elizabeth (1780-1845), British social worker and prison reformer The daughter of John Gurney, a rich Quaker banker, she married Joseph Fry (a London merchant) in 1800 She agitated for more humane treatment of women prisoners and of convicts sentenced to transportation to Australia She later became active in other fields of reform, notably improving standards for nurses and facilities for women's education

Fry, Maxwell (1899-), British architect He introduced the modern style of the BAUHAUS to Britain, designing several domestic homes in London in the 1930s See also p 1765

Fry, Roger Eliot (1866-1934), British art critic and painter He painted mostly landscapes, many of which were exhibited in London in 1920 He helped to introduce to England the works of CÉZANNE and the POST-IMPRESSIONISTS He wrote many books, including studies of *Belini* (1899) and *Cézanne* (1927) and *Vision and Design* (1920)

Frye, Northrop (1912-), Canadian literary critic His first book, *Fearful Symmetry* (1947), is a masterly study of William BLAKE's poetry Frye set forth his principles of criticism in *Anatomy of Criticism* (1957) He has taught at the University of Toronto since 1939

Fuad, name of two kings of Egypt Fuad I (1868-1936), was sultan (r 1917-22) and first king of modern Egypt (r 1922-36) He founded the University of Cairo in 1906 He suspended the constitution in 1930 and restored it in 1935 Fuad II (1952-), his grandson, was king (1952-53) until the republic was set up

Fuchs, Klaus (1911-), German physicist Interned in Britain at the start of WWI, he carried out nuclear research there and in 1944 was sent to the USA to work on the atom bomb He was imprisoned for passing secrets to the USSR Released in 1959, he went to East Germany

Fuchs, Sir Vivian Ernest (1908-), British geologist and explorer who made the first land crossing of the Antarctic He led the Falkland Island Dependencies Survey in the Antarctic (1947-50) In 1957 he headed the British section of the Commonwealth Transarctic expedition and made the hazardous 3,473km (2,158 miles) journey across the Antarctic, which earned him a knighthood

Fuchsia, shrubby plant found wild mainly in tropical and subtropical America, parts of New Zealand and, as a variant form, in Ireland It is also widely cultivated It has crisp, oval leaves, trailing stems and trumpet-shaped, waxy flowers The 100 or so species include the crimson-purple *Fuchsia procumbens* and cultivated *F. speciosa* Family Onagraceae

Fuel cell, electrochemical cell for direct conversion of the energy of oxidation of a fuel to electrical energy Suitably designed electrodes are immersed in an electrolyte, and the fuel, eg hydrogen, is supplied to one and the oxidizer, eg oxygen, to the other Electrode reactions occur leading to oxidation of the fuel, with production of electric current Fuel cells are used in space vehicles See also p 903

Fuentes, Carlos (1928-), Mexican novelist and short-story writer His novels include *Where the Air is Clean* (1956) and *The Death of Artemio Cruz* (1962), which share a critical view of Mexican society He also wrote in a style of mixed realism and fantasy, eg *Change of Skin* (1967)

Fugard, Athol (1932-), South African dramatist whose plays sympathize strongly with the position of non-whites

and include *Boesman and Lena* (1971), *Sizwe Bansi is Dead* (1973) and *Statements after an Arrest under the Immorality Act* (1974) Fugard's passport was withdrawn by his government in 1967

Fugger, German merchant and banking family, the origin of whose wealth was laid by Hans of Augsburg in the 14th century In the late 15th and 16th centuries it was the richest family in Europe and played a major role in arranging credit for the Hapsburg emperors, notably Charles V See also p 1373

Fugue, in psychology, pathological loss of memory associated with dissociative Hysteria The patient is apparently conscious of his actions, however uncharacteristic these may be, but when the fugue ends has no recollection of them See also p 1112

Fugue, in music, a composition of several simultaneous parts or voices where the same melodic line or theme is stated and developed in each voice so that interest in its overall development becomes cumulative Generally the theme begins in one part and others are added in sequence Fugue writing, popular in the BAROQUE period, reached its peak in the music of Johann Sebastian BACH There has been a revival of interest in fugue writing by composers of the 20th century

Fuhrer, Der, name used by HITLER as leader (its meaning in German) of the German people It was more evocative of racial nationalism and one-man rule than the official title of chancellor

Fujiwara, strong, rich and cultured Japanese family since the 7th century which between 857 and 1160 dominated the Heian period and had a sculptural style named after it By marrying Fujiwara women into the royal family they gained great influence as "advisers" to the emperor The family reached its peak of power under Michinaga Fujiwara (966-1027) See also pp 264 265

Fujiyama, (Fuji-san), highest mountain in Japan, 113km (70 miles) wsw of Tokyo, in the Fuji-Hakone National Park An extinct volcano, it is regarded as the most sacred mountain in Japan It is also a summer and winter sports area Height 3,776m (12,389ft)

Fukien (Fu-chien or Fujian), province in SE China, on the Formosa Strait opposite the island of Taiwan, the capital is Fuzhou (Fuzhou) It has a warm, moist climate and a mountainous terrain which has hampered communications Its people are predominantly Chinese and four main dialects are spoken Rice, sweet potatoes, tea and wheat are grown in upland areas, and fruit, silk, sugar and yute are produced in the lowlands Industries include food processing, timber, textiles, cement and ceramics As a result of its strategic location near Taiwan, a number of military posts have been maintained there since 1950 Area approx 123,000sq km (47,500sq miles) Pop 18,000,000

Fukuda, Takeo (1905-), Japanese politician He became a member of the House of Representatives for the Liberal-Democratic Party in 1952, and following several ministerial posts from 1965 became Prime Minister in Dec 1976

Fukuoka, city in N Kyushu, Japan, on the SE shore of Hakata Bay In medieval times the area of Hakata was one of the chief ports of Japan There is a rich agricultural region to the N, industries include textiles and chemicals Pop. (1970) 853,270

Fulani (Fulah or Fulbe), African people of mixed Negro and Berber origins, scattered through W Africa and numbering approx six million Their language belongs to the W Atlantic group of the Niger-Congo family Originally a pastoral people, they helped to spread Islam throughout W Africa from the 16th century and established areas of empire until defeated by the British in the 19th century

Fulbright, James William (1905-), US DEMOCRATIC politician He was a representative from Arkansas (1943-45) and senator (1945-74) He was chairman of the senate committee on Foreign Relations from 1959 to 1974, on which he was a frank and persistent critic of US military

Robert Frost (left), possibly America's most popular poet, with President Kennedy

Fruit bat, large groups of which hanging in a tree make it look laden with fruit

Elizabeth Fry visiting prisoners in Newgate Prison (from a painting by Mrs E M Ward)

Fuel cell, scientists are now working to produce cells that run on cheap fuels

Fulcrum

Fulmar builds its nest in high rocky crevices, where it lays only one egg

Robert Fulton designed a warship to defend New York Harbour in the War of 1812

Fumitory was esteemed in medieval times for its supposed medicinal and cosmetic qualities

Fungicides are today manufactured in great quantities to prevent the destruction of crops

involvement overseas. In 1977 he was awarded the Benjamin Franklin medal. He has published *Old Myths and New Realities* (1964), *The Arrangement of Power* (1967) and *The Crippled Giant* (1972). **Fulcrum**, point about which a lever pivots. Its use in the PRINCIPLE OF MOMENTS was recognized by ARCHIMEDES, who is reputed to have said: "Give me a firm place on which to stand and I will move the earth". See also pp 446, 446, 460, 827.

Fuller, Isaac (c 1606-72), English portraitist and decorative painter. Few of his works survive, but five *Self Portraits* display a certain boldness of form.

Fuller, Richard Buckminster (1895-), US architect and engineer. Believing that only technology can solve modern world problems, he invented several revolutionary designs. The best known, and widely used, is the geodesic dome: a spherical structure composed of light, strong, triangular parts. His books include *Operating Manual for Spaceship Earth* (1969) and *Earth Inc* (1973). See also p 795.

Fuller, Roy (1912-), British poet and novelist, who for many years wrote in his spare time from being a solicitor. His verse includes the war poetry of *The Middle of a War* (1942) and *A Lost Season* (1944). *Epitaphs and Occasions* (1949) and *Counterparts* (1954) are later collections of poetry. Among his novels are *Image of a Society* (1956) and *My Child, My Sister* (1965).

Fuller's earth, clay-like substance that contains more than half silica. Originally used to remove oil and grease from wool, (the process of fulling), it is now used to bleach petroleum and in refining vegetable oils.

Fulmar, scavenging oceanic bird of the Arctic, Antarctic and N Atlantic, related to the SHEARWATER. Heavily built and with grey feathers, it has a large head, hooked bill, short neck, a throat pouch, long narrow wings and a short tail. It spits foul-smelling oil when threatened. Length 30-45cm (12-18in). Family Procellariidae. Genus *Fulmarus*.

Fulminate, explosive, a salt of fulminic acid (HONC), especially fulminate of mercury, Hg(ONC)₂, which is formed by the action of nitric acid on mercury metal in the presence of alcohol. It is a highly unstable compound used in DETONATORS and blasting caps. See also p 420.

Fulton, Robert (1765-1815), US inventor and engineer. He patented designs for torpedoes and other naval weapons. His main interest was in navigation and, as early as 1796, he was urging the USA to build canals. His great triumph was the steamboat *Clermont*, whose 1807 voyage between New York City and Albany pioneered the use of the steamboat for carrying passengers and freight.

Fumarole, vent in the ground that emits gases and vapours, usually found in volcanic areas. The term also refers to a hot spring or geyser that emits steam. A fumarole is sometimes defined in terms of the composition of its gases, such as a chlorine fumarole. See also pp 204-205.

Fumigation, use of toxic gases to kill insects and other pests in houses, industrial and agricultural storage buildings, burrows and soil. The fumigants *o*- and *p*-dichlorobenzene are often used to kill such household pests as clothes moths, termites and carpet beetles. Grain fumigation may be carried out using a mixture of carbon disulphide and tetrachloroethane (carbon tetrachloride). Hydrogen cyanide gas is often used as a fumigant, although its intense toxicity necessitates extreme caution.

Fumitory, common name for a family of herbaceous plants (Fumariaceae) that includes more than 400 species native to northern temperate regions. The common fumitory (*Fumaria officinalis*) is a small, tufted bush with weak, slender stems, feathery leaves and white flowers tipped with purple.

Funchal, port in Portugal, on the SE coast of the island of Madeira. Founded in 1421, it is now a trade and resort centre for all the islands in the Madeira archipelago. Pop (1970) 33,750.

Functional disorders, mental disorders that cannot be accounted for by an organic disturbance. They include SCHIZOPHRENIA, MANIC-DEPRESSIVE psychosis and PARANOID. Although their precise nature is unknown, functional disorders are thought to be caused by psychological factors. See also pp 1110-1111.

Functionalism, in art and architecture, an early 20th-century style based on utilitarianism that emphasized the purpose of the building or piece of equipment. Functionalism rejected ornamentation and stressed instead the basic structure of the work and of the materials used. Major proponents of functionalism included GROPPIUS, members of the BAUHAUS school and LE CORBUSIER. See also p 1765.

Functionalism, sociological and anthropological theory. Its fundamentals were outlined by Emile DURKHEIM. It is a theory of the relationships of the parts of a society - eg customs, institutions, objects, roles, religion - to the whole and of one part to another. The contribution that each part makes to the total cultural system is its function. The theory also tries to understand the "needs" of the social organism to which the cultural phenomena correspond. See also A R RADCLIFFE-BROWN, pp 1750-1751, 1765.

Functional psychology, late 19th century movement, founded by William JAMES and John DEWEY, that emphasized the adjustment of the organism to the environment and the operations of conscious activity, eg thinking. It was a forerunner of BEHAVIORISM.

Fundamentalism, movement within some Protestant denominations, particularly in the USA, which originated at the turn of this century as a reaction against biblical criticism and contemporary theories of evolution. The name is derived from *The Fundamentals*, a series of 12 tracts published between 1909 and 1915 by eminent evangelical leaders. The doctrines most emphasized by fundamentalists are the inspiration and infallible truth of the Bible, the divinity of Christ, the VIRGIN BIRTH, ATONEMENT by Christ bringing expiation and salvation for all, and the physical RESURRECTION and SECOND COMING. See also p 1919.

Fundamental particles. See ELEMENTARY PARTICLES.

Fundin, Ove (1933-), Swedish speedway rider. He won five world titles (1956, 1960, 1961, 1963, 1967) and helped Sweden to win six world team titles (1960, 1962-64, 1967, 1970).

Fundy, Bay of, inlet of N Atlantic Ocean which divides Nova Scotia from New Brunswick, Canada. Passamaquoddy Bay to the NW divides Canada from the USA. Tides there reach 19m (70ft). Length 151km (94 miles), width 51km (32 miles).

Funen. See FYN.

Funkirchen. See PÉCS.

Fungicides, in agriculture and gardening, chemicals that kill fungi, used to prevent or reduce losses from FUNGUS diseases of plants. The most important group of fungicides - including a majority of copper, sulphur and organic compounds - are used to protect healthy but susceptible plants from fungus infections. The other main group - including dinitro compounds and organic sulphur or mercury compounds - are used to eradicate fungus infections already established in plants. Fungicides used on wood, such as creosote, prevent decay.

Fungus, any of a wide variety of plants that cannot make their own food by photosynthesis, including mushrooms, truffles, moulds, smuts and yeasts. Fungi have relatively simple structures, with no roots, stems or leaves. The main body, or thallus, of a typical multicellular fungus consists of a usually inconspicuous network of fine filaments called a mycelium. The mycelia occasionally develop spore-producing, often conspicuous, fruiting bodies, as in mushrooms and toadstools. Fungal PARASITES depend on living animals or plants, SAPROPHYTES utilize the materials of dead plants and animals, and symbionts obtain food in the mutually beneficial relationship with other plants. All three groups

are of great importance to man. See also pp 352-355, 667, 696, 697, 719.

Funk, Cassimir (1884-1967), US biochemist who discovered VITAMINS. In 1912 he found vitamins B₁, B₂, C and D, coined the term "vitamine" (the AMINES of life) and presented a paper formulating the idea of vitamin deficiency disorders. Funk also contributed to the knowledge of cancer and of the hormones of the sex glands.

Fur, soft, dense hair covering the skin or pelt, of certain animals. Such animals include mink, fox, ermine, musquash, wolf, bear, squirrel and rabbit. Most of these animals are hunted and killed for their pelts which, when manufactured into coats and other garments, may command high prices. But some fur-bearing animals are now protected by law because overhunting has threatened them with extinction. Some, such as mink, are also reared on farms.

Furie, Sidney, (1933-), Canadian film director trained in television whose films were especially noted for their spirited camerawork and accomplished editing. Best-known examples include *The Impress* (1965) and *Lady Sings the Blues* (1972), a successful cinematic biography of Billie Holiday.

Furies, The, in Greek mythology, three hideous and terrible goddesses of vengeance whose main task was to visit torment upon those who had committed social crimes.

Furlong, imperial unit of measurement, equal to 220yds (201m). There are eight furlongs to a mile. The word derives from a "furrowlong", it represented the standard length of a furrow on a square field of 10 acres in medieval times.

Furnace, enclosed space which is raised to high temperatures by the combustion of fuels or by electric heating. Most furnaces are used in the extraction of metals or the making of alloys, although their heat may be used to fire kilns (for "baking" ceramics), ovens and boilers. Even a domestic boiler - especially if it burns solid fuel - is sometimes loosely described as a furnace.

There are three main types of electric furnaces. An arc furnace, eg as used in the extraction of phosphorus, relies on the heat generated by an electric arc (spark), often between two large carbon electrodes, which are slowly consumed. A resistance furnace is heated by radiation from coils or windings carrying an electric current, as in a domestic oven. An induction furnace melts a metallic charge by inducing a heating current in it. See also ELECTROMAGNETIC INDUCTION, pp 396-397, 406, 430.

Furneaux Islands, group of islands off the NE coast of Tasmania at the end of Bass Strait, separated from Tasmania by the Banks Strait. The group includes Flinders Island (the largest), Cape Barren Island and many smaller islands. Industries: dairy products, tin-mining. Area approx 2,330sq km (900sq miles). Pop (1969 est.) 1,240.

Furniture, movable items of domestic equipment, especially chairs, tables, beds and other such large pieces. Furniture has been used since earliest times, and until the 20th century wood has been the most common material used, both for the construction and decoration of furniture. The use of metals has increased since the Industrial Revolution and of plastics since WWII. As well as its simple function of supporting the body at rest or at work, furniture, particularly the chair, has played an important role in reinforcing social relationships - in medieval times, for instance, it was rare for even the most wealthy to own more than a few chairs, and highly decorated ones such as thrones denoted particular social importance. The advent of the generally available comfortably upholstered chair perhaps coincided with the achievement of the conveniences of middle-class life in Georgian England (a period often considered a golden age of domestic furniture). Furniture has been decorated since Classical times either to conceal the structure of the piece or with ornamentation designed to refer to its symbolic functions, since Renaissance

times this decoration has generally echoed current architectural designs. The tendencies have continued in the 20th century. GERT RIETVELD designed a desk chair and the use of steel in furniture construction was pioneered at the BAL HAUS.

Furniture beetle. See woodworm.

Furphy, Joseph (1843-1912), Australian novelist, pen name Tom Collins. His unconventional but subtle work underwent a revival in the 1940s, and his major novel *Such Is Life* (1903) describing episodes in the life of a solitary wayfarer received much critical acclaim.

Furter, Ekaterina Alekseyevna (1910-72), Russian pianist. From 1952 to 1956 she was a member of the Central Committee and from 1957 to 1960 of the Praesidium. In 1955 she became a member of the USSR Supreme Soviet. From 1960 she was the minister of culture.

Furtwängler, Wilhelm (1886-1954), German conductor. He became conductor of the Berlin Philharmonic Orchestra in 1922 (conductor for life in 1952) and of the Vienna Philharmonic Orchestra in 1930. He appeared frequently at the Bayreuth and Salzburg festivals and was a specialist in the works of Beethoven and Wagner.

Furze. See Gorse.

Fuson. See PIVAS.

Fuse, in electrical engineering, a safety device to protect against overloading. Fuses are commonly strips of easily melting metal placed in series in an electrical circuit such that when overloaded, the fuse melts, breaking the circuit and preventing damage to the rest of the system. See also p.869.

Fused-salt electrolysis. ELECTROLYSIS of molten ionic salts as a method of extracting elements. The technique is used for producing electropositive metals, such as aluminium and magnesium which are higher than hydrogen in the ELECTROCHEMICAL SERIES. (Electrolysis of aqueous solutions of their salts cannot be used because hydrogen ions would be discharged at the cathode in preference to metal ions.) See also pp.400-903.

Fuselage, body of an aircraft to which the wings, tail assembly and landing gear are attached. It houses the crew, cargo, passengers and controls. Its structural strength lies in a stress-bearing skin, internal bulkheads, lengthwise stringers and ribs. See also pp.514-15.

Fuseli, Henry (1741-1825), British painter, b. Switzerland. An admirer of the work of MICHAEL ANGELO and a friend of William Blake, he painted visionary and grotesque illustrations of SHAKESPEARE'S plays at *The Nightingale* (1782). See also pp.1548-1556.

Fusel oil, poisonous, clear, colourless liquid with a disagreeable smell. A mixture of amy alcohols obtained as a by-product of the fermentation of plant materials containing sugar and starch. It occurs as a dangerous impurity in badly made spirit drinks. It is used as a solvent for waxes, resins, fats and oils and in the manufacture of explosives and pure amy alcohols.

Fushun, city in Liaoning province, NE China, on the Hun Ho river, 40km (30 miles) SE of Shenyang (Mukden). The city was developed as a mining centre by the Russians from 1902 to 1908 when it came under Japanese control until after WWII. It has one of the largest open-cast mines in the world. Industries: oil refining, aluminium, chemicals, machinery. Pop. 170,000.

Fusion, nuclear. See NUCLEAR ENERGY.

Fust, Johann (c.1400-66), German printer. When Johann GUTENBERG was unable to repay a loan made by Fust, he took over Gutenberg's machinery and with a partner, Peter Schoeffer, established a commercial printing press. Among the works published were the *Psalter* (1457), a Benedictine psalter (1459) and Cicero's *De officiis* (1465).

Futabatei, Shimpei (1864-1909), Japanese author and translator. His novel *The Drifting Cloud* (1887-89) was never completed, but is generally accepted as the first modern Japanese novel in both style and content. Its description of Japan in the 1880s borders on caricature.

Future shock, term coined by Alvin Toffler who used it as the title of his 1970 best-seller, to describe the impact of rapid change on people and societies. Characterized by disorientation and anxiety and generated by urbanization and rootlessness, future shock results from the sudden breakdown of old social systems and values.

Futurism, art movement that originated in Italy in 1909 with the publication of the first FUTURIST MANIFESTO. It aimed to glorify machines and to depict speed and motion in painting and sculpture by means of an adapted version of CUBISM. It was violently opposed to the study of the art of the past, and proclaimed the values of modernity. The leading futurists included the poet MARINETTI, SEVERINI and BOCIONI in Italy, and Marcel DUCHAMP in France. After WWII the movement became linked with fascism through its advocates of an artistic elite and its wholesale rejection of the past, and artistically its ideas were absorbed by DADAISM and SURREALISM. See also pp.1656-1657.

Futurist Manifestos (1909-14), series of articles (1909-12) that announced the objectives of FUTURISM. The first written by F. T. MARINETTI, for the French paper *Le Figaro*, appeared in Feb. 1909 and proclaimed the new beauty of mechanical speed, two following manifestos published in 1910 discussed the implications of this aesthetic for painting.

Fuzhou. See FOZHOU.

Gyfe, David Patrick Maxwell, 1st Earl of Ardmuir (1900-67), British lawyer and politician. He became a Conservative MP in 1935 and was attorney general in 1945. He served as deputy chief prosecutor at the NUREMBERG TRIALS, was home secretary (1951-54) and lord high chancellor (1954-62). He was made an earl in 1962.

Gyffe, Will (1885-1947), Scots comedian. He began his acting career with his father's stock company but by 1921 had achieved great personal success in music halls with his character sketches. Among his most popular songs was *I Belong in Glasgow*.

Gyn, sland of Denmark, between the Jutland peninsula (W) and Spitzland Island (E). It is the second largest of the Danish islands and is connected to the mainland by a bridge. It produces dairy goods and wheat. Area 1,486sq km (1,346sq miles). Pop. 289,400.

G

G, seventh letter of the alphabet, derived from the Greek *gamma*, which entered the early Roman alphabet as a letter that stood for both g and k. This Roman letter resembled a c and later had a vertical line added to form the modern hand-written form of the letter g. In English a g may be hard, as in *game*, or soft (pronounced like a j), as in *page*. A following h gives it a variety of sounds (like a w in *rough*, like an f in *rough* or silent, as in *high*), g is also used in some other words, eg *sign*, unit of acceleration based on the acceleration of falling bodies near the Earth's surface. $1g = 9.807m/sec^2$ (32ft/sec²). Great forces are experienced by bodies traveling at accelerations greater than g. See also GRAVITY.

G, universal constant of gravitation, equal to 6.67×10^{-11} newton-m²/kg². It is the constant of proportionality in Sir Isaac Newton's law on gravitation.

Ga, black African people on Ghana's coast. They number approx. 625,000 and follow a system of patrilineal political and material inheritance for men and matrilineal inheritance for women.

Gabbro, coarse-grained basic igneous rock. It can be regarded as the plutonic equivalent of BASALT, being much coarser because of its slow crystallization. The constituents are sodium and calcium feldspars and the dark minerals (olivine and pyroxene), which impart a green hue to the rock. See also p.209.

Gabelentz, Hans Conon von der (1807-74), German linguist, ethnologist, and government official. Best known for his linguistic scholarship, he published research on the Malayo-Polynesian Monaghan, Gothic, Dakota and many other languages.

Gabin, Jean (1904-76), French film actor, real name Alexis Muncourage. He is famous for his roles as a disconsolable but heroic survivor. His major films include *La Grande Illusion* (1937), *Quai des Brumes* (1938), *Le Jour se Lève* (1939), *Mais qui Tend un Piège* (1958), and *Fin de Journée* (1969).

Gable, Clark (1901-60), US film actor. His impudent, virile magnetism made him a screen idol for 30 years. His films included *Red Dust* (1932), *It Happened One Night* (1934), *Gone With the Wind* (1939), *The Tall Men* (1955) and *The Misfits* (1960), his last film.

Gabio, Naum (1890-1977), US sculptor and architect, b. Russia, real name Naum Pevsner. A founder of CONSTRUCTIVISM, he published the *Realist Manifesto* (1920) with his brother Antoine Pevsner, a work explaining the principles of that style, works of which were often transparently geometrical abstractions composed in plastic. His works include a huge public sculpture in Rotterdam (1947).

Gabon, nation in western central Africa. The tropical climate creates rain forest throughout the country and although coffee and cocoa are grown, the economy is based on timber and mineral deposits. Exports include ebony, crude oil, manganese and uranium. The capital is Libreville. Area 267,677sq km (103,346sq miles). Pop. (1975 est.) 1,155,800. See p.2043.

Gaboon viper, highly venomous but docile viper native to central Africa and closely related to the puff adder. The snake has a stocky body and its head is twice as wide as its neck. A brilliant geometric pattern of yellow, blue, purple and brown over its body provides a highly effective camouflage. The Gaboon viper has enlarged, horn-like scales between its nostrils. Length up to 2m (7ft).

Gabor, Dennis (1900-1979), British physicist b. Hungary, who was awarded the 1971 Nobel Prize in physics for his invention of HOLOGRAPHY. He developed the basic technique in 1947 but it was not until the invention of the laser, by Charles H. Townes in 1960, that holography (a process of three-dimensional photography) became commercially feasible. Gabor has also researched into optics and communication theory.

Gaboriau, Emile (1832-73), French novelist. He wrote a number of early popular detective stories, including *L'Affaire Lerouge* (1866), *Monsieur Lecog* (1869) and *La Corde au Cou* (1873).

Gaborone, capital city of Botswana, 240km (150 miles) NW of Pretoria, South Africa. The city served as the administrative headquarters of former Bechuanaland Protectorate and became the capital when the Protectorate gained its independence in 1966. Pop. (1971) 17,718.

Gabriel, one of the four major archangels mentioned in both the Old and New Testaments. In the Old Testament account he helps DANIEL to interpret his visions. In the New Testament he foretells the birth of St JOHN THE BAPTIST to his father, ZACHARIAS, and that of Jesus to his mother, the Blessed Virgin Mary.

Gabriel, Jacques Ange (1698-1782), French architect. He perfected the French Classical style. Gabriel became first architect to Louis XV in 1742 and built or enlarged many chateaux and palaces under royal commission. His work includes the Petit Trianon at Versailles, the Ecole Militaire in Paris, and the Place de la Concorde.

Gabriel, family name of two Italian composers, uncle and nephew Andrea Gabriel (c.1510-86), a pupil of WILLIERT, was organist at St Mark's, Venice. He wrote vocal music (sacred and secular) and organ music, developing the antiphonal use of several choirs. His nephew and student Giovanni Gabriel (c.1555-1617)

Wilhelm Furtwängler succeeded Richard Strauss at the Berlin State Opera in 1920.

Futurism, a painting by Boccioni, one of the signatories of the Futurist Manifesto.

Jean Gabin, the popular French film actor as he appeared in *Le Jour se Lève*.

Gaboon viper does not always withdraw after striking but may hold on until its prey is dead.

Gaelic football: the All-Ireland Senior final between Kerry and Dublin, 1976

Yuri Gagarin, photographed in Britain in 1961 while visiting the Soviet Exhibition

Gainsborough's Blue Boy rebuffed Reynolds' tints and not areas of blue

Hugh Gantakell explaining the Labour Party manifesto at a press conference in 1961

succeeded him as organist at St Mark's. Giovanni's varied output included large works for voices and orchestra, from which the orchestral sections emerged as independent pieces in the new concerto style. He was a major influence on the early baroque period, particularly (as teacher of Heinrich Schütz) in Germany. See also p 1580

Gad, two biblical figures, one the seventh son of Jacob, whose tribe settled in Gilead. The other was a prophet and historian during David's reign.

Gaddi family, Florentine artists of the early Renaissance. Gaddo Gaddi (Gaddo di Zanobi) (c 1259–c 1330) made mosaics in many Florentine churches, some of which show the influence of Cimabue. His son, Taddeo (c 1300–c 1366), was trained by and worked with Giotto. His best-known work is the fresco series *Life of the Virgin* (completed in 1348) in the Baroncelli Chapel, Santa Croce, Florence. Other works include the Ponte Vecchio bridge, altarpieces and panel paintings. Taddeo's son, Agnolo (d 1396), also painted frescoes, the most famous is the *Legend of the True Cross* (c 1380) in Santa Croce, Florence. Agnolo has also had many panel paintings attributed to him. See also MM p 191.

Gadidae, family of fish containing about 70 species, some of which – including cod, haddock and hake – are caught for food. See also pp 744–745.

Gadolinium, metallic element (Gd) of the lanthanide series, first isolated as the oxide in 1880. Chief ores are monazite (a phosphate) and bastnaesite (a fluorocarbonate). The element has some specialized uses including neutron absorption and the manufacture of certain alloys. Properties: a.n. 64, a.w. 157.25, s.g. 7.898 (25°C), m.p. 1,311°C (2,402°F), b.p. 3,233°C (5,851°F), most common isotope Gd¹⁵⁷ (24.87%).

Gaea, in Greek mythology, mother goddess of the earth who was less actively worshipped than goddesses of later origin. Wife (and in some legends, mother) of Uranus, she bore the Titans, the Cyclopes and the Hecatoncheires ("those of a hundred hands"). When Uranus hid all her children from her, she persuaded the Titan Cronus to castrate his father.

Gaelic, language spoken in scattered parts of Ireland and Scotland. The two branches diverged in the 15th century and are mutually unintelligible. The Irish variety is one of the official languages of the Irish Republic and is taught in schools but the number of speakers is diminishing. In Scotland Gaelic has no official status and is gradually dying out. Gaelic is a Celtic language.

Gaelic football, sport popular in Ireland. Each side has 15 men who may kick, punch or pass the ball, but not throw it. Players may not pick the ball up directly from the ground with the hands, it may be carried for four paces but then has to be bounced, or kicked or punched away. The pitch is between 128m (420ft) and 146m (480ft) long and between 77m (252ft) and 91m (300ft) wide. There are goalposts at each end. One point is scored for putting the ball over the bar and three for driving it under the bar. The game lasts 60 minutes, except in the All-Ireland semi-finals and final when it lasts 80 minutes, with two halves, and is controlled by a referee and four goal umpires. The sport was established in Ireland in the 16th century and the ruling body, the Gaelic Athletic Association, was formed in 1884.

Gagarin, Yuri Alekseyevich (1934–68), Russian cosmonaut and national hero, the first man to orbit the earth. His historic flight took place on 12 April 1961, in the five-ton spacecraft *Vostok* ("East"). He attained a height of 300km (188 miles), and made his single orbit in 1 hr 29 min. He landed safely in the Soviet Union. Gagarin died seven years later in a plane crash. See also p 1026.

Gage, Thomas (1721–87), British general, and administrator in North America. He became governor of Montreal in 1760 and was made head of the British forces in North America in 1763 and governor of Massachusetts in 1774. His soldiers

fought the patriots at Lexington (April 1775), the battle that began the American War of Independence. He resigned in October of the same year.

Gagging Acts, popular name for a series of acts passed by the British parliament in 1817 to restrict the radical agitation which was the product of postwar unemployment and high food prices. After Orator Hunt's mass meeting at Spa Fields, London, in November 1816 and an attack on the Prince Regent in December, the Tory government suspended the right of habeas corpus and outlawed the holding of "seditious" meetings.

Gag rules, series of rules adopted by the US Congress in the late 1830s to prevent the discussion of slavery. The first, and most important, was the resolution of 1836, which declared that all petitions relating to slavery should be "laid on the table of the House" without debate. For eight years John Quincy Adams led the fight against the rules and in 1844, with the support of the northern abolitionist states, he succeeded in getting them repealed.

Gala, See GAEA.

Gaillardia, also called blanketflower, a genus of annual and perennial flowering plants of the composite family. They are native to North America and are popular garden flowers. They have floral heads of a yellow, red or purple colour.

Gainsborough, Thomas (1727–88), British portrait and landscape painter. He made skilful use of various influences, including Van Dyck, Rubens and the Dutch landscape painters, to develop a personal style that is remarkable for its characterization and use of colour. His portraits, such as *Viscount Kilmorey* (1768) rivalled those of Sir Joshua Reynolds. Among his best landscapes is *The Watney Place* (1777). He also painted pastoral genre scenes or "fancy pictures", eg *The Harvest Wagon* (c 1770).

Gainsford, John (1918–), South African rugby union player. A tall, strongly-built centre-threequarter, he played in 33 internationals (1960–67) – then a Springbok record – scoring 8 tries. He represented Western Province and South-West Districts.

Gairdner, dry salt lake N of Fyfe Peninsula, in South Australia. Area: 4,766sq km (1,840sq miles).

Gairy, Eric Matthew (1922–), Grenada politician who became a member of the legislative council in 1951, and Prime Minister in 1967. He was Prime Minister at and after Grenada's independence in 1974.

Gaitskill, Hugh Todd Naylor (1906–63), British politician. He entered Parliament as a Labour MP in 1945, was minister of fuel and power (1947–50), minister of state for economic affairs in 1950, and in the same year, at the age of 44, became the youngest chancellor of the exchequer since Austen Chamberlain (in 1903). His 1950 budget, by imposing some charges on National Health treatment, brought him the leadership of the right wing of the Labour Party against the Bevanites. He became treasurer of the party in 1953 and 1954, defeating Aneurin Bevan, and in 1955 was elected leader of the party. At the 1960 party conference he distinguished himself by his resolute defiance of the conference's vote in favour of unilateral nuclear disarmament.

Gaius, See CAIUS.

Gajdusek, Daniel Carleton (1923–), US physiologist who shared the 1976 Nobel Prize in physiology and medicine with Baruch S. Blumberg for work on the neurological disease kuru. Working among tribes in New Guinea, which were being decimated by this disease, he postulated its transmission by the ritual eating of human brains. Further study implanting kuru in animals led him to conclude that it was caused by a slowly acting virus which could remain dormant for years. This finding implicated viruses in other diseases such as multiple sclerosis and Parkinson's disease.

Gal, little-used unit, abbreviated from Galileo, measure of acceleration equal to 1 centimetre per second per second.

Galactic co-ordinate system, astronomical

co-ordinate system that refers to the plane of the galaxy. The co-ordinates are galactic latitude and longitude. Galactic latitude is the angular distance of a celestial object above or below the galactic plane. Galactic longitude is the angular distance around the galactic equator from a defined zero point. This point is at right ascension 17 hr 42.4 min, declination 28°25', and is the direction of the presumed galactic centre. The galactic north pole is at RA 12 hr 49 min, dec +27°24'.

Galactosemia, genetic inability to convert galactose (in milk) to usable glucose because a particular enzyme is missing. Symptoms, appearing in infants within a few days of birth, include vomiting, possible oedema and feeding difficulty. It is controlled by eliminating milk and milk products from the diet.

Galago, also called bush baby, any of several African species of small, nocturnal and tree-living PRIMATES of the subfamily Galaginae of the LOIIS family (LOIIDAE). At night galagos leap between branches like squirrels, searching for fruit and insects. They have large, light-gathering eyes and long fingers, toes and bushy tails. See also pp 102–103.

Galah, bright pink and grey cockatoo that lives in large numbers in Australia and is often kept there as a cage bird. Species *Kakatoe roseicapilla*. See also NW p 205.

Galahad, in Arthurian legend, son of Lancelot and Elaine. He qualified as the best knight by passing the test of the Perilous Seat and drawing a sword from a marble and iron stone. He was a late addition to the legends, replacing Percival as the major seeker of the Holy Grail. Galahad was successful in the quest because he was a pure knight.

Galapagos Islands, volcanic archipelago in the Pacific Ocean astride the Equator near Ecuador, to which country they belong. They are famous for the visit in 1835 of the naturalist Charles Darwin in HMS *Beagle*. Darwin noted that the dominant animals were not mammals but reptiles and birds. These include species found nowhere else, such as the GALAPAGOS TORTOISE and the marine IOLANA. SEABIRDS include FRIGATEBIRDS, GANNETS and a flightless cormorant. The GALAPAGOS FINCHES, a group of birds that show radiative adaptation to various ways of feeding, gave Darwin strong evidence for his theory of evolution by natural selection. See also pp 186–187, 204.

Galapagos tortoise, any of several tortoises, all subspecies of *Testudo elephantopus*, they are found solely on the GALAPAGOS ISLANDS. Animals introduced to the islands are robbing the tortoises of their staple food, but a conservation programme is in progress. Length to 1 m (3 ft), weight to 180kg (397lb).

Galatea, in Greek mythology, a sea nymph. She was in love with ACIS, the son of a river nymph, but was loved by the Cyclops, POLYPHEMUS, who, when he found her with ACIS, crushed ACIS under a huge stone. To release ACIS, Galatea turned him into a river. By some legends, Galatea is also the name of the woman brought to life from a statue.

Galati, port in Romania, on the Danube (Danau) River, capital of Galati county. It was the seat of the European Danube Commission from 1856 until 1945. Its major exports are grain and timber, and industries include iron and steel, ship building, chemicals and textiles. Pop (1974) 197,853.

Galatia, ancient region of Asia Minor near modern ANKARA in Turkey. It was named after the Celts who invaded the area in the 3rd century BC. Galatia became subject to the Romans in 189 BC and in 25 BC its name was given to a Roman province larger than the original region.

Galatians, Epistle to the, letter in the New Testament written by the apostle Paul in indignation at the increase in false teachings among his Galatian converts. Paul stressed his apostolic authority and the commission which he had received directly from God, and argued against teachers who exhorted the Galatians to adhere strictly to Jewish Law.

Galaxy, large collection of stars, gas and dust, held together by gravitational attraction of the component parts, and prevented from collapsing in on itself by its rotational movement. Galaxies usually contain millions of stars and are classified according to their shape, a system originated by E. P. Hubble. The majority of galaxies are spiral or elliptical. A spiral galaxy is shaped like a flat disc with a central bulge, or nucleus, made up of old stars, with spiral arms consisting of gas, dust and young stars. This type is further classified into normal and barred spirals, the latter having a central bar of stars from which the arms project. Our Galaxy, the MILKY WAY, is a typical spiral galaxy. Elliptical galaxies have no spiral arms and resemble the nuclei of spiral galaxies. They contain no gas or dust and vary greatly in size and mass. Some galaxies, composed wholly of young stars, and with no shape or nucleus, are known as irregular galaxies, an example being the MAGELLAN CLOUDS. Galaxies often occur in clusters, although they are apparently retreating from each other at great speed, demonstrated by red shifts in their spectra. The more distant galaxies seem to be retreating at greater velocities, evidence in support of the big bang theory of cosmology. Some galaxies emit energy in forms other than visible light, and many radio galaxies have now been detected. See also pp 996-1001.

Galaxy cluster, group of associated galaxies, consisting of several separate systems moving together through space. Our own Galaxy (the Milky Way) belongs to the LOCAL GROUP OF GALAXIES which includes the ANDROMEDA spiral and the MAGELLAN CLOUDS. A concentration of galaxy clusters is termed a galaxy supercluster. See also pp 998-999, 1001.

Galbraith, John Kenneth (1908-), US economist, b. Canada. His works have made him well known to the general public. Three of his most famous books are *American Capitalism: The Concept of Countervailing Power* (1952); *The Affluent Society* (1958), and *The New Industrial State* (1967). In general, Galbraith takes the position that many accepted theories about consumption are outmoded. An early supporter of and adviser to John F. Kennedy, he was ambassador to India from 1961 to 1963.

Galen (c. AD 129-c. 199), Greek physician. His work and writings provided much of the foundation for the development of medicine. He tried to synthesize all that was known of medical practice and to develop a theoretical framework for an explanation of the body and its disorders. He made numerous anatomical and physiological discoveries, including ones concerning heart valves, secretions of the kidney, respiration and nervous-system function. He was among the first to study physiology by means of detailed and ingenious animal experimentation. Galen's theories influenced medical practice for centuries. See also p 1058, 1061, 1122, 1250.

Galena, lead-grey, brittle metallic mineral, lead sulphide (PbS); a major ore of lead in igneous and sedimentary rocks. It occurs as granular masses, and commonly as cubic system octahedral crystals, sometimes fibrous. Hardness 2.5-2.7, sp. gr. 7.5.

Galicia, historic region in SE Poland (Western Galicia) and W Ukraine (Eastern Galicia), on the slopes of the Carpathian Mts N of Czechoslovakia. It is mainly an agricultural region, producing grain, flax, hops, potatoes and tobacco, but there are some oilfields. It was part of Poland from the 14th century until the partitions of Poland in 1772, 1795 and 1815 when Austria took possession. In 1919 Poland took W Galicia and gained E Galicia in 1923. The 1939 partition of Poland gave E Galicia to the Ukraine. Area 78,500sq km (30,309sq miles).

Galicia, region in NW Spain, comprising the provinces of La Coruña, Lugo, Orense and Pontevedra. Galicia has an indented coastline and a mountainous interior. The economy is based on the raising of livestock. The region has always been known for its spirit of independence, there were

frequent rebellions against the crown in the Middle Ages and an important cultural revival in the 19th century. Pop (1970) 2,584,000.

Galilean satellites. See CALLISTO, EUROPA, GANYMEDE, IO.

Galilee, region in N Israel, bounded by the River Jordan and the Sea of Galilee (E) and the Plain of Esdraelon (S). Irrigation has made this a fertile agricultural area, and olives and grain are the chief crops. Fishing is the most important industry. Nazareth is the major town of the region. The home of Jesus Christ, it was the scene of His ministry and His disciples were local fishermen.

Galilee, Sea of (Lake Tiberias or Yam Kinneret), freshwater lake in N Israel, near the border of Syria and Israel. It receives most of its water from and is drained by the River Jordan. Israel's major reservoir, it is an important fishing ground and the source of water for irrigation of the Negev Desert via the 'National Water Carrier'. It has been the site of several archaeological excavations. Area 166sq km (64sq miles).

Galileo Galilei (1564-1642), Italian scientist, lecturer at Pisa, later moving to Florence and then to Padua. He deduced the formula for the period of a pendulum from the oscillation of a hanging lamp in Pisa Cathedral. He later studied falling bodies and disproved Aristotle's view that the rate of fall is proportional to the weight. He also discovered the parabolic flight path of projectiles. He developed the telescope, which enabled him to discover sunspots, lunar craters, Jupiter's satellites and the phases of Venus. In *Sidereus Nuncius* (1610) he announced his support for the Copernican view of the universe, with the earth moving around the sun. This was declared a heresy by Cardinal Bellarmine. In *Dialogo Sopra i Due Massimi Sistemi del Mondo* (1632) he defied the pope by making his views even more explicit; as a result he was brought before the INQUISITION at the age of 69 and forced to publicly contradict his own theories. See also pp 450-774, 964.

Gall, Franz Joseph (1758-1828), German anatomist and physiologist, who correctly identified the function of several areas of the brain and suggested that these areas controlled or were related to certain parts of the body. He extrapolated from this and founded PHRENOLOGY, the study of the external structure of the skull to determine the character of an individual.

Gall, abnormal swelling or protuberance of plant tissue stimulated by an invasion of any of a wide variety of parasitic or symbiotic organisms, including bacteria, fungi, insects and nematodes. Most gall organisms stunt but do not kill the affected plants. The gall wasp larva makes a spongy 'apple' gall on oak trees, which contains tannin. These galls are used in leather tanning and made into inks and dyes.

Gallacher, Hughie (1903-57), Scottish footballer. A small, quick witted centre forward, he played 19 times for Scotland (1924-35), scoring 22 goals. During a tempestuous career he scored 387 league goals for Airdrieonians, Newcastle United, Chelsea, Derby County, Notts County, Grimsby Town and Gateshead.

Gall bladder, muscular sac found in most vertebrates. It stores and concentrates bile which it receives from the liver. It is well supplied with blood vessels, nerves and lymphatic tissue. When stimulated by the vagus nerve, the gall bladder discharges bile into the duodenum via the bile duct. See also pp 161, 161.

Gallé, Emile (1846-1904), French designer and technical innovator in art glass, a leading force in the ART NOUVEAU movement. His glassware, in which the influence of Japanese art is evident, made a vital contribution to the evolution of asymmetrical forms and symbolic overtones associated with ART NOUVEAU. It was rich in special textures obtained with air bubbles and metallic foil, and with special effects produced by mixing varying thicknesses of layered glass which was carved or etched to create plant forms.

Galle, Johann Gottfried (1812-1910), German astronomer, the first to observe

and identify Neptune as a planet (1846), although its presence had been postulated by other scientists. Galle also suggested a system for determining the scale of the solar system based on the observation of asteroids.

Galloon, general-purpose wooden sailing ship dating from the 16th century and larger than the earlier CARRACK and CARAVEL. It featured a larger forecabin and quarterdeck, and was rigged with a bowsprit sail, two main masts with several square sails and one or two lateen masts at the rear. See also pp 472-473.

Gallery, topmost seats in a theatre or cinema, most usually the upper balcony or balconies and known colloquially as 'the gods'. Usually the cheapest part of a theatre, its occupants were once noted for their unreservedly critical reactions to the performance on stage. A gallery can also be any raised platform at the rear or side of the stage.

Galley, oared Mediterranean warship of ancient origin used by the Greeks and Romans, as well as by the Italian, French and Turkish navies up to the 17th century. They usually had from one to three rows of oars on each side. Later galleys carried guns and had a crew of several hundred. See also TRIEMME, pp 566-567, 566.

Galliard or Galliard, court dance in moderate triple time, full of quick turns and intricate steps. It was popular in 16th-century Europe and in Italy replaced the earlier Sauterello.

Gallicanism, nationalist movement within the French Roman Catholic Church, opposed to ULTRAMONTANISM. It affirmed the supreme authority of the French bishops and Crown at the expense of the papacy. The movement began in the 13th century, and was enshrined in the Pragmatic Sanction of Bourges (1438) and the Concordat of Bologna (1516). The controversy continued in several forms, such as JANSENISM, until modern times.

Gallio, Paul (1897-1976), US writer of Italo-Austrian parentage. He was a prominent US sports journalist before turning to fiction writing in 1936. His books, many of them enchanting stories about animals and children, include *The Snow Goose* (1941), *The Small Miracle* (1952) and *Thumalina* (1958).

Galli-Curci, Amelita (1882-1963), US SOPRANO, b. Italy. She studied in Milan and made her debut in 1909 as Gilda in Verdi's *Rigoletto*. She became a famous soprano in the Italian repertoire and spent much of her career with the Metropolitan Opera Company, New York (1921-30).

Gallie Wars (58-51 BC), campaigns in which the Romans, led by Julius Caesar, conquered the Gauls. By 57 he had subdued SW and N Gaul and extended Roman influence to the River Rhine and N France. In 56 he conquered the Veneti, leaders of an anti-Roman confederation, and in 55-54 invaded Germany and Britain. He defeated a united Gallic force under Vercingetorix in 52 BC. Caesar's *The Gallic Wars* is a classic account of the campaigns. See also p 1231.

Galliformes, order of six families of GAME BIRDS, including TURKEYS, GUINEA FOWL, PHEASANTS and PARTRIDGES.

Gallipoli (Gelibolu), city in SW European Turkey, on the Gallipoli Peninsula, port at the E end of the Dardanelles. First colonized by the ancient Greeks, it has been of strategic importance throughout history in the defence of Istanbul (Constantinople). It was the first European city to be conquered by the Ottoman Turks, in 1354. Pop (1970) 14,600.

Gallipoli Campaign (1915), Allied attempt during WWI to defeat Turkey and establish a Black Sea supply route to Russia by capturing the DARDANELLES. Some 45,000 British and French and 30,000 ANZAC troops were involved. In April British and ANZAC forces established a beach-head along the E coast of the Gallipoli Peninsula, French troops landed on the Asiatic side of the narrow Strait. After eight months of fighting and more than 144,800 casualties, the Allies were ordered to withdraw. See also pp 1605-1670.

Gallium, metallic element (symbol Ga) of

Galilee, many Kibbutzim in this fertile area have built artificial ponds for fish farming

Galileo used actual experiments to prove his theories concerning the rate of falling bodies

Galleons were the large fully rigged warships developed in the 15th and 16th centuries

Gallic Wars were the campaigns in which Julius Caesar emerged as a military genius

Galloway

Galvani believed that nerve juices caused the electricity reading in an animal.

Galvanizing is a method of protecting iron or steel from the corrosive effects of weather.

Galvanometers may be used to find the balance point in bridge circuits.

Vasco de Gama's expedition sought to secure the African coast for Portugal.

group IIIA of the periodic table, predicted by MENDELEEV (as ekaaluminum) and discovered spectroscopically in 1875 by Lecq de Boisbaudran. Chief sources are as a by-product from bauxite and some zinc ores. The metal is used in high-temperature thermometers and in semiconductors. Properties at no. 31, at wt. 69.72, s.g. 5.9 (29.6°C); m.p. 29.78°C (85.6°F), b.p. 2,403°C (4,357°F), most common isotope Ga⁷¹ (60.4%).

Galloway, region of sw Scotland, made up of the former counties of Wigtownshire and Kirkcubrightshire, and now part of Dumfries and Galloway Region. The area includes the Mull of Galloway, the most southerly part in Scotland. Galloway is famous for its black, hornless cattle. Dairy farming and tourism are the principal economic activities.

Gallstone, or **cholelithiasis**, stonelike formation, usually containing cholesterol, found in the gall bladder. It is more common in women than men. Gallstone formation is thought to be related to liver malfunction, and may be due to fatty foods, but its cause is not positively known. Symptoms range from none to excruciating pain (biliary colic). See also pp. 1068, 1069.

Gallup, **George Horace** (1901–), US statistician and public opinion pollster. He taught journalism and then, in the 1930s, embarked on a career sampling public opinion on social, political and business matters. He correctly forecast the outcome of the 1936 presidential election and since then, with the notable exception of 1948, when he predicted a win for Thomas Dewey over President Truman, the Gallup Poll has acquired a reputation for accuracy. His methods are used extensively in advertising and market research.

Gall-wasp, small brown wasp found worldwide. The female lays eggs in plant tissues and a gall develops as the larvae hatch and mature. The abnormal plant tissues provide the larvae with food and shelter. The galls are usually found on oak trees ("oak apples") and roses ("rose-pincushions"). Length 6–8mm (0.25–0.32in). Family Cynipidae. See also NW pp. 46, 47.

Galois, **Evariste** (1811–1832), French mathematician who laid the foundation of the algebraic group theory. His work was dismissed by the mathematical establishment as incomprehensible and he turned to political activism, being arrested twice. He died after a duel.

Galsworthy, **John** (1867–1933), British novelist and playwright. His novels deal with the contemporary English upper-middle class. The most noted of his novels are those about the Forsyte family, grouped in three trilogies: *The Forsyte Saga* (1906–21), *A Modern Comedy* (1924–28) and *End of the Chapter* (1931–33).

Galt, **Sir Alexander Tilloch** (1817–93), Canadian politician. He sat in the Legislative Assembly (1849–50, 1853–67) and promoted the Grand Trunk Railway. As minister of finance in 1858, he urged confederation on the British and was influential at the Quebec Conference as chief spokesman for the English of Lower Canada.

Galt, **John** (1779–1839), Scottish writer. Galt produced poems, dramas and historical novels, but particularly remembered are his studies of life in Scotland. *The Ayrshire Legacies* (1821), *Annals of the Parish* (1821) and *The Entail* (1823).

Gaillon, **Sir Francis** (1822–1911), British scientist and scholar. He pioneered the study of human differences, mental tests and statistical analysis of data. In *Hereditary Genius* (1869) he described his theories of HEREDITY and advocated a science of EUGENICS—selective breeding of persons with desirable traits.

Galty Mountains, range of mountains in s central Republic of Ireland, extending w to e through s Limerick and s Tipperary counties. The highest peak is Galtymore, rising to 920m (3,018ft) in Tipperary. Length, 24km (15 miles).

Galvani, **Luigi** (1737–98), Italian physician and physicist who became lecturer of anatomy at Bologna and did pioneer stu-

dies in electrophysiology. His experiments with frogs' legs indicated a connection between muscular contraction and electricity, although the correct explanation was given by VOLTA.

Galvanism, early name for an electric current that results from chemical action, so called after Luigi GALVANI.

Galvanizing, the coating of iron or steel articles with zinc, either applied directly in a bath of molten zinc, electrodeposited from cold zinc sulphate solutions, or dusted on and baked. Corrugated sheets, dustbins, nails, pails and wire netting may be protected from the corrosive effects of atmospheric carbonic acid. The metal to be protected is first derusted but if, after galvanizing, the zinc coating is pierced protection is still provided because of the preferential attack by corrosion on zinc rather than on iron.

Galvanometer, instrument for detecting, comparing, or measuring electric currents. It is based on the principle that a current through a conductor (usually a coil) creates a magnetic field which reacts with a magnet giving a deflection. The main types are the moving-coil galvanometer (modern and most commonly used) and the moving-magnet instrument. See also pp. 872, 873.

Galway, county in the w Republic of Ireland. Bounded by the Atlantic (w) it has an indented coastline with many islands. It is a farming region, mountainous in the w, lowlying in the e and drained by the River Shannon. The chief towns are Galway, Tuam and Ballinasloe. Area 5,939sq km (2,293sq miles). Pop. (1971) 148,220.

Gama, **Vasco da** (c. 1469–1524), Portuguese navigator and discoverer of the sea route to India. In 1497 he led the historic expedition to establish a maritime route to the Indies. He reached South Africa, sailed around the Cape and across the Indian Ocean to Calicut, India. The route is still used by ships today, and opened up the resources of Asia to the Western European powers. In 1524, he went to India as viceroy, becoming head of the first European enclave in Asia. He died there only months later. See also pp. 1368.

Gambetta, **Léon Michel** (1838–82), French politician. He was a parliamentary opponent of Napoleon III, organized French resistance in the Franco-Prussian War (1870–71) and helped form the Third Republic. He was Prime Minister from 1881 to 1882.

Gambia, republic in w Africa. It is Africa's smallest nation, lying on either side of the Gambia River for about 464km (290 miles) and varying in width from 24–48km (15–30 miles). The economy is dependent on groundnuts and associated products, and these together account for 95% of the country's exports. The capital is Banjul. Area 11,295sq km (4,361sq miles). Pop. (1975 est.) 524,000. See p. 2043.

Gambia, river and major trade route in w Africa. It rises in the Fouta Djallon Mountains, Guinea, and flows nw through Senegal and w into the Atlantic Ocean at Banjul. It is navigable by ocean-going ships for 300km (185 miles) of its 1,120km (700 miles).

Gambier Islands, island group of FRENCH POLYNESIA, s Pacific Ocean. It consists of four inhabited islands, known as the Mangareva group, and numerous uninhabited atolls used for nuclear testing. Industries: copra, coffee and pearls. Area 31sq km (12sq miles). See also p. 2043.

Gambling, pursuit in which people bet money on a contest with the aim of winning back more than their initial outlay. It takes a large number of forms: a "flutter" on the football pools or Derby sweepstake, a bet against defined odds put up by a bookmaker on sports events or, say, a general election, a stake on personal success, as at cards, roulette, or the humble but avuncular "fruit machine." Chance is the main ingredient of all gambling, luck more often than skill the ingredient of success. With more fortunes lost than won through gambling, and with crime and poverty sometimes closely associated with it, it is not surprising that some countries view it as a social evil and declare it illegal.

In others the state derives considerable income from taxes on gambling or from the profits on state-run lotteries, such as the British Premium Savings Bonds. Gambling has been described as "a way of buying hope on credit." See also pp. 808, 809.

Game bird, bird hunted by humans for food, especially birds of the two major orders Galliformes and Anseriformes. Galliformes include the chicken, turkey, quail, pheasant, partridge, guinea and curassow. Typically, they are ground birds with strong legs adapted for walking and running, and strong toes to scratch the ground for fruits and seeds. They often have abundant plumage and elevated tails and make simple ground-depression nests. Anseriformes include the duck, goose and swan. They are waterfowl and have rounded, open nostrils, dense undercoats of down, and special glands to waterproof their plumage. See also individual species, pp. 736, 737.

Gamelan, traditional village percussion orchestra of Indonesia, consisting of tuned and untuned percussion instruments (mainly xylophones, marimbas, gongs and drums), played by up to 30 musicians. The music is based on various pentatonic scales, and is rhythmically complex.

Game Laws, series of laws in Britain from the 14th to the 20th centuries controlling the possession, shooting and sale of animals classified as game. The first act (1389) forbade persons below a certain rank and fortune (a landed income of 40 shillings a year) from shooting hares, deer or conies. From then until the comprehensive Game Acts of 1816 and 1831 there were 50 acts of parliament on the subject. By then game included hares, pheasants, partridges, grouse, blackgame and bustards. These acts, the basis of the present law, prescribed severe penalties for poaching and restricted the shooting and sale of each animal to a few weeks of the year (called the open season). See also pp. 736, 737.

Gamete, sexual reproductive cell that joins with another cell to form a new organism. Female gametes (ova) are motionless, male gametes (sperm) have a tail enabling them to swim. See also pp. 164, 165, 178.

Game theory, in mathematics, the analysis of problems involving conflict. Its application includes problems in business management, sociology, economics and military strategy (they involve situations in which there is a conflict of interest, incomplete information and an element of chance) as well as "true" games such as poker and chess. The theory was first introduced by Émile Borel and developed by John von Neumann in 1928. See also pp. 808, 809.

Gametophyte, generation of plants that bears the female and male gametes (sexual reproductive cells). In flowering plants these are the germinated pollen grains (male) and ovules containing the embryo sac (female). See also ALTERNATION OF GENERATIONS, Fern, Moss, pp. 350–351, 364–365.

Gamma globulin, one of the protein components of the serum of mammalian blood. It contains approximately 85% of the circulating ANTIBODIES of the blood. It gives temporary immunity in patients who have been exposed to certain diseases such as measles. See also p. 152.

Gamma radiation, or **γ rays**, form of ELECTROMAGNETIC RADIATION emitted from the nuclei of radioactive atoms, or extremely short wavelength, ie high frequency. High energy gamma rays have even greater powers of penetration than hard x-rays, so that sources of this radiation must be stored inside thick lead containers. Gamma rays can be detected with a GEIGER COUNTER. See also RADIOACTIVITY, pp. 951, 923, 974.

Gammer Gurton's Needle (c. 1557), play believed to be by William Stevenson. An early and somewhat coarse comedy, it realistically portrays hearty, rustic English contemporary life, employing racy, idiomatic dialogue.

Gamow, **George** (1904–68), US nuclear physicist, cosmologist and author.

b. Russia He was a proponent of the "BIG-BANG" theory of the creation of the universe and he contributed to the deciphering of the genetic code. He also developed the quantum theory of radioactivity and proposed the liquid-drop model of atomic nuclei. With Edward TELLER, he established the Gamow-Teller theory of beta decay and the internal structure of red giant stars.

Gandhara, historic area in modern NW Pakistan, on the Indus river. A Persian colony (6th century BC), it passed to the MAURYA EMPIRE of India (c 303 BC), under ASHOKA (c 265-238 BC). Gandhara flourished as a cultural and Buddhist centre. Its greatest prosperity came during the rule of the KUSHANS (1st-3rd centuries AD), who developed the Gandhara School of art, noted for Buddhist sculptures and reliefs. In the 6th century, the area was raided by the HUNS.

Gandhi, Indira (1917-), Indian political figure, the first woman elected (1966) Prime Minister of India. The daughter of Jawaharlal Nehru, she served as president of the Indian National Congress Party in 1959-60. In 1975 she was found guilty of breaking electoral rules in the 1971 elections. She refused to resign, invoked emergency powers and imprisoned many of her opponents. In the 1977 elections her party was defeated, re-elected.

Gandhi, Mohandas Karamchand "Mahatma" (1869-1948), Indian leader. Known as the Mahatma ("Great soul"), he was regarded as the father of India because of his leadership of the country's nationalist movement from 1919 to 1947, when independence was granted. His method, called *Satyagraha* ("truth-keeping") included all forms of non-violent resistance to British rule, such as strikes, refusal to pay taxes, and refusal to respect courts. His experiences in South Africa, where he spent 21 years trying to end oppression of the Indians, and the massacre of a mob in Amritsar by the British in 1919, led him to believe that freedom could not be gained by force. In 1930 he made a dramatic (388km, 241-mile) protest march to the sea inspiring widespread demonstrations. His methods succeeded, and he came to be considered a moral as well as actual leader. He was assassinated by a Hindu Brahmin who objected to his religious tolerance. See also pp 1698, 1702.

Ganesha, elephant-headed Hindu god, son of SHIVA and PARVATI, he is considered to be able to remove obstacles, relieve difficulties and is the patron of learning said to have written down the MAHABHARATA. He is the leader of Shiva's attendants and is depicted with a pot-belly and a broken tusk. His birth festival is in the lunar month Bhadrpad.

Ganges (Ganga), sacred river in India. It rises in the Himalayas, formed by the confluence of two headstreams, the Bhagirathi and Alaknanda. It then flows SE and empties into the Bay of Bengal through the combined Brahmaputra - Ganges delta. The plains of the Ganges are extremely fertile and support one of the world's most densely populated areas. In Hindu religion and legend, the Ganges is the earthly form of the Goddess Ganga, and pilgrims purify themselves in its waters. Length 2,512km (1,560 miles).

Ganglion, small mass of nervous tissue preponderant in the nervous system of invertebrates, peripheral in vertebrates.

Gangrene, death of body tissues associated with loss of blood supply and bacterial infection. It can occur as a result of injury, freezing or in people with diabetes. In dry gangrene, found most often in old people with diseased arteries, the affected part gradually turns black, with inflammation and skin ulcers. Moist gangrene is characterized by fever, inflammation and effusion of fluid from the diseased limb. It can be fatal. Gas gangrene occurs when open wounds become infected with gas-producing bacteria (*Clostridium welchii*). Treatment consists of antibiotics and, in severe cases, amputation.

Gangster film, melodramatic film, many made in the USA, depicting the exploits of a gangster or a gang who carries out robberies with murder, or indulges in warfare with a rival gang. Such bloodthirsty films began with Sternberg's *Underworld* (1927), followed by the classic *Quick Millions* (1931), *The Roaring Twenties* (1939) and *White Heat* (1949). The style was revived with *Bonnie and Clyde* (1967) and continued into the 1970s with *The Godfather* (1971) and *Lucky Luciano* (1973).

Gangtok, capital of Sikkim, central Asia, situated in the Himalayas, 28km (17 miles) NE of Darjeeling, India, one of the world's wettest regions. Gangtok has a Buddhist monastery. There is a little light industry. Pop. (1968 est.) 9,000.

Gangue, waste material in an ore of deposit, as opposed to metal-containing or other useful minerals.

Ganivet, Angel (1865-98), Spanish novelist. He analysed the problems of Spanish culture and empire in *Spain. An Interpretation* (1897), and introduced Scandinavian writers including STRINDBERG and IBSSEN to the Spanish public.

Gannet, fast-diving marine bird of cooler offshore waters, related to tropical boobies. Gannets are heavy-bodied with tapering bills, long pointed wings, short legs and webbed feet. Their plumage is white with a yellowish head and black wing tips. They feed on fish and nest in huge colonies on rocky islands. Length 63-101cm (25-40in). Family Sulidae. See also pp 76, 81.

Ganymede, in Greek legend, the son of Tros, King of Troy. Because of his adolescent beauty, he was carried off by Zeus to serve as cupbearer to the gods.

Ganymede, largest of Jupiter's satellites, one of the Galilean satellites, it is larger than Mercury. Diameter approx 5,000km (3,100 miles), mean distance from Jupiter: 1,000,000km (621,000 miles), mean sidereal period 7.15 days. See also pp 964, 1048.

Garamond, Claude (c 1480-1561), French type-cutter. With Robert Estienne (1503-1559) he designed the famous Greek typeface *Grecs du Roi* (in recognition of the patronage of King Francis I). Garamond based his own typeface on designs of the Italian printer Aldus Manutius (1449-1515) and the earliest examples are found in books printed in Paris in about 1532. Many of the modern versions of this typeface such as those by Goudy are based on the *Typi Academice* of Jean Jannon, cut in Sedan in about 1615.

Garbanzo. See CHICKPEA.

Garbo, Greta (1905-), Swedish film actress, real name Greta Gustafsson. She became famous for her aura of mystery and legendary romantic beauty. Her silent films included *Torrent* (1926) and *Flesh and the Devil* (1927), but her greatest successes were the sound films *Anna Christie* (1930), *Grand Hotel* (1932), *Queen Christina* (1933), *Anna Karenina* (1935), *Camille* (1936) and the comedy *Ninotchka* (1939). She retired in 1941 and since then has eschewed all publicity.

Garborg, Arne Evensen (1851-1924), Norwegian novelist, poet, playwright and essayist. His works were inspired by the peasant society in which he grew up. His book *Bondesludensar* (1883) describes the life of a peasant-student in the city. His most popular work is the poetic cycle *Haugussa* (1895).

García Calderón, Ventura (1886-1959), Peruvian author and one of the leading Latin American writers of the early 20th century. His best-known collection of stories, *The Vengeance of Condor* (1924), deals with rural Peru and the plight of the South American Indian.

García de la Huerta, Vicente Antonio (1734-87), Spanish playwright, poet and critic whose most celebrated work is the neo-classical tragedy *Raquel* (1778). He translated Greek and French drama and also published an anthology of plays from the 16th and 17th centuries, *Spanish Theatre* (1785-86).

García Gutiérrez, Antonio (1819-84), Spanish playwright and poet. His play *El Trovador* (1836) inspired an opera by Verdi. His other plays included *Venganza Catalana* (1864) and *Juan Lorenzo* (1865). He also wrote much lyrical poetry.

García Lorca, Federico (1898-1936), Spanish poet and dramatist. His poetry, from *Gypsy Ballads* (1928) to *The Poet in New York* (1940), was internationally acclaimed. His early balletic farces gave way to tragedies of frustrated womanhood, such as *Blood Wedding* (1933) and *The House of Bernarda Alba* (1936). He was killed by Nationalist soldiers at the outbreak of the Spanish Civil War.

García Márquez, Gabriel (1928-), Colombian novelist. His popular novel *One Hundred Years of Solitude* (1967), set in the mythical town of Macondo (as are his previous novels), achieves a unique combination of earthy realism, lyricism, wild comedy and mythical fantasy. *The Autumn of the Patriarch* (1977) marks a new departure in style and content.

Garcilaso de la Vega (1503-36), Spanish poet, courtier and soldier. He helped to introduce Italian metrical forms into Spain. His poems, principally concerning love and nature, include sonnets, canciones and elegies and were published with those of Juan Boscán in 1543.

Garcilaso de la Vega (1539-1616), Peruvian historian. Calling himself "El Inca", he was one of the first accomplished writers of the New World. His best-known work is *The Royal Commentaries of Peru* (1609-17), a history of the Inca Empire.

Garda, Lake (Lago di Garda), lake in N Italy fed by the River Sarca and drained by the River Mincio. It is the largest in Italy. Area: 370sq km (143sq miles).

Garden city, planned urban residential and industrial area, with a fixed population size and mix, and with as much open space as possible. The British concept of garden cities as a cure for the social ills of industrialization arose early in the 19th century, but the first such community was not built until Letchworth was founded in 1903. A second, Welwyn Garden City, was founded in 1919. The idea of a fully integrated and almost self-sufficient garden city lost popularity after the 1950s. See also p 1573.

Gardenia, genus of more than 60 species of evergreen shrubs and small trees of the MADDER family, native to tropical and sub-tropical Asia and Africa. They have white or yellow fragrant, waxy flowers and are widely cultivated. Height to 5.5m (18ft). Family Rubiaceae.

Gardening, cultivation of flowers, shrubs, trees and vegetables for pleasure or practical benefit. The development of the garden as an extension of the dwelling place, a design feature and a place of relaxation prompted the growth of a scientific approach to gardening both domestic and commercial. The Egyptians, Persians, Romans, and the Chinese all made notable contributions to the art. In the Middle Ages the enclosed gardens of monasteries gave impetus to the private garden. In England gardening flourished under the Tudors, and Renaissance Italian and French design emphasized symmetry and incorporated waterfalls and fountains. A reaction against this formalism led, in England, to the creation of parkland settings accompanied by the Victorian liking for "Gothic" ruins, grottoes and other devices, all intended to surprise. Chinese and Japanese elements were also introduced. With the decline of the great houses in Europe, gardening has become a small-scale domestic pastime of great popularity. The type of plants grown is determined by climate, site and soil.

Garden of Eden. See EDEN.

Garden Party, The (1922), collection of short stories by Katherine Mansfield, in which she captures with quiet clarity of detail and subtlety of characterization the atmosphere of her childhood in New Zealand.

Gardiner, Stephen (c 1483-1555), English prelate and statesman. He became secretary to HENRY VIII (1514) and was appointed Lord CHANCELLOR by MARY (1553), supporting her persecution of Protestants.

Gardner, Earl Stanley (1889-1970), US writer who invented the detective lawyer Perry Mason. Beginning in 1933 with *The Case of the Velvet Claws*, Gardner wrote 80 Perry Mason novels, some of which

Gandhi led the people of India in a non-violent struggle for independence.

Gannets have air sacs under their skin which cushion their impact when landing on water.

Greta Garbo's withdrawal from the lime light was described as "conscious isolation".

Gardenias belong to the madder family, a group which also includes coffee.

Garfish

Judy Garland's personal life reflected the emotional stresses of the Hollywood star

Garlic was used medicinally by the Romans as a stimulant for their soldiers

David Garrick, portrayed here by Hogarth, revolutionized 18th-century English theatre

were made into a popular television series. He also wrote under two pseudonyms of A. A. Fair and Charles J. Kenny.

Garfish, marine NEEDLEFISH found in all tropical and temperate waters, also in bays and coastal rivers. Its long silvery body has a dark green or blue-black stripe, the jaws are elongated and pointed, with sharp teeth. The flesh is edible. Length to 1.2m (4ft). Family Belontiidae.

Gargantua and Pantagruel, two comic and satirical works by the French writer, humanist and physician François RABELAIS. *Pantagruel* (1532) and *Gargantua* (1534), which are now generally combined in one volume, depict the foolhardiness and superstition of the Middle Ages with much ribaldry. These themes were extended into three more volumes, culminating in *Le Cinquiesme Livre* (1564).

Gargoyle, stone waterspout, often carved in the shape of a grotesque human and animal figure, used on medieval church and cathedral roofs.

Garibaldi, Giuseppe (1807–82), Italian patriot and guerrilla general who helped to bring about Italian unification. He was influenced by MAZZINI. After participating in a naval mutiny in 1834 Garibaldi fled to South America, where he fought in the war between Uruguay and Argentina. Returning in 1848, his defence of the Roman Republic against the French (1849) made him a national hero. In 1860 he successfully led his 1,000 strong guerrilla army against Sicily and Naples, uniting Italy under King Victor Emmanuel II of Sardinia-Piedmont. He failed to capture Rome in 1862 and 1867, and was involved in the Franco-Prussian War (1870–71). See also pp.1588, 1589.

Garland, Judy (1922–69), US singer and film actress. She began her film career at 13, gaining popularity in the Andy Hardy films and *The Wizard of Oz* (1939). Her other films included *Meet Me in St Louis* (1944), *Easter Parade* (1948) and *A Star is Born* (1954). See also HC2 p.268.

Garlic, bulbous herb native to S. Europe and central Asia. It has onion-like foliage and a bulb made up of sections called cloves that are used for flavouring. It is also claimed to have medicinal properties. Family Liliaceae, species *Allium sativum*. See also pp.683, 708, 709.

Garneau, François Xavier (1809–66), Canadian historian. He worked as the town clerk of Quebec while writing his major work, *Histoire du Canada depuis sa Découverte jusqu'à Jours* (4 vols. 1845–48, 1852), a history of Canada to 1840. It has provided source material and inspiration for generations of Canadian writers.

Garneau, St Denys (1912–43), Canadian poet. He wrote art criticism for several years but gradually withdrew to the isolation of his childhood home. His poems are about death and suicide, such as *Regards et Jeux dans l'Espace* (1937).

Garrick, Alan (1935–), British writer. His books, some of them for children, weave together folklore and the supernatural. They include *Weirdstone of Brinsgamen* (1963) and *Red Shift* (1973).

Garner, Errol Louis (1921–77), US jazz pianist and composer. Self-taught, he developed a unique "stride" piano style featuring full chords in the left hand. He was one of the most popular jazz pianists of the postwar era. His most famous composition was *Misty* (1959).

Garnet, two series of common orthosilicate minerals: the pyrospite series (pyrope, almandine and spessartite), and the ugrandite series (uvarovite, grossularite and andradite). Garnet is found in metamorphic rocks and pegmatites as cubic system crystals, rounded grains and granular masses. It is brittle, glassy and occurs in many hues, some varieties (particularly the red form) are important as gemstones. Hardness 6.5–7.5, s.g. 4.

Garnier, Francis (1839–73), French naval officer and explorer. He served (1859–62) in French campaigns against China and became governor of French-ruled Saigon in 1862. He went on a hazardous expedition (1866–68) through Vietnam, Cambodia, Laos and southern China which showed that the Mekong River was not a trading route into China. He was killed in

1873 during the first French attempt to conquer northern Vietnam.

Garnier, Jean Louis Charles (1825–98), French architect. The designer of the famous Opéra in Paris, he combined the neo-Baroque style with Classical elements to create elaborate decorative effects. See also p.1601.

Garnier, Tony (1867–1948), French architect. Along with Auguste PERRET, he explored the architectural possibilities of the then new material, reinforced concrete. Most of his work is in Lyon, including the stockyards, cattle market and abattoirs (1913) and a stadium (1913–18). See also p.1600.

Garnierite, ore of nickel. It is a serpentine of a more or less lustrous green colour, also containing magnesium and silicon. It occurs in ultrabasic rocks as a decomposition product of olivine. Externally it resembles chrysoprase and this is its main difference from CHRYSOPTILE.

Garrick, David (1717–79), English actor. He is credited with replacing the formal declamatory style of acting with easy natural speech. After making his reputation in the title role of Shakespeare's *Richard III* in 1741 he was hired by the Drury Lane Theatre in 1742, where he remained until his retirement in 1776. He became its manager in 1747, and pioneered the use of concealed lighting and damped spectators from the stage. His final performance was in *The Wonder A Woman Keeps a Secret* (1776).

Garrotte, method of CAPITAL PUNISHMENT still used in Spain. Originally a string around the throat, tightened by twisting a stick, it now consists of an iron collar, attached to an iron post, which is placed round the condemned person's neck. A screw is then tightened until the victim dies of strangulation.

Garron, Greer (1908–), Anglo-Irish actress who, after appearing on the London stage, starred in her first film *Goodbye Mr Chips* (1939). Thereafter she became established in roles of intelligent, high-principled women in such Hollywood films as *Mrs Miniver* (1942) and *Madame Curie* (1943), a pattern culminating in her portrayal of Eleanor Roosevelt in *Sunrise at Campobello* (1960).

Garter, Order of, the most ancient of chivalric orders in Britain. It was the creation of EDWARD III and held its first meeting in 1348, on St George's day, at Windsor Castle (which remains its home). The monarch is the Grand Master. Originally there were 25 other members, among whom were some of the great feudal barons of the land, but in 1831 the order was enlarged to include sons of the monarch and some foreign rulers. The emblem, a dark blue garter edged in gold and the motto *Honi soit qui mal y pense* ("The shame be his who thinks badly of it") are traced to the story that at a ball at Calais, Edward III spoke the words when returning, to Joan, Fair Maid of Kent, a garter which she had dropped. The garter, the personal gift of the monarch, is worn on ceremonial occasions, below the knee on the left leg.

Garter snake, non-venomous SNAKE, usually striped, ranging from S. Canada, through Central America. The ground colour is usually olive-brown with yellow, orange, red or blue stripes often spotted with black. It feeds on frogs, insects and earthworms. Length: to 60cm (24in). Family Colubridae, genus *Thamnophis*.

Garvin, James Louis (1868–1947), British journalist and historian. He was editor of *Outlook* (1905–06), *The Observer* (1908–42) and the *Pall Mall Gazette* (1912–15). When he died he had completed the first three volumes of a biography of Joseph CHAMBERLAIN.

Gas, state of matter in which molecules are free to move in any direction, so that a gas always expands to fill a container of any size. Eleven of the chemical elements are gases at room temperature. Some such as hydrogen and chlorine, have molecules containing two atoms (diatomic), and others, such as neon, are monatomic (composed of single atoms). Many simple chemical compounds are gases at room temperature, including ammonia,

methane and carbon dioxide. When cooled, gases become liquids. Pressure assists in liquefaction and some gases, such as carbon dioxide, can be liquefied at room temperature by pressure alone. Most gases, however, require cooling before they can be liquefied, and the temperature above which a gas cannot be liquefied by pressure alone is called the critical temperature of that gas. All gases follow certain laws which have long been established in physical science. Boyle's law states that a volume of gas varies inversely with the pressure upon it, if the temperature remains constant. Charles's law states that the volume of a gas varies directly with the absolute temperature, if the pressure remains constant. Avogadro's law states that equal volumes of gases at equal temperatures and pressures contain equal numbers of molecules. Graham's law states that the rate of diffusion, or spreading through an orifice, of a gas is inversely proportional to the square root of its density – a gas of density "1" will diffuse twice as quickly as a gas of density "4". Because of their low densities, most gases are poor conductors of heat and electricity. See also SOLID, LIQUID, PLASMA, pp.836–842.

Gas analysis, determination of the nature and quantity of constituents of gas mixtures. It is carried out widely in National Coal Board laboratories to analyse mine gases and by the Gas Boards. Three methods of analysis are available, the gases can be selectively absorbed in chemical solutions and the decrease in volume is measured, in gas chromatography the rates of diffusion of gases through such media as charcoal is utilized, and there is the instrumental method where such physical properties of the gases as density are used as the basis of analysis. See also pp.904–905.

Gas chamber, airtight compartment into which lethal gas is pumped to execute the occupant. It was used until recently in ten states of the USA as a means of capital punishment, and as a method of mass-killing used by Adolf HITLER against Jews and others during WWII. See also CAPITAL PUNISHMENT.

Gascogne, George (c.1525–77), English poet, essayist and playwright. His *Spoyle of Antwerpe* (1576) anticipated modern war-correspondence, but he is chiefly remembered for his poetry, which includes *A Hundred Sundrie Flowers* (1573) and *The Poemes of George Gascoigne* (1575). He also wrote a dramatic tragedy, *The Glasse of Government* (1575). He was an MP from 1557–59 and fought with English troops in The Netherlands (1572–74).

Gascony, province of SW France. The region was part of Roman AQUITAIN, and was conquered by the Visigoths in the 5th century and the FRANKS in the 6th century. In about 700 the region was settled by the Basque-speaking Vascones tribe, who gave their name to the region. Most of the region was reunited with Aquitaine in 1058, became an English possession in 1154 disputed in the HUNDRED YEARS WAR. It became part of France in 1451.

Gas engines. See ENGINE.

Gaskell, Elizabeth Cleghorn (1810–65), British writer. She spent her adult life in Manchester and became familiar with the problems of the industrial poor, which she explored in her novels *Mary Barton* (1848) and *North and South* (1855). Other works include *Oranford* (1835), *Wives and Daughters* (unfinished, 1866) and *The Life of Charlotte Brontë* (1857).

Gaskill, William (1930–), British stage director. He established his reputation in the 1950s at the ROYAL COURT THEATRE, London, and consolidated it with both the ROYAL SHAKESPEARE COMPANY and the NATIONAL THEATRE, where his many successful classical and modern productions included Farquhar's *The Recruiting Officer* (1963). He returned to the Royal Court as director of the English Stage Company (1965–72) and subsequently worked widely as a freelance.

Gas mask, protective device worn over the nose and mouth to prevent inhalation of poisonous or irritating gases, germs, or

Gas molecules are free to move, and cause a gas to fill a container of any size

dust. It consists of a valve which ensures that air is inhaled through purifying filters only, and is exhaled through a separate duct. It is used by many armies, civil police (during tear gas raids) and in industry.

Gasnier, Reg (1939-), Australian rugby league player. A member of Sydney's St George club, he played 39 times for his country, scoring 28 tries and winning fame as a centre of outstanding physique, speed and courage. In 1962, aged 23, he became Australia's youngest captain.

Gasolene. See **PETROLEUM**.

Gasometer, or gas-holder, large container for storing fuel gases for domestic and industrial consumption. Most familiar are the telescopic gas-holders in which gas is stored in a cylindrical vessel that moves up and down on guides, ascending from and descending into a cylindrical steel or brick tank, the gas being contained by a water seal between the two vessels.

Gasparini, Francesco (1668-1727), Italian composer. He was a pupil of Corelli and one of the most popular opera composers of his day. His first opera, *Il Roderico*, was performed at Rome in 1694. The most famous (he wrote about 65) was *Amleto* (1705), the first opera about HAMLET.

Gas poisoning, illness resulting from the effects of toxic gases of many kinds. Most widespread until recent times was coal gas poisoning, caused by the carbon monoxide part of that gas. Carbon monoxide was also responsible for many deaths in coalmines. In WWI poison gases were used to cause illness and death; they included the gases chlorine and phosgene, and the volatile liquids MUSTARD GAS and Lewisite. Tear gases cause lachrymation and temporary incapacitation. See also **GAS WARFARE**.

Gasser, Herber Spencer (1888-1963), US physiologist and medical researcher. He was director of the Rockefeller Institute (1935-55). He shared the 1944 Nobel Prize in physiology and medicine with Joseph ERLANGER for their discoveries regarding the highly differentiated functions of single nerve fibres.

Gastric juice, mixture of substances secreted into the stomach, they break down complex proteins and carbohydrates into simpler units during digestion. They include hydrochloric acid, the enzyme PEPSIN and mucus. See also **p 160**.

Gastritis, inflammation of the lining of the stomach, chronic or acute. It may be caused by chemicals, irritant foods or disease.

Gastroenteritis, inflammation of the lining of the stomach and intestine. It may be caused by viruses, bacteria, chemicals or an allergy. Treatment is aimed at alleviating symptoms, which include vomiting and DIARRHOEA.

Gastroenterology, branch of medicine that deals with the diagnosis and treatment of diseases and disorders of the gastrointestinal tract. See also **p 1068**.

Gastroliths, stones swallowed by birds and reptiles to help grind up their food in a crop or gizzard. Such stones have been found with the fossils of dinosaurs.

Gastropods, any of a class of MOLLUSCS including snails, slugs, winkles, whelks, limpets, cone shells, abalones and sea slugs. Many possess a single shell which is coiled into a flat or conical spiral and has been secreted by the mantle, or skin covering the body. In gastropods with larger shells the internal organs follow the spiral twist of the shell. The foot and head can be extended from and withdrawn into the shell. Many types of gastropods live either totally or periodically immersed in sea-water, breathing through gills. Some freshwater snails, paradoxically, breathe through lungs and need to surface periodically for air. Sea butterflies (pteropods) have delicate, glassy shells and swim using fins developed from the foot. Sea slugs are entirely without shells and are often brilliantly coloured. See also pp. 2, 20, 20, 22, 26.

Gastrotricha, phylum of microscopic, multi-cellular animals similar to ROTIFERS. Structurally similar to simple worms, they

have bristles covering the entire body. Reproduction is HERMAPHRODITIC and PARITHEOGENETIC.

Gastrula, an early stage in the embryonic development of many animals. It is a hollow sac of two layers of cells, the inner endoderm and the outer ectoderm. The sac cavity is called the archenteron and its mouth the blastopore. See **EMBRYO**.

Gas warfare, offensive use of noxious gases as tactical weapons. First used in WWI the major gases used by both sides were MUSTARD GAS - a vesicant and lung irritant which causes severe blistering on all body surfaces, blindness and death (which may be delayed some days) and chlorine - a lachrymator (like tear gas) and lung irritant which brings pulmonary oedema and death. In trench warfare the most efficient means of delivery was the gas shell, developed by the French. There was widespread revulsion to the use of gas and, although much research has gone into the development of more refined and deadly gases, such as NERVE GAS (which attacks the nervous system causing paralysis and death), gas was not used as a weapon in WWII. See also **GAS POISONING**, pp. 574-575.

Gates, in electronics and FLUIDICS, circuit having two or more inputs but a single output energized only under specific input conditions. Gates are used extensively in logic circuits in which the sequence of operations, or their combinations, are determined by the rules of SYMBOLIC LOGIC.

Gates, Horatio (c1727-1806), US general. Born in England, he served in the British army until he emigrated to Virginia in 1772 and joined the patriots' cause in the American War of Independence. In 1776 he became commander of the army in the north, and with Benedict ARNOLD and Daniel MORGAN decisively defeated the British at Saratoga, NY in 1777. He was relieved of his command after his defeat at Cowden, South Carolina (1780).

Gates, Sir Thomas (died c1621), member of the London Company, which organized the first settlement of Virginia. En route from England in 1609 he got lost and was shipwrecked, rejoining the other colonists in 1610. He was Governor of Virginia (1611-14).

Gateshead, county district in W TYNE AND WEAR, England, created in 1974 under the Local Government Act (1972). Area 143 sq km (55 sq miles). Pop. (1974 est.) 222,300.

Gathas, collection of hymns, believed to be the work of Zoroaster, that are the basis of the AVESTA or sacred book of ZOROASTRIANISM. They contain the fundamental teachings of the prophet and are concerned with man's duty in the conquest of evil.

Gatling, Richard Jordan (1818-1903), US inventor. He invented and manufactured machines for sowing cottonseed, rice and wheat, later perfecting a revolving machine gun (1862). The GATLING gun, at first rejected by the Union army, was improved (1865) and adopted by the US government in 1866. He devised a gun metal of steel and aluminium in 1886.

Gatling gun, early MACHINE GUN invented by Richard GATLING, the US inventor. It consisted of several barrels mounted in a cylindrical chamber that was rotated manually by a crank so that each barrel, in turn, was positioned to fire a cartridge. The gun was mounted on a carriage, one model had ten barrels and was capable of firing 1,000 rounds per minute. See also **p 558**.

GATT (General Agreement on Tariffs and Trade), UN agency of international trade. Founded in 1948, it is designed to prevent "tariff wars" and to work towards the gradual and orderly reduction of TARIFF levels. It is based on the most favoured nation principles: any reduction granted by one nation to another must be extended to all members of the group. Most non-communist nations are party to GATT. See also **p 1868**.

Gaucha, colourful cowboy of Argentine and Uruguayan history and legend, and an important political force in the 18th and 19th centuries. At first proud nomads of

the PAMPAS, the mixed-blood gauchos became farmhands and superb horse riders as civilization advanced and fenced their lands. They later became the subject of a distinctive South American literature.

Gaudi, Antoni (1852-1926), Spanish architect. He built the Casa Vicens in Barcelona (1878) in a startlingly individual style. His work employs bizarre sculptural and sinuous forms, and in its plasticity is often associated with ART NOUVEAU. His works include the Palau Guell (1885-89), the Casa Batlló (1905-07) and the Church of the Sagrada Família (unfinished), all in Barcelona. See also **p 1658**.

Gaudier-Brzeska, Henri (1891-1915), French sculptor, who lived in England from 1911. His work was highly experimental; he was a friend of Roger Fry and Ezra Pound, and he was part of the pre-war VORTICIST avant-garde movement. His works include abstracts such as *The Dancer* and many sensitive animal sculptures. He was killed in WWI. See also **p 1764**.

Gauge, term for many kinds of measuring device. For example, calipers are width gauges, dipsticks are depth gauges and thermometers are temperature gauges, although here the term is restricted usually to mechanical thermometers. Pressure gauges are of various kinds, the Bourdon gauge being the type used to measure fluctuations of air pressure in aneroid barometers and variations in gas and liquid pressure in industry. The term is also used of the perpendicular distance between railway lines, from the largest actual gauge (the "5-foot gauge") to miniature and model.

Gauguin, Eugene Henri Paul (1848-1903), French painter. Early in his career as a painter, he exhibited in four IMPRESSIONIST exhibitions from 1880. However he reacted against the realism of the Impressionists, and the use of colour solely for its representational function. For him, form and pattern should represent mental images and these ideas influenced the SYMBOLIST movement though after 1889 Gauguin himself repudiated Symbolism. In 1891 he left France for Tahiti and there he executed his most famous paintings - primitive and exotic, using strong outlines and flat, gold colours depicting native figures and landscapes. See also **p 1654**.

Gaul, old name for the land of what is now France, Belgium, northern Italy and part of W Germany. It was conquered (58-51 BC) by Julius CAESAR. By the 5th century AD German tribes had wrested control from the Romans. See also pp. 1231, 1270, 271.

Gaulle, Charles André Joseph Marie de. See **DE GAULLE**.

Gauls, Celtic tribes who moved W across the River Rhine in c1500 BC and had occupied the whole of modern France by 400 BC. They invaded Italy, and sacked Rome in 390 but were confined W of the Alps by 250. Gaul was conquered by the Romans in the 50s BC, and during the next century it was fully Romanized. There was a revival of Gallic civilization during the 3rd century AD, until the Frankish invasions of Gaul in the 5th century.

Gaumont, British, film production and distributing company formed in 1927 from the Gaumont Film Company, which was established in 1898. It was not until new studios were opened at Shepherd's Bush in 1932 and Gaumont became linked with the Gainsborough company and Michael BALCON that it enjoyed major successes. These included Alfred Hitchcock's *The Thirty-Nine Steps* (1935) and *Subotage* (1936). Although Gaumont has survived as a name for cinemas, the company ceased production and distribution after 1936.

Gaunt, John of. See **JOHN OF GAUNT**.

Gaur, species of wild cattle found in forested hilly country in India and Malaya. Gaurs (also called selangs) are dark brown in colour with a white "sock" on each leg. An adult bull may grow up to 3.8m (12.4ft) long and weigh more than a tonne. Gaurs range in small herds, feeding

Gasser demonstrated that different nerves carried different sensations to the brain.

Gastrotricha are species of microscopic worms that live in both fresh and sea water.

Gatling gun, multi-barreled machine gun immediately adopted by the US army.

Paul Gauguin, the French post-impressionist painter in his self portrait of 1890.

Gauss, Karl Friedrich

Gavotte, a restoration print showing this fashionable court dance of the 18th century

Gay-Lussac, the French chemist and physicist who made important studies of gases

Gazelles are several species of swift running African and Asian antelopes

Gears are used to modify either the turning force or speed of rotary mechanical motion

in the morning and evening. Family Bovidae species *Bos gaurus*. See also p.294

Gauss, Karl Friedrich (1777-1855), German mathematician. As a child prodigy from a poor family his education was sponsored by the Duke of Brunswick. He made studies of electricity and magnetism and advanced mathematics in areas such as number theory and the theory of series. The unit of magnetic induction is named after him. See also p.1290

Gauss's law, the total electric flux, Φ , of a closed surface in an electric field equals the electric charge, q , within that surface divided by the permittivity of the medium, ϵ : $\Phi = q/\epsilon$. The law also applies to surfaces in a magnetic field and similar statements can be made for a gravitation field

Gautama Buddha. See BUDDHA

Gautier, Théophile (1811-72), French poet, novelist and critic. He turned from painting to write Romantic poems, such as *Alberus* (1833), macabre stories, *La Mort Amoureuse* (1836) and the novel *Mademoiselle de Maupin* (1835). He was an early exponent of the formalist "aesthetic" theory of art that influenced the PARNASSIANS and SYMBOLISTS. See also p.1234

Gavelkind, system of inheritance common in England before the NORMAN CONQUEST and abolished in 1296. As opposed to primogeniture, by which the eldest son inherited his father's estate, the custom of gavelkind entitled all sons to share equally in the estate

Gaveston, Piers (d.1312), English favourite of Edward II. His arrogance, relatively lowly birth and the fact that he was a foreigner (his father was a Gascon knight) brought baronial opposition while he was keeper of the realm (1308), and Edward was forced to agree to his banishment. He returned to England the next year, but further opposition led again to a brief exile in 1311. He was executed by the barons in 1312. See also p.1313

Gavial, crocodilian native to N India. It has a long, narrow, rod-like snout, an olive or brownish back and a lighter belly. It is harmless to man, feeding almost exclusively on fish. Length to 5m (15.4ft). Family Gavialidae, species *Gavialis gangeticus*. See also CROCODILES

Gaviliformes. See LOON

Gävle, city on the Gulf of Bothnia, 161km (100 miles) NNW of Stockholm. Founded in 1446, the city was rebuilt several times after fires swept the area. Although ice-bound for part of the year, Gävle has an important timber and iron ore export trade. Pop. (1970) 2,987

Gavotte, originally a peasant folk dance of the 15th century. It was popularized and became fashionable in French court society in the 18th century. Graceful and stately, it is similar to the minuet, but more lively and in 4/4 rhythm

Gawain and the Green Knight, Sir. See SIR GALAHAD and the GREEN KNIGHT

Gay. See HOMOSEXUAL

Gay, John (1685-1732), English poet and dramatist. His best-known work is the ballad-opera *The Beggar's Opera* (1728), a political satire burlesquing Italian opera style, and mirroring the moral degradation of society in its characters of highwaymen and thieves. His other works include the poem *Trivia* (1716), a delightful description of London life at the time

Gay, Noel (1898-1954), English musical comedy composer. He is best remembered for the Cockney musical *Me and My Girl* (1937), which introduced "The Lambeth Walk"

Gay-Lussac, Joseph Louis (1778-1850), French chemist and physicist who did pioneer research on the behaviour of gases. He discovered the law of combining gas volumes (Gay-Lussac's Law) and the law of gas expansion, often also attributed to J. A. C. CHARLES (who discovered it earlier but did not publish his results). In chemistry he prepared (with Louis Jacques Thénard) the elements potassium and boron, investigated fermentation and hydrocyanic (prussic) acid, and invented a hydrometer

Gay-Lussac laws. See CHARLES'S LAW

Gaza Strip, small region in NE Egypt,

bordering on the SE Mediterranean Sea. It was part of Britain's Palestine Mandate after WWI although by 1947 Britain intended to give up the area, and the settlement after the ARAB ISRAELI WAR (1948-49) made it an Egyptian possession. It has served as a Palestinian Arab refugee centre since WWI and it has been occupied by Israel since 1967. Area 365sq km (130sq miles). Pop. (1971) 365,000. See also pp.1782-1783, 2044

Gazelle, any of a dozen species of fast, graceful, small-to-medium antelopes native to Africa and Asia, frequently inhabiting plains and treeless areas. The lyre-shaped horns, common to both sexes in most species, are generally lacking in females of the species *Gazelle subgutturosa*. Most animals are light brown with a white rump. Bedouins hunt them with falcons and dogs - some gazelles can run at 80km/h (50mph) for more than 15 minutes. Family Bovidae, genus *Gazella*. See also pp.299, 318, 320

Gaziantep, city in S Asian Turkey, located between the Taurus Mountains and the River Euphrates, capital of Gaziantep province. It is an agricultural trade centre, and was formerly known as Antab. An ancient Hittite city, it was conquered by the Ottomans in the early 16th century. It resisted French occupation from 1920 until 1921 when it was returned to Turkey. Products: pistachio nuts, grapes, textiles. Pop. 275,000

Gdańsk (Danzig), port in N Poland, on a branch of the River Vistula and the Gulf of Danzig, capital of Gdańsk province. Settled by Slavs in the 10th century, it was a member of the HANSEATIC LEAGUE and became an important Baltic port. It was taken by Poland in the 15th century but passed to Prussia in 1793. The Treaty of VERSAILLES (1919) established Gdańsk as a free city serving as Poland's port. HITLER's demand for the return of the city to Germany was a major cause of the German invasion of Poland and thus of WWI. Its shipyards are among the largest in the world and other industries include metalurgy, chemicals, food processing, machinery and timber. Pop. (1974) 402,000

Gear, toothed wheel, usually attached to a rotating shaft. Operating in pairs, the teeth of one gear engage those of the other to transmit and modify rotary motion and torque. The smaller member of a pair of gears is called a pinion. If the pinion is on the driving shaft, speed is reduced and torque amplified, if the gear is on the shaft, speed is increased and torque reduced. A screw-type gear, called a worm, may have only one tooth, a pinion must have at least five. See also pp.448-449

Geb, in Egyptian mythology, the earth god, son of Shu and Tefnut, husband and brother of Nut and father of Osiris, Isis, Seth and Nephthys. He is sometimes depicted as a goose, or as a man with a goose on his head. In the Egyptian myth of creation, the air separates Geb, the earth, from Nut, the sky

GEC (General Electric Company), Britain's largest electrical engineering company. It was founded in 1889, is a public company and has offices and factories in some 40 countries with a total staff of almost 200,000. It manufactures a wide range of products, from computers, radar equipment and telephone exchange systems to domestic appliances, cables, wire and electric lamps

Gecko, any of about 650 species of small to medium lizards that are common in most warm regions of the world and live in a variety of habitats, even in houses. They owe their remarkable climbing ability to minute hooks on their feet. They make chirping or barking calls. Length 3-15cm (1.6in). Family Gekkonidae. See also pp.69, 317

Gedda, Nicolai (1925-), Swedish operatic tenor. He made his debut at Stockholm in 1952, his Covent Garden debut in 1954 and his Metropolitan Opera debut in 1957. He has remained a leading tenor with the Metropolitan Opera Company, New York

Gedling, county district in S central NOT-

TINGHAMSHIRE, England, created in 1974 under the Local Government Act (1972). Area: 112sq km (43sq miles). Pop. (1974 est.) 100,200

Geelong, city in Victoria, SE Australia, on an inlet of Port Phillip Bay. A major port it exports wool, wheat, meat and hides, and imports oil. Industries: safety glass, fertilizers, motor vehicles. Pop. 17,775

Gefle. See GÄVLE

Geiger, Hans Wilhelm (1882-1945), German physicist who, with Ernest Rutherford in 1908, devised a method of detecting and counting alpha particles. This device, with modifications, became the GEIGER COUNTER. Geiger and E. Marsden noticed the deflection of alpha particles by thin metal foil in 1909, and this phenomenon was the basis of Rutherford's planetary theory of the atom

Geiger counter, also called Geiger-Müller counter, instrument used to detect and measure the strength of radiation, or the numbers of particles. It is a type of ionization chamber in which a high voltage is applied across a pair of electrodes. Radiation or particles entering the chamber ionize gas atoms and the resulting ions, gaining energy from the electric field between the electrodes, magnify the effect by producing many more ions. These constitute a current which quickly subsides so that a pulse of current is produced for each particle. Each pulse activates a counting circuit enabling several thousand particles per second to be counted

Geijer, Erik Gustaf (1783-1847), Swedish historian and poet, professor of history at Uppsala from 1817. Originally a conservative, he adopted reformist liberal ideas in 1838. He also wrote lyrics and hymns set to his own music. His best known work is *History of the Swedes* (trans. 1845)

Geisel, Ernesto (1908-), President of Brazil (1974-). Originally an army officer, Geisel inaugurated a policy that slightly relaxed parts of the authoritarian political and social system that had been in effect since the military took power in 1964

Gensha, in Japan, a woman who is a member of a professional class employed to entertain and attend men at restaurants and parties. Traditionally she may sing, dance, play a musical instrument or simply converse. After training for a period of years, she must display delicate manners and be exquisitely dressed

Geosler tube, old name for a discharge tube, a glass electronic tube used in the study of the light emitted by various substances in a gaseous form. The tube has an electrode at each end. The tube is filled with a gas at low pressure, and the current which flows through the tube when a high voltage is applied between the electrodes causes the gas to glow with a distinctive colour. See also p.813

Gel, homogeneous mass consisting of minute particles dispersed or arranged in a liquid to form a fine network throughout the mass. Their appearance may be notably elastic or jellylike (as in GELATIN or fruit jelly) or quite rigid and solid (as in silica gel, a material resembling coarse white sand used as a dehumidifier in the manufacture of silicone and rubber)

Gelasius, name of two Popes. Gelasius I, saint and Pope (r.492-96), upheld papal supremacy in a dispute with the Byzantine emperor Anastasius. He produced more than 100 treatises, including attacks on PELAGIANISM, and introduced the feast of the Purification. Gelasius II was Pope from 1118 to 1119. He was twice driven out of Rome by Emperor Henry V, who appointed an antipope, known as GREGORY VIII, in opposition to him

Gelatin, colourless or yellowish protein obtained from collagen in animal cartilages and bones by boiling in water. It is used in photographic film, size, capsules for medical drugs as a culture medium for bacteria and in foodstuffs such as jellies

Geld, land tax in England, first systematically assessed in the 10th century. EDWARD I used it from 991 to 1012 to buy peace from the Danes. For the next 50 years it was used to maintain an army and navy and was called the *heregeld*. It later

became generally described as the DANIEL.

Gelderland, province of The Netherlands stretching from the German frontier to the IJsselmeer, the capital is Arnhem. Fertile in the SW, the region is known for its agricultural produce. The Veluwe, heathland to the N and W, is popular as a resort area. Area 5,130sq km (1,981sq miles). Pop (1971 est.) 1,533,700.

Gellibolu. See GALLI POLI.

Gellert, Christian Fürchtegott (1715-69), German poet and moralist, prolific writer of fables, stories and hymns. His best-known works are the collection *Fables and Tales* (1746-48) and the hymn *The Heavens Praise the Creator's Glory*, which was set to music by Beethoven.

Gell-Mann, Murray (1929-), US physicist who was awarded the 1969 Nobel Prize in physics for his application of group theory to elementary particles, which led to the prediction of QUARKS as the basic constituents of baryons and mesons. His theory also predicted the existence of an unknown particle called the omega minus (Ω^-), subsequently discovered in 1964. He also introduced, in 1953, the concept of strangeness to explain the longevity of certain particles. **Gelsenkirchen**, city of W West Germany on the River Emscher 24km (15 miles) W of Dortmund. After the development of the RUHR district in the 1860s, the city grew rapidly and became an industrial and coal-mining centre. Its manufactures include chemicals, iron, steel and glass. Pop. (1974) 333,202.

Gem, any of about 100 minerals, either opaque, transparent or translucent, valued for their beauty, rarity and durability. Transparent stones, such as diamond, ruby, emerald and sapphire, are the most highly valued. Pearl, amber and coral are gems of organic origin. During the Middle Ages, many gems were thought to have magical powers. The art of cutting and polishing gemstones to bring out their colour and brilliance was developed in the 15th century, particularly in Italy. Stones with a design cut into them are intaglios, with a design in relief, cameos. See also LAPIDARY pp 260-261.

Gem, artificial, man-made imitation of natural gemstone composed of any of various substances. Glass is frequently used, the best quality contains high lead content. Pearls are simulated by coating glass beads with pearl essence, a derivative of fish scales. Imitation diamonds are made of strontium titanate, rutile or vitium GARNET. Other precious stones such as ruby, sapphire, emerald and spinel are also made synthetically.

Gemini, or the Twins, northern constellation, situated on the ecliptic between Taurus and Cancer, the third sign of the zodiac. It contains the star cluster M 35 (NGC 2168) and the planetary nebula NGC 2392. The brightest star is Beta Geminorum (Pollux). See also pp 1006, 1011, 1011 1894-1895.

Gemini Programme, series of US manned experimental space flights that followed the Mercury and preceded the Apollo programmes. Gemini 3 was a two-person craft first manned by Maj Virgil Grissom and Lt Cmdr John Young on 23 March 1965; they made three earth orbits. Subsequent flights and experiments ending with Gemini 12 (11-15 Nov 1966) demonstrated space walks, space docking manoeuvres and tests of longevity including a 14-day flight by Lt Col Frank Borman and Cmdr James Lovell Jr, in Dec 1965. See also p 1024, 1026-1027.

Gemmology, study of gems. A gem is regarded as any precious or semi-precious stone, and is usually of mineral origin although it may be organic (eg, pearl, coral and amber). The appearance of a gem is greatly improved by polishing, and this may be done in either of two ways. The cabochon cut, in which the surface of the gem is rounded, is used mainly for opaque materials, whereas the faceted cut, in which reflective faces are cut into the surface, is used for transparent stones. See also pp 260-261.

Gembok. See ORYX.

Gene, unit by which hereditary charac-

teristics are passed on from one generation to another in plants and animals. Genes are found in a line in CHROMOSOMES. The universal chemical constituent of a gene is DNA. Genes control both the morphology and the metabolism of a cell and hence the organism. See also pp 1974-1979.

Genealogy, study of family origins and history. A genealogist compiles lists of ancestors and arranges them in pedigree charts. In Europe, the study began to develop in its present form in the early 16th century.

Genée, Dame Adeline (1878-1970), British dancer, b. Denmark, real name Anita Jensen. She made her debut in Oslo in 1888 and later toured Australia and the USA. She is especially remembered for her portrayal of Swanilda in *Coppelia*. A vivacious charming dancer, she retired in 1917 and was first president of The Association of Operatic Dancing of Great Britain (1920-35) and its successor, the Royal Academy (1935-54).

General, commander or divisional commander of an army, usually of rank immediately below a FIELD MARSHALL and above lieutenant-general.

General Agreement of Tariffs and Trade. See GATT.

General Assembly. See CHURCH OF SCOTLAND.

General Council. See ECUMENICAL COUNCIL.

General Electric Co. See GEC.

General Motors Corporation, massive US based international industrial concern. It is the world's largest manufacturer of motor vehicles and has overseas branches or subsidiaries in West Germany, Canada, Britain and Australia. Apart from cars, buses and trucks, General Motors also produces refrigerators, diesel locomotives and a wide range of engines. In 1976 it employed an average of 748,000 people throughout the world.

General Strike, nationwide strike in Britain in May 1926, resulting from the failure of miners and mine owners to reach agreement on terms of employment. Economic difficulties led the mine owners to propose reduced wages and longer hours. The Miners' Federation refused to accept them and the owners ordered a lockout for 1 May, which was answered by the TUC's call for a national strike. It lasted from 3-12 May but was a failure. The miners, who remained on strike throughout the summer, returned to work on the employers' terms.

General Synod, formerly the Church Assembly, which in 1969 became the governing body of the CHURCH OF ENGLAND. It consists of three houses: bishops, clergy and laity. The body meets at least twice a year, and its members (except bishops) are elected on a diocesan basis.

General Theory of Relativity. See RELATIVITY.

Generation of '98, group of Spanish writers of the early 20th century, so called because they aimed to face up to the implications of Spain's defeat in the Spanish-American War. The leading writers associated with the movement were José MARTÍNEZ RUIZ and Pío Baroja. They sought the essence of Spanish culture within Spanish history.

Generator, electric, device for producing electrical energy. The most common is a machine that converts the mechanical energy of a turbine or internal combustion engine into electricity by employing ELECTROMAGNETIC INDUCTION. There are two types: alternating current (AC) and direct current (DC) generators, often called an alternator and a dynamo. Each has an armature (or ring) which rotates within a magnetic field creating an induced current. The direct current generator has a commutator on the armature which divides the induced current as it changes direction, giving rise to a pulsating direct current. See also pp 444, 876.

Genesis, first book of the Old Testament and of the PENTATEUCH, written following three separate strains of tradition which occasionally contradict each other. The Priestly, the Yahwist and the Elohist

There are three sections: the creation of the universe (two versions) from ADAM and EVE to ABRAHAM, and from ABRAHAM to JOSEPH and the descent into Egypt.

Genet, Jean (1910-), French dramatist and novelist. The hardships of his childhood led him into delinquency and crime. In books such as *Our Lady of the Flowers* (1944) and *Thief's Journal* (1948) he records his experiences as a homosexual in brothels and prisons. His plays, which include *The Maids* (1947) and *The Balcony* (1956), are concerned with a world of illusions, masks and mirrors.

Genet, cat-like carnivore of the CIVET family native to W Europe and S and E Africa. Solitary and nocturnal, genets have long, slender bodies, short legs, grey to brown fur with black or brown spots and banded tails. Length body - to 48cm (22in), tail - to 43cm (20in), weight 1.2kg (4.4lb). Family Viverridae, genus *Genetta*. See also pp 99, 310.

Genetic code, the arrangement of information in GENES that specifies exactly the way in which all the complex substances in living cells are made. It also specifies the manner of cell reproduction and is, therefore, the ultimate basis of heredity. In molecular biology the genetic code is the arrangement of NUCLEOTIDES - complex chemical groups - in the long molecules of nucleic acids in the cell CHROMOSOMES. These nucleotides, in groups of three, constitute the code words, each of which specifies an amino acid or an action such as "start" or "stop". Together, the code words constitute the genetic code.

Genetics, biological science and study of HEREDITY, mutation and development in plants and animals. Geneticists study molecular structures involved in heredity and evolution and the genes involved in the structure or alteration of an individual or a population. They also examine the effects of heredity or environment on personality and how these two factors interact. Heredity is also examined relative to behaviour, learning ability and physiology. The application of genetics has provided improved plant and animal stocks. See also pp 176-178.

Geneva (Genève), city in SW Switzerland, on the River Rhône, at the S end of Lake Geneva, capital of Genève canton. A former seat of the Burgundian kingdom, it was taken by the Franks in the 6th century, and passed to the HOLY ROMAN EMPIRE in the 12th century. The city accepted the REFORMATION in 1536 and became the centre of PROTESTANTISM under John CALVIN in 1541. It became part of the Swiss Confederation in 1815 and was the scene of the GENEVA CONVENTION in 1864. The city was the headquarters of the LEAGUE OF NATIONS from 1920 until 1946, and is the European centre of the UNITED NATIONS. It has a university, founded in 1559 by Calvin, and a Gothic cathedral. Industries: banking, jewellery, iron goods, tourism, enamelware. Pop. 340,600 (1980 estimate). See also pp 1403, 1651, 1700.

Geneva, Lake (Lac de Genève, Lac Léman), crescent-shaped lake in SW Switzerland. Lying between the ALPS and the JURA mountains, the S section is part of France and it is drained to the W by the River Rhône. Length 72km (45 miles), width up to 14km (9 miles). Area 580sq km (224sq miles).

Geneva Conventions, series of agreements on the treatment of wounded soldiers and prisoners during war, and on the neutrality of the medical services. The first convention was held in 1864. Later conventions have changed and updated its rules. See also p 1651.

Genghis Khan (1167-1227), conqueror and Emperor of the MONGOL EMPIRE stretching across central Asia from the Caspian Sea to the Sea of Japan. Mongol Emperor from 1206, he united the Mongol tribes and demonstrated his military genius and ruthlessness by capturing Peking (1215), annexing Iran and invading Russia as far as Moscow. He established law codes, tolerated ethnic and religious minorities and fostered contact between the East and West. His empire was divided and expanded by his sons and grandsons. See also pp 1356, 1358.

Gemini - the twins, who in Arabian astrology were represented by a pair of peacocks.

Jean Genet draws freely on the degrading and criminal experiences of his own life.

Genets, like other civets, produce a musky scent to mark out their own territory.

Geneva, a view of the city with the UN buildings and the Jura mountains beyond.

Genizah, room in a synagogue designated for the storage of holy books and utensils that are no longer in use. Jewish law forbids the destruction of such objects.

Genesaret, Lake of. See GALILEE SEA OF GENOA (Genova), port in NW Italy, on the Gulf of Genoa, capital of Genoa province and Liguria region. An important commercial centre in the Middle Ages, its fortunes declined in the 15th century and it came under foreign control. Occupied by Napoleon in 1796, it passed to France in 1805 and Sardinia in 1815. It was the birthplace of Christopher Columbus c. 1451. It has a university (1471) and an Academy of Fine Arts (1751). Exports: rice, wine, olive oil, silk, coral, marble, macaroni. Industries: iron and steel, textiles, shipbuilding, chemicals. Pop. (1975) 805,855.

Genocide, deliberate governmental policy aimed at destroying a racial, religious or ethnic group. The word has become synonymous with the Nazi extermination of Jews during WWII, although the practice has existed for centuries. The UN General Assembly has defined genocide as an international crime, but no court with international criminal jurisdiction exists. See also ANTI-SEMITISM.

Genotype, genetic or hereditary makeup of an individual (the particular set of genes present in each cell of an organism). This is contrasted with **PHENOTYPE**, the observable characteristics of the organism.

Genoux, Claude (d. 1835), French printer who made important improvements to the stereotype process. In 1829 he patented a papier mâché sheet (a flong) which could be beaten or rolled into shape to form the stereotype. It was a great improvement on the late 18th century methods of using clay, stucco or molten metal.

Genova. See GENOA.

Genre painting, art term used to define realistic painting of scenes of everyday life. It was popularized in 16th-century Flanders by Pieter BRUEGEL THE ELDER and flourished in 17th-century Holland in the works of DE HOOCH, TER BORCH, METSU, VERMEER and many others, extending in the 18th and 19th centuries to France and England, where its major exponents included CHARDIN, WATTEAU, MORLAND and WILKIE. In Italy CARAVAGGIO and the CARRACCI were prominent among genre painters. More recently, the DEPRESSIONISTS frequently painted genre subjects, as did artists of the ASHCROFT SCHOOL in the USA. **Genl.** See GHENT.

Gentian, perennial herb native to temperate regions, although many species are alpine. It has heart-shaped leaves and usually blue, tubular flowers. Among 500 species are the dark blue *Gentiana clusii*, fringed *G. crinita* and yellow *G. lutea*, whose bitter root is used as a gastrointestinal tonic. Family Gentianaceae. See also p.321.

Gentian violet, purple dye used in biology as a bacterial stain and in medicine as an antiseptic applied to the skin.

Gentile, Giovanni (1875-1944), Italian philosopher and educator. He founded an important journal of philosophy and literary criticism in 1920. His philosophy, "actual idealism", was an extreme version of HEGEL's idealism. He supported the Fascists in Italy and was minister for education (1922-24) under them, and editor of the *Enciclopedia italiana* (1925-43). He was killed by anti-Fascist partisans.

Gentile da Fabriano (c.1370-c.1427), Italian painter. A leader of the INTERNATIONAL GOTHIC revival, he greatly influenced Florentine art with his elegant frescoes and decorative altarpieces for the Church of Sta Trinita, Florence, depicting the *Adoration of the Magi* (1423).

Gentileschi, name of two Italian painters. Orazio Gentileschi (1563-c.1647) was a follower of CARAVAGGIO, and is best known for his portraits and historical paintings. In 1626 he went to England as the court painter to Charles I, and he spread the style of CARAVAGGIO in northern Europe. He was accompanied by his daughter, Artemisia (c.1597-c.1652), who also became noted for her portraits and depictions of violent scenes.

Gentili, Alberico (1552-1608), Italian jurist. He is regarded as the first to expound the principles of international law, which he said should rest on the actions of civilized states and moral considerations. He divorced secular law from that of the Roman Catholic Church. Exiled from Italy because of his Protestantism, he taught at Oxford University from 1581.

Gento, Francisco (1933-), Spanish footballer. A stocky left winger of remarkable speed and ball control, he played in all Real Madrid's European finals from 1956 to 1971, captaining them in 1966 when they won the European Cup.

Gentofte, one of the largest suburbs of Copenhagen, Denmark, to which it is connected by an underground railway. It includes the lake Gentofte Sø. Chiefly a residential area, Gentofte is the site of Bernstorff Castle and a sports stadium. Pop. (1971 est.) 71,683.

Genus, group of closely related biological species with common characteristics. The genus name is usually a Latin or Greek noun, normally printed in italic letters. Example: genus *Quercus* denotes oak trees and *Felis* denotes all cats. A genus contains from one to several species. It is the sixth major category in taxonomy, the biological system of classification. The seven main categories are Kingdom, Phylum, Class, Order, Family, Genus and Species. See also p.182.

Geochemistry, study of the chemical composition of the Earth and the changes that have resulted in it from chemical and physical processes.

Geochronology, the dating of rocks or of Earth processes. Various techniques are used, such as the measurement of radioactive decay, the search for fossils of a known age and the study of the sequence of deformation of a system. See also p.268.

Geode, small hollow rock nodule with inner walls lined with crystals, generally quartz or calcite. It is formed by gelatinous silica and mineral-bearing water within a cavity.

Geodesic dome, architectural structure of plastic, metal or even of cardboard, based in shape upon triangular or polygonal facets which evenly distribute the tension. Originated (1947) and perfected by R. Buckminster FULLER, geodesic domes in their form of prefabricated standardized parts are a recent descendant of the assembly methods first used by Sir Joseph FAXTON in the CRYSTAL PALACE. They may be used for housing. The best-known example is the US Pavilion at Montreal's Expo 67. See also p.795.

Geodesic surveying, method of surveying that covers areas large enough to involve consideration of the Earth's curvature. It is carried out in order to establish such geographical features as national boundaries, and as a basis for the mapping of whole states or countries. The maps are made using various projections, such as Mercator's or polar azimuthal, which transfer the Earth's curved surface to a plane surface.

Geodesy, in geophysics, the determination of the size and shape of the Earth, its gravitational field and the location of fixed points. Unlike surveying in civil engineering, ie plane surveying, geodesic surveying takes into account the curvature of the Earth. See also pp.242-243.

Geoffrey of Anjou (1113-51), ancestor of the PLANTAGENET kings of England. He married Henry I's daughter Matilda in 1128 and in 1129 became Count of Anjou, Maine and Touraine. He became Duke of Normandy in 1144. He had three sons, the eldest of whom became Henry II of England.

Geoffrey of Monmouth (c.1100-54), English chronicler best known for his *Historia Regum Britanniae* (History of the Kings of Britain). Based on Latin manuscripts, Welsh genealogies and oral tradition, it is primarily a fictional account but was accepted as a historical document until the 17th century. It directly inspired Shakespeare's great tragedy, *King Lear*, and also his late play, *Cymbeline*, and was translated into many languages.

Geography, science that studies the relationship between the surface of the Earth and mankind. It includes the size and distribution of land masses, seas and resources, climatic zones and plant and animal life. Because it seeks to relate all the Earth's features to man's existence, geography differs from other earth sciences such as geology, meteorology and oceanography, which study this planet's features as specific phenomena not necessarily relevant to man.

Geological survey, the study of the geology of an area, usually with some other end in view, such as the evaluation of the area's agricultural potential, its mineral resources or its suitability as building land. See also p.266.

Geology, study of the materials of the Earth, their origin, arrangement, classification, change and history. Geology is divided into several categories, the major ones being mineralogy (arrangement of minerals), petrology (rocks and their combination of minerals), stratigraphy (arrangement and succession of rocks in layers), palaeontology (study of fossilized plant and animal remains), geomorphology (study of landforms), structural geology (classification of rocks and the forces that produced them), hydrology (study of surface and sub-surface waters), environmental geology (geological study applied to the best use of the environment by man) and oceanography (combination of several fields as they relate to the total study of oceans). See also pp.262-263.

Geomagnetism, the physical properties of the Earth's magnetic field. A compass needle points to magnetic north, which differs from geographical north by an amount that varies over geological periods of time as the Earth's magnetic field shifts in direction. Geomagnetism is attributed to the metallic composition of the Earth's core, and the movements of magnetic north is a result of the Earth's rotation and currents within the mantle.

Geometric mean, square root of the product of two numbers. For example, the geometric mean of 8 and 2 is $\sqrt{8 \times 2} = 4$. The geometric mean of n numbers is the n th root of their product $\sqrt[n]{a \cdot b \cdot c \dots}$.

Geometric progression, sequence of numbers in which the ratio of each term to the preceding one is a constant (called the common ratio). It has the form a, ar, ar^2, ar^3, \dots where r is the common ratio. The sum of these terms, $a + ar + ar^2 + \dots$ is a geometric series. If there are n terms the sum equals $a(1-r^n)/(1-r)$. Infinite geometric series converge to a limit r lies between -1 and +1. $\sum_{n=0}^{\infty} ar^n = a/(1-r)$.

Geometry, branch of mathematics concerned broadly with studies of shape and size. To most people geometry is the Euclidean geometry of simple plane and solid figures. It is, however, a much wider and more abstract field with many subdivisions. Analytic geometry (also called co-ordinate geometry), introduced in 1637 by René DESCARTES, applies algebra to geometry and allows the study of more complex curves than those of Euclidean geometry. Projective geometry is, in its simplest form, concerned with projection of shapes—operations of the type involved in drawing maps and in perspective painting—and with properties that are independent of such changes. It was introduced by Jean-Victor PONCELET in 1822. Even more abstraction occurred in the early 19th century with formulations of non-Euclidean geometry by János BOLYAI and N I LOBACHEVSKY. Differential geometry—based on the application of calculus and ideas such as the curvature and lengths of curves in space—was also developed during this period. Geometric reasoning was also applied to spaces with more than three dimensions. TOPOLOGY is a general form of geometry, concerned with properties that are independent of any continuous deformation of their shape. See also pp.794, 798-802.

Geomorphology, the study of features of the Earth's surface that have been formed as the result of wind and water erosion. It includes the formation of river valleys and estuaries, the formation of sand dunes and glacial moraines, and the creation of other

Genoa, birthplace of Christopher Columbus, was a vital medieval commercial port.

Genre painting, Vermeer's works are superb examples of the Dutch genre.

Gentian, a perennial flower whose roots are used to produce medicinal compounds.

Artemisia Gentileschi, detail from her painting of Judith, the biblical Jewish heroine.

topographical features by the accretion of eroded materials.

Geophone, seismic detection device placed on or in the ground to measure the echoes produced by volcanic or seismic (earthquake) activity.

Geophysics, study of the characteristic physical properties of the Earth as a whole system. It uses parts of chemistry, geology, astronomy, seismology, meteorology and many other disciplines. From the study of seismic waves geophysicists have deduced the structure of the Earth's interior.

George, Saint, early Christian martyr who became patron Saint of England in the late Middle Ages. According to tradition he was born in Palestine and martyred at Lydda some time before 323. Many stories grew up about him including the 12th-century tale of his killing a dragon to save a maiden. He is one of the great saints in the Eastern Church and is the ancient patron of soldiers. His feast day is April 23, and he remains a revered martyr.

George I (1660–1727), King of Great Britain and Ireland (1714–27) and Elector of Hanover (1698–1727). Great-grandson of James I and a Protestant, he succeeded Queen Anne and was the first Hanoverian monarch. He favoured the Whigs over the Tories, suspecting the latter of Jacobite sympathies. In 1715 and 1719 he put down Jacobite uprisings. In 1717–18 he formed alliances with Holland, France and Austria that guaranteed Hanoverian succession. He was disliked in England because he did not speak English and spent much of his time in Hanover. See also pp 1447, 1462.

George II (1683–1760), King of Great Britain and Ireland (1727–1760) and Elector of Hanover (1727–1760). Robert WALPOLE (in office 1727–42) dominated the early part of the reign. George brought Britain into the War of the Austrian Succession (1740–48) to protect Hanover personally commanding victorious forces at Dettingen (1743). He suppressed the last Jacobite rebellion (1745–46). In the last years of his reign, during the SEVEN YEARS WAR (1756–63), William PITT the Elder was largely responsible for imperial acquisitions in Canada and India. See also pp 1458, 1462, 1466, 1544.

George III (1738–1820), King of Great Britain and Ireland (1760–1820), Elector and then King of Hanover (1760–1820), grandson of George II. He initially sought an active role in government during the ministries of BUTE, GRENVILLE, PITT the Elder, GRAFTON and Lord NORTH (1760–82), influencing the disastrous colonial policy that led to American independence (1776) but effectively suppressing the anti-Catholic Gordon Riots (1780). He consolidated Tory power by calling William PITT the Younger to office (1783–1801, 1804–06), yet defeating Pitt's plans for Catholic emancipation (1801). Suffering increasingly from bouts of insanity after 1765 (probably caused by the disease porphyria) he became nearly blind in 1805 and completely insane in 1811. Under the Regency Act (1811) his son (later George IV) acted as regent (1811–20). See also pp 1462, 1463, 1464, 1493, 1539, 1544, 1545, 1642.

George IV (1762–1830), King of Great Britain and Ireland (1820–30). He served as regent during the periods of George III's madness (1788–89, 1811–20). In 1785 he secretly married Maria FITZGERBERT, but because he was under 25 and the king had not consented, the marriage was invalid. In 1795 he married CAROLINE of BRUNSWICK in order to obtain parliamentary settlement of his debts, they separated within a year. When limitations on his powers as regent were removed in 1812 George decided to retain his father's Tory advisers instead of replacing them with the Whigs, whom he had supported earlier. A patron of the arts, he was, however, disliked for his extravagances and dissolute habits. He was succeeded by his brother WILLIAM IV.

George V (1865–1936), King of Great Britain and Northern Ireland and Emperor of India (1910–36). He had taken up a naval career but became heir

apparent after his elder brother, Albert Duke of Clarence, died in 1892. He married Princess Mary of Teck in 1893. In 1917 he changed the name of the royal house from the German SAXE-COBURG-GOTHA to Windsor. He maintained a strong personal interest in the British Empire throughout his reign and was occasionally active in domestic politics. **George VI** (1895–1952), King of Great Britain and Northern Ireland (1936–52) and Emperor of India (1936–47). He was proclaimed king when his brother, EDWARD VIII, abdicated. In 1923 he married Lady Elizabeth Bowes-Lyon. To boost the morale of his people during war he and his family toured bombed areas and inspected mines and munitions factories, and he visited several battle fronts. In 1949 he was recognized as the head of the Commonwealth of Nations.

George I and II, kings of Greece. **George I** (1845–1913), King of the Hellenes (1863–1913), was appointed by Great Britain, France and Russia. He gained territory for Greece in the Balkan Wars but was assassinated in 1913 and succeeded by his son Constantine I. **George II** (1890–1947), king (1922–23 and 1935–47), was deposed in 1923 and Greece was declared a republic (1924). He was reinstated in 1935 whereupon he dissolved parliament and suspended constitutional rights. He fled the Germans in 1941, but ruled again from 1946 until his death.

George, Stefan (1868–1933), German poet. Influenced by the French symbolists, he strove to achieve perfection of form, eg in *The Year of the Soul* (1897) and *The Carpet of Life* (1899). The Nazis misinterpreted his visions of noble youth and a new Reich in *The Seventh Ring* (1907) and *The New Reich* (1928), so he went voluntarily into exile.

George Cross, decoration first awarded in 1941 by King George VI for "the greatest heroism or the most conspicuous courage in circumstances of extreme danger". It ranks next to the Victoria Cross and was intended primarily for civilians, replacing the Empire Gallantry medal.

George Medal, decoration first awarded in 1940 by King George VI. It is presented for bravery in similar, but less outstanding, circumstances to the George Cross. Its insignia is a red ribbon with five narrow blue stripes. In 1942 King George VI awarded it to the entire population of Malta for bravery.

Georgetown, largest city and capital of Guyana, at the mouth of the Demerara River. Founded in 1781 by the British it was the capital of the united colonies of Essequibo and Demerara, and known as Stabroek during Dutch occupation. Renamed Georgetown in 1812, it is the country's major port, exporting sugar, rice, timber, bauxite, gold and diamonds. Industries include shipbuilding, food processing, brewing and rum distilling. Pop. 63,200.

George Town, See PENANG.

Georgia, state in SE USA, on the Atlantic Ocean, N of Florida. In the S and E of the state is a broad coastal plain. The central area consists of the Piedmont plateau beyond which, in the N, are the Blue Ridge Mts and the Appalachian plateau. The area is drained by the Savannah, Ogeechee and Altamaha rivers. Cotton, once the chief crop, has declined in favour of tobacco, grown in the SE, and peanut, grown in the SW. Livestock and poultry are now important. Textile manufacture has long been a major industry, but others include transport equipment, chemicals, paper and timber. Atlanta is the capital and the largest city. The first settlement of Georgia was on the Savannah River by James Oglethorpe in 1732. In the AMERICAN CIVIL WAR, it was one of the original six states of the Confederacy. The state was ravaged by the armies of General Sherman in 1864. Re-admitted to the Union in 1870, the recovery of the state economy was very slow. Area: 152,488 sq km (58,876 sq miles). Pop. (1975 est.) 4,926,000. See also p.2161.

Georgia (Gruzinya SSR), one of the 15 union republics of the USSR, bounded by

Turkey (S), the Black Sea (W) and the Armenian, Azerbaijan and Russian republics. It is a mountainous region on the slopes of the Caucasus, and the climate varies from the lowlands near the Black Sea, where it is subtropical, to the dry steppes of the E. Most of the people are farmers. The warmer parts of the region produce tea, citrus fruits, tobacco and grapes. Sheep, pig and poultry raising are important throughout the area. There are rich mineral deposits, including manganese, coal, lignite, iron and oil, there are also large areas of peat. The chief industries are iron and steel, railway and mining equipment, chemicals, machinery and building materials. The region has abundant hydroelectric power. The capital is Tbilisi. Area, 69,000 sq km (26,910 sq miles). Pop. (1976) 4,965,000. See also pp 1358, 2153.

Georgian architecture, building style in Britain and its colonies in the 18th and early 19th centuries. The name derives from the Hanoverian kings who reigned during this period. Based on classical forms, Georgian architecture stresses symmetry and makes use of brick and stone. A typical small Georgian building is rectangular in shape, built around a central stair-hall, and often with an imposing main door which employs a projecting hood or porch supported with columns. Many churches, particularly in London, were built in the Georgian style.

Georgian language, language spoken principally in Georgia, USSR. It is the most important member of the South Caucasian (Kartvelian) language family which is used by about 3 million people south of the Caucasus. The Georgian alphabet dates from the 5th century AD.

Georgian Poetry, series of anthologies in the conservative tradition, begun in 1912 and edited by Sir Edward Marsh. Five volumes were published in London between 1912 and 1922. Noted contributors included Rupert Brooke, W.H. Davies, Lascelles Abercrombie, James Elroy Fickler, and Edmund Blunden, Walter de la Mare and Robert Graves.

Georgics, instructive work in four books (29 BC) by VIRGIL. It vividly depicts the hard struggles and great rewards of all the activities of a farmer's life, as part of its purpose in persuading freemen to return to Italy's depopulated farms.

Geotrophic current, general term for an ocean or wind current whose direction is affected by the meeting of its pressure gradient with the CORIOLIS FORCE. See also pp 234, 235, 248, 249.

Geosyncline, great basin or trough in which deposits of sediments and volcanic rock, thousands of metres thick, have accumulated during slow subsidence over long geologic periods. It is an older and more extensive form of a SYNCLINE. See also pp 214, 215.

Geothermal energy, heat contained in the Earth's crust. It is naturally released by GEYSERS and VOLCANOS, and is used as a power source for generating electricity in Lardorello in Italy, Wairakei in New Zealand and in N California, USA.

Geotropism, in plant growth, the response to the stimulus of gravity. Plant stems are generally negatively geotropic and grow upwards, roots are positively geotropic and grow downwards. For example, growth curvature is caused by the accumulation of the plant hormone AUXIN in the tissue on the lower side of the stem, growth increases on that side and the stem bends upwards. See p.357.

Gera, city in S East Germany, 56 km (35 miles) SSW of Leipzig. One of the country's oldest cities, it was the capital of the principality of Reuss, 1564–1918. Today it is a communications and industrial centre whose manufactures include textiles and metal products. Pop. (1975) 114,117.

Gerald of Wales. See GERALDUS CAMBRIENSIS.

Geranium, shrubby or trailing house and garden plant native to S Africa. It is densely branched with hairy, fan-shaped leaves that in some species emit a spicy aroma. Red, pink or white flower clusters are borne on stalks above the leaves. Its structure favours cross-pollination.

George III's unfortunate political meddlings led to the loss of the American colonies

George IV, the dissolute British monarch who was, however, patron of the arts

Georgian architecture was inspired initially by the principles of Andrea Palladio

Geranium gets its common name of cranesbill from the beak shaped ovaries

Géricault, *A Mad Woman with the Mania of Envy* from his paintings of the insane

Germany, the Bavarian royal castle at Neuschwanstein built in the 19th century

Germinal typifies Zola's pessimistic view of man as a prisoner of his environment

Gershwin's *Porgy and Bess* reflects a deep study of black customs and music

Height 10–80cm (4–33in). Family Geraniaceae, genera *Pelargonium* and *Ceranium*.

Gerard, John (1545–1612), English herbalist and author of *The Herball, or general historie of plantes* (1597), in which he listed thousands of plants and their healing properties. It was a popular work, divided into 800 chapters. He also recorded much of the folklore associated with the plants. See also p.708

Gerbil, small mainly nocturnal rodent native to arid areas of Asia and Africa and a popular pet. It has large eyes and ears, long hind legs and long tail. Its fur may be fawn, grey, brown or red. In its natural habitat it is a subterranean herbivore and often hoards food; it requires little water. Length to 12cm (5in). Family Cricetidae. See also p.318

Gerhard, Roberto (1896–1970), Spanish composer, b. Switzerland. After studying with GRANADOS and SCHOENBERG he later moved to Cambridge, England, in 1939. His works, which include five ballets, symphonies and chamber music, mingle Spanish idioms with the 12-tone technique and, later, serialism.

Gerhardt, Charles-Frédéric (1816–1886), French chemist best known for his attempt to systematize organic chemistry under the Theory of Types. This based all compounds on four main types and was influential in the development of structural chemistry. He published this and other ideas in *Traité de Chimie Organique* (4 vols, 1853–1856).

Geriatrics, branch of medicine that deals with the disorders and other medical problems of the elderly, who are subject to degeneration and ageing of certain tissues and other disorders not common in younger people. Atherosclerosis and arthritis occur more frequently in old age, as does SENILITY. See also pp.1144–1148

Géricault, Jean Louis André Théodore (1791–1824), French painter. A forerunner of the Romantic movement, he began as a painter of battle scenes. His most famous work was *Raft of the Medusa* (1817), depicting the survivors of a shipwreck who, after 12 days on a raft, had thrown the others overboard or eaten them. Out of 147, only 15 remained.

Gerkin. See CUCUMBER

Germ, word popularly denoting any infectious agent of microscopic or ultramicroscopic size. Germs can be pathogenic bacteria, fungi or viruses. The word germ is used in biology to denote a rudimentary stage in plant growth, such as an embryo in a seed, or a bud.

Germain, Saint (c.496–576), Bishop of Paris. According to legend, he both cured and saved King Childebert I from licentiousness, in compensation for which the king built the monastery of St Vincent in 558, later renamed Saint Germain-des-Prés. Feast 28 May.

German, Sir Edward (1862–1936), British composer. Real name Edward German Jones. He wrote *Merrie England* (1902), *Tom Jones* (1907) and other light operas. He also composed two symphonies and a *Welsh Rhapsody*. He completed SULLIVAN's *The Emerald Isle*.

German Confederation (1815–66), federation of 39 German principalities set up by the Congress of Vienna to replace the HOLY ROMAN EMPIRE. It had few formal powers, beyond a mutual defence pact, and was dominated by Austria. It collapsed in 1848 but was restored two years later. After the Prussians defeated Austria in 1866 it was dissolved and replaced with the North German Confederation. See also pp.1558, 1588

German Democratic Republic. See GERMANY EAST

German Federal Republic. See GERMANY WEST

Germanic language, group of languages forming a sub-division of the Indo-European family. One branch includes English, German, Yiddish, Dutch, Flemish, Frisian and Afrikaans; another includes Swedish, Danish, Norwegian, Icelandic and Faroese Gothic, the language of the ancient Goths, but long extinct, was a third branch.

Germanium, metalloid element (symbol,

Ge) of group IVA of the periodic table, predicted (as ekasilicon) by Mendeleyev and discovered in 1886. Germanium is a by-product of smelting zinc ores or may be obtained from the combustion of cerium coals. It is important in transistors, rectifiers and similar semiconductor devices. Properties: at no. 32, at wt. 72.59, s.g. 5.32 (25°C), m.p. 937.4°C, (1,719°F) b.p. 2,830°C (5,126°F), most common isotope Ge⁷⁴ (36.54%).

German measles, or rubella, virus-caused contagious disease characterized by a light pink rash beginning on the face and spreading down. The disease is mild, requiring only symptomatic relief usually of itching. Young girls who have not had the disease are frequently immunized against rubella to prevent contagion in women in childbearing years, because rubella during pregnancy can damage a foetus. See also p.1075

German shepherd, breed of working dog developed in Germany by about 1900. It has woolly underhair and a slightly wavy or straight outer coat. Its commonest colours are black, grey or black and tan. Height approx. 64cm (25in) at the shoulder, weight 27–38kg (60–85lb).

Germanus, Saint (c.378–448), Gallic churchman. He became Bishop of Auxerre in 418, and visited Britain on papal instructions twice, in 429 and 447. In 447 he probably helped the British defeat an invasion by the Picts and Saxons. He may also have sent bishops to Ireland to assist St PATRICK. See also p.1272

Germany, former nation in central Europe, divided since 1945 into two independent countries, East GERMANY and West GERMANY. Some territory also became part of Poland and the USSR. A unified German nation existed from the end of the Franco-Prussian War in 1871 until 1945. On two occasions in the 20th century Germany initiated and was defeated in world wars. See pp.2044–2050

Germany, East, Communist country in N Europe, official name the German Democratic Republic, formed after wwii from the NE part of Germany. Devastated during the war, it is now one of the richest Communist countries. The principal crops, produced on collective farms, are rye, sugar beet, potatoes, wheat, barley and oats. Most raw materials have to be imported although East Germany produces approx. one-third of the world's brown coal (lignite). Industries include steel, chemicals, heavy machinery, motor vehicles and textiles. The capital is East Berlin. Area, 108,178sq km (41,610sq miles). Pop. (1976 est.) 16,850,000. See p.2045

Germany, West, nation in W Europe, official name the Federal Republic of Germany. It has made an astonishingly rapid recovery since wwii and now has one of the highest standards of living in the world. Many foodstuffs have to be imported, but wheat, barley, oats, sugar beet and rye are grown. West Germany is also noted for its hops and vines. The country is, however, overwhelmingly industrial. Iron and steel, motor vehicles, chemicals, electrical goods, oil refining and food processing are of great importance. The capital is Bonn. Area, 248,577 sq km (95,976 sq miles). Pop. (1980 est.) 61,300,000. A member of the EEC. See also p.2049

Germicide, any substance for destroying disease-causing micro-organisms. Germicides include antiseptics and antibiotics.

Germinal (1885), naturalistic novel by Émile ZOLA which graphically describes the struggle of Lantier, a socialist miner, against an indifferent and oppressive social system. The result is not only a well-balanced and complex study of labour problems, but also a psychological drama of considerable power. See also p.1574, 1575

Germination, growth of the embryo of a plant after the seed ripens and is detached from the parent plant. It may occur immediately or after a period of dormancy. In order to germinate, a seed or spore needs favourable conditions of temperature, light, moisture and oxygen. The process

begins with the rehydration of the protoplasm of the embryo and the production of the amino acids and energy that stimulate growth. Germination is complete when a root appears outside the seed coat. See also DICOTYLEDON, MONOCOTYLEDON pp.674–675

Germiston, city in Transvaal province, N-South Africa, 13km (8 miles) E of Johannesburg in the Witwatersrand. It has the world's largest gold refinery. Industries: chemicals, textiles, engineering. Pop. (1970) 210,298.

Germ theory of disease, the attribution of the causes of infectious disease to micro-organisms, such as bacteria, viruses and microscopic fungi. In the 1850s Louis PASTEUR demonstrated that bacteria could infect a nutrient solution only if it was exposed to air or any other infecting medium. This destroyed the old but widely held idea of spontaneous generation of bacteria. In 1876 Robert KOCH carried out experiments that demonstrated conclusively the bacterial aetiology of the disease anthrax and, by inference, that of many other diseases. See also p.1061

Germ warfare, or biological warfare, the deliberate use of pathogenic micro-organisms, such as bacteria, viruses and microscopic fungi, and their toxins, to produce disease in an enemies' population, domestic animals or food crops. Microbiologists are now able to grow such organisms on a large scale and, by genetic manipulation, even to increase their virulence. Guided missiles are capable of firing a "package" of disease across the world; large-scale germ warfare is now a possibility. The widespread use of defoliants by the US armed forces in Vietnam, in an attempt to undermine that country's economy and deprive enemy troops of cover, is a modern application of biological warfare. See also pp.574–575

Gerónimo (1829–1909), chief of the Chiricahua Apaches. He led his tribe against white settlers in Arizona for more than 10 years. In 1886 he surrendered his tribe to General Miles and they were taken to Fort Sill, Oklahoma. Gerónimo became a prosperous farmer and national celebrity.

Gerontology, the study of ageing. The capacity of an organism to repair tissues effectively, by the replacement of worn out cells, diminishes with age, so that "growing old" is inevitable (even when, as in many large trees, it is delayed for some thousands of years). The effect of GERIATRIC medicine has been to relieve and treat the disease burdens of age. It has not noticeably increased life expectancy. See also p.1144

Gerrymander, practice of rearranging electoral districts in such a way as to favour a particular party. It was a common means by which parties sought to retain power. The manoeuvre is named after Elbridge Gerry, governor of Massachusetts (1810–12), whose party employed the practice. One of his redefined districts was said to resemble a salamander, hence by combination the verb gerrymander.

Gershwin, George (1898–1937), US composer who wrote many popular songs, for which his brother Ira Gershwin (1896–

1945) mostly wrote the lyrics. The scores for several musicals, eg *Lady Be Good* (1924) and a Negro opera *Porgy and Bess* (1935) were by him, as were also some serious orchestral works that contain elements of jazz and popular music. *Rhapsody in Blue* (1923), originally for piano and jazz band (later reorchestrated), and the tone poem *An American in Paris* (1928). See also p.1755

Gesner, Abraham (1797–1864), Canadian geologist and inventor. He is noted for his exploration and geological mapping of Nova Scotia, and his invention of a process for the distillation of kerosene from petroleum.

Gesner, Konrad von (1516–65), Swiss scientist who is best remembered for his diverse scientific knowledge. He taught physics and practised medicine. He compiled a dictionary of animals called *Historiae animalium* (1551–58).

Gesso, in art, a ground applied TEMPERA. Oil Paint or GILDING, it is a mixture of gypsum or chalk, and size. The first layer, *gesso grosso*, is coarse, heavy and absorbent, second, *gesso sottile*, is a mixture of size and slaked plaster of paris and is applied in several fine coats to provide a brilliant white, smooth surface. *Gesso grosso* may be reapplied to strengthen the surface. Furniture manufacturers indent the gesso, or mould it (*gesso rilievo*), after which painting or gilding is done.

Gestalt psychology, school of psychology based on the theory that man perceives phenomena as relating to a configuration, a whole or Gestalt. Thus the whole is more than the sum of its parts. From the end of the 19th century, in Germany Gestalt psychology was developed by Max WERTHEIMER, Wilhelm WUNDERLICH, Wolfgang KÖHLER and Kurt KOFFKA. Using mainly introspective methods, they formulated several principles which were essentially refinements of the original concept. According to Gestalt psychologists, these principles govern man's perception of the world. They also did important research into the neurological basis of perception. See also pp 134-135.

Gestapo (Geheime Staatspolizei), state secret police of NAZI Germany. Originally founded in 1933 by GOERING in Prussia, it soon became a national organization. It was taken over by HIMMLER in 1934 and became in effect a unit of the SS (Schutzstaffel). It had virtually unlimited powers and, together with the SS, ran the Nazi concentration and extermination camps.

Gestation, period of carrying a developing EMBRYO in a uterus between conception and birth. Gestation periods are specific to each mammalian species and range from 12 days (Virginia opossum) to 22 months (Indian elephant). In man and many apes the period is approximately 38 weeks.

Gestring, Marjorie (1923-), US diver who became the youngest individual champion of the modern Olympic Games when, aged 13, she won the springboard gold medal at Berlin in 1936.

Gethsemane, in the New Testament olive grove at the foot of the Mount of Olives, S of Jerusalem, the name means "oil press". A favourite place for Jesus to pray, it was there that the three disciples could not remain awake during the night of Jesus's agony (or Passion). The next morning Jesus was confronted there by Judas Iscariot and "a number of men carrying sticks and clubs", the chief priests and the Temple guard, the preliminary to his being led off to crucifixion.

Getty, Jean Paul (1892-1976), US businessman and art collector. He inherited his father's oil business, George F. Getty, Inc., becoming its president in 1930. After 1959 he lived in England. He was one of the world's richest men, with a fortune estimated at more than £1,000 million.

Gettysburg, town in S Pennsylvania, USA. It was the scene of the historic battle in 1863 during the AMERICAN CIVIL WAR in which Robert E. LEE and his Confederate troops were defeated by the Union army led by George Meade. The battle proved a turning point in the war, stopping Lee's invasion of the North. It was also the scene of Lincoln's GETTYSBURG ADDRESS in Nov 1863. There are several monuments commemorating the battle. Tourism is a major industry. Pop. (1970) 7,275.

Gettysburg Address (19 Nov. 1863), speech by Abraham LINCOLN at the dedication of the national cemetery on the site of the battle of GETTYSBURG. It has become famous for its eloquence and brevity. The final sentence contains a phrase that has become a definition of democracy: "government of the people, by the people and for the people".

Getz, Stan (1927-), US jazz saxophonist. He came to fame with Woody Herman in the 1940s and since then has led his own groups. Although popular, he has usually managed to avoid vulgarization. A creative stylist strongly influenced by Lester YOUNG, his sensitive tone control has made him influential.

Geum, or *avens*, perennial herb of the rose family. Most species have orange red, yellow or white flowers and deeply

indented basal leaves. Height to 60cm (24in). Family Rosaceae, genus *Geum*. Geyser, hot spring that erupts intermittently, throwing up jets of superheated water and steam. Before eruption, the water occupies a natural crooked tube reaching deep into the earth. Pressure, at eruption, forces columns of water into the air to a height commonly of 60 metres (197ft) which are followed by a shaft of steam emitted with a thunderous roar. Most geysers are found in Iceland, New Zealand and the USA. See also pp 204-41.

Gezelle, Guido (1830-99), Flemish lyric poet and priest-journalist. He was disapproved of by the state and the Church for his Flemish nationalism, which is revealed in poetry such as *Kleengedichtjes* (1860) and *Laatste verzen* (1901).

Ghaghra (Gogra), river in Asia which rises in the Himalayan Mts in Tibet, China, and flows SE through Nepal to join the River Ganges in Bihar state, a India. Length approx 920km (570 miles).

Ghana, nation in W Africa, known as the Gold Coast before independence in 1957. Most of the inhabitants depend on agriculture, producing cassava, groundnuts and guinea corn. Ghana is also the world's leading cocoa producer. It has little industry although gold and diamonds are mined. The capital is Accra. Area 238,537sq km (92,099sq miles). Pop. (1975 est.) 9,866,000. See p 2051.

Ghats, two mountain systems in peninsular India. The Western Ghats extend from the Tapi River to Cape Comorin and form the W edge of the Deccan Plateau, the Eastern Ghats extend from the Mahanadi River to the Nilgiri Hills and form the E edge of the Deccan Plateau. Height (Western) 900-1,500m (2,950-4,920ft), (Eastern) 600m (1,970ft). Length (Western) 1,600km (1,000 miles), (Eastern) 1,400km (875 miles).

Ghent (Gent), city in NW central Belgium, 50km (31 miles) NW of Brussels. It was a major cloth centre in the 13th century and the power of the guilds made the city virtually independent. The Pacification of Ghent was signed there in 1576. The city's development was disrupted by war in the following century as it was captured by France in 1698, 1708 and 1745. Its prosperity revived after the FRENCH REVOLUTIONARY WARS when textile factories were established. The city was occupied in WWI and WWII. Industries: plastics, chemicals. Pop. 224,728.

Ghent, Treaty of (1814), treaty which ended the war of 1812 between the British and the USA. It made no mention of the maritime issues which were the ostensible cause of the war - notably the US ships ignoring of the blockade set up by the British against the French during the NAPOLEONIC WARS. Instead it appointed a commission to settle the dispute over the boundary dividing the USA and British North America.

Ghetto, section of a city inhabited almost exclusively by one ethnic group. The term originated in Europe, designating a separate area of a city for Jews. Characterized by homogeneity, cultural cohesion and shared economic conditions, ghettos are founded on the basis of religion, race or culture. Ghettos may generate alternative life-styles that differ from those of the larger society. The term has come to have a pejorative connotation, indicating a poor, dilapidated area.

Ghibellines, political faction in 13th century Italy that supported the HOHENSTAUFEN dynasty of the HOLY ROMAN EMPIRE, opposed to the pro-papal GUELPHS. The name derived from Wabingen castle which belonged to the Hohenstaufens. During the struggles that occurred in north and central Italy between Emperor Frederick II and the popes of the mid-13th century, the term came to designate those on the imperial side.

Ghiberti, Lorenzo (1378-1455), Italian sculptor, goldsmith, architect, painter and writer; a major transitional figure between the late Gothic and Renaissance worlds. He made two pairs of richly gilded bronze doors for the Baptistery in Flor-

ence. The first (1403-24) depicts 28 New Testament scenes, the second (1425-47) is his own choice of 10 scenes from the Old Testament. The latter, known as the "Doors of Paradise", are considered his masterpiece. See also pp 1382, 1383.

Ghirlandajo, Domenico (c 1449-94), Italian Florentine painter. A prolific fresco artist, he typified the trend towards detailed realism in figures, settings and landscapes. He worked on the Sistine Chapel with BOTTICELLI and others, his major contribution being *Christ Calling the First Apostles* (1482).

Ghost, phantom or spectre of a dead person, animal, or possibly both simultaneously (as with ghosts of highwaymen on horseback). Occasionally only heard or seen, ghosts may appear as likenesses of people who died in any former time, in full or in part, and with reasonable definition or faint and shadowy. Much belief in ghosts stems from the idea that violent death may cause the deceased to haunt the living, this fear has given rise to many folktales and has influenced the religious beliefs of societies since primitive times. A popular modern theory is that ghosts may be some kind of "image-memory" in the fabric of particular places, imprinted during the deceased's lifetime by his repeating an action time after time - which would account for the number of ghost priests in churches and prisoners in castles. A noisy but unseen ghost that moves objects and furniture is called a POLTERGEIST.

Ghosts (1881), three-act play by Henrik IBSEN showing how moral diseases from the past, symbolized by hereditary venereal disease - can haunt the present. The author's uncompromising presentation of this subject led to riots at its first performance in Chicago. Critical and popular reactions to its first public performances in Oslo (1883) and London (1914) were equally vitriolic. Ibsen was Norwegian.

Giacometti, Alberto (1901-66), Swiss sculptor and painter. In the 1930s he worked on SURREALIST sculpture. During the 1940s and 1950s he produced his greatest works - emaciated, dreamlike figures built of plaster of paris on a wire base. His paintings and drawings have the same agonized visionary quality.

Ginever, Ivar (1919-), ex physicist from Norway who shared the 1973 Nobel prize in physics with Brian JOSEPHSON and Leo ESAKI for their research into tunnelling in semiconductors and superconductors. Esaki developed the tunnel diode, which enables electrons to cross normally impassable electronic barriers, and Ginever applied this to superconductors demonstrating new effects which led to a better understanding of SUPERCONDUCTIVITY. See also SEMICONDUCTIVITY.

Giambologna, or Giovanni Bolognese (1529-1608), Flemish sculptor, active in Florence. A master of MANNERISM, he executed his *Rape of the Sabine* in 1582 and *Astronomy* in 1573. See also HIC1 p 265.

Giant, in mythology, huge being of enormous strength and human form. In Norse mythology giants existed before the gods who overcame them, in Greek mythology the TITANS were giants who repeatedly attacked Olympus. Most medieval European giants were portrayed as clumsy, greedy cannibals, dominating whole districts. Traditionally a giant could not be overcome by might, but could be defeated by cunning and trickery.

Giant's Causeway, promontory on the N coast of Northern Ireland in County Antrim. It extends 5km (3 miles) along the coast and consists of thousands of basalt columns of varying height.

Giant star, star belonging to a luminosity class midway between main-sequence stars and supergiants. Giant stars lie directly above the main sequence on the HERTZSPRUNG-RUSSELL DIAGRAM and are characterized by large dimensions, high luminosity, and low density. They are found throughout the entire surface temperature range. Those of spectral type G-M (the red giants) contrast with corresponding DWARF STARS of the main sequence. See also pp 978-979.

Stan Getz has recently fused the new Latin rhythms with his own jazz style.

Geysers operate the giant safety valves for powerful underground volcanic activity.

Ghent, more than any other Belgian town has retained a feudal atmosphere.

Giants are common mythological figures, one of the most famous being Goliath.

Gibbons swing through the trees but walk erect with arms held right or behind

Gibraltar voted almost unanimously to remain a British colony in 1967

Gide's affection for Soviet socialism declined after his journey to the USSR in 1936

Beniamino Gigli left the USA for Italy in 1932 in protest at salary cuts at the Metropolitan

Giap, Vo Nguyen (1912–), Vietnamese general and politician. A brilliant guerrilla commander, he led the VIETMINH forces that entered Hanoi in 1945 and that later defeated the French at Dien Bien Phu (1954). He commanded North Vietnamese forces in the VIETNAM WAR (1961–75), and organized the 1968 Tet offensive. He is now deputy premier of a united Vietnam.

Giauque, William Francis (1895–), US chemist. Giauque is noted for discovering the isotopes of oxygen and for his studies of phenomena at extremely low temperatures. In 1926 he suggested a method for producing temperatures approaching absolute zero, until then believed impossible in practice. He received the 1949 Nobel Prize for chemistry.

Gibberd, Sir Frederick (1908–), British architect and town planner, one of the first in Britain to accept the INTERNATIONAL STYLE. His best-known works include the plan and some major buildings for Harlow New Town, Essex (1947), London Airport (1955) and the prize-winning design for the Roman Catholic Cathedral of Liverpool (1960), influenced by Oscar Niemeyer's Brasilia Cathedral.

Gibberellins, group of organic compounds that stimulate stem elongation, dormancy and plant response to light and temperature. Originally isolated from the fungus *Gibberella fujikuroi*, they interact with some AUXINS to promote cell enlargement and have been used to increase crop yields substantially. See also p.357.

Gibbon, Edward (1737–94), British historian. A man of independent means, he travelled widely, and it was during a visit to the Forum in Rome in 1764 that he decided to write his great work *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88). His magisterial sweep and cynical vision of history render it one of the most widely known historical works of modern times, indeed a classic.

Gibson, Lewis Grassie (1901–35), Scottish writer, the pen-name of James Leslie Mitchell. He wrote with feeling about Scottish rural life, especially in his trilogy *Sunset Song* (1932), *Cloud Howe* (1933) and *Grey Granite* (1934).

Gibbon, small, slender, long-limbed ape that lives in forests in SE Asia. It has a shaggy brown, black or silvery coat and is the most agile of the mammals that live in trees. It travels from branch to branch by swinging with its long, powerful arms. Height, 41–66cm (16–26in). Family Pongidae, genus *Hylodactylus*. See also pp.103, 312.

Gibbons, Grinling (1648–1721), English wood carver of fruit, flower and lacy decorations. There are fine examples of his work at St Paul's Cathedral, London, Windsor Castle and many country houses, especially Petworth House, Sussex, which has a magnificent room decorated by him. Gibbons, whose patrons included Charles II and George I, also worked in conjunction with Christopher Wren.

Gibbons, Orlando (1583–1625), English composer. He was organist of the CHAPEL ROYAL (1605–25) and of Westminster Abbey (1623–25). Although he composed viol fantasies and madrigals, he was, above all, a composer of church music and a master of POLYPHONY (as in *Hosanna to the Son of David* and *O Clap Your Hands*).

Gibbons, Stella Dorothea. See COLDCOM FORT FARM.

Gibbs, Cecil Armstrong (1889–1960), British composer. He is best known for his songs, in particular his setting of poems by Walter de la Mare. He also composed large choral works, such as *Deborah and Barak* (1947) and the choral symphony *Odysseus* (1938).

Gibbs, James (1682–1754), Scottish architect whose best known work is the church of St Martin in the Fields, London (1722–26). He was influenced by Italian architecture and the work of Sir Christopher Wren. He also designed the Radcliffe Camera at Oxford (1737–1749).

Gibbs, Josiah Willard (1839–1903), US theoretical physicist and chemist. While a professor at Yale, he devoted himself to establishing the basics of physical chemis-

try. His application of thermodynamics to physical processes led to statistical mechanics. He evolved the concepts of free energy and chemical equilibrium, devised the phase rule and developed vector analysis.

Gibbs, Lance (1934–), West Indian cricketer. He is a tall off-spin bowler whose immaculate control and deceptive flight brought him a world record 309 wickets in 79 Test matches for the West Indies (1957–76). He played for Guyana, Warwickshire, and South Australia.

Gibraltar, British Crown colony on the S coast of Spain. Its name comes from the Moorish *Djebel Tarik* ('mountain of Tarik'). It was from Gibraltar that the MUSLIM conquest of Spain by TARIQ was begun in 711, and it remained under Moorish control until it fell to the Castilians in 1462. In 1704 it was captured by an Anglo-Dutch fleet and was formally ceded to Britain by the Treaty of Utrecht (1713); it has remained a crown colony ever since. In 1964 it was granted extensive self government, and in 1967 a referendum revealed the almost unanimous wish of Gibraltarians to remain British. See also pp.1493, 2052.

Gibraltar, Strait of, channel connecting the Mediterranean Sea with the Atlantic Ocean between Gibraltar (N) and Ceuta (S) at the E end and capes Trafalgar (N) and Spartel (S) at the W end. Width 13.37km (8.23 miles), length 58km (36 miles).

Gibson, Sir Alexander (1926–), British conductor. He was assistant conductor of the BBC Scottish Orchestra 1952–54 and has been the principal conductor of the Scottish National Orchestra since 1959 and of the Scottish Opera, which he founded, since 1962.

Gibson, Aithen (1927–), US tennis player. The first black player to win a major championship (the French in 1956), she went on to win the Wimbledon and US singles in 1957 and 1958, the years she was ranked No. 1 in the world. She turned professional in 1959.

Gibson, Charles Dana (1867–1944), US illustrator and artist. He worked for, among others, the magazines *Life* and *Collier's Weekly* and his depiction of the American feminine ideal became known as the Gibson Girl. He illustrated Anthony Hope's *Prisoner of Zenda* and other novels and also published books of drawings, eg *The Social Ladder* (1902) and *Our Neighbours* (1905).

Gibson, Mike (1942–), Irish rugby union player, an equally gifted fly-half or centre, who between 1964 and 1977 won 62 caps (only one less than the Irish record). A Cambridge blue and a British Lions tourist to New Zealand (1966, 1971, 1977) and South Africa (1968, 1974), he played for North of Ireland at in Belfast.

Gibson desert, a region in E and central Western Australia state, Australia. It is noted for its salt lakes. Length 402km (250 miles), width 837km (520 miles).

Gide, André (1869–1951), French novelist, playwright and critic. His novels and his *Journals* (1885–1949) show him to be constantly divided by the puritan and pagan elements within himself. Works such as *The Immoralist* (1902) and the experimental *The Counterfeiters* (1926) dramatize a parallel search for spiritual truth and individual freedom. He was awarded the Nobel Prize in literature in 1947. See also p.1775.

Gideon, biblical Judge, Israelite hero and father of Abimelech. Called by an angel of God (Yahweh), he destroyed the Canaanite altar of BAAL. After a victorious attack on the Midianite camp with only 300 soldiers (chosen by God) he refused to be made titular king, although as a Judge he was already not far removed, and his son's name means 'son of the long'.

Gideons, The, interdenominational religious body of laymen founded in the USA in 1899. It is best known for donating Bibles to places such as hospitals, hotels and prisons. It has about 23,500 members throughout the world.

Giedion, Sigfried (1893–1968), Swiss historian who specialized in architecture.

He was closely associated with the International Congress of Modern Architecture, which first met in 1928. In lectures which he gave at HARVARD UNIVERSITY he presented history in terms of constancy and change.

Gielgud, Sir Arthur John (1904–), British stage actor whose consistently excellent performances in both modern and classical roles after 1921 established him as one of the century's finest actors. He played almost every major Shakespearean role and his outstanding Hamlet, first performed in 1929, delighted audiences on more than 500 occasions. Other major appearances were made in *The Importance of Being Earnest* (1939), *The Lady's Not for Burning* (1948) and *The Cherry Orchard* (1954). For the NATIONAL THEATRE he won wide acclaim for the roles he created in *No man's Land* (1975) and *Half-Life* (1977).

Gierek, Edward (1913–), Polish Communist political leader. After periods in France and Belgium before and during WWII, he returned to Poland in 1948 and rose through the party hierarchy. When riots over increased food prices and shortages broke out in Gdansk and other port cities in 1970, Gierek succeeded Wladyslaw Gomulka as party chief. He attempted to satisfy the demands of workers, and to improve relations with the Roman Catholic Church. See also p.1725.

Giesecke, Walter (1895–1956), German pianist, born in France. He made his debut in 1915 and his first European tour in 1920; he made his London debut in 1923. He was later accused of collaboration with the Nazi government in the 1930s. He was highly regarded as a player of the music of DEBussy and SCHUBERT.

Giffard, Henri (1823–1882), French engineer who in 1852 constructed a steam-driven dirigible (steerable airship). His steam engine was the first power source light and powerful enough to have application in lighter-than-air ships. It drove a 3.5m (11ft) long propeller at the rate of 110rpm to power a 44m (143ft) airship at about 9km/h (5.5mph).

Gigantism, generalized over-growth of an individual, believed to be caused by PITUITARY GLAND disturbance resulting in pre-pubescent overproduction of the GROWTH HORMONE. The body may remain in proportion or have distorted extremities and head.

Gigli, Beniamino (1890–1957), Italian tenor. After his debut in 1914, he became a favourite in Italian opera houses until 1920, when he succeeded CARUSO at the Metropolitan Opera, New York. He made his debut at Covent Garden in 1930, and after 1946 often appeared in opera with his daughter, the soprano Rina Gigli.

Gila monster, poisonous nocturnal lizard that lives near water in deserts of SW USA and MEXICO. It has a stout body, massive head, flat tail and bead-like scales of orange, yellow and black. It eats small mammals and eggs. Length 50cm (20in). Family Heloderma, species *Heloderma suspectum*. See also p.69.

Gilbert, Cass (1859–1934), US architect. He designed New York's 52-storey Woolworth Building (1913), which influenced the development of the skyscraper. He also designed the US Supreme Court Building in Washington DC. His styles were not highly original but emblematic of the Neoclassical derivative style which then predominated.

Gilbert, Sir Humphrey (c.1539–83), English soldier and explorer. A brilliant navigator, Gilbert wrote his *Discourse on the Northwest Passage* (1576) and made expeditions to Canada in 1578 and 1583. He established the first British colony in North America at St John's, Newfoundland in 1583. Gilbert used his private means in searching for a passage to the Pacific Ocean. See also pp.1412–1413.

Gilbert, William (1544–1603), English physicist and physician to Queen Elizabeth I. His *De magnetis, magneticisque corporibus* (1600) laid the foundation for the scientific study of magnetism. He was the first to recognize terrestrial magnetism and concluded that a type of magnetism keeps the planets in their orbits. He

coined the terms magnetic pole, electric attraction and electric force. See also p 870

Gilbert, Sir William Schwenck (1836–1911), English librettist and playwright. He collaborated with Sir Arthur Sullivan on an immensely successful series of 14 comic light operas frequently performed by the D'Oyly Carte company. Their works include *HMS Pinafore* (1878), *The Pirates of Penzance* (1879) and *The Mikado* (1885). Gilbert's lyrics reveal an exuberant wit and an often macabre humour.

Gilbert and Ellice Islands, British coral island group in the W Pacific Ocean 4,000 km (2,484 miles) NE of Australia. Most are low-lying atolls producing copra and mother-of-pearl for export. The capital is Tarawa. Area, 733 sq km (283 sq miles). Pop. (1975 est.) 66,000. See p 2052

Gilbert of Sempringham, Saint (c 1083–1189), English priest who founded the Gilbertines, the only Roman Catholic monastic order of exclusively English origin. He was born in Lincolnshire, the son of a Norman knight. He started the order as a convent for girls, but it grew to have double monasteries, with houses for monks and nuns. Feast 4 February.

Gilchrist, Percy Carlyle (1852–1935), British chemist who developed, with his cousin Sidney Gilchrist Thomas, a process for smelting iron ore rich in phosphorus in a BESSEMER converter. The process was patented and extended to the open-hearth furnace.

Gildas (fl 6th century), British monk and chronicler. In the 540s he wrote *De excidio et conquestu Britanniae* (*The Ruin and Conquest of Britain*), an account of the Anglo-Saxon invasions, bemoaning the state of the country until the British victory at Mount Badon. It is the earliest surviving record of the invasions, and of the ruler who can be identified as King Arthur. See also pp 1154, 1272

Gilding, process by which a thin layer of gold is used to cover another surface. Silver is the metal most commonly gilded, but base metals are also used extensively. The original method of gilding was by a chemical process, but in the 19th century ELECTROPLATING, a cheaper if less effective method, was introduced.

Gilds. See GUILDS

Gilead, mountainous region in Jordan, E of the River Jordan, between the Dead Sea and the Sea of Galilee. Traditionally the place of reconciliation between JACOB and LABAN, it was also the birthplace of the prophet ELIJAH and the spot where jephthah was made Judge over Israel.

Gilgamesh, hero of the great Assyro-Babylonian myth, the EPOCH OF GILGAMESH. A story similar in theme and construction to the Greek story of Orpheus. Gilgamesh, king of the city of Uruk (biblical Erech), was a hero of divine birth who went sorrowing for his dead friend ENKIDU, in search of the secret of immortality. After overcoming monsters and gods and difficult journeys he accomplished his goal and found the flower of life, only to have immortality denied him by a serpent that snatched the magic plant from him.

Gill, (Arthur) Eric (Rowton) (1882–1940), British engraver and sculptor. He designed many typefaces, including Gill sans serif (1927). He is best known for his carved sculptures, including the *Statues of the Cross* (1914–18), in Westminster Cathedral, and *Prospero and Ariel* (Broad casting House, London, 1931).

Gillen, Francis James (1856–1912), Australian anthropologist. He did pioneering research on Australian Aborigines and worked for many years with the Aranda people. With Sir Walter Baldwin SPENCER he wrote *The Native Tribes of Central Australia* (1899) and *The Northern Tribes of Central Australia* (1904).

Gillespie, John Birks "Dizzy" (1917–), jazz trumpeter and bandleader. With Charlie (Bird) PARKER he founded the BEBOP style in the 1940s. After 1950 he led his own groups and made many recordings with other jazz performers. Arrangements he made for his big bands of the 1940s,

greatly influenced other jazz musicians. See also p 1756

Gillette Cup, annual knockout cricket competition for the 17 first-class English counties and the top five Minor Counties. A team has one innings limited to 60 overs, bowlers being restricted to 12 overs each. The final is held in September at Lord's. It began in 1963; since then Gillette Cup competitions have also been instituted in the West Indies, South Africa, Australia and New Zealand.

Gillette, King Camp (1855–1932), US inventor and manufacturer of the first safety razor. Patented in Dec 1901, his concept of a thin, double-edged blade was not an instant success, but by the end of 1904 he had produced 90,000 razors and almost 12.5 million steel blades.

Gillingham, county district in N central Kent, England, created in 1974 under the Local Government Act (1972). Area 34 sq km (13 sq miles). Pop. (1974 est.) 93,000.

Gillray, James (1757–1815), English caricaturist. His work was wider in scope in its political and social satire than that of HOGARTH, the vital, witty and vitriolic cartoons were famous throughout Europe at a time when England's prestige was pre-eminent. He displayed a certain artistic naivete and rivalled Fuseli in his rich and fanciful imagination. Among his caricatures are those of "Farmer George" (George III) and *Temperance Enjoying a Frugal Meal*.

Gills, breathing organs through which most fish and some larval amphibians obtain oxygen from water. When a fish breathes it opens its mouth, draws in water and shuts its mouth again. Water is forced through the gill slits, over the gills and out into the surrounding water. Oxygen is absorbed into small capillary blood vessels, and carried to larger blood vessels. At the same time, waste products carried by the blood are released and diffused through the gills. See also p 58

Gilman, Harold (1876–1919), British painter. He was a leading British post-Impressionist, and was a member of the CAMDEN TOWN GROUP and first president of the LONDON GROUP (1913). His best works are his vividly coloured landscapes, interiors with figures and portraits.

Gilmore, Dame Mary (1865–1962), Australian poet. Her best poetry, such as *The Myall in Prison* and *Old Botany Bay*, gives humanist expression to her sympathy with the Aborigines and Australia's convict pioneers.

Gilpin, Sawrey (1733–1807), British painter and draughtsman. He specialized in sporting scenes and horses, sometimes assisting other artists, such as TURNER, by painting animals in their pictures. He was the younger brother of Rev. William Gilpin (1724–1814), writer on the pictures.

Gilroy, Cardinal Sir Norman Thomas (1896–1977), first Australian-born Cardinal of the Roman Catholic Church. Ordained in 1923, he became a Bishop in 1934, Archbishop of Sydney in 1940, and Cardinal in 1946.

Gin, distilled alcohol containing flavouring substances from the berry of the JUNIPER tree, *Juniperus communis*. English and American gins are alcohol distilled from fermented grain, diluted to the required strength – between 80° and 94° proof spirit – and flavoured with juniper and small amounts of orris, cassia, lemon and other aromatic substances. Dutch gin is distilled from barley malt, has a lower alcoholic content, and is usually drunk neat. See also p 709

Ginger, herbaceous, perennial plant native to tropical E Asia and Indonesia and grown commercially in Jamaica and elsewhere. It has fat, tuberous roots and yellow-green flowers with purple edges spotted with yellow. The kitchen spice is made from the tubers of *Zingiber officinale*, Family Zingiberaceae. See also pp 379, 707, 707

Ginger ale and beer, beverages having little or no alcoholic content, flavoured principally with the rhizome (underground stem) of the ginger plant, *Zingiber officinale*, they are saturated with carbon diox-

ide gas, which makes them effervescent. Pile, dry ginger ales contain more added acid and capsicum than the darker, more golden brands. Both types are clear liquids, whereas ginger beer is cloudier because of its higher solids content, it is also a sweeter drink. Its effervescence is due to the incomplete fermentation of yeast which generates carbonic acid.

Gingivitis, inflammatory disease of the gums that makes them tender and swollen and causes them to bleed easily. In severe cases ulceration and even anaemia may develop. General infections, bad tooth alignment and faulty dentures may all cause gingivitis, it may also be a symptom of vitamin C deficiency or an allergy.

Gingold, Hermione Ferdinanda (1897–), British actress who made her name as a comedienne in revues of the 1930s and 1940s and made frequent appearances in the theatre, cinema and on television, especially in the USA. In 1973 she created the role of Madame Armfeldt in the New York production of *A Little Night Music* and repeated it in London.

Ginkgo, also called maidenhair tree, oldest living species of tree, native to temperate regions of China, but occurring only rarely in the wild. It dates from the late Permian period. It has delicate fan-shaped leaves, small, four-smelling fruits and edible, nut-like seeds. Each tree bears either male or female flowers. Height to 30m (100ft). Family Ginkgoaceae, species *Ginkgo biloba*. See also pp 283, 306, 367

Ginkel, Conrad van Reede-Ginkel (1644–1703), distinguished Dutch soldier who went to England with William of Orange in 1688. As commander-in-chief of the land in 1691 he subdued Athlone and Clway, and decisively beat the Irish army at Aughrim. For his services he was created 1st Earl of Athlone in 1692.

Gin rummy, card game for two players who are dealt ten cards from a 52-card pack, the top card of the deck remaining being turned face up. The object is to form matched sets (melds) of three or more cards either of the same number or of consecutive cards of the same suit, so that the value of the upturned card, or to play until one player lays down all ten cards in matched sets (a gin). Either merits the player the value of his opponent's unmatched cards (ace 1, court cards 10). The first to score 150 or more wins.

Ginsberg, Allen (1926–), US poet, major writer of the BEAT GENERATION. His work is influenced by his interest in ZEN BUDDHISM, meditation and the use of drugs. His most famous poems are *Howl* (1956), a condemnation of American society, and *Kaddish for Naomi Ginsberg* (1894–1956) (1961), a lament for his mother, who became insane.

Ginseng, either of two perennial plants found in the USA (*Panax quinquefolius*) and E Asia (*P. schinseng*). It has yellow-green flowers and compound leaves. The dried tuberous roots are used in Chinese traditional medicine. Height to 50cm (20in). Family Araliaceae.

Gioconda, La. See MONA LISA

Gioconda, La (1876), opera in four acts by Amilcare BONCHIELLI, with libretto by Arrigo Boito, based on a play by Victor HUGO. It was first performed at La Scala, Milan.

Giorgione, U (c 1475–1510), Italian painter. He was a pupil of BELLINI, and became one of the major painters of the Venetian High Renaissance. He evolved his own mysterious romantic style, creating a unity of figures and landscape. His *Tempest* (c.1505) is the first painting of the Renaissance in which atmosphere is important. Only a few of the works attributed to him are really his, and many paintings that undoubtedly he began were finished by others, eg *TITAN*. See also p 1390

Giotto di Bordonne (c 1266–1337), Italian painter and architect. He had profound influence on the development of Western art, and created visually and psychologically convincing human forms and arranged his realistic figures in dramatic relation to each other and to their setting. Probably his best work is the fresco cycle

Gills are sometimes used to generate currents which draw food towards the fish.

Ginger being laid out to dry in Jamaica where it is a major commercial crop.

Giotto shows in this self-portrait the emotional moodiness typical of his paintings.

Giotto, detail from the *Story of St Francis* whose authenticity has caused controversy.

Giovanni di Paolo

Giraffe, the gentle, a most totally silent animal, produces one fawn at a birth

Girders are the main load-bearing beams designed to sustain great lateral stress

Thomas Girtin, detail from his watercolour of Copenhagen House, Islington, London

Glaciers are powerful agents of erosion working through the abrasive action of ice

Lives of the Virgin and Christ (1305-08) in the Arena Chapel at Padua. In these scenes, Giotto broke away from medieval formulas of figure painting: the concern is more for portraying moral fibre than divine splendour. The naturalism of the Italian Renaissance owes much to his work. See also pp 1351, 1381

Giovanni di Paolo (1403-83), Italian painter, one of the most influential and prolific Siennese painters of the 15th century. His ecstatic, often wistful figures have a languid grace which can be seen in the monumental altarpiece *Presentation of Christ in the Temple* (1447-49). In his later work the forms are heavier and distorted and the colours darker.

Giraffe, even-toed, hoofed, ruminant mammal that lives in the savannas of Africa; it is the tallest living mammal. It has a long neck that contains only seven vertebrae (as do the necks of most other mammals) and bears a short tufted mane. On the heads of both sexes are two to four skin-covered horns and sometimes a fifth protuberance between the eyes. The legs are long, slender and bony; in order to drink, the animal must bend or splay its forelegs. Its coat is pale brown and almost covered by characteristic red-brown blotches. Height, to 5.5m (18ft). Family Girafidae; species *Giraffa camelopardalis*. See also pp 94-95, 298-299

Giraldus Cambrensis (c.1146-1223), Welsh ecclesiastic and historian, also known as Gerald de Barri. From 1184 to 1195 he was in the service of HENRY II, despite his opposition to the Anglo-Norman control of the Welsh Church. In 1176 and again in 1199 he was nominated for, but never elected to, the bishopric of St David's, which he wished to make independent of Canterbury. His writings include *Expugnatio Hibernica* (*Conquest of Ireland*, c.1189) and *Cambriae descriptio* (*Description of Wales*, 1194).

Girard, Philippe Henri de (1775-1845), French inventor and industrialist. In 1832 he invented a machine for spinning linen thread from flax which was capable of separating long and short fibres. The machine was subsequently improved in England.

Girardon, François (1628-1715), French sculptor in a severely Classical style who worked at Versailles Palace for LOUIS XIV. His most celebrated works there are *Apollo tended by the Nymphs* (1666) and *Rape of Persephone* (1694-99).

Giraudoux, Jean (1882-1944), French novelist and dramatist who wrote a series of slight novels about adolescence. Louis Jouvet, the French director and actor, recognized the dramatic possibilities of the works. The first international successes were *Amphitryon* '38 (1929, trans. and adapted by S. N. Behrman, (1938)) and *La Guerre de Troie n'aura pas lieu* (1935, trans. as *Tiger at the Gates* by Christopher Fry, 1955).

Girders, in engineering, a main load-supporting beam. Steel or iron girders may be made of a single piece or of laminated strips built up of plates, latticework or bars. When the cross-section is formed in the shape of an I by riveting and welding plates or by rolling the girder, greater stiffness is achieved and larger spans are possible. Girders may also be made of reinforced or pre-stressed concrete.

Girl Guides, organization for girls founded in England in 1910 by Agnes Baden-Powell, sister of Lord BADEN-POWELL, founder of the BOY SCOUTS. There are about 871,000 guides in Britain, divided into three groups, according to age. Girls between 7 and 11 are eligible to become Brownie Guides; those between 10 and 16 are known as Guides, and girls between 14 and 20 are called Ranger Guides. Girl Guides subscribe to a three-fold promise of loyalty and service to God, their monarch and the Guide Law. They share their motto with the scouts: "Be Prepared". Work and play is organized under a system of patrols of some 5 to 8 girls, each under a leader.

Giro, system of receiving and paying accounts through an account with the Post Office. The practice began in 1883 in Austria, spread throughout W. Europe,

and to Japan, and reached Britain in 1968. The name derives from the Greek gyros meaning ring, since the money recycles.

Girondins, political group of the French Revolution named after legislators from Gironde. Although never an organized party, the name is associated with attempts to prevent the execution of Louis XVI, to reduce the power of Paris over the provinces and an inability to accept the consequences of a revolutionary war. After bitter personal disputes with the JACOBINS they were arrested and their leaders executed in June 1793.

Girtin, Thomas Joseph (1775-1802), British watercolour artist. His evocative use of broad washes of strong colour, offset by darker areas, ushered in the ROMANTIC revolution in watercolour landscape art developed by TURNER and CONSTABLE. See also p.1578.

Gisborne, town in the North Island of New Zealand, the chief town of East Coast. It is a port for the export of dairy products and wool. Population (1975) 12,400.

Giscard d'Estaing, Valéry. See ESTAING, VALÉRY GISCARD D'.

Giselle, Romantic ballet by VERNY de Saint Georges, Théodore Gautier and Jean Coralli with music by Adolphe Adam. The first production was in Paris in 1841 with Carlotta Grisi in the title role. Famous interpreters of the main role include Alicia Markova, Nora Kaye and Margot Fonteyn. See also p.1758.

Gish, Dorothy (1898-1968), US stage and screen star who began as a child actress and reached the height of her popularity in silent films. She appeared with her sister, Lillian, in many films, including *Hearts of the World* (1918), *Orphans of the Storm* (1921) and *Romola* (1925).

Gish, Lillian (1896-), US stage and film actress. She portrayed delicate heroines in such silent films of D. W. Griffith as *The Birth of a Nation* (1915). With MGM in the 1920s, she made films such as *The Scarlet Letter* (1926). Her sound films include *The Night of the Hunter* (1955). She has often appeared on the stage.

Giulini, Carlo Maria (1914-), Italian conductor. He was music director of Radio Italiana from 1946 to 1951. His first major appointment was principal conductor of La Scala, Milan (1951-56). From 1956 he conducted the New Philharmonia Orchestra regularly and also officiated at many operas at COVENT GARDEN.

Giulio Romano (1492-1546), Italian painter and architect. One of the founders of MANNERISM, he was Raphael's chief assistant in his youth. His later work, influenced by Michelangelo, has an exaggerated dramatic quality. He designed pornography and had to flee from Rome for Mantua, where in 1526 he began his famous Palazzo del Te.

Giza (Al-Jizah), city in N. Egypt, capital of Al-Jizah governorate. The Great Sphinx and the pyramid of Khufu (Cheops) are near the city. The University of Cairo (1924) and Egypt's film industry are to be found in Giza. A suburb of Cairo, it is a resort and agricultural centre with cotton textiles, footwear and cigarette manufacturing industries. Pop. (1974) 853,700. See also pp.1506, 1507.

Gjellerup, K. A. (1857-1919), Danish poet and novelist. His first novel, *An Idealist* (1878), was written when he turned to atheism. *Minna* (1889) and *The Pilgrim Kamanita* (1906) represent his interest in Buddhism. Other works include *The Mill* (1896) and a collection of poetry, *Rødghen* (1881). He shared with Henrik Pontoppidan the Nobel Prize for literature in 1917.

Glacial groove, deep, wide, usually straight furrow cut in the bedrock. It is caused by the abrasive action of large rock fragments dragged along the base of a moving glacier. The grooves are larger and deeper than glacial striations, ranging in size from a deep scratch to a glacial valley. See also pp.224, 225.

Glacial polish, polish on bedrock resulting from abrasion by rock flour held in the bottom of the overriding ice. See also pp.224, 225.

Glaciation, climatic and geological process in which ice sheets and glaciers advance and retreat with fluctuations in atmospheric temperature, causing topographical changes and great alterations in animal and plant populations. Glacial features of landscape include scooped-out valleys, re-directed rivers, the formation of lakes and the alteration of shorelines. See also pp.224-227.

Glacier, large mass of ice, consisting mainly of recrystallized snow, which moves slowly by CREEP downslope or outward in all directions due to the stress of its own weight. At its source there is a constant supply of snow and the glacier is broad and deep, although the flow is greatest in the centre as it is retarded by friction at the base and sides. The flow terminates where the rate of loss of ice by ABLATION is equal to the forward advance of the glacier. There are three main types: mountain or valley glaciers, piedmont glaciers and ice sheets and ice caps. See also pp.224-225, 226, 227.

Glaciology, study of ice. No longer restricted to the study of glaciers, this science deals with ice and the action of ice in all its natural forms. Glaciology, therefore, draws upon the knowledge of many other related subjects, notably physics, chemistry, geology and meteorology. See also pp.234, 235, 226-227.

Gladesville Bridge, bridge over the Parramatta River in Sydney, Australia. When completed in 1964 it was the world's longest reinforced concrete arch. It carries an eight-lane roadway and spans 305m (1,000ft). See also p.534.

Gladiators, armed men who fought, usually to the death, for public entertainment. Perhaps originally an Etruscan custom, gladiatorial combats were first recorded in Rome in 264 BC, although they may have begun as an extension of the displays of swordsmanship that were part of the funeral rites given as military honours to heroes killed on the battlefield. Later gladiators were commonly prisoners of war, slaves or condemned convicts, trained to fight one another or wild beasts in the public arenas. The gladiator who lost a battle, unless already dead, could have his life spared by a show of popular approval. Although abolished by Constantine I in AD 325, gladiatorial combats persisted into the 5th century. See also p.1229.

Gladiolus, genus of 250 species of flowering plants native to Europe and Africa but cultivated widely. A corm is planted in early spring to produce a flowering spike of funnel-shaped flowers and tall, lance-shaped leaves. Cultivated hybrid species may be almost any colour. Height to 0.91m (3ft). Family Iridaceae.

Gladsone, William Ewart (1809-98), British politician. He entered Parliament as a Tory in 1832 and served as president of the Board of Trade in Sir Robert Peel's cabinet (1843-45). He then held several cabinet posts including chancellor of the Exchequer. He joined the Liberal Party in 1859, became its leader in 1867, and was prime minister four times (1868-74, 1880-85, 1886, 1892-94). A social reformer and Christian moralist, his achievements included DISSENTMENT of the Church of Ireland (1869), the Irish Land Act (1870), the Elementary Education Act (1870), introduction of the secret ballot, the reorganization of the judiciary and a third REFORM ACT (1884). His attempts to establish IRISH HOME RULE led to his government's defeat in 1886 and 1894 and shattered the Liberal Party. See also pp.1591, 1643, 1662-1663.

Glåna, river in SE Norway, rises in the highlands of Sør-Trøndelag county and flows into the Skagerrak at Fredrikstad, its chief tributary is the River Vorma. The longest river in Norway, it has several hydroelectric stations and a timber-floating industry along its course. Length 612km (380 miles).

Glamorganshire (Morganwg), former county in S. Wales and site of the ancient Roman city of Caerion-upon-Usk. Since 1974 Glamorganshire has been divided into West, Mid and South Glamorgan and Gwent. The mountains in the

N have rich coal deposits. The fertile coastal plain has wheat and dairy farming, and on the Gower Peninsula in the sw, fruit and vegetables are grown. The region is drained by the Taff, Neath and Lawe rivers. A major industrial region of the British Isles, its chief industries are coal mining, iron and steel and tinplate. The main urban areas are Cardiff the administrative centre, Swansea, Merthyr Tydfil and Rhondda. Area 2,119sq km (818sq miles). Pop (1971) 1,202,591.

Gland, in anatomy, organ or tissue whose cells manufacture and secrete special substances. Many plants bear glands on their leaves, which secrete excess sugars, ENZYMES or sticky liquids for trapping insects. The glands of animals are of two basic types. EXOCRINE GLANDS make such substances as hydrochloric acid, mucus, sweat, sebaceous oil and enzymes, and secrete these usually through ducts to the sites of metabolic function. ENDOCRINE GLANDS contain cells that secrete HORMONES directly into the bloodstream. See also pp.154, 1076.

Glanders, or farcy, contagious disease of horses, donkeys and mules. The organism *Malleomyces mallei* enters the digestive tract, permeates the blood and the lungs and skin, resulting in nasal emissions, hardening of certain lymph glands and ulcers. Diseased animals are usually slaughtered. Infection in man can occur from exposure to the broken skin of infected animals.

Glandular fever, acute ailment usually of young people, the symptoms of which are fever, enlargement of the glands of the neck, and occasionally a rash. It is caused by a virus and is also known as infectious mononucleosis from the increase in numbers of white blood cells, particularly LYMPHOCYTES. See also p.1076.

Glaouill, Ranulf de (d.1190), English lawyer. He was chief justiciar of England 1180-89, and wrote a *Treatise on the laws and customs of the kingdom of England*, an early compilation of common law. He died on the Third CRUSADE.

Glanville-Hicks, Peggy (1912-), Australian composer who studied under VAUGHAN WILLIAMS, Nadia Boulanger and Egon Wellesz. She has written principally orchestral music, including stage works, film scores and a flute concerto. She has lived in the USA and Greece for many years.

Glaser, Donald Arthur (1926-), US physicist who in 1953 invented the BUBBLE CHAMBER and, with it, devised a new method for studying ELEMENTARY PARTICLES, for this work he was awarded the 1960 Nobel Prize in physics. The idea of the bubble chamber is reputed to have occurred to him while he contemplated a glass of beer. In 1964 Glaser became professor of physics at the university of California. See also p.839.

Glasgow, Ellen (1874-1945), US novelist. Her writing dwells on regional values, giving the South what she termed 'blood and irony' in such novels as *The Descendants* (1897), *Barren Ground* (1925), *The Romantic Comedians* (1926) and *In This Our Life* (1941, Pulitzer prize winner).

Glasgow, city in Strathclyde Region, sw central Scotland, largest city in Scotland. Located on both banks of the River Clyde 68km (42 miles) w of Edinburgh, it is a major port and industrial region. Founded in the 6th century, its commercial development came with the American tobacco trade in the 18th century and the cotton trade in the 19th century. Nearby coal fields and the Clyde estuary promoted the growth of heavy industry. It has a university (1451) and the Hunterian, a museum (1807). Industries shipbuilding, heavy engineering, flour milling, brewing, textiles, tobacco, chemicals, printing. Pop (1974) 816,265. See also pp.1472-1473, 1644, 1768-1769.

Glasgow Citizens' Theatre, theatre in Glasgow. Opened in 1943 with a performance of *The Holy Isle* by James Arncliffe, who helped to found the theatre, it was so successful that it moved in 1945 to larger premises in the Royal Princess Theatre, in the Gorbals, a working-class district of Glasgow. One of the leading Scottish

repertory companies, it pursues a policy of making theatre available to everybody with excellent productions and cheap seats.

Glasgow Orpheus Choir, Scottish choral society. It was formed in 1901 by its conductor, Sir Hugh Robertson, and was disbanded on his retirement in 1951. The choir made a specialty of singing folk songs arranged in Victorian harmonies, many of the arrangements by the conductor.

Glass, brittle and usually transparent material made by melting together silica and smaller proportions of an alkali with a base, such as lime or lead oxide. Glass melts slowly, can be worked only while hot and pliable, and must be cooled gradually to prevent strains or breakage. Fused silica is the simplest glass and is preferable when stability against changing temperatures is needed. Soda-lime glass is used in the manufacture of bottles and drinking vessels. Flint glass, which is heavy and refracts light well, is used in lenses and prisms. Glass appears to have been invented in the Eastern Mediterranean, probably Egypt, where glass objects, especially jewellery and small containers, were made c 2500 BC. Glass figurines and vessels were common in the Middle East and in Greece during the 8th and 7th centuries BC. The discovery of the process of glass-blowing probably in the 1st century BC in Syria revolutionized the glass-making industry by allowing glassware to be mass-produced in a variety of thicknesses and sizes. From the 12th to the 14th centuries Syria and Egypt had a highly developed industry producing enamel Islamic mosque lamps. During the 13th century Murano, in Venice, rose to prominence as a major centre in the making of thin, coloured glass. It was the Venetians who discovered the art of making clear crystal glass in the 16th century and immediately raised the status of glass vessels. In the late 17th century heavy, lead glass was developed in England. The process of making pressed (or moulded) glass - the greatest technical development in glass since the invention of blowing - was introduced (1826) in the USA and soon adopted elsewhere. During the 19th century E. Gallé in France and L.C. Tiffany in the USA developed cut glass and other techniques for the production of electric-light fittings and attachments in the ART NOUVEAU style. In the 20th century Scandinavia has been a leader in industrial and decorative glass design. See also pp.546-547.

Glass blowing, art of shaping molten glass by inflating it through a hollow tube or blowpipe. Glass blowing was invented by Syrian craftsmen probably in the 1st century BC. Molten glass is picked up on the end of the blowpipe, inflated to a bubble and then formed by blowing, swinging and rolling on a smooth stone or iron surface. Additions are attached by welding. The glass is reheated to maintain optimum viscosity. Intricate shapes such as glassware for chemistry laboratories, illuminated signs and works of art are blown by skilled glassblowers. Manufacture of large numbers of like pieces such as milk bottles is achieved by blowing glass into rotating moulds. See also pp.546-547.

Glass fibre, glass in the form of filaments, used widely for heat insulation (as glass wool) and with a plastic resin to make a composite material (fibreglass) for materials and repair kits. Glass fibre for these applications has short filaments made by blasting air or steam into molten glass. Continuous glass fibre of closely controlled quality, for such applications as fibre optics, is made by spinning molten glass through fine metal nozzles or spinnerets. See also p.591.

Glass fish, any of several species of deep-bodied freshwater fish of the family Ambloplitidae, found in shallow waters of N India. A favourite aquarium fish, it has an almost transparent body. Length to 5cm (2in). Genera, *Centropomus*, *Chanda*.

Glass Menagerie, *The* (1945), "memory" play in 7 scenes by Tennessee Williams. Chiefly concerned with failure and loneliness, and the most lyrical of all the

author's works, the play dramatizes the hopes and illusions of Amanda Wingfield and her lame daughter Laura. Many devices, including music and pantomime, heighten the emotion of the play, which is narrated by Tom Wingfield, a figure many identify with Williams himself.

Glass snake, or glass lizard, legless LIZARD found in North America, Eurasia and Africa. The cylindrical body has a groove along each side and is mostly brown or green, although some species are striped. Length 60-120cm (24-48in). Family Anguillidae, genus *Ophisaurus*.

Glasswort, fleshy plant found in salt marshes throughout temperate regions of the Northern Hemisphere. It has succulent stems and inconspicuous leaves and flowers. Family Chenopodiaceae, genera *Salsola* and *Salsola*.

Glastonbury, ancient and historic market town in Somerset, sw England, 35km (22 miles) sw of Bath. According to legend, it was the site of the first Christian church in England founded by Joseph of Arimathea Industries (tanning, dairying). Pop 6,600.

Glastonbury legends, many legends surrounding the ancient town of Glastonbury, England, its ruined abbey and for. According to tradition the abbey church was built by missionaries from Rome in AD 166. In 1191 the supposed grave of KING ARTHUR and GUINEVERE was found and their remains reinterred at the abbey. It is also believed that St JOSEPH OF ARIMATHEA visited Glastonbury bearing the Holy Grail, which was the object of quests by the knights of King Arthur.

Glauber, Johann Rudolf (1604-68), German chemist and physician. He made valuable contributions to chemistry, mainly concerning the preparation of salts. He prepared hydrochloric acid sodium sulphate (known as Glauber's salt) and tartaric acid.

Glauber's salt, sodium sulphate dehydrate, Na₂SO₄ · 10 H₂O, once prescribed by doctors as a purgative and diuretic. It has few uses today.

Glaucoma, eye disease characterized by increasing pressure of aqueous humour (the fluid within the eye) leading to progressive loss of vision. Its causes are unknown although heredity seems to be a factor. It occurs most frequently in persons over 40 and is accompanied by the need for frequent changes in corrective lenses, mild headache and occasionally nausea. Chronic glaucoma sets in gradually and can be arrested with drugs that permit greater outflow of aqueous humour. Acute glaucoma sets in suddenly and can lead to total permanent blindness if left untreated.

Glaze, in painting, a transparent coat of oil paint applied over other colours, thus modifying them and giving added richness to the painting. In CERAMICS, a glaze is a glass-like coating fired on to porcelain or earthenware to make it waterproof.

Glazunov, Alexander Constantinovich (1865-1936), Russian composer, in the romantic tradition of TCHAIKOVSKY. His works include eight symphonies, chamber music, two violin concertos and the ballets *Raymonda* (1897) and *The Seasons* (1898). See also p.1582.

Glebe, land attached to a parish church for the maintenance of the incumbent. It is part of the endowment of the church and the freehold is in the parson. But under common law the parson may not alienate the land without the consent of the bishop and the patron of the living. By acts of 1842 and 1858 glebe land in Britain may be let on building leases for up to 99 years and on mining leases for up to 60 years.

Glewitz, See GLIWICE.

Gleizes, Albert (Leon) (1881-1953), French painter and writer. Through his writings, he was the chief disseminator of CUBIST ideas. In 1911 he exhibited with the first Cubist group. In 1912 he and Jean Metzinger published the influential *On Cubism*. By 1919 his paintings had become religious in tone, combining Roman Catholic themes with Cubist ideas. See also p.1656.

Glencoe, massacre of (13 Feb 1692), slaughter of 38 members of the MacDo-

Glass is rolled out in a continuous process from the molten state to polished plate.

Glass blowing techniques have changed little from those of the early Syrian craftsmen.

Glass fish, the transparent bodied aquarium fish known sometimes as glass perch.

Glasswort is a plant whose ashes contain a chemical that was once used in glass making.

Glendower, Owen

Glider remain aloft by seeking out the rising currents of warm air known as thermals

Glinka's great inspiration was the folk music he heard as a child in his native province

Globigerina are protozoa whose empty shells form part of the deep sea sediment

Glow-worm, the light emitting organs of the female attract the flying male for mating

nald clan, including women and children, for the technical failure of their chief to declare allegiance to William III. The massacre was carried out by the Campbells at the instigation of the secretary of state for Scotland, John Dalrymple. Glencoe is situated in N Argyll, S Highland region, Scotland. See also p 1433

Glendower, Owen. See GLYN DWR, OWAN

Glider, aircraft with no power source of its own, which sustains flight through the controlled loss of altitude. Gliders usually have long narrow wings to provide maximum lift with minimum drag from even weak air currents. They may be launched in a variety of ways: towed by a plane, car or winch, pulled by an elastic shock cord, or pulled by a ground crew with a rope or cable attached to the front of the glider.

Gliding, unpowered flying in which a glider is launched by a sling or towed into flight by an aeroplane. Gliding depends on the same aerodynamic principles as does the flight of other fixed-wing aircraft, but it is closest to that of the soaring birds. The main difficulty in gliding is the gaining and maintenance of height. This is done in two ways: with thermals and with lift patterns. Thermals are regions of hot air that are rising in relation to the colder surrounding air. Once a glider enters a thermal the pilot may ascend in tight turning circles and heights of more than 10,000m (30,000ft) have been achieved. A lift pattern is formed when the wind blows at close to right-angles to a line of hills or a ridge, along which the glider may fly. Hang-gliding, employing a specialised 'delta' or roughly triangular shaped aerofoil (see illustration above left) became increasingly popular in the early 1980s.

Glinka, Mikhail (1804-57), Russian composer, important as the first of the nationalist school in Russian opera and the first Russian composer to receive acclaim outside his own country. His two operas *A Life for the Tsar* (1836) and *Russian and Ludmila* (1841) inspired the composers who were called the "MIGHTY FIVE". See also p 1583

Glossando, rapid playing of a scale (or a slur from one note to another with no definite intervals) on a musical instrument to give a sliding effect (from the French *glisser* - to slide). It is used principally for the trombone, piano, harp and xylophone. On the piano it is played by turning the finger over and running the finger-nail over the keys.

Gliwice, city in SW Poland on the River Klodnitz 75km (47 miles) SW of Opole. The city is the centre of the Katowice region, which produces coal and iron, and its industries include chemicals and machinery. Pop (1974) 179,900.

Globe artichoke. See ARTICHOKE

Gloeflower, perennial flowering plant native to temperate parts of the Northern Hemisphere. The yellow sepals form large blossoms and buttercup-like leaves surround the stem. The European Gloeflower (*Trollius europaeus*) has yellow or orange globular blossoms. There are about 15 species. Family Ranunculaceae.

Globigerina, genus of one-celled marine PROTOZOA whose empty shells are an important component of ocean floor ooze. The shell is spiralled into a lumpy sphere with needle-like extensions. See also FORAMINIFERA

Globular cluster, stellar cluster that is symmetrical in shape and believed to contain hundreds of thousands of stars. Globular clusters are located near the galactic nucleus and composed largely of POPULATION II stars. See also pp 994-995

Globulins, family of globular proteins that are soluble in dilute salt solutions, found in the blood serum. Some globulins serve as carriers of lipids, hormones and inorganic ions. The immunoglobulins are included in this general category. Globulins differ from ALBUMINS in that albumins are more soluble in ammonium sulphate solution. See also p 152

Glockenspiel, percussion instrument with a bell-like sound. Its name comes from the German (*Glocken* = bells, *spielen* = to play). Its tuned metal bars are struck with a hammer, either freehand or from a miniature keyboard. The word is occasionally used for a chime of bells or carillon.

tionally used for a chime of bells or carillon.

Glorious First of June (1794), British naval victory over the French. The Channel Fleet under Admiral Howe met the French fleet under Admiral Villaret de Joyeuse 690km (430 miles) W of Ushant on 28 May. After four days six French ships had been taken and one sunk. The rest of the fleet was allowed to retreat to Brest harbour.

Glorious Revolution (1688-89), the abdication of JAMES II of England, and his replacement with WILLIAM III and MARY II. After James had aroused the hostility of much of the political nation with his pro-Catholic policies, the birth of a male heir to the throne prompted seven leading statesmen to invite the Dutch William, Prince of Orange, to take the throne. He invaded England with an army in Nov 1688, and James's army, led by John Churchill, later Duke of MARLBOROUGH, defected to William's side. James fled to France in Dec 1688, and William and Mary were made joint rulers the following year. The principles of the revolution, which won its name from the fact that no blood had been shed in achieving it, were enshrined in the BILL OF RIGHTS and the DECLARATION OF RIGHTS (1689). These upheld the rule of law and the principle of toleration. The revolution was the central point of the movement towards the establishment of a constitutional monarchy. See also pp 1427, 1446

Glossitis, inflammation of the tongue. There are various causes, including infection and anaemia.

Glossolalia, speaking in tongues, or making sounds, which are usually unintelligible, made by people in a state of religious ecstasy. Pentecostal sects cite the Bible (Acts 2) for authority and there are other references in the New Testament. See also PENTECOSTAL CHURCH

Glotis, aperture less than 25mm (1in) long between the vocal cords at the lower end of the pharynx. It opens into the trachea, and its dimensions are changed by the vibration of the vocal cords.

Gloucester, county town of Gloucestershire, W England, on the River Severn, 151km (94 miles) WNW of London. Gloucester was the Roman city of Glevum and capital of Mercia in Saxon times. There is an 11th-century cathedral where Edward II is buried. Gloucester is a market town, and has agricultural machinery, aircraft components, railway equipment and fishing industries. Pop (1971) 90,134.

Gloucestershire, county in SW England. To the E are the Cotswold Hills where dairy and arable farming is important. The fertile valley of the Severn River is also devoted to dairying. To the W is the Forest of Dean and the Wye valley where sheep are raised. Industries include aircraft engineering and paper. The main towns are Gloucester, the county town, and Cheltenham. Area 2,642sq km (1,020sq miles). Pop 491,500.

Glove-box, chamber with a viewing window into which are let, and firmly sealed, rubber gloves. It is used in laboratories for handling toxic and other harmful materials, including radioactive chemicals and metals, and cultures and toxins of pathogenic microbes.

Glover, Denis (1912-), New Zealand poet. He founded the Caxton Press at Christchurch, and began publishing poetry in the 1930s. His volumes include *Cold Tongue*, *Arawata Bill*, *Sings Harry* and *Myself When Young*.

Glow-worm, small European BEETLE closely related to the firefly. The male is winged and has tiny light-producing organs. The wingless female flashes her brightly luminous hindquarters to attract a mate. Adults do not eat, but die shortly after mating. Larvae feed on snails. Family Lampyridae. Genus *Lampyrus*.

Gloxinia, herbaceous plant with short stems, native to South America. The common gloxinia (*Sinningia speciosa*) has elongated, bell-shaped flowers ranging in colour from purple to violet, sometimes with red or white variations. Family Gesneriaceae.

Glubb, Sir John Bagot (1897-), British commander of Jordan's Arab Legion, known as Glubb Pasha. After WWI he helped the British to oversee Palestine and Trans-Jordan but from 1948 he led a Palestinian force against Israeli border raids. HUSSEIN I of Jordan dismissed him in 1956 because of anti-British feeling in the Middle East.

Glucagon, protein hormone secreted by cells in the ISLETS of Langerhans. It helps regulate blood sugar blood glucose levels. See also INSULIN

Glucinum. See BERYLLIUM

Gluck, Christoph Willibald von (1714-87), German operatic composer who studied in Prague and Vienna. After composing his early operas in the Italian tradition Gluck became dissatisfied with this mannered style and in his opera *Orfeo ed Euridice* (1762) unified musical, emotional and dramatic components into a more coherent whole. This change in operatic tradition influenced, amongst others, MOZART. Gluck's finest work is thought to be *Iphigene en Tauride* (1779). See also pp 1452-1453

Glucose, colourless crystalline sugar ($C_6H_{12}O_6$) that occurs in fruit and honey. It requires no digestion before being absorbed since it is a normal component of blood. Other carbohydrates in the bodies of animals are converted to glucose before being utilized as an energy source. It is prepared commercially by the hydrolysis of starch using hydrochloric acid and is used in confectionery, tanning and pharmaceuticals. See also pp 906, 906, 908-909

Glucoside, a carbohydrate-containing compound that yields a glucose and a non-sugar component (either an alcohol or phenol) when decomposed by the process of hydrolysis. The natural glucosides are important in plant metabolism, and many polysaccharides, such as cellulose, starch and glycogen, are regarded chemically as glucosides. They may be used as drugs, colouring agents and aromatics.

Glue, traditionally a cement made by boiling down animal skin, bones, horns and hooves. It consists of a jelly of hydrolysed collagen protein mixed with many other animal substances. It dries to form a hard tough skin or film. There are many other types of glue, which range from simple mixtures of flour and water, through rubber adhesives to EPOXY RESINS.

Glutamic acid, colourless AMINO ACID, $COOH(CH_2)_2CH(NH_2)COOH$, commonly found in proteins. One of its functions is to increase the solubility of its associated proteins by providing them with one negative charge. It also helps in the removal of poisonous ammonia from the body. Its sodium salt (sodium glutamate) is used as a food flavouring. See also GLUTAMINE, p 907

Glutamine, colourless soluble AMINO ACID, $COOHCH(NH_2)(CH_2)_2CONH_2$. It is formed when one of the acidic carboxy groups of GLUTAMIC ACID couples with ammonia, a poison to the body, which is carried safely to the liver where it is converted to urea.

Gluten, protein substance present in wheat flour, grey in colour and elastic in texture. Gluten contributes the elasticity to dough. Being insoluble in water, it can be washed out of flour. It is then used to make gluten bread for diabetics, and as an additive to chocolate and coffee.

Glycerin, glycerine or glycerol (1, 2, 3 propanetriol), thick syrupy sweet liquid ($CH_2OHCHOHCH_2OH$) obtained by the saponification of fats and oils in the manufacture of soap or from propylene or acrolein. It is used in the manufacture of various products including plastics, explosives, cosmetics, foods, antifreeze and paper coating. Properties: s.g. 1.26, m.p. 18°C (64.4°F), b.p. 290°C (554°F). See also pp 906, 906.

Glycine, colourless soluble crystalline AMINO ACID (NH_2CH_2COOH), the principal amino acid in sugarcane and the simplest, structurally, of the alpha-amino acids.

Glycogen, also known as animal starch, the carbohydrate stored in the body, principally by the liver and the muscles.

Like starch and cellulose it is a polymer of glucose. When the body needs energy, glycogen is broken down to glucose, which is further metabolised to carbon dioxide, water and ADENOSINE TRIPHOSPHATE (ATP) (a source of chemical energy). See also pp 162, 911

Glycol, or diol alcohol containing two hydroxyl groups. The simplest is ethylene glycol, or ethane diol, $C_2H_4(OH)_2$, a viscous liquid used in plastics, antifreeze and artificial fibres.

Glycosuria, excretion of an abnormally large amount of sugar in urine. It is found in disorders such as diabetes.

Glyn, Eleanor (1865–1943), British writer, b Jersey, Channel Islands. She shocked contemporary society with the publication, in 1907, of *Three Weeks*, a novel of a torrid love affair. The resulting notoriety prevented critics giving her later works serious consideration. These included *The Career of Catherine Bush* (1917) and *Man and Maid* (1927).

Glyndebourne, estate in East Sussex, England, and the home of the famous annual festival of opera. John Christie, who once owned the estate and its Elizabethan house, built a theatre for opera there after marrying Audrey Mildmay in 1931. The first performance of Glyndebourne Opera took place in 1934, the festival is of international standard.

Glyn Dwr Owain (Glendower, Owen) (c 1359–c 1416), Welsh leader. He was a member of the house of Powys, and led a revolt against English rule in 1400. He was proclaimed Prince of Wales, won temporary alliances with the Mortimer and Percy families in England, and captured Harlech and Aberystwyth castles. He lost both castles by 1409, and retreated to the hills where he carried on a guerrilla war against the English until 1412. See also p 1319.

Glyn Dwr Rebellion, Welsh revolt against English rule led by Owain Glyn Dwr (Owen Glendower). It began in Wales in 1400 and by 1403 had spread across the principality. In 1404 Owain declared himself Prince of Wales and summoned a parliament. But by 1409 he had lost control and the revolt withered. See also pp 1318–1319.

Glyptodont, extinct edentate South American mammal, and the Pleistocene representative of the ARMADILLO family. Its bones have occasionally been found associated with those of human beings. It was up to 3m (10ft) long, with a broad body armoured with tough plates and a stout, clubbed tail. See also p 285.

GMT (Greenwich Mean Time), the local time at Greenwich, London, situated on the PRIME MERIDIAN. It has been used as the basis for calculating standard time in various parts of the world since 1884. GMT corresponds with local time in England during the winter months. British Summer Time (BST) is one hour ahead of GMT. See also p 1964.

Gnagi, Rudolf, (1917–), Swiss lawyer and politician. A member of the Farmers' Tradesmen's and Burgers' Party of Berne, he became a member of the National Council in 1953, a member of the Federal Council in 1966 and in both 1971 and 1976 he was President of the Swiss Confederation.

Gnat, common name for several small flies, mainly of the family Culicidae, the female of which bites human beings. The term is also used to refer to MOSQUITOES, MIDGES and biting midges.

Gneissau, August Wilhelm Anton Graf Neithardt von (1760–1831), Prussian Field-marshal. After the Prussian defeat by NAPOLEON at Jena (1806), he played a major role in the reorganization of the army with Gerhard von Scharnhorst and Hermann von Boyen. Chief of staff to Marshal Blücher, he devised the strategy that defeated Napoleon in the Wars of Liberation.

Gneiss, general term that describes a coarse-grained rock, laminated with minerals and largely recrystallized, but which lacks the breaking pattern of schist. It is formed by metamorphic processes from igneous or sedimentary rocks. See also pp 210–211.

Gnetales, primitive seed plants of the GYMNOSPERM order, having some feeding and reproductive qualities of ANGIOSPERMS.

Gnome, in western folklore, a subterranean dwarf or goblin who guards mines or hidden treasure, commonly depicted as a small, deformed (often hunch-backed) creature resembling a wizened old man. Gob, traditionally the king of gnomes, ruled with a magic sword.

Gnosticism, religious movement including numerous sects, widespread by the 2nd century AD. Its creed of occult philosophy promised salvation in the form of escape from the powers of evil for its followers alone. The sects incorporated many tenets of Christianity, in which at one time Gnosticism represented a serious competitor.

GNP. See GROSS NATIONAL PRODUCT.

Gnu, or wildebeest, large, ox-like African ANTELOPE. The white-tufted gnu (*Connochaetes gnou*) is almost extinct, except for a few protected herds in s Africa. The brindled gnu (*Connochaetes taurinus*) lives in e and s Africa. It has a massive, buffalo-like head and horns, and a slender body. Both sexes are horned. The brindled gnu is silver with brownish bands and black neck, face and shoulder mane. Length up to 2.4m (7.8ft), height 1.3m (4ft), weight up to 275kg (606lb). Family Bovidae.

Go, board game of oriental origin for two players. On a board consisting of 361 intersections, 181 black and 180 white stones are alternately placed one at a time with the object of encircling the opponent's pieces and territory.

Goa, former Portuguese colony in sw India on the Arabian Sea. It was seized by India in 1962 and is now part of a self-governing union territory with Daman and Diu. Its products include rice, cashews and spices. Pop. (1971) 857,180.

Goajiro, tribe of Arawak-speaking South American Indians that live on the Goajira Peninsula in w Colombia. A nomadic, cattle-raising people, they are one of the most numerous tribes of n South America with a population of between 30,000 and 50,000, according to recent estimates.

Goat, horned ruminant raised mainly for milk, meat, leather, and hairs. They are closely related to sheep and are brown or grey in colour. The male is a ram or billy, the female a doe or nanny and the young a kid. Wild species are generally nomadic in rugged mountains. The gestation period is five months and usually two young are born. The five species include the ibex (*Capra ibex*), markhor (*Capra falconeri*) and the pasang (*Capra aegagrus*), which is thought to be a forerunner of many domestic breeds. Length to 1.4m (4.5ft), height to 0.85m (2.8ft). Family Bovidae, genus *Capra*. See also pp 320, 321, 731.

Goatfish, or red mullet, or surmullet, any of 55 species of marine fish found in tropical and temperate inshore, shallow waters. Goatfish are elongated, brilliantly coloured fish, with forked tails and long, fleshy whiskers. Length up to 60cm (24in). Family Mullidae, species include one British, *Mullus surmuletus*.

Goatsucker, common name for various large-mouthed, nocturnal birds of the order Caprimulgiformes. They are widely distributed in warm areas and include the PROGNATH, nighthawk, nightjar, potoo and whippoorwill. They fly with their bristly mouths agape, to catch insects. They lay one to four whitish eggs, on bare ground or a heap of leaves. Length 15–30cm (6–12in). Family Caprimulgidae. See also p 73.

Gobat, Charles Albert (1843–1914), Swiss lawyer and philanthropist who played an active role in Swiss politics. He was director of the Bureau International Permanent de la Paix and was awarded the Nobel Peace Prize with Élie DUROUJON in 1902.

Gobbie, Tito (1915–), Italian baritone. Since his debut in Rome in 1938 in *La Traviata*, he has sung in all the famous opera houses. Particularly admired as an interpreter of VERDI and PUCCHINI, his powerful acting ability has also been

highly acclaimed. He has also produced operas, his first being *Simon Boccanegra* at Covent Garden (1965).

Gobelins, Manufacture nationale des, state-controlled TAPESTRY factory in Paris, founded c 1440 by Jean Gobelins as a dye-works and converted in 1601 to a tapestry works. In 1662 Louis XIV bought the premises to create a royal tapestry and furniture works. From 1697 the Gobelins specialized in tapestry, producing in the late 17th and the 18th century panels of unrivalled perfection. Famous examples include a set of tapestries based on RAPHAEL's frescoes in the Vatican and 14 great panels commemorating Louis XIV. **Gobi** (Sha-moh), large desert area in central Asia, extending over much of Mongolia and the n part of China, one of the world's largest deserts. It is a plateau region, 910 to 1,520m (3,000–5,000ft) high, and most of the topsoil has been removed by the prevailing north-westerly winds. The desert fringes are grassy and these areas are inhabited by nomadic Mongolian tribes who rear sheep and goats. The desert has cold winters and hot summers, and fierce winds and sand storms are common. Rainfall is intermittent and often in the form of cloudbursts. The desert is crossed by a highway and the Trans-Mongolian railway. Area, approx 1,295,000sq km (500,000sq miles).

Goblin, in western folklore, a sprite who lives in a grotto, but sums its mischief and malice at human beings and their households. Traditionally it creates noise and disturbance and moves objects and furniture at night, only to run away unseen. It is generally depicted as a small figure with pointed ears, large feet and a mischievous smile.

Goby, marine and occasionally freshwater fish found in tropical and temperate inshore waters or around coral reefs. Gobies are brightly coloured and have a suction area, formed from fused pelvic fins, on the front of the body which is used to hang on to underwater surfaces. Length, 1–10cm (0.5–4in). Family Gobiidae, species 700, including the neon goby, *Elacatinus oceanops*. See also p 63.

God, name given in many religions to the creator and mover of the universe, in others to a variety of supernatural beings. JUDAISM, CHRISTIANITY and ISLAM are monotheistic religions, holding that there is one God. In HINDUISM, BRAHMA is considered the soul of the world, but there are lesser gods. In polytheistic religions, such as those of ancient Greece and Rome, there are many gods and goddesses. Sceptics doubt the existence of any god. See also AGNOSTICISM, ALLAH, ATHEISM, BUDDHISM, DEISM, YAHWEH, ZEUS.

Goddard, Jean-Luc, (1930–), French film director whose innovative flair revolutionized film-making. He has produced one of the most creditable science-fiction films to date – *Alphaville* (1965). His political sketches have transformed film as propaganda as in *Weekend* (1968) and *Tout va bien* (1972). Goddard also made fine thrillers, such as *Breathless* (1959), with Jean Paul Belmondo, and *Made in USA* (1966). Sophisticated and erudite, his films do not have widespread appeal.

Godavari, river in central India which rises in the Western Ghats and flows se across the Deccan to the Bay of Bengal, se of Rajahmundry. Its waters supply hydroelectric power and irrigation schemes. Sacred to the Hindus, there are many pilgrimage centres along its banks. Length 1,450km (900 miles).

Goddard, Paulette (1911–) US film actress, real name Marian Levee. She worked on the New York stage before rising to stardom in Charlie CHAPLIN's film *Modern Times* (1936). Between 1933 and 1942 she was married to Chaplin. She was at the height of her fame in the 1940s, appearing in 20 films between 1940 and 1950. These included *The Great Dictator* (1940), *Diary of a Chambermaid* (1946) and *An Ideal Husband* (1947).

Goddard, Robert Hutchings (1882–1945) US physicist and pioneer in rocket development. He developed and launched (1926) the first liquid-fuelled rocket, developed the first smokeless powder roc-

Glyndebourne opera-goers stroll out onto the lawns of the estate to relax between acts

Gnus gallop in a wild extravagant manner, tossing their heads and kicking back

Go is an ancient oriental board game which is currently enjoying renewed popularity

Goatfish include some highly-prized food species, the most popular is the red mullet

Godden, Rumer

Lady Godiva's ride was commemorated in an annual fair in Coventry until 1828

Goebbels used his intellectual powers to dignify the philosophy of National Socialism

Goethe, universal genius whose greatness lay in interpreting the human character

Gogol has been likened to Dickens in the way he presents characters of force and truth

ket and the first automatic steering for rockets. See also pp 1022, 1026

Godden, Rumer (1907-). British novelist. She spent much of her childhood and later life in India, as reflected in her novels *Black Narcissus* (1939), *The River* (1946, filmed 1951 by Jean Renoir) and *Kingfishers Catch Fire* (1953).

Gödel, Kurt (1906-78), US logician, b Czechoslovakia. In 1931 he published the theorem named after him. By uniquely numbering each statement in his Consistency Theorem he proved that in any formal system that can be dealt with using NUMBER THEORY there exist true propositions that cannot be proved within the system. The implication is that the whole of human knowledge can never be systematized within one axiomatic system. Gödel emigrated to the USA in 1940.

Goderich, Frederick John Robinson, Viscount, later 1st Earl of Ripon (1782-1859), British politician. He entered the House of Commons in 1806 and was President of the Board of Trade (1818-23) and Chancellor of the Exchequer (1823-27). He was Prime Minister for five months in 1827-28. He was later a minister in Lord GREY's Whig government (1830-34), becoming Earl of Ripon in 1833, and in Robert PEEL's Conservative government (1841-46).

Godfather, The, (1969), bestselling novel by Mario PUZO, which was later made into two successful films (1971 and 1974) directed by Francis Ford Coppola. It is the story of a young Italian migrant's rise in the competitive world of us crime. Don Corleone's son, Michael (played in the films by AL PACINO), establishes their family as supreme among the us Mafia, and then channels their ill-gotten gains into other legitimate enterprises. See also p 620.

Godfrey of Bouillon (c 1060-1100), French leader in the First CRUSADE (1096). Having sold his possessions to raise an army, Godfrey led about 3,000-4,000 Germans to Palestine. His troops were the first to enter Jerusalem in 1099. He was offered the throne of the city, but out of piety took instead the title Defender of the Holy Sepulchre. Later, in legend, Godfrey was portrayed as the ideal Christian knight.

Godiva, Lady (d c 1080), English benefactress, wife of Leofric, Earl of Mercia. According to tradition she rode naked through the streets of Coventry in 1040 to obtain the people's relief from taxation by her husband. She founded endowed monasteries at Coventry and Stow.

Godley, John Robert (1814-61), Irish colonizer. He went to New Zealand as a director of the New Zealand Company in the 1850s and stayed there until the granting of self-government in 1852.

Godolphin, Sidney Godolphin, 1st Earl of (1645-1712), English politician. Secretary of State (1684) under James II, he regained office under William III (1688-96) but maintained secret contact with James. As Lord Treasurer (1702-10), he helped finance the military campaigns of the Duke of MARLBOROUGH. A public servant rather than a party politician he was ousted from power in 1710 as party strife became more extreme.

God Save the King/Queen. See NATIONAL ANTHEMS.

Godthåb, capital city of Greenland, at the mouth of a group of fjords on the sw coast. Founded in 1721, it is the oldest Danish settlement in Greenland. Industries: fishing and fish processing, scientific research. Pop. 7,000.

Godunov, Boris. See BORIS GODUNOV.

Godwin, Earl of Wessex (d 1053), English noble. He aided the accession of Edward the Confessor in 1042. Edward later married Godwin's daughter, Edith. He was outlawed in 1051, but landed in England in 1052 and forced the king to restore him to power. He was the father of King HAROLD. See also pp 1300, 1300.

Godwin, William (1756-1836), British political philosopher, husband of Mary WOLLSTONECRAFT and father of Mary SHELLEY. A dissenting minister for five years, he subsequently became an atheist and anarchist. His belief in the power of

man's reason is expressed in *Enquiry concerning Political Justice* (1793) and in the novels *Caleb Williams* (1794) and *St Leon* (1799).

Godwin-Austen. See K2.

Godwit, large wading bird with long slender bill, related to the SANDPIPER and SNipe. Nesting on grassland or tundra, it breeds noisily and usually lays four greenish eggs. Godwits feed on insects and their larvae, worms, fish, tadpoles and water snails. Length 43cm (17in). Family Scolopacidae, genus *Limosa*.

Goebbels, Joseph (1897-1945), German Nazi leader. He joined the Nazi party in 1924 and worked with Gregor STRASSER leader of the left wing of the party. Changing loyalty to HITLER in 1926, Goebbels founded the newspaper *Der Angriff* and became the leading Nazi propagandist. He was elected to the Reichstag in 1928, and when the Nazis came to power in 1933 became Minister of Propaganda. As such he ruled much of Germany's cultural life. He was a brilliant orator and a masterful propagandist. He committed suicide with his entire family in April 1945. See also p 1857.

Goebe, Alexander (1932-), British composer who studied under MESSIAEN in Paris. He has written an opera, *Arden Must Die* (1967), a piece of "music theatre", *Naboth's Vineyard* (1968), a symphony, a violin concerto and several cantatas. He was appointed Professor of Music and Fellow of Trinity College Cambridge, in 1976.

Goerdeler, Karl Friedrich (1884-1945), German rightist politician, who served as mayor of Leipzig until 1937. He opposed HITLER and planned a takeover with other German leaders which led to an attempt to assassinate Hitler in 1944, for which Goerdeler was hanged.

Goering, Hermann Wilhelm (1893-1946), German Nazi leader. A flying ace in WWI, he then joined the Nazi party. Elected to the Reichstag in 1928, he became its President in 1932. Under the Nazis he became Minister for Aviation and Minister of the Interior in Prussia, where he founded the GESTAPO. As virtual creator of the German air force, he enjoyed great prestige at the start of WWI but its defeat discredited him. Sentenced to death at the NUREMBERG TRIALS, he committed suicide. See also p 1710.

Goes, Hugo van der (fl c 1440-82), Flemish painter. His *Portrait of a Man* in Florence, combining realism and monumentality, influenced many Italian painters. He created a popular art in which he introduced lower-class types and greater individuality in figures. His later religious paintings, executed after he had gone mad, are dramatic, powerful and disturbing. See also p 1341.

Goethe, Johann Wolfgang von (1749-1832), German poet. One of the greatest German writers and thinkers, his range was vast from simple love poems to profound philosophical poems or scientific theories. In his long life he was lawyer, botanist, politician and civil servant, physicist, zoologist, painter and theatre manager. Johann Gottfried von HERDER taught him to appreciate SHAKESPEARE and this influenced his *Goitz von Berlichingen* (1771-73). His major works include *The Sorrows of Young Werther* (1774), a novel *Italian Journey* (1816-29), the classical drama *Iphigenie auf Tauris* (1777), *Torquato Tasso* (1789), *Ermioni* (1787), *Wilhelm Meisters Lehrjahre* (1795-96), *Elective Affinities* (1808) and his most famous work, *Faust* (1808, 1832). See also pp 1466, 1549, 1575-1577.

Goethite, hydroxide mineral, iron oxyhydroxide $FeO(OH)$. It is found in secondary oxidized deposits with orthorhombic system slender plates and velvety needles. It also occurs in a massive fibrous form with uniform surfaces. It is black, brilliant and earthy. Hardness 5-5.5, sg. 3.3 to 4.3.

Gog and Magog, in REVELATION, two powers that make war on Christ's Kingdom. In Ezekiel Gog, a prince of the land of Magog, leads an assault on Israel. In British legend they were giants chained to a palace on the site of London's Guildhall.

Gogarty, Oliver St John (1878-1957), Irish poet, man of letters and physician. His friend James Joyce depicted him as Buck Mulligan in *Ulysses*. He was also a friend of W B YEATS, A E (pseudonym of George RUSSELL), Lady GREGORY and other figures in the Irish literary renaissance, and served in the parliament of the Irish Free State (1922-36). As *I was going down Sackville Street* (1936), an autobiographical volume, exhibits his racy wit.

Gogh, Vincent van (1853-90), Dutch painter, a leading most IMPRESSIONIST and a formative influence on modern art, especially on MUNCH and the EXPRESSIONISTS. During his brief and turbulent life he sold only one painting. He began to paint in 1880 and was virtually self-taught, with only occasional tuition. His early works were often sombre pictures of peasants, eg *The Potato Eaters*. In 1886 he left Holland for Paris, where he met GAUGUIN, SEURAT and other leading painters. His work underwent a transformation: he adopted the light, colourful IMPRESSIONIST palette and painted flowers, portraits and Parisian views. Two years later he went to Arles, in Provence, where most of the paintings for which he is remembered were painted, in a frenzy of prolific activity interspersed with bouts of mental illness and depression which ended in suicide. The paintings of these final two years were his most exalted.

executed with heavy brushwork in heightened, flame-like colour, with passionate expression of light and emotion and with evident influence of Japanese colour prints. To this period belong his sunflower paintings, *Cypresses by Moonlight*, *The Bridge at Arles*, *The Night Cafe* and the swirling *Starry Night*. See also p 1654.

Gogol, Nikolai (1809-52), Russian novelist and dramatist whose work marks the transition from Romanticism to early Realism. He made his reputation with fables, such as *Taras Bulba* (1835), the stories *Diary of a Madman* (1835) and *The Nose* (1835), and the drama *The Inspector General* (1836), which already show his grotesque satirical style. Disinclined by reactionary criticism, he turned to religion for spiritual support and moved mostly in Rome from 1836 to 1848. Here he wrote the first part of his major work *Dead Souls* (1842) and the story *The Overcoat* (1842). The second part of *Dead Souls* was destroyed before publication. See also p 1575.

Goiania, city in SE central Brazil, capital of Goiás state. A modern planned city, it is a distribution and processing centre for a cattle-rearing region. It has a federal university (1964). Pop. (1970) 362,152. **Goiás**, state in central Brazil, the capital is Goiânia. A plateau region of scrubland and semi-desert, it is largely undeveloped. Settled by emigrants from São Paulo in the 17th century, its mineral deposits, mainly industrial diamonds, are now somewhat depleted and cattle grazing is the chief occupation. There is some grain cultivation in the s. The new national capital of Brasília is located in the centre and has improved the state's economy. Area 642,092sq km (247,912sq miles). Pop. (1970) 2,989,414.

Goings, Sid (1943-), New Zealand rugby union player from North Auckland. A strongly-built scrum-half of Maori birth, he played 29 times for the All Blacks (1967-77). His aggressive bursts around the scrum produced many tries. **Goitre**, enlargement of the THYROID gland accompanied by swelling at the front of the neck. Caused most frequently by iodine deficiency, it is occasionally accompanied by hypothyroidism or, in areas where goitre is endemic, by CRETINISM in children. The usual treatment is to increase intake of iodides; hormone therapy or surgery is rare. See also pp 163, 1076.

Go-karting, also called karting, the cheapest and simplest form of motor sport, which accounts for its almost universal appeal. It began in 1956 when a Los Angeles mechanic, Art Ingels, put a motor-mower engine on a small tubular frame construction with 13 cm (5in) wheels. By 1958 competition rules had

been formulated. Classifications are standardized, but constructions vary from simple ladder-shaped frames to complicated multi-tubular affairs. Bodywork is forbidden. Karts are usually powered by single cylinder two-stroke engines with capacities of 100, 200 or 250cc, yet they can attain speeds in excess of 160km/h (100mph). Large capacity karts require a 2000cc. Races vary in length with 8km (5 miles) the maximum for shorter races and there are also 6, 9, and even 24-hour events.

Golden Heights (Ramat Ha Zevan) disputed region in SW Syria. During the six-day ARAB-ISRAELI WAR (1967) Israelis occupied the area and later colonized it. It was subsequently rejected by the United Nations peace plan (Nov. 1967), and broke off diplomatic ties with Britain and the USA. Sporadic fighting between Syria and Israel has continued, although a disengagement agreement was signed in 1974. See also pp 1782, 1783.

Goiconda, ruined town and fortress in S India. It was part of the Bahamani kingdom c. 1474-1512, and capital of the Muslim sultanate of Goiconda 1512-1687. It was conquered by AURIANGZEB in 1687. The city was famous for its diamond mines.

Gold, metallic element (symbol Au) of the third transition series, known from earliest times. The metal occurs naturally; some gold is also obtained as a by-product in the electrolytic refining of copper. It is used in jewellery and as a monetary standard. Gold leaf can be made as thin as 0.0001mm. Colloidal gold is sometimes used in colouring glass. The isotope Au-197 (half-life 2.7 days) is used in radiotherapy. The metal is unreactive, being unaffected by oxygen and common acids. It dissolves in aqua regia. Properties: atomic wt 196.9665, s.g. 19.30, m.p. 1063°C (1945°F), b.p. 2800°C (5072°F), most common isotope Au-197 (100%). See also pp 232, 232, 258, 259, 410, 411.

Goldberger, Joseph (1874-1979), US doctor who proved that pellagra was due to a lack of meat and milk in the diet. These two foods are the main sources of vitamin B. His proof involved denying them to prison inmates who subsequently fell ill with pellagra. He also studied yellow fever and typhus.

Gold Coast, former British colony on the west coast of Africa, now GHANA. The Portuguese began trading there in the 1480s. Britain organized control of the coastal region in 1874, and after defeating the ASANTE in 1901, annexed the inland kingdom. It became independent GHANA in 1957. See also pp 1608, 1702, 1703, 1702, 1703.

Goldcrest, smallest British bird. Its head is capped with bright yellow and orange and a black stripe. Its body is olive green and its wings are black with a white stripe. It is related to the Old World warblers. Length about 8 cm (3 in). Family Muscicapidae, species *Regulus regulus*.

Golden Age, The, mythical period believed in classical times to have been the original state of the world. It was a time of innocence when men lived in peace and harmony with each other and with nature. The term has since been used to describe the flourishing years of any group or civilization.

Golden Ass, The, or *Metamorphoses* (2nd century AD) prose work by Lucius APULEIUS. In 11 books it recounts the adventures of Lucius of Patras, who is transformed into an ass and undergoes initiation into the mysteries of Isis and Osiris before he regains his human form. It is the only novel in Latin to survive intact.

Golden Bough, The, (1890-1915), a study of cultural anthropology by Sir James FRASER. He took as the starting point for this mammoth 12-volume investigation of primitive practices and superstitions the mythical Golden Bough in the grove of Demeter at Eleusis in Italy, which could be obtained only by killing its guardian priest and assuming that sacred post, and showed how it exemplified the development of an incarnate deity. He then exhibited his phenomenally comprehensive knowledge, by comparing and contrasting it with similar customs and

concepts from all parts of the world and all periods of history. An abridged one-volume edition of his life's work was published in 1922.

Golden Bowl, The, last long novel of Henry JAMES, published in 1904. It is a treatment of his favourite theme of American innocence exposed to the corruption of the Old World society.

Golden-brown algae, group of mostly microscopic, primarily freshwater plants (division Chrysophyta). The best known members of the group are the tiny single-celled diatoms, common among both salt and freshwater plankton. All members contain characteristic yellow-brown pigments and lack chlorophyll B.

Golden Calf, according to the Old Testament, an idol fashioned by Aaron while Moses was on Mt Sinai. The Israelites were punished with a plague for worshipping the idol.

Golden eagle, Common type of eagle. **Golden fleece**, in Greek myth, fleece of the winged ram who saved Helle and Phrixus from the step-mother Ino. While the ram flew to Colchis, Helle fell into the sea (henceforth called the Hellespont). After arriving Phrixus killed the ram (which became the constellation Aries) and hung the fleece in a wood guarded by a dragon. See also JASON.

Golden Gate, strait linking the Pacific Ocean and San Francisco Bay on the coast of California, USA. It is believed to have been sighted in 1579 by Sir Francis DRAKE but the first landing was made in 1769 by Francisco de Ortega. It is spanned by the Golden Gate Bridge, completed in 1937. Length 8 km (5 miles), width 1.5 to 3 km (1 to 2 miles).

Golden Hind, flagship of Sir Francis DRAKE on his circumnavigation of the globe (1577-80). It was renamed (from *The Pelican*) after the promoter of the voyage, Sir Christopher HARRIS, whose crest showed a hind standing on gold.

Golden Horde, a Mongol empire that included most of Russia, also known as the Kipchak Khanate. The lands were given by GENGIS KHAN to his eldest son, Juchi, but were not actually conquered and ruled until the invasion of Russia by Juchi's son Batu Khan in the mid 13th century. The empire was conquered by TAMERLANE and after his death (1405) split into several khanates.

Golden mean, or *golden section*, Classical ratio created when a line is divided into two parts in such a way that the ratio of the shorter to the longer is as the longer to the whole, i.e. $b(a+b)$ where a is the line's length. The astronomer PTOLEMY relates to the golden mean, and it was cited by the Roman historian VITRUVIUS as the basis of proportion in Classical Greek architecture. The modern architect LE CORBUSIER based his "modulor" on the golden mean. See also p. 777.

Golden mole, blind burrowing mammal found in Africa's of the Sahara Desert. It has two pick-like claws on each front paw and a leathery padded snout for pushing through soil. It feeds on worms and other small invertebrates. Length 8-23 cm (3-9 in). Family Chrysochloridae.

Golden retriever, hunting dog (sporting group) bred in Scotland in the 19th century for water and land bird retrieving. Ruggedly built, it has a broad head and rectangular muzzle, short, rounded ears hanging flat, a shortish body, medium-length legs, and a straight tail. The flat coat may be straight or wavy with a ruff at the neck and feathering on the legs and tail. Its colour is golden. Average height 58 cm (23 in) at the shoulder, weight 25-33 kg (55-70 lb). See also SPORTING DOGS.

Goldenrod, any of numerous species of mainly North American perennial herbs that grow almost everywhere. They have small yellow (sometimes white) flowers in one-sided clusters and they bloom in late summer. Height 1.5-2.2 m (4-9 ft). Family Compositae, genus *Solidago*.

Golden Rose, rose-shaped ornament of gold inlaid with gemstones. It is blessed by the pope each fourth Sunday in Lent and later presented to a notable individual or group of people.

Golden wattle, shrub or small tree native to Australia. Its yellow flowers grow in clusters. The wattle is one of the unofficial national symbols of Australia. Height up to 9m (29ft). Family Leguminosae, species *Acacia longifolia*.

Goldlode, Abraham (1840-1908), Ukrainian playwright regarded as one of the founders of the Yiddish theatre. He toured Europe and the USA and settled in New York City in 1903. He wrote such dramas as *Shulamit*, *Bar Kokhba* and *Di Kishinimacher*, which are classics of the Yiddish stage.

Goldfinch, small seed-eating, sparrow-like bird that frequents woods and cultivated areas in Britain and Europe. It usually lives in flocks, and lays bluish-white eggs (3-6) in a cup-shaped nest. The red-faced European goldfinch (*Carduelis carduelis*) has a brownish body with yellow and black wings. Family Fringillidae.

Goldfish, freshwater aquarium fish. In China, probably the most popular of all aquarium fish, it was domesticated by the Chinese about 1,000 years ago. The wild form of this hardy, adaptable fish is plain and brownish, but selective breeding has produced a bewildering variety of colours: gold and variegated red, yellow, blue, white, and black forms with flowing fins including the pearlfish, blackmoor, lionhead, comet, eggfish and koi carp. Family Cyprinidae, species *Carassius auratus*.

Goldie, Charles Frederick (1870-1947), New Zealand painter, well known for his Maori portraits and scenes of Maori stories, such as *The Arrival of the Maori*.

Golding, William (1911-), British novelist. His books are complex parables of the human condition with symbolic overtones; they include *Lord of the Flies*. Won the Booker Prize for his novel *Rights of Passage* in 1980.

Goldmark, Peter Carl (1906-1977), US scientist at Hungary. He demonstrated (1940) a colour TV system he had devised and developed the first system to find commercial acceptance. In the late 1940s he invented the 33 1/3 record and later developed an electronic video recorder, used as an educational aid and a system that enabled photographs to be transmitted from space to Earth.

Goldmark, Rubin (1872-1936), US pianist and teacher of composition. A pupil of Sibelius, he taught George Gershwin and Aaron Copland.

Goldini, Carlo (1707-93), prolific Italian dramatist. He substituted written comedy for the traditional commedia dell'arte improvisations. Called the monarch of Italy, Goldini ridiculed the aristocrats and endowed women characters with spirited independence. His most famous play is *La Cenerentola* (1753).

Gold rush, series of dramatic influxes of population following the reports of the discovery of gold. The largest such rush was in 1848-49 when more than 40,000 prospectors went to California, few of whom found gold. The rush was important in that it influenced the entry of California into the USA in 1850. Many prospectors went from there to Australia in 1851-53. There were also gold rushes to the Witwatersrand, South Africa, in 1886 and to the Klondike, Canada, in 1897-98. See also p. 1627.

Goldsmith, Oliver (1730-74), Irish poet, novelist, dramatist and dramatist. His works include the essay *The Citizen of the World* (1762), the poems *The Traveller* (1764) and *The Deserted Village* (1770), and the novel *The Vicar of Wakefield* (1763). His play *She Stoops to Conquer* (1773). Goldsmith satirized the literary pendency of his day and sought to achieve a naturalness in his own work. See also p. 1166.

Goldsmith, Oliver (1794-1864), Canadian poet. A great-nephew of the Irish poet of the same name, he wrote *The Rising Village* (1825).

Gold standard, monetary system in which the gold value of currency is set at a fixed rate and currencies are convertible into its gold equivalent on demand. It was adopted by Britain in 1821, by France, Germany and most countries in Europe in the 1870s and by most of the rest of the

Golden mean, this irrational proportion was once thought to hold some mystic power

Golden mole, its two pick-like claws are well adapted to digging in the hard, cool soil

Goldenrods grow up to nearly 3m tall, with clusters of numerous bright yellow flowers

Goldfish which escape back to the wild tend to revert to their original brownish colour

Goldwyn, Samuel

Golf balls were originally made of leather and stuffed with boiled goose feathers.

Camillo Golgi made important discoveries in anatomy and the causes of mental disease.

Goncourt brothers, many of their novels have a fragmentary quality.

Goniometers are of three kinds, the contact (illustrated), the reflecting and the X-ray.

world before the 1890s. Internationally it produced nearly fixed exchange rates. It was intended to work so that a large flow of gold out of a country would automatically set in motion a series of correctives. An outflow of gold, by reducing the money supply, would force up interest rates, thus attracting back to the country capital investment in search of high returns, and correcting the original imbalance that had produced the outflow. The intended effects were never satisfactorily realized. When the depression produced falling demand without a proportionate fall in wages and prices, countries were forced to depreciate their exchange rate in an attempt to foster trade. By the mid-1930s all countries had followed Britain's lead (1931) and abandoned the gold standard.

Goldwyn, Samuel (1882-1974), US film producer, real name Samuel Goldfish b Poland. He was noted for his commercially successful films, including one of the first feature films, *The Squaw Man* (1913), *Wuthering Heights* (1939), *The Little Foxes* (1941), *The Best Years of Our Lives* (1946), *Guys and Dolls* (1955), and *Porgy and Bess* (1959). He formed Goldwyn Pictures in 1917 and later merged with Louis B. Mayer to form Metro-Goldwyn-Mayer (1924).

Golf, sport played with a ball and clubs with the object of hitting the small, hard ball from the starting point (the tee) into a distant hole in the fewest number of strokes. The course is usually more than 5,450m (17,880ft) long and divided into 18 holes that may vary from 90-595m (295-1,952ft) from tee to putting green—the short, smooth grass in which the holes are sited. Competition may be over 18, 36, 54 or 72 holes and the winner decided by the lowest total of strokes (stroke play) or the most holes won (match play). The area between the tee and green, the mown fairway, can contain such hazards as ponds or streams and be bordered by trees and long grass. Greens are usually set about with sand traps (bunkers). A player may use a maximum of 14 clubs. Those made of wood are used for long drives. The irons, numbered one to nine, are used for accurate shots of shorter range: the higher the number, the greater the angle of the clubface and the higher the flight of the ball. Once the green is reached, the putter is used. Specialized clubs may be substituted for the standard range. A system of handicapping operates in amateur play at club level, allowing golfers of widely varying skill to compete on roughly equal terms. The growth of professionalism and the televising of major tournaments has transformed the game into one of the most popular throughout the world. Professional golfers are among the highest earners of all professional sportsmen. Golf had its origins in 15th-century Scotland. In 1754 the Royal and Ancient Golf Club, St Andrews, Scotland, was formed and the basic rules of the game were drawn up. The Club is the highest authority on matters relating to the sport.

Golgi, Camillo (c 1843-1926), Italian histologist. He shared the 1906 Nobel Prize in physiology and medicine with Santiago RAMÓN Y CAJAL for his work on the structure of the nervous system. In 1873 Golgi developed a method of staining tissue with silver nitrate for microscopic study. With this he discovered the GOLGI BODY within the cell.

Golgi body, collection of microscopic vesicles or packets observed near the nucleus of many living cells. It is a part of a cell's inner membrane structure, or endoplasmic reticulum, specialized for the purpose of packaging and dispatching proteins made by the cell. See also pp 174-175, 175.

Golgotha, a burial-ground, particularly the site outside Jerusalem where Jesus and two others were crucified. It is also called CALVARY.

Goliath, biblical PHILISTINE giant slain by DAVID, the shepherd boy and the only Israelite to accept Goliath's challenge to single combat in front of their respective armies. Goliath was felled by a stone between the eyes from David's sling. The

Israelite army thus encouraged routed the Philistines.

Gollancz, Sir Victor. See LEFT BOOK CLUB.

Goltzrus, Hendrik (1558-1617), Dutch painter and line engraver. He is famed for his exquisite miniature portrait drawings. His portraits, both engraved and painted, show fine character portrayal and sober realism, his superb technique compares favourably with that of PORRER.

Goma, Maj. Louis Sylvain (1941-), Congolese army officer and politician who was educated in France. A member of the Parti Congolais du Travail (PCT), he became Chief of General Staff of the Armed Forces in 1974 and a member of the Council of State in 1975. In 1975 he also became Premier under President Marien Ngouabi.

Gombrich, Ernst Hans (1909-), British art historian and theoretician, b Vienna. He was professor of history of the classical tradition at London University (1959-76), and has written *The Story of Art* (1950), *Art and Illusion* (1960), *Mediations on a Hobby Horse* (1963) and *Norm and Form* (1966).

Gombrowicz, Witold (1904-70), Polish novelist and playwright. He emigrated to Argentina in 1939 and moved to Paris in 1963. His two best novels are *Ferdynand* (1937) and *Trans-Atlantyk* (1953). His plays include *Yvonne, Princess of Burgundy* (1938), *The Wedding* (1946) and *Opera* (1967).

Gomulka, Wladyslaw (1905-), Polish Communist political leader. He became Poland's deputy Premier after WWII, but was dismissed in 1948 and imprisoned (1951-54) for ideological deviation. Reinstated on the central committee of the Communist Party in 1956, he became first secretary and denounced Russian domination. He also revoked some of the more oppressive Stalinist measures. He supported the USSR in its 1968 invasion of Czechoslovakia. He was forced to resign during the food riots of 1970. See also p 172.

Gonad, the primary reproductive organ of male and female animals, in which develop the GAMETES or sex cells. Thus, the gonad in the male is a testis and in the female an ovary. Hermaphrodite animals possess both types.

Gonçalves, Nuno (c 1438-71), the most important Portuguese painter of the 15th century, court painter to Alfonso V. His only known surviving work is a series of six panels (c 1465-67) depicting Alfonso Henry the Navigator and Portuguese citizens praying to St Vincent. A master of colour and composition, Gonçalves shows the influence of wood carving in his modelling of heads, which are painted with sharp psychological insight.

Gonçalves, Vasco dos Santos (1921-), Portuguese army officer and politician. He was a leading member of the armed forces movement that overthrew the government of Marcello Caetano in April 1974. Gonçalves, a leftist, became Premier in July 1974, he continued as Premier after Francisco de Costa Gomes became President in September 1974.

Gonçalves Dias, António (1823-64), Brazilian poet. Considered the best of Brazil's early Romantic poets, he wrote lovingly about his country, especially its Indians and tropical beauty. His patriotic *Song of Exile* from the collection *First Songs* (1847), is one of Brazil's most famous poems. He had an intensely emotional style that has been compared to that of WHITMAN.

Goncharov, Ivan Alexandrovich (1812-91), Russian novelist. A civil servant from 1834-67, he spent many years in the ministry of censorship. His novels include *A Common Story* (1847), *Oblokov* (1859) and *The Precipice* (1869). *The Frigate Pallas* (1858) is based on his voyage to Japan.

Goncourt, de, family name of brothers Edmond (1822-96) and Jules (1830-70), French novelists and social historians. They wrote in collaboration until Jules died of syphilis. Self-absorbed and wealthy, they saw themselves as having a literary and artistic mission. Their joint works include *Art of the Eighteenth Century*

(1859-75) and the naturalistic novels *Sœur Philadine* (1861) and *Oermur Lacerteux* (1864), but they are famous for the often maliceous *The Journal of the Goncourts* (1836-40). Edmond (1822-96) wrote the novels *La Fille Elisa* (1877) and *Les Frères Zemganno* (1879). The PRIX GONCOURT, France's top literary award, was provided for in his will.

Gondoliers, The, or the King of Barataria, (1889), comic operetta in two acts by Arthur SULLIVAN with libretto by William GILBERT. It was first performed at the Savoy Theatre, London. A satire on the class system and developing democracy, it was the last great success of the Gilbert and Sullivan partnership.

Gondwana, historical region in India, now divided into the states of Andhra Pradesh, Madhya Pradesh and Maharashtra. The main inhabitants are a Dravidian speaking people, the Gonds.

Gondwanaland, name given to the southern supercontinent which began to break away from the single land mass Pangaea about 200 million years ago. The name comes from GONDWANA, a historical region in central India. The northern supercontinent, which eventually became North America and Eurasia without India, was Laurasia. The occurrence of tilites (glacial deposits) in separate parts of India, South America and Africa is fair evidence that these were once a single continent. See also pp 200-201.

Gone to Earth (1917), novel set in Shropshire by Mary WEAVER describing "the continuity of country life" with an unusual and sympathetic intensity.

Gone With the Wind (1936), novel by Margaret MITCHELL. It was made into a successful colour film in 1939. Set in Georgia during the Civil War and Reconstruction, it deals with Scarlett O'Hara and her efforts to maintain and restore her plantation home, Tara. The film starred Vivien Leigh as Scarlett, Clark Gable as Rhett Butler and Leslie Howard as the ineffectual Ashley Wilkes. It was mainly directed by Victor Fleming, and won nine Academy Awards. See also pp 1752, 1753.

Gong, PERCUSSION instrument sometimes known as a tamtam, a bronze dish-shaped disc, struck with a soft-headed beater. Its origin is oriental. At least 1m (3.3ft) in diameter, it is normally of indefinite pitch, but 20th-century composers have scored parts for sets of tuned gongs which are much smaller.

Góngora y Argote, Luis de (1561-1627), Spanish poet and chaplain to the king (1616-26). His poetry includes *Galatea* (1585), *Paragynco al duque de Lerma* (1609) and *Las Soledades* (1612-17). His works became increasingly complex, allusive and BAROQUE, giving rise to the term GONGORISM.

Gongorism, literary term originally referring to 17th-century baroque poetry of Luis de GONGORA Y ARGOTE. It is deliberately complex and is characterized by Latinized vocabulary, neologism, obscure allusions and unconventional syntax. As a literary phase it reflects the decadence of the late Golden Age in Spain.

Goniatite, type of AMMONITE cephalopod mollusc, with a coiled shell divided into chambers by zigzag partitions. It first appeared in the upper Devonian period, about 350 million years ago. See also p 265.

Goniometer, instrument used mainly by mineral collectors to help in the identification of crystal forms by measuring the critical angles of related sets of crystal faces. These angles are characteristic for certain minerals.

Gonorrhoea, most common venereal disease, caused by a gonococcus and transmitted usually through sexual intercourse. Sometimes carriers of the disease, particularly females, show no symptoms. In males, symptoms usually occur between two and ten days after exposure and include a profuse, purulent discharge from the urethra, homosexual men may also have anal or pharyngeal infections. Females may show increased or painful urination, vaginal discharge or signs of uterine infection. Complications include

infection of other organs in the body, endocarditis and meningitis. Infants of infected parents may be infected at birth. It may be treated with a course of antibiotics. See also p 1079

Gonzaga family, Italian dynasty that ruled Mantua (1328-1707) and Montferrat (1536-1707). The family's power in Mantua was established by Luigi Gonzaga (c 1267-1360), a supporter of the Holy Roman Emperor. Giovanni Francesco in imperial service, was a patron of the humanist Vittorino da Feltre. Giovanni Francesco II (1466-1519) was a leader of Italian defence against Charles VIII's invasion in 1494 and wed Isabella d'Este, a great Renaissance art patron. See also p 1390

Gonzales, Richard ("Pancho") (1928-), US tennis player who, having won the US singles in 1948 and 1949, turned professional. He dominated professional tennis in the 1950s with an aggressive all-round game built on a booming service, powerful volleys and a delicacy of stroke-play remarkable for such a big man. At Wimbledon in 1969, aged 41, he won a 112-game marathon that lasted 5 hours 12 minutes.

Goodbye To All That (1929), autobiographical book by Robert Graves in which he recalls his childhood, his schooling and his experiences during WWI and its aftermath. It is a frank, realistic, yet restrained account of the horrors of war.

Goodbye to Berlin (1939), novel by Christopher Isherwood that describes life in Berlin during the early 1930s, based on the author's own experiences. It became the basis of a successful play, *I Am a Camera* (adapted by John van Druten), and a musical play (and later film), *Cabaret*.

Good Companions, The (1929), novel by J. B. Priestley, awarded the James Tait Black Memorial Prize. In his story, Priestley assembles a small company of people, turns them into a concert party, and lets them loose on England. He turned it into a play (1931) and it was later made into a musical and a film.

Good Friday, the Friday before Easter Sunday. The most solemn day in the Church calendar, it is observed by all Christians as a time for the remembrance of the death of Jesus Christ on the cross. For many Christians it is a day of fasting and abstinence. A popular devotion on this day is a service of meditative vigil which starts at noon and continues for three hours.

Goodman, Benny (1909-), US clarinetist and bandleader. After a period (1926-30) with Ben Pollack, he formed a big band in 1934 and was immediately successful. He also formed small groups which were the first permanent jazz units to have both white and black musicians. Goodman's own playing, which was marked by an excellent classical technique, was at its best in these small groups.

Good Parliament (1376), English Parliament noteworthy for its constitutional innovations. The Commons' choice of Peter de la Mare as its spokesman is the origin of the office of speaker. By trying Latimer and other royal servants for misconduct, Parliament took a large step towards the procedure of impeachment. It then nominated new royal councillors itself. The Acts of the Parliament were annulled by Edward III in 1377. See also p 1342

Goods, in economics, the physical products of an economic system that are able to satisfy human desires and needs. Economists usually classify them as durable or non-durable goods and consumer or producer goods.

Goodwill, in business, an intangible asset. For example, a person who pays a premium for the assets of a going concern is in fact purchasing an intangible value, the value attached to the name and reputation of that company.

Goodwin Sands, sandbanks, approx 16km (10 miles) long, about 9km (6 miles) off the S coast of Kent, SE England. The area is marked by lightships because no lighthouses can be built on the sands.

Goodwood, magnificently-situated race-

course, generally acknowledged to be the most beautiful in Britain, on the Sussex Downs. Horse racing began there in 1801. The Goodwood Cup, first run in 1812, is the feature race of Goodwood's July meeting, known as "Glorious Goodwood". Some miles away is the Goodwood motor racing circuit, which opened in 1948 but closed in 1966 for safety reasons.

Goodyear, Charles (1800-60), US industrial inventor. Despite early business failures, he developed an acid and metal coating process for rubber in 1837 and succeeded in vulcanizing rubber, which process he patented in 1844. Infringements upon his rights allowed others to reap profits from his work, and financial difficulties in France put him in prison.

Googolplex, Evonise. See CAWLEY, EVONISE

Gooshilly Downs, site of British Telecom satellite tracking station on the Lizard peninsula, in Cornwall, SW England. It is equipped with a transmitter and receiver for communications satellites and is in permanent contact with most parts of the world. The station is capable of handling 500 transatlantic telephone calls and a television channel simultaneously.

Goosander, also called common merganser, duck of the family Anatidae. It is distinguished from the red-breasted merganser (*Mergus serrator*) mainly by the markings on its head and neck. Found throughout Britain and continental Europe, it flies low and favours lakes, rivers and wooded areas. Length 67cm (26in). Species *Mergus merganser*.

Goose, widely distributed waterfowl, related to ducks and swans, valued as game and raised commercially for its dark, protein-rich meat, its feathers, which are used in pillows and quilts, and the delicacy *pate de foie gras* (a paste made from its liver). Heavier than ducks, geese have blunt bills, long thick necks, shortish legs, webbed feet and, in the wild, a combination of grey, brown, black and white dense plumage underlaid by down. They live near fresh or brackish water but spend time on land, grazing on meadow grasses. They fly in flocks with rather laboured wingbeats, in V-shaped formations, making long, noisy migrations. Wild geese breed in colonies, mate for life, and build grass-and-twig down-lined nests for 3-12 eggs. The sexes look alike. Weight 1.4-5.9kg (3-13lb). Family Anatidae. See also pp 325, 333, 735-737, 736

Gooseberry, hardy, deciduous, spiny shrub and its edible fruit, which is generally green and hairy and fairly acid. Family Grossulariaceae; species *Ribes grossularia*. See also p 710

Goosefish. See ANGLER FISH

Goose flesh (goose pimples), temporary pattern of small bumps on the skin caused by contraction of underlying tissue in response to cold, fear and other emotions. The effect causes hairs to stand erect and trap more air for insulation against cold, long-haired animals become apparently enlarged—a form of deterrent against enemies.

Goosefoot, or pigweed, any of about 120 species of herbs and sub-shrubs, with mealy, often lobed, leaves that look like goose feet, and minute green flowers. The widely distributed species, mostly weeds, also include SPINACH and BEETS. Family Chenopodiaceae.

Gosse family, Belgian and British musicians. Eugène (1845-1906), b. Bruges, was appointed conductor of the British touring company, the Carl Rosa Opera, in 1882. His son Eugène (1867-1958) was a violinist and conductor. He succeeded his father at the Carl Rosa in 1899. He became conductor of the British National Opera in 1926. His son Sir Eugène (1893-1962) was a conductor and composer, born in London. He was conductor of the Rochester Philharmonic (1923-31), director of the Cincinnati Orchestra (1931-46) and conductor of the Sydney Symphony (1948-56). He wrote much chamber music and two operas. His brother Leon (1897-) has made a reputation as Britain's foremost about

Gopallawa, William (1897-), Sri Lankan lawyer and politician. Gopallawa served as ambassador to the People's Republic of China from 1958 to 1961, to the USA, Cuba and Mexico between 1961 and 1962 and he was governor-general of Ceylon from 1962 to 1972. He was appointed president of the Republic of Sri Lanka by Prime Minister Mrs Bandaranaike remaining in office until 1978.

Gopher, small, stout burrowing rodent of North and Central America that has furred external cheek pouches and long incisor teeth outside the lips. It lives mostly underground, digging shallow tunnels to find roots and tubers, and deeper ones for shelter and food storage. Length 13-46cm (5-18in). Family Geomyidae.

Goral, shaggy, mountain-dwelling goat-like ruminant found in central Asia, China, Korea and Burma. It has brownish fur, short conical horns and lives in small family groups. Length to 1.3m (5ft). Family Bovidae; genus *Naemorhedus*.

Gordian Knot, complicated binding, tying the yolk to the pole of a wagon of Gordius, legendary King of Phrygia. An oracle foretold that whoever could untie the knot would conquer all Asia. In 333 BC ALEXANDER THE GREAT was said to have slashed through the binding with his sword, before going on to fulfill the prophecy.

Gordimer, Nadine (1923-), South African writer of novels and short stories, most of them critical examinations of life in South Africa. Her works are also concerned with the problems of contemporary politics and social morality. Her novels include *The Lying Days* (1953) and *The Conversationist* (1974), for which she won the Booker Prize for fiction.

Gordon, Adam Lindsay (1833-70), Australian poet. His simple, melancholic verse, often celebrating heroic virtues, is included in the collections *Sea Spray* and *Smoke Drift* (1867), *Ashtaroth* (1867) and *Bush Ballads and Galloping Rhymes* (1870). There is a memorial to him in Westminster Abbey.

Gordon, Charles George "Chinese" (1833-85), English soldier and administrator. In 1860 he took part in the expedition that captured Peking and was personally responsible for the burning of the Summer Palace. From 1877-80 he was governor of the Sudan, where he attempted to suppress the slave trade. In 1884 he returned to the Sudan and attempted to put down the Mahdi Rebellion. He was killed at Khartoum in 1885 after he and his troops had been besieged for 10 months by insurgents. See also p 1609

Gordon, Lord George. See GORDON RIOTS

Gordon, George Hamilton, 4th Earl of Aberdeen. See ABERDEEN, GEORGE HAMILTON GORDON 4TH EARL OF

Gordon, Richard (1921-), British writer. After leaving medical practice in 1952, he took up writing and produced a series of humorous novels about the medical world, including *Doctor in the House* (1952), *Doctor on the Boat* (1970) and *Doctor in the Nude* (1973). Many of his books have been made into films.

Gordon Riots (1780), reply of Protestant zealots in London to the Roman Catholic Relief Act of 1778. Lord George Gordon formed a Protestant Association to agitate for the repeal of the Act and on 2 June 1780 led a deputation to Parliament. That night rioting began, houses, churches and breweries were sacked and prisons opened. Order was restored by martial law. About 450 persons were killed or injured. Gordon was acquitted, but 21 rioters were executed.

Gordon setter, bird and gun dog that originated in Scotland. It has a heavy head with a long muzzle, broad nose and set ears folded close to the head. The strong body is deep-chested and set on big boned, feathered legs. The tail is carried horizontally. The flat, straight or slightly waved coat is black with tan markings. Height to 68.5cm (27in) at the shoulder, weight 20-32kg (44-70lb).

Gordonstoun, boys' public school near Elgin, Scotland, which lays particular stress on spartan outdoor activities. It was

Pancho Gonzalez, pictured in action aged 43 on the centre court at Wimbledon (1971)

Gopher holes were a hazard to the cowboy whose horse could accidentally step into one

GORALS are goat-like animals which live in the area from the Himalayas to eastern Siberia

Gordon rioters burning the prison at Newgate during anti-Catholic protests

Gore, Charles

Gorillas, unlike their close relatives the chimpanzees, do not fare well in captivity

Vladimir Lenin championed the workers and subsequently the Bolshevik cause

Goshawk (goose hawk) is a large, long-legged hawk which is used in falconry

Gothic, originally an architectural term, is now applied also to art and literature

founded in 1934 by Kurt Hahn and several members of the British royal family were educated there

Gore, Charles (1853-1932), British theologian, bishop and a dominant figure in the Church of England for nearly 50 years. Principal of Pusey House, Oxford, from 1884-93, and founder of the Community of Resurrection, he combined traditional high churchmanship with liberal social and theological ideas

Gore, Spencer Frederick (1878-1914), British painter of landscapes, interiors and music-hall scenes, who assimilated the influence of impressionism and post-impressionism but retained a fresh and original style. With Gilman, Sickert and others he was a founder member of the Camden Town Group, of which he was first president (1911).

Gorgas, William Crawford (1854-1920), US surgeon whose successful mosquito-control programme in Panama eradicated malaria and yellow fever there and made possible the building of the Panama Canal

Gorges, Sir Ferdinando (c.1566-1647), English colonizer. He was a founder of the Plymouth Company (1606), which acquired charter rights to New England. Gorges transferred the charter to the Council for New England in 1620, which granted patents to the Plymouth and Massachusetts Bay colonies

Gorgons, in Greek mythology, three monsters named Stheno, Euryale and Medusa, who had gold wings and snakes for hair, and who turned to stone anyone who looked directly at them. With the help of a reflective surface Perseus killed Medusa, the only mortal one. See also pp 1900, 1904

Gorgonzola, pungent, pale-yellow cheese with pronounced blue veins. It was originally made in the Italian town of the same name. See also pp 726-727, 727

Gorilla, diurnal, gregarious, powerfully-built great ape that lives in the forests of equatorial Africa. It is the largest primate and is mostly brown or black, with long arms and short legs. It walks on all fours and spends most of its time on the ground, searching for fruits and other vegetarian foods. Generally shy and peaceful, the gorilla builds a nest in a tree each night. Height, to 175cm (70in), weight 140-180kg (308-396lb). Family Pongidae; species *Gorilla gorilla*. See also pp 102, 109, 311

Gorki (Gorkij or Gorky), city in w central USSR, 400km (250 miles) NE of Moscow, at the confluence of the Volga and Oka rivers; capital of Gorki oblast. Formerly known as Nizhny Novgorod, the city was united with Moscow state in 1417. It became a trade and cultural centre in the 18th-19th centuries. It was renamed in 1932 after the Russian writer Maxim Gorky. It has a state university (1918) and a medieval kremlin. Industries: motor vehicles, aircraft, plastics, textiles, shipbuilding, food processing, oil refining. Pop. (1975) 1,283,000

Gorky, Arshile (1905-48), US painter, b. Turkey. His early work was influenced first by Cézanne and then by cubist primitivism. His mature paintings were brightly coloured washes and tints overlaid with calligraphic black lines, creating a hybrid effect, as in *The Betrothal II* (1947). See also p 1685

Gorky, Maxim (1868-1936), Russian dramatist and writer, b. Aleksei Maksimovich Peshkov. Gorky championed the worker and peasant in *Sketches and Stories* (1898), in the play *The Lower Depths* (1902), produced by the Moscow Art Theatre with Anton Chekhov's support, and in the novel *Mother* (1907). He also wrote autobiographical volumes (1913-23) and other plays, including *Yegor Bulichov* (1931). He has been called the father of Social Realism

Gorky, See Gorki
Goropstiza, José (1901-), Mexican poet. His wide-ranging verse extends from simple folklore to complex and obscure subject matter. His overriding concerns are with God and death. The collection *Poesía* (1964) contains his best poems.

Gorse, also called furze, any of several

dense thorny shrubs found mainly in Europe, all are of the genus *Ulex*, family Leguminosae. The common European species, *U. europaea*, bears yellow flowers and thrives in open hilly regions. See also p 382

Gorst, Sir John Eldon (1835-1916), British politician. He was a Conservative MP (1866-68 and 1875-1906) and chief organizer of the Party (1868-80). He was a member of Randolph Churchill's "Fourth Party" (1880-85) and solicitor-general (1885-86). He spent five years in New Zealand (1860-65) and wrote *The Maori King* (1864)

Gort, John Standish Surtees Prendergast Vereker, Viscount (1886-1946), British soldier. He was given command of the British Expeditionary Force sent to France in 1939, and led it in its retreat to Dunkirk in 1940. He was governor of Malta from 1942 to 1944, when it was besieged by the Axis powers.

Gorton, John Grey (1911-), Australian politician who was elected to the Senate in 1949. In Jan. 1967 he became leader of the Liberal Party and prime minister, but having lost the support of his party he resigned in 1971. He was Liberal Party spokesman on the environment 1973-75

Gosford, Sir Archibald Acheson (1776-1849), governor-in-chief of British North America (1835-37). A Whig from Ireland in the British Parliament, he attempted to conciliate French Canadians while delaying confederation. His reports anticipated the Rebellion of 1837.

Goshawk, large hawk with greyish plumage and a long, rounded tail. It feeds on small mammals, including rabbits and squirrels, and on birds. Length to 61cm (24in), wingspan, to 1m (39in). Family Accipitridae; species *Accipiter gentilis*. See also pp 78, 84, 305

Gospel, in Christian theology, term used to denote the central content of the Christian faith, the good news of redemption. Meaning precisely "good news", the term is also used as a title for the first four books of the New Testament, ascribed to Matthew, Mark, Luke and John. The first three gospels are called the "Synoptic Gospels", because they contain approximately the same account in roughly the same order, whereas the Gospel according to St John, which is more in the nature of a theological treatise, is arranged carefully for profound philosophical effect

Gospel music, term applied to US Negro-style vocal church music, which arose from the fusion of Protestant hymn harmony with originally African rhythmic and melodic features, such as blue notes (See blues). A powerfully expressive idiom, gospel music is often in call-and-response form (choir answering soloist/preacher). The secular equivalent is known as soul music or rhythm-and-blues. "Negro spirituals" are gospel music arranged for concert presentation.

Gosplan, state planning committee of the USSR. It is an important unit in the economic decision-making process. Responsible directly to the Council of Ministers, Gosplan creates and administers plans in all sectors of the economy.

Gosseart, Jan. See Mabuse

Gosse, Sir Edmund William (1849-1928), British man of letters. He was lecturer in English at Cambridge University (1884-90) and librarian of the House of Lords (1904-14). He wrote many biographies and one classic fragment of autobiography, *Father and Son* (1907).

Göteborg, traditional name for the s part of Sweden. It was derived from the early settlers of the region, thought to be ancestors of the Goths. The area comprises the counties of Lakes Värmland and Västernorrland. Area: 92,624sq km (35,762sq miles). Pop. 3,819,800.

Göteborg. See Gothenburg

Gothenburg (Göteborg), city in SW Sweden, at the confluence of the Göta and Kattégat rivers. It is the chief seaport and second largest city in Sweden. The present city was founded by Gustavus Adolphus in 1619, and it quickly flourished as a commercial centre with colonies of Dutch and English merchants. Today its industries include shipbuilding, motor cars and

lornes, food processing and textiles. Pop. 444,650

Gothic, term applied to the style in European arts that developed in the 12th century and lasted throughout the remainder of the Middle Ages, following Romanesque and preceding Renaissance. In architecture it began c 1140 with the east end of the abbey church of St Denis, Paris, from whence it spread through western Europe. Notre Dame de Paris and Laon are the two great cathedrals in the earliest Gothic style, while Chartres, Bourges, Amiens and Beauvais are among famous examples in the mature style. Gothic architecture is characterized by the pointed arch, soaring spires, elaborate vaults, extensive use of stained glass and sculpture and increasingly intricate stone tracery. In contrast to Romanesque, the emphasis in Gothic is on dynamic line (rather than weight and mass) and increased height, in keeping with the new spirit of mysticism of the age. The style spread from France to England (where it developed in the three phases of Early English, Decorated style and Perpendicular) and slightly later to Germany. Spanish Gothic, though at first deeply influenced by French, developed a splendidly exuberant national style in the 15th century. Italy remained outside the mainstream, abandoning the Romanesque style for the Gothic reluctantly, and turning to the Renaissance soon after 1400. International Gothic is a term used in painting. See also Gothic Revival Architecture, pp 1332-1335, 1350-1353

Gothic novel, genre of English fiction widely popular in the late 18th and early 19th centuries. Although not necessarily historical, Gothic novels often rely on eerie medieval (ie "Gothic") externals, such as old castles, monasteries, hidden trapdoors etc, as symbols of their characters' psychological states. Horace Walpole's *The Castle of Otranto* (1765) was an important prototype. Later examples include Mary Shelley's *Frankenstein* (1818) and Charles Robert Maturin's *Melmoth the Wanderer* (1820). The genre was an important strand of the Romantic movement.

Gothic revival, or neo-Gothic, terms applied to architecture based on the Gothic style of the Middle Ages. Beginning in the late 18th century with fanciful remodellings, the revival reached a peak in 19th-century Britain and the USA, and appeared in many European countries. Its two leaders in Britain, the critic John Ruskin and the writer and architect A. W. N. Pugin, insisted on the need for authentic, structural recreation of medieval styles. Notable examples of neo-Gothic buildings are Pugin and Sir Charles Barry's Houses of Parliament in London, and Richard Upjohn's Trinity Church in New York City.

Gothic script, or black-letter script, style of calligraphy, and later of printing, that emerged in Switzerland in the late 9th century and prevailed until the Renaissance. It was characterized by dense, thick black strokes, and by a rejection of curves in favour of sharp angles.

Goths, Germanic people who settled on the lower Vistula in the 1st century AD. They began to make incursions on the Roman Empire after 238, but were halted by Gallienus and Claudius. The Visigoths (West Goths) occupied Dacia until resettled by the Emperor Theodosius (382). Under Alaric they ravaged Greece and sacked Rome (410). The Ostrogoths (East Goths) ruled in the Ukraine until conquered by the Huns (c.370). They entered Italy under Theodoric the Great (489). The Franks forced them into Spain where they survived until defeated by the Moors in 711. See also pp 1270-1271

Gotland, island 97km (60 miles) off Östergötland on the s coast of Sweden in the Baltic Sea. The island belonged to Sweden in the 13th century, became part of Denmark in 1570 and was returned to Sweden in 1645 by the Treaty of Brömsebro. The capital is Visby. Products include sugar-beet processing, barley and rye. Area: 3,172sq km (1,225sq miles). Pop. 54,100

Götterdämmerung ("The Twilight of the Gods"), opera in three acts by Richard Wagner, the last of the tetralogy, *Der Ring des Nibelungen*. The libretto is by the composer. It was first produced at Bayreuth in 1876, when it was conducted by Hans Richter.

Gottfried von Straubung (fl. 1210), medieval German poet. Little is known of his life, but he was apparently well educated in literature and theology. His Arthurian stories, such as *Tristan und Isolde*, are largely borrowed from French and British sources, but his treatment of characters is often more profound and perceptive than the originals.

Gottlieb, Adolph (1903-74), US ABSTRACT EXPRESSIONIST painter. His works, influenced by primitive art, use Freudian themes and allusions translated into abstract symbols. He was a founder, with ROSENKRANTZ and others, of the Ten Group in New York in 1935.

Gouache, type of watercolour paint made opaque by the addition of white. Although somewhat resembling oil paint in effect, gouache tends to lighten in colour when dry and often cracks if used thickly. Poster colour is an inferior variety of gouache. Especially popular among manuscript illuminators in the Middle Ages, gouache has been widely used by 20th-century painters and commercial artists.

Gouda, round, pale-coloured mild cheese that is made from whole or partly skimmed milk, it is usually covered with a protective coating of yellow wax. It was originally made in the town of Gouda, Holland. See also pp 726-727.

Goody, Frederic William (1865-1947), US printer and typographer. He established his first press in 1905 and designed more than 100 typefaces, the most popular and influential of which were inspired by Roman and Renaissance letter forms and include Kennerley (1911), Goudy Old Style (1913-16) and Monotype Garamond (1921).

Goujon, Jean (c.1510-68), French Renaissance sculptor and architect known for his decorations in low relief for buildings. He was influenced by Italian MANIERISM and associated with Pierre LESCOT, the architect of the Louvre, where a number of Goujon's works are found today. See also p 1397.

Gould, Glenn (1932-), Canadian pianist and composer. A child prodigy, he was a soloist with the Toronto Symphony Orchestra at age 14. He is famous for his interpretations of the Romantic composers, and also of J. S. Bach. His first string quartet was premiered in 1956. In recent years he has concentrated on recording.

Gould, Jay (1836-92), US speculator and financier. In 1869, his attempt to corner the gold market resulted in financial panic. Avoiding prosecution, he later bought control of Union Pacific and other railways, and eventually controlled much of the railroad mileage in sw USA.

Gould, Morton (1913-), US composer and conductor. He is known for his compositions containing elements of jazz, popular and folk music, and has written stage works, film music, orchestral and piano compositions.

Gould, Shane (1956-), Australian swimmer who, in a 24-year career, won five Olympic medals at Munich in 1972 (including golds for the 200m medley, 200m and 400m freestyle) and broke every freestyle record from 100m to 1,500m plus the 200m medley. In 1973, aged 16, she turned professional.

Gounod, Charles François (1818-93), French composer and organist. He composed church and choral music but is chiefly known for his operas, the most successful of which have been *Faust* (1859), *Mireille* (1863) and *Roméo et Juliette* (1864). See also p 1599.

Gour, ridge formed in the bed of a calcite-rich underground stream by the deposition of CALCITE by turbulence. The ridges can grow to the water surface and dam the stream, and a series of them may form a terraced structure resembling paddy fields on a slope. See also pp 218-219.

Gourami, also called kissing gourami, white deep-bodied tropical freshwater fish of the Malay Peninsula, Thailand and the Sunda Islands. It has a sucker-like mouth, and two fishes may often join mouths, for unknown reasons. It is a popular aquarium fish. Length: to 30cm (12in). Family Helostomatidae; species *Helostoma temminckii*.

Gourd, annual vine and its ornamental, hard-shelled fruit. These range from almost spherical, as in *Cucurbita pepo*, to irregular or bottle-shaped, as in the bottle gourd, *Lagenaria siceraria*. The rind may be smooth or warty. When hollowed and dried, the fruits of some species make useful containers. Family Cucurbitaceae. See also pp 373, 652.

Gournia, ancient Cretan industrial town (1600-1400 BC), the only well-preserved late MINOAN settlement on Crete. It was destroyed by fire in about 1400 BC.

Gout, form of arthritis, possibly hereditary associated with an excess of uric acid. Adult men are primary victims. Its symptoms usually affect one joint, often the big toe, with intense pain that may last for a week. It was once thought to be caused by excessive eating and alcoholic drink. It is partially treated with high liquid intake to increase the urine output.

Goutweed. See GROUND ELDER.

Govind Rai, or Govind Singh (1666-1708), tenth and last guru of the Sikhs. He created the military fraternity the Khalsa (the chief Sikh brotherhood, and instituted their strict practices, such as the wearing of a turban and long hair).

Gow, Nell (1727-1807), Scottish violinist and composer. He was famous for his renditions of Scottish melodies, especially strathspeys and reels. He published dance music in six *Collections* (1784-1822).

Gower, John (c.1330-1408), English poet, all of whose works are of didactic or moral intention. *Vox Clamantis* (c.1382) on social injustice and violent rebellion. His most famous work is *Confessio Amantis* (1390), an allegorical collection of tales on the subject of Christian and courtly love.

Goya y Lucientes, Francisco José de (1746-1828), Spanish painter and engraver. Goya sympathized with the French Revolution but was still esteemed at the Spanish court, where he painted a portrait, *The Family of Charles IV* (1800), shocking in its revelation of the corrupt inner life of its subjects. Among Goya's most vivid and expressive works are his portraits and nude studies of his mistress. When Napoleon's occupation of Spain was accompanied by brutal atrocities, Goya's bitter disillusionment was reflected in such brilliantly coloured, dramatic works as *The 3rd of May, 1808*, commemorating the execution of a group of Madrid citizens, and a series of etchings *The Disasters of War* (1810-14). See also pp 1556.

Goyen, Jan Josephszoon van (1596-1656), Dutch painter. A pioneer of Dutch realistic painting, he attempted to capture natural light and space, and to depict calm atmospheric effects in nearly monochromatic form. Many of more than 1,000 paintings are town views and river scenes. See also p 1445.

Gozzi, Carlo (1720-1806), Italian writer. He was an opponent of the theatrical reforms of Carlo GOLDONI, who wished to substitute prepared dialogue for the improvisation of the *COMEDIA DELL'ARTE*. **Gozzoli, Benozzo** (c.1421-97), Italian painter. His numerous frescoes, such as that of the Medici family as the Magi in the Chapel of the Medici Palace, Florence, faithfully depict 15th century Italian life. He began as an assistant to Fra ANGELICO, but his work is secular in mood and outlook.

GPO. See POST OFFICE.

GPU. See KGB.

Graaf, Regnier de (1641-73), Dutch anatomist and doctor after whom the Graafian follicles - thin-walled cavities in mammalian ovaries in which eggs develop - were named. De Graaf investigated the functions of the pancreas and the nature of the sexual organs. He was the first user of the term "ovary".

Grace, Christian concept of a frame of mind in which God's power is felt, accepted or even used, and which itself is a free gift from God. Faith, regular worship and the sacraments are all means of receiving grace.

Grace, W. G. (William Gilbert) (1848-1915), British cricketer. A formidable bearded figure with a deserved reputation for psychological tactics, Grace had a prolific career for England, Gloucestershire and London County. He scored a total of 54,904 runs (including 126 centuries), took 2,876 wickets and held 877 catches in first-class matches. He led England in 13 of his 22 Test matches (1880-99). He was also a doctor.

Graces, in Greek mythology, three goddesses who represented intellectual pleasures: beauty, grace and charm. Associated especially with poetry, Aglaia, Euphrosyne and Thalia were often linked with the muses. Perhaps originally fertility deities, they were also described as daughters or granddaughters of ZEUS.

Grackle, any of several species of stout-billed, New World blackbirds within the genera *Quiscalus* or *Cassidix* of the family Icteridae. Sometimes called crow-blackbirds, they have blackish, iridescent plumage. The common grackle, *Q. quiscula*, of the USA, may reach 30cm (12in) in length. Species of Asian MYNAB birds of the genus *Gracula* are also called grackles.

Graebner, Fritz (1877-1934), German ethnologist who postulated the theory of the *Kulturkreise* (culture complex), which held that all primitive cultures derived from a single type. His theory founded the culture-historical school of ETHNOLOGY in Europe.

Graf Spee, German POCKET BATTLESHIP launched in 1936. Its main armament was six 11in guns and it displaced 12,500 tonnes. Having sunk many British merchant ships early in WWII, the *Graf Spee* was finally cornered in Montevideo harbour, Uruguay, in Dec. 1939 by three British cruisers - Ajax, Exeter and Achilles - and scuttled by her captain.

Graft, tissue, portion of skin, bone or other tissue removed from its original site and transferred elsewhere in the body to repair a defect. The tissue may be taken from the individual requiring the repair (autograft), from another individual of the same species (homograft or allograft) or from an individual of another species (heterograft). The chief difficulty in grafting is that the recipient's tissues may reject the grafted tissue. Autograft and grafting from an identical twin are less likely to be rejected than heterograft or even homograft.

Grafting, in horticulture, method of plant propagation. A twig of one variety, called the scion, is established on the roots of a related variety, called the stock. Most fruit trees are propagated by a similar process called budding, in which the scion is a single bud. Grafting is a way of producing new plants that are genetically identical to the parent from which the scions are cut, and is carried out when the plant is infertile or will not grow from seed. Dwarf or special varieties may also be produced if desired. See also pp 674-675, 716.

Grafton, Augustus Henry, 3rd Duke of (1735-1811), British statesman. In 1765 he was Secretary of State under Rockingham and became First Lord of the Treasury under Pitt (Lord Chatham). Having deputized for Pitt during his illness in 1766, he became Prime Minister in 1768. He was forced to resign in 1770, following the crisis in the American colonies and the Wilkes affair, but he later served as Lord Privy Seal under North (1771-75), and under Rockingham and Shelburne (1782-83).

Graf Zeppelin, German airship built in 1928, which provided a passenger and freight service between Germany and South America until 1937. Capable of 124km/h (77mph) it was 236m (776ft) long and had room for 63 passengers. In 1929 it flew around the world in 21 days.

Graham, George (1673-1751), British inventor who in about 1715 invented the first of many pendulums that were compensated for temperature changes. He

Gounod's lasting fascination for Goethe's *Faust* inspired his most successful opera

Goya's lithograph of the famous American bullfighter Mariano Caba

W. G. Grace, the legendary English batsman, played first-class cricket for 36 years

Graces, the three Greek goddesses of fertility thought to be the daughters of Zeus and Hera

The Holy Grail is thought to carry overtones from the mythological Celtic horns of plenty

Grampus is the common name sometimes used for the killer whale

Granada may be so called from the Spanish word for pomegranate

Grand Canal, the main waterway and thoroughfare dividing the city of Venice in two

also invented astronomical instruments. See also p 452

Graham, Martha (1893–), US choreographer and dancer, a leading figure in the modern dance movement. In the early 1920s she began to break with traditional ballet forms, employing instead highly individual forms based on natural movement. Her ballets, often based on psychological situations rather than the more narrative form of conventional dance, include *Primitive Mysteries* (1931), *Appalachian Spring* (1944), scored by Aaron Copland, and *Archaeic Hours* (1969).

Graham, Thomas (1805–69), British physicist who is best remembered for the rule he formulated (GRAHAM'S LAW) which relates the density and rate of diffusion of gases. He also discovered DIALYSIS, a process used in kidney machines.

Graham, William Franklin ("Billy") (1918–), US evangelist. His evangelism is estimated to have reached more than 60 million people. He was the confidant of several presidents including Truman, Eisenhower, Kennedy, Johnson and Nixon. See also pp 1791, 1919.

Grahame, Kenneth (1859–1932), British author of children's books. He created Mole, Rat, Badger and Mr Toad in the classic *Wind in the Willows* (1908). Earlier books included *The Golden Age* (1895) and its sequel *Dream Days* (1898). A. A. MILNE based the play *Toad of Toad Hall* (1930) on Grahame's book.

Grahame-White, Claude (1879–1959), British pioneer aviator who was the first Briton to receive a certificate of proficiency (1910) in flying. He founded (1909) the first British school of aviation.

Graham Land, or Antarctic Peninsula, northward extension of Antarctica that reaches 1,290km (800 miles) towards South America. It was claimed for Britain in 1831, but Argentina also claimed it (as San Martín Land), as did Chile (as O'Higgins Land). In 1964 the region was called the Antarctic Peninsula by international agreement.

Graham of Claverhouse, John. See CLAYVERHOUSE, JOHN GRAHAM OF.

Graham's Law, in physics, states that the velocity of the molecules of a gas is inversely proportional to the square root of its density. It has important industrial applications, and can be expressed as follows: rate of diffusion = $k/\text{square root of density}$, where k is a constant.

Grail, Holy, object of quest of the knights of Arthurian romance. The grail (cup) was supposedly the one used by Jesus at the LAST SUPPER, and possibly by JOSEPH OF ARIMATHEA to catch the blood from Jesus's wounds. The quest for the grail became a search for mystical union with God.

Grainger, Percy Aldridge (1882–1961), Australian composer and pianist. He was a pupil of BUSONI and a protégé of ORGEL, who encouraged him to collect, edit and arrange English and Irish folk-songs. His arrangements of *Country Gardens* and *Shepherd's Hey* were both published in 1908, and he continued to produce other songs and orchestral pieces in the same folk tradition.

Gramm. See CHICKPEA.

Gramme-atom, quantity of an element whose weight, in grammes, is equal to its atomic weight. It has been replaced by the SI unit, the mole. For example, one gramme-atom of hydrogen (H, atomic weight = 1) is 1g.

Grammar, the branch of linguistics that deals with a language's inflections, its phonetic system and syntax. Rules for the English language were developed on the basis of Latin grammar, which is inflectional (based on variations in the form of words), even though English is more of a syntactical language (based on word order). Grammar is continually evolving in response to popular usage.

Gramme molecular volume, volume occupied by a weight of gas equal to its molecular weight in grammes (eg 2 grammes of hydrogen or 32 grammes of oxygen). At a given temperature and pressure it has approximately the same value for all gases. It is 22.415 litres for an ideal gas at 760mm of mercury pressure and 0°C (STP).

Gramme, Zénobe Theophile (1826–1901), Belgian engineer who developed the first practical industrial dynamo in 1869. His knowledge of electrical theory was limited, but even so he developed an electric motor from his dynamo, and was one of a group of scientists who, in 1872, succeeded in transmitting direct current electricity over long distances.

Gramophone, name of the instrument for reproducing sound, invented by Emile BERLINER in 1887. It was an early form of record player: a stylus traced the spiral indentations of the recording on a horizontal disc. This was a significant advancement on the original phonograph invented by Thomas A. EDISON in 1877, in which a stylus traced vertical indentations upon a rotating cylinder wrapped in tin foil, the weak sound output being amplified by a horn. See also pp 642, 643.

Grampian, region in NE Scotland, formed in 1975 from the former counties of ABERDEEN, KINROSS, BANFFSHIRE and most of MORAY. The administrative centre is ABERDEEN. Area approx. 8,550sq km (3,300sq miles). Pop. (1974 est.) 447,935.

Grampians, mountain range in N central Scotland. It is the highest mountain system in Britain, running SW-NE between Glen More and the Scottish Lowlands. Rivers rising in the Grampians include the Spey, Findhorn (flowing N), Don, Dee (flowing E), Tay and Forth (flowing S). Highest peak, Ben Nevis, 1,343m (4,406ft).

Grampus, also called Risso's dolphin, species of DOLPHIN found in temperate and tropical seas throughout the world. It is dark grey with a lighter belly, has no "beak" and feeds primarily on cuttlefish. Length 4m (13ft). Family Delphinidae, species *Grampus griseus*.

Gramsci, Antonio (1891–1937), Italian political thinker, a founder of the Italian Communist Party (PCI) and one of its leading theorists. From a poor Sardinian background, he entered Turin University in 1911, but abandoned his studies to become an active socialist and then Marxist. He founded the newspaper *L'Ordine Nuovo* (The New Order) in 1919 and was a leader of the 1920 Turin general strike. In 1921 he and his followers left the Socialist Congress at Livorno to form the PCI. In 1924 he became party leader and was elected to the Chamber of Deputies. Arrested in 1926, Gramsci was imprisoned for 11 years, and died soon after his release. His posthumously published *Lettere dal carcere* (Prison Letters, 1947) have greatly influenced modern Italian Communism.

Gram stain, in microbiology, a differential staining method named after the Danish physician H. C. J. Gram. It aids in the categorizing and identification of bacteria, which are said to be gram-positive or gram-negative, depending on whether or not they retain the original violet stain at the end of the process. If gram-negative, the stain washes out to a red counterstain.

Granada, province in Andalusia, a Spain in the Andalusian region, bounded in the S by the Mediterranean Sea. It is a fertile area drained by the Genil River, and sugar-beet is the chief crop. There are a few mineral resources. Conquered in the 8th century by the Moors, Granada became an independent kingdom in 1238 and a centre of Moslem learning and civilization. The capital is the city of Granada. Area 12,530sq km (4,838sq miles). Pop. 733,375.

Granados, Enrique (1867–1916), Spanish composer who, like ALBÉNIZ and FALLA, worked to develop a national style, drawing inspiration from the rhythms and melodies of Spanish folk-music. His most famous work, *Goyescas* (1911), was written for piano, and later arranged as an opera (1916). He wrote six other operas, piano and orchestral music and songs.

Granby, John Manners, Marquis of (1721–70), British soldier. He was commander of the Leicester "blues" (1745–59) and led the British forces in Germany during the SEVEN YEARS WAR. In 1766 he was made commander-in-chief of the British army.

Gran Chaco. See CHACO.

Grand Alliance, War of the (1689–97), war between France and the Grand Alliance. In 1688 LOUIS XIV invaded the PALATINATE, and the Holy Roman Emperor (LEOPOLD I) formed the Alliance primarily with The Netherlands, Spain and England. There were French victories at Namur (1692, 1695) and an English naval victory at La Hogue (1692). Peace was concluded by the Treaty of Ryswyk (1697).

Grand Bank, underwater plateau 564km (350 miles) long and 320km (200 miles) wide in the Atlantic Ocean off the coast of Newfoundland. The flow of the GULF STREAM along its E edge encourages marine life and makes this area one of the world's most productive fishing grounds.

Grandbois, Alain (1900–), Canadian poet. He travelled abroad extensively between the world wars. His innovative poetry includes *Les Îles de la Nuit* (1944) and *Poèmes* (1963). He also wrote *A Life of Joliet* (1933).

Grand Canal, main waterway in Venice, Italy. It is crossed by three bridges, the most famous of which is the Rialto. It forms, with smaller canals, the major Venetian transport system. Length 1.6km (2 miles), width 30–60m (100–200ft).

Grand Canyon, immense gorge in NW Arizona, USA, carved by the Colorado River. With its multicoloured rocks and magnificent rock formations, the Grand Canyon is considered to be one of the great natural wonders of the world. It is 450km (280 miles) long and varies from 6km (4 miles) to 18km (11 miles) in width. See also pp 262, 265.

Grand Chartreuse, La. See CHARTREUSE (A GRAND).

Grand Design, plan attributed by SULLY to HENRY IV of France for setting up a Christian Republic of Europe devoted to ensuring perpetual peace. The Holy Roman Emperor would act as magistrate, with a general council to discuss matters of general interest and tackle any problems that might occur.

Grande, Rio. See RIO GRANDE.

Grande Illusion, La (1937), French film directed by Jean RENOU and written by him with Charles Spaak. Set in a German prison camp, it is a subtle, sympathetic portrait of the dying aristocracy and its outmoded rules of conduct. The actors include Erich von Stroheim, Pierre Fresnay and Jean Gabin.

Grand Guignol, theatrical genre of short melodramatic plays featuring passion, rape, murder and suicide and named after the Parisian Théâtre du Grand Guignol, in which such horrific pieces were strongly exploited in the 1890s and 1900s.

Grandma Moses. See MOSES, GRANDMA.

Grand jury, in US law, a group appointed by the law that investigates in secret a crime within its jurisdiction. It hears evidence, then decides whether a person should stand trial. It is so-called because it is usually larger than the trial jury.

Grand mal, type of epileptic attack characterized by loss of consciousness and muscular contractions, lasting up to five minutes. See also EPILEPSY, p 1072.

Grand National, premier steeplechase of the English National Hunt horse-racing season. First run in 1839 over fields at Aintree, near Liverpool, this handicap for six-year-olds and upwards became world famous for the severity of such jumps as Becher's Brook, Valentine's Brook and the Chair. It is raced over 4 miles 856 yards (7.2km), with 14 of the 16 obstacles jumped twice.

Grand Piano. See PIANO.

Grand Prix de Paris, French classic horse race for three-year-olds. Inaugurated in 1863, it is run over 3.1km (1 mile 7½ furlongs) at Longchamp on the last Sunday in June – traditionally a day at the races for Parisians.

Grand Tour, part of the education of young people of aristocratic or wealthy English families between the 16th and 19th centuries. It lasted from two to three years and went from France to Italy (especially Rome), returning through the German states and the Low Countries.

Grand Remonstrance (22 Nov 1641), statement drawn up by the opposition to

Charles I in England, declaring Parliament's right to approve ministers employed by the king and laying forth civil proposals for the reform of the Church. It proved to be a test of whether a man were a royalist or a parliamentarian, and it was passed in the House of Commons by only 11 votes.

Grand Trunk Pacific Railway, western part of a Canadian transcontinental railway. It ran from Winnipeg (Saskatchewan) to Prince Rupert (British Columbia) and was completed in 1914. The following year the eastern line, Montreal (New Brunswick) to Winnipeg, was finished. The company that built the line went bankrupt, was taken over by the government in the 1920s and its lines integrated with the Canadian National Railways system.

Grand Union Canal, artificial inland waterway in England which runs from London through Leicester, Birmingham and Loughborough in the Midlands. It is the longest canal in England, with a navigable length of over 422 km (262 miles).

Granit, Ragnar (1901–), Swedish neurophysiologist who contributed greatly to an understanding of vision. He shared the 1967 Nobel Prize in physiology and medicine.

Granite, intrusive rock from deep within the earth, composed chiefly of feldspar and quartz, with some mica or hornblende. Its colour is usually light grey, although feldspar may reddens it. Its durability makes it a valuable construction material. Granite is thought to have solidified from magma (molten rock), but the occurrence of some granite with features normally associated with rocks of metamorphic origin suggests that not all granites are igneous. It crystallizes at great depths where the pressure is high; it becomes exposed at the earth's surface only by erosion of surface rocks or by movements in the earth's crust. See also pp 208–211.

Grant, Cary (1903–), US film-star, b. Britain; real name Alexander Archibald Leitch. His many films include sophisticated comedies such as *Topper* (1937) and *Hanging Up Baby* (1938) and stylish thrillers such as *North by Northwest* (1959) and *Charade* (1963).

Grant, Duncan (1885–1978), British landscape painter, portraitist and designer, one of the first British artists to be influenced by the post-impressionists. He was a member of the Bloomsbury Group and as a designer was closely associated with Roger Fry and the Omega Workshops.

Grant, George Munro (1835–1902), Canadian educator and writer, born in Scotland at Glenelg, Glasgow. He later joined the Canadian Forces and was a member of the expedition to the Yukon in 1898. He recounted his experiences in *Ocean to Ocean* (1873), his most famous book. The interest it aroused helped to encourage the settlement of W. Canada. From 1877 to 1902 he was principal of Queen's University, Ontario. Under Grant the university gained size and importance.

Grant, Ulysses Simpson (1822–85), US soldier and politician. He served in the Mexican War (1846–48) and at the start of the Civil War was colonel of the 21st Illinois Volunteers. After capturing Fort Henry and Fort Donelson in 1862, he was made a major general. In 1864, as lieutenant general, he was given command of the Union forces. In 1866 he was elected general. Chosen as the Republican candidate for president in 1868, he was elected and served two terms in the White House (1869–77).

Grantham, market town and railway junction on the River Witham in Lincolnshire. The Battle of Grantham (1633) was the first Roundhead victory against the Royalists in the English civil war. Pop. 15,011.

Grant's gazelle, large, pale brown gazelle of African plains. It is noted for its long, ringed horns. Height to 89 cm (35 in). Family Bovidae, species *Gazella gazelle*.

Granule, in astronomy, any of millions of regular, frequent polygonal markings on the Sun's photosphere, imparting to it a bubbly mottled appearance. Granules are

transient phenomena: the tops of hot gas clouds set up by subsurface convection currents.

Granulite, granular metamorphic rock that derives largely from quartz and feldspar. Also called leptytes, granulites often have a banded appearance. See also pp 208–211.

Granville-Barker, Harley (1877–1946), British dramatist-producer and critic who co-managed the Court Theatre in London (1904–07) and was one of the theatrical forces of his day. He produced the works of young playwrights and, as a critic, is known for his *Prefaces to Shakespeare* (1927–45).

Grape, any of numerous species of vines that grow in temperate and subtropical climates, and its important fruit which is eaten raw, dried or used for making wine. The classical European vine (*Vitis vinifera*) had its origins in Asia. The climate, soil, topography and the methods of cultivation all determine the quality of the crop. Family Vitaceae. See also pp 688–689, 696–697, 698–699.

Grapefruit, evergreen citrus fruit tree of the family Rutaceae and its popular edible fruit, which is a valuable source of vitamin C. The tree, which may reach 6 m (20 ft), is grown mainly in subtropical climates in the USA, Israel, South Africa and Argentina. The large, spherical fruit has a thick yellow rind and a juicy, acid pulp.

Grape hyacinth, any of more than 50 Old World, perennial, bulbous plants native to the Mediterranean region. They have long, narrow leaves and deep blue, sometimes white or pink bell-shaped flower clusters. Family Liaceae, genus *Muscari*.

Grapes of Wrath, The (1939), realistic novel by John Steinbeck about US farmers during the Depression. It deals with the Joad family who leave their drought-ridden Oklahoma farm for California. The novel received a Pulitzer Prize in 1939 and the following year was made into a film directed by John Ford and starring Henry Fonda. See also pp 1772–1773.

Graph, diagram representing a functional relationship between numbers or quantities, generally using Cartesian co-ordinates. Two scales (axes) are drawn at right angles. The point of intersection (origin) has the value zero and the scales have positive values to the right and above the origin and negative values to the left and below it. Distances along the horizontal axis (abscissa) represent values of the independent variable (x); those along the vertical axis (ordinate) give values of the dependent variable (y). Thus a point on a graph can be represented by a pair of numbers, and a curve is a 'plot' of all possible pairs of numbers belonging to the function. See also pp 784–787, 804, 805.

Graphic art, form of art that depends for its effect mainly on drawing and not on colour. It includes the art of engraving and all forms of drawing, sometimes within the context of painting or printmaking. In current usage the term is sometimes extended to include the processes of graphic design, typography, photography and illustration, which are commonly integrated to meet the needs of industry and commerce. Traditionally, however, graphic art refers to the aesthetic process of drawing, employed by an artist to create a work of art.

The first professional engraver, Marcantonio Raimondi, interpreted the works of other artists. But as early as the 15th century others, such as Albrecht Dürer and Lucas van Leyden, were creating their own subjects. In the 19th century technical engravers were almost in opposition to the artist-engravers. Some of this feeling has filtered through to today, but this distinction is by no means absolute.

Graphite (plumbago), dark grey, soft crystalline allotrope of carbon that occurs naturally in deposits of varying purity and is made synthetically by heating petroleum coke. It is used in pencils (a mixture of graphite and clay is the 'lead'), lubricants, electrodes, brushes of electrical machines, rocket nozzles and as a moderator in nuclear reactors. It owes its lubricating properties to the overlapping

scale-like crystals that tend to slide, giving it a smooth, slippery feel. Properties, s.g. 2.2–2.5.

Graptolite, any of an extinct group of colonial aquatic drifting organisms, sometimes considered a separate phylum but also thought to be related to the chorizoids. They are found most frequently as flattened fibres of carbon, resembling pencil marks, in black shales of the Ordovician and Silurian ages. Their uncompressible skeletons etched out of limestone show that graptolites were composed of many small tubes regularly arranged along branches, which are presumed to have been attached to a common bladder-like float. See also pp 182, 275, 276.

Grasmere, village in Cumbria, NW England. It is famous for its literary associations. The Romantic poets William Wordsworth and Samuel Taylor Coleridge lived there, as did the essayist Thomas de Quincey. Wordsworth's house, Dove Cottage, is now a museum with some of the poet's manuscripts on display. **Grass, Günter** (1927–), German novelist, poet and playwright. His prose narrative combines evocative description with historical documentation in the Mannerist style. He used powerful techniques to effect grotesque comedy in *The Dream* (1949) and *Cat and Mouse* (1961) and to satirize the Nazi era, the war and its aftermath in *Dog Years* (1963). Other works include *From the Diary of a Snail* (1972) and *Human Pleasure* (trans. 1974).

Grass, any of many non-woody plants with fibrous roots that have long, narrow leaves enclosing hollow, jointed stems. The stems may be upright or bent, and may lie on the ground or grow underground. The small flowers, lacking petals and sepals, are arranged in spikelets and in the axils of bracts. Grass grows from the base, and so removal of the tips does not inhibit growth, making it suitable for lawns and pastures. The seed-like fruits store oil and protein, and are called grains. Economically the grasses are the most important plant family. Cereals, such as rice, millet, maize and wheat, are cultivated for their seeds. Others are grown as forage for domestic grazing animals, and for erosion control and ornament. Furniture is made from some grasses, such as bamboo. Height 2.5 cm–30 m (1 in–100 ft). Family Gramineae: there are approx. 8,000 species. See also MONOCOTYLEDON, pp 378–380.

Grasshopper, plant-eating insect found throughout the world. Its enlarged hind legs make it a powerful jumper. The forewings are leather-like and the hind wings are membranous and fan-shaped when the insect is at rest; the wings are folded over its back. Length 8–11 cm (3–4 in). Order Orthoptera, families Acrididae and Tetragonidae. See also CRICKET, LOCUST, ORTHOPTERA, pp 39, 207.

Grass of Parnassus, any of about 50 species of the perennial herb *Parnassia* of the SAXIFRAGE family, native to damp, cold temperate or mountainous regions of the Northern Hemisphere. The graceful plants bear solitary, showy flowers.

Grass snake, also called European water snake, a non-poisonous snake found in Europe, W. Africa and central Asia. It swims readily but is generally found in long grass and undergrowth. It is greenish-brown with a yellow collar and sometimes mistaken for the adder. Length to 1 m (3.3 ft). Family Colubridae, species *Natrix natrix*. See also pp 69, 71.

Grass track racing. See MOTOR CYCLE SPORT, MOTOR SPORTS.

Grass tree, tree-like perennial plant native to regions of Australia. The long grass-like leaves grow in tufts on thick stems. Family Xanthorrhoeaceae, genus *Xanthorrhoea*.

Grass wrack. See FLE GRASS.

Grateful Dead, US rock group. Formed in 1965 as the Warlocks, they typified the acid rock movement of the late 1960s. Records from this period include *Anthology* (1969) and *Live Dead* (1970). Later recordings in a country rock vein such as *Workingman's Dead* and *American Beauty* (1970) show an increasing

Grape hyacinth, most of the 50 species have clusters of blue, pink or white flowers

Grapes of Wrath. Henry Fonda (centre) in a scene from the film of Steinbeck's novel

Graphs illustrate the relationship between varying quantities or numbers

Grass snakes, which are non-poisonous, are sometimes mistaken for poisonous adders

Thomas Gray, who wrote the poem *Elegy Written in a Country Churchyard*

Grayling, a game fish which is suffering from the pollution of N American streams

Graz is the capital of the province of Styria and the second largest city in Austria

Great Barrier Reef, which faces destruction from the crown-of-thorns starfish

realization of the potential of studio recordings.

Gratianus, Flavius (359-83), Western Roman emperor (367-383). Co-emperor first with his father, Valentinian I (until 375), he later ruled with his brother Valentinian II. Advised by St Ambrose he tried to stamp out paganism in the empire.

Grattan, Henry (1746-1820), Irish statesman. Trained as a lawyer, he entered the Irish Parliament in 1775 and through his oratory quickly became a leader of the party supporting Ireland's independence from the British Parliament, a goal achieved in 1782.

Grattan's Parliament, popular name given to the Irish parliament of 1782 to 1800, when it was ended by the Act of Union between Britain and Ireland. It got its name from Henry GRATTAN, leader of the Irish Volunteer Movement, which succeeded in forcing the British Parliament to restore the independence of the Irish legislature and also the appellate jurisdiction of the Irish House of Lords.

Gravett, John (1620-1674), English statistician who prepared the first mortality table. This was published in 1662 under the title *Natural and Political Observations*.

Gravett, Thomas William (1927-), British cricketer who played for Gloucestershire, Worcestershire and England. Noted for the elegance and grace of his batting, Gravett played in 79 Test matches from 1951-69, scoring 4,882 runs (including 11 centuries) at an average of 44.38.

Graves, Robert Rankin (1895-), British poet, novelist and critic. After publishing his own autobiography, *Confessions to All That* (1929), he emigrated to Majorca. Other works include *I, Claudius* (1934), *Claudius the God* (1934) and *The Crowning Privilege* (1955). In *The White Goddess* (1948), he discusses the importance of religion and myth in the creative process.

Gravesham, county district in W KENT, England, on the Thames estuary, created in 1974 under the Local Government Act (1972). Area, 100sq km (39sq miles). Pop. (1974 est.) 97,300.

Gravettian culture, PALAEOLITHIC culture of c 22,000-18,000 BC. It is named after the site of La Gravette, in the Dordogne, France, but is found also in Italy. A related culture, the Eastern Gravettian, flourished in E Europe and Russia at about the same time. See also pp. 110-116.

Gravimeter, or gravity meter, instrument used in geophysical surveys. Essentially, it is a heavy mass suspended from a spring. In the vicinity of a dense underground feature such as a metal deposit, the weight of the gravimeter mass increases slightly by gravitational attraction, so causing the spring to extend slightly, a movement recorded by its analogue meter. See also p. 206.

Gravimetric analysis, in geology, the study of the magnitude of the earth's gravitational field in a particular area. Small variations in this field can be caused by the density of the rocks beneath the surface and can provide information about structures that are otherwise inaccessible. The instrument used for such a survey is known as a GRAVITY METER. See also PE p. 32.

In chemistry, gravimetric analysis is a method of determining the composition of a substance by making weighings. See also p. 904.

Gravireceptors, sensory organs in the utricle and saccule located in the inner ear (labyrinth). They are sensitive to bodily equilibrium and gravity and have been found to be temporarily affected by prolonged weightlessness.

Gravitation, one of the four kinds of known forces (the others being electro-

magnetism and the weak and strong nuclear forces). Gravitation is extremely weak compared to the others, but it is nonetheless obvious to man because of the great mass of the earth. The gravitational force F between two masses M_1 and M_2 a distance d apart was found by Isaac NEWTON to be $F = DM_1M_2/d^2$, where D is a constant of proportionality called the universal constant of gravitation. A more powerful treatment of gravitation was developed by Albert EINSTEIN, who showed in his general theory of RELATIVITY how to understand gravitation as a manifestation of the underlying structure of space time. See also pp. 824-825.

Gravitational red shift, slight shift in the red spectral lines of radiation emanating from a source within a gravitational field. It is predicted by EINSTEIN's general theory of RELATIVITY and has been experimentally observed in the spectra of celestial bodies, most noticeably in massive stars such as white dwarfs.

Gravitational waves, similar to electromagnetic waves, postulated by Einstein's general theory of RELATIVITY as being emitted from a massive accelerating body, such as an exploding or collapsing star, and to travel at the speed of light. Experimental results put forward as evidence for such waves have not yet been generally accepted in the scientific world. See also pp. 858-859.

Graviton, hypothetical elementary particle of zero mass thought to be continuously exchanged between bodies of mass and thus to be the carrier of the gravitational force. The graviton is analogous to the photon - the quantum of electromagnetic waves. Its existence was suggested for the same reason that early physicists postulated an ETHER to satisfy a theory.

Gravity, gravitational force of attraction at the surface of a planet or other celestial body. The Earth's gravity produces an acceleration of 9.8 m/sec^2 (32 ft/sec^2) for any unsupported body. If the mass M and radius R of a planet are known, the acceleration due to its gravity (g) at its surface can be determined from $g = GM/R^2$, where G is the universal constant of gravitation. The weight of a body is a measure of the force with which the Earth's gravity attracts it. Unlike mass, which remains constant at normal speeds, weight (or the force of gravity) varies from place to place. See also pp. 824-825.

Gravity anomaly, deviation in gravity from the expected value. Gravity measurements over deep ocean trenches are lower than average, those in mountainous regions are higher than average. There are two theories to explain this according to J.H. Pratt: mountains are composed of blocks of material of various densities floating at the same level, whereas G.B. AIRY assumes that there are blocks of the same density at various levels. See also p. 206.

Gravity-assisted flight, use of a close approach to a planet to obtain extra velocity from its gravitational pull. A rocket "grazing" a planet is accelerated and whipped off in a new direction with greatly increased velocity, perhaps unattainable by conventional means. This technique has helped the two Voyager probes, launched in 1977, on their way to the outer planets.

Gravity corer, device for collecting samples of the sea-bed. A weighted tube is dropped into the sediments and pulled to the ocean surface containing whatever sediment is trapped in the tube. A triggering device is usually incorporated so that the corer can be lowered slowly until it is just above the sea-bed and then dropped the last few metres. See also p. 483.

Gravity meter. See GRAVIMETER.

Gravity survey, large-scale survey of rock formations that lie close to the surface, using sensitive instruments to measure increases in gravity to indicate possible petroleum reservoirs. Observable formations may be anticlinal folds, fault blocks and salt domes. Gravity surveys are made from the air and are generally used to discover areas for further exploration. See also SEISMIC SURVEY.

Gray, Elisha (1835-1901), US inventor. He received his first patent for a self-adjusting telegraph relay in 1867. He also invented and patented the telegraphic switch, telegraphic repeater, type-printing telegraph and telautograph. He claimed priority in inventing the speaking telephone, but Alexander GRAHAM BELL's patent rights were upheld by the US Supreme Court.

Gray, John (1907-), Canadian biographer. His work, typified by *Lord Selkirk of Red River* (1963), combines painstaking research with balanced judgement. His other works include *The One-Eyed Trapper* (1942).

Gray's Elegy. See ELEGY WRITTEN IN A COUNTRY CHURCHYARD.

Gray, Sir James (1891-1975), British zoologist, noted for his research on the movement of cells and animals. He wrote many books, including *How Animals Move* (1953) and *Animal Locomotion* (1968).

Gray, Thomas (1716-71), English poet. His *Elegy Written in a Country Churchyard* (1751) brought him fame. Other poems include *Ode on the Death of a Favourite Cat* (1748), and *The Descent of Odin* (1768). His letters are valued for their witty observations of contemporary life.

Grayling, freshwater food and sporting fish of the salmon group found in N North America and Eurasia. It is characterized by an unusually long, tall dorsal fin and a small mouth. It usually frequents fast-flowing, gravelly river beds. Length to 60cm (24in). Family Salmonidae, species include *Thymallus thymallus*. See also pp. 57, 743.

Graz, city in S Austria, on the River Mur, 140km (87 miles) ssw of Vienna, in the Styrian Alps, second largest city in Austria. It has a 16th-century university where astronomer Johannes KEPLER taught. Industries: iron and steel, machinery, paper, leather, glass, textiles. Pop. 248,500.

Grease, semi-solid lubricant which consists of a mixture of a liquid lubricant with either a saponified fat or a dispersion of metallic soaps. There are five types: water soluble; water resistant; synthetic; special purpose; and multi-purpose. Although liquid lubricants are usually preferred, greases are used where a piece of machinery cannot be lubricated or where there is a need to avoid leakage which may occur if oil were used.

Great Australian Bight, wide inlet on the S coast of Australia, part of the Indian Ocean. The coast is backed by a continuous line of the 80m (262ft) high cliffs of the Nullarbor Plain. During winter months the sea in the area is very stormy. Width, 966km (600 miles).

Great Barrier Reef, largest coral reef in the world, off the NE coast of Queensland, Australia. Made up of several individual reefs, it forms a natural breakwater and, in places, up to 800m (2,625ft) wide. It is separated from the mainland by a shallow lagoon 11-24km (7-15 miles) wide. Length, 2,000km (1,242 miles).

Great Bear, or **Ursa Major**, northern circumpolar constellation, nicknamed the Plough, made up of seven stars, six of which are of the 2nd magnitude. It includes Mizar or Zeta Ursae Majoris, in the Bear's tail, which has a faint companion, Alcor. The two stars at the other end of the constellation are "pointers" to the Pole Star (Polaris). See also pp. 915-916, 989, 1010-1011, 1018-1021.

Great Bear Lake, lake in Northwest Territories, Canada, largest lake in Canada and fourth largest in North America. It is drained in the W by the Great Bear River which flows into the Mackenzie River, but the lake is icebound for eight months of the year. It was first explored in 1825 by John FRANKLIN. Area: approx. 31,800sq km (12,278sq miles).

Great Bible, Thomas Cromwell's edition of English Bible which was ordered to be placed in every parish church. Published in 1539, it was an amalgamation of existing vernacular bibles. The second edition of 1540 contains an influential preface by Thomas CRANMER, and is known as "Cranmer's Bible".

Great Bitter Lake, marshy lake of salt water N of Suez, Egypt. Once part of the Red Sea, it was deepened when the Suez Canal opened in 1869.

Great Britain, kingdom in NW Europe, officially named the United Kingdom of Great Britain and Northern Ireland, made up of England, Scotland, Wales and Northern Ireland, the Channel Islands and the Isle of Man. It is commonly known as Britain. See p.2160.

Great circle, circle on a spherical surface whose centre is coincident with the centre of the sphere. Thus lines of longitude lie on great circles; a route above the great circle is the shortest distance between two points on a sphere.

Great Dane, also called German mastiff, a large hunting and fighting dog originally bred in Germany more than 400 years ago for boar hunting. It has a long narrow head with a large blunt muzzle. Its long, broad, deep-chested body is set on long strong legs. The short, smooth coat may be brindle, fawn, blue, black or a mixture called harlequin. Height at least 76cm (30in) at the shoulder.

Great Dictator, The, US film, released in 1940. Written and directed by Charles Chaplin the film starred Chaplin himself, Paulette Goddard and Jack Oakie. Its plot, the story of how a Jewish barber is mistaken for the dictator Adenoid Hynkel, gave Chaplin the chance to satirize Adolf Hitler and fascism.

Great Dividing Range (Eastern Highlands), series of mountain ranges and plateaus along the east coast of Australia, extending from the Atherton Tableland (N) to Victoria (S). The highest peak is Mt Kosciuszko, 2,230m (7,316ft). Length 3,703km (2,300 miles).

Great Eastern, British-built steamship, completed in 1858, for many years the largest ship in existence. Conceived by Isambard BRUNEL, she had a displacement of 27,400 tonnes when fully laden, and a length of 211m (692ft). Built for the England-India trade, she ended up in the North Atlantic, laying the Atlantic cable from Ireland to Newfoundland in 1866. The Great Eastern was broken up in 1889. See also p.635.

Greater Antilles, largest of the three major island groups in the West Indies between the Atlantic Ocean and the Caribbean Sea. The group includes Cuba, Hispaniola, Jamaica, Puerto Rico and the Cayman Islands. Puerto Rico is self-governing in association with the USA; the Cayman Islands are a British Dependent Territory and the other islands are independent. Hispaniola being divided into Haiti and the Dominican Republic.

Greater London, administrative area in SE England, formed in 1974 from the former county borough of London and the City of London, most of the former county of MIDDLESEX, and parts of the former counties of SURREY, KENT, ESSEX and HERTFORDSHIRE. Greater London includes the Corporation of the City of London plus 33 boroughs. Area, 1,580km² (610sq miles). Pop. (1980 est.) 6,849,100.

Greater London Council (GLC), governing body for the metropolitan area of greater London. It replaced the London County Council in 1964, when 87 separate local authorities were abolished and London divided into 12 inner and 20 outer boroughs, each with its own council. The City of London, a corporation, retained its independence. Elections to the GLC are held every four years in May. The GLC has no authority to levy rates or administer education in the outer boroughs, although it does administer education in the inner boroughs through the Inner London Education Authority (ILEA). The chief duties of the GLC are overall planning, the maintenance of main roads, traffic control and public transport, and fire brigade services. The metropolitan police are under the direct control of the HOME OFFICE.

Greater Manchester, metropolitan county in NW England, formed in 1974 from parts of the former counties of CHESHIRE, LANCASHIRE and including the former county borough of Manchester. Area: 1,284sq km (496sq miles). Pop. (1980) 2,635,500.

Great Exhibition (1851). See CRYSTAL PALACE.

Great Expectations (1861), novel by Charles DICKENS. Tragi-comic in tone and sporadically autobiographical, the novel differs from Dickens' earlier work in that it concerns itself closely with individuals rather than with society as a whole, examining with profound psychological insight the themes of gratitude, revenge, and the illusions accompanying wealth.

Great Gatsby, The (1925), novel by F. Scott FITZGERALD. Specifically dealing with the gloomy spiritual isolation of Jay Gatsby, the possessor of great wealth dubiously obtained, the novel more generally highlights both the illusory nature of social glamour and, in common with many novels of the period, the failure of the 'American Dream'.

Greathead, James Henry (1844-96), British engineer, b. South Africa. He developed a method of shield tunnelling that is named after him. The shield was designed to complete the building of a subway in 1869, under the River Thames, London, and other projects included the City and South London railway tunnels.

Great Lakes, chain of five freshwater lakes in central North America, between Canada and the USA, they are, from W to E: Superior, Michigan, Huron, Erie and Ontario, and are connected by straits, rivers and canals, providing a continuous waterway. Formed at the end of the ice age, they are drained by the St Lawrence River. The opening of the Erie Canal in 1825 connected Lake Erie with the Hudson River, New York and the Atlantic Ocean. The deepening of the St Lawrence River opened up the lakes to world shipping. The Illinois Waterway connects the lakes with the Mississippi River. Heavy industrialization along their shores has greatly increased pollution, particularly lakes Erie, Ontario and Michigan. Major cities on the lakes' shores include Chicago, Detroit, Buffalo, Cleveland and Milwaukee. The combined surface area of the lakes is 245,300sq km (94,710sq miles). See also pp.761, 1944.

Great Leap Forward, name given to a five-year economic plan begun by MAO TSE-TUNG in China in 1958. It aimed to double industrial production and boost agricultural output in record time. Tens of millions of workers were mobilized to smelt iron in primitive handmade furnaces, but much of the iron produced proved useless. Collective farms were merged into communes but initial progress was dashed by a succession of poor harvests. After four years the government was forced to admit that the scheme had failed. See also pp.1726, 1726.

Great Mammoth Cave, large underground cavity in the Mammoth Caves, Kentucky, USA. Part of the world's largest underground cave network, the cavity was formed in a limestone plateau by surface water seeping through and dissolving the rock. See also pp.218-219.

Great Ouse, river in a central England, rises in the Northampton Highlands and flows E and NW through Bedfordshire and Cambridgeshire to the Wash near King's Lynn. Its drainage basin extends over the E Midlands and the W Fens. Length 251km (156 miles).

Great Plains, high, extensive region of grassland in central North America, extends from the central Canadian states of Alberta, Saskatchewan and Manitoba S through W central USA, including North and South Dakota, Nebraska, Kansas, Oklahoma, Montana, Wyoming and New Mexico to Texas. It is a sparsely populated region with a semi-arid climate, and cattle ranching and sheep-rearing are the main economic activities in the W. Farther E, wheat is the principal crop, but sorghum and flax are also grown.

Great Rift Valley, steep-sided, flat-floored valley in SW Asia and E Africa, extending from N Syria, through the Jordan Valley, Dead Sea and the Gulf of Aqaba. It continues as the trough of the Red Sea, through Eritrea, Ethiopia and S across Kenya, Tanzania and Malawi to the lower valley of the Zambezi River in Mozambique. One of the finest examples

of a RIFT VALLEY, the Great Rift Valley was formed in the Pleistocene period. Length approx. 6,400km (4,000 miles).

Great Salt Lake, large, shallow salt-water lake in NW Utah USA. Fed by the Bear, Weber and Jordan rivers, its depth and area vary from year to year with climatic changes. It is believed to be the remnant of the prehistoric Lake Bonneville, which covered much of the Great Basin of North America. Area: approx. 5,180sq km (2,000sq miles).

Great Sandy Desert, large and region of sand dunes, scrubland and salt marshes in N Western Australia state, Australia. Area 518,000sq km (200,000sq miles).

Great Schism, division within the Catholic Church (1378-1417). The split reflected political ambition and controversy about the power of the cardinals over the pope. The unpopular URBAN VI was elected pope in 1378 by half the college of cardinals, which later tried to depose him and elect another pope, CLEMENT VII, who was installed in Avignon. Thereafter successive popes held sway in Avignon and Rome. The schism was ended by the Council of CONSTANCE (called in 1414), which established MARTIN V as the only pope. See also p.1321.

Great Seal, chief seal of the British monarch, used on all important documents. It is normally in the possession of the Lord Chancellor. The seal is circular and double-sided. The earliest impression extant is from EDWARD THE CONFESSOR. A new seal is produced for a monarch on accession.

Great Slave Lake, lake in Northwest Territories, Canada, the fifth largest lake in North America. The British fur trader Samuel Hearne discovered it in 1771, and it was named after the Slave Indians. Gold is mined on its N shore. Area: approx. 28,400sq km (10,980sq miles).

Great Train Robbery, The (1933), US film. This western was the longest narrative film of its time, 92m (302ft), which ran for 11 minutes. In a series of short, interdependent scenes, the director, Edwin S. Porter, made a number of editing innovations, including parallel and overlapping action sequences. See also p.1682.

Great Trek (1835-40), migration of Boer farmers from the CAPE COLONY in South Africa northwards into the interior. They were called *voortrekkers*, men of Dutch origin who wished to escape from the British government's attempt to preserve native lands for the Bantu people and to protect the rights of non-European people on the eastern frontier. About 12,000-14,000 farmers and about the same number of slaves and servants made the journey. They founded NATAL, the TRANSVAAL and the ORANGE FREE STATE. See also pp.1606, 1607.

Great Wall of China, defensive wall 2,400km (1,500 miles) long, marking a clear boundary between the settled areas of China and the lands inhabited by nomads. The wall was first unified in 214 BC by the first CH'IN emperor, but many shorter lengths of wall already existed. The present wall was mostly built by the MING DYNASTY. The wall is about 7.6m (25ft) high and up to 9.1m (30ft) thick. See also p.1256.

Great Western, transatlantic steamship. Designed by Isambard KINGDOM BRUNEL, it made its maiden crossing of the Atlantic in 1838 in 15 days, about half the normal time. The vessel displaced 1,340 tonnes, was 65m (213ft) long and could accommodate 148 passengers.

Great Whale, river in Quebec province, Canada which rises E of Lac Bienville, and flows W into Hudson Bay. At its mouth is the Hudson Bay trading post of Great Whale River. Length 370km (230 miles).

Greaves, Jimmy (1940-), British footballer. A supreme forward with a strong left-foot shot, he scored 491 goals in a 16-season career (1957-71), playing for Chelsea, AC Milan, Tottenham Hotspur and West Ham United.

Grebe, brown, grey and black freshwater diving bird found throughout the world. It flies laboriously and has legs set so far back that it cannot walk on land. There are five common species of grebes in Britain and

The Great Dictator was the first film in which Chaplin made full use of a soundtrack.

The Great Trek was the migration of the Boer farmers from Cape Colony into the interior.

The Great Wall of China, which took centuries to finish, was built to keep out invaders.

Grebes build nests which sometimes float like rafts in the shallows of lakes or ponds.

Grechko, Andrei Antonovich

El Greco was born in Crete, studied in Italy, but is regarded as a Spanish painter

w Europe. They are either resident or regular visitors. Length to 48cm (19in). Family Podicipedidae, genus *Podiceps*. See also p.72

Grechko, Andrei Antonovich (1903-76), Soviet military commander. In wwii he was an army commander in the Caucasus and Ukraine. From 1957 to 1960 he was commander-in-chief of the Soviet land forces. In 1967 he became both commander-in-chief of the armed forces of the Warsaw Treaty Powers and Soviet minister of defence.

Greco, El (1541-1614), Spanish painter, real name Domenikos Theotokopoulos, b. Crete. His early style was influenced by TITIAN and other Italian MANNERISTS. By 1577 he had settled in Toledo and his earliest work there, *The Assumption of the Virgin*, combines new Spanish influences with the Italian. His intensely personal vision is ecstatically mystical, with elongated, distorted figures, disturbing colour schemes and a disregard for normal rules of perspective. His later paintings, such as *Burial of Count Orgaz* (1586), *Agony in the Garden* (1610) and *Assumption* (1613) express his profound and emotional religious conviction.

Greco, Emilio (1913-), Italian sculptor, b. Sicily. His sculptures of female figures and portraits border on the avant garde, with angular mannered rhythms and simplified forms. His works also include the bronze doors of Orvieto Cathedral (1964) and the Pinocchio monument at Collo di Greco, José (1918-), us dancer and choreographer, b. Italy. He is famed for his flamenco dances. He began his dance career in the New York production of *Carmen* in 1937 and was a partner of the dancer La Argentinita in 1943. In 1948 he organized his own company, the Ballets y Bailes de España.

Greece, nation in the s of the Balkan Peninsula in the e Mediterranean. A magnificent civilization flourished there in the first millennium BC, but later Greece came under foreign domination for centuries, and today it is a largely underdeveloped country that has suffered political unrest in the 20th century. Agriculture is based on grain, tobacco, fruits, cotton and sugar-beet. The chief industries are food processing, chemicals and textiles. It is, however, a leading maritime nation with a large commercial fleet. The capital is Athens, a member of the EEC. Area 131,944sq km (50,944sq miles). Pop. (1981) 9,700,000. p.2053

Greece, ancient, civilization of the NE Mediterranean that arose in the 3rd millennium BC in Crete, and reached its greatest achievements on the Greek mainland 500-300 BC. Although politically divided into diverse city-states, Greece and its colonies maintained a universal culture that formed the basis of Roman and European art, philosophy and science until modern times. See also pp.1170-1173, 1202-1213

Greek architecture and art evolved after the decline of the MYCENAEANS and the migrations to the Aegean (c.1100 BC) of the Dorians.

The architecture of ancient Greece achieved its unique character and its place as a principal influence on European styles until the present century not through great structural innovations (the Greeks used simple TRAPEZOID construction) but through its unparalleled perfection in form and proportion and refinement of detail. The Greeks regarded beauty as a god-like attribute and the pursuit of beauty as a religious exercise. They evolved many types of building, including the AGORA, or civic centre, around which were grouped buildings such as council chambers, schools, libraries, theatres, gymnasia, public baths and lavatories. From earliest times, however, the Greek architect's chief concern was with temple building, first in wood and later in stone (6th century BC), when the transformation was monumental in every sense and Greek architecture really came into being. Gradually distinct styles or orders of column, each with its own form of entablature, began to emerge - DORIC, IONIC and, lastly, CORINTHIAN. The

earliest Doric temple of which there are appreciable remains is the Temple of Hera at Olympia (late 7th century BC). The Temple of Aphaia at Aegina (c.490 BC) is perhaps the earliest example of mature Doric, while the PARTHENON, on the ACROPOLES, Athens, enjoys the reputation of being the most perfect Doric temple ever built. Among Ionic temples, that of Athena Nike (c.427 BC), at the gateway of the Acropolis, is an early surviving example and the Erechtheion, near the Parthenon, is considered the most perfect. The Temple of Olympian Zeus at Athens (2nd century BC) is among the most important Corinthian buildings; the Corinthian Mausoleum at Halicarnassus (350 BC) was one of the Seven Wonders of the World.

Greek art may for convenience be divided into four chronological periods: Geometric, Archaic, Classical and Hellenistic.

The Geometric period (late 11th to late 8th century BC). There is no extant painting or major sculpture from this period. Numerous terracotta vases, decorated with geometric motifs, survive, also a large number of naively executed figurines and from the end of the period, a few miniature bronze horses, sculpted in a simple, abstract style in keeping with their size.

The Archaic period (late 8th century to 480 BC). A new feeling, reflecting the growth in civic life and trade, began to enter Greek art. Fresh ideas and motifs were introduced, some of them from the e Mediterranean, particularly Syria, and there was a general spirit of experimentation. Stone sculpture appeared for the first time and painting probably began, vase painting proliferated. The anatomy of the human figure, the main interest of representational artists, was a common subject by the end of the period.

The Classical period (480-323 BC). Civic wealth and pride increased throughout the period. Sculpture, which aimed at ideal beauty of form, proportion and expression, reached its peak of serene perfection, painting experimented with the third dimension, although vase-painting declined, metalwork and engraving of gemstones was excellent.

The Hellenistic period (327-23 BC). Technical skill and variety in the arts still developed, although the art of the Classical period continued without interruption throughout the Hellenistic period. See also pp.1202-1217

Greek drama, first form of DRAMA in western civilization, among which are found plays of unparalleled poetry and power. Greek drama took two forms, TRAGEDY and COMEDY. Tragedy developed from religious festivals at which a chorus sang responses to a leader. Aeschylus introduced a second actor, allowing for genuine dramatic interaction, and Sophocles added a third. The other main surviving tragedian was Euripides. Greek tragedy usually dealt with mythical subjects, but sometimes, as in Aeschylus' *The Persians*, used recent history for its setting. The subjects are based on the inexorability of fate, the failure of man's attempts to transcend his limitations, and human dilemmas of love and duty. A tradition of Greek comedy arose in the 5th century BC, which was often highly topical and lampooned the conventions of tragedy as well as the actions of politicians. The best-known comedy-writer was Aristophanes. Drama competitions, for both comedy and tragedy, were run by many of the cities at religious festivals. See also pp.1208-1209

Greek fire, compound that ignited and burned strongly when brought into contact with water. It was first used by the Byzantine Greeks in sea battles in the 7th century AD. Its constituents probably included sulphur, tar, quicklime and naphtha, but its exact composition remains unknown.

Greek language, Indo-European language spoken in Greece since c.2000 BC. In ancient Greece there were several dialects, of which Attic, spoken in Athens, is the most common in literary records. Greek was widely spoken in the Middle East in Hellenistic times in a simplified

form known as koine, and was known throughout the Roman Empire. It was the official language of the Byzantine Empire, and began to evolve into its modern form in c.1000 AD. After the fall of Byzantium in the 15th century it was confined to Greece, where it developed two forms - 'demotiki', the spoken language and that used in most literary forms, and 'katharevousa', used for 18th-century literature in official documents. Ancient Greek is still spoken by Greek Orthodox priests. See also pp.1878-1879

Greek literature, one of the longest surviving traditions of literature in the world. Earliest Greek literature was in the form of epic songs, collected by HOMER in the *Iliad* and the *Odyssey*. Throughout classical Greece there was a tradition of fine literature in poetry, both lyric and dramatic, and prose writing, encompassing history, philosophy and oratory. Greek literature continued to flourish until the fall of the Roman Empire, and most of the scientific works of the period were written in Greek. Imaginative literature was less popular than scholarship in the Byzantine Empire, and writing in Greek died out after the Turkish invasions of the 15th century. With the overthrow of the Turks in 1828, Greek literature was revived, and several writers of international significance such as Nikos KAZANTZAKIS and George SEFERIS have written in Greek. See also pp.1208-1209

Greek Orthodox Church. See ORTHODOX CHURCH

Green, Julian (1900-), French novelist of American parentage and brother of novelist Anne Green. He expresses deep spiritual anxiety in the face of a violent and sinful society. Among his best-known works are *The Closed Garden* (1927), *Moina* (1950) and *Ce qui reste de jour* (1972).

Green, Thomas Hill (1836-82), British philosopher. A representative of English idealism, he reacted against the English empiricists and stressed self-determination based on free ethical choice. His most important work is *Prolegomena to Ethics* (1883).

Green algae, large group of marine and freshwater algae (division Chlorophyta). Green algae range in size from microscopic single-cell types to large, complex seaweeds. Some of the single-cell types form colonies. Others live in a symbiotic relationship with fungi, forming the plant known as a LICHEN, and yet others live in symbiotic association with certain marine invertebrates. See also p.358

Greenaway, Kate (1846-1901), British author and illustrator of books for children. Her illustrations of a joyous world of children are executed with charm and delicacy, but without sentimentality. Her first major success was *Under the Window* (1879). Other titles include *Mother Goose* (1881) and *Language of Flowers* (1884). **Green belt**, area of open land as a barrier between adjoining built-up areas. The concept of green belts was first put forward by Ebenezer HOWARD in his plans for Garden Cities. Howard used them to distinguish residential from industrial sections. The green belts provide insulation from ugly factories and intensive commercial areas; they may provide recreational space and they aid in the replenishment of atmospheric oxygen.

Greene, Henry Graham (1904-), British novelist and dramatist. His novels, usually written from the evident viewpoint of a Roman Catholic convert, include *Brighton Rock* (1938), *The Power and the Glory* (1940), *The Quiet American* (1955), *Our Man in Havana* (1958), *Travels with My Aunt* (1969) and *The Honorary Consul* (1973). His plays include *The Living Room* (1953) and *The Potters' Shed* (1957).

Greene, Nathaniel (1743-86), American Revolutionary general. From 1775-77 he served as an able subordinate to Washington in Massachusetts, New York and New Jersey. He was appointed commander of the army of the South in 1780.

Greene, Robert (1558-92), English dramatist and pamphleteer. His works include the play *The Honourable History*

Greek architecture's perfection of form influenced all subsequent European styles

Greek drama marks the introduction of the distinction between tragedy and comedy

Graham Greene's novels present a recurring theme of the conflict between good and evil

of Friar Bacon and Friar Bungay (acted c.1592), the prose romance *Pandosto* (1588) and accounts of London's criminal underworld. His romantic comedies influenced those of SHAKESPEARE, and he was possibly co-author of the *Henry VI* plays on which Shakespeare based his own.

Greenfinch, greenish bird with yellow wing markings, it is resident in Britain, but found also in other parts of Europe and in N Asia. Length 14.7cm (5.8in). Family Fringilidae, species *Carduelis chloris*.

Green flash, the greenish or bluish hue of the upper rim of the sun seen just as it is about to disappear at setting, or appear at rising, due to refraction, scattering and absorption of light in the atmosphere.

Greenfly, small insect of the order Hemiptera which is, with the blackfly, the most common aphid. These plant lice pierce the leaves and stems of plants with their mouthparts and suck out the juices, thereby helping to spread plant diseases and seriously to deform seedlings. They are preyed upon by LADYBIRDS, but are nurtured by ants for their sticky, sugary excretion called honeydew. Length about 3mm (0.25in). See also p 40.

Greengage. See PLUM.

Greenheart, tropical American tree which yields a heavy dense greenish wood that resists attack by insect and marine borers. It has accordingly been used to build piers and the keels of boats. Family Lauraceae, species *Ocotea radiaei*.

Greenhouse, also called hothouse, building designed to protect vulnerable plants against extremes of temperature. Most greenhouses have a wooden or metal framework with glass or clear plastic. They may also be used to house germinating seeds and seedlings. Temperature and humidity can be controlled so that out-of-season or exotic plants can be grown.

Greenhouse effect, selective trapping of heat radiation from the sun by the atmosphere causing the earth to be heated. It is so named because the effect is readily demonstrable in a greenhouse in which the glass is analogous to the atmosphere. Of the radiation reaching the earth, or the inside of a greenhouse, only the shorter (ultra-violet) rays can pass back through the atmosphere, or the glass, the longer (infra-red) heat rays are re-reflected within, due to the optical properties of the atmosphere, or glass.

Greenland, in the NW Atlantic Ocean, largest island in the world. Most of the land is ice-covered and the vegetation is limited to mosses and lichens. The majority of the population is Eskimo, who hunt seals and live on the SW coast. Fish and fish products are the basis of the economy although there is some mining for coal, mica, quartz and cryolite. The capital is Godthåb. Area: 2,175,000sq km (840,000sq miles). Pop. (1975 est.) 49,500. See p 205b.

Green Revolution, intensive plan of the 1960s to increase crop yields in THIRD WORLD agriculture by introducing higher-yielding strains of plant and new fertilizers. The scheme began in Mexico in the 1940s and was successfully introduced in parts of India, SE Asia, the Middle East and Latin America. Particularly notable for his work in this sphere is N E BORLAUG. See also p 178b.

Green room, traditional actors' backstage common-room, probably named after the colour of its walls and furnishings or perhaps derived from a corruption of scene room.

Green shank, shy wading bird with a long, slightly up-turned bill, it breeds in Scotland and Scandinavia and is a common winter visitor to Britain. It has characteristic olive green legs. Height 30cm (12in). Family Charadriidae, species *Tringa nebularia*. See also p 304.

Greenwich, borough in Greater London and site of the Royal Observatory from its foundation in 1675 until the 1950s, when it moved to Herstmonceux, Sussex. It is still used to define the PRIME MERIDIAN. Pop. (1971) 59,755.

Greenwich Mean Time. See GMT.

Greenwood, Walter (1903-), British novelist and playwright whose works describing social conditions in pre-war

Lancashire, most notably *Love on the Dole* (1933) and *Only Mugs Work* (1938), won him considerable contemporary acclaim. **Gregg**, Sir Norman McAlister (1892-1966), Australian ophthalmic surgeon. In 1941 he discovered that rubella - GERMAN MEASLES - in a pregnant woman could cause physical defects in her child. Gregg was knighted in 1953.

Gregorian calendar. See CALENDAR.

Gregorian chant, religious PLAINSONG music of the early and medieval Christian Church still, however, sung in some high Anglican and Roman Catholic churches today. Named after Pope GREGORY I (r 590-604), it is nevertheless believed to have originated shortly after Gregory's time. Before the REFORMATION, Gregorian chant was sung to the liturgy, psalms and canticles in Latin.

Gregory, name of 16 popes, of which those listed below were the most prominent. Gregory I (r 590-604) reformed the administration of the papal patrimony, insisted that the Apostolic see was the head of all churches, codified church music and initiated the conversion of Anglo-Saxons. He was canonized and became known as Gregory the Great. Gregory II (r 715-31) travelled with Pope CONSTANTINE I to Constantinople in 710, alienated the Byzantine government by his opposition to iconoclasm and developed new Masses for Lent. Like Gregory I, he was canonized. Gregory VII (family name Hildebrand; r 1073-85) twice excommunicated the Roman Emperor Henry IV over a conflict on lay investiture. He considered a crusade against the Seljuk Turks, increased the papacy's temporal power and thought constantly of the rights and duties of rulers. Gregory IX (Ugolino di Anagni b c 1143, r 1227-41) was made a cardinal deacon in 1198 by his uncle Pope INNOCENT III and as pope, clashed continuously with Emperor FREDERICK II. He ordered the 1233 inquisition, placed the Dominicans in charge of it and published the Decretals in 1234, a code of common law used until 1917. Gregory XI (Pierre Roger de Beaufort, b 1329, r 1370-78) was the last Avignon pope and his concern to recover the papal lands led to war with Florence. He issued the first condemnation of John WYCLIFFE's teachings. Gregory XII (Angelo Correr, b c 1325, r 1406-15) was appointed Latin patriarch of Constantinople in 1390 and later served as secretary to Pope INNOCENT VII. When he failed to end the schism between Rome and Avignon, he was deposed and died a cardinal bishop in 1417. Gregory XIII (Ugo Boncompagni, b 1502, r 1572-85) served as papal legate to France and Belgium (1556-57). He supported the training of the clergy, giving special support to the Jesuits, and restored the Roman Catholic Church in Poland. Gregory XVI (Bartolomeo Alberto Cappellari, b 1765; r 1831-46) lived monastically and revived missionary activity to combat secularization.

Gregory, (Isabella Augusta Lady) (1852-1932), Irish playwright. She recorded the folklore, humour and dialect of the peasants of western Ireland in such one-act plays as *Spreading of the News* (1909) and *The Rising of the Moon* (1909). With W B YEATS she organized the Abbey Theatre of Dublin and toured the USA with it in 1911.

Gregory of Nazianzus, Saint (c 330-c 390), bishop, theologian and father of the early Church. For a time Gregory was Patriarch of Constantinople, upholding the NICENE CREED against the ARIAN heresy, but retired to lead a monastic life and write. His most important contribution was his exposition on the Trinity.

Gregory of Nyssa, Saint (c 331-c 396), bishop, theologian and father of the Eastern Church. At the Council of Constantinople (381) Gregory supported the orthodox stand of GREGORY OF NAZIANZUS against ARIANISM. Gregory of Nyssa's many writings include tracts on asceticism and mysticism. His systematic works on Christian doctrine make him one of the greatest theologians of his period.

Gregory of Tours, Saint (c 538-594), bishop and historian of Gaul. After he

became bishop of Tours in 573 he used his influence to end various political feuds. He is best known, however, for his writings. His *History of the Franks* consists of three separate sections on current affairs, which are primary sources for a study of his times. He also wrote on miracles, martyrs and church fathers.

Greig, Tony (1946-), England and Sussex cricketer, b South Africa. A tall (2.0m, 6ft 7in), fiercely competitive all-rounder, he first played for England against the Rest of the World in 1970 and won 58 caps (1972-77), 14 as captain.

Grenada, independent republic of the Commonwealth in the SE Caribbean Sea, 137km (81 miles) N of Trinidad. It consists of Grenada and the smaller islands of the South Grenadines. The economy is largely based on cocoa, bananas and sugar. The capital is Saint George's. Area 344sq km (133sq miles). Pop. (1975 est.) 105,000. See p 205b.

Grenadier Guards, First Regiment of Foot Guards in the British army. Grenadiers were originally grenade-throwers chosen for their height. Its troops are today still the tallest in the British army, and with the other guards regiments are widely considered to form an elite.

Grenade, small hand-thrown or rifle-launched bomb carried by individual soldiers. Grenades may be filled with an explosive charge or substances used in chemical warfare. They are usually fused and are set off by a detonator which is included within the metal case. The early grenadiers were troops trained to use grenades. See also p 582.

Grenfell, Joyce Irene (1910-1979), British writer and popular film, television and theatre entertainer. She started her career as radio critic for *The Observer* newspaper and made her first stage appearance in London in 1939. Her autobiography was published in 1976.

Grenfell, Sir Wilfred Thomason (1865-1940), Canadian doctor and philanthropist. Grenfell devoted his life to the welfare of residents of Labrador and Newfoundland, using a hospital ship and establishing orphanages, hospitals and small businesses. He wrote about his experiences in *Forty Years for Labrador* (1932) and *The Romance of Labrador* (1934).

Greville, George (1712-70), British statesman, member of Parliament from 1741, navy treasurer (1756-62), first lord of the Admiralty (1762-63) and prime minister (1763-65). He was responsible for the STAMP ACT, which provoked violent reactions in the colonies, especially the Americas, and eventually caused the downfall of his ministry.

Greville, Sir Richard (c 1541-91), English naval commander and hero. He was fatally wounded and his ship, the *Revenge*, was captured in a sea battle off the Azores in 1591 against a vastly superior Spanish force.

Greville, William Wyndham, Baron, (1759-1834), British prime minister. A longtime friend of William PITT the younger and a supporter of Roman Catholic emancipation, he formed the "ministry of all the talents" (1806-07) after Pitt's death, which abolished the slave trade in 1807.

Gresham, Sir Thomas (1519-79), English merchant and financier, often sent on diplomatic and financial missions by ELIZABETH I. He was the founder of the ROYAL EXCHANGE and the endower of GRESHAM'S COLLEGE, London. He gave his name to GRESHAM'S LAW, although he did not formulate it.

Gresham's College, English educational establishment in the City of London. Founded in 1597 with money bequeathed for the purpose by Sir Thomas GRESHAM, the college offered open lectures on science in English rather than Latin. It made a notable contribution to the development of scientific thought and was the first home of the ROYAL SOCIETY.

Gresham's law, in economics, is stated as "bad money drives out good money". Specifically, the law means that if two kinds of money, eg. gold and silver coins, are in circulation, and if gold is overvalued

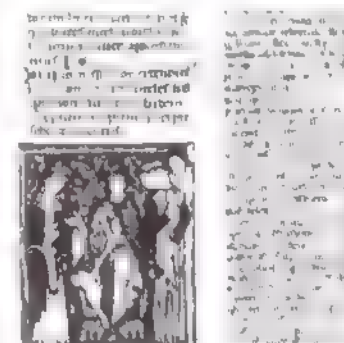

Greenhouses using clear plastic film can be erected quickly by most amateurs

Greenland is almost continuously girded with snow and buffeted by arctic winds

Gregory I delivered a panic-stricken Rome from threats of invasion by the Lombard king

Gregory IX twice excommunicated Frederick II the emperor of the Holy Roman Empire

Gretna Green

Lady Jane Grey, who was beheaded in the Tower, was Queen for only nine days

Greyhounds were originally hunting dogs, relying on their speed and keen eyesight

Grieg received an income from the government for the fame he brought to Norway

D W Griffith, a scene from his film *The White Rose*, a domestic drama made in 1914

while silver is simultaneously undervalued, then people will spend gold coins and hoard silver ones.

Gretna Green, village in Dumfries and Galloway, Scotland, close to the border with England. It became famous as the destination of eloping English couples after 1754, when English marriage laws were tightened, until 1856 when a law was passed making it necessary that one of the prospective marriage partners reside in Scotland for 21 days prior to issue of the licence.

Greuze, Jean-Baptiste (1725-1805), French painter. He is known for his narrative genre paintings depicting strong passions in his subjects. His later works, mostly mood studies and paintings of nudes, were mawkishly sentimental.

Greville, Charles Cavendish Fulke (1794-1865), British diarist. Clerk to the Privy Council, and an intimate of politicians of both parties, his *Memoirs* were published in eight volumes (1875-87). They contain details about public figures and events spanning a 40-year period.

Grew, Nehemiah (1641-1712), English physician, botanist and microscopist whose best-known work, *The Anatomy of Plants* (1682), included a description of the anatomy of flowers and many fine wood engravings of the structures of plant tissues. It also contained ideas on the sexuality of different parts of a flower.

Grey, Albert Henry George, 4th Earl (1851-1917), governor-general of Canada (1904-11). A Liberal from England, Grey devoted himself to Commonwealth unity, the Quebec centenary in 1908, and the establishment of the Grey Cup for rugby.

Grey, Beryl (1927-), British dancer. She studied with Sergeyev and de Valois and was a soloist with Sadlers Wells Ballet (1942-57). She created many roles including Ashton's *Les Sylphes* (1946) and Massine's *Donald of the Buriens* (1951). Her international appearances have included Russia and China, and in 1968 she became artistic director of the London Festival Ballet.

Grey, Charles, 2nd Earl (1764-1845), British prime minister. During his administration (1830-34), the First Reform Bill was passed (1832). Grey supported limited parliamentary reform, though as a whig aristocrat he was no radical.

Grey, Sir George (1812-98), British colonial administrator. He explored Western Australia (1837-39) and served as lieutenant-governor for South Australia (1841-45). He governed New Zealand (1845-53, 1861-68) and Cape Colony in South Africa (1854-61). He was premier of New Zealand (1877-79).

Grey, Lady Jane (1537-54), Queen of England. A great-granddaughter of Henry VII, she was married to Guildford Dudley, son of the Duke of Northumberland, as part of the duke's scheme to oust the Tudor dynasty. On Edward VI's death in 1553 she was proclaimed queen, but Princess Mary's claim was established quickly and Lady Jane was executed in February 1554.

Grey, Zane (1875-1939), US novelist. One of the best-known writers in the western genre, his most popular novel was *Riders of the Purple Sage* (1912). His cowboy stories present brawny heroes, loyal to the ethos of the frontier, who overcome callous villains.

Grey, river in NW South Island, New Zealand; rises in the Spenser Mountains and flows SW into the Tasman Sea at Grey-mouth. Length: 121 km (75 miles).

Greyhound, coursing dog traditionally used to hunt hares and also used for racing. It has a long tapered head and muzzle with small ears set at the back and dark bright eyes. Its broad muscular back and well-arched loins are set on long lean legs. The tail is long and tapered and the smooth coat may be almost any colour. Height: 66 cm (26 in) at the shoulder, weight 29 kg (65 lb).

Greyhound racing, sport in which GREYHOUND dogs race each other around an oval track in pursuit of an electrically operated dummy hare. Races are begun with the

traps being opened automatically to release all the dogs at once. Distances vary between 210 and 1,100 m (230-1,200 yards), with a maximum of eight dogs, more usually five or six. The greyhound's origins are ancient, but the sport did not begin until 1876 in London, and it was another 43 years before the oval track and mechanical hare were introduced. Popular as a betting sport, it attracts a large following in Britain, the USA, Australia and W Europe.

Grey matter, term used to distinguish brain cells that are not coated with a whitish substance, called myelin, from those that are - which are called white matter.

Greymouth, town and port on the W coast of New Zealand's South Island, at the mouth of the Grey River. Exports include coal, gold and timber.

Grey of Fallodon, Viscount (1862-1933), English statesman. As foreign secretary (1905-16) he was a major influence in British policy-making up to and during WWI, supporting France against Germany's expansionism and fostering links between Britain and the USA.

Gribble, isopod crustacean related to woodlice. It is a marine animal that bores into the wood of piers and jetties, causing considerable damage. Family Limnoriidae, genus *Limnoria*. See also p 30.

Grid, or control grid, perforated electrode placed between the cathode and the anode of a thermionic valve for controlling the flow of electrons in the valve. This effect is the basis of electronic amplification. Grid also refers to the reticulation systems of energy sources such as electricity or gas, as in the NATIONAL GRID.

Grieg, Edvard Hagerup (1843-1907), Norwegian composer. Called the "Chopin of the North", he used Norwegian folk themes in his music, much of which is for the piano or voice. His music manifests some of the most undiluted romantic nationalism, and among his best-known works are the song *I Love Thee* (1864), the two *Peer Gynt* suites for orchestra (1876), and the immensely popular *Piano Concerto in A minor* (1868). See also p 1583.

Grierson, John (1898-1972), British critic and film-maker. He coined the "documentary" as a cinematic concept in 1926 and thereafter pioneered its aesthetic development in both Britain and abroad - especially before WWII, when he worked closely with Robert Flaherty and administered the output of various official documentary film units.

Gries, Johann Peter (1829-88), German chemist who discovered the diazo reaction which enabled azo dyes to be prepared from a wide range of intermediate chemical compounds. See also AZO AND DIAZO COMPOUNDS, pp.585-586.

Griffith, Arthur (1872-1922), Irish politician and a founder of the Irish Free State. He edited "The United Irishman" (1899-1906), which proclaimed the SINN FEIN policy of national self reliance. He was president of the SINN FEIN party (1910) and of DAIL EIREANN (1922).

Griffith, David Wark (1875-1948), US film maker. His feeling for realistic narrative and characterization and his sense of varied composition, lighting and dramatic editing (montage) established the art of film in the US. His principal feature films include *Epoch Arden* (1911); *The Birth of a Nation* (1915); *Intolerance* (1916); *Broken Blossoms* (1919); *Orphans of the Storm* (1922); and *Isn't Life Wonderful* (1925). See also p 1682.

Griffon, also called griffon vulture, carrion-eating bird of prey of Eurasia and N Africa; it has gold or sandy-brown plumage. It is gregarious and nests in large flocks in caves or on cliffs. Length 1 m (3.3 ft). Family Accipitridae, species *Gyps fulvus*.

Grignard, Francois Auguste Victor (1871-1935), French chemist who shared the 1912 Nobel Prize in chemistry with Paul Sabatier for his discovery and investigation of GRIGNARD REAGENTS. He also synthesized organic compounds of aluminium and mercury.

Grignard reagents, organic chemical compounds containing the metal magnesium,

having the general formula R.Mg.X, where R is an alkyl or aryl group and X is chlorine, bromine or iodine. Examples are methylmagnesium iodide, CH₃MgI, and phenylmagnesium bromide, C₆H₅MgBr. Grignard reagents undergo many reactions to form carbon-carbon bonds and for this reason they are invaluable in organic synthesis. They are named after the French chemist and Nobel Prize winner (1912) Victor Grignard.

Grigson, Geoffrey (1905-), British poet and critic. His first publication was *Several Observations* (1939). He won the Duff Cooper Memorial Prize in 1971 for *Discoveries of Bones and Stones and Other Poems*.

Grike, feature of limestone exposed by erosion. Rainwater containing dissolved carbon dioxide is a weak acid that dissolves limestone along its planes of weakness. A blocky surface results, the blocks being called CLINTS and the separating cracks called grikes. See also pp 208, 218.

Grillparzer, Franz (1791-1872), Austrian Romantic poet and playwright whose works combined elements of popular STURM UND DRANG historical drama with an expression of the innate conflicts between spiritual serenity and worldly realities. His best-known plays, in a variety of classical metres, include *The Golden Fleece* trilogy (1821), *The Waves of the Sea and of Love* (1831) and *The Jewess of Toledo* (1837).

Grimaldi, Joseph (1779-1837), British clown, singer, dancer and actor. His white-face character, "Joey the Clown" influenced the development of the circus clown. He rose to fame at Covent Garden in 1806 in the pantomime *Harlequin and Mother Goose*. Often regarded as the greatest of clowns, he was also a popular comic singer.

Grimaldi, Genesio QUELPM (pro-papal) family who were lords of Monaco from the 15th century. With the Fieschi, the Grimaldi were leaders in Genoa's 13th-century pro-Angevin struggle against Frederick II, which began a long period of association with the house of Anjou. In 1419, after several earlier seizures of power, a branch of the family took final possession of Monaco and in 1659 assumed the title of prince, now held by Prince Rainier III (r.1949-).

Grime's Graves, NEOLITHIC flint mines, named after the Anglo-Saxon god Grum (or Woden), near Brandon on the Norfolk-Suffolk border, ENGLAND. Remains have been excavated of some 340 shafts, from which flint, mainly for axe blades, was extracted. These were roughly chipped on site and then sold in half-finished condition.

Grimm, the Brothers, two German brothers, Jacob Ludwig Carl Grimm (1785-1863) and Wilhelm Carl Grimm (1786-1859), famous for their collection of folk-songs and folktales, in particular *Grimm's Fairy Tales* (1812-22). This was the first systematic compilation of traditional, mostly oral, stories. The brothers' interest in Germanic history and philology led to the publication of Jacob's *Deutsche Grammatik* (1819-37) and the *Deutsches Wörterbuch*, a study of the historical development of the Germanic languages, for which he also formulated GRIMM'S LAW.

Grimmelshausen, Hans Jakob Christoffel von (c.1625-76), German novelist. He wrote *Simplicissimus* (1669), a satirical novel on social conditions during the THIRTY YEARS WAR. He had served in the Holy Roman and Swedish armies and became a Roman Catholic convert.

Grimmett, Clarrie (1891-1980), Australian cricketer, b. New Zealand. An accurate leg-break bowler with a low arm action, he came late to Test cricket yet in 37 Test matches (1925-36) became Australia's leading wicket-taker with 216 dismissals. He played for Wellington (NZ), Victoria and South Australia.

Grimm's law, in philology, series of rules that describes sequences in the development and divergence of related languages. The law of consonantal mutations was first suggested by Jacob Grimm in his *Deutsche Grammatik* (1819-37); he discovered significant correlations between German and

other INDO-EUROPEAN LANGUAGES, especially Latin, and demonstrated that sound changes are not random but a regular process. The law runs: Hard consonant becomes Aspirate, Aspirate becomes Soft, Soft becomes Hard - mnemonically abbreviated to HAS over ASH.

Grimby, county district in ss Humberside, England, on the Humber estuary, until 1974 it was in the county of Lincolnshire. The town of Grimby is one of the world's largest fishing ports. Pop. (1971) 95,685. See also HUMBERSIDE.

Grihnau, Judy (1939-), English 100m backstroke swimmer who retired when aged 20, having become the first swimmer to hold Olympic (1956), European (1958) and Commonwealth (1958) titles concurrently.

Gris, Juan (1887-1927), Spanish painter, sculptor and writer. He settled in Paris in 1906 and, with PICASSO and BRAQUE, became a leading CUBIST artist. His later works included collages, architectonic paintings, still lifes and stage sets and costumes for DIAGHILEV. A representative work is the oil paint collage *Breakfast* (1914).

Grisaille, monochromatic painting in greys. It may be used in the first stage of an oil painting, or to imitate sculptural features, as in works by such early Netherlandish painters as Jan van Eyck. It is also a type of stained-glass painting, a famous example of which is the *Five Sisters* window in York Minster, England.

Grisi, Carlotta (1819-99), Italian ballerina. Infatuation by her led Theophile GAUTIER to adapt for ballet the legend *Giselle* (music by ADAM). She created the title roles in *La Esmeralda* (1844) and *Pagliola* (1846). In 1845 she started with Marie TAGLIANI in *Pas de Quatre*.

Grisons, or Graubünden, largest and most easterly canton in Switzerland, the capital is Chur. A region of glaciated peaks, forests and fertile valleys, it is a popular tourist area. There is little industry. The majority of the population speak Romansch, the rest either Italian or German. Area: 7,112sq km (2,745sq miles). Pop. (1970) 162,086.

Grist, in the brewing of beer, crushed malt in which the barley husks are retained whole. The next stage in the brewing process is to feed the grist into a mash tun, where hot water is added and the goodness extracted. The spent grain may later be used as an ingredient of cattle cake.

Grit, in geology, a coarse sandstone. It is usually formed in a river delta where material eroded from a landmass has been deposited rapidly before the fragments have been rounded or sorted. The Upper Carboniferous deltas left thick beds of grit in many areas of the British Isles.

Grivas, George (1898-1974), Greek Cypriot general who led the Greeks in Cyprus in rebellion against Britain from 1955 until 1959. He formed the guerrilla force EOKA (National Organization for the Cyprus Struggle) to fight for ENOSIS (union with Greece) but clashed with Archbishop MAKARIOS and retired. He returned in 1964 to head Greek forces in Cyprus, was forced to leave again in 1967, but re-entered the country secretly in 1971.

Grizzly bear, large omnivorous BEAR, generally considered to be a variety of brown bear (*Ursus arctos*) although sometimes classified as a separate species (*Ursus horribilis*). Once widespread in N. North America, the grizzly is now rare except in W. Canada, Alaska and the Yellowstone and Glacier parks. Length to 2.5m (7ft); weight 410kg (900lb).

Groat, medieval English silver coin worth four contemporary pence. First minted in 1351, it lasted for 300 years until the introduction of milled coins. The name is borrowed from an earlier Dutch and Flemish coin and means "large".

Groek (1880-1959), stage name of Charles Adrian Weiach, Swiss clown who during his career built up an international reputation second only to that of GUMMA. Especially popular in Paris and London, he exhibited an inimitable and infectious appreciation of his own jokes and pathetic sympathy with himself when in distress.

Groenendaal. See BELGIAN SHEPHERD.

Gromyko, Andrei (1909-), Soviet diplomat. In 1943 he was appointed ambassador to the USA and took part in the YALTA and POTSDAM conferences. In 1946 he became Soviet representative to the UN and in 1952 ambassador to Britain. After being appointed to the Communist Party Central Committee in 1956, he was made foreign minister in 1957.

Groningen, NE province of The Netherlands, bordered by West Germany (E) and the North Sea (N); the capital Groningen. The economy is based on agriculture. There is much reclaimed land. Area 2,419sq km (934sq miles). Pop. (1971 est.) 522,400.

Groombridge 34, binary star in the constellation of Andromeda. Both components are faint red stars. Characteristics: apparent mag. 8.1 (A), 11.0 (B), absolute mag. 10.3 (A), 13.1 (B), spectral type M1 (A), M6 (B), distance 11.7 light-years. See also p.978.

Groote Eylandt, island off the NE coast of the Northern Territory, Australia, in the Gulf of Carpentaria. It has a rocky, barren terrain and manganese ore is mined. It is part of the Arnhem Land Aboriginal Reserve. Area: 2,460sq km (950sq miles).

Gropius, Walter (1883-1969), German-born architect and founder of the BAUHAUS (1919-28). He pioneered the functional design that became known as the INTERNATIONAL STYLE and his belief in group-work led him to associate with other architects on almost all his buildings. Representative of his work is the Fagus Factory at Alfeld-an-der-Leine (1911) and Impington Village College (1939) near Cambridge, England, which Gropius designed in partnership with Maxwell Fry. See also pp.1658-1659, 1659.

Gros, Antoine-Jean (1771-1835), French painter. He was a forerunner of the ROMANTIC MOVEMENT and strongly influenced by the NEO-CLASSICISM of DAVID. His large, dramatic pictures illustrating the NAPOLEONIC WARS influenced GERICAULT and DELACROIX, who admired his rich colours and the sweeping movement of his compositions.

Grosbeak, name given to several birds of the FINCH family (FRINGILLIDAE) which have short, thick, seed-cracking beaks. Found in wooded areas of the Americas, Europe and Asia, grosbeaks feed on seeds, fruits and buds. They include the rose-breasted grosbeak (*Phoeniceus ludovicianus*) of North and South America, the pine grosbeak (*Pinicola enucleator*) of Canada and N. Europe, and the scarlet grosbeak (*Cardinalis erythrinus*) of Europe. Length: 18-25cm (7-10in).

Grosseteste, Robert (c.1175-1253), statesman, scholar and Bishop of Lincoln. He influenced English FRANCISCANS toward biblical study and other academic pursuits. His belief that the Church is superior to the state brought him into conflict with the crown.

Grossmith, name of two brothers, entertainers on the British stage. George (1847-1912) was a singer of light opera who created many of the roles in works by Gilbert and Sullivan, including *The Mikado*, *Iolanthe* and *Patience*. With his brother Weedon (1854-1919) he wrote *The Diary of a Nobody* (1892), the imaginary diary of an extremely respectable city clerk of the 1890s. Weedon Grossmith was initially a painter and in 1885 went on the stage as an actor and comedian. *The Night of the Party* (1901) was his most successful play.

Gross National Product (GNP), total market value of all goods and services produced by a nation in a specific period, usually one year. GNP is a universal indicator of economic performance and can tell a government how different areas of the economy are faring. GNP is the sum of four types of spending: private consumption (goods and services bought by the community), government expenditure, exports, less the value of imports, and business investment. GNP can be adjusted for changes in prices to produce a "real" figure in terms of the prices of a given base year.

Gross profit, or gross margin, in accounting, the difference between the money received for goods sold and the costs that were incurred in producing them. The gross profit figure is used as a measure of the profitability of a company. A downward trend in the gross profit figure over a period may indicate an inadequate pricing policy.

Grosz, George (1893-1959), German illustrator and painter. A founder of the DADA movement in Berlin, he savagely satirized capitalist and military corruption in books of pen drawings and caricatures, such as *Ecce Homo* (1923). After settling in the USA in 1932, his later works combined satirical with idyllic and then nightmarish qualities which showed some affinity with SURREALISM. See also p.1655.

Grotelend, Georg Friedrich (1775-1853), German classical scholar. Although he specialized in Latin and Italian, his greatest achievement was the deciphering (1802) of ancient Persian cuneiform (wedge-shaped) script, first copied at Persepolis in Iran in 1765. He deduced correctly that the inscriptions were in three languages.

Grotius, or De Groot, Hugo (1583-1645), Dutch jurist and statesman. He held the office of chief magistrate of Rotterdam from 1613 until 1618 when he was ousted by his political opponents. He was sentenced to life imprisonment but escaped in 1621 and lived in Paris. His most famous work was *De Jure Belli ac Pacis* (On the Law of War and Peace, 1625), and he is considered the founder of international law.

Grotowski, Jerzy (1933-), Polish theatre director, an influential avant-gardist who advocates a style of "poor theatre" stripped of superfluous effects. He founded the Polish Laboratory Theatre in 1959, and wrote *Towards a Poor Theatre* (translated 1968).

Ground effect, aircraft, reaction of the wing to reduced drag when operating close to the ground. When close to touchdown, drag may drop by as much as 40%, allowing an aircraft to fly at a speed lower than its normal stall speed.

Ground elder, perennial herb whose long rhizomes make it a troublesome weed in many temperate regions. It is also called goutweed and is sometimes eaten as a vegetable. Family Umbelliferae, species *Aegopodium podagrana*.

Ground ivy, trailing, perennial herb native to Europe and often considered a weed. It has round leaves and small, violet, clustered flowers, and spreads rapidly in cool, damp places. Family Labiatae, species *Glechoma hederacea*.

Groundling, member of an Elizabethan audience who occupied the promenade pit of a theatre and constituted its most rowdy and vociferous element. See also GALLERY.

Ground loop, in aviation, a violent, uncontrollable turn by an aircraft on the ground. If, on taking off or landing, an aircraft is not correctly aligned, a ground loop may be caused if a wing-tip touches the ground.

Groundnut, or peanut, fruit of the plant *Arachis hypogaea* of the pea family (LEGUMINOSAE). It is grown as a valuable food crop in many warmer parts of the world. Groundnuts are not "nuts" at all, but pea-like fruits which ripen in underground pods. The name groundnut is also sometimes given to the edible tubers of other plants, such as the European *Cyperus esculentus* (family Cyperaceae). See also pp.711, 713.

Ground pine. See CLUB MOSS.

Groundsel, also called ragwort, any of numerous species of plants in the genus *Senecio*, many can be cultivated. More than a dozen wild species are common in Britain, in woods, sandy soils, cultivated land or waste ground. Most of these, including common groundsel (*S. vulgaris*), produce yellow flowerheads. Family Compositae.

Groundspeed, aircraft's actual rate of progress with respect to the ground, rather than the air. It may be calculated from the airspeed by correcting for variations in temperature and pressure and by allowing for the speed of the wind.

Grizzly bears are so called from the "grizzled" (grey) tips to their otherwise dark fur.

Walter Gropius designed these Proletariat Houses in Karlsruhe, Germany.

Antoine-Jean Gros' sweeping canvas of Napoleon on the Battlefield of Eylau (detail).

Groundsel, the yellow flowers of this weed can be seen throughout the year.

Ground squirrel

Grouse, the black grouse is a European member of the large family of game birds

Grouse are so called from the sound which they make when fished out of the water

Guadeloupe, a palm tree commemorating Basse-Terre's liberation in 1944

Guardi's treatment of this scene is less mechanical than, say, a Canaletto

Ground squirrel, small terrestrial squirrel native to Eurasia and North America. Ground squirrels, active by day, find shelter in burrows or crevices and eat plants, seeds, insects and other small animals and sometimes eggs. Most have greyish-red to brown fur and some are striped or spotted. Length, excluding tail to 40 cm (16 in), weight 85–1,000 g (0.1–2.2 lb). Family Sciuridae, genus *Citellus* (and others). See also p 304

Ground state, most stable energy state of an atom, ion or molecule. It is the state of an atom when the orbiting electrons move in such orbits that the atom's energy is at a minimum.

Ground water, water that lies in the zone beneath the surface of the earth. The water comes chiefly from the atmosphere, although some is of volcanic or sedimentary origin. Ground water moves through porous rocks and soil and can be trapped by wells. It can dissolve minerals which are in the rocks, precipitating others, creating such geological structures as caves, stalagmites, stalactites and sinkholes.

Grouper, tropical marine fish found from the coast of Florida to South America and in the Indian and Pacific oceans. It has a large mouth, sharp teeth, a mottled body and the ability to change colour. Length to 3.7 m (12 ft), weight to 450 kg (1,000 lb). Family Serranidae, species giant, *Epinephelus itajara* and the Australian *Epinephelus aeneolatus*. See also p 61

Group theory, branch of abstract algebra applicable to symmetry properties. A group is a collection of entities with associated operations, obeying a specific set of rules (associative law, existence of an inverse, etc). The theory was developed mainly by the French mathematician Évariste GALOIS. The symmetry elements of an object, for example – operations, such as rotations, that bring an object back to its original position – form a group. Group theory is particularly useful in QUANTUM MECHANICS, SPECTROSCOPY and theories of elementary particles. See also pp 790–791, 800–801

Group therapy, psychotherapy in which two or more patients and a trained therapist participate to resolve difficulties and effect therapeutic changes. There are several different types often based on different theories, but they all rely on the group generating an atmosphere of mutual trust and support. With discussion, confession and constructive criticism the patients are able to conquer their problems and disorders, develop their interpersonal skills and gain personal understanding. The role of the therapist varies: he can be detached and analytic, limited to interpreting the dynamics of the group, or he can be more involved personally, offering advice, direction and reassurance. See also ENCOUNTER GROUP THERAPY, PRIMAL THERAPY, pp 1120–1121

Grouse, plump game bird of N areas of the Northern Hemisphere. About the size of a small turkey, grouse are fowl-like but have feathered tarsi and toes for walking on snow, feathered nostrils and often distensible, brightly-coloured air sacs on the neck. Some species, such as the PTARMIGAN, are seasonally monogamous. Family Tetraonidae. See also CAPEBAILLE, PRAIRIE CHICKEN, SAGE GROUSE, pp 76, 304

Grove, Frederick Philip (1871–1948), Canadian writer, b Sweden. His works, mainly concerned with prairie life, include *Settlers of the Marsh* (1925), *The Yoke of Life* (1930) and *Fruits of the Earth* (1933).

Groves, Sir Charles Burnard (1915–), British conductor. His first appointment was as assistant conductor of the BBC Theatre Orchestra (1942). He was conductor of the Bournemouth Symphony (1954–61), and between 1963 and 1977 was musical director and conductor of the Royal Liverpool Philharmonic. In 1977 he became principal conductor of the English National Opera.

Grove, Sir George (1820–1900), British musical scholar. He discovered parts of SCHUBERT's *Rosamunde* music and edited the authoritative *Dictionary of Music and Musicians* (1879–89).

Growing Up in New Guinea, study of sex and adolescence in a primitive society by the US anthropologist Margaret MEAD, published in 1930.

Growth, progress or development, in biology, the process by which an organism increases in size and weight. It involves cell division or enlargement, or both. It can result from the inclusion of external matter, and is usually dependent on the environment of the organism.

Growth hormone, or somatotropin, protein hormone produced by the anterior PITUITARY, it effects general growth of the body. Over-secretion results in ACROMEGALY in the adult, and GIGANTISM in the young, under-secretion results in "pituitary dwarfism". See also p 154

Grub, common term for the LARVA (often legless) of an insect, although fly larvae that infest decaying food are more usually called maggots.

Grub Street, street in London which, in the 18th century, was largely taken over by minor writers and pamphleteers. The term is used to describe literary hackwork.

Gruftdydd ap Llywelyn (d 1063), Welsh king. He fought both the Danes and English successfully and became King of all Wales in 1055. After his defeat by Earl HAROLD (future king of England) Wales reverted to a group of princedoms. See also pp 1318, 1318

Gruiformes, order of birds, many of which are aquatic, eg rails, fialoots or sunbitterns, coots and cranes. Terrestrial species, including BUSTARDS, rarely fly. See also p 73

Grundy, Mrs, symbol of conventional British propriety, named after a character in Thomas Morton's *Speed the Plough* (1798). She is continually referred to in this play – "What will Mrs Grundy say?" "What will Mrs Grundy think?" – but never actually appears.

Grünwald, Matthias (c 1480–1528), German painter. Although a contemporary of DÜRER, he applied few Renaissance techniques except in perspective, light and colour. His greatest work was the folding altarpiece for the Antonite monastery in Isenheim (1512–16). It consists of a majestic sequence of religious scenes with mystical overtones in late Gothic linear style. See also pp 1394, 1394

Grunion, marine silverfish found in shallow tropical and temperate waters, particularly along the Baja and s California coast. Shoals of grunion spawn high on the beach at the highest tide, and the eggs hatch at the next high tide. Family Atherinidae, species *Leuresthes tenuis*.

Grunt, marine fish found in shallow tropical waters of the w Atlantic and Pacific. A deep-bodied fish with a large mouth, it makes sounds by grinding its pharyngeal teeth, an air bladder acting as a resonator. Family Pomadasysidae, species includes Bluestripe *Haemulon sciurus*.

Gruyère, popular cheese produced in the Fribourg canton of w Switzerland. It is high in butterfat and has a light yellow colour. See also pp 726–727, 727

Gryphus, Andreas (1616–64), German author. He wrote lyrics, tragedies and comedies in High German and dialect, and is best known for his satirical comedies. These include *Hornbläserbrief* (1663) and *The Beloved Rose Among Thorns* (1660).

Guadalajara, city in sw Mexico, capital of Jalisco state and second largest city in Mexico. Noted for its mountain scenery and mild climate, it is a popular health resort and communications centre, having a direct rail link to the USA. Industries: engineering, food processing, pottery. Pop (1975) 1,560,805.

Guadalcanal, tropical island in the w central Pacific Ocean, approx 970 km (600 miles) e of New Guinea, largest island of the British Solomon Island Protectorate. The port of Honiara is the centre of government. The island was the scene of heavy fighting between Japanese and US troops in WWII. The chief products are coconuts and timber. Area: 6,475 sq km (2,500 sq miles). Pop. 24,000.

Guadeloupe, overseas French département in the Leeward Islands, e West Indies, made up of the islands of Basse-

Terre (w), and Grande-Terre (e). Basse-Terre is the capital and Pointe-à-Pitre is the chief port. Discovered in 1493 by Columbus, the islands were settled by the French in 1635. The chief crops are sugarcane and bananas. Industries: distilling, tourism. Area: 1,780 sq km (687 sq miles). Pop (1975 est.) 354,000.

Guahibo, tribe of nomadic South American Indians that live in the savannah w of the Orinoco River in a Colombia. They speak their own language and are related to the Chincoa. Today there are approx 20,000 people in the tribe.

Guam, unincorporated US territory in the w Pacific Ocean, largest of the Mariana Islands. Discovered by Ferdinand MAGELLAN in 1521, it was ceded to the US by the Treaty of Paris in 1848. Guam was the first US territory to be occupied by the Japanese during WWII. It has a large US military base. Area: 541 sq km (209 sq miles). Pop (1975 est.) 104,000. See also p 2056.

Guano, one of four gregarious South American relatives of the camel, the other three are the LLAMA, alpaca and vicuña. It is a slender-bodied animal with a long neck and long legs. It is prized for its hide, meat, droppings (for fuel) and wool, which is used for high quality textiles. Height: to 110 cm (43 in) at shoulder. Family Camelidae, species *Lama guanicoe*.

Guangzhou. See CANTON.

Guano, dried excrement, mainly of seabirds and bats, that accumulates along coastlines and in caves. A valuable natural fertilizer, containing phosphorus, nitrogen and potassium, it is found mainly on islands off South America and Africa where there is a large population of pelicans, gannets and cormorants. Seal guano is also used.

Guantanamo, city in e Cuba, served by the port of Caibarien on Guantanamo Bay. It is the processing centre for a prosperous coffee and sugar producing region. The USA maintains a naval base on Guantanamo Bay under the terms of a treaty first signed in 1903. Pop. 130,100.

Guaraní, tribe of South American Indians speaking the Guaraní tongue. Once numerous, they have declined greatly, although most Paraguayans have some Guaraní blood. Their language has survived, and is the second national tongue of Paraguay. Some 200,000 people are counted as essentially Guaraní.

Guardi, Francesco (1712–93), Italian painter. Like CANALETTO, he specialized in views, but his style is freer and more imaginative. His views of Venice were not highly regarded in his day but his work has since been re-evaluated, first by the IMPRESSIONISTS who praised his treatment of atmosphere and light.

Guard, Brigade of. See individual regiments.

Guareschi, Giovanni (1908–68), Italian author whose humorous stories about a village priest, Don Camillo, sympathetically satirized the especially Italian problem of simultaneously acknowledging Roman Catholicism and Communism. *The Little World of Don Camillo* (1950) and its many sequels were widely translated, and adapted into films.

Guarnieri, a family of violin makers who worked in Cremona, Italy. The first of these was Andrea (c 1626–1698) who designed and built his instruments in the AMATI style. The greatest craftsman of the family was his grandnephew (or possibly grandson) Giuseppe Antonio (1698–1744). He is known for the original designs of his violins which can be compared to the instruments made by STRADIVARI.

Guatemala, nation in Central America between the Caribbean Sea and Pacific Ocean. The country has a tropical climate which is moderated by several mountain ranges. Although the economy is based on agriculture (coffee, cotton and bananas are among the chief crops), mining and consumer industries are becoming increasingly important. The capital is Guatemala City. Area: 108,889 sq km (42,042 sq miles). Pop (1973) 5,540,000.

Guatemala City (Ciudad Guatemala),

capital city of Guatemala, on a plateau in the Sierra Madre, largest city in Central America. Founded in 1776 to replace Antigua as the colonial capital of Spanish Central America, the city became the capital of the Central American Federation from 1823 until 1833. It was badly damaged by earthquakes in 1917-18 and 1976. It is the seat of San Carlos University (1676). Exports: coffee, gold, copper, silver, lead. Industries: mining, furniture, textiles, clothing, food processing, handicrafts. Pop. 717,300.

Guava, any of various trees or shrubs native to tropical America and the West Indies, and bearing fruit of the same name. The large white flowers produce a 7.6cm (3in) berry-like fruit, usually yellow with white, pink or yellow flesh. The 100 species include the common guava, *Psidium guajava*, and the strawberry guava (*P. cattleianum*), with purplish-red fruit. Family: Myrtaceae.

Guayaquil, city in w Ecuador, on the River Guayas near its mouth in the Gulf of Guayaquil, capital of Guayas province, chief port and largest city of Ecuador. Founded in 1535 by the Spanish, Guayaquil was frequently attacked by buccanniers in the 17th century. The city used to be plagued by tropical disease as a result of its hot, humid climate and inadequate sanitation. Industries: textiles, leather goods, cement, iron products. Pop. 814,000.

Guaymí, tribe of Indians inhabiting Panama, their language is of the Chibchan group. They are the most numerous Indians in Panama, and may be divided into the Northern Guaymí, who inhabit tropical forests, and the Southern Guaymí. Dependent on agriculture, they are also hunters with the bow and arrow. **Guayule**, shrub native to desert regions of N Mexico and Texas. Latex extracted from it is a commercial source of rubber. Height 0.9m (3ft). Family: Asteraceae, species *Parthenium argentatum*.

Gudgeon, freshwater CARP found in rivers from Britain to central China. It has a small mouth with barbels (fleshy whiskers) at each corner, elongated body and variable colour. Length rarely exceeding 20cm (8in).

Guelder rose, plant of the honeysuckle family grown as a garden ornamental. It has globular clusters of white or pink sterile flowers. Species *Viburnum opulus*.

Guelph, medieval Italian pro-papal political faction, opposed to the pro-imperial Ghibellines. "Guelph" derives from "Welf", the name of the German family contending with the HOHENSTAUFENS for control of the Holy Roman Empire in the 12th and 13th centuries, but the term later applied to the Italian opponents of the Hohenstaufen emperor Frederick II, and, more generally, the supporters of his enemies, the pope and the Angevins.

Guenon, any of 10-20 species of long-tailed, slender, medium-sized African MONKEYS found in the Sahara Desert. Guenons are day-active tree-dwellers, living in small troops dominated by an old male. Their omnivorous diet consists mainly of fruit, leaves and roots. They make good pets while young but often turn savage as they grow older. Genus *Cercopithecus*. See also p. 108.

Guercino, Francesco Barbieri (1591-1666), Italian painter. Influenced early in his career by Caracci, he worked mainly in Bologna. For Pope Gregory XV in Rome he painted the ceiling fresco *Aurora* in the Villa Ludovisi - a Baroque masterpiece. **Guernica**, town in N Spain. It is a centre of Basque nationalism, the oak of Guernica under which the diet of Vizcaya used to meet is a symbol of lost Basque liberties. Its bombing in the SPANISH CIVIL WAR aroused international protest and inspired one of Picasso's best-known paintings.

Guernsey, second-largest island in the CHANNEL ISLANDS of the United Kingdom, 40km (25 miles) NW of Jersey. It constitutes a bailiwick with several smaller islands, including Alderney and Sark. The mild and sunny climate makes farming and horticulture the most important activities. Tourism is another valuable source

of income. Area: 78sq km (30sq miles). Pop. 51,500.

Guernsey, common breed of DAIRY CATTLE originally in the English Channel Island of Guernsey. The cows give rich, yellow milk, second only to the Jersey breed in butterfat content, but greater in overall volume. Larger than Jerseys, Guernseys are brown and white. Weight: about 770kg (1,700lb).

Guerrilla warfare, small-scale ground combat operations frequently designed to harass rather than destroy the enemy. Such tactics are often employed by insurgents or irregular soldiers, and the term is closely associated with rebellion against an unpopular government or a foreign rule. By conducting limited forays against supply lines and small installations, guerrilla forces are able to avoid open engagements with conventional military units, enabling them to tie down a disproportionate quantity of enemy military strength. Guerrilla tactics are especially suited to difficult terrain (although they have been adapted to urban use) and rely on lightning attacks and aid from civilian sympathizers. By itself guerrilla warfare may not be decisive, it often needs to be complemented and consolidated by conventional strategy. In the 20th century guerrilla tactics have been used by many nationalist and/or Communist movements, eg in China, by Tito's Yugoslavian partisans in WWII, in Africa (Algeria, Angola, Mozambique, Zimbabwe) and Indochina (notably Vietnam).

Guevara, Ernesto "Che" (1928-67), revolutionary leader and political theorist; a key figure in CASTRO's Cuba. A physician born in Argentina, Guevara became associated with Castro in Mexico, and returned with him to Cuba in 1956 to conduct guerrilla activities against the regime of Fulgencio BATISTA. When Castro came to power, Guevara was placed in charge of economic planning. He disappeared from public view in 1965. Two years later he was captured and killed while trying to establish a Communist guerrilla base in Bolivia.

Guiana. See FRENCH GUIANA, GUYANA, SURINAM.

Guided missile, missile controlled throughout its flight to target either by exterior or interior control systems. There are four types: (1) surface-to-surface, (2) surface-to-air, (3) air-to-air, (4) air-to-surface. The first guided missiles were built in Germany during WWII. The first of these was the V1, which was powered by a pulse-jet engine and flew at quite low speeds which made it easy to destroy in the air. The V2 was a far more sophisticated weapon - rocket-powered, with an automatic pilot and electronic guidance, it could reach a height of 100km (60 miles) and speeds of over 5,800km/h (3,600mph) and deliver a tonne of high explosive. Postwar development improved upon the V2 with missiles ranging from the huge intercontinental ballistic missiles (ICBMs) with ranges of 10,000km (6,000 miles) and nuclear warheads, to small hand-launched anti-tank missiles. An important strategic capability lay in the submarine systems developed by the superpowers, the first of which was Polaris. The multiple independently targeted re-entry vehicles (MIRV) were developed in the late 1960s. Another important event in the arms race was the US Cruise missile, which can evade radar detection by flying at low heights. Its computer guidance system can steer it to within ten metres of its target by comparing satellite photographs with the terrain over which it flies. More recently, the balance of power has been disturbed by the deployment of Soviet SS20 missiles, and by the US response - the Pershing. See also pp. 563, 569, 572-573.

Guido d'Arezzo (died c.1050), musical theorist and Benedictine monk, b. France. While head of the choir school at Arezzo, Italy, he gave the names *ut, re, mi, fa, sol, la* to the notes of the 6-note or hexachord scale then used. This was the basis of solfège, used in Italy and France, and its British variant, TONE SOL-FA. Guido also furthered the use of the STAFF to indicate the pitch of notes.

Guido da Siena (fl. mid-13th century), Italian painter. Although little is known of him, he is believed to be one of the first Italian painters to move away from the Byzantine style, and was a forerunner of Duccio and the Sienese painters.

Guild, organization formed by special interest or skilled group during the Middle Ages. Guilds, being urban organizations in the age of the FEUDAL SYSTEM, were formed for self-protection, social life and profit by those outside the rural manorial system. In 10th-century England, the London peace-guild was formed to protect urban landowners. In the 12th and 13th centuries, craftsmen in towns throughout Europe organized guilds to maintain the price and quality of goods, to protect their interests and to supervise the training of apprentices. By exercising a monopoly of a craft, they were able to control the amount of labour employed by the craft. By the 14th and 15th centuries, there were also religious guilds, burial guilds, merchant and money-lending guilds. At first self-governing and politically influential, guilds in the later Middle Ages were subject to municipalities. The longest lasting guilds, those of teachers and students, were responsible for the development of medieval universities.

Guildford, county district in w Surrey, England, bordering Greater London. It was created in 1974 under the Local Government Act (1972). Area, 271sq km (104sq miles). Pop. (1974 est.) 121,600.

Guild socialism, type of socialism in Britain that advocated government control of the means of production and contracting of workers through national outlets. The initial theorist, Arthur J. Penly, urged a restoration in the power of guilds. The movement stressed worker-control of industry rather than general political reform. It lasted from 1906 to 1925.

Guillaume, Charles Édouard (1861-1938), Swiss physicist who was awarded the 1920 Nobel Prize in physics for his discovery of invar, an alloy of iron and nickel with an extremely small coefficient of expansion. He also developed another alloy, platinite, which expands at about the same rate as glass.

Guillemot, small, usually black and white seabird of the AUK family (Aleidae). It lives on cold Northern Hemisphere coastlines and dives for food on the seabed. Nesting in colonies, it lays two oval eggs on rocky coasts. Length about 43cm (17in). Genera *Cephus* and *Uria*. See also p. 81.

Guillen, Jorge (1893-), Spanish poet. After the civil war he left Spain for the USA. His main work, *Cántico*, appeared in several augmented editions from 1928 to 1950. *Language and Poetry*, a critical work, appeared in 1961.

Guillotine, mechanized beheading device adopted during the FRENCH REVOLUTION after its invention by Dr Guillotin. Following experiments on corpses, it was first used to execute a highwayman on 25 April 1792. Its first political victim was Colletot d'Angremont, who was convicted of being a royalist agent. The term also describes a British parliamentary procedure (first used 1887) by which a set time is allotted to various stages of a bill.

Guimard, Hector (1867-1942), French ART NOUVEAU architect. He designed several of the entrances to the Paris Métro (1899-1901), employing plant-like forms in cast iron, and taught at the École des Beaux-Arts. His Castel Béanger, a residential building in Paris (1898), was one of the first examples of Art Nouveau in France. See also p. 1658.

Guinea, gold coin introduced by Charles II of England in 1663 and then worth 20 shillings. The gold used in its minting came from the Guinea coast of Africa, hence its name. From 1717 the guinea was 21 shillings and in 1817 it was replaced by the gold sovereign (worth 20 shillings). It survives, even after the introduction of "metric" currency in Britain, as a pricing unit in the sale of horses, works of art and various professional fees, its value being taken as 21 shillings (£1.05).

Guinea, nation in w Africa, on the Atlantic coast. The agricultural economy relies

Guavas have a sharp flavour and are used in a variety of ways, including cheese-making.

Guenons are like the macaques in that they have cheek pouches.

Guided missiles employ a variety of computer systems to take them to their target.

Guillemots can be seen breeding in huge numbers on the cliffs of the north Atlantic.

Guinea, Equatorial

Guinea fowl are pheasant-like birds which can be bred like domestic poultry

Guinea pigs have lent their name to a person or group who assumes an experimental role

Guizot survived violent changes of regime in a turbulent period of France's history

Gulf Stream, a blueshine distinguishes it from the colder inshore counter-currents

heavily on the banana and coffee crops, and a large majority of the population is involved in farming. There is, however, considerable mineral wealth, and bauxite (aluminum ore) accounts for 65% of all exports. The capital is Conakry. Area: 245,857sq km (94,925sq miles). Pop. (1975 est.) 4,416,000. See p.2056

Guinea, Equatorial. See EQUATORIAL GUINEA

Guinea-Bissau, nation in W Africa. It was formerly known as Portuguese Guinea until independence in 1974. The economy is based on agriculture and more than 80 per cent of the country's exports come from groundnuts and associated products. The capital is Bissau. Area: 36,125sq km (13,948sq miles). Pop. (1976 est.) 44,000. See p.2056

Guinea Coast, stretch of the W coast of Africa, from Cape Verde in Senegal to Moçâmedes in Angola. It includes the regions formerly known as the Ivory Coast, Gold Coast and Slave Coast, names which originated in early colonial trade.

Guinea fowl, pheasant-like GAME BIRD of Africa and Madagascar typified by the common domestic guinea hen (*Nemuda meleagris*). It is bluish, greyish or blackish with white spots and an ornamental crest. Other species have spurs, some have feather tufts on the head and one has a long, ornamental tail. Length, to 50cm (20in). Family Phasianidae. See also pp.72, 298

Guinea pig, type of CAVY found in South America and a popular pet, including the wild guinea pig (*Cavia aperea*) and the domestic strain (*Cavia porcellus*). It has a large head, short legs and no tail. Its fur may be short or long and of any colour. It eats grass and other green plants. Family Caviidae. See also p.301

Guinevere, in Arthurian legend, King Arthur's queen and the object of LANCELOT's love. In Thomas MALORY's *Morte d'Arthur* she betrayed the king and was sentenced to die, was rescued by Lancelot and later restored to Arthur. Towards the end of her life she became a nun; she was buried with her husband.

Guinness, Sir Alec (1914-), British actor. His first major role was in *Twelfth Night* at London's Old Vic (1936-37). He became world-famous after WWII playing the English eccentric in such BAILEY Studio films as *Kind Hearts and Coronets*, *The Lavender Hill Mob* and *The Ladykillers*. He has appeared in *Vicious Circle* (1946), *The Cocktail Party* (1950, 1968), *Exit the King* (1963), *Wise Child* (1967), *Time Out of Mind* (1970). He also played in such films as *Bridge on the River Kwai*, for which he won an Academy Award (1957), *Doctor Zhivago* (1966) and *The Comedians* (1970). More recently he has appeared on the London stage in *The Old Country* (1977), in the film *Star Wars* (1977) and in the TV series *Tinker, Tailor, Soldier, Spy* (1979).

Guinness, brewery established by the Irish family of the same name. Arthur Guinness founded the firm which brewed porter in Dublin. Its control passed in turn to Benjamin Lee (1798-1868), Arthur Edward (1840-1913) and Edward Cecil Guinness (1847-1927) who, in 1919, became Lord Iveagh.

Guise, Sir John (1914-), politician from Papua New Guinea who was a member of the Legislative Council from 1961 to 1963, its speaker from 1968 until 1971, and deputy chief minister in 1972-75. He was governor general in 1975-7.

Guise, House of, ducal house of Lorraine, the most influential family in 16th-century France. Claude, Duke of Lorraine (1496-1550), founded the house in 1528. His son François (1519-63) supervised the massacre of HUGUENOTS at Vassy in 1562, thus precipitating the French Wars of Religion. His brother Charles (1524-74), Cardinal of Guise, played an important role at the Council of Trent. François' son Henri helped to organize the MASSACRE OF ST BARTHOLOMEW'S DAY in 1572, and led the HOLY LEAGUE, which opposed any toleration of Protestantism. The power of the family declined when HENRY IV became a Catholic in 1593.

Guitar, plucked stringed musical instru-

ment of great antiquity. It was introduced into Spain by the Moors perhaps as early as the 12th century. Like the lute, the early guitar had four double strings. The popularity of the lute in the 17th century extended also to the guitar of which the famous exponent at that time was Robert de Visée (c.1650-c.1725). The national instrument of Spain, the modern guitar has six strings and the virtuoso playing of Andrés BIZCARRA has inspired compositions for the instrument by FALLA, VILLA LOBOS and CASTELNUOVO-TEDESCO. As a popular instrument today, it is also used for simple chordal accompaniment to folk song and dance and, as an electric instrument, in jazz and rock groups. See ELECTRIC GUITAR.

Guitar fish, cartilaginous RAY found worldwide in tropical and subtropical waters. It travels in schools, feeding off the seabed. It is usually brown with spots, and its young are born alive. There are 9 genera and 45 species including *Rhinobatos cemiculus*. Family Rhinobatidae. Length 1.5-2m (5-6 ft).

Guizy, Sacha (1885-1957), French actor, director and prolific author of immensely successful, mainly lightweight plays. Their plots often involved famous people such as Pasteur, Napoleon or Mozart, and inevitably starred Guizy himself with one or other of his five wives.

Guizot, François (1787-1874), French leader of the conservative constitutional monarchists and historian. He held several posts during the July Monarchy (1830-48). The Guizot law (1833) promoted all citizens secular, primary education. Despite a pacific foreign policy, an economic crisis and his stubborn refusal to extend the limited franchise brought about his fall in the FEBRUARY REVOLUTION of 1848. See also p.1650

Gujarat, state in W India, on the Arabian Sea; the capital is Gandhinagar. It was established in 1960 when the former state of Bombay was separated into Maharashtra and Gujarati-speaking areas. Archaeological finds have linked this region to the Indus valley civilization (3000-1500 BC). It was a centre of JAINISM under the Maurya Dynasty from the 5th to the 8th centuries. The home of Mahatma GANDHI, it was the site of his religious retreats, the first of which was in 1915. Industries: cotton textiles, salt-mining, oilseed. Area: 195,984sq km (75,669sq miles). Pop. (1971) 26,697,475.

Gujranwala, city in the Punjab, NW Pakistan, 67km (42 miles) N of Lahore. It is a market centre for a district producing wheat, rice, sugar, oilseed and oranges. It was an important centre of SIKH power in the 18th and 19th centuries, particularly under Ranjit Singh. Industries: ironware, textiles, pottery. Pop. 366,000.

Gulag Archipelago, The (1973-74), prose work in two volumes, written between 1958 and 1968 by the Soviet author Alexander SOLZHENITSYN. It is a detailed documentary account of life in Soviet prison camps between 1918 and 1956, derived from the author's own experience and correspondence with more than 200 other survivors of the camps.

Gulbenkian, Turkish-Persian family of financiers. Calouste Sarkis (1869-1955) organized important oil concessions for Britain, France, Holland and the USA in Turkey and the Middle East (1888-1954). He became a naturalized Briton in 1902, but assumed Persian citizenship in 1940 after his oil company was nationalized. On his death an international Gulbenkian Foundation was set up, to which he left a fine art collection. His son Nubar Sarkis (1896-1972) worked in his father's company, and as an Iranian diplomat (1926-51).

Gulf of Mexico. See MEXICO, GULF OF

Gulf Oil Corporation, US company internationally involved in the exploration for and the processing of crude oil and natural-gas liquids. It produces petrochemical products and mines uranium. It is one of the giants of US industry.

Gulf States, name given to countries around the Persian Gulf, namely Iran to the N, Iraq to the NW, Kuwait, Saudi Arabia and Qatar to the W, Trucial Oman

to the S and E and the Bahrain Islands between Saudi Arabia and Qatar. These states have gained international importance in recent years because of the discovery of extensive oil reserves within their borders.

Gulf Stream, relatively fast-moving current of the N Atlantic Ocean flowing from the straits of Florida along the E coast of North America, then S across the Atlantic to the NW European coast. Long considered to be one wide mass of water, research now indicates that it is made up of many thin streams which cause local variations in the water temperature. The current has a warming effect on the coastal climates along its course. See also pp.234-235

Gull, also called seagull, any of various ground-nesting birds found soaring and gliding along most coastlines. Gregarious, particularly when feeding, gulls eat carrion, refuse, fish, shellfish, eggs and young birds. The herring gull is grey and white with black markings (although the young are mottled brown) and has a hooked bill, pointed wings, a rounded tail and webbed feet. It grows to 56-66cm (22-26in). The black-headed gull is smaller, and has black feathers on the top of the head in summer. Family Laridae, species: herring gull *Larus argentatus*, black-headed gull *Larus ridibundus*.

Gulliver's Travels (1726), prose satire by Jonathan SWIFT. Although the descriptions of the four cultures visited by Gulliver can be enjoyed by both children and adults as pure exercises of imagination, they clearly satirize contemporary political, scientific and moral institutions. The last section in particular, dealing with the Houyhnhnms, has often been seen as a vicious and misanthropic attack on the mental and physical attributes of humanity itself. See also p.1471

Gullstrand, Alvar (1862-1930), Swedish ophthalmologist. He received the Nobel Prize in physiology and medicine in 1911 for his contributions to dioptries, the study of refraction of light by the eye. He invented many important ophthalmological tools, including the slit lamp, which aided the study of the structure and function of the cornea, and improved corrective lenses for use after surgery.

Gum arabic, or acacia gum, soluble yellowish gum obtained from certain species of acacia trees and consisting of a complex carbohydrate POLYMER. It is used in foods, cosmetics and adhesives.

Gums, secretions of plants. Some gums are soluble in water, others absorb water and swell. Gums are chemically complex, consisting mainly of various saccharides bound to organic acids by glycoside linkages. Common examples are GUM ARABIC, agar and tragacanth. Many substances of similar appearance, such as some resins, are classed as gums.

Gums, two areas of tissue covering the alveolar arch of the upper and lower jaws. The gums surround the teeth and are quite resistant to damage - their submucosa is well supplied with nerves and blood vessels. Inflammation of the gums is called GINGIVITIS, and is caused by poor mouth hygiene, BRUSH OF VITAMIN DEFICIENCY.

Gun, general term for any tubular weapon firing a projectile, usually by force of explosion. The phrase "The guns" was sometimes used in the 19th century to refer to artillery, but the word gun is now used for artillery pieces with a relatively high muzzle velocity and a flat trajectory, thus a MORTAR or HOWITZER is not often described as a gun, but PISTOLS, RIFLES and MACHINE GUNS can all be so described. The word has also been applied to weapons that use compressed air to propel projectiles, ie airguns. See also pp.556-565, 567-568, 570-573, 570-573

Guacotton, nitrocellulose, highly nitrated form of CELLULOSE which is highly explosive. It is made by soaking cotton cellulose in mixed nitric and sulphuric acids. When dry, guacotton is dangerously unstable. It is used mainly as an ingredient of explosive propellants such as COMBITE.

Gunmetal, types of wear-resistant BRONZE once used to make heavy field and naval guns, but now used in gears, bearings and

pump spindles. A typical gunmetal alloy contains about 88% copper, 10% zinc and 2% tin.

Gunn, Thom (1929–), British poet. His first poems appeared in *Fighting Terms* (1954) and *The Sense of Movement* (1957). Other collections are *My Sad Captains* (1961), *Positives* (1966) and *Moby* (1971). He now lives in the USA.

Gunpowder, mixture of saltpetre (potassium nitrate), charcoal and sulphur. When ignited, it expands violently due to the almost instantaneous conversion of the solid ingredients into gases such as carbon dioxide, carbon monoxide, nitrogen, oxides of nitrogen, oxides of sulphur and steam. The sudden release of enormous volumes of these gases gives the reaction its explosive force. It was used extensively in firearms until about 1900, after which it was replaced by smokeless powders such as cordite. See also pp 582–583.

Gunpowder Plot (1605), Roman Catholic conspiracy to blow up James I of England and the Houses of Parliament, and to establish Catholicism in England. The plotters, led by Robert Catesby, took gunpowder into the cellars beneath Parliament, where Guy Fawkes was to ignite it when James opened Parliament on 5 Nov. The authorities, however, were alerted and Fawkes was arrested, tried and executed along with his fellow conspirators. The plot led to increased penalties against Catholics. See also p 1420.

Gusther, Franz Ignaz (1725–75), Bavarian sculptor in wood. His painted sculptures of religious themes are among the finest and most moving examples of the rococo style. Especially notable are *The Annunciation* (1764) and *The Pietà* (1774), his last work.

Guppy, or millions fish, minnow found in fresh waters of the West Indies, Venezuela, the Guianas and N Brazil, and named after R. J. L. Guppy, a 19th-century clergyman and naturalist. The wild guppy is grey with bright spots but selective breeding has produced many different coloured varieties. The smaller male is brighter than the female, which bears live young. It is a popular aquarium fish. Length to 3.6cm (1.2–2.5in). Family Poeciliidae, species *Lebistes reticulatus*.

Gupta dynasty (c. ad 320–550), ruling dynasty of a kingdom covering most of northern India. The state was the prototype of Indian empires to follow. The Guptas conquered territory and collected tribute from defeated rulers but allowed them to remain on their thrones. The Guptas were considered benevolent, and art and literature flourished under their rule. See also pp 1252–1253.

Gurkha, Hindu ruling caste of Nepal since 1768. They speak a Sanskrit language and their racial characteristics are a mixture of Mongoloid and Caucasoid. The name often denotes a Nepalese soldier in the British or Indian army. Gurkha soldiers have a high reputation for combat skills and physical endurance.

Gurnard, tropical marine bottom-dwelling fish. It has a large spiny head and enlarged pectoral fins. It uses its fins to "walk" on the sea-bed. Length to 50cm (20in). Family Triglidae.

Guru, Sanskrit term for a teacher and spiritual master. In traditional Hindu education, boys lived in the home of a guru, who was their guide in their studies of the sacred books (vedas) and saw to their physical health and ethical training. In many Hindu sects the guru is responsible for initiating novices. In *sikhism* the title Guru was assumed by the leaders of the community until the guruship was terminated in 1708.

Gustavus, name of six Swedish kings. Gustavus I (Gustavus Vasa) (r 1523–60) founded the Vasa dynasty. He promoted a national Protestant church (1527), organized a national army and navy, suppressed clerical and peasant revolts and limited the power of the nobles, thus strengthening the monarchy and founding the modern Swedish state. Gustavus II (Gustavus Adolphus) (r 1611–32), the "Lion of the North", spearheaded the Protestant cause in the THIRTY YEARS WAR. Invading Germany in 1630, he won a

series of battles against the imperial commanders Tilly and Wallenstein but was killed at Lützen. His reign saw economic and administrative reform within Sweden, largely due to his chancellor, Oxenstierna. Gustavus III (r 1771–92) ended civil strife, restored royal power, reformed Sweden's finances and built up the navy. He defeated the Danes and Russians but was assassinated by an aristocratic conspiracy. He founded the Swedish Academy (1786). Gustavus IV (r 1792–1809) followed a reactionary policy at home. His anti-French foreign policy led to the loss of Swedish Pomerania and Finland to France and Russia, and to his forced abdication. The reign (1907–50) of Gustavus V saw the development of Sweden's advanced welfare state and a policy of international neutrality. Gustavus VI (r 1950–73) was a noted botanist and archaeologist. He founded the Swedish Academy in Rome and was a member of the British Royal Society.

Guston, Philip (1912–), US painter. Largely self-taught, he executed many murals for the Federal Art Project (1935–40). He was a prominent abstract expressionist, and his style is reminiscent of Mondrian, with colourful subdued tints in patches on a light background.

Gutenberg, Bero (1889–1960), US seismologist, noted for his analyses of earthquake waves. He showed that three-quarters of earthquakes occur in the Circum-Pacific belt. He worked with Charles Richter to develop the Richter scale.

Gutenberg, Johann (c. 1400–c. 68), German goldsmith and printer credited with the invention of printing from movable type. He experimented with printing in the 1430s, and his innovations included a new type of press and a type-metal alloy, neither of which were used in the older woodblock printing process. He made the first printed Bible, known as the Gutenberg Bible in 1455 at Mainz.

Guthrie, Sir William Tyrone (1900–71), British director and playwright. He directed the Scottish National Theatre (1926–27), the Festival Theatre, Cambridge (1929–30) and the Old Vic and Sadler's Wells Theatres. He also worked in other countries and directed the theatre named after him (1963) in Minneapolis. He was particularly known for his productions of Shakespeare.

Guthrum (d 890), Danish leader. He fought against the English in E Anglia in the 870s, and is said to have led the first Danish expedition to have wintered in England, in 877. In 878 he was granted a kingdom in East Anglia and agreed to be converted to Christianity. After his baptism he was known as Aethelstan. See also pp 1288, 1289.

Gutta-percha, evergreen tree found in Malaya, Sumatra and Borneo. It is the source of a rubber-like gum used in belting, golf-balls and in chewing gum. The tree is flat-topped and has long oval leaves that are green above and coppery with silky hairs below. Height to 30.5m (100ft). Family Sapotaceae, species *Palaquium gutta*.

Guttuso, Renato (1912–), Italian painter. A social realist, after WWII he became an influential figure in the left-wing New Art Front. Influenced by Pablo Picasso, his art became less representational but remained committed to protesting against social injustice.

Gutzkow, Karl Ferdinand (1811–78), German dramatist, journalist and novelist. His works include the comedies *Zopf und Schwanz* (1844) and *Der Königsleutnant* (1849); the tragedies *Richard Savage* (1839) and *Uriel Acosta* (1846) and a novel, *Maha Guru* (1833).

Guyana, nation in NE South America, between Venezuela and Surinam. It was formerly British Guiana. The land is covered by tropical forest and savanna, and most of the population inhabits the coastal region. The terrain prevents full exploitation of the country's bauxite deposits, and agriculture remains the basis of the economy with sugar cane and rice as the chief crops. Capital, Georgetown. Area 214,970sq km (83,000sq miles).

Pop. (1975 est.) 794,000. See p 2057.

Guy of Lusignan (1140–94), Latin King of Jerusalem (1186–92) and of Cyprus (1192–94). He succeeded Baldwin V of Jerusalem, but was defeated and captured by Saladin at Hattin (1187). He later fought in the Third Crusade (1189–91), resigned the throne to Conrad of Montferat (1192) and was granted Cyprus by Richard I of England. See also pp 1310, 1311.

Guyot, or tablemount, names given to flat-topped submarine mountains. They rise about 1,000m (3,300ft), with tops about 2.5km (1.5 miles) below sea-level. Before becoming submerged, they may have been volcanic islands with peaks flattened by wave erosion. If so, this is evidence for the subsiding of the ocean floor. See also p 239.

Guys, Constantin (1805–92), French painter and illustrator. Much of his work was published in the *Illustrated London News*. He is best known for his witty drawings of contemporary society.

Gwyn and Dolls (1950), popular Broadway musical by Frank Loesser based on a Damon Runyon short story. A similarly successful screen version appeared in 1955.

Gwent, county in SE Wales, formed in 1974 from most of the former county of Monmouthshire and a small part of Brecknockshire, bounded by the English border and the Severn estuary. The administrative centre is Cwmbran. Area 1,376sq km (531sq miles). Pop. (1975 est.) 440,100.

Gwyn, or Gwynne, Nell (1650–87), English actress. She made her first stage appearance at 15 in *The Indian Emperor*. Much in demand as a speaker of prologues and epilogues, she attracted the attention of King Charles II while reciting the epilogue to Dryden's *Tyrannic Love* (1669). She later became his mistress and bore him two sons.

Gwynedd, county in NW Wales, on the Irish Sea coast, formed in 1974 from the former counties of Anglesey, Caernarfon, part of Denbighshire and most of Merioneth. The administrative centre is Caernarfon. Area 3,866sq km (1,493sq miles). Pop. (1975 est.) 224,200.

Gymnastics, sport requiring suppleness, strength and poise in the performance of a variety of athletic exercises. Men and women compete separately in individual and team events. At national and international level, men perform in six events: on the vault, parallel bars, horizontal bars, pommel-horse, suspended alloy rings and floor exercises. Women take part in four events: the vault, balance beam, floor exercises and asymmetrical bars. Contestants perform twice in each event, they complete a compulsory set of exercises, then a set of their own choosing. Exercises are rated in terms of difficulty, and points for technical skills and visual appeal are awarded by a panel of judges. The combined scores of these individual events give the final result of an all-round event.

Dating back to the ancient Chinese and Greeks, gymnastics became truly international only after WWII, when world championships were begun (1950) and women's events gained Olympic acceptance (1952). The father of the modern sport, Friedrich Ludwig Jan, devised the apparatus and exercises requiring muscular power, while Pehr Henrik Ling, a Swede, stressed rhythmic movement. The exercises performed today are of both these types. The sport has become increasingly popular, and the televised Olympic successes of such performers as Olga Korbut, barely into their teens and transmitted throughout the world, brought thousands of youngsters into the sport in the 1970s.

Gymnosperm, seed plant with naked seeds borne on scales, usually in cones. Most trees commonly referred to as evergreens are gymnosperms. All living seed-bearing plants are divided into two main groups: gymnosperms and angiosperms (with seeds enclosed in an ovary). Gymnosperms include cycads, ginkgo, pines, spruces, cedars and ephedras. See also CONIFER, pp 273, 350, 366–367.

The Gunpowder Plot has become, without its religious aspects, an English festival.

Guppies are a common sight, seen darting excitedly around the waters of home aquaria.

Constantin Guys portrayed fashionable society, as in *The Elysian Fields* (detail).

Gymnastics has received a new impetus from the appeal of televised Olympic excellence.

Gynecomastia

Gyroscopes are one of the scientific toys which have enthralled many children

Haddock, one of our most valuable food fish, is trawled extensively in the northern seas

John Hadley, a detail from the illustration of the principle parts of his original quadrant

Hadrian, the bronze head was found in the Thames near to London Bridge

Gynecomastia, inappropriate enlargement of the male breasts, usually at puberty, caused by hormone imbalance - ie, an excess of the female hormone oestrogen. The enlargement often subsides spontaneously

Győr, city port in NW Hungary, at the confluence of the Rába and Répce rivers. Its location makes the city an important communications centre. Local industries include steel, textiles and distilling Pop (1974) 114,709

György, Paul (1893-), US doctor, b. Hungary, who was involved in the discovery of riboflavin, vitamin B6 and biotin (vitamin H). He was the chairman of advisory groups to the UN and who from 1958 until 1961

Gypsies, nomadic people, now believed to have originated in N India, now inhabiting Europe, Asia, Siberia, America, Africa and Australia. They were once thought to have come from Egypt, hence their name. They speak the distinctive ROMANY language, from which they are also known as Romanes, and traditionally live in decorated, horse-drawn carriages. Gypsies first appeared in Europe in the 15th century. Since then their reluctance to lead a settled life has caused prejudice, often resulting in persecution. On the other hand, their colourful folklore is part of popular tradition. Other wandering groups who are not true Romanes are also sometimes called gypsies, although strictly speaking, this is incorrect

Gypsophila, genus of the RINK family containing annual or perennial plants, native to Europe, Asia and North Africa. Growing to 0.9m (3ft), they have narrow leaves and pink or white flowers in single or double blossoms. They are widely cultivated in gardens and for cut flowers. Family Caryophyllaceae

Gypsum, commonest sulphate mineral, calcium sulphate ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$), and a source of PLASTER OF PARIS. Huge beds of gypsum occur in sedimentary rocks. It crystallizes in the monoclinic system as prismatic or bladed crystals. Varieties are alabaster (massive), selenite (transparent and foliated), and satin spar (silky and fibrous). It can be clear, white or tinted. Hardness 2, s.g. 2.3.

Gypsum processing, production of PLASTER OF PARIS from hydrated calcium sulphate ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$). Partial calcination is accomplished by heating gypsum to 120°C (248°F) to produce the hemihydrate, a fine, quick-setting white powder. Hard wall plaster contains an additive to retard the set.

Gypsey moth, small russock moth with black zigzag markings, the female is larger and lighter in colour. The caterpillar of this species feeds on forest and fruit trees, and can be a serious pest, it is pale brown and covered with tufts of stiff hairs. Length 5cm (2in). Family Lepidoptera, species *Lymantria dispar*

Gyre, large circular flow of ocean water with a calm centre region called an eddy. There are three gyres in both the Atlantic and Pacific oceans and one in the Indian Ocean. They are narrowest and swiftest on their western sides and are generally centred on the Horse latitudes (about 30° latitude in both hemispheres). See also p 235

Gyrfalcon, bird of prey living mainly in Scandinavia and arctic regions, it is the largest European falcon. It commonly flies low, catching prey on the ground or small birds in flight, it rarely soars. Plumage is a mottled grey-brown. Length to 61cm (24in). Family Falconidae, species *Falco rusticolus*. See also p 323

Gyrocompass, navigational aid consisting of a continuously driven gyroscope, used where a magnetic compass would be unreliable because of large masses of iron or steel nearby. The spinning axis of the gyroscope is horizontal and its direction indicates true north, irrespective of the course or attitude of the craft to which it is attached. Similar devices are used to "hold" the aim of guns carried by warships and tanks.

Gyropilot, mechanism consisting of devices for detecting and automatically correcting changes in the attitude of an

aircraft or the course of a ship in which it is mounted. In an aircraft the gyropilot makes the correction by moving the appropriate control (rudder for azimuth and change in heading, aileron for roll and elevator for pitch). The essential component is the spinning wheel, or gyroscope, which is suspended in gimbals so that it maintains its direction of spin irrespective of the orientation of the craft to which it is secured, the gyroscope constitutes a reference platform. The gyropilot detects changes in orientation and signals affiliated components, such as slave motors, to make corrections. See also pp 464, 465

Gyroscope, symmetrical spinning body, usually a wheel, mounted in gimbals so that it can spin in any direction. When the gyroscope is spinning, a change in the orientation of the outer gimbals does not change the orientation of the spinning wheel, thus changes in direction aboard, say, a ship can be determined without external references. A torque (twisting force) applied to a fast-spinning gyroscope, eg by leaning it out of the vertical, results in a phenomenon known as PRECESSION: the gyroscope does not fall but rotates about a fixed point with the axis of spin describing a cone around the vertical. This tendency to resist changes in the spin axis accounts partly for the stability of bicycles, and the orbits of heavenly bodies. See also p 450

H

H, eighth letter of the alphabet, derived from the Semitic letter *heth*, which was used like an English *h* (aspirate) or like the *ch* sound in *loch*. In Greek it became *eta* (pronounced like a short *e*) or an aspirate, in which form it passed into the Roman alphabet. In English an initial *h* may be silent (as in *hour* and *heir*). It modifies the sounds of certain preceding consonants, as in *ch*, *gh*, *ph*, *sh* and *th*, but is virtually silent after *w* (as in *what* and *which*). It is generally silent after a vowel, but lengthens its sound (compare the *a* sounds in *eta* and *bah*).

Haakon I (c 914-961), "the Good", King of Norway, son of Harald I. Brought up a Christian in King Athelstan's court in England, he returned to Norway to take control from his brother, the tyrannical ERIC BLOODAXE.

Haakon IV (1204-63), "the Old", King of Norway, elected 1217, crowned 1247, son of Haakon III. He made legal reforms and acquired Iceland and Greenland. He was patron of the arts and his reign began medieval Norway's "golden age" (1217-1319).

Haakon V Magnuson (1270-1319), King of Norway, son of Magnus VI, succeeded his brother Erik II in 1299. He limited the power of the nobles, and alienated the English by trading with the HANSEATIC LEAGUE.

Haakon VI Magnuson (1339-80), King of Norway. Son of Magnus VII, he ruled from 1355, and was the last king of independent Norway. His reign was weakened by war and the BLACK DEATH.

Haakon VII (1872-1957), King of Norway. Formerly Prince Charles, son of Denmark's King FREDERICK VII, he was offered the crown in 1905 when Norway separated from Sweden. During WWII he held government while in exile.

Haarlem, city in W Netherlands, on the River Spaarne, capital of North Holland province. Haarlem was a centre of Dutch painting in the 16th and 17th centuries. The city has many old buildings, including the 13th-century Groote Kerk (or St Bavo's Cathedral), which houses a fine organ and where many recitals are held. Haarlem is a centre for the export of tulips and has industries which include electronic equipment and machinery. Pop (1974) 167,052.

Habakkuk, Book of, Old Testament book by the eighth of the 12 minor prophets. It

bemoans the condition of JUDAH and the apparent success of God's enemies.

Habeas Corpus, the most important writ in English law for the protection of the liberty of the individual. There are several kinds of writs of *habeas corpus*, but the most important is the *habeas corpus ad subjiciendum*, which commands a person who holds another in custody to bring his captive before the court and to state the cause of his detention.

Haber, Fritz (1868-1934), German physical chemist whose early work involved ELECTROCHEMISTRY and THERMODYNAMIC gas reactions. With Carl BOSCH he invented (1908-09) the HABER PROCESS for converting atmospheric nitrogen into ammonia. He was awarded the 1918 Nobel Prize in chemistry.

Haber process, industrial process in which nitrogen from the atmosphere is "fixed" by synthesizing ammonia. A mixture of nitrogen and hydrogen is passed over a heated catalyst at a pressure of about 1,000 atmospheres. The chemical reaction, $\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$, is exothermic, which in turn speeds up the reaction.

Habsburg. See HAPSBURG.

Habyalimana, Maj.-Gen. Juvenal (1937-), Rwandan politician. He became President of Rwanda in 1973, an office he combined with those of Prime Minister and Minister of National Defence.

Hackman, Gene (1931-), US film and television actor. He appeared in various television productions and gained an international reputation with small character parts in such films as *Bonnie and Clyde* (1967) and *Downhill Racer* (1969). In 1972 he won an Academy Award for his performance in *The French Connection* (1971).

Hackney, light horse bred for heavy harness and carriage use. An English breed developed during the early 18th century from the Norfolk trotter and the thoroughbred, it has short legs and robust build. Colours are chestnut, bay or brown, with white markings. Its tail is docked and its mane pulled for show. The Hackney pony is a cross between the horse and a Welsh pony. Height: 147-157cm (58-62in), weight: 360-540kg (800-1,200lb).

Hadal. See ADAD.

Hadal zone, deepest oceanic environment, particularly that of the deep ocean trenches from 6.5km (4 miles) below sea-level down to the ocean floor.

Haddock, marine food and commercial fish found in cold and temperate waters, primarily in the Northern Hemisphere. Dark grey and silver, it has a large, dark blotch near the pectoral fins. Length to about 90cm (36in); weight: to 11kg (24.5lb). Family Gadidae, species *melanogrammus aeglefinus*. See also pp 63, 739, 744, 745.

Hades, in Greek mythology, both another name for PLUTO, god of the underworld, and the world of the dead, ruled by Pluto and PERSEPHONE. The dead were ferried to Hades by CHARON across the river STYX. The entrance was guarded by the dog CERBERUS.

Hadley, John (1682-1744), British inventor who in 1721 constructed the first reflecting telescope sufficiently accurate for astronomical observations. In 1730, independently of Thomas GODFREY, he designed a reflecting quadrant, the forerunner of the sextant, which enabled navigators to make accurate determinations of latitude.

Hudramawt, region in E Yemen, along the coast of Arabian Peninsula. For more than 100 years it was under the British protected Quail and Kathun sultanates. In 1967 these were overthrown and Southern Yemen (the People's Democratic Republic of Yemen) formed. Area: approx 153,220sq km (58,000sq miles). Pop 240,000.

Hadrian, Publius Aelius (AD 76-138), Roman emperor (117-138). He crushed a Jewish revolt and destroyed the Temple of Jerusalem in 135 but promoted major building programmes, including the Pantheon in Rome, his villa at Tivoli and HADRIAN'S WALL in Britain. He enlarged and reformed the civil service and

provided alms and circuses for the poor of Rome.

Hadrian's Wall, northern boundary wall of Roman Britain erected on the orders of the Emperor Hadrian between AD 122-136. It extended 118.3km (73.5 miles) from Wallend-on-Tyne to Bowness-on-Solway. About 2.3m (7.5ft) thick and 1.8-4.6m (6-15ft) high, it supported many stone forts along its length. The Romans held it until 383. An extensive ruin survives.

Hadron, class of elementary particle with strong interaction. The group can be divided into baryons, such as the neutron and proton, and mesons, such as the pion and kaon. Over 150 hadrons have been discovered, mostly since about 1950, and with the exception of the proton and antiproton they are all unstable. Unlike leptons, they have a measurable size. Experiment indicates a substructure postulated to consist of quarks. See also STRANGENESS, pp 818-819.

Haeckel, Ernst Heinrich (1834-1919), German zoologist. His popular books defended and extended the theories of Charles Darwin and helped to promote interest in the study of biology.

Haematite, one of the most important iron ores, ferric oxide, Fe₂O₃. It contains 70% of iron by weight. It is blood red in colour and occurs in several forms. Kidney ore is so called because it occurs as red, rounded masses that resemble kidneys. Specular haematite is more obviously crystalline and takes a high polish. Haematite deposits are found in all continents.

Haematoma, localized mass of blood, often clotted, that collects in an organ or tissue when an associated blood vessel breaks. Its treatment depends on location and its size.

Haematuria, blood in the urine. It may have various causes, such as an injury or obstruction in the urinary tract and should be reported to a doctor immediately.

Haemoglobin, protein present in the red blood cells of erythrocytes of vertebrates that carries oxygen to all cells in the body. It is scarlet when combined with oxygen to form oxyhaemoglobin and bluish-red when deoxygenated. Oxygen attaches to the haem part of the protein which contains iron, the globin part is a globular protein. Worn out red blood cells are destroyed by the liver which salvages the iron for making more haemoglobin.

Haemophilia, hereditary defect which can cause severe external or internal bleeding because the blood clots only with difficulty due to the absence of clotting factor VIII, a globulin. The gene for the disease is passed on almost exclusively by the mother, male haemophilic sons, even when they survive long enough, rarely have children. About one in 10,000 boys are born haemophilic but haemophilic girls are extremely rare. If a haemophilic male and a carrier female produce children, half of the girls will be haemophilic, the other half being carriers. See also pp 157, 1060, 1067.

Haemorrhage, bleeding. That from an artery is most serious because blood is forced out by the heartbeat. Internal bleeding can also be dangerous, whether from an artery or a vein. Haemoptysis is the spitting of blood from a lung haemorrhage. Haematuria is blood in the urine. Haematemesis is vomiting blood, often caused by a stomach haemorrhage.

Haemorrhoids, piles, varicose veins of the lower rectum. External haemorrhoids are purplish in colour. Internal haemorrhoids under their coverings of mucous membrane, are bright red in colour and extend farther up the rectum. Both types can protrude from the anus and both can be very painful. The causes of haemorrhoids are many and ill defined.

Haffkine, Waldemar Murdecai Wolff, (1860-1930) Russian bacteriologist who from 1889 to 1893 was an assistant to Louis Pasteur in Paris. After founding a research laboratory in Bombay, India, he discovered and used a method of inoculation against cholera by which some 42,000 people were treated.

Haifa (died c 1388), Persian poet born as

Shams ed-Din Muhammed. He was associated with the DERVISHES and was a SULTAN. His verse, in rhyming couplets, was powerful and dealt with sensual pleasures. **Hafrum**, metallic element (Hf) of the third transition series, first discovered in 1923. Its chief source is as a by-product in obtaining the element zirconium. It is used as a neutron absorber in reactor control rods. Properties: a.n. 72, a.w. 178.49, s.g. 13.31, m.p. 2,220°C (4,031°F), b.p. 4,602°C (8,316°F), most common isotope Hf¹⁸⁰ (35.24%). See also pp 888-890.

Haganah, semi-underground ZIONIST army which was formed in the 1920s to protect Jewish interests in Palestine. It allied with the extreme Irgun group in 1945 in an attempt to change British policy on Jewish immigration, and received financial and military aid from American Zionists after that time. See also pp 1782, 1783.

Hagar, in the Old Testament, handmaid given by SARAH to ABRAHAM as a concubine. She bore his first son, Ishmael. Hagar and Ishmael were banished because Sarah feared Ishmael would share in ISAAC'S inheritance.

Hagen, Friedrich Heinrich von der (1780-1856), German philologist. His edition of the Norse song cycle *Nibelungenlied* was published in 1810.

Hagen, Walter Charles (1892-1969), US golfer. One of the most colourful personalities in golf history, he helped improve the standing of professional players and their prize money. He won five Professional Golfers' Association titles (1921-1924-27), four British Open championships (1922, 1924, 1928-29) and two US Opens (1914, 1919).

Hagfish, or slime eel, eel-like, jawless fish found in temperate-to-cold marine waters. It has underdeveloped eyes and four to six fleshy whiskers around its sucking mouth. It is a scavenger and feeds on dead or dying fish. It also secretes a slimy mucus from pores along its body. Length to 80cm (31in). Family Myxiniidae. See also CYCLOSTOMATA, p 55.

Hagg, Gunder (1918-), Swedish middle distance runner who from 1941 to 1945 ran a series of races in which he set 15 world records for the mile 1,500m, 2,000m, 3,000m, 2 miles and 3 miles 5,000m. In 1945 he lost his amateur status for infringements of the amateur code.

Haggai, biblical author and tenth of the 12 Minor Prophets. After the BABYLONIAN CAPTIVITY, he encouraged 100,000 people in rebuilding the TEMPLE in Jerusalem (c 520 BC).

Haggard, Sir Henry Rider (1856-1925), British novelist. His experiences in the colonial service in the Transvaal (1875-79) and Africa provide the background for his romantic adventure novels, including *King Solomon's Mines* (1885), *She* (1887) and *Allan Quatermain* (1887).

Haggis, traditional Scottish dish, dating at least from the early Middle Ages. It is made of the liver, heart, lungs and other offal of a sheep or a calf. These are mixed with suet, oatmeal, onions and spices wrapped in the lining of the animal's stomach and boiled.

Hagia Sophia (532-537), Byzantine church at Constantinople (Istanbul). Built for the Emperor Justinian by Anthemius of Tralles and Isidorus of Miletus, it is the supreme masterpiece of Byzantine architecture. The church was converted into a mosque in 1453 but is now a museum of Byzantine art. See also pp 1277, 1280, 1281.

Hagiographa, historical and sacred writings in the Old Testament. They comprise the Psalms, Proverbs, Job, Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah and Chronicles I and II. In the Jewish scriptures, they form the third and final part.

Hague, The ('s-Gravenhage, or Den Haag), capital of the Netherlands on the North Sea. Founded in the 15th century, the city had become an important European intellectual and political centre by the 17th century. The country's administrative capital, it has the Dutch supreme court and the headquarters of the

Dutch legislature. The Hague since 1945 has been the seat of the International Court of Justice. Although there is some industry, the city's economy depends on its diplomatic and administrative activities. Pop. (1976 est.) 550,600.

Hague Peace Conferences (1899, 1907) international meetings that drew up laws on the conduct of warfare and the rights of neutral nations, but failed to reach agreement on arms reduction. The first conference set up the Permanent Court of Arbitration, a forerunner of the International Court of Justice.

Hahn, Kurt (1886-1968), educationist who was influential in emphasizing physical rather than intellectual activities in education. He was born in Germany, went to England in 1933 and in the following year founded a public school at Gordonstoun in Morayshire. Hahn's ideas influenced such establishments as the Outward Bound Schools and Atlantic College.

Hahn, Otto (1879-1968), German chemist who became director of the Kaiser Wilhelm Institute in 1928. With Lise Meitner he discovered protactinium and several others. He was later the co-discoverer of nuclear fission (1939) for which he won the 1944 Nobel Prize in chemistry. During WWII he remained in Germany, after the war he was appointed president of the Max Planck Institute.

Hahnemann, Christian Friedrich Samuel (1755-1843), German physician. He popularized HOMEOPATHY, a method of medical treatment based on the idea that "like cures like", or that a disease should be treated with minute doses of agents that produce the symptoms of the disease.

Hahtum. See ELEMENT 105.

Haida, tribe of North American Indians. They are closely related to the Tlingit and the Tsimshian and inhabit the Queen Charlotte Islands, Canada. A small group that moved to Alaska in the 18th century are known as the Kugam. The Haida are skilled wood-carvers and are famous for their totem poles and other highly decorative sculptures. Pop. (1970) 1,367.

Haifa, city in NE Israel on Mt Carmel. It is one of the largest Israeli ports, handling ocean going vessels and local trade. It is also a focus of the Israeli railway system and has an international airport.

Haig, Sir Douglas Haig, 1st Earl (1861-1928), British Supreme Allied Commander Europe (1974-79), US Secretary of State (1981).

Haig, Douglas, 1st Earl (1861-1928), British soldier. After service in Sudan, South Africa and India, he was sent to France in 1914 and became commander-in-chief of the British Expeditionary Force in Dec. 1915 and field marshal in 1916. Despite enormous losses, Haig and Marshal Foch, the French commander, finally broke the German lines in 1918. See also p 1668.

Haiku, Japanese poetry form consisting of 17 syllables in five-seven-five pattern, originally evoking a moment in nature. It came into prominence through its mastery by MATSUO Bashō (1644-94) still regarded as the finest practitioner.

Haik, precipitation from clouds in the form of balls of ice. Haik storms are associated with atmospheric turbulence especially at great heights together with war in most air nearer the ground. Haik stones are usually less than 1cm across but some have exceeded 13cm. See also pp 249, 257.

Haile Selassie (1892-1975), Emperor of Ethiopia (1930-74), original name Lij Tafari Makonnen. When Italy invaded Ethiopia in 1935, he was forced into exile (1936), despite his appeal to the League of Nations for help. He drove out the Italians with British aid in 1941. Subsequently he became a leader among independent African nations, helping to found the Organisation of African Unity. Unrest at lack of reforms led to his being deposed by a military coup in 1974.

Hailey, Arthur (1920-), English-born writer who went to Canada in 1947 and was naturalized in 1952. His best-selling novels have exciting plots and much detailed information about their subject matter. His novels include *Flight into Danger* (1958), *Hotel* (1965), *Airport*

Hagia Sophia, rivalled in splendour only by St Peter's in Rome, took only five years to build.

The Hague, the Peace Palace was financed by the US industrialist Andrew Carnegie.

Haida, a carved staff from the small tribe whose carving and sculpture are renowned.

Haile Selassie in the compartment of his special train during a state visit to France.

Hail Mary

Hair the styling of which creates its own curious technological lands

Bill Haley with his golden disc of *Rock Around the Clock* the first million seller in Britain

Half tone process the making of black dots and white paper produces greys

(1968), *Wheels* (1971) and *The Money Changers* (1975)

Hail Mary, prayer to the Blessed Virgin MARY the mother of Jesus, widely used in the Roman Catholic Church. The Latin version (beginning Ave Maria) has been set to music by Gounod and others.

Hailwood, Mike (1940-), British motorcyclist who dominated the first half of the 1960s, winning nine world titles (250cc 1961, 1966, 1967, 350cc 1966, 1967, 500cc 1962-65). His record of 12 wins in the Isle of Man TT is unbeaten. He retired in 1967 to race cars, but without the same success.

Hainan, island off SE China, in the South China Sea, separated from the mainland by the Hainan Strait, second-largest Chinese island. Under Chinese control since the 2nd century BC, it has long been a place for those seeking political exile. It was taken in 1950 by the Chinese Communists. Products: rubber, coffee, rice, sugarcane, fruit, timber, tin, copper, iron, steel and bauxite. Area 33,941 sq km (13,124 sq miles). Pop. 2,900,000.

Hainaut, historic county in the Low Countries, now divided between Belgium (Hainaut province) and France (Nord département). Hainaut and the county of Flanders were united in 1051. They later separated, but reunited in 1191. Later, as part of The Netherlands, it belonged to the Burgundians and then the Hapsburgs. The modern Belgian province has productive farmland and coalfields; its industries include the manufacture of glass and electrical equipment. The capital is Mons. Area 3,789 sq km (1,463 sq miles). Pop. (1971) 1,330,789.

Haiphong (Hue-phong), port in N Vietnam, 32 km (20 miles) from the Gulf of Tonkin on a branch of the Red River Delta. Founded in 1874, it was developed by the French and became the chief naval base of French Indochina. It was occupied during WWII by the Japanese, and bombed by the French in 1946 during the French-Indochina war. The city was included in the new state of North Vietnam in 1954. It was heavily bombed by the USA during the Vietnam War. Industries: cement, glass, chemicals, cotton. Pop. 812,000.

Hair, outgrowth of mammalian skin; it has protective and sensory functions. Hair is made up of three layers: an outer flat scale-like cuticle, a middle keratinized cortex that contains the pigment, and an inner medulla layer. Hair grows in a follicle, a tubular structure extending down through the epidermis to the upper dermis. The hair follicle ends in a papilla, a highly vascularized point that supplies nourishment for hair growth. See also CELL, p. 122, 150-161.

Hair (1967), rock musical in two acts with book and lyrics by Jerome Ragni and James Rado, and music by Galt McDermott. It was first produced on Broadway where it ran for more than 1,700 performances, and productions followed throughout the world.

Haire, Norman, (1892-1952), Australian obstetrician, gynaecologist and sexologist. He settled in England in 1919 and helped to found the Walworth Welfare Centre one of the first establishments in Britain to give advice on contraception.

Hairstreak, any of a group of butterflies of the family Icaenidae. They are grey and brown and commonly found in open areas on every continent, especially in the tropics. Hairstreaks have a quick erratic flight. Larvae of some species bore into fruit and seeds, often causing damage to growing crops. Genus *Strymon*.

Haiti, independent nation occupying the W third of the Caribbean island of Hispaniola, and including the off-shore islands of Tortuga and Gonave. Although much of the land is uncultivable, it is one of the most densely populated countries in the world. There is subsistence farming and some mining of bauxite. Area 27,750 sq km (10,714 sq miles). Pop. (1975 est.) 4,584,000. See also p. 2058.

Haitink, Sir Bernard (1929-), Dutch conductor who was appointed musical director of the Amsterdam Concertgebouw Orchestra in 1964 and principal

conductor of the London Philharmonic in 1967. He won a reputation for his fine interpretations of the work of Anton Bruckner and Gustav Mahler. He also worked in many opera houses, notably Covent Garden and Glyndebourne.

Haji, meaning "setting out", the pilgrimage to Mecca in the 12th month of the Muslim year. The fifth of the Five Pillars of Islam, it is the duty of each Muslim to make this pilgrimage at least once. This duty is based on instructions in the Koran.

Hake, commercial marine fish found in cold and temperate waters. Its elongated streamlined body is silver and brown. Length to 1m (40in), weight to 14kg (30lb). Family Gadidae or Merlucciidae. Species include Atlantic silver *Merluccius bilinearis* and Pacific *M. productus*. See also p. 63.

Hakluyt, Richard (c. 1552-1616), British geographer. He was a member of the Virginia Company and a compiler of travel accounts. His most important work was *The Principal Navigations, Voyages, Trafficks, and Discoveries of the English Nation* (1589-1600). See also p. 1413.

Halsey, Murray (1933-), New Zealand middle-distance runner who overcame the handicap of a paralysed arm to win the 1960 Olympic Games 5000m, the Commonwealth Games 3 miles in 1958 and 1962 and set world records for 2 and 3 miles.

Haldane, John Burdon Sanderson (1892-1964), British scientist whose work formed the basis of the mathematical study of population genetics. His book *The Cause of Evolution* (1933), examined the theory of natural selection in the light of modern genetic research. In 1932 he was the first to estimate the mutation rate of a human gene. His book *Due datus, or Science and the Future* (1924) was an attempt to popularize science.

Hale, George Ellery (1868-1938), US astronomer who organized a number of observatories. He initiated work on the Mt. Palomar observatory, whose 200-inch telescope bears his name. Hale invented the spectroheliograph, an instrument for photographing the Sun, and discovered the Sun's magnetic field.

Hale Observatories. See MOUNT WILSON and PALOMAR.

Halevy, Ludovic (1834-1908), French librettist who, in collaboration with Henri Meilhac, wrote for such composers as Offenbach, Delibes and Bizet. Operas for which he was librettist include *Carmen*, (1875), *La Belle Helene* and *La Vie Parisienne* (Offenbach) and *Le Petit Duc* (1878) by Bizet.

Haley, Bill (1925-), US singer. White idol of the rock and roll era in the 1950s, Haley made his first solo recording in 1945 but had to wait until 1953 for his first real success with *Crazy Man Crazy*. In 1954 he achieved world wide fame with the re-release of *Rock around the Clock*, and between 1955 and 1956 he had a series of successes including *See you later, Alligator* and *R-O-C-K*.

Haley, Sir William John (1901-), British journalist. He began his career at the Manchester Evening News in 1922, and was Director-General of the BBC (1944-52) and editor of *The Times* (1952-66).

Half-cell, electrode immersed in an electrolyte. A full electrolytic cell is formed of two connected half-cells - different solutions being separated by a membrane or conducting bridge that allows electricity to flow but prevents mixing. See also ELECTRODE POTENTIAL.

Half-life, time taken for one-half of the atoms present in a given amount of radioactive isotope to undergo one disintegration - i.e. to change into another element or isotope. Half-lives range from fractions of a second to millions of years. See also RADIOACTIVITY.

Half-tone process, the production of zinc or copper plates for printing illustrations. By breaking down the continuous image of the original into separate dots of varying size (which therefore control the amount of ink printed within a specific area), it is possible to reproduce the full tone values of a photograph or original artwork. The image required is photo-

graphed through a glass screen bearing ruled lines crossing each other at right angles, and the resultant image is exposed on a sensitized printing plate.

Fox Talbot and other Victorians experimented with photographic half-tone processes and the first such printed image probably appeared in the *Canadian Illustrated News* in 1869. But Georg Meissenbach of Munich is usually credited as the inventor of the half-tone - which he patented in 1882 - although many authorities credit the Levy brothers of Philadelphia with the first wholesale commercial usage of the half-tone processes. See also pp. 615, 615.

Haliburton, Thomas Chandler (1796-1865), Canadian judge and humorist who wrote several books on law and history. He used the adventures of Sam Slick, a fictional Yankee pedlar, to chide his fellow Nova Scotians for their laziness.

Halibut, flatfish found worldwide in deep cold to temperate seas. An important commercial food fish, it is brownish on the eye side and white below. Family Pleuronectidae, species *Atlantic Hippoglossus hippoglossus*, giant Pacific *H. stenalepis*. See also pp. 62, 744, 745.

Halicarnassus, Ionic Greek city in the extreme SW of Asia Minor (modern Bodrum, Turkey). With an advantageous trading position, the city was a rich port, and the Mausoleum was the site of one of the SEVEN WONDERS OF THE WORLD.

Halide, salt of a HALOGEN, or an organic compound containing a halogen. The halide salts, fluorides, chlorides, bromides and iodides, contain negative ions. The alkyl halides are organic compounds such as methyl chloride (chloromethane, CH₃Cl), containing an alkane radical bound to a halogen atom.

Halifax, Charles Montague, Earl of (1661-1715), English statesman whose political success stemmed from his great financial skills. As a lord of the treasury in 1692 he initiated the national debt and was instrumental in founding the Bank of England. He was twice impeached (1701-1703) for breach of trust as auditor of the exchequer, but was acquitted.

Halifax, George Savile, First Marquess of (1633-95), English statesman. As a privy councillor (1672-85), he led the opposition to a Bill to prevent Charles II's Roman Catholic brother James from becoming king. He was Lord Privy Seal (1682-85) but was dismissed by James II on his accession.

Halifax, city port and capital of Nova Scotia, Canada, on the Atlantic Ocean. It is the terminus of the country's transcontinental highway and of the two railway networks. Industries include commercial fishing, shipbuilding and oil refining. Pop. (1974) 122,035.

Halite, common salt, most abundant HALIDE mineral, sodium chloride (NaCl). It is found in sedimentary rocks, salt domes and dried lakes, as cubic system interlocking cubic crystals, granules and masses. It is colourless, white or grey with a glassy lustre. Hardness 2.5, s.g. 2.2. It is important as table salt and as a source of chlorine.

Halitosis, or bad breath, may have a number of causes including respiratory infections, mouth disorders, dental decay and excessive smoking. Occasionally odour occurs with no apparent cause.

Hall, Asaph (1829-1907), US astronomer. He was professor of mathematics at the US Naval Observatory, Washington DC (1863-91) and professor of astronomy at Harvard (1896-1901). In 1877 he discovered PHOBOS and DEIMOS, the two moons of Mars. See also pp. 921, 952.

Hall, Charles Martin (1863-1914), US chemist who in 1886 discovered (independently of Paul L. T. REMOND) the first economical method for extracting aluminium electrolytically from bauxite. See also pp. 400-401.

Hall (Halle), Edward (1498-1547), English chronicler. *The Union of the noble and illustre Families of Lancaster and York* is his only famous work. It deals with the court of HENRY VIII and describes the FIELD OF THE CLOTH OF GOLD. See also pp. 1374, 1374.

Hall, Marguerite Radclyffe (c 1886-1943) British novelist best known for *The Well of Loneliness* (1928), a sincere study of lesbianism, originally banned as obscene in Britain. Other novels include *The Unlit Lamp* (1924), *Adam's Breed* (1926) (which was awarded the James Earl Black prize) and *The Sixth Beatitude* (1936).

Hall, Marshall (1790-1857) British physician and physiologist who showed that reflex actions occur even when the nerve cord to the brain is cut. Hall was able to conclude that the nerve cord has a dual function - producing co-ordinated movements and as an autonomous system. His name is given to a form of artificial respiration.

Hall, Sir Peter Reginald Frederick (1930-) British theatrical director. He was well known for his many Shakespearean productions at the Shakespeare Memorial Theatre at Stratford-upon-Avon. He was director of the ROYAL SHAKESPEARE COMPANY (1960-71) and was responsible for the formation of the permanent company in 1960. He has directed opera at GLYNDEBOURNE and COVENT GARDEN and made several films including *Akenfield* (1974). In 1973 he became director of the NATIONAL THEATRE of Great Britain.

Hall, Willis (1929-), British dramatist whose reputation was established with the success of his first play *The Long and the Short and the Tall* (1959). He subsequently worked closely with Keith WATERHOUSE, notably on the stage, screen, musical and television versions of the latter's *Billy Liar*.

Hallam, Henry (1777-1859), British historian. The death of his son, Arthur, was the occasion of TENNYSON'S *In Memoriam*. His enduring reputation rests on his studies of early modern European society and letters and his *Constitutional History of England* (1827).

Halle, Sir Charles (1819-95), British conductor. He began as a concert pianist and in 1857 formed a symphony orchestra in Manchester, England, which subsequently became known as the Halle Orchestra. He was a founder of the Royal Manchester College of Music, which was established in 1893.

Halle, city in s central East Germany, on the River Saale. Capital of the Halle district. It is a transport centre and part of an important industrial region. Manufactures include chemicals, food products and machinery. There is some salt and potash mining in the area. Pop. (1975) 230,181.

Haller, Albrecht von (1708-77), Swiss biologist, physician and poet. As a botanist he was celebrated for his descriptions of alpine flora and as a poet for his glorification of the mountains in his *Die Alpen* (1729). While professor of anatomy, medicine and botany at the University of Göttingen in 1736, he researched the contractile properties of muscle tissue, and his resulting treatise (1757-66) laid the foundations of modern neurology.

Halley, Edmond (1656-1742) British astronomer and mathematician. He accurately predicted the return in 1758 of the comet which has since borne his name. He published a map of the winds in 1686.

Halley's comet, noted periodic comet observed in 1682 by Edmond HALLEY who identified it as the comet seen in 1531 and 1607. He predicted its return in 1758. It last returned to perihelion in 1910 and is due back in 1986. A bright naked-eye object, it was known before the time of Christ. See also pp 968, 969.

Halldgrímsson, Geir (1925-), Icelandic politician, chairman of the Independence Party. He started his career as a lawyer in his father's firm, and entered politics in 1959. He became Prime Minister in 1974.

Hallmark, official stamp used by British government ASSAY offices to mark the standard of gold and silver articles. The mark has four elements: the standard mark, showing the purity of the metal; the office mark, bearing the assay office's cipher, the date mark, and the maker's mark.

Hallowe'en, hallowed or holy evening, in medieval times a holy festival observed on

31 Oct. the eve of All Saints' Day. It was merged with the ancient Celtic festival of Samhain, which was also observed at the end of summer and marked the beginning of the Celtic year. This was the occasion when fires were lit to frighten away evil spirits and to guide the souls of the dead who were supposed to revisit their homes on this day. Hallowe'en is observed today as a social festival.

Hallstatt, town in s Austria on Lake Hallstätter. Archaeological excavations (1946-99) unearthed cultural relics dating from c 800 BC, now known as the Hallstatt era of the IRON AGE. Today the village is a thriving tourist centre.

Hallucination, apparent perception of something that is not in fact present. Although they may occur in any of the five senses, auditory hallucinations (hearing voices or noises) and visual hallucinations (seeing things or people) are the commonest. While they are usually symptomatic of psychotic disorders, hallucinations may result from fatigue or emotional upsets and can also be a side-effect of certain drugs. See also pp 135, 1081, 1106.

Hallucinogen, drug that causes HALLUCINATIONS, ie, unusual perceptions without external cause. Hallucinogenic drugs such as CANNABIS, Mescaline and lysergic acid diethylamide (LSD) have been used in primitive religious ceremonies and are extensively but illicitly taken today. Some are employed in experimental investigation and treatment of mental illness. See also pp 1080, 1081, 1116.

Halogens, elements (fluorine, chlorine, bromine, iodine and astatine) belonging to group VII of the periodic table. They react with most other elements and with organic compounds, reactivity decreases down the group. The halogens are highly electronegative and react strongly because they require only one electron to achieve the 'stable 8' inert gas configuration, they produce crystalline salts containing negative ions of the type F⁻ and Cl⁻. The name halogen means 'salt producer'. See also pp 888, 891.

Halogeneration, introduction of one of the HALOGEN elements - fluorine, chlorine, bromine, iodine or astatine - into an organic compound either by addition or by substitution of an atom or group of atoms. This reaction is widely used in making pharmaceuticals and dyes.

Halophyte, any plant, usually a seed plant which is able to live in salty soil and absorb water which is rich in salts.

Hals, Frans (c 1581-1666), Dutch painter. He was unique in his ability to capture fleeting expressions in his paintings of robust, vital figures, such as the *Laughing Cavalier*, and his group portraits. His later works more subdued in colour and mood have a dignity and strength approaching those of his contemporary, REMBRANDT. See also p 1444.

Halsbury, Hardinge Stanley Giffard, 1st Earl of (1823-1921), British politician and judge. He was appointed Solicitor General in 1875. From 1877 to 1885 he was a Conservative MP. In 1885 he was raised to the peerage and made Lord Chancellor. *Halsbury's Laws of England* was published under his direction from 1905 to 1916.

Halsey, William Frederick, Jr. (1882-1959), US admiral. He was a destroyer commander in WWI and led carrier raids against the Japanese-held Marshall and Gilbert Islands early in WWII. The terms of Japanese surrender in 1945 were signed aboard his ship.

Helsingborg, city port in sw Sweden, on the Öresund opposite Helsingør, Denmark. It is a commercial and industrial centre whose industries include copper, sugar refining and rubber processing. Pop. (1974) 102,137.

Holstead, William Stewart (1852-1922), US physician. He pioneered the use of cocaine as a 'knock' anaesthetic and expanded on the techniques of antiseptics in surgery by introducing rubber gloves. Holstead experimented on animals to improve surgical procedures, including operations for breast cancer.

Halton, district in N Cheshire, England, on

the Mersey estuary, created in 1974 under the Local Government Act (1972). Area 74sq km (29sq miles). Pop. (1974 est.) 106,200.

Ham, in GENESIS, second of NOAH'S SONS. After the Flood, his irreverence resulted in a curse by Noah, who predicted that Ham's descendants, called CANAAN, would be subservient to those of his brothers, SHAM and JAPHETH.

Hamadan, city in w Iran at the foot of Mt Alvand. It was the ancient city of Agbatana. Taken by the Arabs in AD 645 it later passed to the Seljuk Turks and to the Mongols. The modern city is the market centre for a farming region and is known for its rugs and leatherwork. Pop. (1973 est.) 144,000.

Hamadryas, or sacred baboon, small baboon living in the plains and rocky hills of NE Africa and Arabia. Adults and males have a mane round the neck. The animal was sacred to the ancient Egyptians. Weight to 18kg (40lb). Family Cercopithecidae, species *Papio hamadryas*. **Hamah** (Hama), city in w Central Syria on the River Orontes. Settled since the Bronze Age, it serves today as a market centre for the nearby irrigated farming region, and produces textiles and silks. Pop. (1970) 137,421.

Hambledon, Hampshire village whose cricket team was one of England's first and its finest from 1753-87.

Hamburg, city that is also a constituent state of West Germany, on the River Elbe. Founded in AD 808 by CHARLEMAGNE, it became a successful medieval trading port and by 1510 was an imperial free city. Severely damaged during WWII, the city was rebuilt in 1945. It is now the country's largest city and cultural centre. It has shipyards and diverse manufacturing industries including electronic equipment and chemicals. Pop. 1,738,800.

Hamelin, (Himelín) town and port in Lower Saxony, N West Germany. Situated at the confluence of the rivers Wesel and Hamel, its industries include the manufacture of carpets, electrical motors, baking powder and pottery. With a history dating back to the 8th century and its famous association with the legend of the PRETTY PRINCE, the town also attracts a valuable tourist trade. Pop. (1970 est.) 47,000.

Hamhung, city in s North Korea, capital of South Hamgyŏng province. The city was the scene of heavy fighting during the KOREAN WAR. Today it is a commercial centre, its industries produce sake, fertilizer and cotton textiles. Pop. 420,000.

Hannibal Barca (d 228 BC), military commander of CARTHAGE. Father of HANNIBAL and HASDRUBAL. After quelling a revolt of mercenaries led by Spendius and Mathos (241-38 BC), he conquered s and E Spain. **Hamilton, Alexander** (1775-1804), US statesman. During the American War of Independence he became an assistant of George WASHINGTON and served as secretary of the Treasury during Washington's first administration, setting up the Bank of the United States.

Hamilton, Lady Emma (c 1765-1815), wife of the ambassador and archaeologist Sir William Hamilton and from 1798 mistress to Lord Horatio Nelson, by whom she had two daughters, one of whom Horatia (1801-1881), survived.

Hamilton, Gavin (1723-98), Scottish neo-classical painter. He spent much of his life in Rome but also lived in London (1753-54). He was an associate of WINCKELMANN. See also p 1486.

Hamilton, Iain Ellis (1922-), British composer. Influenced early by such contemporaries as Hindemith, Bartók and Stravinsky, his compositions had become serialist in style in 1960 and include the operas *The Royal Hunt of the Sun* (1966-67) and *Tamburlaine* (1977).

Hamilton, Sir Ian Standish Monteith (1853-1947), British general. He led the Mediterranean Expeditionary Force at the GALIPOLI campaign of WWI. He later became a leading pacifist.

Hamilton, James Hamilton, 1st Duke of (1606-49), Scottish politician. As CHARLES I'S commissioner in Scotland (1638-39) he tried to conciliate the COVENANTERS and led Charles's army against

Sir Charles Halle mixed with many celebrities of his time, including Chopin and Liszt.

Halley's Comet photographed in 1910 during its last appearance. It returns every 76 years.

Frans Hals, his *Young Man in Yellow*. Grey's typical of his renderings of robust figures.

Lady Emma Hamilton as *Antonia* in one of her poses plastiques by George Romney.

Hamilton, Richard

Hamlet played by Richard Hamilton in the 1938 production at the Old Vic, London

Hammerhead shark - streamlined body, flat head, large eyes, powerful jaws

Hammond organs feature a reed action, rhythm and string and brass effects

Hampshire, the bowling green, framed in the ruins of the priory at Christchurch

them in 1639. He fought for Charles in the Civil War but was imprisoned by him (1644-46), he was executed after leading a Royalist army against Cromwell at the Battle of Preston (1648). See also pp 1432-1433

Hamilton, Richard (1922-), British artist who was a leader of the POP ART movement in the 1950s and 1960s, mainly producing collages of images taken from commercial art. These include *Just what is it that makes today's homes so different so appealing?* (1956). See also pp 1762-1763

Hamilton, Sir William (1788-1856) Scottish philosopher. He became professor of logic at Edinburgh in 1836, and expounded the views of the school of common sense realism in his *Discussions in Philosophy and Literature* (1852).

Hamilton, Sir William Rowan (1805-65) Irish mathematician. He was appointed professor of astronomy at Trinity College, Dublin, and Irish astronomer royal in 1827. His greatest achievement was in the creation of a three-dimensional mathematics (quaternions).

Hamilton, capital and chief seaport of Bermuda Island, at the head of Great Sound. Founded in 1790 and settled by the English, it was incorporated in 1793. It became the capital in 1815 and was made a free port in 1956. Tourism is the major industry. Pop. (1970) 2,127.

Hamilton, city in SE Ontario, Canada, 64 km (40 miles) SW of Toronto on Lake Ontario. It is an important centre of communications and is also a large manufacturing city, producing iron, steel and textiles. Pop. (1974) 309,175.

Hamilton, city in North Island, New Zealand, on the Waikato River. It is the commercial centre of the surrounding dairy farming and sheep rearing region. Pop. (1972 est.) 77,600.

Hamito-Semitic languages, family of languages spoken in N Africa, the Sahara, parts of E Africa, central Africa, W Africa and W Asia. About 130 million people speak them. With a few exceptions, notably the Tamechek dialect which uses a Berber alphabet, the family uses the Arabic alphabet. It is the only family of languages common to Asia and Africa.

Hamlet (c 1601), five-act tragedy by SHAKESPEARE based on a historical account which had already been dramatized, probably by Thomas KYD. Subject to persistent critical and psychological appraisal, the complicated role of Hamlet is one of the most demanding but rewarding parts an actor can play.

Hamlyn. See **HAMELIN**.

Hammada, rocky desert surface. It is often found on desert plateaus where the surface has been swept clear of sand or rocky debris by the wind. Local patches of sand or rubble are found in sheltered spots, but the distinctive landscape features are yardangs, wind-eroded rocky outcrops. See also p 229.

Hammarfeld, Dag (1905-61), Swedish diplomat who succeeded Trygve LIE as Secretary General of the United Nations in 1953. In 1956 he played a leading part in the SUEZ crisis by sending a UN emergency force to Egypt. He sent another UN force to the Congo to keep peace in 1960. En route to Katanga for peace talks, he was killed in a plane crash. He was posthumously awarded the 1960 Nobel Peace Prize.

Hammer, in athletics, field event for men in which a ball attached to a spring-steel wire is thrown by a gloved thrower who builds up momentum with a series of 3 rotations within a 2.13 m (7ft) circle. The "hammer" weighs 7.26 kg (16 lb) and is 1.213 m (almost 4 ft) long. The best athletes make throws around or in excess of 77 m (252 ft). The hammer has been an Olympic event since 1900.

Hammerbeam roof, late GOTHIC form of roof in which massive beams project from the supporting side walls without meeting their corresponding opposite members. The roof of WESTMINSTER HALL, London (1397-99), is the earliest dated example of the type, that of the 15th-century church of St Margaret, Ipswich, a double hammerbeam, is another example.

Hammer Film Productions, British film company, formed 1948, which enjoyed much success in the 1950s and 1960s, mostly with numerous reworkings of gothic horror themes. Its films include *Dracula* (1958), *The Mummy* (1959), *The Gorgon* (1964) and *Plague of the Zombies* (1965).

Hammerhead shark, aggressive, dangerous fish found in all tropical marine waters and warmer temperate zones. It can be recognized by its unusual head, which is extended laterally in two hammerlike lobes, with one eye and one nostril located at the tip of each lobe. The shark is greyish above and whitish below. Length to 6.1 m (20 ft), weight to 906 kg (2,000 lb). Family Sphyrnidae. See also **SHARK**.

Hammerstein, Oscar (1846-1919) US opera impresario, b Germany. After emigrating to the USA in the 1860s he amassed a large fortune by means of more than 100 inventions. He built the Manhattan Opera House in 1906, and staged there the first US performances of operas by various composers, including MASSENET, CHAR PÉNNE and DEBESSY.

Hammerstein, Oscar II (1895-1960), US lyricist and librettist. He collaborated with Jerome KERN (*Show Boat*, 1927) and Richard RODGERS (*Oklahoma!*, 1943; *Carnegie*, 1945; *South Pacific*, 1949 and *The King and I*, 1951). Rodgers and Hammerstein gave the US musical a new direction and substance.

Hammer toe, or claw toe, toe deformed by the flexion of one or more joints. The deformity is sometimes by surgery, although special shoes or pads may help relieve pressure.

Hammett, Dashiell (1894-1961), US author, the originator of hard-boiled realistic, seamy detective novels. He created Sam Spade, a tough but honest private detective, and Nick Charles, a sophisticated one. His books include *The Maltese Falcon* (1930), *The Glass Key* (1931) and *The Thin Man* (1932).

Hammond, Dame Joan (1912-), Australian lyric soprano, b New Zealand. Also a talented violinist, she left Sydney in 1936 to study singing in Vienna and later London, and made her operatic debut in 1938 (London). Thereafter she sang in all the principal opera houses, including those in the USSR, and made numerous recital tours.

Hammond, Walter (1903-65), England and Gloucestershire cricketer who, in 85 Test matches (1927-47), scored 7,249 runs (average 58.45), including a record 336 not out, and took 83 wickets. But it is more for the attractive way in which he scored his 50,551 career runs that Wally Hammond will be remembered.

Hammond organ, electric keyboard instrument producing amplified music with discs rotating in an electromagnetic field. Invented by Laurens Hammond in 1934 to replace pipe organs in small churches, it was later used in jazz and popular music. The size of a small upright piano, it can produce a wide variety of tones.

Hammurabi (18th century BC), King of Babylonia in the first dynasty. He extended his rule in Mesopotamia, organized the empire, built canals and wheat granaries and classified the law (the code of HAMMURABI). See also p 1164.

Hammurabi, Code of, ancient code of law compiled under Hammurabi, King of Babylonia (c 18th century BC). Found carved on a diorite column in 1901, it is now in the Louvre. It is composed of 282 case laws in CUNEIFORM script dealing with Babylonian social structure, economic conditions, industries, law and family life. See also p 1870.

Hampden, John (1594-1643), English statesman who was influential in Parliament's struggle against CHARLES I. Hampden's refusal to pay ship money, and his opposition to royal policies, led the king to make an unsuccessful attempt to arrest him and four other critics (1642), which in turn helped to precipitate the ENGLISH CIVIL WAR.

Hampden Park, football stadium in Glasgow, Scotland, home of the Queen's Park club and venue for Scotland's international matches and Cup finals. With

capacity for 134,000 spectators, it is Britain's largest ground and holds attendance records for European matches.

Hampshire, county in S England, bordering the English Channel. Most of the terrain is undulating chalk downland, the Test and Itchen rivers drain into it, so fertile. Predominantly agricultural, Hampshire contains the major port of Southampton and the naval centre at Portsmouth. Its coastal resorts and the New Forest woodlands are tourist attractions. The county town is Winchester. Area 3,782 sq km (1,461 sq miles). Pop. (1976) 1,456,100.

Hampstead, former N London village now part of the borough of Camden. Its fine air and rural milieu have endeared it to literary and artistic residents such as JOHN KEATS, JOHN CONSTABLE and D. H. LAWRENCE.

Hampstead Heath, partly wooded open area of N London that was formerly common land. Attempts to build on it resulted in its gradual acquisition, beginning in 1871, for public use. It now includes adjoining areas such as the grounds of Kenwood and Parliament Hill, covering about 324 hectares (806 acres).

Hampton, Lionel (1913-), US jazz vibraphonist and bandleader. He played with the Benny GOODMAN Orchestra (1936-40), then led his own big bands and small groups which were among the best known of jazz ensembles for almost three decades.

Hampton Court, royal palace begun in 1515 by Cardinal WOLSEY beside the Thames, 23 km (14 miles) from Westminster. The splendour of its architecture and fittings was apparently so envied by HENRY VIII that Wolsey made it over to him in 1526. Henry made considerable extensions and improvements between 1531 and 1536. When rebuilt and extended parts between 1696 and 1704. See also pp 1352, 1430.

Hamster, small, mainly nocturnal burrowing RODENT native to E Asia and Africa. It has internal cheek pouches for carrying food. Golden hamsters, popular as pets and also used in laboratory experiments, are descendants of a single family discovered in Syria in 1930. Disease-resistant and almost odourless, golden hamsters are easy to handle. They eat fruit, green vegetables, seeds, nuts and meat. Length up to 18 cm (7 in). Family Cricetidae, species *Cricetus cricetus*. See also p 296.

Hamstring. See **ACHILLES TENDON**.

Hamsun, Knut (1859-1952), Norwegian naturalist novelist and playwright, b Knut Pedersen. He was awarded the 1920 Nobel Prize for literature for *The Growth of the Soul* (1917). Other important novels include *Hunger* (1890), *Victoria* (1898) and *Vagabonds* (1927). His six plays were influenced by those of IBSEN and STRINDBERG. His pro-German sympathies aroused considerable controversy in both WWI and WWII.

Han, name of two rivers in China. The River Han in a central China rises in SW Shensi (Shanxi) and flows SE to join the River Yangtze (Changjiang) at Hankow. Length 1,200 km (750 miles). The River Han in SE China rises on the border of Fukien (Fujian) and Kiangsi (Jiangxi) provinces, and flows S to the South China Sea at Swatow (Shanton). Length 160 km (100 miles).

Han Chinese, or Han-Jen, Mongoloid people that make up about 94% of the population of China, they inhabit the densely populated eastern half of the country. They consist of various groups sharing the same culture, traditions and written language, although within the Han Chinese language are several dialects. Their ancient hierarchical society, based on Taoist, Confucian and Buddhist tenets, has been reorganized under Communism and their agriculture modernized.

Hancock, Sir Keith (1898-), Australian academic who became professor of history at the University of Birmingham in 1933. From 1957 to 1965 he was professor of history at the Australian National University at Canberra, and was the civil editor of the official war histories.

Hancock, Tony (1924-68), British comedian. His truculent and self-centred performances in *Hancock's Half Hour* gained a unique and original comic reputation, and he explored new areas of radio and television social comedy. His films included *The Rebel* (1961) and *The Punch and Judy Man* (1963).

Handball, name given to two sports played mostly in Ireland and the USA. One version is a game similar to fives and played indoors or outdoors with a hard, small ball by two or four players on courts of one, three or four walls. The other game, sometimes called field handball, is quite different. On a court between two goals and two goalkeepers, players catch, pass and throw a ball like a small football with the object of hurling the ball past the opposing goalkeeper. They may not run more than three steps with the ball or hold it for more than three seconds or approach closer than the semicircular goal area. Outdoors the game is played by teams of eleven indoors by teams of seven. Dimensions of pitches vary greatly.

Handel, George Frederick (1685-1759), German-born composer who became a naturalized Englishman in 1726. With J. S. BACH, he is regarded as the greatest composer of the BAROQUE period. Among his many works are operas (eg. *Atlantia*, *Berenice*, *Serse*), oratorios (eg. *Samson*, *Esther*, *Judas Maccabaeus*), organ music, chamber concertos, sonatas and songs. His most popular works include the *Water Music* (c 1717) and the *Fireworks Music* (1749), both composed for outings and holidays promoted by the English royal court. Handel's best-known work is perhaps the oratorio, the *Messiah* (1742), famous for its Hallelujah Chorus. Handel was greatly honoured in his own day, especially in England, HAYDN, MOZART and BEETHOVEN all professed great admiration for his music. He is buried in Westminster Abbey. See also p 1452.

Hand grenade. See GRENADE.

Handicapped, people with physical or mental disabilities. Depending on the degree of severity of the handicap these people may need personal help. Such aid is available in the form of prosthetic limbs, special training and equipment and the persistence and care of others.

Handicapping, system used in some sports to give all competitors an equal chance by placing the better contestants at some disadvantage. It is primarily associated with horse racing, in which entrants carry excess weight (usually up to 19kg, 42lb) related to the previous performances. The first handicap was run at Newmarket, England, in 1785, and the system is today used throughout the world.

Handley, Tommy (1892-1949), British radio comedian who appeared in a succession of programmes from 1926. He became well known in ITMA (It's That Man Again, 1942), a morale-building series of wwn that established the comedy show formula of stock characters and catch phrases. He also made several films, including *Elstree Calling* (1930) and *It's That Man Again* (1942).

Handley Page, British manufacturer of military aircraft. Its first large bomber, powered by two Rolls-Royce 12-cylinder engines, was introduced in 1918, in time to serve in the latter part of wwi. It was made of wood and fabric, could carry sixteen 50kg (110lb) bombs or one 750kg (1,650lb) bomb, and had a crew of two to five. The most famous Handley Page bomber of wwi was the *Halifax*. See also pp 570-571.

Hands, Terry (1941-), British stage director who worked with the Royal Shakespeare Company after 1966. His direct, textual approach to plays was the keynote of many award-winning productions.

Handy, William Christopher (1873-1958), us composer and musician known as the father of the blues. He led his own band in 1903 and later composed several hits including *Memphis Blues* (1911) and *St Louis Blues* (1914). After 1923 he devoted his time exclusively to composing and publishing many other classic blues songs.

Han dynasty (206 BC - AD 220), Chinese dynasty. It was founded by Liu Pang and was ruled by his family for more than four centuries. It is considered by the Chinese to be one of their greatest periods of rule. Han rulers laid the administrative and ideological basis for the subsequent greatness of the Chinese Empire. Under the Han the Confucian state cult was formalized through the examination system, art and literary traditions were established and imperial expansion began to spread Chinese influence throughout Asia. See also pp 1256-1257.

Hangchow (Hangzhou), capital city of Chekiang (Zhejiang) province, a China on Hangchow Bay. Founded in 606, the city became an important cultural centre and capital of the Southern Sung dynasty (1126-1279). It developed as a major silk-producing centre at the same time. The city's modern prosperity dates from the opening of the Shanghai-Hangchow Ningbo railway. Industries include iron and steel, fertilizers, motor vehicles, machine tools, electronic equipment and chemicals. Pop. (1970 est.) 1,100,000.

Hang gliding, sport that enables a person to 'fly', supported only by a large, generally triangular, kite-like wing, which is stabilized by the weight of his own body. The gliders fall into two categories - the sail wing and the rigid wing - and may weigh as much as 45kg (100lb). Take-off is made from the top of almost any steepish incline, but requires a steady updraught. The pilot sits on, and is harnessed to, a suspended bar. He steers by means of a fixed, triangular, trapeze-like frame, which he uses to help shift his weight from side to side (thereby varying the glider's centre of gravity). For landing the pilot needs to use his legs. This sport can be dangerous and a number of participants have been killed.

Hangnag, method of capital punishment, especially in the Western world. It derives from ancient Teutonic practice and was introduced into England by the Anglo-Saxons.

Hangnest, or Baltimore oriole, North American orange and black bird well known for its clear, musical whistle. It gets its first name from its finely woven nest built suspended from the tip of a branch, and its second from the orange and black colours of the Calverts, the founding family of Maryland where the bird was first found. Species: *Icterus galbula*.

Hangover, results of acute alcoholic intoxication. Symptoms may include headache, nausea, general discomfort and agitation. The precise cause is unknown and no medical cure has been confirmed, although popular remedies abound. See also ALCOHOLISM.

Hani Mohammed (1934-), Pakistani cricketer who doubly amassed a world record 499 runs for Karachi and played the longest innings ever, 16 hours 13 minutes for 117 runs for Pakistan against the West Indies in 1957-8. He played in 55 Test matches between 1952 and 1969 (3,915 runs, average 43.98), 11 times as captain.

Haniwa, Japanese terracotta sculpture of the YAMATO period. Originally they were cylindrical grave-markers. Later they were modelled to represent retainers and property of the deceased. See also p 1265.

Han Kan (c 720-80), Chinese painter of the T'ANG DYNASTY, court painter to the emperor. In both his religious art and in secular paintings, eg. of horses, he had a remarkable gift for suggesting mass and perspective.

Hankow. See WUHAN.

Hann, Julius (1839-1921), Austrian meteorologist whose data, collected from balloon ascents and from climbing in the Alps and Himalayas, showed that about 90% of the atmosphere's water vapour is found below 6,010m (20,000ft). From this it followed that high mountains were effective barriers against the transport of water vapour.

Hannah, in the Bible, mother of the prophet Samuel. Barren for many years, she kept the promise to dedicate her first son

to God by taking Samuel, at the age of three, to the high priest Eli.

Hannay, James Owen. See BIRMINGHAM, GEORGE A.

Hannibal (247-183 BC), Carthaginian general, one of the foremost military commanders in history. Commander of the Carthaginian forces in Spain (221 BC) he conquered much of the country. With about 40,000 select troops and elephants he crossed the Alps into Italy in 218 and won brilliant victories at Ticino and Trebia. At Cannae in 216 he wiped out at least 48,000 Romans in his greatest victory but, deprived of support from Carthage, was gradually forced south. In 203 he was ordered to return to Carthage, after 16 years of battle in Roman territory, he was finally defeated at Zama in N. Africa by scipio Africanus. Political enemies forced him to flee to Syria, then probably to Bithynia where he poisoned himself rather than fall into Roman hands. See also p 1225.

Hanoi (Ha-noi), city in Vietnam, on the Red River, former capital of North Vietnam and now capital of the Socialist Republic of Vietnam. The Chinese ruled Vietnam from Hanoi in the 7th century. Taken by the French in 1883, the city became the capital of Indochina from 1887 to 1945. It was liberated by the VIET MINH in 1945. From 1946 to 1954 it was the scene of heavy fighting between the French and the Viet Minh. It was heavily bombed by the USA during the VIETNAM WAR. There is a university (1956). Industries: textiles, rice milling. Pop. (1976 est.) 1,443,500. See also pp 1778-1779.

Hanover, House of, British royal family from 1714 to 1901. The Electors of Hanover succeeded to the English throne in 1714 under the terms of the Act of Settlement (1701) and the Act of Union (1707). GEORGE I, the first Elector also to be King of England, was succeeded in both England and Hanover by GEORGE II, GEORGE IV and WILLIAM IV, SAULTING FORBID. Queen Victoria's accession in Hanover, so that the Hanoverian title was inherited by her uncle, the Duke of Cumberland. In 1901 Victoria was succeeded by her son who, as EDWARD VII, took his father's family name, SAXE-COBURG-GOTHA.

Hanover (Hannover), city in N. West Germany on the River Leine, 56km (35 miles) WNW of Brunswick (Braunschweig). Founded in 1241, the city became the residence in 1636 of the dukes of Brunswick-Lüneburg (predecessors of the House of Hanover, the British royal house 1714-1901). Although badly damaged during WWII, many old buildings were reconstructed in the post-war years. The city is now a centre of industry and communications, holding an annual trade fair. Manufactures include machinery, steel, textiles and chemicals. Pop. (1974) 505,106.

Hanoverian Succession, settlement of the House of Hanover on the British throne by act of parliament (1701), to take effect on the death of Queen ANNE. It was accepted by Scotland in the Act of Union (1707). The claims of the Stuart house were set aside in order to ensure a Protestant monarch. GEORGE I became the first Hanoverian king in 1714. See also pp 1462-1463.

Hansard, colloquial name for the daily record of the proceedings of the British Houses of Parliament. Named after Luke Hansard (1752-1828), printer to the Commons, who compiled unofficial reports, and his son Thomas Curson Hansard (1776-1833) who took over official publication of the reports from William Cobbett in 1812. These verbatim records have continued to be referred to as 'Hansard' even though the family sold their publishing interest in 1889 and the responsibility now rests with Her Majesty's Stationery Office.

Hanseatic League, commercial union of German, Dutch and Flemish towns established in the 13th century, which grew from smaller local unions, or Hanse. The League functioned as protector of the merchants of its member towns by controlling the trade routes from the Baltic

Handel's operas regained recognition at the beginning of this century.

Hang gliding. Two skiers launch themselves from the top of the Weisshorn in Switzerland.

Hannibal defies a paucity by Hann. Motta of the Carthaginian army crossing the Rhône.

Hanover: new buildings replacing those destroyed during the course of WWII.

Hansel and Gretel

Hansom cab, model of the 1880s photographed outside the Albert Hall in London

Hanuman is one of the most popular of all monkeys, protected as a protégé of the god

Hardouin-Mansart, an engraving of the architect with his patron, King Louis XIV

Thomas Hardy's frank treatment of sexual attraction deeply shocked his readers

region to the Atlantic seaboard. The League began to decline in the late 15th century with the opening up of the New World and aggressive trading by the British and Dutch. The League's diet met for the last time in 1669. See also pp.1299-1340

Hansel and Gretel (1893), three-act opera by Engelbert HUMPERDINCK, German libretto by Adelheid Wette based on the GRIMM brothers' tale. The roles of Hansel and Gretel are always sung by women (mezzo-soprano and soprano respectively).

Hansom cab, horse-drawn cab which was open at the front and had the driver placed at the back and above the passenger. The Hansom safety cab was patented in 1834 by Joseph Aloysius Hansom, (1803-1882), an English architect who also designed Birmingham Town Hall in 1833.

Hanukkah, or Chanukah, meaning consecration or dedication, an eight-day festival celebrated in Judaism. It is also known as the Feast of Lights. It is a major ceremony, involving services at home and in synagogues, which commemorates the re-dedication of the TEMPLE in 165 BC and the miracle of a one-day supply of oil lasting for eight days. Gifts are given, and games played.

Hanuman, in Hindu mythology, the monkey general who helped RAMA to find and rescue SITA. His attributes include great strength, agility and wisdom. He remains a favourite deity in many villages.

Hanuman, or entellus langur, leaf-eating MONKEY of S. ASIA with bristly hairs on its chest. It is believed to migrate from higher to lower levels in cold weather. Family: Cercopithecidae, species *Presbytus entellus*.

Harvey, Jonas (1712-1786), British traveller and philanthropist. He travelled to Russia and Persia, retiring in 1750 and becoming an advocate of prison reform, and working for other philanthropic causes. He is said to have been the first Englishman regularly to carry an umbrella, which had been considered an unmanly appendage.

Han Yu (768-824), Chinese writer. He was a leader of the reform movement during the T'ANG DYNASTY (618-906) which opposed the inhibiting effect of certain established prose rules and returned to the simpler prose style of the CHOU and HAN dynasties several centuries earlier. He was also a popular poet, much of his verse being macabre.

Haploid cell. See MEIOSIS.

Happening, spontaneous or improvised multi-media event emphasizing audience participation and an element of surprise. Most popular in the 1960s, happenings draw on elements of DADA, SURREALISM and POP ART and the THEATRE OF CRUELTY.

Hapsburg (Habsburg), name of a royal Austrian family, one of the principal houses of Europe from the 15th century onwards. From Werner, the first count of Hapsburg in the 11th century, there was a direct male line until 1740, when the PRAGMATIC SANCTION allowed a daughter, MARIA THERESA, to succeed.

FREDERICK III, the Hapsburg King of Germany, was crowned Holy Roman Emperor in 1452, and the title remained in the family until the empire was dissolved in 1806. His descendants gained by marriage and war, vast territories including the Netherlands, Spain, Naples, Sicily and Sardinia. But the empire's size proved too unwieldy and the family split into two branches in 1558: the Spanish and the Austrian Hapsburgs. The Spanish line died out in 1700, the last ruling Austrian Hapsburg, Charles I, abdicated in 1918. See also pp.1407, 1559-1561, 1586-1587.

Hapsburg Empire, lands ruled by the Austrian Hapsburg family from the 13th century to 1918. The heart of the empire was Austria, which the founder of the dynasty, Rudolf I of Germany, gave to his son, Rudolph II of Austria, in 1282. From 1452, when Frederick V was elected emperor, until 1806, the HOLY ROMAN EMPIRE was identical with the Hapsburg Empire. From the 16th to 18th centuries the empire was at its peak, extending over

most of Germany, Spain and Italy and including also the Spanish colonies in America. Hapsburg power ended with the disintegration of Austria-Hungary in WWI. See also pp.1402, 1446, 1460-1461, 1559-1561, 1586-1587.

Hara-kiri, Japanese form of ritualized suicide by disembowelment, it is also known as seppuku. It originated with the samurai in the 12th century and was considered an honourable alternative to execution. Later, it was often ordered for acts of insubordination, although it was usually performed voluntarily to avoid becoming prisoner, to prove loyalty or as an expression of protest. Japanese servicemen in WWI often performed hara-kiri.

Harald Hardrada (Harold III) (1015-66), King of Norway (1045-66). After spending his youth in Russia, he served as a mercenary for the Byzantine Empire, returning to Norway in 1045. He made vain attempts to conquer Denmark and was finally killed at Stamford Bridge in 1066 during his invasion of England.

Harappa, ancient city of the INDUS VALLEY CIVILIZATION, now in Pakistan in the central Punjab. The site was a flourishing town from c.2300 BC to some time after 2000 BC, when it was abandoned. Excavations there began in 1920. See also pp.1168-1169.

Harari, people of the city and province of Harar (Harar), in Ethiopia. They differ from other Ethiopians in that their language is Semitic and their literature is written in Arabic. The region produces cereals and coffee.

Harbour seal, also called common seal or spotted seal (*Phoca vitulina*), North American earless seal usually found in coastal waters of Canada and Alaska. Adults have a spotted grey or black coat; pups are born white or grey. Harbour seals come ashore frequently and congregate in herds when they are on land. Length about 1.5m (5ft), weight 116kg (255lb). Family: Phocidae.

Hardecansute (c.1019-42), King of Denmark (1028-42), King of England (1040-42), son of King CANUTE. His claim to the English throne was opposed by his half-brother Harold the Godwinson, who elected king in 1037, died in 1040. Hardecansute was succeeded by his half-brother EDWARD THE CONFESSOR.

Hard-edge painting, style of abstract art in which geometric forms are executed in a sharp, "hard-edged" manner. It developed in New York City in the late 1960s in reaction to ABSTRACT EXPRESSIONISM. Leading hard-edge painters include Al Held, Ellsworth KELLY, Frank STELLA and Barnett NEWMAN.

Harden, Sir Arthur (1866-1940), British biochemist who showed that each stage in the fermentation of sugar is catalyzed by a specific ENZYME and that the essential first step is the attachment of a phosphorus-containing group to the sugar. For this research he shared the 1929 Nobel Prize in chemistry with Hans von EILANDER. He also studied lactic acid enzymes and the conversion of glycogen to lactic acid during muscle activity. His work laid the foundation for the elucidation of the KREBS (citric acid) cycle, which describes the process of sugar metabolism.

Hardie, James Keir (1856-1915), British socialist and a founder of the Labour Party. He organized the Ayrshire miners' union, founded the newspaper *Labour Leader* and was chairman of the INDEPENDENT LABOUR PARTY (1893-1900). 1913-14. He was the first Labour Member of Parliament and for three years (1892-95) was the sole representative of that party in parliament.

Harding, St Stephen. See STEPHEN HARDING (AINT).

Hardness of water, reluctance of water to produce a lather on the addition of soap due to various kinds of dissolved salts (mainly carbonates and sulphates) such as those of calcium and magnesium. These prevent the soap from lathering by giving rise to an insoluble precipitate and also cause incrustations in boilers and pipes. Lather is inhibited until all the dissolved salts are precipitated as scum, which floats on the surface.

Hardness scales, graduated indications of a material's hardness. The several ways of determining such scales are known as the BRINELL, MOHS and ROCKWELL tests, after the metallurgists who developed them.

Hardouin-Mansart, Jules (1646-1708), chief architect to Louis XIV of France from 1674. His major works include the Hall of Mirrors (1678-84), the Orangery (1681-86) and the Grand Triunvirat (1687-88) all at Versailles, and the dome of the Hôtel des Invalides, Paris, (1680-91).

Hurd Times (1854), novel by Charles Dickens describing the de-personalizing effect of the Industrial Revolution. Its memorable characters include the fuel-loving Mr Gradgrind and the self-made Mr Bounderby.

Hardwar, city in N. India, on the River Ganges. Considered one of the seven most sacred pilgrimage centres in the country, it is the scene of the Kumbh Mela, a large bathing festival held every twelfth year. Pop. (1971) 77,940.

Hardwick, Elizabeth ("Bess of") (1518-1608), English gentlewoman who married four times, lastly to George Falholt, Earl of Shrewsbury. She inherited all four of her husbands' estates and is remembered for the many fine buildings she commissioned, Chatsworth House and Hardwick Hall were built on her lands. She was also entrusted with the care of Mary, Queen of Scots.

Hardwick, Philip (1792-1870), British architect of a variety of public and private buildings. His most famous works were Euston Station, with its majestic Greek Doric entrance (Entrance Screen 1835-37, demolished 1962) and Gt. Smith's Hall (1835), both in London.

Hardy, Thomas (1840-1928), British novelist and poet. His novels are set in a fictitious region of Wessex, and include *Far From the Madding Crowd* (1874), *Tess of the d'Urbervilles* (1891) and *Jude the Obscure* (1896). Hardy later concentrated on poetry, in volumes such as *Wessex Poems* (1898). Much of his earlier writing is emotional and tragic and has strong moral undertones.

Hardy, Sir Thomas Masterman (1769-1839), British naval officer. He twice commanded the flagship of NELSON's fleet and was at Nelson's side when he died at Trafalgar. Hardy became First Sea Lord in 1830.

Hare, large member of the herbivorous RABBIT family (Leporidae), widely distributed around the world. Like the rabbit it has long ears and large hind feet, but in contrast true hares (genus *Lepus*) have ears that are longer than their heads, and their young are born with open eyes and a full coat of fur. Length to 76cm (30in), weight to 4.5kg (10lb). Hares include JACK RABBITS and SNOWSHOE RABBITS. See also p.92.

Harbell, flowering plant of the BELLYFLOWER family (Campanulaceae) widespread as a wild flower of pastures and also cultivated in gardens. It has drooping bell-shaped, mid-blue flowers. Species: *Campanula rotundifolia*.

Hare-lip, congenital cleft in the upper lip caused by the failure of the two parts of the palate to unite. Heredity may be a cause, as may metabolic disorders of the mother. Corrective surgery is usually undertaken successfully when a child is two months old. See also CLEFT PALATE (p.111).

Harem, women's quarters in a MUSLIM household. It contained a man's wives, concubines and female servants. The most famous harems were those of the Turkish sultans, which often had several hundred women and were guarded by eunuchs. The harem originated with Semitic cultures, and was adopted by Islam, which required women to be segregated.

Harar (Harar), city in a central Ethiopia. In the 16th century a centre for Islamic studies, it was incorporated into Ethiopia in 1857. It is now an important commercial centre and the market for a region which produces coffee and cereals. Fierce fighting between Ethiopians and Somalis occurred there in 1977. Pop. (1970 est.) 45,000. (1971 est.) 45,000.

Hargeysa, town in N Somalia, E Africa. It was the capital of British Somaliland from 1884 to 1960. It is now the market centre for the surrounding area. Pop. (1963 est.) 40,000.

Hargreaves, Edward Hammond (1816-91), Australian gold-digger. One of the first to discover gold in Australia, his success was in the Bathurst district in New South Wales in 1851. He had been involved in the California gold rush in 1849 and was able to find gold in Australia because of the similarity of landforms.

Hargreaves, James (d 1778), British inventor. He was working as a weaver at Stanhill, Blackburn when in 1764 he invented the spinning jenny, which was able to spin eight threads of cotton at the same time. When in 1768 Blackburn weavers destroyed his machinery and house, he moved to Nottingham and, with Thomas James, built a mill and became one of the first great factory owners. See also p 592.

Harmona. See **HARYANA**.

Harrington, Sir John (1561-1612), English courtier. He wrote many epigrams and poems, translated Aristotle's *Orlando Furioso* in 1591 and wrote *A Short View of the State of Ireland* (1605). He also designed the earliest water closet.

Harless, Edward. See **HARLES TRIEST**.

Harlem, residential area of Manhattan, New York City, USA. It was a fashionable 19th-century community, and an influx of blacks c 1915-20 made it one of the largest black settlements in the USA and a political and cultural focus. The Center for Research in Black Culture is located there, next to the Countee Cullen branch library, which has been a meeting place for black writers since the 1920s.

Harlequin, name derived from the character Arlecchino of the *COMEDIA DELL'ARTE* who was a quick-witted, unscrupulous serving man. A harlequin nowadays appears in pantomime and comedy as a male jester dressed in multi-coloured tights.

Harlequinade, essential 18th-century element in the development of PANTOMIME. A mixture of dance music and mime it featured characters from the *COMEDIA DELL'ARTE*. But Pantomime's comic involvement, as developed by clowns such as CRIMINALI, overwhelmed the strictly romantic elements, and the harlequinade slowly declined as the 19th century progressed.

Harley, Robert, 1st Earl of Oxford (1661-1724), British politician. He was a Tory MP (1688-1711) and Speaker of the House of Commons (1701-05). In 1710 he became the leading minister of Queen Anne, but was unable to form a lasting government. He was appointed Lord High Treasurer in 1711, but dismissed from office in 1714.

Harley Davidson, US motor cycle manufacturer, one of the pioneers in the development of the motor cycle. The characteristic V-twin cylinder engine was first produced in 1909. The Harley Davidson WLA and WLC motor cycles, produced in 1945 for the Canadian Government, have a fine reputation for reliability. See also p 490.

Harlow, Jean (1911-37), US film actress who became known as the 'blonde bombshell'. An almost legendary figure of Hollywood in the 1930s, she is now considered one of its most tragic victims. Her first major role was in *Hell's Angels* (1930), after which she made more than 20 films in six years until her untimely death from kidney failure in 1937 during the filming of *Saratoga*.

Harmonica, or **mouth organ**, musical instrument consisting of a metal cassette containing free metal reeds tuned to diatonic or chromatic scale. The reeds are vibrated as the player blows or inhales through slots along one edge of the cassette: on blowing, notes of the home key chord are produced; on inhaling, other notes. It was invented c 1820 and is regarded as a novelty instrument despite being difficult to play expertly.

Harmonic motion, periodic motion, such as that of a pendulum, atomic vibrations or an oscillating electrical circuit. SIMPLE

HARMONIC MOTION is governed by a restoring force (F) proportional to the displacement (x) of the vibrating particle from its equilibrium point $F = -kx$, where k , called the spring constant, determines the strength of the restoring force. The above equation pervades all branches of physics. See also pp 828-829.

Harmonic progression, sequence of the form $\frac{1}{a}, \frac{1}{b}, \frac{1}{c}, \dots$, where a, b, c , etc. form an ARITHMETIC PROGRESSION. The simplest is formed by the reciprocals of the positive integers $1, 2, 3, 4, \dots$. Strings with lengths proportional to these terms (and with identical diameter and tension) vibrate with harmonic musical tones.

Harmonics, in acoustics, additional notes whose frequencies are multiples of a basic (fundamental) note. When a violin string is plucked or a drumskin tapped, the sounds emitted correspond to vibrations of the string or skin. The loudest sound (note) corresponds to the fundamental mode of vibration. But other, weaker notes, corresponding to subsidiary vibrations, also sound at the same time. Together these notes make up a harmonic series.

Harmonium, keyboard instrument that produces notes when air propelled by a pedal-operated bellows vibrates metal reeds. It is equipped with stops to vary the tone and sometimes levers to control volume. The harmonium was developed in France about 1840, by Alexander Dohun.

Harmony, in music, structure of chords and the relationships existing between them. The DIATONIC scale (from one C to the next on a piano, for example) is the basis of chord construction, and a harmonic progression from one chord to the next is defined by the key. The tonic, dominant and subdominant chords are the primary chords of a key (eg, C, G and F chords in the key of C) and composers, especially of the 18th and 19th centuries, followed specific rules of harmony. In some 20th-century work, harmony is more a matter of musical suitability than of following accepted formulas. See also p 1754.

Harness racing, sport popular in the USA, Australia and New Zealand and increasingly so in Britain. Horses race around an oval circuit and draw a two-wheeled sulky that holds the driver. The horses are classified according to gait: trotters are diagonally gaited and pacers laterally gaited. The distance raced is 1.6 km (1 mile) or more, and the horses begin from either a standing or moving start. There are various classes of race, usually dependent on speed. A tote-betting system pays on first, second and third place, and sometimes on combinations. Harness racing, also known as trotting, began in the USA in the 1830s and was popular in New Zealand and Australia a century later. Famous US races include the Hambletonian and the Roosevelt International Trot. The Inter Dominion Championship is a high light of the trotting calendar in New Zealand and Australia.

Harney, Bill (1895-1962), Australian author and amateur anthropologist. He was adviser to many anthropological expeditions and during WWII was Government Protector of Aborigines. His books include *Taboo* (1943), *North of the Twenty-third* (1946) and *Life Among the Aborigines* (1957).

Harold I, or **Harold the Godwinson** (d 1040), Danish king of the English from 1035 to 1040. He was the illegitimate son of CANUTE. He failed to establish his authority over the Anglo-Saxons, and his reign was one of continual civil strife.

Harold II (c 1022-66), last king of Anglo-Saxon England. He was the son of Godwin, Earl of Wessex and, after King EDWARD THE CONFESSOR, the most powerful man in the kingdom. When Edward died in 1066 he became king, but he was slain in the same year at the Battle of HASTINGS.

Harold, sometimes spelled Harald, the name of four Norwegian Kings. Harold I consolidated his rule by deposing rival chiefs, a process probably completed in the 880s. His harsh taxes led many to emigrate to the British Isles and perhaps Ice-

land. He abdicated in favour of his son Eric Bloodaxe, who was succeeded by his brother HAARON I. Harold II (c 930-970) with the aid of his uncle the Danish King Harold Bluetooth, overthrew and killed Haakon I, c 961. A harsh ruler, he forbade pagan worship. Harold III (1015-66), HARALD HARDRADE, served the Byzantines. From 1047 to 1064 he tried to conquer Denmark, he died while aiding Earl Rognar in his effort to conquer England in 1066. Harold IV (1103-36) reigned for six years until his death. He feuded with fellow King MAGNUS IV. After capturing and blinding Magnus, he became sole ruler in 1135 but was killed by Sigurd Stenbi, a pretender to the throne.

Harp, ancient musical instrument consisting of a frame over which strings are stretched and plucked by hand. Variations have been found in civilizations as diverse as Egyptian, Greek and Celtic. A modern orchestral harp has a large triangular frame that carries 46 strings tuned diatonically, with certain strings coloured for quick identification. Seven pedals alter the home key by half a tone each (thus covering the diatonic range) by means of a double-action mechanism perfected by Sébastien Érard in 1810.

Harpies, in Greek mythology, storm goddesses generally depicted by later writers as loathsome creatures with hag faces and the bodies, wings and talons of birds. Their ravages spread disease and famine and they were foul-smelling. The ARGONAUTS escaped their clutches, and several other heroes battled against them.

Harpignies, Henri Joseph (1819-1916), French painter and graphic artist. Greatly influenced by COROT, he is best known for his poetic watercolour paintings of various regions of France and Italy.

Harpoon, weapon, usually a barbed spear attached to a strong line, used for hunting fish and whales. It has a flat triangular sharpened head, sometimes detachable from the shaft. The harpoon may be hurled by hand or fired from a gun; the head of a modern whaling harpoon carries an explosive charge.

Harp seal, North American seal that ranges widely over the Arctic seas, with the largest herds found off the west coast of Greenland and the E Arctic Ocean. To whelp, they migrate to Labrador and the Gulf of St Lawrence. Adults are silver with black harp-shaped marks on their backs; pups are pure white. Species *Pagophilus groenlandicus*. Length to 1m (3 3/4 ft).

Harpischord, keyboard musical instrument, often ornately decorated, resembling a small grand piano. Its metal strings are mechanically plucked by quill plectrums (not struck by hammers). Unlike the piano, its volume can barely be regulated, although stops may be used to bring extra strings into use. Historic instruments may have had two or, rarely, three keyboards. The harpischord was the principal keyboard instrument 1400-1750 but was later replaced by the piano. Harpischord playing has been revived in this century, especially through the mastery of Wanda Landowska. George Malteff and Rosalyn Tureck.

Harpur, Charles (1813-68), Australian poet. He used a variety of poetic forms and was the first to versify truly Australian topics. A collection of his work, *Poems of Charles Harpur* (1883), was published by his widow.

Harpy eagle, any of four species of EAGLES of tropical rain forests in New Guinea, the Philippines and South America. Included are the monkey-eating eagle (*Pitheco-phaga (Pitheco-phaga) jefferyi*) of the Philippines and the harpy (*Harpy harpyia*) of South America that feeds on capuchin monkeys. Family Accipitridae.

Harrier, diurnal bird of prey with an owl-like face. It frequents pastures and grasslands where it swoops on small mammals. It has a small bill, long wings, legs and tail and may be grey, black or brown with a white rump. Length 38-50cm (15-20in). Family Accipitridae, genus *Circus*.

Harrier, pack hunting dog of the HOUND group. Used for hare hunting, it can be fol-

Harpies, regarded as two or three in number, administered the vengeance of the gods.

Henri Joseph Harpignies, a detail from one of his pastoral scenes, painted in 1883.

Harpischord, developed in the late 1300s, was most popular between 1500 and 1700.

Harrier, dog thought to have developed from a cross between a hound and a greyhound.

Harriman, William Averell

Reg Harris, sprint cyclist of the 1950s, with his Sportsman of the Year trophy in 1951

Harvard, the main gateway of the USA's oldest institution of higher education

Harvestman, insect popularly known in the UK and USA as a 'saddy long egg'

William Harvey showed how the heart pumps the blood continuously around the body

lowed on foot. A smaller version of the FOXHOUND it has a medium-sized head with a pronounced forehead, flat, thin ears, a muscular body, and straight well-boned legs. Standard height 46-48cm (18-19in) at the shoulder, weight approx 18kg (40lb).

Harriman, William Averell (1891-), US political leader and diplomat. After a financial career, he went into public life and served under various presidents from Franklin D. Roosevelt to Lyndon Johnson. His most distinguished work was as ambassador to the USSR during WW2 (1943-46) and to Britain (1946). In 1956 he was an unsuccessful candidate for the Democratic presidential nomination.

Harris, Sir Arthur Traversa (1892-), British air marshal. He flew with the Royal Flying Corps during WW1, from 1919-41 he was an air vice marshal and from 1942 Commander-in-Chief of Bomber Command. He instigated a policy of mass bombing raids.

Harris, Frank (1856-1931), British-American writer, b. Ire and At 15 he emigrated to the USA where he attended the University of Kansas. He is best remembered for his scandalously frank but unreliable autobiography *My Life and Loves*, which appeared in five volumes (1923-27) and was for many years banned in England and the USA.

Harris, Howell (1714-63), Welsh revivalist preacher who, with Daniel Rowlands founded Welsh Calvinistic Methodism. After a disagreement with Rowlands (1751) he organized his congregation into a communal settlement at Trevecka.

Harris, Joel Chandler (1888-1984), American author known for his retellings of folk-tales of the American Negroes known as the *Uncle Remus* stories. The character of Brer Rabbit is perhaps the most memorable. Harris's first collection was *Uncle Remus: His Songs and His Sayings* (1880), followed by *Nights with Uncle Remus* (1883) and *Uncle Remus and His Friends* (1892).

Harris, Reg (1920-), British track cyclist who set long-standing world records and won five world sprint titles as an amateur in 1947, and as a professional in 1949, 1950, 1951, 1954. In 1948, despite a broken arm, he won two Olympic silver medals (1,000m sprint, 2,000m tandem).

Harris, Richard (1932-), leading Irish actor whose stage debut was in Brendan Behan's *The Quare Fellow* (1957). He gave a notable performance in J.P. Donleavy's *The Ginger Man* (1959) and then virtually abandoned the theatre for the cinema, appearing in *Mulvey on the Bounty* (1962), *This Sporting Life* (1963), *Camelot* (1967), *Cromwell* (1970), *A Man Called Horse* (1970) and many others.

Harris, Roy Ellsworth (1896-), US composer. He was a pupil of Nadia Boulanger. His works include seven symphonies, among them *Symphony for Voices* (1936) and the *Folk Song Symphony* (1940), a piano quintet (1936) and the *Cumberland Concerto* (1951).

Harris, s part of Lewis and Harris in the Western Isles, NW Scotland. The main occupations are crofting, fishing and stock raising, although the main shopping and residential area is Stornoway (Lewis) which is also the centre of the Harris Tweed industry. Gaelic is the predominant language. Area 505sq km (195sq miles). Pop. (1971) 2,963.

Harrison, James (1816-93), Australian journalist and inventor in 1851 of the first large practical refrigerator. He recognized the potential of meat exporting for the economy of Australia, which greatly benefited from the introduction of refrigerated ships. See also p.602.

Harrison, John (1693-1776), British horologist (watch or clock maker) who, in 1753, made a marine chronometer for which he was awarded a Government-sponsored prize of £20,000. The timepiece was tested for accuracy on two sea voyages to Jamaica. See also p.453.

Harrison, Rex Carey (1908-), British actor who appeared on the stage from 1924 and in films from 1929, both in London and the USA. Probably his best known

role was as Prof. Higgins in *My Fair Lady* on Broadway (1956), in London (1958) and in the film (1964), for which he received an Academy Award.

Harrison, Richard Berry (1864-1935), US actor. The grandson of escaped slaves, he made his professional debut in Canada and from 1930 played "De Lawd" in *Green Pastures* for 1,659 consecutive performances.

Harrrogate, county district in s North Yorkshire, England, created in 1974 under the Local Government Act (1972). Pop. (1974 est.) 134,300.

Harrow School, public school that originated in the 14th century, in Middlesex, England. Its charter was granted in 1571 and after a bequest from John Lyon, a local landowner, the present school buildings were begun in the early 17th century.

Hart, Basil Henry Liddell. See (MODEL) HART BASIL HENRY.

Hart, Doris (1925-), American tennis player who overcame a crippling illness to win six singles (Australian 1949, French 1950, 1952, Wimbledon 1951, USA 1954, 1955) and 29 doubles titles in the four major world championships. Although physically frail, she was a perfect stylist. She became a professional in 1955.

Harte, Francis Bret (1836-1902), US author. In 1868 he became editor of *Overland Monthly* and in 1870 published his most famous work, *The Luck of Roaring Camp and Other Sketches*.

Hartebeest, large ANTELOPE native to African grasslands of the Sahara Desert. Both sexes are light to dark brown and have lyre-shaped horns unted at the base and rising sharply from the forehead. Length up to 200cm (79in), height to 150cm (59in), weight up to 180kg (397lb). Family Bovidae.

Hartford, capital city and port of entry in central Connecticut, USA, on the Connecticut River. Known as the 'insurance capital of the world' more than 250 companies have their headquarters there. Manufactures include precision instruments and electrical equipment. Pop. (1970) 58,017.

Hartford Wits, The. See CONNECTICUT WITS.

Hartlepool, county borough in NE England. In 1974 it became part of the new county of Cleveland. A seaport, it exports coal and imports timber. Other industries include shipbuilding and marine engineering. Pop. (1971) 96,898.

Hartley, Lesley Poles "L.P." (1899-1972), British novelist. Her works include the trilogy *The Shrimp and the Anemone* (1944), *The Sixth Heaven* (1946) and *Eustace and Hilda* (1947), an account of a sibling relationship from childhood to adulthood. He also wrote *The Go-Between* (1953).

Hartline, Haldan Keffer (1903-), US neurophysiologist who shared the 1967 Nobel Prize in physiology and medicine with George Wald and Ragnar Granit for their contributions to an understanding of vision. Hartline studied the compound eye of the horseshoe crab and determined the effects of brightness on the eye.

Hartmann, Karl Robert Edward von (1842-1906), German philosopher. His *The Philosophy of the Unconscious* appeared in 1870 and postulates a system by which the human unconscious evolves through two stages before reaching the highest stage, where reason prevails. He was much influenced by Hegel and W. HOFFENHAUER.

Hartmann, Nicolai (1882-1950), German IDEALIST philosopher whose theories were influential in early 20th-century philosophy. Influenced by Plato and Immanuel Kant, he finally rejected Kantian ideas in his book *New Ways of Ontology* (1942) which proposed that existence is an essential prerequisite for knowledge, a reversal of Kant's idea. He also considered reality to be meaningless, forcing people to live in a world irrelevant to human desires.

Hartono, Rudi (1949-), Indonesian badminton player who won the All-England singles title for an unprecedented seven successive years 1968-74, lost the 1975 final, and in 1976 took the title for a record eighth time.

Hartung, Hans (1904-), French painter of German origin. He developed a truly abstract style using ink blots and calligraphic pen strokes, often with strong colour to unite the effect.

Harty, Sir Hamilton (1879-1941), Irish conductor, arranger and composer. He was conductor of the Halle Orchestra in Manchester, England, from 1920 to 1933 and was well known for his performances of works of the Romantic composers.

Harun ar-Rashid (c 764-809), the most famous of all the ABASSID caliphs. His brilliant reign has been given added lustre by the role given him in the stories of the *Thousand and One Nights*. He is known to have had diplomatic relations with CHARLEMAGNE and to have waged successful wars against the BYZANTINE empire. See also p.1283.

Harunobu, Suzuki (1724-70), Japanese printmaker. He was the first artist to print in a wide range of colours, beginning with the multi-colour calendar prints made from woodcuts in 1765.

Harvard University, oldest US college founded in 1636 by John Harvard at Cambridge, Massachusetts. Originally intended for the instruction of Puritan ministers, this religious restriction declined in the 18th century as more liberal subjects were introduced.

Harvestman, ARACHNID found worldwide with legs that may be several times its body length. There is little narrowing between head and abdomen. It feeds on dead or living insects and plant juices. Body length 2.5-13mm (0.1-0.5in). Family Phalangidae. See also pp.33-34.

Harvest mite, any of several species of ARACHNIDS whose larvae are ectoparasites on human beings and animals. Infestation usually results in local dermatitis and severe itching. The animal's mouth parts are borne on a 'false head'. Length 1mm (0.04in). See also p.34.

Harvey, Robert Neil (1928-), Australian cricketer. A stylish left-hand batsman and a superb fielder, he played in 79 Test matches between 1946 and 1963 (6,149 runs, average 48.41), the most by an Australian. He represented Victoria and New South Wales and in the 1970s became an Australian selector.

Harvey, William (1578-1657), English physician and anatomist who discovered the circulation of the blood. This landmark in medical history marked the beginning of modern physiology. His findings, published (1628) in *De Motu Cordis et Sanguinis (On the Motions of the Heart and Blood)*, were ridiculed at first and only later generally accepted. Harvey also made important studies in EMBRYOLOGY. See also p.1437.

Harwell, research and development centre of the United Kingdom Atomic Energy Authority, situated close to the village of Harwell in Berkshire.

Haryana, state in N central India. Chandigarh, the capital, is a Union territory and shares its facilities between Haryana and the Punjab. Although there is some agriculture, the land is generally dry and barren. Wheat production is most important. Area 44,222sq km (17,074sq miles). Pop. (1971) 10,036,808.

Hary Janos (1926), ballad opera by Zoltan Kodaly, based on Hungarian legend and first performed in Budapest. An orchestral suite drawn from the opera has become well known.

Harz Mountains, mountain range on the border of East and West Germany extending about 96km (60 miles) between the Elbe and Leine rivers. It is a resort and mining area. The highest peak is Brocken, 1,142m (3,747ft).

Hasdrubal, name of two Carthaginian generals. The elder (d.221 BC) expanded Carthaginian power and founded Cartagena. The younger (d.207 BC) was the son of HANNIBAL BARCA and the brother of HANNIBAL. He took command in Spain when Hannibal marched into Italy. Defeated by Publius Cornelius Scipio in 208, he crossed the Alps to join Hannibal but was forced to withdraw to the Metaurus valley in 207, where he was defeated and killed. See also p.1225.

Hasek, Jaroslav (1883-1923), Czech satirical novelist and short story writer, author of the best-selling novel *The Good Soldier Schweik* (four volumes of which were completed by his death). Schweik is an ambivalent character, variously interpreted as a Czech patriot making fun of his Austrian rulers and as the little man struggling against bureaucracy.

Hashish, resin obtained from the flowering tops of the hemp plant, *Cannabis sativa*, and used as a psychotropic drug. Its effects vary from user to user, but usually when smoked or eaten it induces heady sensations and often a feeling of carefree detachment. It is not markedly hallucinogenic, nor has it ever proved to be addictive. The legal penalties following discovery of its use are connected with drug smuggling and with the supposition that its use can lead to addiction to heroin and other hard drugs. See also MARIJUANA, p.1081.

Hashman, Judy, née Devlin (1935-), American badminton player. Without equal in the women's game, she won ten All England singles (1954, 1957, 1958, 1960, 64, 1966, 1967) and 7 doubles, 12 mixed singles (1954, 1956, 63, 1965, 67), 10 doubles and 6 mixed doubles. She was in the winning U.S. Uber Cup team in 1957.

Hasidism, popular pietist movement within Judaism founded by Israel Baal Shem-Tov (c.1699-c.1761). It taught the ability of all men to reach God and its followers have been known for tolerance and glorification of the founder. The movement, centred in Eastern Europe until war, strongly supports Orthodox Judaism. Its main centres are now in Israel, and the *Hasidim*. **Haskell, Arnold Lionel** (1903-), British writer on ballet. In 1935 he was a ballet critic with the *Daily Telegraph* newspaper and subsequently editor of *The Ballet Annual* (1947-63). His writings, which include *Balletomania* (1934) and *Dancing Round the World* (1937), have done much to popularize the art of dance.

Hassan II (1929-), King of Morocco (1961-), son and successor of MOHAMMED V. He dissolved the National Assembly in 1965, assuming all executive and legislative powers, but in 1970 provided a new constitution by referendum. He eliminated foreign ownership of business in 1973, and in 1975 made claims to much of the Spanish Sahara after organizing a march across its border.

Hassan al-Bakr, General Ahmad (1914-), Iraqi military and political figure. After serving as a colonel in ww, he played a key part in the overthrow and execution in 1963 of Gen. Abdul Karim KASSIM, president since 1958. He became Prime Minister under Col. Abdul Salem Arif but was dismissed in 1964 because of Baathist sympathies. The coup of 1968 gave Hassan al-Bakr the presidency and put the Baathists back in office; he was succeeded in July 1979.

Hassel, Odd (1897-), Norwegian chemist who shared the 1969 Nobel prize in chemistry with Derek BARTON for his work on conformational analysis, the study of the three-dimensional structures of molecules. In 1930 he began research on aromatic organic compounds and discovered the two stereo isomers of cyclohexane.

Hassett, Lindsay (1913-), Australian cricketer. A compact, balanced batsman from Victoria, he played in 43 Test matches between 1938 and 1953 (3,073 runs, average 48.56), 24 times as captain. He scored 59 first-class centuries, second only to Don BRADMAN among Australian batsmen.

Hastings, Francis Rawdon-Hastings, 1st Marquess of (1754-1826), British soldier, politician and colonial administrator. He fought in the American Revolution, worked actively for the House of Lords and later (1813-23), when governor of Bengal, greatly expanded British control of India. In 1819 he gained Singapore by purchase for Britain.

Hastings, Warren (1732-1818), British colonial administrator, first governor-general (1772-85) of Bengal (British India). He fought at the battle of Plassey with CLIVE (1757), was governor of Fort William and reorganized the revenue col-

lection system. Pitt's India Act of 1784 caused Hastings to resign and return home. In 1786 impeachment proceedings began for corruption in his Indian administration. But after a seven-year trial he was acquitted. See also p.1493.

Hastings, city in Hawkes Bay province, New Zealand, on Heretaunga Plains on the North Island's east coast. It is a sheep farming and manufacturing centre. Pop. (1972 est.) 30,601.

Hastings, Battle of (1066), battle fought near Hastings, Sussex, between King HAROLD of England and a claimant to his throne, WILLIAM, Duke of Normandy (WILLIAM I, THE CONQUEROR). Harold's defeat and death in battle led to the establishment of the Norman dynasty in Britain. See also pp.1301, 1302.

Hatchet fish, marine fish found in deep temperate and tropical seas. Its body is silvery and there are light emitting organs along the underside of its deep, muscular abdomen. Length 19cm (4in). Family Stenopterygiidae (for Characidae). See also pp.149, 32.

Hathaway, Anne (1555-1623), wife of William SHAKESPEARE. She was born in Stratford-upon-Avon, Warwickshire. She was married in 1582 and had three children. See also pp.1418, 1419.

Hathor, ancient Egyptian goddess of love and happiness, music and dance, depicted as a cow or with the horns of a cow. A personification of the sky, she was thought to appear at the bedside of a newborn child to determine his fate.

Hathor, powerful and well-travelled Queen of Egypt (c.1494-1482 BC). Daughter of THOTMES I, she married her half-brother THOTMES II, ruled through him, and when he died ruled as regent for his son THOTMES III. She may have been the biblical Queen of Sheba.

Hattin, Battle of (1187), engagement in which the Christian troops of Guy de Lusignan, King of Jerusalem, were defeated by a Muslim army under SALADIN. This defeat, which led to the Muslim reconquest of Jerusalem, Antioch and Tripoli, forced Europe to consider mounting a third crusade.

Hatton, Sir Christopher (1540-91), Lord Chancellor of England. A favourite of ELIZABETH I, he was a leading royal spokesman in the Commons after his election in 1571. He was Chancellor from 1587 to 1591 and prominent in the trials of Catholic plotters against the Queen.

Hauhauius, Christian sect set up by Te Ua Haumene in New Zealand in 1862. He claimed the Maori to be a lost tribe of Israel. The sect expressed anti-European feeling.

Hauptmann, Gerhart (1862-1946), German dramatist, poet and novelist. His play *Vor Sonnenaufgang* (1889, *Before Dawn*, 1909) was received with great excitement and marked the birth of German naturalist drama. *Die Weber* (1892, *The Weavers*, 1961) portrayed the human misery of the industrial age. He was awarded the 1912 Nobel prize for literature. He is chiefly remembered for his earthy realistic scenes, rather than for the grim fantasy which pervaded several of his works.

Hausa, Negroid people of Islamic culture inhabiting NW Nigeria and S Niger. Hausa society is basically feudal and is traditionally based on patrilineal descent. Its language is a member of the Chad group of Afro-Asiatic languages, it is the official language of Nigeria and a major trading language of W Africa. Hausa crafts, especially weaving, leatherwork and silver-smithing, are important aspects of an extensive trade network.

Hausmann, Georges-Eugene, Baron (1809-91), French town planner. He was responsible for the rebuilding of Paris (1851-68) under NAPOLEON III. He planned the broad straight boulevards visible today, said to have been built to enable troops more easily to quell any civil disturbances. See also p.1587.

Hauy, Rene Just (1743-1822), French geologist and mineralogist, regarded as the father of CRYSTALLOGRAPHY. He defined the five mineral classes, and formulated the laws governing the struc-

ture of crystals. See also pp.256, 257.

Havana (La Habana), capital city on the SW coast of Cuba, 145km (90 miles) SSW of Key West, Florida. The settlement was moved to its present site in 1519 and Havana has remained a strategically and commercially important centre in the Caribbean. Its present industries include oil refining and steel. Pop. (1974 est.) 1,838,000.

Havana brown cat, domestic short-haired cat breed with distinctive pink pads on the feet. It has a long head, large ears, oval chartreuse eyes and a medium-sized body. The tobacco-brown coat is smooth and glossy.

Havilland, Sir Geoffrey de. See DE HAVILLAND, SIR GEOFFREY.

Havířov, city in Czechoslovakia, SE of Ostrava, near the Polish border. Founded in the 15th c., it is now part of the Ostrava-Karvina industrial complex and an important mining centre. Pop. (1970 est.) 182,200.

Hawaii, state of the USA, in the Pacific Ocean, 3,163km (2,000 miles) WSW of San Francisco, California. Hawaii consists of eight large and 124 small volcanic islands, many of which are uninhabited. The economy is based on valley agriculture and there is an extensive tourist trade. There is an important US naval base at Pearl Harbor. The islands were annexed by the USA in 1898, became a territory in 1900 and were admitted to the Union in 1959. The capital is Honolulu. Area, 16,705sq km (6,450sq miles). Pop. (1975 est.) 865,000. See also p.2161.

Hawfinch, largest European finch, nesting in mixed and deciduous woods in temperate regions. Distinguished by its large bill with which it cracks nuts and fruit stones, it has mostly chestnut plumage with black and white patches. Length 18cm (7in). Species *Coccothraustes c. cathartes*. See also p.76.

Haw-Haw, Lord. See JOYCE, WILLIAM.

Hawk, any of several species of diurnal birds of prey found in temperate and tropical climates. They have short hooked bills for tearing meat and strong claws for killing and carrying their prey. The females are larger than the males. Hawks have red, brown, grey or white plumage with streaks and bars on the wings. They lay three to five eggs in a sturdy twig-and-stick nest high in a tree. The young, or hawklets, are blind and helpless, and are fed by the parents for six weeks. Length 28-66 cm (11-26in). Order Falconiformes; genera *Accipiter* and *Buteo*. See also p.315.

Hawke Bay, inlet of the South Pacific Ocean on the E central coast of North Island, New Zealand. The coastal provincial district of Hawke's Bay is a fertile region producing fruit and vegetables. Its chief city is Napier, on the SW coast of the inlet.

Hawke of Towton, Edward Hawke, 1st Baron (1705-81), British admiral. Distinguished service off Toulon in 1744 and in the English Channel in 1747 earned Hawke rapid promotion. His greatest victory, at QUILLON BAY in 1759, saved Britain from the threat of a French invasion.

Hawkins, Coleman (1904-69), US jazz saxophonist. He made his recording debut in 1923 with Fletcher HENDERSON and greatly extended the scope of the improviser by basing his solos on the arpeggios of the chords of a melody rather than on the notes of the melody itself. From 1934-39 he lived in Europe where he recorded with Django REINHARDT.

Hawkins, Jack (1910-73), British actor. He made many stage appearances after his debut in 1924 in Shaw's *St Joan*. After 1932 he appeared in films such as *The Good Companions* (1935), *The Cruel Sea* (1952), *The Bridge on the River Kwai* (1957) and *Lawrence of Arabia* (1962). After recovering from an operation for cancer of the larynx in 1966, he learnt to speak again, but his subsequent minor film appearances were dubbed.

Hawkins, or Hawkyns, Sir John (1532-95), English naval commander. With the support of Queen Elizabeth I, he led two lucrative expeditions to Africa and the West Indies (1562-63, 1564-65), but on

Hatchet fish possess luminous organs that supply light in their dark habitat.

Gerhart Hauptmann: his plays portray man as obliged to act according to his basic drives.

Havana: the cathedral of the Holy Spirit, Church built in 1746 and rebuilt in 1792.

Hawk's extremely keen eyesight enables it to locate its prey from a great height.

Hawkins, Sir Richard

Joseph Haydn's combination of instruments became the basis of the modern orchestra

William Hazlitt's 'personal' essays, *Table Talk*, were published in two volumes

Headhunting, the lips are sewn together to prevent evil spirits escaping

Hearing aids, are now made small enough to be completely hidden from sight

his third expedition (1567-69) the Spaniards destroyed most of his ships. He was prominent in plans to improve the navy, both in administration and in the design of its ships, and played an important role in the defeat of the Spanish ARMADA (1588). See also p 1612

Hawkins, Sir Richard (c 1560-1622) English seaman, son of Sir John Hawkins. In 1593 he attempted to circumnavigate the globe, but off the coast of Peru he was captured by Spanish warships and was sent to Spain, where he remained prisoner until 1602

Hawkmoth, or sphinx moth, or hummingbird moth, medium-to-large moth characterized by narrow wings, a spindle-shaped body and a long sucking-tube coiled beneath its head. Strong flyers, hawk moths usually feed at dusk, hovering over flowers and sucking nectar through the extended tube. Their larvae - large smooth-skinned caterpillars - are called hornworms because of a hornlike protrusion on the posterior segment. Family Sphingidae. See also p 47

Hawks, Howard (1896-1977), US film director. Famous chiefly for his action dramas and deft comedies, he made more than 40 films in a career spanning the whole history of film-making and employing almost all the stars of Hollywood's heyday. These films include *Bringing Up Baby* (1938), *Sergeant York* (1941), *The Big Sleep* (1946) and *Rio Lobo* (1970)

Hawksbill, or tortoise-shell, turtle, carnivorous marine turtle found in tropical seas. It has overlapping plates on its carapace, and is prized for its brown and-yellow horny plates. Length to 55cm (22in). Family Cheloniidae, species *Eretmochelys imbricata*. See also p 70

Hawke, Francis, (died c 1713), English experimental physicist and student of Robert Boyle. Hawke was responsible for the double-cylindrical air-pump with which he showed that air glows at low pressure when excited by an electric discharge. Hawke also demonstrated that the transmission of sound through air was dependent on pressure

Hawkesmoor, Nicholas (c 1661-1736), English baroque architect who started as an assistant to WREN. He also assisted VANBRUGH at Castle Howard and Blenheim Palace. His own buildings - all extremely innovative in his use of towers, steeples, niches and porches for the most exciting effects - are close to Italian Baroque, which he never saw. Among them are the Clarendon Building and Queen's College at Oxford and six outstanding London churches, including St Mary Woolnoth, St Anne, Limehouse, and St George-in-the-East. He also built, in Gothic style, the two w towers of Westminster Abbey

Hawkewood, creeping perennial plant with a rosette of hairy leaves at ground level. In late summer a leafless stem grows out of the rosette and bears yellow to red flower heads that resemble dandelions. Height up to 30 cm (12in). Family Compositae

Haworth, Sir Walter Norman (1883-1950), British organic chemist and Fellow of the Royal Society. Educated at Manchester and Göttingen, he held academic posts in London, St Andrews and Newcastle and was Director of chemistry at Birmingham from 1925-48. He determined the constitution of vitamin C and various carbohydrates, sharing the 1937 Nobel Prize for chemistry with O. PAUL KARRER for this work

Hawthorne, any of more than 1,000 species of shrubs and trees of the rose family growing in temperate parts of the world. Their flowers are white or pink, and their berries, shaped like tiny red, black or blue apples, are borne in clusters. Genus *Crataegus*. See also p 373

Hawthorne, Mike (1929-59), British motor racing driver. He won the world drivers' championship in a Ferrari in 1958, having finished third in 1954. In 1955, driving a Jaguar, he won the Le Mans 24-hour race

Hawthorne, Nathaniel (1804-64), US novelist and short story writer. Like Edgar Allan Poe, he was a leader in the development of the American short story. His early work received little acclaim but his

reputation was made with the publication of *The Scarlet Letter* (1850), a tale of sin and redemption through suffering. Among his other popular works are *The House of Seven Gables* (1851), a novel and *The Snow Image and Other Thrice-Told Tales* (1851). See also p 1772

Hay, Will (1888-1949), British character comedian who after many years in music hall became a film actor. On screen he portrayed a cheerful incompetent. His films included *Those Were The Days* (1934), *Oh Mr Porter* (1937), *Ask A Policeman* (1938), *The Ghost Of St Michael's* (1941) and *My Learned Friend* (1943)

Haydn, Franz Joseph (1732-1809), Austrian composer. One of the greatest composers of the Classical period, he served from 1761 to 1790 as musical director for the wealthy Esterházy family and composed many of his best works during these years. Later he twice visited England, composing the last 12 of his 104 symphonies for concerts there. Haydn brought the sonata form to masterful fruition in these symphonies, which included the *Military*, the *Clock* and the *London*. One of the most prolific of all composers, he also wrote many songs, string quartets, masses, chamber works, concertos and choral works, the most famous of the latter being the oratorios *The Creation* (1798) and *The Seasons* (1801). He influenced and was in turn influenced by his friend MOZART. See also p 1485

Haydon, Benjamin Robert (1786-1846), English historical painter and writer. His most valuable writing, *Autobiography and Memoirs* (1853), provides important information about notable artists and politicians of the period. His paintings were greatly influenced by the Italian masters, and were executed on a grand scale

Hayek, Friedrich August von (1889-), British economist, b Vienna. He was professor of economic science, London (1931-50), of social and moral science, Chicago (1950-62) and of economics, Freiburg (1962-69). He has written many books on law, economics and philosophy. In 1974 he won the Nobel Prize in economics

Hayes, Evelyn. See BETHELL, MARY

Hayes, Helen (1900-), US actress. She made her stage debut in New York in 1908, but is more famous for her film roles. In 1932 she won an Academy Award for her part in *The Sin of Madelon Claudet*

Hay fever, seasonal ALLERGY induced by grass pollens (fertilizing dust-like particles in flowers). Its symptoms include asthma, itching of the nose, pharynx and eyes which can develop abruptly, followed by sneezing and watery discharge from the nose and eyes. Headache and coughing may also accompany attacks. The symptoms can often be controlled with ANTIHISTAMINES. See also pp 447, 449

Haynes, Johnny (1914-), British footballer who became England's first £100-a-week player. An inside-forward of immaculate passing skills, he spent his entire career (1952-70) with Fulham, winning 56 England caps (1954-62). 21 as captain

Hazel, any of about 15 bushes or small trees of the birch family, native to temperate regions of Europe, Asia and America. The leaves are large, oval and serrated. There are separate male and female flowers. The fruit is a hazelnut, also called cobnut or filbert. Family Betulaceae. See also p 382

Hazlitt, William (1778-1830), British writer and critic. He wrote for several periodicals, including the *Edinburgh Review*, and was a political reporter for *The Morning Chronicle*, but he is best known for his essays, particularly those in literary criticism as in *A View of the English Stage* (1818). His most famous collections of essays are *Table Talk, or Original Essays on Men and Manners* (1821-22) and *The Plain Speaker* (1826)

Head, in anatomy, that part of the animal body that contains the brain together with sense organs such as eyes and ears. In all

vertebrates and in many invertebrates, the organs of smell and taste, and the mouth are also located in the head. Positionally the head is anterior, or at the leading end of the body

Headache, one of the most frequent discomforts suffered by human beings. It may be caused by disease, emotional disorder or distress, pressure on cranial nerves, or by the dilation or contraction of certain blood vessels. The most frequent causes of minor short-duration headaches are daily tensions and fatigue. MIGRAINE is an intense form of headache, usually lasting several hours

Headhunting, taking and sometimes preserving the heads of enemies. Once a widespread custom, it is still sometimes practised in New Guinea and lingered in Europe after 1900. Captured heads were believed to give victors their victims' powers, to prove courage or to be necessary for fertility

Headingley, cricket ground in Leeds, home of Yorkshire County Cricket Club and since 1899 a Test match venue. Sir Don Bradman played six innings there making 963 runs at an average of 192.6. In 1975, vandals dug up the pitch during the England-Australia Test

Healey, Denis (1917-), British Labour politician. He became a Labour MP in 1952 and was Secretary of State for Defence between 1964 and 1970. He was a member of the Labour Party National Executive Committee from 1970 to 1975, Chancellor of the Exchequer from 1974-79 and Deputy Leader of the Labour Party 1981

Health and Social Security, Department of, British government department responsible for the administration of the NATIONAL HEALTH SERVICE and the social services provided by local bodies. It also has various related functions, eg the payment of benefits, the assessment of the means of LEGAL AID applicants and the determination of non-contributory benefits. It is headed by the Secretary of State for Social Services, who is assisted by a Minister for Social Security and two Ministers of State for Health

Health Service. See NATIONAL HEALTH SERVICE

Healy, Timothy Michael (1855-1931), Irish political leader and first governor-general of the Irish Free State (1922-28). He worked closely with PARNELL and showed a remarkable spirit of conciliation in his political duties

Heaney, Seamus (1939-), Irish poet who has written several volumes of poetry including *Eleven Poems* (1965), *Death of a Naturalist* (1966), *Door to the Dark* (1969) and *North* (1975), for which he won the W H Smith Prize

Heard and McDonald Islands, island group forming an external territory of Australia, situated in the Indian Ocean 4,000km (2,500 miles) SW of Perth. Heard Island is partly glaciated and inhabited only periodically by research groups. The McDonald Islands are situated to the W of Heard Island and are uninhabited

Hearing, process by which sound waves are experienced. Sound waves are systematic compressions and decompressions of the air. The physical mechanism of hearing begins when sound waves enter the ear canal and vibrate the eardrum. The vibrations are transmitted by the three small bones of the ossicles to the cochlea, the organ of hearing. Within the cochlea are receptors called hair cells, which generate nerve impulses that pass via the auditory nerve, to the brain, to be interpreted as sounds. Many of the distinctions human beings make among sounds are psychological, eg the difference between noise and music is learned in part although physical factors do play a role. See also pp 138-139, 832-835

Hearing aid, electronic sound reproducing device to increase the sound intensity at the ear. Modern aids use a small crystal microphone, a microminiaturized battery-powered amplifier and an earpiece (often shaped to fit into the auditory canal). The device consists of either two parts connected by a thin wire (the battery and amplifier being hidden in the

clothing) or one tiny unit placed in or behind the ear or housed in spectacle frames. See also pp 138-139

Hearn, Samuel (1745-92) Canadian fur trader and explorer, b England. Hearn navigated for the HUDSON'S BAY COMPANY (1768-70), in 1770 making the first overland trek to the Arctic Ocean. In 1774 he founded Cumberland House, the first inland trading post of the Hudson's Bay Company.

Hearst, William Randolph (1863-1951), US publisher. He built a countrywide publishing empire that included newspapers, magazines, a syndicated weekly supplement, news services, radio stations and film studios. As with his rival, Joseph PULITZER, he practiced sensational journalism and promoted American imperialism.

Heart, muscular organ that pumps blood throughout the body by rhythmic contractions of its unique muscle tissue. In man the heart is located behind the sternum (breastbone) between the lower parts of the lungs. It lies in a double-walled sac, the pericardium, the walls are separated by pericardial fluid that cushions the heart from shock. The heart is divided longitudinally by a muscular wall, the septum. The right side contains only deoxygenated blood, the left side only oxygenated blood. Each side is divided into two chambers, an atrium and a ventricle, both separated by valves. The rhythmic contractions are maintained by electrical impulses that originate in the sinoatrial node, a bundle of muscle cells, blood vessels and nerves, the average heart rate for an adult is 70-80 beats per minute. See also pp 152-153.

Heart attack, or myocardial infarction, diminishing or failure of blood supply to the heart, generally although not always the result of CORONARY OCCLUSION or thrombosis. It is accompanied by pain which is typically persistent, described as constricting or oppressive, and commonly by shortness of breath, vomiting, nausea and pale, cold, moist skin may occur. If the victim survives, immediate hospital treatment is necessary. See also ANGINA PECTORIS, pp 1066-1067.

Heartburn, burning sensation along the oesophagus occurring soon after eating, especially overeating. It is caused by gastric contents spreading back to the oesophagus and throat. Heartburn pain may resemble that of a heart attack. It may be relieved by drinking fluids, or by acid neutralizers.

Heart failure, disorder in which the heart is unable to pump blood at the rate necessary to supply body tissues. Symptoms include respiratory distress, oedema and fatigue. Treatment is with bed rest and avoidance of stress, drugs are sometimes prescribed. See also HEART ATTACK, pp 1066-1067.

Heart-lung machine, device that supplies and distributes oxygen to the body when the natural circulation is interrupted during open heart surgery. It consists of an oxygenator, which substitutes for the lungs, and a pump, which performs the circulatory functions of the heart. See also pp 117-118.

Heart murmur, abnormal sounds in the chest heard (using a stethoscope) because of vibrations and turbulence in the heart and blood vessels around it. The intensity, pattern and location of murmurs are used in diagnosis. Murmurs are most frequently associated with rheumatic fever and congenital disorders, but they do not always indicate the presence of disease or disorder.

Heat, form of energy associated with the constant vibration of atoms and molecules. It was once thought to be a material substance called caloric, that was contained in all bodies and could flow from one to another. The KINETIC THEORY is the present accepted theory of heat. It holds that the degree of hotness of a body depends on the extent of vibration of its atoms. Heat is distributed in three forms: CONVECTION, through gases and liquids; CONDUCTION, through solids; and RADIATION, mainly through space. Heat and temperature are sometimes confused.

temperature is an indication of how much heat a body possesses. Heat and mechanical energy are interchangeable, eg the hands can be warmed by rubbing them, causing friction which produces heat. See also pp 842-843.

Heat cycle. See HEAT PUMP, CARNOT CYCLE.

Heat engine, any engine that converts heat energy into useful mechanical energy. Thus, all engines that burn fuels are heat engines, including steam, petrol, diesel and jet engines.

Heat exchange, or heat transfer, flow of heat energy from one object to another. This flow of energy occurs at all times when two or more bodies at different temperatures are in thermal contact. Three methods of heat transfer may be distinguished: CONDUCTION, CONVECTION and RADIATION. In conduction, heat is transferred from molecule to molecule within a body, as in an iron rod stuck in a fire, in convection, heat is transferred by circulation of fluid, as in boiling, in radiation, heat is transferred in the form of electromagnetic waves, as in sunlight. Heat exchange is essential in many industrial processes where heat may be extracted from one source for use elsewhere. See also pp 842-843.

Heath, Edward Richard George (1916-), British politician. He entered parliament as a Conservative in 1951 and subsequently held several offices, including government chief whip (1955-59), minister of labour in 1965 and prime minister on winning the general election of 1970. Heath successfully concluded negotiations for Britain's entry into the EEC in 1973 but was defeated by Labour under Harold Wilson in 1974. Margaret Thatcher succeeded him as party leader in 1975. See also p 1720.

Heath, family (Ericaceae) of about 2 000 species of evergreen herbs, shrubs and small trees native to temperate zones of Africa, North America, Europe, tropical mountains and the Arctic. The plants have small, thick or needle-like leaves and bell-shaped flowers. The fruit is usually a small berry. The best-known example is HEATHER. See also ERICA.

Heather, or ling, small, evergreen shrub native to North America, Europe and Asia Minor. It has scale-like leaves and small bell-shaped flowers of pink, lavender or white. It is common on British moors. Family Ericaceae, species *Calluna vulgaris*. See also ERICA.

Heathrow, major international airport to the W of London, one of the busiest in the world. It is situated 24 km (14 miles) from the West London Air Terminal, and in 1977 was connected with London Underground railway system. See also p 526.

Heating, of industrial and domestic buildings and installations, is accomplished either by burning fuels or by tapping heat from available nearby sources. Older types of heating systems for buildings include stoves and open fireplaces burning the solid fuels wood, coal and coke. These often pass part of their heat to a water boiler which supplies hot water for washing and cooking purposes, and in larger installations, also feeds steam to heavy radiators for central heating. More sophisticated fuelled central heating systems burn oil, natural gas or solid fuels more efficiently in a specially designed burner which transfers the heat to a boiler, which then supplies hot water to efficient, lightweight radiators, usually via pumps. In hot air systems a fan blows air across elements heated either by combusted fuels or by electricity, the heated air passes on through ducting to outlet grills situated in the areas to be heated. Underfloor central heating systems include ducts and electric coils. Electricity can also be supplied at a cheaper, off-peak cost to storage heaters, which release the heat slowly during daylight hours. All these arrangements are combined usually with effective heat insulation such as glass-wool insulation of lofts and double glazing. Near factories, dwellings may be centrally heated by the excess heat generated by an industrial process. In countries situated in regions of geothermal activity such as Iceland New

Zealand and Italy, hot water and steam can be tapped from springs and geysers and piped to buildings, or a geothermal power station built to supply electricity for this and other purposes. Solar heaters for houses are now effective even where sun shine is, at best, intermittent for most of the year. Solar cookers for heating food are used in many hot countries, particularly where fuel is expensive. These comprise a polished reflector that focuses heat on to a metal food heater. See also pp 597, 597.

Heat pump, employed mainly in refrigerators and central cooling systems. In a refrigeration cycle, a liquid boiling at about -30°C, called a FREON, is evaporated at low pressure in metal coils. This absorbs heat from the surrounding space, so producing the cooling effect. The freon vapour then passes to a pump driven by an electric motor, which delivers it at raised temperature and pressure to a condenser outside the refrigerated area. As the vapour condenses to a liquid it gives up heat to the surrounding space. The liquid, still under pressure, passes to a receiver, from which the suction intake of the pump withdraws it at lowered pressure back to the evaporator in the refrigerated area, so completing the cycle.

Heat shield, in aerospace technology, plate or apron attached to the leading edge of a spacecraft to absorb or dissipate heat on re-entry into the Earth's atmosphere. It is constructed of ablative materials, which chip off or vaporize to dissipate heat and provide an insulating layer of gases to protect the spacecraft. Materials used include quartz and various plastics. See also ABLATION, NOSE CONE.

Heatstroke, exhaustion or illness brought on by exposure to extreme heat. This can include exposure to intense sunlight and heat, and to the heat of such workplaces as boiler rooms and steel foundries. In all cases, damp heat is more injurious than dry heat because it prevents sweat evaporating from the skin. In the early stages of severe heatstroke the body's temperature regulation system fails and collapse, coma and death ensue.

Heat transfer. See HEAT EXCHANGE.

Heat treatment, cycle of heating and cooling of a metal or other material to alter its physical properties. In annealing the material is heated to a predetermined temperature, held for a time, then cooled to room temperature. This improves ductility and reduces brittleness in a metal and reduces strain in glass. Annealing is intermittently carried out during the working of a piece of metal, when ductility is lost through hammering.

Heat unit, in physics, quantity of heat energy chosen to be convenient for calculations. The kilocalorie, or calorie, is usually employed, defined as the amount of heat needed to raise the temperature of one kilogram of water one degree Celsius (from 14.5°C to 15.5°C).

Heaven, in most religions, the dwelling place of God and the angels and of those human beings who have entered into a state of bliss after physical death as a reward for leading a virtuous life on earth. In Christian theology heaven is essentially the fulfilment of the chief end of man: to glorify God and to enjoy His presence forever.

Heavside layer, obsolete name for the TROPOSPHERE. The term Kennelly-Heavside layer was also used, after the two scientists who first proposed the existence of this atmospheric layer.

Heavy water, deuterium oxide, water in which the hydrogen atoms are replaced by DEUTERIUM, the isotope of HYDROGEN of atomic mass 2 (normal hydrogen has mass 1). It occurs in small proportions in ordinary water, from which it is obtained by electrolysis. It is used as a moderator in some nuclear reactors. Molecular weight 20.

Hebb, Donald Olding (1904-), Canadian psychologist who wrote *Organization of Behavior* (1949) in an attempt to relate physiological brain processes to intelligence. It greatly influenced subsequent research and theory of brain processes, learning and memory.

Heart. William Harvey first deduced that blood circulates constantly in a circle.

Edward Heath's confrontation with the miners led to a government defeat in 1974.

Heather is a common shrub in the Scottish Highlands, thought by some to be lucky.

Heating: these solar panels are part of a central heating system in a French hotel.

Hebbel, Christian Friedrich

Hector, his heroic deeds in the Trojan War, part of a series of illustrations.

Heinrich Heine, a portrait drawing of the great German poet by Wilhelm Hense, 1874.

Heine's most influential work is 'The Poet's Progress in the German Empire'.

Helen's abduction by Paris caused the Trojan War, which was besieged for ten years.

Hebbel, Christian Friedrich (1813-63) German playwright and novelist. Naturally inclined towards tragedy, he nevertheless wrote several comedies, including *The Diamond* (1841). His tragedies, in both verse and prose, include *Maria Magdalena* (1844) and *Juno* (1848). He also wrote the epic poem *Mother and Country* (1855).

Hebe, in Greek mythology, the goddess of youth and beauty, one of the twelve needs of the gods. She married the god of wine, *Dionysus*. In the Semitic group of the Hamitic-Semitic family, the word *Hebrew* (Hebrew *Hebrew*) is a result of the word *Hebrew* (Hebrew *Hebrew*) which was used by the Jews for over 2,000 years. It was revived as a secular spoken language in the 19th century and in 1948 was declared the official language of the State of Israel.

Hebrides (Western Isles) a group of islands in the Atlantic Ocean off the west coast of Scotland. They are divided into the Inner Hebrides (principal islands Skye, Rhé, Mull, Gigha, Barra, and Uist) and the Outer Hebrides (principal islands Lewis, Harris, North and South Uist), part of the Western Isles island region. The main occupations are fishing and farming. Pop. 60,000.

Hebron (al-Khalil) town in NW Jordan, one of the four holiest cities in the world. It is considered the burial place of Abraham and Sarah. The modern city, surrounded by a grape and vegetable growing area. Its industries include tanning and wool processing. Pop. 115,000.

Hecate, powerful Greek mythological goddess, thought to be the daughter of Perseus and Asteria. She ruled over heaven, earth, and the underworld as an embodiment of earth. She bestowed the wealth and blessings of daily life and presided over witchcraft, magic, and the underworld.

Heckelphone, a wind instrument, a member of the brass family, developed in the 19th century. It has a double reed and a wooden body and is usually played by a musician wearing a mask. It is a combination of the oboe and the horn. It was invented by Richard Strauss in the opera *Salome* (1905).

Hector, in Greek mythology, the greatest of the Trojan heroes, eldest son of Priam and Hecuba (king and queen of the besieged city) and husband of Andromache. Achilles slew him and dishonoured his body, but Priam persuaded Achilles to return the body for an honourable burial.

Hecuba, in Greek mythology, the wife of Priam (King of Troy) and mother of Hector. After the fall of Troy Hecuba was imprisoned by the conquering Greeks, and because of her revenge on King Polydorus of Thrace (who had killed her youngest son) became the personification of motherly courage.

Hedda Gabler (1890) four act drama by Henrik Ibsen which emphasizes the danger of adhering to the conventions of society at the expense of individuality. The work revolves round its strong-willed heroine Hedda who refuses to conform with her own spiritual nature and in so doing brings tragedy upon herself, a former admirer and her husband (whom she has ceased to love).

Hedgehog, small, nocturnal Eurasian mammal, of the family Erinaceidae. The common European hedgehog, has short sharp spines above and lighter-coloured thick fur below, and has a pointed snout. It feeds on insects and other small animals and defends itself by rolling into a ball with the spines outmost. Species *Eristalis* and *Eristalis*.

Hedge-sparrow, or dunnoek, small European accentor with grey and brown

body and grey tipped wing. The song is similar to the sparrow. It is native to the length to 14 cm (5.5 in). Species *Prunella*.

Hedin, Sven Anders (1865-1952) Swedish geographer and traveller who explored and mapped much of central Asia. In several expeditions between 1891 and 1906, and in 1927-33 he found ruined cities in Turkistan and explored central Asia's high plateau complex.

Hedonism, from the Greek *hēdonē*, pleasure, may be of three types: that at the moment is taught by Aristippus; careful discrimination of pleasure sought is found in Epicureanism; or emphasis on complete and lasting happiness. Basically hedonism springs from the premise that man seeks pleasure in all he does.

Heem, Jan Davidzoon de (1606-84) Dutch still life and portrait painter, who specialized in sumptuous flower paintings. His many pupils and imitators included his son Cornelis (1631-95).

Hegel, Georg Wilhelm Friedrich (1770-1831) German philosopher. He was professor of philosophy at Heidelberg and subsequently at Berlin, where he became famous for a romantic metaphysical system that traced the self-realization of spirit by so-called dialectical processes towards perfection. First in the *Phenomenology of Mind* (1807) and then in *Science of Logic* (1812-16) Hegel tried to express the course of universal reason with his metaphysical dynamism. See also pp 1650, 1653.

Hegemony, term used to describe the leadership or dominance of one state over others. It originated with the Greek city of Athens and derives from a Greek word meaning leader.

Hegra, flight of MOHAMMED from the wrath of the merchants of polytheistic Mecca to Medina (then called Yathrib) in 622. The Islamic calendar dates from 1 July of this year, as indicated by the letters AH (Anno Hegrae). Thus AH 622 is 622 AD.

Heian, period of rule in Japanese history from 794 to 1185, centred on the city of Heian, now Kyoto. Under the Fujiwara dynasty the period was marked by great advances in Japanese civilization, above all in poetry and prose, which flourished with the development of a phonetic-based script encouraging writing in Japanese in addition to the traditionally Chinese-based literature. Some of the most important developments of Japanese art and culture also occurred at this time. See also pp 1265, 1266.

Heidegger, Martin (1889-1976), German philosopher who had a major influence on 20th century existentialism. Publishing his principal work *Being and Time*, in 1927 he sought the meaning of being in terms of individual human thought.

Heidelberg Man, species of man (*Homo heidelbergensis*) of the type formerly classified as *Heidelberg*. Known from a 300,000 to 400,000 year-old jawbone discovered near Heidelberg, Germany, in 1907. The teeth are human in development, but are set in a massive ape-like chinless jaw. See also p 113.

Heidenstam, Verner von (1859-1940) Swedish poet, essayist and novelist. In his essay *Renaissance* (1889) he called for a rebirth of literary fantasy and beauty. His verse, published in three volumes, displayed original imagination. He also wrote several historical novels and was awarded the 1916 Nobel Prize in literature.

Heidi (1880-81), classic children's novel by Johanna Spyri. A story containing much autobiographical material of the author's early life in the Swiss Alps, it champions simple virtues and country life. In its first ten years it ran through 13 editions, and it has remained a favourite with children ever since.

Heifetz, Jascha (1901), Russian violinist. He made his debut at the age of six and first performed in London in 1920, rapidly establishing a reputation for technical virtuosity. He commissioned a number of new violin works, including William Walton's *Violin Concerto* (1939).

Heilongjiang (Heilongjiang), province in NE China, making up the N part of the

region known as Manchuria, bordered by the USSR, the capital is Harbin (Haerbin). Products: wheat, timber, flax, soybeans, coal, oil, gold. Industries: heavy machinery, electrical equipment. Area 163,740 sq km (170,069 sq miles). Pop. (1977 est.) 21,000,000.

Heine, Heinrich (1797-1856) German poet and prose writer. In 1826 he published his satirical *Pictures of Travel*, and in 1831 he settled in Paris, writing on German life and letters. The pain and fear he suffered in the last eight years of his life from a paralytic illness are recorded in *Phenomena* (1853 & 1854) and *Romanesque* (1851). See also p 1576.

Heinkel, Ernst Heinrich (1888-1958) German aircraft designer who founded the Heinkel works in 1922. Initially he specialized in developing sea planes, and later light passenger aircraft. He designed the HE-178, the first jet aircraft flown in 1939. Also in that year the HE-176 flew powered by a liquid fuel rocket motor. During WWII his aircraft were used extensively by the German Luftwaffe, particularly the versatile twin-engine HE-111 bomber.

Heinz, Henry John (1844-1919) US food packer and founder of the famous firm that still bears his name. With his brother and cousin he founded the firm of F & J Heinz to make and sell pickles and other prepared foods in 1876. The firm became famous for its pre-cooked baked beans, which required only light cooking before eating. Heinz was president of the company from 1905 until 1919.

Heisenberg, Werner Karl (1901-76) German physicist and philosopher of science and later in Berlin. He is best known for his discovery of the uncertainty, or indeterminacy, principle (1927). He was awarded the 1932 Nobel Prize in physics for his work on quantum mechanics.

Heisenberg uncertainty principle, in physics, law that states that it is impossible to measure exactly the position and momentum of a body at the same time. The product of these two uncertainties is always greater than Planck's constant. This principle was first stated by Werner Heisenberg in 1927.

Hejaz (Al-Hijaz), region in NW Saudi Arabia, on the Red Sea coast. The centre of ISLAM, it contains the Muslim holy cities of MECCA (birthplace of MOHAMMED) and MEDINA (the first Islamic capital). Proclaimed an independent kingdom under HIS MAJESTY ABU (1916), it was taken by the SAUDIS in 1924 and has been part of Saudi Arabia since 1932. Area 168,500 sq km (150,000 sq miles). Pop. (1967 est.) 2,300,000.

Hegra, see HEGRA.

Heidentaler, group of short poems performed in song that celebrated dramatic tales of Germanic heroes. Beginning in AD 775 they were transmitted orally, originally by court poets. *Hildebrand* (c. 1000) is one of only few to survive and such hero songs provided the subject matter for the 13th century epic *Nibelungen* and *Tristan*.

Helen, in Greek mythology, the daughter of either PANDORA or MENES and ZEUS, sister of Pollux and half sister of CASTOR. She was exceptionally beautiful, and her many suitors pledged themselves to do whatever she should choose to wed. She married Menelaus, King of Sparta, but was carried off three years later by Paris, Prince of Troy. Her former suitors rallied to the King and the Trojan War began.

Helena, Saint (c. 250-330) mother of the Roman Emperor CONSTANTINE I and wife of Constantius Chlorus (Constantine's father), who married another woman when he became emperor as Constantius I. Helena's son was named emperor in 306, and she became an ardent patron of Christianity. Early church historians relate that Helena inspired the building of the Church of the Nativity in Bethlehem. Later tradition claims that she found the Cross on which Christ died.

Helicopter, aircraft that derives support from lift provided by power-driven rotor(s) revolving around a vertical axis or axes. It is capable of vertical take-off and

land ng, hovering, and forward backward and lateral flight. Military applications include rescue, reconnaissance and combat. In civil aviation, it is commonly used for short-haul transport, crop-dusting and pipeline patrolling. See also pp 471, 520, 521.

Heligoland (Helgoland), island of West Germany in the North Sea, 64km (40 miles) NW of Cuxhaven. It has been under German control since 1890, when Britain exchanged it for Zanzibar. It played a strategic role in WWI and WWII with the installation of German fortifications. It is now a resort and fishing area. Area: 61 hectares (150 acres). Pop. (1971 est.) 2,300.

Heligoland Bight, Battle of (28 August 1914), first naval battle of WWI, off the German island base of HELIGOLAND, at the mouth of the River Elbe in the North Sea. The British fleet, under Admiral BEATTY, sank three German cruisers and one destroyer.

Helipolis, ancient city in N lower Egypt in the Nile delta, 10km (6 miles) NE of Cairo. It was noted as a centre of sun worship for the god RA from c. 1580-1090 BC and was the site of the obelisks called CLEOPATRA'S NEEDLES. The founding of Alexandria in 332 BC affected the prosperity of the city, although it remained important until the Christian era.

Helios, ancient Greek god who represented the physical presence of the sun in its daily and yearly course, later confused with the Olympian deity APOLLO whose attributes are spiritual. The offspring of the Titan HYPERION, the god of light, and father of PHAETON, Helios appears in mythology as the charioteer of the sun driving a four-horse chariot through the sky.

Heliotrope, properly the name of flowering plants of the boraginaceae family genus *Heliotropium*, which bear clusters of small white or purple, scented flowers. The name has also been given to plants of the VALERIANACEAE family which bear similar flowers.

Heliozoa, or sun animal, order of fresh water, amoeboid protozoa characterized by a spherical body surrounded by needle-like extensions of protoplasm. Many are encased in a gelatinous capsule or a perforated silica skeleton. Common examples are *Acanthophrys sol* and *Acanthophrys echinatus*. Length 0.04-1mm (0.002-0.04in).

Heliport, airport reserved particularly for the use of HELICOPTERS. Because these aircraft are able to land and take off vertically, a heliport can be quite small, often requiring only the roof of a building or one apron in an airport.

Helium, gaseous non-metallic element (symbol He) of the noble gas group, discovered in 1868 by Pierre JANSSEN who noticed its lines in the sun's spectrum. It is the second most common element in the universe. The element was first obtained in 1895 from the mineral cleveite, the chief source is from natural gas. Helium is also found in some radioactive minerals and in the Earth's atmosphere (0.0005% by volume). It is a light, colourless, non-flammable gas used in balloons, mixed with oxygen to make artificial "air" for divers, in welding, semiconductor production, metallurgy and other applications requiring an inert atmosphere. It has the lowest melting point of any element and is extensively used in low-temperature research. The element forms no chemical compounds. Properties: at 20°C it wts 4.0026, s.g. 0.178 g/dm³, m.p. -272.2°C (-457.96°F) (26 atm.), b.p. -268.9°C (-451.48°F), most common isotope He⁴ (100%). See also NOBLE GASES.

Helix, curve generated when a point moves over the surface of a cylinder in such a way that the curve it traces is inclined at a constant angle to the axis of the cylinder, as in a coil spring or the thread of a bolt.

Helix, double. See DOUBLED HELIX.

Hell, in many religions, place or state of eternal torture and punishment after death for those who have led wicked lives. In modern Christian theology Hell is conceived as the state of eternal separation

from God - and consequently from all possibility of happiness - for the unrepentant sinner in consequence of his deliberate rejection of the will of God. Such an exclusion from Heaven is not held to be inconsistent with the idea that God is love since God does not force response from anyone against his will. See also HADES, HEAVEN, LIMBO, PURGATORY.

Hellbender, large aquatic SALAMANDER of E and central United States. Because it does not completely metamorphose the adults lose their gills, but lack eyelids and retain their larval teeth. The hellbender has a grey or brown, loose, wrinkled skin. Length up to 76cm (30in). Family Cryptobranchidae, species *Cryptobranchus alleganiensis*.

Hellebore, any of about 20 species of poisonous herbaceous plants that grow in Eurasia. The most familiar is the Christmas rose *Helleborus niger*, garden hybrids that bear red flowers in mid-winter to early spring. Others have green or white flowers. Family Ranunculaceae.

Hellenes, name by which the ancient Greeks called themselves (after Hellen, grandson of Prometheus). More especially, it means the people who came under the sway of Greek civilization, especially after the conquests of Alexander the Great, and adopted the Greek language and way of life.

Hellenism, culture and ideals of Classical Greece. The term is used especially of the culture of Athens and related cities during the golden age of PERICLES (5th century BC). Hellenism came to symbolize pagan pleasure, freedom, love of life and the pursuit of beauty in the arts. The Hellenic period ended in the 4th century BC with the conquest of ALEXANDER THE GREAT. It was succeeded by the HELLENISTIC civilization. See also pp 1206-1207, 1212-1213.

Hellenistic Age (323-30 BC), E Mediterranean and Near Eastern history between the death of ALEXANDER THE GREAT and the accession of AUGUSTUS. Greek dynasties (the PTOLMIES and SELEUCIDS) were established in Egypt, Syria and Persia. Alexandria and Pergamum became major cultural and trading centres, adding unique elements to, while preserving much of, Greek culture. Major literary figures were the poets Callimachus and Theocritus, and the philosopher Theophrastus. Neo-Platonism and EPICUREAN philosophy flourished. Important works of art included the sculptures the *Venus de Milo* and *The Dying Gaul*. Hellenistic city planning influenced the Romans, who eventually dominated and overshadowed Hellenistic culture. See also pp 1212-1213.

Heiler, Joseph (1923-), US author. His first novel, *Catch-22*, appeared in 1961. Subsequent works include the play *We Bombed in New Haven* (1968) and the novel *Something Happened* (1974).

Hellespont. See DARDANELLES.

Hellman, Lillian (1905-), US playwright and author. Her plays, which include *The Children's Hour* (1934) and *The Little Foxes* (1939), deal with psychological and social issues. She has also published three autobiographical volumes: *An Unfinished Woman* (1969), *Penitents* (1973) and *Scoundrel Time* (1976).

Helio Dolly (1964), musical play, later a film, with songs by Jerry Harman and book and lyrics by Michael Stewart. Based on a Thornton Wilder play, it tells the story of a matchmaker who seeks a prince for herself.

Helmholtz, Hermann Ludwig Ferdinand von (1821-94), German anatomist, physicist and physiologist. He made contributions in acoustics and optics, expanding Thomas Young's three-colour theory of vision and inventing an ophthalmoscope and an ophthalmometer. His experiments on the speed of nerve impulses led to a study of animal heat, which in turn led to work on the principle of conservation of energy.

Helmont, Jan Baptista van (1580-1644), Flemish chemist, physician and physiologist. Although he believed in TRANSMUTATION and that water was the basic substance of the earth, he carried out quantitative experiments and coined the word gas (Greek *chaos*). He also dis-

covered CARBON DIOXIDE, expressed his (mistaken) belief that fermentation caused digestion and nutrition, and proposed the use of alkalis to compensate for excess acidity in the digestive juices.

Heloise. See ABEILARD, PIERRE.

Helots, class of Greeks between free men and slaves, probably indigenous. In SPARTA they outnumbered full Spartan citizens. They were employed as agricultural labourers and as domestic servants; they were owned by the state, which used them as soldiers after the PERSIAN WARS (500-449 BC). They were freed in 369 BC. See also pp 12-13.

Helpmann, Sir Robert (1909-), Australian ballet dancer and actor. He was a principal with the Vic Wells and Sadler's Wells Ballets (1933-50) and later (1956) co-artistic director and chief choreographer of the Australian Ballet. From 1935 he regularly partnered Marge Fonteyn and appeared in films including *Henry V* (1944), *The Red Shoes* (1948) and *Tales of Hoffmann* (1950). See also pp 1758.

Helsinki (Helsingfors), seaport and capital of Finland, in the S of the country on the Gulf of Finland. Founded in 1550 by Gustavus of Sweden, it was rebuilt after a fire in 1808 and became the capital in 1812. It is the commercial and administrative centre of the country. Industries include food processing and textiles. Pop. (1975) 495,287.

Helvellyn, mountain in Cumbria, NW England, between Thirlmere and Ullswater. It has a sharp ridge (Scafell Edge) running E. Height 4,109ft (1,252m).

Helvetia, old name for the plateau region between the Alps and the Jura Mountains, roughly the western part of present-day Switzerland. Its Celtic inhabitants were called HELVETII by the Romans, who defeated them at Bibracte in 58 BC. The name is still used poetically and appears on Swiss postage stamps.

Helvetii, Celtic people that inhabited S Germany and migrated in the 2nd century BC to the N part of modern Switzerland. In 58 BC they invaded SW Gaul but were defeated by CAESAR. They lived thereafter in Belgian Gaul and upper Germany under Roman control until AD 260, when they were subjected by the ALLEMANNI.

Helvetius, Claude-Adrien (1715-71), French philosopher whose best-known work *On the Mind* (1758) attacked the religious basis of morality. The book aroused great opposition, causing him to leave France temporarily. He also claimed that everybody is intellectually equal but some have less desire to learn than others. This belief led him to claim in *De l'homme* (1772), that all human problems could be solved with education.

Hematite. See HAEMATITE.

Hemery, David (1944-), British hurdler who, at the 1968 Olympic Games, won the 400m hurdles and beat the world record of 48.8 seconds by 0.7 seconds. In 1972 he was third in this event and won a silver medal in the 4x400m. He won Commonwealth gold in 1966 (170m hurdles) and 1970 (110m hurdles).

Hemichordata, subphylum of the phylum CHORDATA that includes two groups of primitive marine animals, the Enteropneusta or Baupneusta and the Pterobranchia. Most of the animals do not have common names. Characteristics include a short notochord, or primitive backbone, partially or completely solid dorsal nerve chord, and may have gill slits. See also pp 3-54.

Hemingway, Ernest Miller (1899-1961), US author. After WWI he became a correspondent in Paris for the *Toronto Star* and was strongly influenced by the work of Gertrude Stein. With the novel *The Sun Also Rises* (1926) he established his reputation as a writer. This book also established him as the spokesman for the Lost Generation. Later works by Hemingway include *A Farewell to Arms* (1929), *To Have and Have Not* (1937) and *For Whom the Bell Tolls* (1940).

Hemiplegia, paralysis of one side of the body. It can be caused by brain injury and may be accompanied by spasticity.

Hemiptera, or **Heteroptera**, order of

Heliotrope - the garden marmoset, turning towards the sun which has just appeared.

Lillian Hellman is a distinguished screen writer, adapting many of her own plays.

Helmholtz argued that knowledge is derived from experience, not from innate ideas.

Ernest Hemingway's writings reflect the action and commitment of his own lifestyle.

Hemlock

Henrietta Maria was indefatigable in her work during the English Civil War.

Henry V, had he lived a few months longer, would have succeeded in France.

Henry VI, the last Lancastrian king, being overthrown at the Battle of Barnet.

Henry VIII, the seal of the annulment of his marriage to Catherine of Aragon.

INSECTS, made up of true bugs, found worldwide. They may be winged or wingless and all have three life stages: egg, nymph and adult. The piercing and sucking mouthparts are used to suck liquids from either plants or animals. Length 1.7-100mm (0.04-4in). See also pp 36-44.

Hemlock, poisonous plant found throughout the world. It has a long taproot, lacy foliage and flat clusters of white flowers. The leaf stalks have conspicuous purple spots. Family Umbelliferae, species *Conium maculatum*.

Hemlock, evergreen tree native to the USA and Asia. Its leaves are long, flat, blunt-ended needles, the tree bears small pendulous cones and drooping branches. Its bark is used to make tannin and the soft, light timber is used in construction work. Height to 60m (196ft). Family Pinaceae.

Hemon, Louis (1880-1913), Canadian novelist. He worked as a farm labourer in Quebec, and that area provided the setting for his famous novel, published posthumously, *Maria Chapdelaine* (1915).

Hemp. See HEMP.

Hempel, Carl Gustav (1905-), US philosopher. Trained in physics and mathematics, his critical positivism was influenced by Moritz SCHULZ and Rudolf CARNAP. His works include *Fundamentals of Concept Formation in Empirical Science* (1952) and *Philosophy of Natural Science* (1966).

Hen. See POULTRY.

Henbane, a highly poisonous plant that grows in the Mediterranean region and in Africa. It contains a powerful ALKALOID that affects the nervous system. The leaves are coarsely toothed and the stems are hairy. The bell-shaped yellow flowers have purple veins and produce black seeds. Height to 74cm (29in). Family Solanaceae, species *Hyoscyamus niger*.

Hench, Philip Shewalter (1896-1965), US physician. He shared the 1950 Nobel Prize in physiology and medicine with Edward KENDALL and Tadeus REICHSTEIN for their pioneering work on hormones of the adrenal cortex, which led to discovery of the treatment of rheumatoid arthritis with CORTISONE.

Hencke, Karl Ludwig (1791-1866), German astronomer who found the fifth and sixth minor planets to be discovered, Astraea in 1830 and Hebe in 1847. Before this, professional astronomers had given up the search for further asteroids.

Henderson, Arthur (1863-1935), British labour leader, one of the chief organizers of the British Labour Party. He was the first Labour politician to hold office in the war cabinets (1915-17). He became Home Secretary in the first Labour government in 1924, but grew more and more internationalist in outlook. He served as Foreign Secretary (1929-31) and was awarded the Nobel Peace Prize in 1934. See also p 1693.

Henderson, Fletcher (1898-1952), US jazz composer and arranger. Henderson was the first man to write jazz arrangements for more than a small group, and as such had great influence during the 1920s and 1930s.

Henle, Sonja (1913-69), Norwegian figure skater. Olympic champion (1938, 1932, 1936) and world amateur champion (1927-36), she popularized figure skating in the USA through her Hollywood Ice Revues and her starring roles in several films.

Henley Royal Regatta, oldest rowing regatta in the world, begun in 1839 at the prompting of merchants in the Berkshire town of Henley-on-Thames. The course is 2 km (1.3 miles). It is equally famous as a social event and for the quality of rowing for such trophies as the Grand Challenge Cup, Diamond Challenge Scull, Silver Goblets and Stewards' Challenge Cup.

Henna, also called Egyptian privet, a small shrub native to the Middle East and N. Africa and cultivated in Egypt. Since ancient times people have extracted a red-brown dye from the leaves and used it in colour hair and to make patterns on the skin. Family Lythraceae, species

Lawsonia inermis. See also p 557.

Hennepin, Louis (1640-c.1701), Belgian explorer and Franciscan missionary. He sailed to Canada in 1675 with Cavalier de LA SALLE. After doing missionary work among the Indians, Hennepin was directed to explore the upper Mississippi. In an account of his trips, he claimed to have explored the river to its mouth, but this false claim discredited him.

Henri, Robert (1865-1929), US painter, a member of the ASHCAN SCHOOL, best known for his realistic urban street scenes.

Henrietta Maria (1609-69), Queen consort of CHARLES I of England, daughter of HENRY IV of France. She married Charles in 1625. Her Catholicism and negotiations with the Pope and the French government increased Parliament's hostility to Charles. After 1644 she lived in France except for a brief return to England after the Restoration. See also p 1421.

Henry, the name of seven German kings, all of whom except Henry I were elected emperors of the HOLY ROMAN EMPIRE.

Henry II (r. 1012-24), who was canonized in the mid-12th century, maintained order in Germany, subdued the Lombards and fought constantly against the Poles.

Henry III (r. 1039-56) succeeded his father Conrad II. Imperial power reached its zenith during his reign. He made the Duke of Bohemia and, for a time, the King of Hungary, vassals of the empire, contained revolts in Germany and effected the election of four popes. He supported reforms in the Roman Catholic Church by denouncing the marriages of priests and the buying of church offices.

Henry IV (r. 1056-1106) became embroiled in controversy with the popes over the lay investiture of clerics. He opposed Pope GREGORY VII but rebellion in the German church made him seek papal absolution at Canossa in 1077. Thereafter, however, he resumed the struggle, setting up the anti-pope CLEMENT III. In 1104 his son Henry joined a rebellion against him and deposed him. See also HC1 pp 160-186.

Henry V (r. 1099-121), who succeeded him, inherited the quarrel with the papacy over investiture. After a prolonged and violent struggle, he reached a compromise with Pope CALIXTUS II in the Concordat of Worms in 1122. See also HC1 p 161.

Henry VI (r. 1169-97) married Constance I of Sicily in 1186 and much of his reign was devoted to securing that inheritance. He was finally crowned King of Sicily in 1194. A rebellion in Germany was quelled when the rebels' ally RICHARD I of England, became his prisoner. See also HC1 p 161.

Henry VII (r. 1308-13) acquired Bohemia for his family by marrying his son John to Elizabeth of Bohemia in 1310. Henry revived imperial ambitions in Italy but, although crowned King of the Lombards (1311), failed to keep authority there.

Henry I (1068-1135), King of England, younger son of William I. On William II's death he was crowned king in 1100. His elder brother Robert, Duke of Normandy, claimed his throne, but Henry defeated him and captured all his lands at Tinchebrai in 1106. Henry, who married an Anglo-Saxon princess, reformed the judicial and fiscal administration but his reign was troubled by unruly barons, wars with the French and Welsh, and the death in 1120 of his heir, William. See also pp 1302-1303, 1312-1313.

Henry II (1133-89), King of England, son of Geoffrey Plantagenet and Matilda, daughter of Henry I. He inherited the Angevin lands, obtained Aquitaine by marrying Eleanor in 1152, and succeeded to the throne in 1154. He reformed the judicial, monetary and military systems and set up a system of peripatetic royal justices. His attempt in 1164 to bring church courts under secular control through the Constitutions of Clarendon failed. By the Treaty of Montmirail (1169) Henry secured France's sanction for his sons' succession to his territories.

and Prince Henry was crowned heir in 1170. After the murder of Thomas a Becket in 1170, Henry's life was beset by trouble with the Church, revolts in Ireland and Normandy, and a continual struggle

with his own sons. See also pp 1302-1303, 1312, 1320-1328.

Henry III (1207-72), King of England, son of JOHN, whom he succeeded when a minor in 1216. He married Eleanor of Provence in 1236. His favouritism of foreigners led to resentment among his barons, who revolted against him and refused to finance his overseas campaigns. Forced to make substantial constitutional concessions, the PROVISIONS OF OXFORD by the so-called 'MAGNACHART' in 1258, he enlisted French and papal aid but the barons under Simon de MONTFORT defeated him at Lewes in 1264. His son Edward's victory at Evesham (1265), however, enabled him to retain executive power and grant reforms. See also pp 1302-1313, 1342.

Henry IV (c.1367-1413), King of England, son of John of Gaunt and cousin of RICHARD II. He was banished by Richard in 1398, but returned to claim his father's estates in 1399 and, finding Richard campaigning in Ireland and deserted by many of his former supporters in England, claimed the throne for himself. Henry's reign was disturbed by Welsh and Scottish wars, attempts on his life and rebellions (chiefly fomented by the PERCY family). See also pp 1313, 1376.

Henry V (1387-1422), King of England, eldest son of Henry IV. After fighting on his father's behalf at Shrewsbury in 1403, in Wales and in Scotland, he succeeded him in 1413 and immediately demanded the restoration of territories formerly ceded to France. Invading France, he captured Harfleur and won the decisive victory at Agincourt in 1415. Further military and diplomatic success led to his adoption as the French king's heir by the Treaty of Troyes in 1420. See also pp 1346-1347, 1376.

Henry VI (1421-71), King of England, who succeeded his father Henry V in 1422 at the age of 8 months. He came of age in 1437, after a sheltered youth spent in study. He had no capacity for government and his reign was characterized not only by military and diplomatic disasters in France (by 1453 nothing remained of the Crown's former French possessions except Calais) but also by civil war in England, where his feebleness permitted the Yorkist and Lancastrian factions to instigate the Wars of the Roses. Deposed by the Yorkists (1461), he was restored in 1470 but was again deposed almost immediately and then murdered. See also pp 1376-1377.

Henry VII (1457-1509), King of England, founder of the Tudor dynasty. Having come to the throne by killing RICHARD III at Bosworth in 1485, Henry united the warring factions by marrying the Yorkist heiress Elizabeth. His financial acumen restored England's fortunes after the devastation of civil war and gave the monarchy considerable independence of action. He concluded various advantageous foreign treaties, such as the Treaty of Etaples in 1492, and took effective action against pretenders to his throne, thereby securing the future of his dynasty. See also pp 1319, 1343, 1374-1376, 1400.

Henry VIII (1491-1547), King of England, who succeeded his father Henry VII in 1509. In 1513 victories over the French (at Tournai) and the Scots (at Flodden) re-established England as a European power, a position maintained by the diplomacy of Cardinal WORSELEY. However, was dismissed in 1529 after Henry's decision to divorce Catherine of Aragon (who had not borne a male heir) in favour of Anne Boleyn led to conflict and his eventual excommunication. With the help of Thomas CRAWMER, Archbishop of Canterbury from 1533, Henry compelled the clergy to acknowledge him as supreme head of the Church and executed those such as Sir Thomas MORE who protested. Under Thomas CROMWELL's direction he initiated other anti-ecclesiastical legislation in the 1530s, including transferring church revenues to the Crown and appropriating monastic property. From his six marriages Catherine of Aragon, Anne Boleyn, Jane

Seymour, Anne of Cleves, Catherine Howard and Catherine Parr, he had one son and two daughters. *See also* pp 1374-1375, 1400-1401, 1403-1404.

Henry, French *Henn*, the name of four kings of France. The reign of Henry I (1008-60) who ruled from 1031 to 1060 was characterized by the king's struggle to maintain central authority. Henry's younger brother, Robert, claimed the throne and was supported by their mother Constance of Provence. In the ensuing civil war, Henry was forced to cede Burgundy to Robert. Henry II (1154-59), reigned 1154-59, was the second son of Francis I; he became heir to the throne upon his brother's death. He married Catherine de Medici. As king, Henry continued his father's policies of strengthening the monarchy and effecting administrative reform. A militant Catholic, he initiated harsh, systematic repression of Protestants. Henry III (1551-89), reigned 1574-89, was the last of the Valois dynasty. As Duke of Anjou he defeated the Huguenots in 1569 in the Wars of Religion. With his mother, Catherine de Medici, he instigated the Massacre of Saint Bartholomew's Day (1572). Elected King of Poland in 1573, he returned to France to assume the throne on the death of his brother Charles IX in 1574. He made peace with the Huguenots in 1576, but when his younger brother Francis died in 1584 and the Protestant Henry of Navarre became heir to the throne, he renewed the wars. Henry IV, or Henry of Navarre (1553-1610), King of Navarre (as Henry III, 1572-1610) was the first Bourbon King of France (1589-1610). Raised as a Huguenot, he nevertheless married Margaret of Valois, the Roman Catholic sister of the French king Charles IX in 1572. He escaped the Massacre of Saint Bartholomew's Day (1572) by agreeing to renounce his Protestantism, and was kept as a virtual prisoner at the French court until he escaped in 1576, to join the Huguenot forces. He became heir to the French throne in 1584 on the death of the younger brother of Henry III. Henry III was persuaded by Henry de Guise, leader of the Catholic League, to deny Henry of Navarre the succession. The War of the Three Henries resulted. Henry of Navarre defeated the king's forces in 1587 and was reconciled with him after the Catholic League expelled the king from Paris (1588). Henry III was assassinated in 1589, but Henry of Navarre did not go to Paris until after he renounced his Protestantism in 1594. During his reign he reconciled the Huguenots by the Edict of Nantes and laid the foundations of French absolutism, before his assassination by a religious fanatic. *See also* p 1407.

Henry IV, play in two five-act parts by William SHAKESPEARE. Both parts were first performed in c 1597. *See also* p 319.

Henry V, historical play in five acts by William SHAKESPEARE. Like his other historical plays, the major source was Holinshed's *Chronicles*. *See also* pp 1418-1419.

Henry VI, historical play in three parts by William SHAKESPEARE. Probably his first play, all the parts were performed c 1590. *See also* pp 1418, 1419.

Henry VIII, five-act play by William SHAKESPEARE, probably written in collaboration with John FLETCHER. Its first performance was in c 1613. *See also* p 1419.

Henry, Joseph (1797-1878), US physicist whose contribution to ELECTROMAGNETISM was essential for the development of the commercial telegraph. His work on INDUCTION led to the development of the TRANSFORMER. In 1850 he introduced a system of using the telegraph for sending weather reports, making possible the establishment of the US Weather Bureau. The unit of inductance is named after him. **Henry, O.** (1862-1911), a pen-name of William Sydney Porter, a popular US short story writer. His typical surprise ending gave rise to the term the "O. Henry ending." In 1901 he moved to New York City the scene of much of his fiction.

Henry, Patrick (1736-99), US patriot, orator and lawyer. Elected to the Virginia House of Burgesses (1765-75), he denounced the Stamp Act. He was a member of the Continental Congress (1774-76) and became convinced that war with Britain was inevitable. It was then he delivered his "Give me liberty or give me death" speech that established his reputation as a gifted orator.

Henry of Navarre. *See* HENRY IV (of France).

Henry, William (1774-1836), British chemist and physician whose most important work was his study of the solubility of gases in water under varying temperatures and pressures. This led to his formulation in 1803 of HENRY'S LAW.

Henry's law, principle in physical chemistry which states that the weight of a gas dissolved in a fixed quantity of a liquid is directly proportional to the pressure of the gas on the liquid, at constant temperature. Thus the more a gas is compressed the more it is absorbed in a liquid.

Henry the Lion (1129-95), Duke of Saxony (1142-80) and of Bavaria (1156-80). He married MATILDA, daughter of HENRY II of England, in 1168. He failed to extend his power beyond the River Elbe.

Henry the Navigator (1394-1460), Portuguese prince and patron of explorers. He was the third son of JOHN I and the uncle of ALFONSO V. In 1419 he established an observatory at Sagres and a school for the study of geography and navigation. He made no exploratory journeys himself but sponsored numerous Portuguese navigators who made many important discoveries in West Africa that formed the basis for the later Portuguese empire.

Henze, Hans Werner (1926-), German composer. Influenced by TWELVE-TONE music, he has composed in almost every medium and is known especially for his operas, which include *Boulevard Solitude* (1952), *Elegy for Young Lovers* (1961) and *The Haverdams* (1965). He has composed six symphonies. *See also* p 1755.

Hepatitis, inflammation of the liver. It is caused by one of two viruses and takes the form of infectious hepatitis, which is usually spread through faecal contamination, or serum hepatitis which is spread by blood transfusion or poorly sterilized hypodermic needles. Symptoms include lethargy, nausea, fever and perhaps jaundice. Recovery is usually spontaneous although observation in hospital is usual to guard against complications and to provide relief of symptoms.

Hephurn, Audrey (1929-), actress born in Belgium who achieved success in the US. Real name Fidda Hephurn van Heemstra. Trained as a dancer, her initial popular success was achieved in ingénue gamine roles such as *Roman Holiday* (1953), *Sabrina* (1954) and *Funny Face* (1957). After these her performances matured with starring roles in *My Fair Lady* (1964), *Two for the Road* (1967) and after a prolonged absence from the screen that of the ageing romantic heroine in *Robin and Marian* (1976).

Hephurn, Katharine (1909-), US stage and film actress who is famed for her intelligence, wit and noble bearing. She made nine films with Spencer TRACY, including *Adam's Rib* (1949), *Pat and Mike* (1952) and *Guess Who's Coming to Dinner* (1967). Her dramatic films include *The African Queen* (1951), with Humphrey BOGART, *Long Day's Journey into Night* (1962) and *The Lion in Winter* (1968).

Hephaestus, ancient Greek god of fire and crafts. Son of ZEUS and HERA, he is equivalent to the Roman Vulcan. Blacksmith and armourer to the Olympian gods with a forge under Etna (or Stromboli) he is depicted as crippled and unloved but clever and able enough to create Pandora, the first woman, and to wed APHRODITE.

Hepplewhite, George (d 1786), British furniture designer and cabinetmaker. His furniture, light in scale and usually with tapered legs, combined pale woods with mahogany often in the form of inlay. Hepplewhite was best known for his shield-back chairs.

Heptane, any chemical compound having the formula C₇H₁₆. Such compounds are saturated, or paraffin, hydrocarbons. Normal heptane or n-heptane is used in car fuels to determine OCTANE ratings.

Heptarchy, generally recognized term for the seven Anglo-Saxon kingdoms from the 5th century to the Danish invasions of the 9th, including Mercia, Northumbria, Sussex, Kent, East Angles, Essex and Wessex. *See also* pp 1288, 1289, 1300, 1301.

Hepworth, Dame Barbara (1903-76), English sculptor. Her carvings in wood or stone have a poetic quality in the open and closed form of the abstract works. Much of her later work is in bronze. *See also* p 1764, 1765.

Hera, in Greek mythology, the daughter of Cronus and Rhea, queen of the Olympian gods, sister and wife of ZEUS. Depicted with crown and sceptre, she was worshipped as patron of ARGOS and SAMOS. In myths she appears as a jealous widow who persecuted her rivals but helped heroes such as JASON and ACHILLES.

Heraclitus (536-470 BC), pre-Socratic philosopher. He maintained that all things are constantly changing, even the universe is a whole, since only change is real, the orderliness of successive changes, or the world's destiny is all that remains the same.

Heraclius (c 575-641), Byzantine emperor (r 610-41). One of Byzantium's greatest rulers, he came to power at a time of economic, political and military crisis. Byzantium's enemies had overrun vast territories, but, under Heraclius, far reaching reforms in the army and administration led to an improvement in the internal situation and to Byzantium's defeat of the Persians (622-628).

Heraclius. *See* HERCULES.

Heraclion. *See* IRACLIION.

Heralds' College. *See* COLLEGE OF HERALDS.

Herat, city and provincial capital in NW Afghanistan, on the Hari Rud. Originally the ancient city of Aria. Herat served as SAMERIAN capital in the fifteenth century. Its present industries include textile weaving. Pop. 62,000.

Herb, seed-bearing plant, usually with a soft stem that withers away after one growing season. Most herbs are flowering plants, or ANGIOSPERMS. The term is also applied to any plant used as a flavouring, seasoning or medicine, such as THYME, SAGE and MINT. *See also* pp 708, 709.

Herbart, Johann Friedrich (1776-1841), German philosopher who maintained a doctrine of "reals" in permanent and objective entities in nature. In his view metaphysics and psychology are unified and ideas act in much the same way as do forces in physics. His educational doctrine, Herbartianism, became influential in the USA until superseded by the ideas of JOHN DEWEY.

Herbert, Sir Alan (Patrick) (1890-1971), British humorist, novelist and librettist. He was a barrister and was member of parliament for Oxford University from 1935 until university seats were abolished in 1950. His novel *Holy Deadlock* (1934) led to a reform of the British marriage laws. He also campaigned for an improvement in the legal rights of authors.

Herbert, George (1593-1633), English poet. Educated at Cambridge University, he was disappointed in his hopes of a court appointment. After four years in quiet retirement he took full orders in 1630 and became vicar of Bemerton in Wiltshire until his death. His verse, remarkable for its gentle tone, was collected and published after his death as *The Temple*. **Herbert, George Edward Stanhope Molyneux, 5th Earl of Carnarvon** (1866-1923), British archaeologist. He joined Howard CARTER in excavating at Egypt in 1907, and together they discovered the tomb of TUTANKHAMEN in 1922.

Herb Gerard. *See* GROUND ELDER.

Herbicide, chemical substance used to kill weeds and other unwanted plants. There are two kinds: selective herbicides such as 2,4-D, 2,4,5-T and MCPA, which kill the weeds growing with crops, leaving the

Hans Werner Henze's work has had a great influence on the best in post-war Germany.

Katherine Hepburn and Spencer Tracy in one of her great successes *ABR of Divorcement* (1932).

Barbara Hepworth's work is represented in major galleries in Europe and the USA.

Heraclitus believed there was a hidden connection between everything in the universe.

crusts unharmed, and non-selective herbivores such as sodium arsenite which kill all the vegetation with which they come into contact.

Herbivore, animal that feeds solely on plants. The term is most often applied to mammals and especially to the ungulates or hoofed mammals. The herbivores are characterized by broad molars and blunt-edged teeth, which they employ in pulling, cutting and grinding their food. Their digestive systems are adapted to the assimilation of cellulose. Cows, for instance, regurgitate their food and have some seven stomachs for this purpose. Cattle, sheep, deer, horses and goats are known as grazers inasmuch as they feed from the ground, eating the grass, whereas giraffes and elephants tear leaves from bushes and trees.

Herb robert, common weed of the geranium family that grows in temperate regions. It has a strong unpleasant smell, pink flowers and deeply-lobed leaves. Family Geraniaceae, species *Geranium robertianum*.

Hercegovina, Herzegovina. See BOSNIA-HERCEGOVINA.

Herculaneum, ancient city in Italy, on the site of modern Resina. Devastated in AD 62 by an earthquake, it was buried in AD 79 with POMPEII by the eruption of Mt VESUVIUS. Archaeological excavations begun in 1709 have unearthed a Villa of the Papyri, which contained a library.

Hercules, Greek hero, renowned for his valour and strength. He spent 12 years at the court of King Eurystheus, where he performed his 12 famous labours: he killed the Nemean lion and the HYDRA, caught the Erymanthian boar and the Cerynean hind, drove away the Stymphalian birds, cleaned the Augean stables, caught the Cretan bull and Diomedes' horses, stole the girdle of HIPPOLYTE, killed Ceryon, captured CERESUS, stole the golden apples of Hesperides. See also p.1902.

Herder, Johann Gottfried von (1744-1803). Prussian philosopher and cultural historian. He believed that human society is an organic and secular totality that develops as the result of an historical process. His claim that a nation and its language define an essential cultural unity anticipated "nationalist" sentiment. Herder was also a founder of German Romanticism and an opponent of Immanuel KANT. He wrote *Ideas on the Philosophy of History of Humanity* (1784-91), which applies the concept of history to all areas of human culture. See also pp.1206, 1208, 1305, 1308, 1309.

Heredia, town in central Costa Rica. Founded in 1571, it is noted for its colonial architecture. It is situated on the country's central plateau and is a centre of the coffee and livestock industries. Pop. (1970) 24 021.

Hereditary disorders, abnormal conditions of the body or mind transmitted genetically. They are clearly distinguished from CONGENITAL DISORDERS which are acquired in the womb or at birth. Their effects are various, depending on which parts of the body they affect. Their frequency of occurrence, however, depends mainly on whether they are handed down as recessive genes or as dominant genes. An example of the first is the disease SICKLE-CELL ANAEMIA, which is much more severe if inherited from both parents. An example of the second is ACHONDROPLASIA, or abnormal shortness of the arms and legs, the gene from only one parent is needed to cause this condition.

Heredity, transmission of physical and other characteristics from one generation of plants or animals to another. These characteristics make up an organism and make it different from others. The combination of characteristics may be specific to the individual, such as blue eyes and blond hair, or it may be typical of the type of organism, such as simply having external ears. These features are passed on by genetic codes from parent to offspring. The first reliable studies of heredity were done during the 19th century by Gregor MENDEL. See also pp.178-179.

Hereford, widespread breed of BEEF CAT.

Hereford. Originally from Herefordshire, there are now numerous herds in various parts of the world, particularly in the USA and Argentina. Herefords gain weight quickly on comparatively little food and adapt well to semi-arid conditions. The animals are red-brown with white faces, and are usually horned. The polled Hereford is a separate breed, without horns. See also pp.724, 724, 730.

Hereford and Worcester, county in central England formed in 1974 from the former counties of Herefordshire and Worcestershire. Area 3,926sq km (1,516sq miles).

Herero, Negroid people of Namibia (South West Africa). By tradition, the Herero are nomadic pastoralists who practise ancestor worship, although European influence and Christianity are now widespread. Both matrilineal and patrilineal descent exist in a society governed by localized autonomous units. Many of the Herero died during a revolt against German rule (1903-07).

Heresy, denial of or deviation from orthodox religious dogma. The concept is found in most organized religions with a rigid dogmatic system. The early Christian Church fought against heresies such as ARIANISM and NESTORIANISM. In the Middle Ages the INQUISITION was established to fight heresy. After the REFORMATION the Roman Catholic Church described Protestants as heretics because of their denial of many papally defined dogmas, while Protestants applied the same term to those who denied their interpretation of the major scriptural doctrines. Persecutions for heresy were common in most parts of Christendom until relatively recent times. In modern usage the term heresy is also applied to deviation from the "orthodox dogmas" of a secular ideology such as Marxism.

Hereward the Wake (fl. 11th century), leader of Anglo-Saxon resistance to the NORMAN CONQUEST of WILLIAM I. With the aid of a Danish fleet he sacked Peterborough in 1070 and consolidated his forces on the Isle of Ely. William captured Ely in 1071. See also p.1301.

Heriot, Anglo-Saxon and feudal death duty. Originally the return of horses and armour (the word heriot derived from the Anglo-Saxon for military clothing) lent by a lord to his arms-bearing tenants; it more commonly became a payment in the form of livestock by 1066. In the 12th century heriots became part of the more general concept of feudal relief.

Heriot, George, (1563-1624), Scottish goldsmith and philanthropist who was goldsmith to James I in London where he amassed a fortune and lent the Queen as much as £18,000 at a time. He was the original of "Geordie" in Walter Scott's *Fortunes of Nigel* and left a bequest for founding Heriot's Hospital in Edinburgh.

Herland, Hugh (fl. 1350-1405), English master carpenter whose masterpiece was the wooden roof of WESTMINSTER HALL, London (1397-99), the earliest dated example of a HAMMERSHAM ROOF.

Hermaphrodite, organism that has both male and female sexual characteristics. Hermaphroditic plants are called monoecious. Most normally hermaphrodite animals are invertebrates, such as the PLANARIAN, EARTHWORM and SNAIL, and are sessile or slow-moving. They reproduce by the mating of two individuals which exchange sperm, or when one individual's ovum (egg) and sperm unite. Hermaphroditism also occurs as a rare abnormality in higher animals, including humans.

Hermes, in Greek mythology god identified with the Roman MERCURY, represented with winged hat and sandals and carrying a golden wand. Hermes was the messenger of the gods and patron of travellers and commerce. He conducted the souls of the dead to HADES.

Hermit crab, small, common crab-like CRUSTACEAN found in tidal pools and shallow water worldwide. It uses sea-shell to protect its soft abdomen, using larger shells as it grows. Some forms are terrestrial and do not use shells as adults. Family Paguridae. See also NW p.105.

Hernandez, José (1834-86), Argentine

poet. His narrative poem *Martin Fierro* is Argentina's national epic and the outstanding poem of the gaucho genre. It was published in two parts, *Departure* (1872) and *Return* (1879).

Hernia, protrusion of an organ, or part of an organ, through its enclosing wall or through connective tissue. Common types of hernias are protrusion of an intestinal loop through the umbilicus (umbilical hernia) or inguinal canal of the groin (inguinal hernia) or protrusion of part of the stomach or oesophagus into the chest cavity through the opening (hiatus) of the oesophagus into the diaphragm (hiatus hernia). See also p.1071.

Herod Antipas (21 BC-AD 39), tetrarch of Galilee and Petraea (4 BC-AD 39), son of HEROD THE GREAT. He had John the Baptist beheaded at the instigation of his wife Herodias and his step-daughter Salome. He refused to intervene in the trial of Christ, leaving his fate to the Roman procurator Pontius PILATE. The Emperor CALIGULA banished him to Gaul in AD 39.

Herod Agrippa I (c. 10 BC-AD 44), grand son of HEROD THE GREAT and King of Judaea (AD 41-44). He became king as a reward for helping to gain the Roman emperorship for CLAUDIUS. He was a zealous opponent of Christianity.

Herod Agrippa II (AD 27-c. 93), son of HEROD AGRIPIA I and last of the rulers of the Herodian dynasty. He was King of Chalcis from AD 50 and tetrarch of NE Judaea from AD 53. He tried in vain, to prevent a rupture between Rome and the Jews.

Herodotus (c. 485-425 BC), Greek historian and geographer. He made lengthy journeys through the ancient world and helped to colonize Thurium in Italy. He is best known for his vivid history of the Persian Wars. Considered the beginning of Western history writing, his work contains much and varied information and is rich in anecdotes. See also THECUDINS pp.1187, 1188, 1222, 1381.

Herod the Great (73-4 BC), King of Judaea from 40 BC to his death, appointed by MARK ANTONY. His principal achievement was to gain favour for the Jews with the Roman state. Five days before his death he had his son, Antipater killed for plotting against him.

Heroic couplet, in English poetry, two consecutive lines of iambic pentameter rhyming verse, used in epic or "heroic" poetry. It was mastered by John DRYDEN and perfected by Alexander POPE. In French poetry it consists of two lines of twelve syllables, the ALEXANDRINE.

Heroin, drug synthesized from MORPHINE. Compared to morphine, heroin requires a smaller dose to produce similar effects more quickly, including reduction of pain, euphoria and depressed respiration. Sweating and vomiting are side effects. Heroin produces dependence, ie it is addictive. Its unprescribed use is illegal in many countries, and its abuse has been widely publicized in the richer democracies, such as the United Kingdom and the USA. See also pp.1218, 1219.

Heron, any of several species of wading birds that live near rivers and estuaries. Herons have white, grey or brown plumage, a long thin neck and legs, broad wings and a sharp, dagger-like bill. They feed mainly on fish and nest early in large groups, called heronries. Height to 1.8m (6ft). Family Ardeidae.

Hero of Alexandria (fl. c. 1st-2nd century AD), Greek engineer who built an early steam engine, called an aeolipile. He used it to control doors automatically and to power moving statues.

Herophilus (c. 335-c. 280 BC), Greek anatomist who practised at Alexandria and was one of the first to experiment with post mortem examinations.

Héroult, Paul-Louis-Toussaint (1863-1914), French chemist who developed the method of extracting aluminium from the electrolysis of cryolite. Héroult also invented an electric-arc furnace for refining steel. See also p.400.

Herpes, infectious virus. *Herpes simplex* infects the skin and is characterized by blisters. These are called cold sores when they appear on the lips. *Herpes zoster* attacks nerve ganglia, causing SHINGLES.

Herefords, native to England, were first exported to the USA in 1817.

Hereward the Wake's fate is unknown, although he became a legendary hero.

Hermit crab, one kind the robber crab, grows to a size of 15cm (6in) across.

Herod the Great, according to legend, sought to destroy the new-born Messiah.

Herpetology, branch of zoology that deals with AMPHIBIANS and REPTILES. Areas of study include taxonomy (classification), life history and geographical distribution. See also ZOLOGY pp 64-71

Herrera, Juan de (c 1530-97), Spanish architect. He succeeded Juan de Toledo in designing the ESCORIAL near Madrid. His partly executed plans for Valladolid cathedral were influential in cathedral architecture in Spain and the New World.

Herrick, Robert (1591-1674), English cavalier poet, disciple of Ben Jonson. Educated at Cambridge University and ordained in 1623, he was ejected from his living (1647-62) for royalist sympathies, but regained his post after the Restoration. His best poems, notably the collection *Hesperides* (1648), have great lyric freshness and simplicity.

Herring, marine schooling fish found worldwide. One of the most important food fish, various species are canned as PILCHARD or SARDINE and sold fresh, pickled or smoked (kippers and bloaters). Herrings have a laterally compressed body, a deeply forked tail fin and a large mouth. Length 8-46cm (3-18in). Family Clupeidae, the 190 species include *Clupea harengus*. See also pp 58, 58, 62, 340, 739, 744, 744, 745.

Herrings, Battle of the (1429), inconclusive battle in the HUNDRED YEARS WAR at Rouvray between French and English forces. The English, under Sir John FASTOLF, were bringing provisions, mainly herrings, to the besiegers of Orleans.

Herrmann, Bernard (1911-), US composer and conductor of the CBS Symphony Orchestra (1940-55). He made his name as a composer of radio and film music. His many film scores include *Citizen Kane* (1941) and *Psycho* (1960). He also wrote an opera, *Wuthering Heights* (1965).

Herschel, Sir John Frederick William (1792-1871), British mathematician and astronomer. He continued his father's observations of double stars, and discovered many previously unobserved nebulae and stellar clusters in the sky. His books included *A General Catalogue of Nebulae* (1864), which later was revised as the NEW GENERAL CATALOGUE (NGC). He also contributed to the study of stellar parallax. See also p 982.

Herschel, Sir William (1738-1822), British astronomer, b. Germany. He moved to Britain during the Seven Years War. A renowned maker of telescopes, he made many discoveries (including in 1781 the planet Uranus) and mapped numerous galactic nebulae. See also pp 931, 931, 982, 988, 996, 1007.

Hershey, Alfred Day (1908-), biologist who shared with M. DELBRICK and S. E. LURIA the 1969 Nobel Prize in physiology and medicine for his part in discoveries concerning the way viruses reproduce. He also found evidence that nucleic acid contains the genetic material of the CELL.

Hertsmere, village in East Sussex, s England. It is the site of a 15th-century castle, a notable example of early brick buildings, and the ROYAL GREENWICH OBSERVATORY, which was moved to the village from Greenwich, London, in 1958. See also p 921.

Hertford, county town of Hertfordshire, s central England, on the River Lea. Records of the settlement date from AD 672 when it was the site of a general synod. A market town, Hertford's industries include brewing and light engineering. Pop. (1971) 20,370.

Hertsmere, county district in s Hertfordshire, England, created in 1974 under the Local Government Act (1972). Area 98sq km (38sq miles). Pop. (1974 est.) 90,000.

Hertz, Gustav (1887-1957), German physicist, who shared the 1925 Nobel Prize in physics with James FRANCK for his work on the laws of impact between electrons and atoms. He was Professor of Physics at Berlin and Director of the Siemens Research Laboratory until 1945. He worked as head of a research laboratory in the USSR from 1945-54, returning then to East Germany to become Director of the Physics Institute at Leipzig.

Hertz, Heinrich Rudolf (1857-94), German physicist who discovered radio waves. He was assistant to Hermann HELMHOLTZ and held professorships at Karlsruhe and later at Bonn. He discovered, broadcasted and received the radio waves predicted by James CLERK MAXWELL. He also demonstrated the phenomenon of electromagnetic or electric waves and showed that their velocity and length could be measured and that heat and light are also kinds of electromagnetic waves. The unit of frequency, HERTZ (Hz), is named after him.

Hertz, unit of frequency named after Heinrich HERTZ. A periodic phenomena that has a period of one second is equivalent to 1 Hz. This unit replaces the cycle per second. Commonly used multiples are the kilohertz (kHz, 1,000Hz) and megahertz (MHz, 1,000,000Hz).

Hertzprung, Ejnar (1873-1967), Danish astronomer who in 1908 devised a diagram illustrating the relationship between the luminosities, surface temperatures and spectral types of stars. He anticipated the work of Henry RUSSELL in the USA a few years later. The diagram is now known as the HERTZSPRUNG-RUSSELL, or H-R diagram. See also pp 478, 481, 990 and the entry immediately below.

Hertzprung-Russell, or H-R diagram, in astronomy, graph of the luminosity of a star (absolute magnitude) as a function of its surface temperature, which is related to its spectral class. Most stars fall inside a diagonal belt, called the main sequence, that extends from the hot, bright blue giants to the cool dim red dwarfs.

Hertzog, James Barry Munnik (1886-1942), Boer military commander and political figure. He served as a judge in the Orange Free State, a guerrilla leader in the SOUTHERN AFRICAN WAR (1899-1902) and later became minister of justice for the new Union of South Africa. He was temporarily excluded from the government for his anti-British sentiments but became prime minister in 1924. He resigned in 1939 after Parliament voted to support Britain in WWII.

Herzberg, Gerhard (1904-), scientist and Nobel Prize winner. Born in Hamburg and educated at Darmstadt, Göttingen and Bristol, he settled in Canada in 1935.

He joined the National Research Council in Ottawa in 1949, and became their first Distinguished Research Scientist in 1969. He was awarded the 1971 Nobel Prize in chemistry for his work on the electronic structure and geometry of molecules, particularly radicals.

Herzegovina. See BOSNIA-HERZEGOVINA.

Herzl, Theodor (1860-1904), Jewish leader and the founder of political Zionism, b. Austria-Hungary. A lawyer and a journalist, in 1897 he became president of the World Zionist Organization, which worked throughout Europe to establish a Jewish national home in Palestine. Herzl wrote of himself as the founder of the Jewish state, and in 1904 his body was reburied in Israel.

Hesdin, Jacquemart de (fl 1384-1411), Flemish manuscript illustrator. His four illuminated manuscripts for Jean, duc de Berry, show both a French and Italian influence.

Heseltine, Philip. See WARLOCK, PETER.

Hesiod (8th century BC), classical Greek poet. The first major poet after HOMER and the first to reveal his personality through his poetry, he is best-known for his *Works and Days*. In *Theogony* he traced the mythological history of the gods. See also p 1208.

Hesperides, in Greek mythology daughters of ATLAS and HESPERUS who were charged by JUPITER with guarding her precious golden apples. As the last and most difficult of his 12 labours, HERCULES was required to obtain the golden apples. He tricked Atlas into helping him, and successfully retrieved the apples.

Hesperidin, vitamin-like substance found in citrus fruits, particularly unripe fruits. It has the chemical formula $C_{28}H_{34}O_{15}$ and is a GLYCOSIDE.

Hesperus (Hesperos), in Greek mythology, the evening star, King of the Western Land and grandfather of the HESPERIDES.

Called Vesper by the Romans, Hesperus later became identified with PHOSPHORUS, the bringer of light (Latin Lucifer), the morning star.

Hess, Dame Myra (1890-1965), British pianist. She made her debut in London in 1907 and first performed in the USA in 1922. She was best known as an interpreter of the Baroque composers Scarlatti and J. S. Bach and of the concertos of Mozart.

Hess, Rudolf (1894-), German Nazi leader. He joined the Nazis in 1921 and took part in the abortive Munich putsch in 1923. He was Adolf HITLER's deputy from 1933, but lacked influence; he flew alone to Scotland in 1941 in an attempt to make peace with the British. Imprisoned for the rest of the war, he was afterwards sentenced to imprisonment for life.

Hess, Victor Francis (1883-1964), US physicist, b. Austria. As a result of his investigations into the ionization of air, he suggested that radiation similar to X-rays comes from space, later named COSMIC RAYS. He shared the 1936 Nobel Prize in physics with Carl ANDERSON. Soon after receiving the prize, Hess emigrated to the USA.

Hess, Walter Rudolf (1881-1973), Swiss physiologist. He shared with A. de EGAS MONIZ the 1949 Nobel Prize in physiology and medicine for his work on how specific, highly circumscribed areas of the brain control body functions, such as blood circulation, muscle relaxation and breathing rate.

Hesse, Hermann (1877-1962), German novelist and poet. He spent much of his life studying Indian mysticism and Jungian psychology, as expressed in the novels *Demian* (1919), *Siddhartha* (1922), *Steppenwolf* (1927), *Narziss und Goldmund* (1930) and *The Glass Bead Game* (1933). He was awarded the 1946 Nobel Prize in literature.

Hessian fly, brown to black fly found in the Tropic of Cancer and in New Zealand. It is a serious pest of wheat and other grains. Length 4-6mm (0.16-0.24in). Family Cecidomyiidae, species *Mayetiola destructor*.

Hew's law, in physical chemistry, law referring to the heat produced in absorbed during chemical reactions leading to the preparation of any chemical compound. It states that the net value of this heat is the same by any chemical route.

Hestia, in Greek mythology goddess of the burning hearth. In the myths she is the unmarried daughter of Cronus and Rhea, who scorned the attentions of Apollo and Poseidon and was installed in Olympus by ZEUS. She was revered as the oldest of the Olympian goddesses. In all Greek towns a flame burned continuously at the Public Hearth. In Rome, virgins (originally two in number) tended the fire at her temple, where she was worshipped as Vesta. See also VESTAL VIRGINS.

Heston, Charlton (1924-), US actor noted for his distinctively virile screen performances, originally associated with heroic epics such as *The Ten Commandments* (1956), *Ben Hur* (1959) and *El Cid* (1961). He gave more exacting performances in *The War Lord* (1965), *Will Penny* (1967) and *Khartum* (1966).

Heterocyclic compounds, in organic chemistry, compounds having a ring structure consisting of atoms of carbon and an atom or atoms of any other element. Pyridine, C₅H₅N, containing a nitrogen atom, is an example.

Heterodyne, in radio, the production of one frequency as the difference of two others. It is used in radiofrequency oscillators and in receivers. The heterodyne system was invented by Reginald A. FESSENDEN in 1905.

Heterosexuality, attraction of a male or female to members of the opposite sex. The word is used to distinguish such attraction from homosexuality.

Heterotroph, organism classified according to its method of obtaining nutrition. Autotrophs can synthesize their own food from inorganic materials, as do most green plants; heterotrophs require organic compounds to sustain life. All animals includ-

Heinrich Rudolf Hertz, whose researches made radio, television and radar possible.

Rudolf Hess, seen with Hermann Goering at the Nuremberg Trials in December 1946.

Hermann Hesse left Germany for Switzerland and becoming a Swiss citizen in 1927.

Hessian fly females lay up to 300 eggs, which hatch in five days and devour wheat ears.

Heterozygote

Thor Heyerdahl's *Ra* journey linked Egyptian and Pre-Columbian cultures

Hibiscus: the Chinese often used the tropical variety to stain their teeth and eyebrows

Wild Bill: Hickok never killed a man except in self defence or while on official duty

Hieratic script: the lower part of the sepulchral tablet of Amenhotep III, official of King Userkhat

ing man, are heterotrophic

Heterozygote, organism possessing two different hereditary units in a CHROMOSOME PAIR. In human beings, for example, one chromosome contains the GENE for dark hair and the other the gene for fair hair. See also HOMOZYGOTE

Hevelius, Johannes (1611–87), Polish astronomer b. Danzig, where he used his home observatory to chart the Moon's surface, catalogue more than 1,500 stars and discover four comets. His Moon atlas *Selenographia* charted many lunar features

Hevesy, George Charles de (1855–1966), Hungarian-Swedish chemist, who was awarded the 1943 Nobel Prize in chemistry. Co-discoverer of the element hafnium (Hf) in 1923, he was also an early researcher into the uses of radioactive isotopes, including their use as "tracers" in living tissue. In the early 1940s he fled from Germany, where he had been teaching, to live in Sweden. He worked with Ernest RUTHERFORD in England and later with Niels BOHR in Copenhagen

Hewish, Antony (1924–), British radio astronomer who shared with Sir Martin RYLE the 1974 Nobel Prize in physics. After WWII Hewish returned to Cambridge University, where he had been educated, to do research and with S. J. Bell in 1967, while surveying the sky with a radio telescope, he discovered the first PULSAR. Hewish became Professor of Radioastronomy at Cambridge in 1971

Hexachlorophene, germicide used as a local antiseptic on the skin, usually in combination with soap. It is used in preparations to combat acne and, very rarely, sensitivity reactions may occur to it

Hexameter, verse line of six metrical feet. DACTYLIC hexameter (the oldest form of Greek verse, characterizes the epic poetry of Homer. An example of the use of the hexameter in English poetry is *Evangelina* (by LONGFELLOW)

Hey, Donald Holroyde, (1904–), Welsh chemist who was professor of chemistry at King's College, University of London from 1945 to 1950. He held many other academic posts and was awarded honorary degrees all over the world

Heyer, Georgette (1904–74), British popular novelist. Her prodigious output of historical romantic fiction includes *Devil's Cub* (1934), *The Cornelian* (1940) and *The Black Sheep* (1966)

Heyerdahl, Thor (1914–), Norwegian ethnologist who, with five companions drilled on the balsa raft *Kon Tiki* (approximately 8,000km (5,000 miles) across the Pacific Ocean from Peru to Polynesia (1947) in an attempt to prove that the Polynesians came from South America and not from South-East Asia. Pursuing his theory, Heyerdahl led archaeological expeditions to the GALAPAGOS ISLANDS (1943) and to Bolivia, Peru and Colombia (1954). In 1970 he sailed from Africa to the West Indies in the papyrus boat *Ra II*

Heymans, Cornille (1892–1968), Belgian medical researcher. He was awarded the 1938 Nobel Prize in physiology and medicine for his contributions to an understanding of how breathing and blood pressure are regulated in the body

Heyrovský, Jaroslav (1890–1967), Czechoslovakian chemist. He was awarded the 1959 Nobel Prize in chemistry for the discovery of polarography, an electrochemical method of analysis that can be used with substances which undergo electrolytic oxidation or reduction in solution

Heyse, Paul Johann Ludwig (1830–1914), German writer. His work is often artificial in style and includes the short story *L'Arabbuata* (1855), the verse tragedy *Meleager* (1854) and the novel *Children of the World* (1872). He was awarded the Nobel Prize in literature in 1910

Heywood, John (c.1497–c.1580) English dramatist. His work was popular at the courts of Henry VIII and Mary I but, being an ardent Roman Catholic, he left England on the Accession of Elizabeth I. He wrote dramatic interludes of a comic nature, which mark the beginning of the 16th-century drama of types and

HUMOURS. Among the plays attributed to him are *The Pardoner and the Friar* (c.1519) and *The Play of the Weather* (1533)

Heywood, Thomas (c.1574–1641), English dramatist. Despite a busy career as a professional actor, he wrote numerous plays, non-dramatic works in verse and prose, and translations. Much of his writing was hasty and superficial, but some work, eg *A Woman Killed with Kindness* (1603), shows dramatic merit

Hezekiah, (c.720–690 BC), King of Judah who led an unsuccessful revolt against the Assyrians in 701. He built an important watercourse to Jerusalem. The prophets ISAIAH and MICAH preached during his reign. See also p.1188

H I and H II regions, interstellar regions made up of neutral (H I) or ionized (H II) hydrogen. H I regions produce characteristic emissions of radio waves at a wavelength of 21cm (8.5in). H II regions, having been excited by nearby hot stars, shine optically as emission NEBULAE. See also pp.982–983

Hibanus hernia. See HERNIA

Hiawatha, The Song of (1855) narrative poem by Henry Wadsworth LONGFELLOW based on American Indian folklore. It recounts the adventures of Hiawatha, a leader of the Onondaga tribe

Hibernation, dormant condition adopted by certain animals to survive the harsh conditions of winter. Adaptive mechanisms to avoid starvation, drying out and extreme temperatures include a reduction in blood pressure, a slower heartbeat and respiration rate and decreased endocrine gland activity. See also p.304

Hibiscus, genus of plants, shrubs and small trees native to tropical and temperate regions and cultivated throughout the world. Most species have large white, pink, yellow or red bell-shaped flowers with darker or variegated centres. Family MALVACEAE. See also p.382

Hiccup (hiccough), spasmodic contraction of the DIAPHRAGM followed by a short inhalation that is stopped by closure of the GLOTTIS, producing a typical sound. It is caused by irritation of the nerves leading to the diaphragm and is a symptom of several diseases, such as TYPHOID FEVER and BRIGHT'S DISEASE

Hickey, William, name given to the gossip columnist of the London newspaper the *Daily Express*. The name was first affixed to the column in the issue of 29 April 1933. Since then the column has been published without a break

Hickok, James Butler ("Wild Bill") (1837–76), US law enforcement officer. He was a stagecoach driver and marksman. He served in the Union Army during the AMERICAN CIVIL WAR as a guerrilla fighter and was a scout for Gen. George CUSTER in his wars against the American Indians. He served as US Marshal in Kansas (1869–71). In 1872–73 he toured the country with BUFFALO BILL as a sharpshooter and trick rider. He was shot dead in a saloon in Deadwood, South Dakota, while playing poker

Hickory, deciduous tree of the WALNUT family native to a North America. Hickories are grown for ornament, timber and for their nuts. Height 25m (80ft). Family Juglandaceae; genus *Carya*. See also PEECAN

Hicks, Sir John Richard (1904–), British economist. He became a fellow of All Souls', Oxford, in 1952, and was professor of political economy, Oxford (1952–65). He has written many books and in 1972 he won the Nobel Prize in economics

Hidalgo, minor planet discovered by Walter BAADE in 1920. It has an eccentric path that takes it out almost as far as the orbit of Saturn over a period of approx. 14 years. With a diameter of approx. 24–48km (15–30 miles), Hidalgo has the greatest orbital inclination (42.5°) of any known planet. See also pp.912–913

Hide, unit of land area in Britain from Anglo-Saxon times. It was the amount of land considered necessary to support a peasant family and varied from 120 to 140 acres. It was the central unit of the Old English agrarian economy and the basis of taxation until the 14th century

Hierarchy, in social groups and organizations, ranked system in which the position of members is determined by their relative importance to the group and their proximity to power. In hierarchical societies ranking may be based on such criteria as sex, age and tasks performed. In business it is determined by such factors as position held, personal influence and work effectiveness. See also CLASS pp.1811, 1814, 1835, 1850, 1851

Hieratic script, cursive form of Egyptian HIEROGLYPHICS. Hieratic script was developed early for convenient and quick writing, especially on papyrus documents. See also p.600

Hieroglyphics, type of writing in which meanings are represented by pictures, used in ancient Egypt and also in Crete, Asia Minor, Central America and Mexico. Only the Egyptian system has been fully deciphered. See also pp.608, 609, 608, 610–611

Higashiodaka, city on the SW coast of Honshu island, Japan. It was formed by the union of Kasaka and Kusume in 1967. Industries include engineering and chemicals. Pop. (1970) 500,173

Higgins, Frederick Robert (1896–1941), Irish poet. Much of his poetry, lyrical in tone, was published by the Cuala Press and includes *Island Blood* (1925), *The Dark Breed* (1927) and *Arable Holdings* (1933)

High, area of high pressure, often shown on weather maps, associated in the Northern Hemisphere with anticyclones (clockwise, outward, atmospheric circulation). See also LOW, pp.248, 249

High blood pressure, elevation of arterial BLOOD PRESSURE above normal levels. In a normal healthy person, systolic blood pressure (maximum pressure reached when the heart contracts) is generally considered to be 120mm of mercury (mm Hg), and diastolic pressure (minimum reached when the heart is relaxed) 80mm Hg. Persistence of high blood pressure, called hypertension, may be of unknown cause (essential, or primary, hypertension) or may be secondary to a variety of conditions, including kidney, cardiovascular or central nervous system diseases, adrenal gland tumours, and toxæmia of pregnancy. Treatment of high blood pressure is by weight reduction, salt restriction and anti-hypertensive drugs. Hypertension shortens life and, if untreated, leads ultimately to damage of vital organs. See also pp.1066, 1067, 1114

High Church, term describing the part of the Anglican Church which, by stressing its historical continuity with the pre-Reformation Church, still employs some ceremonial rites and vestments that were allowed to lapse by Protestant Churches. "High" in this sense means "grand" or "main" (as in High priest or High mass). The more Protestant side of the Anglican Church is sometimes called Low Church. See also OXFORD MOVEMENT

High Commissioner, the appointed representative of a Commonwealth country in the capital of another Commonwealth country

High Court, in English law the supreme court of judicature, reorganized by the Administration of Justice Act of 1970. It consists of three divisions: the QUEEN'S BENCH, the CHANCERY, and the Family division. As it was originally first formed under the terms of the Judicature Act of 1873, it had ten divisions

High diving. See DIVING

High explosive (HE), substance which, when detonated, burns rapidly to produce hot gases that expand and exert a violent force on the surrounding space. An example is TNT. See also BOMB, GUNPOWDER pp.582, 583

High-fidelity, sound recording and reproduction with the minimum of distortion, usually involving the use of high quality components and circuits. The original sound source may be a gramophone record, magnetic tape, a radio signal or a live performance. An audio amplifier is required to "magnify" the signals, and one or more loudspeakers are needed to make the source audible. Domestic high-fidelity sound systems have been made since the

1920s, but did not become common until the advent of long-playing gramophone records in the 1950s and 1960s. Recent developments have included stereophonic sound, recorded on two channels and quadraphonic sound, recorded on four. See also pp 642-643.

Highgate, residential suburb in N London, its name deriving from a toll gate that stood there. Francis Bacon and Samuel Taylor Coleridge lived there, buried in Highgate Cemetery are Karl Marx, George Eliot, Michael Faraday and Herbert Spencer.

High jump, field athletics event for men and women in which a competitor, taking off from one foot, attempts to jump over a bar suspended between two uprights. If successful, he or she may attempt to clear a new height, if the bar is dislodged, the jump counts as a failure. Under IAAF rules, a competitor has up to three attempts to clear each height. There are three main styles of high jumping: the outmoded Western roll, the straddle and the recently introduced Fosbury flop, in which the jumper clears the bar backwards. With the leading men jumping c 2.30m (7ft 6in) and the women c 1.96m (6ft 5in), the 'air bed' landing mats are essential. The high jump has been an Olympic event since 1896.

Highland, region in N Scotland, formed in 1975 from the former counties of Caithness, Ross and Cromarty, Sutherland and Inverness (excluding the Western Isles) and Na h-Eileanan Siar and Argyll. Area 25,130sq km (9,735sq miles). Pop (1975 est.) 182,000.

Highland Games, series of athletics meetings, often professional, held during the autumn in the Scottish highlands. Dancing, bagpipe playing, running and field events make up the programme, with pride of place going to tossing the caber, for which entrants wear a kilt. The modern games, principally the Royal Balmoral Games, date from the early 19th century.

Highlands, Scottish mountain and moorland region lying N of a line running SW to NE approx from Dumbarton to Stonehaven. The area is divided geologically into the Northwest Highlands and the Grampian Highlands, separated by Glen More. In an effort to halt the decline in population through emigration caused by poverty, hydroelectric power and forestry schemes have been introduced. Tourism is also an increasing source of income.

High-temperature physics, production and analysis of the effects of temperatures above 50,000°C (90,000°F). At such temperatures atoms begin to be ionized (stripped of their electrons) and a fourth state of matter, called a plasma, is achieved. Normal stars are plasmas, so is the region around an exploding hydrogen bomb. To make controlled thermonuclear fusion (joining of light nuclei and release of energy) a reality, physicists must find a way to confine a plasma at temperatures of over a million degrees. See also MAGNETIC BOTTLE pp 814-815.

Highway Code, British government publication outlining rules of good conduct on the roads, issued by the Secretary of State for the Environment.

Highwaymen, bandits who specialized in robbing coaches on the highways of 17th and 18th-century England. Many highwaymen became local heroes, such as John Nevison (1639-84) and Dick Turpin (1706-39), who operated in the forests around London.

Hijacking, illegal capture usually of an airliner, by one or more of its passengers. The commonest motives are political, and the other passengers are held hostage towards some goal. The first hijacking, in 1968, involved a US airliner which was forced to land in Cuba. The crime reached a peak in the early 1970s, but stricter security measures and some dramatic rescues have decreased its incidence.

Hiking, leisure activity in which people travel about by walking. It grew in popularity between the World Wars as a cheap way of enjoying the countryside and was boosted by the growth of the Youth Hostel and Ramblers' associations. Using detailed maps to avoid main roads, hikers

can easily walk 32 to 48km (20-30 miles) a day. Sturdy walking shoes, or boots, and thick socks are recommended and a rucksack is standard equipment for carrying food, clothes and a first aid kit. In the UK there are nine official long-distance footpaths for hikers.

Hilary of Arles, Saint (403-449), Archbishop of Arles and leader of the theological school of SEMI-PAGANISM. Feast 5 May.

Hilary of Poitiers, Saint (c 315-367), the 'Athanasius of the West', known for his defence of Christian orthodoxy against Arianism. Feast 13 January.

Hilda, Saint (614-80), Anglo-Saxon abbess, the great-niece of Edwin of Northumbria. She founded the monastery of Whitby in 657.

Hildebrand, Adolf von (1847-1921), German sculptor. The Italian classical influence on his style is evident in his many statues, including his equestrian statue of Bismarck in Bremen, and portrait busts. He designed numerous private and public fountains.

Hildebrandt, Lukas von (1668-1745), Austrian Baroque architect. He studied in Italy where he was influenced by Italian Baroque architecture. In 1723 he became First Court Architect in Vienna. Of the many palaces he designed, the Belvedere in Vienna is considered his masterpiece. He also designed the Peterskirche and the Piaristenkirche, Vienna.

Hilgard, Eugene Woldemar (1873-1946), US geologist and agricultural chemist, b. Germany. He was the first to recognize the close relationship between climatic conditions and soil type. His geological studies laid the foundation for subsequent studies of the Gulf Coast Plain. He was also influential in developing scientific methods for cultivating cotton.

Hill, Alfred (1870-1960), Australian conductor, composer and violinist. He was a violinist with the Gewandhaus Orchestra and professor at the Sydney Conservatorium (1915-35). His interest in the MAORI music of New Zealand is displayed in such compositions as the opera *The Weir Flute* and the *Maori Symphony*.

Hill, Archibald Vivian (1886-1977), British biophysicist. He shared with O J MEYERHOF the 1922 Nobel Prize in physiology and medicine for discoveries relating to the generation of heat in muscles.

Hill, David Octavius. See ADAMSON, ROBERT.

Hill, Geoffrey (1932-), British poet. He writes in a markedly dense style on themes of English history. His volumes include *For the Unfallen* (1959), *King Lear* (1968) and *Mercian Hymns* (1971).

Hill, Graham (1929-75), British motor racing driver who achieved a unique treble, winning the world drivers' championship in 1962 (BRM) and 1968 (Lotus), the Indianapolis 500 in 1966 (Lotus), and the Le Mans 24-hour race in 1972 (Matra). Five times winner of the Monaco Grand Prix, he was killed in an air crash shortly after retiring.

Hill, John, (c 1716-75), English botanist and writer whose book on British flora was the first to be based on the Linnaean system of nomenclature. His *Vegetable System*, in 26 folio volumes, was published from 1759 to 1775.

Hill, John Edward Christopher (1912-), British historian. He was elected master of Balliol College, Oxford, in 1965. His prodigious work on 17th-century Britain has established his pre-eminence in that field.

Hill, Sir Rowland (1795-1879), founder of the penny post in Britain. His invention of the adhesive postage stamp, for which he had some years campaigned, was adopted in the budget of 1839 and introduced in 1840. He was Secretary to the Postmaster General in 1846 and Secretary to the Post Office (1854-1864).

Hill, Susan Elizabeth (1942-), British novelist and playwright. Her first novel was *The Enclosure* (1961) and she established her reputation with her third, *Gentlemen and Ladies* (1969).

Hillery, Sir Edmund Percival (1919-) New Zealand explorer and mountaineer. He participated in the New Zealand and British expeditions to the Himalayas

(1951 and 1953). In 1953 he and his Sherpa guide, Tenzing Norgay, were the first to reach the summit of Mt Everest, the world's highest mountain. In 1955 he led the New Zealand section of the British Commonwealth Trans-Antarctic Expedition. He now spends much time in Nepal where he built a hospital for Sherpa tribesmen in 1966.

Hill climbing. See MOTOR RACING.

Hiller, Dame Wendy (1912-), British actress (bom 1975). In 1936 she played St Joan at the Midvern Festival and made her Broadway debut in *Love on the Dole*. Other appearances include roles in *The Aspern Papers* (1962) and *Waters of the Moon* (1951-53). Her film appearances include *Pygmalion* (1938), *Major Barbara* (1941), *Separate Tables*, for which she won an Academy Award (1958), *A Man for All Seasons* (1966) and *Murder on the Orient Express* (1974).

Hillery, Patrick John (1923-), Irish politician and member of the Dail from 1951 until 1973. He has served as minister of Education, Industry and Commerce of Labour, and of Foreign Affairs. From 1973 until 1976 he was vice president of the commission of the EEC with special responsibility for social affairs. In December 1976 he was appointed President of the Republic of Ireland.

Hill figures, monuments, some of which date from the pre-Roman period depicting men or animals cut into the side of chalk hills. Perhaps the oldest hill figure in Britain is the White Horse of Uffington, on which is probably of the Iron Age and has given its name to the Vale of the White Horse. The Cerne Abbas giant, in Dorset, was cut about 1,500 years ago. The significance of these figures is not clear. See also p 1237.

Hill-forts, late Bronze Age and Iron Age defensive sites in Europe, characterized by a ring of earthworks protecting the top of a hill. The earliest hill-forts were introduced by the CERNILLO people, and in Britain they became common after 500 BC, when intertribal warfare became more prevalent. Some of the hill-forts, such as Maiden Castle or Badbury Rings, had permanent buildings and are considered the first true towns. See also pp 393-395, 1218-1221.

Hilliard, Nicholas (c 1547-1619), English miniaturist and goldsmith, court painter to Elizabeth I and James I. A self-taught painter and the first native-born English artist whose life and work is documented, he painted elegant linear miniature portraits of the highest quality on vellum and on the backs of playing cards. His best known works include *Alce Hilliard*, *Man leaning against a tree with rose bushes* and *Queen Elizabeth*. See also pp 1414-1415.

Hilton, Conrad Nicholson (1887-1979), US businessman who built hotels throughout the USA, Latin America, Europe and the Middle East. He worked in his father's hotel as a child and bought his own first hotel in 1919.

Hilton, James (1880-1954), British novelist and journalist. His works include *Lost Horizon* (1933), a novel set in a Tibetan monastery called Shangri-La, and *Goodbye Mr Chips* (1934), an account of an eccentric schoolmaster at a British public school. Both books were filmed.

Hilversum, municipality in central Netherlands, 27km (17 miles) W of Amsterdam, of which it is a suburb. It is the centre of Dutch broadcasting and is a summer resort noted for its impressive modern architecture. Its industries include electrical machinery and chemicals. Pop (1971) 98,948.

Himachal Pradesh, state in NW India, in the W Himalayas, the *land of the Snows*. Although the state is heavily forested, intensive cultivation is practised in the valleys, potatoes and fruit are grown. Timber provides the main source of income. Area 54,735sq km (21,495sq miles). Pop (1971) 4,615,176.

Himalayan cat, long-haired domestic cat developed from Persian and Siamese breeds. Its body resembles that of a Persian, with a round head, small ears, short tail and a long thick coat. The eyes

Highlands, a glaciated valley: a view typical of many parts of northern Scotland

Adolf von Hildebrand, an example of his work based on classical Greek principles

Rowland Hill's postal reforms were the result of a comprehensive analysis of taxation

are Siamese blue and the coat is cream or white with seal, lilac, blue or chocolate points.

Himalayas, system of mountains in Asia, extending approx 2,400km (1,500 miles) N-S in a long arc between Tibet and India/Pakistan and between the Indus River (W) and the Brahmaputra River (E). The mountains are divided into three ranges: the Greater Himalayas (N), which include Mt Everest, the Lesser Himalayas, running parallel to the Greater and the Outer Himalayas (S). The range marks the beginning of the high Tibetan plateau and is difficult to cross, even by air travel. See also PE pp 214-215.

Himmler, Heinrich (1900-45). German Nazi leader. He took part in the abortive MUNICH PUTSCH (1923) and in 1929 became head of the SS. After the Nazis came to power in 1933 he assumed control of the entire German police system. A fanatical racist, he controlled the Jewish extermination programme. He became minister of the interior in 1943 and head of the army's home organization in 1944. In April 1945 he tried secretly to negotiate peace with the Allies and was expelled from the party. He was captured by the British, but killed himself. See also pp 1704-1705.

Hims. See HOMES.

Hinayana Buddhism, the older of the two major schools of Buddhism. The term *Hinayana*, meaning "Lesser Vehicle", is a commonly used but derogatory name for *Theravada* ("Doctrine of the Elders") and originated at an early stage in the history of Buddhism as a contrast to *Mahayana* ("Greater Vehicle"). Those Buddhists who were dissatisfied with conservative teachings. *Hinayana* Buddhism stresses that sorrow and suffering can be conquered only by the suppression of desire. Desire can be suppressed only if the individual realizes that nothing is permanent, everything is always in a state of flux, and the only stable condition is *NIRVANA*, an undefinable state of rest. *Hinayana* Buddhism is widespread in Sri Lanka and SE Asia. See also MAHAYANA BUDDHISM.

Hindbrain, one of the three primary parts of the BRAIN. In the embryo, the hindbrain develops into the CEREBELLUM, the part of the brain concerned with unconscious muscle co-ordination, and also into the PONS and the MEDULLA OBLONGATA. See also FOREBRAIN, MIDBRAIN.

Hindemith, Paul (1895-1963), German composer who emigrated to the USA in 1939, then from 1953 lived in semi-retirement in Switzerland. Hindemith experimented with dissonance and atonality early in his career, but eventually his works became more melodic and tonal in character. He was a master of counterpoint in music, and many of his compositions are Neo-classical in style. Among his works are the song cycle *Das Marienleben* (1924), symphonies, and concertos such as the viola concerto *Der Schwanendreher* (1935), ballets, chamber music, operas and sonatas. In the 1930s, he developed with Kurt WEILL, *Gebrauchs musik*, or music written for amateur performance. His best-known work is the symphony he derived from his opera *Mathis der Mater* (1934).

Hindenburg, Paul Ludwig Hans von Beneckendorff und von (1847-1941), German general and president (1925-34). Commanding the army on the eastern front in WWI, he defeated the Russians in the Battle of Tannenberg (Aug 1914). In 1918 he became supreme commander and, with his chief-of-staff, Erich Ludendorff, directed the entire war effort (civilian as well as military) until the end of the war. Elected president in 1925, he held office during the collapse of the WEIMAR REPUBLIC. See also pp 1668, 1676.

Hindenburg, German airship built in 1936. Like its sister ship, *Graf Zeppelin* built in 1938, it had 200,000m³ (7 million cu ft) of hydrogen giving a lift of about 232 tonnes, they were the largest airships ever built. In 1937, the *Hindenburg* exploded in flames in the USA with 36 deaths. See also MM pp 146-147.

Hindi, most widespread language in India, spoken principally in the north-central

part of the country by about 154 million people. With English it is an official language. Like the other languages of N India, Hindi derives from SANSKRIT and thus belongs to the Indo-European family.

Hindle Wakes. See HOUGHTON, WILLIAM STANLEY.

Hinduism, traditional religion of India, characterized principally by a philosophy and way of life rather than a dogmatic structure. Unlike other religions, it was not founded by any individual. Its birth is almost synonymous with the beginnings of Indian history about 3000 BC and it has been developing gradually ever since, showing a remarkable ability to absorb external influences and arriving at a synthesis with them. There are several divergent schools within Hinduism, but all Hindus recognize the *VEDAS* as sacred, believe that all living creatures, not merely human beings, have souls, follow the doctrine of TRANSMIGRATION OF SOULS and look upon *moksha*, ie liberation from suffering and rebirth, as the chief end of life. One of the features of Hindu society is the age-old CASTE system, but modern Hindu scholars maintain that it is not part of the Hindu religion. In the mid-1970s Hindus numbered about 500 million.

Hindu Kush, principal Asian mountain range, which extends WSW for 805-965km (500-600 miles) from NE Afghanistan. The mountain system is glaciated and receives heavy snow fall, making the area almost uninhabited. The highest peak is Tirich Mir, 7,700m (25,260ft).

Hindustani. See URDU.

Hinemon, in Maori legend, noblewoman who defied her parents to marry Tutane-kai, who lived on an island in Lake Rotomua. She swam the lake to reach him.

Hines, Earl Kenneth (1905-), US jazz pianist and bandleader. He played in Louis ARMSTRONG's band and led his own groups from the 1920s. His "trumpet style of piano playing" - use of the single note lines in the right hand - was modelled on Armstrong's style and influenced other jazz musicians. He also composed songs and made many recordings.

Hinny, hybrid offspring of a male horse and a female donkey. It is bred less commonly than the MULE to which it is considered inferior as a working animal, but which it resembles in appearance. Like the mule, it is infertile.

Hinshelwood, Sir Cyril Norman (1897-1967), British chemist, President of the Royal Society from 1955-60. From 1937-64 he was Dr Lee's Professor of Chemistry at Oxford, and Research Fellow at Imperial College, London, from 1964. He shared the 1956 Nobel Prize in chemistry with Nikolai N SEMENOV for their simultaneous work on chemical reaction kinetics.

Hinton, Christopher, Baron Hinton of Bankside, (1901-), British nuclear engineer. From 1946, as deputy controller of atomic energy production, he created a new industry in Britain with the world's first full-scale atomic power station at Calder Hall, which was opened in 1956.

Hip, joint on each side of the lower trunk formed at the fusion of three bones, the ilium, ischium, and pubis, that together with the sacrum form the PELVIS. See also pp 147, 1071.

Hipparchus (fl 146-127 BC), Greek astronomer who worked on the island of Rhodes. He estimated the distance of the Moon from the Earth, drew the first accurate star map with more than 800 stars and divided stars into orders of magnitude based on their brightness (a system fundamentally in use today). He also developed an organization of the universe which, although it still had the Earth at the centre, provided for accurate prediction of the positions of the planets. See also pp 1006, 1006.

Hippias of Elis (5th century BC), Greek SOPHIST. Only fragments of his writings survive, and he is known mainly through the writings of PLATO. Because of Hippias' claim to have mastered all the fields of learning, Plato regarded him, and all Sophists, as superficial.

Hippies, term used especially in the

1960s to refer to people who rejected conventional middle-class values. Most were young people who renounced materialism, the work ethic and war, emphasizing brotherhood and love. They had irregular life-styles, often living in communal groups. See also BEATNIKS, YIPPIES.

Hippocrates (c 460-377 BC), Greek physician, often called "the father of medicine". Although little is known about him and the writings known as the *Hippocratic Collection* probably represent the works of several people, he exerted a tremendous influence. He freed medicine from superstition, emphasizing clinical observation and providing guidelines for surgery and for the treatment of fevers. Most important, he is credited with providing the Hippocratic Oath, a code of professional conduct still followed by doctors today. See also pp 124, 1108.

Hippolytus of Rome, Saint (c 170-c 235), author and antipope. When he opposed the policies of Pope CALIXTUS I his followers elected him antipope. He was banished (235) to Sardinia, where he finally resigned his claim to the papacy and died a martyr. Many of his works survive only in fragments, among them his *Apostolic Tradition and Refutation of All Heresies*.

Hippolytus, son of the mythical Greek hero Theseus and the Amazon queen Hippolyta. The dramatist EURIPIDES, in his tragedy *Hippolytus*, tells of Hippolytus' refusal to share other women in order to honour APHRODITE and how this led to divine retribution.

Hipponax (6th century BC), Greek lyric poet, believed to be the inventor of the scazon, or "limping" IAMBIC verse. His poems were bitter, satirical and concerned with love and quarrels between his friends.

Hippopotamus, bulky, herbivorous even-toed mammal that lives in Africa. *Hippopotamus amphibius* has a mossy grey or brown body with a large head, short legs and short tail. Males weigh up to 4.5 tonnes. Hippopotamuses generally live in groups, spending much of their time in water. They can close their nostrils under water but have to rise to the surface to breathe. Pygmy hippopotamuses, *Choeropsis liberiensis*, are much smaller, generally solitary, and spend more time on land. The hippopotamus is valued for its hide and flesh, but the pygmy is protected. Family Hippopotamidae. See also pp 87, 95, 130, 751.

Hire-purchase, method of acquiring goods by making a down-payment (a deposit), and paying the rest, with interest, in instalments at regular intervals. The vendor usually has an agreement with a bank or financier who pays the full selling price of the goods, at the request of the buyer (usually any credit-worthy member of the public). The financier then hires the goods to the buyer who becomes full owner of the goods only after repaying the financier.

Hirohito (1901-), emperor of Japan (1926-). His visit to Europe in 1921 made him the first Japanese crowned prince to travel abroad. Although he exercised little political power, he persuaded the Japanese government to surrender to the Allies in 1945, announcing that surrender himself on the radio. Under the constitution drawn-up by the occupation forces he lost almost all his remaining power. See also pp 1696, 169.

Hiroshige, Ando (1797-1858), Japanese master of the UKIYO-E (coloured woodcut). He is known for his landscapes, the most famous of which are his 53 woodblock prints depicting his trip from Edo (Tokyo) district to Kyoto. His work influenced IMPRESSIONISM and other 19th-century European artists.

Hiroshima, city in the SW of Honshu, Japan, at the W end of the Inland Sea. The River Ota divides the city into six islands connected by 81 bridges. Founded in 1594, it was a military headquarters in several wars and the target, in 1945, of the first atomic bomb dropped on a populated area. Sixty per cent of the city was destroyed, of which a small part was later designated a "Peace City" by the govern-

ment. An annual conference against nuclear weapons is held in the city. Its industries include brewing, shipbuilding and engineering. Pop (1974) 761 240.

Hirschvogel, Augustin (1503-51) German etcher, glass painter, enamelist and cartographer. He is best known for his mountain landscapes.

Hirsutism, excessive or abnormally located hair growth, especially on women. It may be caused by ovarian or adrenal tumours and sometimes by drugs.

Hispaniola, second-largest island in the West Indies, between Cuba (W) and Puerto Rico (E) in the central Caribbean Sea. Haiti occupies the west third of the island and the DOMINICAN REPUBLIC the remaining eastern portion. It is a mountainous, agricultural region with a subtropical climate. It was discovered in 1492 by Christopher Columbus, who called it Española, the first Spanish colony in the New World. Industries: coffee, cacao and some mining, particularly bauxite. Area 76 180sq km (9 559sq miles). Pop (1975 est) 1 928 100.

Hispano-Moresque style, type of 14th-century Moorish pottery and tiles made in Spain, especially in Malaga and Granada. These ceramics were usually decorated with gold lustre pigments, often combined with blue.

Histidine, colourless soluble crystalline amino acid. $C_6H_9N_3O_2$ (147.15) which is the precursor of histamine.

Histochemistry, study of the distribution of biochemical substances and reactions in tissues. See also BIOCHEMISTRY.

Histoire naturelle (1749-1804) monumental 44-volume work by the French naturalist Georges Louis Leclerc, comte de Buffon. Published as *Histoire naturelle générale et particulière*. It deals with the history of natural science.

Histology, biological, especially microscopic, study of organic tissues and structures in living organisms.

Historical geology, study of sedimentary rocks in which a record of events in the history of the Earth is trapped. The combination of the different layers, and the plant and animal remains they contain give clues to the stages of evolution and to water, land and temperature conditions that prevailed when a particular stratum was deposited. See also pp 266-269.

Historicism, view that an adequate account of any subject capable of description in time must be historical. All things must be explained in terms of their origins and comprehended in their development from inception to maturity. The term has been associated with the philosophy of Friedrich Hegel and Karl Marx. See also DETERMINISM.

History, written reconstruction of man's past. The Western historical tradition dates back to the Greek historians Herodotus and Thucydides. Most medieval historical research was the work of ecclesiastics such as monks who often considered the first English historian. Renaissance historians uncritically followed precedents of earlier ones, but rationalism was the chief influence on the historiography of the 18th century. Modern history writing however is concerned with objectivity and critical examination of primary sources. It dates from the early 19th-century German school led by Leopold von Ranke and Berthold Niebuhr. It was only after this time that history became a topic in schools and universities, and specialist journals were devoted to it.

History of the English Church and People, (1891-73) account by H. P. of the Anglo-Saxons and the Church. Although mainly an ecclesiastical history, it is an important primary source for the early history of the Britons and was therefore used for the earlier entries of the Anglo-Saxon Chronicle.

History of the English-Speaking Peoples, (1956-58) four-volume work by Winston Churchill dealing with the period from 1875 to death of Queen Victoria. Churchill's theme was his hope that the contemplation of past trials and tribulations would bring about peace and justice in the world.

History of the Kings of England (*Historia*

de Gestis Regum Britanniae), written account that contains a genealogy of the legendary kings of England from the time of Brutus the Trojan. Produced by Geoffrey of Monmouth who claimed it was a translation of a Breton manuscript. It is one of the sources for the legends of Arthur and his knights.

Hitachi, Japanese business conglomerate, a major producer of electrical equipment, appliances and machinery. In 1976 it employed about 144,000 persons.

Hitchcock, Alfred (1899-1980), British film director. Master of the droll, sophisticated suspense thriller, he believed strongly in the creation of emotion by purely cinematic means. His films include *Blackmail* (1929), *The Thirty-nine Steps* (1935), *Suspicion* (1941), *Strangers on a Train* (1951), *Dial M for Murder* (1954), *Rear Window* (1954), *North by Northwest* (1959), *Psycho* (1960), *Frenzy* (1972) and *Family Plot* (1976). In 1978 he was awarded the highest US film honour the Life Achievement Award.

Hitler, Adolf (1889-1945), German dictator of Austria. He served in the ranks of the German army during WWI and was decorated for bravery. After the war he returned to Munich and in 1921 became the leader of the small National Socialist Workers' (or Nazi) Party. In 1923 a Nazi Putsch failed to overthrow the Bavarian government and Hitler was imprisoned. While serving his sentence he set out his extreme racist and nationalist views in *MEIN KAMPF*. After his release, Hitler worked to revive the Nazi Party and finally, partly in consequence of economic depression and ineffectual democratic government, became Chancellor in a coalition on 30 Jan 1933. Within a month the REICHSTAG FIRE gave him the excuse to establish a one-party state, and the following year he launched a purge in which all possible rivals were liquidated. In the following years Hitler rearmament Germany and occupied large areas of central Europe. Germany's attack on Poland (Sept. 1939) precipitated WWII, a conflict of global proportions, during which the Jewish people were systematically exterminated by the Germans in all parts of occupied Europe. Hostilities ceased in 1945 with Germany's total defeat and Hitler's suicide (30 April). See also pp 1705, 1708-1709.

Hittites, ancient people who built a powerful empire in Asia Minor and N Syria (c 2000-c 1200 BC). Primarily of Indo-European stock, they invaded BABYLONIA (c 1590 BC), seized Cappadocia and conquered Syria and Palestine. Ramses II of Egypt checked them near Kadesh on the River Orontes (c 1284) which led to a treaty. Bogazkoy and Carchemish were the chief cities. After 1200 BC the Hittites, Phrygians and Assyrians invaded the Hittite lands, and their loose empire broke up. The Hittites moved southwards, but their culture survived in city states established by refugees in N Syria. By the 8th century BC these last remnants of the Hittites had been entirely absorbed into the Assyrian empire. See also pp 1184-1185.

Hives, popular term for the transient itchy reddish or pale raised skin patches of urticaria (nettle-rash). Hives may be caused by ALLERGY to certain foods or drugs, by irritants such as sunlight or animal dander (in form of dandruff), or by emotional stress. See also pp 1074-1075.

HMS Pinelore, comic opera in two acts by Arthur Sullivan, libretto by William G. W. It was first produced at the Opera Comique London in 1878. It ran for 700 consecutive performances and became widely popular in Europe and the USA.

Hoar, Lewis Alan ('Flew') (1934-), Australian tennis player. He won the Wimbledon mens singles championship in 1956 and 1957. In 1956 he also took the Australian and French singles titles.

Hoare-Laval plan (1935) plan devised by the British foreign secretary, Sir Samuel Hoare, and the French prime minister Pierre Laval to avoid war with Italy over Mussolini's invasion of Abyssinia. It ceded two thirds of the country to Italy. Public outcry led to both Hoare's and Laval's resignation.

Hoatzin, shaggy-crested bird of N South American river valleys. It has a large crop for storing vegetable matter. The hatchlings have claws on their wings and are able to climb trees. The hoatzin is a member of the cuckoo family but resembles a long slender crow. The brownish adult having rounded wings and a long tail. The female lays two to three oval spotted, white eggs. Species *Opisthocomus hoatzin*.

Hoban, James (c 1762-1831) Irish architect of Ireland. He designed the State Capitol, Columbia, and the original White House, Washington, DC (1792).

Hobart, capital and port of the island state of Tasmania, Australia. It has one of the best natural harbours in the world, and most of the state's exports leave by sea routes from Hobart. The city's industries include fruit processing, textiles and zinc. Pop (1970) 52 900.

Hobbema, Meindert (1638-1709) Dutch painter of serene landscapes, a favourite of 18th and early 19th century English landscape artists. His *The Avenue of Middelarn* (1669) is among the most popular of all Dutch landscape paintings.

Hobbes, Thomas (1588-1679), English philosopher. In *De Corpore* (Concerning the Body), *De Homine* (Concerning Man) and *De Cive* (Concerning the Citizen) he presented his view that matter and its motion comprise the only valid subject matter of philosophy. His greatest work *Leviathan* (1651) argued that man is not naturally a social being but must obey moral rules in order to maintain civilized society.

Hobbs, Sir John Berry ('Jack') (1882-1963), England and Surrey cricketer whose records of runs scored (61 237) and centuries (197) remain unbeaten. The most accomplished of opening batsmen he played in 61 Test matches between 1907 and 1930 (5 410 runs, average 56.94).

Hobby, typical falcon, a diurnal bird of prey found in temperate regions, especially in Europe. A brown and white streaked bird, it lives in or near open woodland country and eats small birds and insects. Length 33cm (13in). Species *Falco subbuteo*. See also p 72.

Hobson, Harold (1904-), British dramatic critic. He was drama critic of *The Sunday Times* (1947-76) and television critic of *The Listener* (1947-51). He has also written several books on the theatre.

Hobson, Captain William, (1793-1842) British colonist and first governor of New Zealand. A humane and just administrator, he regularized land sales in the colony and helped to draft the Treaty of Waitangi by which the Maoris accepted British sovereignty. Hobson entered the navy in 1803 and became governor in 1841.

Hochelaga, original name for Montreal, Canada. The village was discovered by Jacques Cartier in 1535. The name translated as 'at the place of the beaver dam', and it was a centre of Indian trade and government.

Hochhuth, Rolf (1911-), German dramatist whose reputation rests on two controversial documentary plays based on incidents of WWII. *The Representative* (1961) attacked the noncommittal attitude of Pope Pius XII towards Nazi concentration camps. *Soldiers* (1967) implied that Winston Churchill was responsible for the death of the Polish premier in exile, Gen Sikorski. *Guerilla* (1971), *The Midwife* (1972) and *Lystrata* and *NATO* (1973) proved somewhat less controversial.

Ho Chi Minh (1890-1969) Vietnamese political figure. He Nguyen Thai Thanh (1911) he left Vietnam and lived successively in the USA, Britain and France. In 1920 he joined the French Communist Party. He returned to Vietnam and presided over the founding of the Vietnamese Communist party in 1930 but then, after arrest, fled to Moscow and later China. In 1941 he returned to Vietnam and founded the VIET MINH to fight the Japanese. With the Japanese driven out he declared Vietnam an independent nation (1945) and was himself appointed president. The French returned and won

Adolf Hitler at a 1931 rally after the Nazis had won power in the Thuringia government.

Hittite drinking horn of c. 7th century BC made of silver with a handle of gold.

Hoatzin has attractive feathers but its musky odour has earned it the name 'stinkbird'.

Meindert Hobbema, a detail from his *The Avenue of the Middelarn* (1669).

Hockey can be played on many surfaces, as on the deck of the ship at HMS Illustrations.

Alan Hodgkin was a government research scientist during WWII, working on radar.

Ernst Hoffmann's *Mademoiselle de Scudery* (1818) was an early detective story.

Hogarth, the first great English painter and engraver: a self-portrait with his pet dog.

tested Ho's authority until their defeat in 1954. The 1954 Geneva Conference recognized Ho as president of the Democratic Republic of Vietnam (North Vietnam). When the government of the South, backed by the USA, refused to hold reunification elections, Ho helped the NATIONAL LIBERATION FRONT (Viet Cong) in its attempt to gain control of the South. He did not live to see the unification of an independent Vietnam. See also pp 1778-79.

Hockey, 11-a-side game, for both sexes played with curved sticks and a 7-7.3cm (2.8-3in) diameter white ball. The aim is to hit the ball into one of the 3.66 by 2.13m (12 x 7ft) goals centred at each end of the rectangular 92 by 50-55m (100 x 55-60 yards) pitch. To score, a player must be within the striking semicircle in front of the goal. Formations vary with tactics, but basically a team consists of a goalkeeper, two backs, three halves and five forwards. Play commences with a "bully" between two opposing players, who touch sticks twice then go for the ball. After this the ball is dribbled or passed using only the flat side of the stick, which may not be raised above shoulder height. Only the goalkeeper, protected by gloves and pads, may kick or use his body to stop the ball; others may use a flat hand to stop it dead in flight. Infringements are penalized by free hits, penalty corners or penalty strokes. A game comprises two 35-minute halves and is controlled by two umpires. Although hockey's origins are lost in antiquity, the modern game dates from the mid-19th century. A purely amateur sport, it is played throughout the world and has been an Olympic sport, with breaks, since 1908.

Hockey, ice. See ICE HOCKEY.

Hockey, roller. See ROLLER HOCKEY.

Hodgkin, David (1937-), British painter, who made his name during the POP ART movement with witty, often deliberately naive, paintings, such as *Flight into Italy-Swiss Landscape* (1962). In the late 1960s and the 1970s he developed a more realistic, classical style. Typical of this style are his portrait of Celia Birtwell and Ossie Clark (1970) and *A Bigger Splash* (1967). His graphic work executed with an economical but powerful sense of line, includes many fine portraits and his series of etchings, *A Rake's Progress* (1966, 63). See also p 1765.

Hoddinott, Alan (1929-), Welsh composer. He studied with Arthur Benjamin and was appointed professor at the University College of South Wales in 1967. His compositions include symphonies, concertos for piano, clarinet and viola, an oratorio and chamber music.

Hodgkin, Sir Alan Lloyd (1914-), British physiologist. He shared the 1962 Nobel Prize in physiology and medicine with John ECCLES and Andrew HUXLEY for his part in discoveries concerning the ionic mechanisms involved in the excitation and inhibition of the membranes of nerve cells. This work is fundamental to an understanding of the function of nerves.

Hodgkin, Dorothy Mary Crowfoot (1910-), British chemist. After teaching at Oxford and Cambridge Universities she spent some time at the University of Ghana before returning to Oxford in 1960. In 1964 she was awarded the Nobel Prize in chemistry for her determination of the structure of VITAMIN B₁₂ by X-RAY CRYSTALLOGRAPHY. She also determined the structure of PENICILLIN and several other large molecules by the same process.

Hodgkins, Frances (1869-1947), New Zealand-born painter. Arriving in Europe in 1901, she lived in France, especially Paris, and Britain, settling first in St Ives, Cornwall (1914) and later in Dorset. In her most mature work, painted in her later years, she developed a style of still-life and landscape painting that grew increasingly nearer abstraction.

Hodgkin's disease, named after the pathologist Thomas Hodgkin (1798-1866) who first described it, a condition characterized by painless enlargement of the LYMPH GLANDS, lymphatic tissue in spleen, with subsequent spread to other areas. Fever is a common symptom, and

weight loss, anaemia, loss of appetite, and night sweats may occur. The condition is twice as common in males as in females. Treatment varies with the stage reached by the disease but in general consists of RADIOTHERAPY, combinations of drugs, or both. Likelihood of cure or long-term survival is about 50%.

Hodler, Ferdinand (1853-1918), Swiss painter. His early work included naturalistic landscapes, later, he used colour and line in an EXPRESSIONISTIC manner.

Hoe, Richard March (1812-86), US inventor of the rotary printing press (1847), which worked at far higher speeds than the traditional "flat-bed" press. Later developments further increased the pace by printing on a roll or "web" of paper, rather than on single sheets. The rotary press and the web feed became the foundations of the newspaper industry. See also p 423.

Hoff, Jacobus Hendricus van't (1852-1911), Dutch physical chemist, professor at Amsterdam, Leipzig and then Berlin. His research involved advanced investigations of the carbon atom, the theory that gas laws are also applicable to dissolved substances, and the chemical application of THERMODYNAMICS. In 1901 he was awarded the first Nobel Prize in chemistry for his studies on the mechanism of chemical equilibrium, reaction rates and osmotic pressure.

Hoffman, Dustin (1937-), US film actor who became a star following his appearance in *The Graduate* (1967). In John Schlesinger's *Midnight Cowboy* (1969) he played Ratso, a derelict, in Sam Peckinpah's *Straw Dogs* (1971) he was an academic who goes berserk, and he portrayed the Jewish comedian Lenny Bruce in *Levin* (1974). He also starred in *Three Presidents Men* (1976), and *Kramer vs Kramer* for which he won an academy award.

Hoffmann, Ernst Theodor Wilhelm (1776-1822), German Romantic author. He wrote many fantastic stories, several of which were later the basis of the opera *The Tales of Hoffmann* (1881) by OFFENBACH, and was a noted music critic. *The Devil's Elixir* (1813-15) was his only novel.

Hoffmann, Josef (1870-1956), Austrian architect, a pioneer of modern architecture in Vienna. A student of OTTO WAGNER, he was a founder of the VIENNA SEZESSION (1897) and the Wiener Werkstätte (1903). His buildings were courageously early examples of the white cube buildings of the INTERNATIONAL STYLE, with his Stuckel House, Brussels (1905-11), he showed that this new, anti-traditional style could be made to look lavish and monumental by means of the materials used.

Hoffmann, August Wilhelm von (1818-1892), German chemist and teacher. After serving as an assistant to Justus von LIEBIG he was appointed director of the new Royal College of Chemistry in London. Most of his work was based on the compounds of coal tar and their derivatives. Hoffmann discovered a method for converting an amide into an amine - the Hoffmann reaction - and classified all amines as formal derivatives of ammonia. One of his pupils was William PERKIN, who made the first aniline dye, the colour mauve.

Hoffmann, Melchior (c 1495-c 1543), German ANABAPTIST leader. A mystic, he believed that Christ would soon return to earth for the judgment day and urged his followers to be prepared. He spread Anabaptist beliefs in Holland, where his followers were called Melchiorites.

Hofmannsthal, Hugo von (1874-1929), Austrian dramatist, poet and essayist whose *Jedermann* (*Everyman*, 1911) is a verse drama that is regularly staged at the Salzburg Festival, of which he was a founder. One of Richard STRAUSS's librettists, he collaborated with him on *Der Rosenkavalier* (1911), and other opera.

Hofstadter, Robert (1915-), US physicist who shared the 1961 Nobel Prize in physics with Rudolf MÖSSBAUER for their investigations of nuclear structure. Hofstadter discovered that both PROTONS and NEUTRONS (which make up the NUCLEUS) have a central positively charged core

surrounded by a cloud of MIONS.

Hog. See PIG.

Hogan, William Benjamin ("Ben") (1912-), US golfer who overcame a near fatal car accident to become one of the best players in the world. He won four US Open championships (1948, 1950-51, 1953), two Professional Golfers' Association titles (1946, 1948), two Masters tournaments (1951, 1953) and the British Open (1953).

Hogarth, William (1697-1764), English painter, engraver and caricaturist, most famous for his genius in portraying the English national character in such brilliant story-series of paintings as *The Harlot's Progress* (also made into engravings). Similarly, in the *The Rake's Progress* and *Marriage à la Mode*, he satirized English society. In his treatise *The Analysis of Beauty* (1753) he expounded his theories of art. He also painted fine portraits, such as a self-portrait *The Painter and his Pug* (1745). See also pp 1463, 1536.

Hogben, Lancelot (1895-1975), British scientist and popularizer of mathematics. Hogben was professor of social biology at London from 1930 to 1937, of zoology at Birmingham from 1941 until 1947 and of medical statistics at Birmingham from 1947 to 1961.

Hogg, James (1770-1835), Scottish poet and sheep farmer, known as "The Ettrick Shepherd". Encouraged by Sir Walter Scott, he published several poetic works which display an interest in the supernatural. His most enduring prose work is *Private Memoirs and Confessions of a Justified Sinner* (1824).

Hogg, Quintin McGarel (1907-), British lawyer and Conservative politician. After a successful legal career, Hogg succeeded to the title of Viscount Hailsham in 1950, which he resigned in 1963 to pursue his political career in the House of Commons. In 1970, however, he re-entered the Lords as Baron Hailsham. He has been Lord Chancellor from 1970-74 and 1979.

Hogmanay, in Scotland, the eve of New Year's Day. Traditionally more festive than Christmas in Scotland, the Hogmanay celebrations are marked by customs and superstitions dating back to Celtic times. The term is sometimes also applied to presents given at New Year and possibly derives from the word for such gifts in the French Norman dialect.

Hohenstaufen, German dynasty (also called GIBELLINE) which exercised great power in Germany and the HOLY ROMAN EMPIRE from 1138 to 1254. Its name comes from the castle of Staufen, built in 1075 by Frederick, Count of Swabia, whose son became King CONRAD III of Germany and Holy Roman Emperor in 1138. From Conrad III to CONRAD IV, who died in 1254, the family occupied the Imperial throne, except for the years 1209-15 (when Otto IV, the representative of their great rivals the GIBELLINES, was emperor). The greatest of the Hohenstaufens was FREDERICK II, who firmly shifted the family's interests to Italy. On his death in 1250 the family went into decline. It died out with the death of Conradin in 1268.

Hokkaidō, formerly Yezo, the second largest of the four main islands of Japan and the country's chief farming region. Forests cover a large part of the land area and are a source of timber and wood pulp. It is also the major coal-mining region of Japan. The capital is Sapporo. Area 78,515sq km (30,313sq miles). Pop. (1970) 5,184,287.

Hokusai, Katsushika (1760-1849), Japanese master of UKIYO-E (colour woodcut), especially famous for his landscapes. Like his contemporary HIROSHIGE, he had enormous influence on late 19th-century European painters. His most famous print is *The Wave*. See also p 126.

Holbach, Paul Henri Dietrich, Baron d' (1723-89), French radical materialist philosopher and virulent anti-Christian, who believed that if man would abandon superstition he could achieve universal happiness. In his *System of Nature* (1770) he expounded his materialist philosophy which reduced everything to the operation

of physical forces as matter, anything else must be illusion.

Holbein, Hans, the Younger (1497–1533), German painter, one of the most penetratingly realist of all European portraitists. He began in the workshop of his father, Holbein the Elder, but about 1514 went to Basel, where he soon won a reputation with his illustrations for the Luther Bible and his wood engravings of the *Dance of Death* (1523–26). His international fame as a portraitist was established with three portraits of his friend Erasmus (1523). During a visit to London in 1526 he painted Sir Thomas More and his family. He settled in London in 1532 and from 1536 until his death from the plague he was court painter to Henry VIII. Holbein's masterpieces include his show piece *The Ambassadors* (1533), and superb easel paintings of *Christina of Denmark*, *Duchess of Milan* (1538), *Anne of Cleves* (1540), and *Catherine Howard* (1541), all royal sisters. See also pp 1394–1398, 1414–1415, 1416.

Holberg, Ludwig, Baron von (1684–1754), Danish poet and dramatist, b. Norway. His verse includes the mock-heroic poem *Peder Paars* (1719–20), but he is chiefly remembered for his plays, which include *The Political Tinker* (1722), *Jeppe of the Hill* (1722) and *The Hussy Man* (1726).

Holden, Charles, (1875–1960), British architect who is noted for his designs of London Underground stations, especially the facade of Bond Street station. Holden collaborated with sculptors, including Epstein, Gill and Moore, in urban architecture. He also designed some of the buildings at London University.

Holding company, one which controls the activities of other companies by the acquisition of a majority of their shares. Large public companies are frequently holding companies with many subsidiaries, which individually deal with one section of the trade or industry in which the group deals.

Holford, William Graham (1907–1975), British architect and Lever Professor of Civic Design at Liverpool from 1936 when he worked on the design of nuclear laboratories. From 1948 to 1970 Holford was professor of town planning at London University.

Holiday, Billie (1915–59), US blues and popular jazz singer who sang in night clubs in the 1930s and later with the bands of Count Basie and Artie Shaw. Her memorable renditions of *My Man*, *Mean to Me* (1937) and *God Bless the Child* (1941) have a legendary status in the history of American popular and jazz music.

Holiday camp, enclosed area at a seaside resort where holidaymakers pay an overall charge for accommodation, food, recreation facilities and entertainments for one or two weeks. Most activities are organized by the camp staff. The first British holiday camp was opened by Billy Butlin at Skegness in 1937. Butlin's camps accommodate between 5,000 and 11,500 people each.

Holidays, Bank. See BANK HOLIDAYS.

Holshed, Raphael (died c 1580), English historian. His historical work, *The Chronicles of England, Scotland, and Ireland* (2 vols, 1578), provided an invaluable source of information for many early dramatists, notably Shakespeare.

Holland, Henry (1745–1806), British architect, the son-in-law of Capability Brown, with whom he worked from 1771. His independent works include Carlton House, London (1783–85), and the Marine Pavilion, Brighton (1786–87, later altered to the Royal Pavilion by Nash), both for the Prince Regent. He also built country houses and laid out part of Chelsea, including Sloane Street, but little of this work survives. He worked in a style close to that of the Adam brothers.

Holland, John Philip, (1840–1914), US inventor of the first modern petrol-driven submarine. He offered a design to the US Navy Department in 1874 but it was rejected as impracticable. With further work the successful *Fenian Ram* was launched in 1881. This was not practi-

cal for extended operations, but further development produced the *Holland* which had an internal combustion engine for surface cruising and an electric motor for submerged cruising. The US government bought the *Holland* in 1900. See also p 478.

Holland, Sir Sidney George (1893–1961), New Zealand politician and prime minister (1949–57). As head of a National Party administration, he relaxed economic controls, abolished the upper house and settled a five-month-long dockers strike. See also p 1734.

Holland, name popularly given to the entire NETHERLANDS, but properly referring to only one of the country's provinces. A fief of the Holy Roman Empire in the twelfth century, it was seized by the county of Hainaut in 1299 and passed to Burgundy in 1433 and to Austria in 1482. In the next 200 years Holland became a sea power and led the United Provinces of the Netherlands in their long battle for independence from Spain.

Hollar, Wenceslaus (1607–77), Bohemian printmaker. He made numerous topographical and historically important engravings of London before the Great Fire of 1666. His etchings and watercolor drawings of 17th-century English life include a portrait of *Charles I and his Queen* (1691) after Van Dyck.

Holley, Robert William (1922–), US biochemist. He shared with H G KHORANA and M W NIRENBERG the 1968 Nobel Prize in physiology and medicine for his work on the way genes determine the function of cells. Holley described the first full sequence of sub-units in nucleic acid, the genetic material of a cell. This was an important step towards the understanding of gene action.

Holly, Buddy (1936–59), US singer and songwriter. After an unsuccessful recording session in Nashville in 1956, Holly and his group the Crickets released *That'll be the Day* (1957). The immediate success of this record was emulated in the same year by the hits *Oh Boy* and *Peggy Sue*. He was a pioneer of double-tracking and the standard rock-group four-man line-up. He was killed in an air crash.

Holly, any of 300 species of shrubs and trees that grow in most parts of the world. They have alternate, simple leaves and small flowers, male and female flowers are usually on separate plants. The one-seeded fruit is usually red. The English holly tree (*Ilex aquifolium*) has spiny evergreen leaves. Height to 15m (50ft). Family Aquifoliaceae.

Hollyhock, biennial plant native to China and cultivated widely throughout the world. It has leafy stems and showy, often double, flowers of red, pink, white, yellow or orange. Height to 2.7m (9ft). Family Malvaceae, species *Althea rosea*. See also p 672.

Hollywood, suburb of Los Angeles, USA which was developed after 1910 by the new US film industry because of its fine weather and clear air. With most films now made in studios or on location, Hollywood is no longer the centre it once was, although many film stars still inhabit its most glamorous suburb, Beverly Hills.

Holman Hunt, William. See HUNT, WILLIAM HOLMAN.

Holmes, Arthur (1890–1965), British geologist and geophysicist who studied the age of rocks by measuring their radioactivity. He devised the first quantitative geological time scale in 1913 and estimated the Earth's age by means of temperature measurements.

Holmes, Oliver Wendell (1809–94), US author and physician, who studied medicine at Harvard and Paris. He was a gifted conversationalist and much of his best literary work was cast in the form of talk, as in *The Autocrat at the Breakfast Table* (1858), *The Professor at the Breakfast Table* (1860) and *The Poet at the Breakfast Table* (1877).

Holmium, metallic element (symbol Ho) of the lanthanide group, first identified spectroscopically in 1878. Its chief ore is monazite (a phosphate). The element has few commercial uses. Properties at no 67 at wt 164.931, s.g. 8.803 (25°C), m.p.

1,470°C, (2,680°F), b.p. 2,720°C (4,930°F), most common isotope Ho¹⁶⁵ (100%). See also LANTHANIDE SERIES.

Holocene epoch, also called the Recent epoch, division of geological time extending from roughly 10,000 years ago to the present. It therefore includes the emergence of man as a settled member of communities, the first known villages dating from about 8,000 years ago. See also pp 226–227.

Holocephali, one of three groups of cartilaginous fish. See p 56.

Holofernes, biblical Assyrian general enlisted by King NEBUCHADNEZZAR to subdue Judaea. He was slain by JUDITH, an attractive and pious Jewish widow, as he slept in his camp during the siege of Bethulia.

Holograph, three-dimensional image formed from information stored as light shifts on a photographic plate called a hologram. Although the concept of holography has been appreciated since about 1940, experiments could not proceed until the development of a sufficiently coherent light source, the LASER. See also pp 862–863.

Holon, city in w central Israel in the Tel Aviv-Yafo metropolitan area. Its industries include textiles, metal products and food processing. Pop. (1974) 110,300.

Holoisuroidea. See SEA CUCUMBER.

Holst, Gustav (1874–1934), British post-Romantic composer. His early works often betray his interest in Hinduism (the opera *Sita*, 1906); other influences were his love of folk song (*Somerset Rhapsody*, 1907) and the music of his friend Ralph VAUGHAN WILLIAMS. Among his works are several operas, including *The Perfect Fool* (1923), songs, chamber music and popular orchestral suite, *The Planets* (1914–16).

Holst, Imogen (1907–), British composer, conductor and music educationalist. She has published short choral arrangements of folksongs, an overture and piano pieces, as well as a biography of her father, *Gustav Holst* (1938).

Holstein, Duchy of, former duchy in the S part of the West German state of SCHLESWIG-HOLSTEIN. From the 9th century it was part of the duchy of Saxony until it became a county, and in 1474 a dukedom of the Holy Roman Empire. It became part of Schleswig-Holstein in 1773, and passed from Denmark to Prussia in 1866.

Holt, Harold (1908–67), Australian politician. He became deputy leader of the Liberal Party in 1956 and prime minister on the retirement of Sir Robert MANNING in 1966. Holt was drowned while swimming.

Holby, Winifred (1898–1935), British novelist and journalist. Her posthumously published novel *South Riding* (1936) became a best-seller, a Yorkshire novel based in part on her own mother's experiences as a County Councilor. Other novels include *Anderby Wold* (1932) and *Mandragora* (1933).

Holy Alliance, agreement signed by the crowned heads of Russia, Prussia and Austria in 1815. They pledged themselves to conduct policy on Christian principles and to uphold the existing social and territorial order in Europe in particular the legitimacy of the BOURBONS in France and Spain. Ultimately it was signed by every European prince except the prince regent later GEORGE IV, of England, the Pope and the Turkish sultan. See also pp 1558–1559.

Holy Communion. See EUCHARIST.

Holy Ghost, or Holy Spirit, in Christian theology, the third Person of the TRINITY that is God. Consubstantial, co-equal and co-eternal with the Creator and omnipresent Omnipotence (the Father) and with the saviour and champion of sinful mankind (Christ), the Holy Ghost represents the spiritual force through which God's free gift of GRACE is given.

Holy Grail. See GRAIL.

Holyhead, seaport on N coast of Holyhead island off NW Wales. It is a seaside resort and site of a nuclear power station. Pop. (1971) 10,608.

Holy innocents, children of the age of two and under killed in Bethlehem by order of

Hans Holbein the Younger, a portrait by him of Robert Cheseman, falconer to Henry VIII.

Holland, a view of the Amstel, the river by which Amsterdam is built.

Holly, used in churches at Christmas was or is called the Holy tree.

Holst, although influenced by Gung, Strauss and others, wrote highly original music.

Holy Island

Homer's apotheosis: a 19th-century view of the deification of the great Greek poet

Winslow Homer, a detail from his 1866 painting of people playing a game of croquet

Homo erectus lived in Africa, Asia and Europe and used chopping tools and hand axes

Homo sapiens, followed Homo erectus but the is known about how or when

HEROD THE GREAT who hoped by so doing to eliminate the infant Jesus, rumoured to be a future "king of the Jews". Only St MATTHEW'S GOSPEL contains this story. Their feast, formerly called Childermas, is observed on 28 December.

Holy Island. See LINDISFARNE

Holy Land. See PALESTINE

Holy League, name for a number of European alliances from the 15th to the 17th century. The purposes of these leagues included papal checks on French power, Spanish checks on the power of the Holy Roman Empire, French Catholic assertions against French Protestants and European defences against invasions by the Muslim Turks.

Holy Loch, small inlet on the W shore of the Firth of Clyde in W Scotland, opposite the mouth of the River Clyde. It is the site of a US Po aris submarine base.

Holyoake, George Jacob (1817-1906), British social reformer and founder of Secularism. He was the last person in England to be jailed for blasphemy (1842). He taught at the Mechanics Institute in Birmingham, lectured on Robert Owen's socialism, and promoted a parliamentary bill to legalize secular affirmations.

Holyoake, Sir Keith Jacka (1904-), New Zealand politician and Prime Minister (1957, 1960-72). A skilled leader of the National Party, he provided sound economic management and retained public support by unambitious but beneficent policies. In 1977-80 he was Governor General of New Zealand. See also p 1734.

Holy Office, in the Roman Catholic Church, the tribunal that sat in Rome originally established in connection with the inquisition as the final court of appeal in trials of heresy. In 1965 its name was changed to Congregation for the Doctrine of the Faith and it was entrusted with the more positive role of safeguarding and promoting sound doctrine.

Holy Orders, in the Anglican, Roman Catholic and Orthodox Churches, the duties of the clergy and their hierarchical rank as outlined in the office of ordination. A person is ordained and becomes a deacon, priest or bishop, becoming also a successor of the original apostles through the laying-on of hands by the presiding superior. In Protestant Churches, ordination of ministers is not a sacrament; nor is the maintenance of apostolic succession considered relevant.

Holy Roman Empire, European empire founded in 962, when the German king, OTTO I, was crowned in Rome, and surviving until 1806. Some historians date it from CHARLEMAINE's coronation in 800. The emperor claimed to be the temporal sovereign of Christendom, ruling in co-operation with the spiritual sovereign, the POPE. However, the empire never encompassed all of western Christendom and its relations with the papacy were stormy. The imperial authority was based on the German monarchy. Once elected by the German princes, the German king sought papal election as emperor. He did not always receive it, and from MAXIMILIAN I (r 1493-1519) the title Emperor was assumed without papal coronation. By that time, although the office remained elective in theory, the empire had become hereditary in the house of HAPSBURG, which held the office from 1438. Earlier dynasties included the SALIANS and HOHENSTAUFENS, under whom (11th-13th century) the empire was at the height of its power. Under the Hapsburgs it became an increasingly nominal entity, its rulers concentrating on their dynastic interests in Austria while the other German princes pursued their own ends. Pressure from NAPOLEON caused Francis II to resign the imperial title in 1806. See also pp 1184-1185.

Holyrood House, chief residence of the rulers of Scotland, in Edinburgh. It was begun in 1501 on the site of a 12th-century abbey, was partially destroyed in 1544, rebuilt and then burnt down in 1650. The house was rebuilt in French Renaissance style in the 1670s. The building is set in magnificent parkland.

Holy Sep, one of the names by which the pope's see of Rome, or sometimes just the state of the VATICAN, is known. The term is usually used to denote the PAPACY itself in reference to its authority over the worldwide Roman Catholic Church.

Holy Sepulchre, traditional site of the burial and resurrection of Christ in Jerusalem. It is believed to have been "discovered" by St HELENA, mother of the Emperor CONSTANTINE (who built the first "Church of the Holy Sepulchre" there c 335). Several churches have been built, destroyed and rebuilt on the site over the course of the centuries. Most of the present church dates from 1810.

Holy Shroud, The sheet of very old linen in Turin Cathedral, by tradition the cloth in which the body of Christ was wrapped after the Crucifixion. It was photographed in 1898 when negatives were seen to show the shape of a human figure. In 1977 a Roman Catholic conference suggested the linen be tested scientifically.

Holy Spirit. See HOLY GHOST

Holy water, water blessed by a priest for use in religious ritual as a symbol of cleansing. Water has been used in ancient Egyptian, Hindu, Greek, Roman, and Jewish rites and in Christian churches for blessing, purification and baptism.

Holy week, in the Christian calendar, the week preceding EASTER. Palm Sunday commemorates Christ's entry into Jerusalem, Maundy Thursday His institution of the Eucharist, and Good Friday His crucifixion.

Homage, feudal ceremony by which a person became a vassal of a lord and which preceded the granting of a fief (holding of land) by the lord to his vassal. The vassal knelt before the lord, put his hands in his lord's and declared himself to be his lord's man (Latin *homo*, "man"). The lord then signified his own responsibility to the vassal by kissing him and raising him to his feet. The vassal finally swore an oath of FEALTY to the lord. A similar ceremony takes place during the coronation service. See also p 1338.

Home Counties, term given to those counties adjacent to London: Hertfordshire, Essex, Kent, Surrey and formerly Middlesex.

Home Guard, British volunteer force of men over military age trained for local defence. It began in 1940 and was first called the Local Defence Volunteers. Winston CHURCHILL called it the Home Guard and the name stuck. At first the men wore civilian clothes and trained with broomsticks, but by the end of 1942, when the threat of a German invasion had passed, the Home Guard had become a well-equipped, well-drilled force.

Home Office, British department of state, which dates from 1782. Before then there were two secretaries of state, for the northern and southern departments. The secretary for the southern department became the secretary of state for the Home Office. His principal duties were to advise the monarch on domestic affairs and the use of the royal prerogative. His responsibilities now cover all matters of national administration that have not been entrusted to another Minister. Relations with the Channel Islands and the Isle of Man are conducted through the Home Office. Until the creation of the Department for Northern Ireland in 1972, the office was also responsible for the affairs of Ulster.

Home of the Hürsel, Baron Alexander (Alec) Frederick Douglas-Home (1903-), British politician. See DOUGLAS-HOME, SIR ALEC

Homeopathy, non-orthodox medical treatment that involves administering minute doses of a drug or remedy which causes effects or symptoms similar to those that are being treated. It is the opposite of ALLOPATHY, in which curatives are administered to create the opposite effect. Homeopathy was popularized in the 18th century by the German physician CHRISTIAN HAHNEMANN. Although it later fell into disrepute, it is now enjoying a revival in some countries.

Homeostasis, in biology, maintenance of constant conditions within a cell or organ-

ism in response to either internal or external changes.

Homer (c 8th century BC), Greek epic poet. He is traditionally considered to be the author of the great epics of the TROJAN WARS, the *Iliad* and the *Odyssey*. Traditionally, too, he is represented as blind but this may have been because of the false attribution to him of the *Hymn to Apollo*, in which he portrays himself as blind. No definite facts are known about Homer and even his very existence has been the cause of controversy among scholars. However, the works attributed to him are the beginning of Greek, and therefore European, literature. See also pp 1208-1209.

Homer, Winslow (1836-1910), US painter and illustrator. He won international acclaim for his coverage of the American Civil War for *Harper's Weekly* and particular recognition as a painter with *Prisoners from the Front* (1866). In 1876 he abandoned illustration for painting. He found inspiration in the American landscape, e.g. *The Country School* (1871), and later in the Maine Coast.

Home Rule (Ireland). See IRISH, HOME RULE

Home Rule Party, Irish political party formed with the aim of winning Ireland's autonomy within the British Empire. It was started by ISAAC BUTT in the 1870s. In the 1880s, under PARNELL, it controlled Irish politics and converted Gladstone and most of the Liberals to home rule. See also IRISH, HOME RULE, pp 1642-1643.

Homo erectus, species of early man dating from about 1.1 million to 0.6 million years ago. The "Ape Man of Java" was the first early human fossil to be found, late in the 19th century. He was later placed in the genus *Homo*. PEKING MAN, also an early discovery, is a more advanced variety of *Homo erectus*. See also AUSTRALOPITHECUS, pp 109-111, 112-114, 116, 118, 119.

Homogenization, process that reduces a substance contained in a fluid (liquid or gas) to small particles and redistributes them evenly through it. For example, the fat in milk can be broken down so thoroughly by homogenization that particles do not recombine and cream will not rise.

Homo habilis, problematic species of early man, discovered by LOUIS LEAKEY in 1964 in the Olduvai Gorge, East Africa. Its fossil remains have been estimated to be between 1.8 and 1.2 million years old, being contemporary with those of the Australopithecines. But the development of hand and skull is much more like that of modern man. See also AUSTRALOPITHECUS, pp 110-111, 112.

Homology, in biology, similarity in form, function or evolution of living things based on a common genetic heritage. For example a man's arm and a seal's flipper are homologues, having developed from common origin. The wing of a bird and the wing of a bat are not homologous because they evolved independently. See also EVOLUTION.

Homophony, in music originally the sounding in unison of voices or instruments, but in modern terminology meaning HARMONY as opposed to monophony (music in a single part) and POLYPHONY (music with several voices moving independently). Homophonic style is familiar to modern listeners and is generally characteristic of most music since the 18th century.

Homo sapiens, modern man, who first appeared about a quarter of a million years ago. Scattered fossil remains of that age, or somewhat younger, include those of STEINHEIM MAN and SWANSCOMBE MAN, both of whom had skull capacities within the modern range. Also, they both predated NEANDERTHAL MAN, who appears to have arisen contemporaneously with later, indisputably *Homo sapiens* types. For this reason Neanderthal Man is now often regarded as a variety of *Homo sapiens*. In Europe, Neanderthal Man was abruptly replaced by CRÖ-MAGNON Man about 30,000 years ago. See pp 109-111, 113-114, 115, 116, 118-120.

Homosexuality, sexual attraction, often leading to sexual activity, between members of the same sex. In women it is known

as lesbianism. Throughout history lesbianism has hardly ever been illegal and recently private homosexual acts between consenting males have been legalized in most Western countries. Homosexual groups have recently publicly campaigned for an end to society's continuing hostility and discrimination. Doctors now agree that homosexuality is not a psychological disorder, but a normal aspect of sexuality. See also pp 1136

Homozygote, organism possessing identical alleles (hereditary units) on a CHROMOSOME pair. It is a purebred organism and always produces the same kind of GAMETE. See also HETEROZYGOTE

Homs (Hims), city in w Syria, on the River Orontes. A settlement site since ancient times, the city is now a road and railway junction, serving a fertile farming area. Industries include sugar refining and textiles. Pop. (1970) 215,421

Honan (Henan), province in E China, the capital is Chengchow (Zhengzhou). It is a mountainous but fertile area, and wheat and cotton are the major crops, rice and tobacco are also grown. Coal and iron ore are mined and abundant hydroelectric power is produced to supply local industries. Drainage and irrigation schemes have further improved the province's economy. Area, 167,090sq km (64,513sq miles). Pop. 50,000,000

Honduras, independent nation in Central America, between Guatemala (W) and Nicaragua (SE). The damp climate encourages the growth of tropical rain forests in the E. The economy is based on agriculture, with bananas and coffee among the most important crops. Mineral resources have yet to be fully exploited. The capital is Tegucigalpa. Area 112,088sq km (43,277sq miles). Pop. (1975 est.) 1,017,000. See also p 2058

Honduras, British. See BELIZE

Honecker, Erich (1912-), East German politician. He was imprisoned by the NAZIS as a Communist but after WWII he was promoted in the East German Communist hierarchy. He succeeded Walter Ulbricht as party leader in 1971.

Honegger, Arthur (1892-1955), French composer. His works were often religious and mystical in spirit and feeling, but in 1923 he caused a sensation with his *Pacific 231*, an orchestral description of a steam engine, named after a common type of railway locomotive (and its wheel arrangement). His other compositions include five symphonies, a dramatic psalm, *Le Roi David* (1921) and the opera *Judith* (1926) and *Antigone* (1927).

Hone Heke (d. 1850), New Zealand Maori chief, the nephew of HONGI HIKU. He opposed British rule and cut down the Union Jack flagstaff at Kororaraka (Russell) four times before capturing it in 1845, thus starting the Northern War.

Honesty, widely cultivated, hardy, ornamental biennial plant of the mustard family. It has attractive flat, purple flowers and oval pods. Height 61-122cm (2-4ft). Family Cruciferae, genus *Lunaria*.

Honey, sweet, viscous liquid, made up mainly of the sugars levulose and dextrose, traces of minerals, and about 17% water. It is manufactured by HONEYBEES, which collect nectar (sweet juices in flowers), partially digest it, and deposit it in the hive cells, where the water is evaporated. See also pp 692-693

Honey ant, any of several species of ANTS, found throughout the world, that live on sweet juices or from plant-sucking insects. A number of young ants serve as storage vessels for plant nectar and honeydew, which they feed back to the workers in times of shortage. See also p 31

Honeybee, insect of the order Hymenoptera. The most common species is *Apis mellifera*, which has long been domesticated for the production of HONEY. It is found throughout the world, and is yellow and black and about 12.5mm (0.5in) long. It constructs its brood cells and honey storage cells from wax and lives in colonies with a social structure. Family Apidae. See also pp 89, 36, 38, 39, 41

Honey-creeper, any of a number of small birds of tropical America with thin bills, that feed on nectar and fruit. The name is

also given to insect-eating birds, also called *larks*, of the family Drepanididae, from Hawaii. See also p 327

Honeydew melon. See MELON

Honey eater, or honey sucker, any of a diverse group of Australian songbirds of the family Meliphagidae. They have long tongues with brush-like tips for feeding on nectar and fruit, and are important pollinators of the flowers they feed on. Australian bellbirds and wattle birds are two of the more familiar types. See also pp 81, 309, 333, 383

Honey-guide, small bird found in Africa and S Asia that leads people and animals to the nests of bees and shares in eating the honey (which it would not otherwise be able to obtain because of its small beak). Adult plumage is typically grey to green to yellowish-green, with brown and white on the tail. Length to 20.3cm (8in). Family Indicatoridae.

Honey locust, North American tree of the pea family. It has thorny branches, feathery foliage and brown twisted pods about 40cm long. Height to 40m (131ft). Species *Gleditsia triacanthos*.

Honeysuckle, woody twining plant that grows in temperate regions throughout the world. It has oval leaves and bell-shaped, fragrant flowers with male and female parts. A common species in Eurasia, *Lonicera periclymenum*, climbs to 6m (20ft) and may damage the host tree around which it climbs. Family Caprifoliaceae. See also pp 307, 375

Hongi Hika (1777-1828), New Zealand Maori chief. He visited Britain and helped to compile a Maori dictionary. After arming his Ngapuhi tribe with Australian guns he fought rival New Zealand tribes, and took 2,000 prisoners in 1818.

Hong Kong, British Crown colony in S China, 145km (90 miles) SE of Canton. The colony comprises Hong Kong Island, the Kowloon Peninsula, the New Territories on the mainland and some 230 islets in the South China Sea. It is the commercial centre of the Far East and its industries include textiles, plastics and printing. The capital is Victoria. Area 1,036sq km (400sq miles). Pop. (1975 est.) 4,367,000. See p 2058

Honnecourt, Villard d' (c. 1225-c. 1250), French architect. He travelled widely and drew architectural details of Gothic cathedrals. His sketchbook is the only surviving one of its kind made before the 15th century.

Honolulu, capital city of Hawaii, on the SE of Oahu Island. It became the permanent capital of the kingdom of Hawaii in 1850 and remained the capital after the annexation of the islands by the USA in 1898 and the declaration in 1959 of Hawaii as the 50th state. The bombing of Pearl Harbor by the Japanese in 1941 precipitated the USA's entry into WWII. Since then, peacetime defence activity has aided the city's growth. Other industries include sugar refining and pineapple canning. Pop. (1970) 324,871.

Honorius, the name of four popes. Honorius I (r. 625-38), an Italian, showed great interest in the church in Spain's Visigothic kingdom and the British Isles and did much to improve church buildings in Rome. He attempted to settle the schism between Rome and the Eastern Church over the MONOPHYSITE and MONOTHELITE controversies, but in a letter to the patriarch of Constantinople he credited Christ with one nature and "one will" thereby appearing to confirm the heresy. At the Third Council of Constantinople he was posthumously declared heretical. Honorius II (r. 1124-1130), real name Lambert Scannabecchi, was instrumental in ending the controversy between the papacy and the Holy Roman Empire over investiture. Honorius III (r. 1216-27), real name Cencio Savelli, confirmed the mendicant orders of FRANCISCANS, DOMINICANS and CARMELITES that were to revive Christian spiritual life. Honorius IV (1285-87), real name Giacomo Savelli, encouraged oriental studies at the University of Paris in the cause of re-uniting the Western and Eastern Churches.

Honours list, twice-yearly granting of civil and military honours by the British

monarch. Honours lists are published on 1 Jan., on the monarch's official birthday and on other significant occasions such as the changing of the prime minister.

Honshu, largest of Japan's four main islands, between the Sea of Japan and the Pacific Ocean. It produces most of Japan's industrial output and has six of the country's largest cities, including Tokyo. Industries: shipbuilding, chemicals and textiles. Area 230,782sq km (89,105sq miles). Pop. (1970) 82,564,581.

Honthorst, Gerard or Gerrit van (1590-1656), Dutch painter. He was influenced by CARAVAGGIO, whose style he introduced into Holland. He achieved international fame as a portrait painter and went to the English court (1628).

Houth, or Houth, Pieter de (1629-c. 1683), Dutch painter, usually of gardens, courtyards and peaceful domestic scenes. His paintings are noted for their deft use of space and light.

Hood, Alexander, 1st Viscount Bridport (1727-1814), British admiral and brother of Viscount Hood. He recaptured the battleship *Warwick* from the French in 1761 and as second-in-command to Howe in the French Revolutionary Wars he served in the Channel and Gibraltar Straits. He was created a Baron in 1796, and Viscount in 1801.

Hood, Robin. See ROBIN HOOD

Hood, Samuel, 1st Viscount (1724-1816), British admiral who served in the SEVEN YEAR WAR and in the American and French revolutionary wars, distinguishing himself especially in the West Indies. In 1782 a member of Parliament for Westminister, he became an Admiral in 1794 and was created Viscount Hood in 1796.

Hood, Thomas (1799-1844), British editor and poet. He was editor of several important periodicals, much of his work being humorous. But it is his two serious poems, *The Song of the Shuri* and *The Bridge of Sighs*, that reveal his true creative ability.

Hoghly, tributary of the River Ganges, in SE India, formed at the confluence of the Bhagirathi and Jalangi rivers. It is a commercially important trade route and is navigable for almost its entire length of 200km (124 miles).

Hogstraten, Samuel Dircksz van (1627-78), Dutch historical and portrait painter. He studied in Amsterdam with REMBRANDT and his early works were influenced by Rembrandt's style. He was also interested in *trompe l'oeil* painting.

Hooke, Robert (1635-1703), English philosopher and experimental physicist. Active in astronomy, he claimed to have stated the laws of planetary motion before NEWTON deduced that it PETER rotated and named the 5th star in ORION. He made many improvements in astronomical instruments and in watches and clocks. He also studied the elastic properties of solids, and formulated HOOKE'S LAW. See also pp 840, 1437.

Hooker, Sir Joseph Dalton (1817-1911), British surgeon and botanist who went on many expeditions, noting his observations. In 1855 he became assistant director of KEW GARDENS and succeeded his father, Sir William, as director from 1865 to 1885.

Hooker, Richard (c. 1554-1600), English theologian, educated at Oxford. His most famous work, *Of the Laws of Ecclesiastical Polity* (1594, 1597), was a learned and powerful defence of the Church of England against PURITAN attacks.

Hooker, Thomas (1586-1647), English colonist in N America and a Puritan clergyman. He fled to Holland in 1630 and then New England in 1633, seeking religious freedom. Pastor of the first church of CAMBRIDGE, Massachusetts, he led colonists in the first western migration to found and settle HARTFORD, Connecticut in 1636. Hooker helped to draft the "Fundamental Orders" in 1639 under which Connecticut was long governed.

Hooker, Sir William Jackson (1785-1865), British botanist and authority on ferns, mosses and fungi. From 1841 he was the first director of KEW GARDENS where he also founded a museum of economical botany. His son Joseph (1817-1911) succeeded him as director.

Honeybee each collects enough nectar in its lifetime to make 45 grammes (1.5oz) of honey

Honeysuckle, some varieties are feeding places for hummingbirds who eat the nectar

Honolulu, a view of the spacious harbour near the centre of the capital

Robert Hooke, a plate from Micrographia, in which he described his study of plants

Hooke's law

Hooke's law, relationship between stress and strain in an elastic material when it is stretched. It states that the stress is proportional to the strain producing it. In mathematical terms, $F = -kx$, where F is the applied force, x is the distance through which the material stretches and k is a constant that describes the strength of the material. See also ELASTICITY, p 840.

Hookworm, two species of intestinal parasites in man. Larvae usually enter the host by penetrating the skin of the feet and legs, following a circuitous route through the body and finally attaching themselves to the wall of the small intestine. Symptoms can include anaemia, constipation and weakness. It is treated successfully with tetrachloroethylene. Phylum Nematoda, species *Necator americanus* and *Ancylostoma duodenale*.

Hooper, John (d. 1555), English bishop. He became a Protestant follower of Zwingli in the 1530s and lived in Zurich (1539-49). He was appointed Bishop of Gloucester in 1550 and of Worcester in 1552. Queen Mary I imprisoned him in 1554 and had him burned for heresy in 1555.

Hoopoe, zebra-striped, fawn-coloured bird that lives in open areas, parks and gardens throughout warmer areas of the Old World. It has a fan-like crest and a long, curved bill. It utters a "hoo-hoo-hoo" call and feeds on small invertebrates. Length 30cm (12in). Family Upipidae, species *Upupa epops*.

Hoorn, Philip de Montmorency, Count of (1518-68), Flemish stadholder and soldier. With William the Silent and Count Egmont, he opposed the policies of the occupying Spanish, especially their cruel treatment of Dutch Protestants. Arrested in 1567, he was condemned as a traitor to Spain and a heretic, both he and Egmont were beheaded the following year. As a result the Dutch rose and eventually gained their independence.

Hoover, John Edgar (1895-1972), US director of the FBI (Federal Bureau of Investigation) (1924-72). He reorganized the bureau, compiling a vast file of fingerprints and building a crime laboratory and training academy. During the 1930s he fought organized crime, after WWII he concentrated on what he saw as the threat of Communist subversion in the USA.

Hoover Dam, one of the world's largest dams, in the USA on the Colorado River between Arizona and Nevada. Opened in 1935, it irrigates land in California, Arizona and Mexico. Height 221m (726ft). Length 379m (1244ft). See also p 662.

Hop, twining vine native to Eurasia and the Americas. It has rough stems, heart-shaped leaves and small male and female flowers borne on separate plants. The female catkins are covered with lupulin, a yellow powder used as a sedative. The dried female flowers of *Humulus lupulus* are used for flavouring beer. Family Cannabaceae. See also pp 376, 700.

Hope, Alec Derwent (1907-), Australian poet. He was a scholar of early 18th-century English literature and its rational formality is echoed in his poems, first collected in the volume *The Wandering Islands* in 1955.

Hope, Anthony (1863-1933), real name Sir Anthony Hope Hawkins, British author of the adventure novel *The Prisoner of Zenda* (1894) and of its sequel *Rupert of Hentzau* (1898). Both novels are set in the mythical country of Ruritania, a name invented by Hope.

Hope, Bob (1903-), US comedian, b. Leslie Townes Hope in England. He started his career in music hall and in 1938 his *Bob Hope Show* began on radio. From 1950 he has frequently appeared on television. He made more than 50 films, including the *Road* series with Bing Crosby (1940-52), among his better known are *The Paleface* (1947) and *The Seven Little Foys* (1955). He has entertained US troops all over the world.

Hopei (Hebei), province in NE China, on the Gulf of Chihli, the capital is Shihkiachwang (Shijiazhuang). The remains of Peking man found there indicate that

Hopei has been inhabited for at least 500,000 years. After the 14th century, agriculture in the region was greatly developed with the introduction of cotton cultivation and extended irrigation schemes. Industries developed after WWII. Communist control was completed in 1949. Products: cotton, wheat, soya beans, corn, millet, sweet potatoes, fruits, nuts, rice, silks. Industries include the manufacture of chemicals, steel, machines, textiles. Area 202,510km² (78,189sq miles). Pop 47,000,000.

Hopkins, Frederick Gowland (1861-1947), English biochemist. He shared with Christiaan Eijkman the 1929 Nobel Prize in physiology and medicine for his work on vitamins. Hopkins pointed out that some diseases, such as scurvy and rickets, might be caused by the deficiency in the diet of some substance necessary for proper health - the so-called vitamin concept. He also investigated the function of lactic acid in muscular activity.

Hopkins, Gerard Manley (1844-89), British poet. He became a Roman Catholic in 1866 and was later ordained a Jesuit priest (1877). The sinking in 1875 of a German ship carrying five nuns inspired his most notable poem, *The Wreck of the Deutschland*. He contributed the principle of sprung rhythm to English poetry but his small body of verse (he destroyed much of his work on entering the Jesuit novitiate) was not published until after his death. See also p 1576.

Hopkins, Lighthouse (1912-), US blues singer. Endlessly inventive, he retained his stylistic integrity through 30 years of performing and recording, perhaps because he refused to leave his home in Houston. His style balanced vivid boogies with slow blues, accompanied by a piano-like guitar sound.

Hopper, Edward (1882-1967), US painter. A pupil of Robert Henri and greatly influenced by the Ashcan School, he was a realistic painter of the North American scene.

Hopner, John (c. 1758-1810), British society portraitist, a follower of Joshua Reynolds and a rival to Sir Thomas Lawrence. He was appointed portrait painter to the Prince of Wales in 1789 and elected to the Royal Academy in 1795.

Hopscotch, children's game with several variants. A set of numbered squares, usually 10, is marked on the ground or pavement. In one variant a stone is thrown into the first square, the player then hops into the second and succeeding squares and back again, picking up the stone on the return to the base line. The process is repeated for each square in numerical sequence. If the player hops on the square with the stone, loses his balance, steps on a line or throws the stone on a line or wrong square, he must try again next time round.

Horace (65-8 BC), Roman poet, full name Quintus Horatius Flaccus. He fought at Philippi (42 BC) with Brutus, and later won favour in Augustan Rome. His friend Virgil introduced him to Maecenas, who as his patron provided him with an income and a farm. Horace's first *Satires* appeared in c. 35 BC, followed by *Epodes* (c. 30 BC), *Odes* (c. 23 BC), *Epistles* (c. 20 BC) and *Art Poetica* (c. 19 BC). His simple, direct Latin lyrics provided a vivid picture of the Augustan age.

Horé-Belisha, Leslie, (1893-1957), British politician and inventor, who, as Minister of Transport from 1934 to 1937 originated the Belisha beacon, a yellow globe atop a pole at pedestrian crossings which flashes regularly. He was Secretary for War from 1937 until 1940.

Horrebound, aromatic herb of the mint family which grows in Eurasia and is found as a roadside weed in North America. Its woolly white leaves are used for flavouring, cough lozenges and confectionery. Species *Marubium vulgare*.

Horemheb, pharaoh of ancient Egypt (r. 1340-c. 1320 BC), the last ruler of Dynasty XVIII and successor to Tutankhamen. He served as a notable military commander after c. 1365 BC and during his reign restored the old religion after Akhenaton had introduced the worship of the sun god. See also p 1180.

Horizon, celestial, GREAT CIRCLE ON THE CELESTIAL SPHERE, the plane of which contains the line through an observer's position at right angles to the vertical. It lies midway between the observer's ZENITH and NADIR and cuts the observer's meridian at the north and south points. See also p 108.

Horizon, soil. See SOIL PROFILE.

Horizon co-ordinate system, astronomical co-ordinate system referred to the plane of the observer's horizon. The co-ordinates are AZIMUTH and ALTITUDE. See also CO-ORDINATE SYSTEMS, ASTRONOMICAL.

Hormisdas, Saint, pope from 514 to 523. After the Acacian schism (484-519) he reunited the Eastern and Western Churches. Feast day 6 August.

Hormones, chemical substances secreted by the ENDOCRINE SYSTEM of the body directly into the bloodstream. They exercise chemical control of body functions, regulating virtually all of them, such as growth, development, sexual maturity and functioning, metabolism and emotional balance (in part). Hormones circulate in the body in minute quantities and often exert their effects at great distances from their point of secretion. Most are slow to take effect, exert widespread action, and are also slow to disappear from the system. The secretion and activity of the various hormones are closely interdependent, one can stimulate or inhibit the secretion of another or two or more can act together to produce a certain effect. In general they maintain a delicate equilibrium which is important to health. Some of the best-known hormones are THYROIDINE, ADRENALINE, INSULIN, OESTROGEN, PROGESTERONE and TESTOSTERONE. See also pp 154-155.

Hormuz. See ORMUZ.

Horn, Philip de Montmorency. See MONTMORENCY, COUNT OF.

Horn, musical instrument first used for signalling, in hunting and ceremonies. Once made from animal horns and later from metals, different types of horn have normally been made of brass since the Renaissance. They appeared in the opera orchestras of 17th-century Europe and found particular favour in the 19th century with Richard Strauss and Richard Wagner. Also known as the French horn, the modern instrument consists of a coiled tube of conical bore that widens to a flared bell. Most have three valves. It has a mellow tone that is controlled by the lips and hand stopping. See also p 1581.

Horn, defensive or offensive structure that grows from the head of some mammals. A typical horn is made up of a central bony core covered by a layer of the skin protein KERATIN, in the rhinoceros, the entire horn is made of keratin. Horns are generally retained for life, although deer shed their ANTLERS annually.

Horn, Cape, most southerly point of South America, situated in the archipelago of Tierra del Fuego. First discovered in 1616, the Horn route is renowned for its rough seas.

Hornbeam, any of a number of small, hardy trees of the genus *Carpinus*, found throughout the N Hemisphere. They have smooth bark, a short trunk, spreading branches and clusters of green nuts. Family Betulaceae.

Hornbill, tropical African and SE Asian brownish and black-and-white bird, so named because of its large brightly-coloured bill. The female lays one to six eggs in a hole high up in a tree trunk and then sometimes erects a barricade, imprisoning herself and her eggs there for 4 to 11 weeks. The male feeds her through a tiny slit in the barricade wall. There are several species. Length 38-152cm (15-60in). Family Bucerotidae. See also pp 77, 81, 84, 110, 312, 317.

Hornblende, black mineral found widely dispersed in granite and other igneous rocks. It is the commonest form of AMPHIBOLE and contains iron and silicates of calcium, aluminium and magnesium.

Horned owl, common name for any of 11 species of owls with feathery tufts resembling horns on their heads. Fierce and strong, they feed on rodents and other

Hookworm larvae can live outside a host but only in warm regions such as the tropics.

Hoopoes build their nests in trees and was the females laying from five to seven eggs.

Hoover Dam, it contains enough concrete to pave a two-lane highway across the USA.

Horace's subjects included friendship and heroism, this is a 12th-century manuscript.

small mammals. The eagle owl, *Bubo bubo*, is the largest European species, but the most common is the long-eared owl, *Asio otus*. Family Strigidae.

Horned viper, or horned asp, poisonous snake native to the deserts of N Africa and Arabia. It is brown and black, with a sharp, pointed scale over each eye. Length, to 60cm (2ft). Family Viperae, species *Cerastes cornutus*. See also viper. **Hornet**, large dull orange and brown wasp native to Europe. Hornets are social insects. They build egg-shaped paper nests containing one queen and numerous nectar-gathering workers. They have a fearsome reputation and can inflict a powerful sting, but are actually less aggressive than the common wasp and react only when strongly provoked. Family Vespidae. See also p 307.

Horniman, Annie Elizabeth Fredericks (1864-1937), British theatrical benefactress. She founded both the Manchester Repertory Theatre (1908) and Miss Horniman's Company of Actors. She also helped to provide a permanent home in the Abbey Theatre, Dublin, for the Irish Literary Theatre Society.

Horniman, Frederick John (1835-1906), British tea importer. In 1897 he founded the Horniman Museum, Forest Hill, London, in which he housed his outstanding collection of curios.

Hornpipe, solo step dance popular in 16th-century England, Ireland and Wales. Probably Celtic in origin, it has more recently been associated with the navy.

Horology, science of measuring time or the art of constructing clocks or dials for measuring time. See also pp 452-453.

Horoscope, map of the heavens at the time of a person's birth. It shows the position of the celestial bodies in the 12 'houses' through which they pass and their position in relation to the 12 signs of the zodiac. It is the basis of astrology. See also pp 1894-1895.

Horowitz, Vladimir (1904-), US concert pianist, b. Russia. He first performed in public in 1921 and was world famous by the age of 21 as a virtuoso of great sensitivity and technique. Since 1950 he has appeared only rarely on the concert platform but continues to make recordings.

Horrocks, General Sir Brian Gwynne (1895-), British soldier. He served in France during WWI and in Russia during 1919. A vigorous corps commander in the western desert and Europe during WWII, he later commanded the British Army of the Rhine (1948-49). Horrocks subsequently followed a successful career as a military journalist and writer.

Horrocks, Jeremiah (1619-41), English astronomer who in 1639 made the first observation of the transit of Venus. He also applied Kepler's laws of motion to the Moon, and calculated a more accurate value for the solar parallax and the Earth's distance from the Sun.

Horse, hooved mammal that evolved in North America but became extinct there during late Pleistocene Epoch. Early horse forms crossed the land bridge across the Bering Strait, dispersed throughout Asia, Europe and Africa and produced the modern horse family. The only surviving true wild horse is Przewalski's horse. Hunted by Palaeolithic man for food, the horse was first domesticated about 5,000 years ago in central Asia. Horses returned to the New World with the Spanish conquistadores in the 15th c.

Horses are characterized by one large functional toe, molars with crowns joined by ridges for grazing, an elongated skull and a simple stomach. Fast runners, they usually live in herds and walk, canter, trot or gallop. Gestation lasts for 11 or 12 months, one colt is born and it can walk at birth. All species in the family can interbreed. The true horse is distinguished from other equines (zebras and asses) by its short ears, small head, chestnuts (horny, wart-like growths on the inside hind legs), large hooves and hair-covered tail. Family Equidae, species *Equus caballus*. See also pp 343-344. See 28x.

Horse chestnut, any of 25 species of deciduous trees that grow in temperate

regions, especially the common horse chestnut, *Aesculus hippocastanum*. It has large palmate leaves, long showy flower spikes and round prickly nuts containing one or two inedible kernels (called conkers in Britain). Family Hippocastanaceae. Height to 30.5m (100ft).

Horse fly, any of several species of flies in the family Tabanidae, especially *Tabanus lineola*. It is a pest to livestock and human beings. The female has blade-like mouthparts, inflicts a painful bite and sucks blood. Length to 3cm (1.2in).

Horse Guards, building in Whitehall, London, the headquarters of the Household Cavalry regiment. It was built in the 1750s and is the scene of Mounting the Guard, a popular tourist attraction, each morning at 11 am on weekdays and 10 am on Sundays. The Trooping of the Colour takes place on nearby Horse Guards Parade. **Horse mackerel**, commercial marine food fish found in the Atlantic Ocean from the North Sea to Africa. Blue-green and silver with a white belly, it swims in shoals. Family Carangidae, species *Trachurus trachurus*.

Horsepower, unit (hp) indicating the rate at which work is done, adopted by James Watt in the 18th century. He defined it as the weight, 250kg (550lb), a horse could raise 0.3m (1ft) in one second, or 550ft-lb per second. At the output shaft of an engine or motor, it is termed 'brake horsepower' or 'shaft horsepower'. In large reciprocating engines it is termed 'indicating horsepower' and is determined from the pressure in the cylinders. The electrical equivalent of one horsepower is 746 watts.

Horse racing, sport that consists of races between two or more horses over a (usually grassed) circuit. Most popular is thoroughbred racing, although harness racing has a large following in some countries. Types of thoroughbred racing include flat races, and steeplechases over a course with obstacles such as hurdles, fences and water jumps. Distances vary from three furlongs (0.61km) (for two-year-olds) upwards, and include a variety of races, determined by age or sex of the horse, or weight handicap. On the starting line the horses are lined up in enclosed starting gates. Bets are placed on a totalisator (and in Britain also with bookmakers). Payment may be made on the first three horses past the winning post, and sometimes on other combinations. Races are controlled by stewards, and finishes are usually photographed and the result declared by a judge. Horse racing began in Assyria in about 1500 BC and the oldest race in existence is the English Derby, first held in 1780. One of the most famous is the Grand National Steeplechase, contested annually at Aintree, Liverpool, England, since 1839. In the USA the most popular is the Triple Crown for three-year-olds, comprising the Kentucky Derby, Preakness and Belmont Stakes. Britain, the USA, Australia, New Zealand and France have all produced outstanding thoroughbred race horses.

Horseradish, perennial plant native to Eastern Europe and is cultivated for its pungent, fleshy root, which is a useful seasoning. Widespread as a weed, it has lance-shaped, toothed leaves, white flower clusters and egg-shaped seed-pods. Height 1.25m (4.1ft). Family Cruciferae, species *Armoracia lappathifolia*. **Horse's Head Nebula**, dark nebula close to Zeta Orionis. It forms part of the Orion nebula and obscures some of its light. The dark matter resembles the head of a horse in profile. See also p 947.

Horseshoe, metal plate, usually of iron or steel, fixed to the bottom of horses' hoofs. There is evidence of their use in the 6th century BC, since when they have been made in many designs. They are needed to protect the hoof from becoming worn down by hard surfaces. See also p 386.

Horseshoe crab. See KING CRAB. **Horseshoe pitching**, game played by two or four people using horseshoes or, more usually, discs of similar shape. The pitching distance is 12.2m (40ft) for men and 9.1m (30ft) for women, the object being to encircle an iron peg 30cm (14in) high in

the ground. A game is of 50 points. Encircling the peg (scoring a 'ringer') gains three points. If there is no ringer the nearest shoe to the peg - within 15cm (6in) of it - gains one point. Developed from the game of quoits, it was originated by Greek and Roman soldiers, and was introduced to North America, where it is widely played.

Horsetail, any of about 30 species of flowerless, rush-like plants that grow in all continents except Australasia. The hollow, round-jointed stems have a whorl of tiny leaves at each joint. Horsetails have existed for more than 300 million years, and their fossils are found in coal from the Carboniferous period. Genus *Equisetum*. See also pp 282, 350, 364-365.

Horse trials, also known as eventing, an equestrian competition involving three distinct disciplines: dressage, speed and endurance, and show jumping. Trials can be one, two or three-day events, and in the latter a day is devoted to each discipline. The speed and endurance consists of four phases: 1st and 3rd are roads and tracks, a total distance of 16-20km (10-12.5 miles), over which the horse is walked and trotted; 2nd is the steeplechase, over 3.6-4.2km (2.3-2.5 miles); and 4th is the cross-country, over 7.2-8.1km (4.5-5 miles) including 30 to 35 obstacles. The present formula dates from a French cavalry championship in 1902. The three-day event features in the Olympic Games and has a four-yearly world championship for teams and individuals, the places being decided concurrently.

Horsham, county district in central West Sussex, England, created in 1974 under the Local Government Act (1972). Area 536sq km (206sq miles). Pop. (1974 est.) 90,900.

Horsley, Colin (1920-), New Zealand pianist. He made his debut at Manchester in 1943, his first New Zealand tour in 1947. He is admired especially for his interpretation of the works of Chopin.

Horsley, Sir Victor Alexander Haden (1857-1916), British physiologist and surgeon who introduced refinements in neurosurgery. He performed the first successful removal of a tumour of the spinal cord and carried out research on the functions of the thyroid gland, on rabies vaccine and on functions of various regions of the brain.

Horst, in geology, an elongated upthrust block bounded by parallel normal faults on its long sides. See also PL pp 104-105.

Horst Wessel Lied, song written by Horst Wessel (1907-30), who joined the Nazi Party in 1927. After 1933 it became the official Nazi hymn.

Horta, Victor, Baron (1861-1947), Belgian architect, one of the leading influences of Art Deco. His Hotel Tassel in Brussels (1892-93) was one of the earliest buildings in the style. His work featured bold use of exposed iron supports, and metal and glass ornament. He was also noted for interior design, as in the Hotel van der Velde house (1895) and his Maison du Peuple (1896-99) in Brussels.

Horticulture, the growing of vegetables, fruits, seeds, herbs, ornamental shrubs and flowers, on a commercial scale, in nurseries, orchards and gardens. The origins of horticulture lie in the small intensive kitchen gardens of the medieval farming system. The techniques employed include asexual, or vegetative, propagation by leaf, stem and root cuttings, and by stem and bud grafting. Fruit trees, shrubs and vines, including those bearing apples, pears, plums, cherries, citrus fruits and grapes, are usually propagated by grafting the fruiting stock on to a hardier root stock. In the case of apple trees, the root stock is usually French crab apple. Plants propagated sexually by seed include some fruits and vegetables including sweet corn, or maize, and many other types that produce seed abundantly. Often the seed needs to be overwintered, or stored at low temperatures and high humidity, before it will germinate. Seed itself is a major horticultural crop. Close scientific control of pollination is essential for producing crops of specific quality. See also pp 385-386, 664-667, 674-675, 680-691.

Horned viper's eyes are directed upwards, so that it can see when almost buried in sand.

Hornets are useful to men despite their sting, since the young eat flies and other insects.

F. J. Horniman, drawing from The Illustrated London News of part of his museum.

Horse racing, the sport of kings' because once only noblemen could participate.

Hosta, a plant much grown in garden borders. Four shades even in part a shade

Houdini could escape from all manner of restraints, including even prison cells

Hourglass, they were used to define the period for which a speaker could talk

House-fly is one of the fastest of all flying insects. Its wings beat 200 times a second

Horus, falcon-headed god of ancient Egypt, son of Isis and Osiris. In the myth, he came to rule earth after avenging the murder of his father. Originally the god of lower Egypt, Horus came to be closely identified with all the pharaohs of Egypt, who used his name as the first of their titles and were thought to rule as him on earth. See also pp 1166

Horvath, Odon von (1901-38), German dramatist, b. Hungary, whose works such as *Tales from the Vienna Woods* (1931) and *Kasimir and Karoline* (1932), realistically reflect the economic situations and social aspirations of the German-speaking bourgeoisie before the advent of Hitler who subsequently forced Horvath into exile. Neglected in the years after WWII, his plays received renewed critical attention and frequent performances in Germany and other countries in the late 1960s and 1970s.

Hosea, biblical author and first of the 12 minor prophets of the Old Testament. He condemned Israel for worshipping false gods and promised mercy to the faithful. **Hoskyns, Bill** (1931-), British fencer. The first Briton to win a world title at épée in 1958, he won two Olympic silver medals at épée (team 1960, individual 1964) and nine gold and one silver at épée, foil, and sabre in three Commonwealth Games (1958, 1966, 1970).

Hospitalet, city in NE Spain. A suburb of Barcelona, it takes its name from its sanctuary that has sheltered travellers since the 12th century. Its chief industries are steel, textiles and chemicals. Pop (1971 est.) 242,000.

Hospitals, places for the shelter and treatment of the sick and injured. The earliest hospitals in the West may be attributed to the Greeks, where the ill gathered at the temples of Aesculapius - the god of healing - and waited there to be cured. The Romans also used temples as hospitals and after the advent of Christianity Christian hospitals, the origin of modern hospitals, were established throughout the Empire. The monasteries also took in the poor and sick and became centres of pharmaceutical and medical knowledge. This centralization forms the rationale of today's hospitals, which, in the primary function of healing the sick, began to develop in the early 19th century. The modern era has seen the construction of larger and larger general hospitals, which combine treatment with research, teaching and specialization. These hospitals are technologically intensive and have equipment for radiology, bacteriology, haematology, X-ray diagnosis, pathology and many other sciences. There is now a trend away from such centralization.

Host, from the Latin *hostia*, meaning a sacrificial victim, is the term used in the Anglican and Roman Catholic Churches for the consecrated bread or wafer used in the Eucharist, or Mass. Any left unconsumed after a service are set aside for the priest's visits to sick parishioners.

Host, organism infected by a parasite, either *definitive* (in which the parasite reaches sexual maturity) or *intermediate* (in which it does not).

Hosta, also called plantain lily or funkia, perennial plant native to Asia and Japan. It has veined leaves and lily-like flowers ranging from white to blue to lilac. Family Liliaceae, genus *Hosta*.

"Hot line", direct telephone link between the White House in the USA and the Kremlin in Moscow. The agreement to set up the line was signed in 1963. Its purpose is to speed communication between the two superpowers in an emergency, the underlying object being to prevent the outbreak of nuclear war.

Hotspur, Sir Henry Percy (1364-1403), English nobleman, called Hotspur for his zeal in guarding the Scottish-English border. He helped in the overthrow of Richard II but quarrelled with the new king, Henry IV, in 1402. In 1403 he and his father, the Earl of Northumberland, planned to overthrow the king but were defeated by Henry at Shrewsbury.

Hottentot, or **Xhokhoi**, Khoisan-speaking people of southern Africa, now almost extinct. Characteristically of short

stature, with a dark yellowish skin, they are probably of mixed Bushman and Negro origin. Traditionally they were nomadic pastoralists. Many of them were displaced or exterminated by the early Dutch settlers. Their surviving descendants have mostly been absorbed into the Cape Coloured population of South Africa.

Hottentot fig, succulent vine found in deserts and on seashores in warm regions, and cultivated as a ground cover. Not a true fig, it has woody stems with succulent leaves, and large, daisy-like, yellow or lilac flowers. The fig-shaped fruits are edible but not tasty. Family Aizoaceae.

Hotter, Hans (1909-), Austrian bass-baritone, b. Germany. After studying at the Munich Academy and making his debut in 1929, he became renowned for his roles in the operas of Wagner, especially in the title role of *The Flying Dutchman*. He had a close association with Richard Strauss and created several roles in his friend's operas before retiring in the late 1960s.

Houdini, Harry (1874-1926), US magician, b. Erich Weiss in Budapest, Hungary. No packing case or set of handcuffs could contain this escape artist, who also specialized in exposing fraudulent mediums. Author of *The Unmasking of Robert Houdini* (1908), he had an extensive library on magic, now in the Library of Congress, Washington DC.

Houdon, Jean-Antoine (1741-1828), French sculptor, best known for his portrait busts, including those of Rousseau, Voltaire and George Washington. Houdon worked in a baroque manner for some time but eventually adopted a colder, classical style.

Houghton, William Stanley (1881-1913), British playwright. His plays about Lancashire, strongly influenced by the work of Henrik Ibsen, include *The Dear Departed* (1908), *The Younger Generation* (1910), *Fancy Free* (1911) and *Hindle Wakes* (1912). He emigrated to Paris in 1913, but died soon afterwards.

Hound, dog that hunts with man, either by sight or by ground scent. The sight hunters, including the Saluki, Afghan Hound, Irish Wolfhound or Greyhound, chase quarry at great speed to overtake and kill or capture it. Most are streamlined and deep-chested, with long legs. A trailing hound, commonly a bloodhound, beagle, basset or foxhound, follows game by its scent and flushes it. Most are stocky with large muzzles, long ears and short legs.

Hounslow Heath, area of barren scrubland W of Hounslow, London. Now small (61 hectares, 150 acres) and enclosed, in 1545 it covered 1,739 hectares (4,293 acres). Formerly notorious for its highwaymen, it was also used by British monarchs to assemble troops.

Houphouët-Boigny, Félix (1905-), President of the Ivory Coast Republic from 1960. He served in the government of French West Africa and led his country to independence in 1958.

Hour angle, angle measured westwards along the celestial equator from the observer's meridian to the line passing through a celestial body and the celestial poles (hour circle of the body). It is given in hours, minutes and seconds and ranges from 0 to 24 hours. See also RIGHT ASCENSION.

Hourglass, instrument used to measure time. It consists of two glass chambers separated by a narrow passage through which fine granules (usually sand) pass. The time taken for the sand contained in one glass to empty through the passage into the other glass is one hour, or a fraction of an hour. They were widely used before the invention of clocks.

Houri, beautiful maiden awaiting a devout Muslim in Paradise. Having reached paradise, the Muslim is given a large number of hours, with whom he may copulate once for every good work he has done and once for each day he fasted in Ramadan.

House-fly, black and grey fly found throughout the world that lays its eggs in animal waste and decaying vegetable mat-

ter. It commonly feeds on the food of human beings, and can transmit several diseases, including typhoid fever, yaws, tuberculosis and intestinal parasites. Order Diptera, species *Musca domestica*. See also pp 42-43.

Household, royal, corps of officials who were the chief servants of the medieval monarchy in Britain, the forerunners of the Civil Service. The main offices were originally the Chancery, the Chamber (from which developed the exchequer) and the Wardrobe. The Household looked after not only the sovereign's personal affairs but also the great matters of state. The Wardrobe handled the monarch's clothing and domestic supplies - and financed wars. The Chancery protected the king's prerogative and developed into a court of Equity. The Exchequer shared with the Wardrobe responsibility for revenues.

Housemaid's knee, swelling of the kneecap caused by pressure from kneeling. Technically it is the result of excess liquid in the bursa, or fluid-filled sac, in front of the kneecap bone. If the swelling does not subside naturally the liquid may have to be withdrawn with a syringe. See also TENNIS ELBOW pp 147, 149.

House of Commons, lower elective house of the British Parliament but with greater powers (especially control over finances) than the House of Lords. Its 635 members are elected by gaining a majority in a constituency election, most in general elections which must be held at least every five years. The Speaker controls debates and is chosen from the dominant party, which provides the government. The Prime Minister is the leader in the Commons of the majority party and members of his cabinet may come from either House. The Commons dates from the 13th century. It is the forum where the people's representatives voice their opinions and question ministers, and where intended legislation is discussed and voted upon. See also pp 1342-1343.

House of Lords, upper house of the British Parliament, having both legislative and judicial functions. In its legislative capacity the Lords have been completely subordinate to the House of Commons since the Parliament Acts of 1911 and 1949 checked virtually all its power, except the right to delay passage of a bill for a year. It has no absolute veto over Commons legislation. All bills except for appropriation may be initiated by the Lords. Life peers, whose titles may not be inherited, and hereditary peers sit in the house. Hereditary peers may resign their titles to run for election to the Commons. There are special "law lords" who act as judges when the House acts as Britain's highest court.

House of Representatives, lower chamber of the US legislature and the name given to the lower chamber in Commonwealth countries such as New Zealand and Australia. In the USA the 435 members of the House are directly elected, and serve two-year terms. The House considers bills and has exclusive authority to originate revenue bills, initiate impeachment proceedings and elect the president should the electoral college be deadlocked. The House of Representatives in Commonwealth countries is usually closely modelled on the House of Commons. See also CONGRESS, AMERICAN, PARLIAMENT pp 1854-1855.

Housman, Alfred Edward (1859-1936), British poet and classical scholar, best known as the author of three small volumes of poetry, *A Shropshire Lad* (1896), *Last Poems* (1922) and *More Poems* (1936). He treats such general themes as the brevity of life in short, subtle lyrics.

Houssay, Bernardo Alberto (1887-1971), Argentinian physiologist. He shared with C F and G T Cori the 1947 Nobel Prize in physiology and medicine for discovering the role played by the hormone of the anterior pituitary lobe in regulating the metabolism of sugar. He demonstrated the complex interlocking action of various hormones of the body - in this case, a pituitary hormone with the

sugar-metabolizing hormone **INSULIN**
Houston, industrial city and port of entry in SE Texas, 40km (25 miles) NW of Galveston Bay and connected to the Gulf of Mexico by the Houston Ship Canal. Founded in 1836, it served as the capital of the Republic of Texas (1837-39 and 1842-45). Its greatest period of expansion came after the building of the canal (1912-14), when the exploitation of the coastal oil fields provided a rich source of income. The largest city in the state, its diverse industries include chemicals, rubber and printing. Pop. (1973) 1,320,018.

Hovercraft, or air cushion vehicle (ACV), fast, usually amphibious craft invented by Christopher Cockerell, a British engineer. Hovercraft are propelled on a cushion of air, usually by turbo-prop engines similar to those used in aircraft, over land and water at speeds up to 160km/h (100mph). They are invaluable for negotiating swamps, and are used as marine ferries (in Britain) and as military vehicles. Smaller, less speedy craft have been developed as runabouts, and a HOVERTRAIN travelling at more than 480km/h (300mph) has been projected.

Hoverfly, two-winged insect of the large family Syrphidae, easily recognizable from its habit of hovering, then darting forwards. Many hoverflies are banded yellow and black like wasps. Others resemble bees, but none has a sting, their coloration being a form of protective mimicry.

Hovertrain, tracked air-cushion vehicle which is still in the conceptual stage, even though the technology for its operation (it works on the HOVERCRAFT principle) is extensively developed. The advantages of such a train would offer are high speed on elevated, space-saving tracks. See also pp 510-511.

Howard, Catherine (c 1520-42), fifth queen of HENRY VIII, granddaughter of Thomas, 2nd Duke of Norfolk. Henry married her in July 1540, but evidence of pre-marital indiscretions was produced against her (Nov. 1541). She was beheaded in February 1542.

Howard, Sir Ebenezer (1850-1928), British town planner. He wrote *Tomorrow's Peaceful Path to Real Reform* (1898) and founded the Garden City Association in 1899. He was responsible for laying out Leitchworth (1903) and Welwyn Garden City (1920), two British GARDEN CITIES.

Howard, Elizabeth Jane (1923-), British novelist, wife of the author, Kingsley AMES. Among her books are *The Beautiful Visit* (1950), *After Julius* (1965) and *Odd Girl Out* (1971).

Howard, Henry, Earl of Surrey (1517-47), English poet. A cousin of Catherine HOWARD, he too was executed for alleged treason. He wrote some of the earliest English sonnets and translated two books of Virgil's *Aeneid* into blank verse. See also p 1416.

Howard, John (1726-90), British philanthropist who devoted much of his efforts to the welfare of prisoners. He was appointed High Sheriff of Bedfordshire in 1773, and instigated two acts of Parliament in 1774 concerning jails and standards of cleanliness in prisons.

Howard, Leland Owsian (1857-1950), US entomologist. His work helped man to achieve control over parasitic insects, especially the house-fly and the mosquito, and crop destroyers such as the boll weevil (which attacks cotton). His many books include *The Insect Book* (1901) and *The House Fly - Disease Carrier* (1911).

Howard, Luke (1772-1864), English meteorologist who gave names to various types of clouds. He recognized that clouds reflect "the general causes which effect all the variations of the atmosphere, just as the countenance of a person reflects the state of his mind or body". He named cirrus, cumulus, stratus and nimbus and their combinations. See also p 250.

Howard, Trevor (1916-), British actor. He made his stage debut in *Revolt in a Reformatory* (1934), played Shakespearean roles at Stratford-upon-Avon and appeared in US stage productions. He has made numerous films, including *Brief Encounter* (1945), *Ryan's Daughter* (1970) and *Kidnapped* (1971).

Howard, prominent English family, particularly in the Tudor era. Dukes of Norfolk and Earls of Surrey. John Howard was raised to the dukedom of Norfolk by Richard III in 1483 but was killed at Bosworth (1485). His son (1443-1524) and grandson (1473-1554), both named Thomas, conquered the Scots at FLODDEN (1513). The younger Thomas's son, Henry, was executed on a spurious charge of treason in 1547, as was the fourth duke in 1572. Catherine Howard, a niece of the 3rd Duke, married HENRY VIII.

Howard of Effingham, Lord Charles (1536-1624), English statesman and admiral. He was ambassador to France (1559) and Lord Chamberlain (1574-85). As Lord High Admiral (1585-1618), he commanded the fleet against the Spanish Armada in 1588 and was the colleague of Essex in the Cadiz expedition of 1596.

Howe, Clarence Decatur (1886-1960), Canadian engineer and politician, who amassed his fortune designing grain elevators. He served as a Liberal member of Parliament (1935-57) and was Minister of Transport (1936). In 1937 he founded Trans-Canada Air Lines.

Howe, Elias (1819-67), US inventor of the sewing machine. In the AMERICAN CIVIL WAR he supported the regiment in which he served with royalties from his patent.

Howe, Edgar Watson (1853-1937), US writer. He edited *Howe's Monthly* (1911-33), but he is most famous for his novel *The Story of a Country Town* (1883). His other works include *Country Town Sayings* (1911) and his autobiography *The Indignations of E.W. Howe* (1933).

Howe, Joseph (1804-73), Canadian journalist and orator, Premier of Nova Scotia (1860-63). A poet and newspaper publisher, he established the freedom of the press in a court suit (1835). He ran Nova Scotia almost single-handedly during his premiership, and was a vigorous opponent of Confederation.

Howe, Julia Ward (1819-1910), US author, lecturer and campaigner for women's rights. She wrote the *Battle Hymn of the Republic* (1862), which first appeared in the *Atlantic Monthly* during the AMERICAN CIVIL WAR.

Howe, Richard Howe, Earl (1726-99), British admiral. After notable service in the Rochefort expedition (1757) and at QUEBEC BAY (1759), he commanded the British navy in North America during the early stages of the American War of Independence. In 1794 he fought and won the action against the French fleet known as the GLORIOUS FIRST OF JUNE.

Howe, Sir William (1729-1814), British general during the American War of Independence. The commander at Bunker Hill, he became supreme commander of British forces in North America in 1775. With his brother Admiral Richard HOWE, he captured New York (1776) and occupied Philadelphia (27 Sept. 1777) but, after defeat at Saratoga (1777), he resigned in May 1778 and returned to England.

Howells, Herbert (1892-), British composer. A pupil of STANFORD, his compositions included several choral works set to religious texts. Prominent among these are the requiem *Hymnus Paradisi* (1938) and *Stabat Mater* (1963). His music, although basically conventional in idiom, was characterized by an individual style of chromaticism.

Howells, William Dean (1837-1920), US novelist and critic, pioneer of American literary realism. As assistant editor (1866-71) and editor (1871-81) of the *Atlantic Monthly*, the leading literary journal of the time, Howells concentrated the magazine's attention more exclusively on literature. His socialist sympathies are reflected in the novels *A Traveler from Altruria* (1894) and *Through the Eye of the Needle* (1907), but his best-known work is *The Rise of Silas Lapham* (1885). See also p 1772.

Howitzer, ARTILLERY piece that, because of its low muzzle velocity, is capable of curved fire - hence its projectile may reach targets hidden to high-velocity guns. Howitzers were first used in the late 16th century. See also pp 560-563.

Howler monkey, mammal that lives in Central and South America. Its name is derived from the loud, penetrating call of the male. The largest New World monkey, it is a gregarious tree-dweller that feeds chiefly on leaves. Height to 92cm (36in), weight 9kg (20lb). Genus *Alouatta*. See also p 374.

Howlin' Wolf (1910-76), US blues singer. Also known as Chester Burnett, he wrote and performed songs of aggressive intensity right up to his death. He profoundly influenced rock musicians, especially CARL TAIN, BEETHEART and Little Feat. All his major hits were recorded 1954-64.

Howrah, city in a central India on the River Hooghly opposite Calcutta. It is part of an industrial region and its own products include iron and steel, food processing and textiles. Pop. (1971) 737,877.

Hoeha, Enver (1908-), Albanian Communist leader. He came to prominence in WWII when he was active in the National Liberation Movement, and in 1941 he established the Albanian Communist Party. In 1944 he became Premier. Following the USSR rift with Communist China in 1960, Hoeha joined Peking in its ideological struggle with Moscow.

Hoy, second largest of the ORKNEY ISLANDS, 23km (14 miles) long and 10km (6 miles) wide, off the NE coast of Scotland. There is some settlement in the NE (pop. 750) but the island is largely barren. The highest point is Ward Hill, 477m (1,564ft).

Hoyle, Sir Fred (1915-), British astronomer and mathematician who worked at Cambridge with Thomas Gold and Hermann Bondi on the development of the STEADY-STATE THEORY, subsequently becoming director of the Institute of Theoretical Astronomy (1966). He held academic posts in the USA and wrote several books, including science-fiction novels, sometimes in association with his son Geoffrey. See also pp 425, 404.

Hoysala (c 1006-1346), Indian dynasty that ruled in the southern Deccan and Cauvery valley. Vishnuvardhana won much territory, but his weak son Narasimha I lost it. His grandson Ballala II (r. 1173-1220) came to his aid. The dynasty's strength or weakness depended upon the merit of the individual on the throne more than its structure of rule.

H-R diagram. See HERTZSPRUNG-RUSSELL DIAGRAM.

Hsia dynasty, legendary first dynasty in Chinese history, supposedly prior to the Shang kingdom. Its traditional dates are c 2205-c 1766 bc, but modern Chinese scholars suggest c 1994-1524 bc.

Hsiao. See Hsiao.

Hsiao-chu, city in NE Taiwan, 10km (6 miles) inland. Founded c 1700 by Chinese settlers from the mainland, it is now a commercial centre with paper, fertilizer and textile industries. Pop. (1970) 208,038.

Hsiao-shing, city in China, provincial capital of Kinn province and 282km (175 miles) NNE of Mukden, it is now known as Ch'ang-ch'un. The city was given the name Hsin-ching when it became the capital of the former state of Manchukuo 1932-45. Ch'ang-ch'un is an industrial city producing chemicals, textiles and motor vehicles, and is a large engineering centre. Pop. (1970 est.) 1,500,000.

Hsiang, Shih I (1902-), Chinese playwright. His play *Lady Precious Stream*, based on an ancient Chinese comedy, was produced in London in 1934. Hsiang worked in the theatre in Peking and Shanghai and later taught at Peking University.

Hsuan Tsung (685-762), Chinese emperor (r. 712-56) of the T'ANG DYNASTY, also known as Ming Huang (The Enlightened Emperor). His rule provided the empire with one of its greatest periods of prosperity, grandeur and cultural brilliance, known as the golden age of Chinese poetry. Political dissatisfaction and military revolt followed the development of opposed and powerful factions in his administration, and led to his abdication.

Hsun-tzu (c 298-c 230 bc), Chinese phi-

Hovercraft are capable of adaptation: here a farm vehicle is able to cross muddy ground.

Howitzer, nuclear shells are among the projectiles that this weapon can fire.

Howler monkey, its dawn chorus can sometimes be heard several kilometres away.

Fred Hoyle, new techniques in red dwarf astronomy disputed his steady-state theory.

Hua Kuo-feng

Huddersfield, a factious area, is a typical of the landscape of the north of England.

Hudson River, today road tunnels provide links between Manhattan and New Jersey.

Hudson's Bay Company. Charles Granting a charter to trade to Prince Rupert's syndicate.

Howard Hughes, the US industrial and film producer who became a recluse.

philosopher. He systematized the work of CONFUCIUS and MENCIUS, thereby securing the continuance of the Confucian philosophical tradition. His importance has been obscured by the stress that later Confucians have placed on the view attributed to him that human nature is basically evil.

Hua Kuo-feng (c 1920-), Chinese politician who was appointed Premier of China in April 1976. The previous year he was deputy Premier before being elevated to acting Premier by the death of CHOU EN-LAI. A moderate, he was instrumental in the denunciation of the "gang of four" who made a bid for power following the death of MAO TSE-TUNG in Sept. 1976. He became Chairman of the Chinese Communist Party in Oct. 1977. *See also* Premier by Y.

Huallaga, river in N and W Peru. It flows from the Andes Mts N to the Marañon River. Length 1,127km (700 miles).

Huang-ho. *See* HWANG HO.

Huari, (Wari) prehistoric cultural period in Peru, named after a major archaeological site in the Mantaro Basin of the central Highlands. The Huari Empire lasted from about AD 600-1000. Its architecture is characterized chiefly by large stone enclosures. The culture also produced large stone sculptures and naturalistic representations of male and female figures.

Huascar (r.1525-32), Inca King, son of HUALYNA CAPAC, who controlled northern Peru (Cuzco) after his father's death. His younger half-brother, ATAHUALPA, controlled Quito, and the civil war between them (which Huascar lost) also facilitated their conquest by PIZARRO.

Huayna Capac (d.1525), last of the great Inca rulers (1493-1525), who extended the Inca Empire to its greatest size. He divided his realm between his two sons, ATAHUALPA and HUASCAR, war between the brothers had just ended when the Spanish began their conquest.

Hubble, Edwin Powell (1889-1953), US astronomer. Educated at Chicago and Oxford universities, he thereafter worked at MOUNT WILSON OBSERVATORY. Hubble discovered that galactic NEBULAE were GALAXIES OUTSIDE THE MILKY WAY and also detected and studied their recession. *See also* pp 990-991, 1000-1001.

Hubble constant, ratio of the velocity of recession of a GALAXY to its distance. All galaxies beyond the LOCAL GROUP are receding from us and from each other, as indicated by their RED SHIFTS. The limit of the observable universe should thus occur when the recession velocity equals the velocity of light. Assuming that the Hubble constant holds at large distances this limit is about 10 thousand million (10¹⁰) light-years. If the rate of expansion of the universe has always been the same the Hubble constant gives the age of the universe as about 10¹⁰ years. *See also* pp 300-301.

Hubertusburg, Peace of (1763), treaty ending the SEVEN YEARS WAR between Prussia and Austria. Prussia agreed to support the succession of JOSEPH II to the Imperial throne, and in return, Prussia was awarded Silesia.

Huch, Ricarda (1864-1947), German poetess and writer. Her poetry was published in two volumes called *Gedichte* (1891, 1894), but she is remembered chiefly for her historical studies, which include *The Life of Count Federico Confalonieri* (1910), *Wallenstein* (1915) and *Michael Bakunin and Anarchy* (1923).

Huckleberry Finn, The Adventures of, novel by MARK TWAIN, published in 1885. The novel, a sequel to *Tom Sawyer*, is considered to be Twain's most characteristic in characterization, plot and style, and is regarded by some critics as the greatest American novel.

Huddersfield, town in Yorkshire on the River Colne, 24km (15 miles) SW of Leeds. The woollen trade was developed in the 17th century and textiles are now the most important industry. Other products include chemicals and machinery. Pop. (1973) 130,060.

Huddleston, Ernest Urban Trevor (1913-), British churchman. Ordained in 1937, he spent 13 restless years in South

Africa, often vociferously opposing the government, before becoming Bishop of Masai (1960-68). Then appointed suffragan Bishop of Stepney, London, in 1969. He became vice-president of the Anti-apartheid Movement. In Oct. 1977 he accepted appointment as Bishop of Mauritius.

Hudibras, verse satire by Samuel BUTLER published in three parts in 1663, 1664 and 1678. It mocks the 17th-century PRESBYTERIANS and INDEPENDENTS through the adventures of the mutually quarrelsome Hudibras (the presbyterian) and his servant Ralpho (the independent). The work is incomplete. It is written in octosyllabic couplets.

Hudson, Henry (d.1611), English navigator and explorer. During his last four years he led several expeditions in search of a passage to China. On his first attempt he reached Newland (Spitsbergen), where he discovered rich fishing grounds. On the third voyage (1609), he reached the American Coast, and, sailing up what was to be called the Hudson River, disproved the possibility of there being a low-latitude sea route across the continent. On his last expedition he passed through the strait which bears his name and entered the inland sea now known as HUDSON BAY. In 1611 he was set adrift by his mutinous crew and never heard of again. *See also* p 1614.

Hudson, William Henry (1841-1922), British naturalist writer and novelist who was born in South America and went to England in 1869. His romantic novels include *The Purple Land* (1885) and the popular and haunting *Green Mansions* (1904). He has a talent for observation and description of the English countryside.

Hudson Bay, inland bay in a Northwest Territories, Canada, bounded by Québec (E), Ontario (S) and Manitoba (SW). The bay contains Southampton, Mansel and Coats Islands. The Churchill and Nelson Rivers drain into the bay, which is ice-free from July to October. Area 1,243,200sq km (480,000sq miles).

Hudson River, river in a New York state which rises near Mount Marcy in the Adirondacks and flows to New York Bay at New York City. Sighted in 1524 and explored in 1609 by Henry HUDSON, it has become one of the most important waterways of the world. The New York State Barge Canal connects the Hudson with Lake Champlain, the Great Lakes and the St Lawrence River. Length approx 493km (306 miles).

Hudson River School, group of US ROMANTIC landscape painters active between 1825 and 1875. They were so named because many painted idealized scenes of the Hudson River Valley. Among the most famous of the group were Thomas COLE, John Kensett, Henry Inman and Asher B. DURAND.

Hudson's Bay Company, corporation chartered in 1670 by CHARLES II of England to promote trade in the HUDSON BAY region of N America and to seek a northwest passage to the Orient. It dealt mainly in furs. In 1821 it absorbed the Montreal-based North West Company. In 1859 it lost its right to govern territories, much of its land was transferred to the new Confederation of Canada in 1870. It then began to expand into diverse business interests. In 1930 it was split up, the fur company remaining in London, the retail shops and diversified businesses in Canada. It remains one of the largest business firms in Canada. *See also* pp 1492-1493.

Hudson Strait, strait in NE Canada, between Baffin Island and N Québec. It connects Hudson Bay with the Atlantic Ocean and Foxe Channel, and is a passageway to the Arctic Ocean. Length 725km (450 miles).

Hue, city on the east of central Vietnam on the Hue River. Founded c 3rd century AD, the city was occupied by the Chams and the Annamese and it became the capital of Annam. First taken by the French in 1883, Hue witnessed the struggle between the French and the VIET MINH after WWII. Much of the city was destroyed

during the Vietnam War. There is a university (1957) in Hue, which is a market centre for rice, it also has cement industries. Pop. (1973) 209,043.

Hueffer, Ford. *See* FORD; FORD MADON.

Huggins, Charles Brenton (1901-), US physician, b. Nova Scotia. He shared the 1966 Nobel Prize in physiology and medicine with F. P. ROUS for his pioneering work in CANCER chemotherapy and his development of ways of investigating and treating cancers through the use of HORMONES.

Huggins, Sir William (1824-1910), British astronomer, the first to use the SPECTROSCOPE to determine the chemical composition of stars, comets and novae. He developed spectroscopic photography and applied the DOPPLER shift of the spectral lines of stars to the measurement of stellar motion. He distinguished between nebulae that are in fact gaseous and those that contain stellar clusters. *See also* p 978.

Hughes, Arthur (1835-1915), British painter. He was a member of the PRERAFAELITE school, his best-known paintings include *April Love* (1856) and *The Foe of St Agnes* (1856).

Hughes, David Edward (1831-1900), Anglo-American inventor and scientist who, in 1879, made the first practical demonstration of what we now call radio waves, but did not publish his findings for 20 years. In 1854 he built the first practical printing telegraph, and is now generally credited as the inventor of the CARBON MICROPHONE. *See also* pp 635-636, 638.

Hughes, Howard (1905-76), US industrialist, aviator and film producer. He pioneered an industrial corporation (1923), subsequently becoming one of the wealthiest of US billionaires as head of the Summa Corporation and the Hughes Aircraft Company. In 1935 he set the world speed record of 567km/h (352mph) in an aircraft of his own design. He occasionally produced films, including *Hell's Angels* (1930) in which he made a star of Jean HARLOW, as he did of Jane Russell in *The Outlaw* (1941). He lived the last 20 years of his life in almost total seclusion.

Hughes, Patric ("Spike") (1908-), British jazz composer, arranger and bass player. Hughes was an important force in stimulating jazz interest in Britain during the 1930s. He recorded with well-known US musicians such as Coleman Hawkins during a visit to the USA in 1937.

Hughes, Richard Arthur Warren (1908-76), British novelist. He wrote a number of plays, but is best known for his novels *A High Wind in Jamaica* (1929), a bizarre tale of amiable pirates and malevolent children, *The Fox in the Attic* (1961) and *The Wooden Shepherdess* (1972).

Hughes, Sir Samuel (1853-1921), Canadian soldier and political leader. A member of the Conservative Party, he sat in the House of Commons (1892-1921) and during WWI played an important role in organizing the Canadian expeditionary forces.

Hughes, Ted (1930-), British poet and short story writer whose major works include *Hawk in the Rain* (1957), *Lupercal* (1960), *Woodrow* (1967), *The Crow* poems, beginning in 1970, and *Gaudete* (1977). In these works he explores the theme of man's identity in a hostile universe and uses material from the animal world, mythology and folklore.

Hughes, Thomas (1822-96), British novelist and political writer. An active member of the Christian Socialist Movement, he is chiefly remembered for his popular novel *Tom Brown's Schooldays* (1857) and its sequel *Tom Brown at Oxford* (1861). Among his other works are *The Scouring of The White Horse* (1859) and *The Manliness of Christ* (1879).

Hughes, William Morris (1864-1952), Australian politician, b. England. In 1894 he was elected as a Labor member to the New South Wales legislature and he entered the federal parliament in 1901. He was prime minister between 1915 and 1923 and at the Paris Peace Conference

in 1919 gained German New Guinea for Australia

Hugh of Avalon, Saint. See HUGH OF LINCOLN

Hugh of Lincoln, Saint (c 1135–1200), English bishop. In 1179 HENRY II appointed him Prior of Witham Friary in Somerset, the first English CARthusian monastery. He became Bishop of Lincoln in 1186. Courageous and independent, he persistently fought for the interests of ecclesiastical authority in opposition to the Crown.

Hugo, Victor (1802–85), French poet, dramatist and novelist. He received a pension from LOUIS XVIII for his first collection of *Odes* (1822) and presented his manifesto of ROMANTICISM in the preface to his play *Cromwell* (1827). Later works include the plays *Hernani* (1830) and *Ruy Blas* (1838) and the novels *Notre-Dame de Paris* (1831) and *Les Misérables* (1862). Political convictions sent him into exile in the Channel Islands (1851–70) but on the fall of the Second Empire he returned to Paris, where he received a respect bordering on veneration. At his death he was given a state funeral. See also pp 1574, 1576–1577.

Huguenots, French Protestants of the 16th–18th centuries. The name probably comes originally from the German Edgenossen ("confederates"), but is possibly also influenced by the name of the gate, Roi-Hugen, where the Protestants of Tours assembled at night. In 1559, in the face of persecution, a national Protestant synod adopted a confession of faith and an ecclesiastical structure, influenced by Calvin more than by Luther. During the Wars of Religion the Huguenots continued to be persecuted (see BARTHOLOMEW'S DAY MASSACRE). The Protestant HENRY IV came to the throne in 1589, and, despite adopting the Roman faith in 1593, he promulgated the Edict of Nantes (1598). This recognized Catholicism as the official religion, but gave the Huguenots certain rights. It was revoked by LOUIS XIV in 1685 and thousands of Huguenots fled France. In 1789 their civil rights were restored and by the CODE NAPOLÉON (1804) they were guaranteed religious equality.

Huia, extinct New Zealand bird which showed a very unusual form of sexual dimorphism, or specialization of shape between male and female. The male had a short, straight, strong bill for making holes in decaying bark. The female had a long, slender, curved bill for probing crevices and for removing grubs which the male had uncovered but could not reach. Species: *Heteralocha acutirostris*.

Hudobro, Vicente (1893–1948), Chilean poet. He founded a literary movement known as *creacionismo*, which attempted to free words from their customary meanings to facilitate original imagery. His most praised poem is *Altazor o el viaje en paracaidas*, an account of what he believed to be modern man's descent from order to chaos.

Hui Tsung (1082–1135), Chinese emperor (r 1101–25). The penultimate emperor of the Northern Sung DYNASTY, he abdicated under threat from the Jurchen tribes of Manchuria. He founded the first imperial Chinese academy of painting, established imperial porcelain kilns and was an accomplished painter.

Huizinga, Johan (1872–1945), Dutch historian, admired for his social and intellectual history. He was professor of history at the University of Leiden (1915–42). His most famous books are *Erasmus of Rotterdam* (1924), *Homo Ludens* (1938) and *The Waning of the Middle Ages* (1919).

Hulagu Khan (1217–65), Mongol leader, grandson of GENGHIS KHAN. He quelled an uprising in Persia and annihilated the ASSASSIN sect, a Muslim secret society. He sacked Baghdad (1258) and seized Aleppo in Syria (1260). The Mongol advance under his command was checked by the MAMLUKES, an Egyptian military caste.

Hulbert, Jack (1892–1978), British light comedy actor who made his first professional appearance in 1913 and continued to give consistently entertaining perfor-

mances in plays, musicals and films. He produced and starred – often with his brother Claude – in musicals such as *Lido Lady* (1926) and *Follow a Star* (1930), his films included *The Ghost Train* (1931). He was married to Cicely Courtneidge in his autobiography, *The Little Woman's Always Right*, was published in 1975.

Hull, Cordell (1871–1955), US Secretary of State (1933–44) under Franklin D. ROOSEVELT. He was a member of the House of Representatives (1907–21, 1923–31) and author of the first federal income tax law in 1913. He played a significant part in bringing together the USA and Latin-American states. During WWII he was an important diplomatic figure and was later influential in establishing the preliminary organization of the UNITED NATIONS. In 1945 he was awarded the Nobel Peace Prize.

Hull (Kingston upon Hull), city in Humberside, NE England, on the N shore of the Humber estuary, third largest port and the largest fishing port in Britain. It exports products from the industrial region of NE England. Hull is the only city in Britain to own its own telephone system. Industries: chemicals, iron and steel, food processing, machinery. Pop. (1971) 285,472.

Hulme, Denny (1936–), New Zealand motor racing driver. In 1967 he became the first New Zealander to win the world drivers' championship (in a Brabham), and in 1968 and 1970 won the Can-Am sports car title in a McLaren. In 1967 and 1968 he was fourth in the Indianapolis 500.

Hulme, Thomas Ernest (1883–1917), British philosopher, poet and literary critic. He was a leader of the anti-romantic movement in modern poetry and criticism and a chief figure, with Ezra POUND, of the IMAGIST group of poets, which also included F. S. FLINT, H. D. (Hilda Doolittle), Richard Aldington and Amy Lowell. His philosophical writings include *Speculations* (1924) and *Notes on Language and Style* (1929).

Huikst, Hendrik van de (1918–), Dutch astronomer who calculated that the clouds of cold hydrogen gas in space should radiate at a wavelength of 21 cm. He also made contributions to the study of light scattering and the solar CORONA. See also p 997.

Human body, body of HOMO SAPIENS that differs from those of man's close relatives, the great apes, most obviously in the greater cranial development, the S-curved backbone and straight limb bones, a foot development in which the big toe cannot touch more than one other toe, and relative hairlessness. Otherwise the human body, bone for bone, matches those of the chimpanzee, gorilla and orangutan. Genetically, there are more obvious differences as can be seen by examination of the CHROMOSOMES of man and the apes.

Human Comedy. See COMÉDIE HUMAINE. **Humanism**, philosophical viewpoint based on the belief that "the proper study of mankind is man." Humanist ideas can be found from ancient to modern times, but the flowering of Humanism came during the RENAISSANCE. Medieval scholars had studied the classics to bolster Christian theology; Renaissance men, such as PETERARCH, studied the classics for their own sakes and saw them as a means of educating people. The movement spread northwards from Italy to include such scholars as Sir Thomas MORE, JOHN CALVIN and Desiderius ERASMUS. From the 15th to the 18th centuries Humanism represented the revival of Classical values in philosophy and art. Modern Humanism developed in the 19th and 20th centuries alongside scientific discoveries as an alternative outlook to that of traditional Christian beliefs. This movement, which has been associated with social reform, was championed by Bertrand RUSSELL. See also pp 1380, 1381.

Human rights, freedom which it may be argued that an individual possesses by virtue of being human. The concept of the inalienable rights of the human being has traditionally been linked to the idea of the higher or natural law, on which important

commentaries were written by several of the Greek and Roman writers. The concept of human rights was most notably formulated, however, in the American Declaration of Independence (1776), the Constitution (1789) and particularly its first amendments in the Bill of Rights (1791), and in the French DECLARATION OF THE RIGHTS OF MAN (1789). These documents owed much to the English PETITION OF RIGHT (1628) and BILL OF RIGHTS (1689) which extended the concept of individual freedom proclaimed earlier in the agreement between monarch and barons, MAGNA CARTA (1215). Important also are various international agreements for the protection of rights, most notably the abolition of slavery, including the traffic in women and children during the 19th and 20th centuries. The responsibility of the international community for the protection of human rights is proclaimed in the Charter of the United Nations and the Universal Declaration of Human Rights. **Human Rights, Universal Declaration of**, statement drafted by the United Nations Commission on Human Rights and adopted by the general assembly in 1948. It contains 30 articles and sets out basic human rights, including legal, political and economic equality. It declares that all persons should enjoy at least a minimum standard of living, access to health and social services, the right to employment, free education and to pass freely between countries. The declaration does not have the force of international law.

Human sacrifice, sacrifice to a deity usually in an agricultural society to ensure fertility and a good harvest, of at least one human being, usually young. Human life has always been considered more valuable and so more potent as a sacrifice than that of an animal. In some societies such as those of the pre-Roman Celts or ancient Greeks, only pure or noble victims were selected, the rituals of some other societies provided willing volunteers, in yet others mass sacrifices were common as with the Aztecs. Sometimes the bodies of the victims were eaten to ensure the communality of the rite.

Humberside, county in NE England created in 1974 from parts of Yorkshire East Riding and North Lincolnshire, HULL is the administrative centre and major port. Area 3,512 sq km (1,356 sq miles). Pop. 846,600.

Humble Petition and Advice (1657), second constitution of the English Protectorate, replacing the Instrument of Government. In its original form it made Cromwell king, but he refused the Crown. It restored a second chamber (abolished in 1649) to a Parliament of nominated members and vested executive power in the protector and a privy council. It lasted until the Stuart restoration in 1660.

Humboldt, Baron Alexander von (1769–1859), German scientist and explorer. His special subject was mineralogy but on his scientific trips in Europe and Central and South America he studied volcanoes, the origins of tropical storms and the increase in magnetic intensity from the equator towards the poles. His principal work, *Kosmos* (five vols, pub. 1845–62) is a comprehensive description of the physical universe.

Humboldt (Peru) Current, current in the SE Pacific Ocean. An extension of the West Wind Drift, the Humboldt current flows N along the W coast of South America. A cold current, it lowers temperature along its course until it joins the warm Pacific South Equatorial current. See also pp 234, 235.

Hume, David (1711–76), Scottish philosopher, historian and man of letters. His works include *A Treatise of Human Nature* (1739–40), *History of England* (1754–63) and various essays and philosophical "inquiries". Widely known for his humanitarianism and scepticism, Hume held a form of EMPIRICISM that affirmed the contingency of all phenomenal events. The posthumous *Dialogues Concerning Natural Religion* (1779) indicate the extent of his atheism. See also pp 1473, 1475, 1880, 1883, 1884, 1886, 1887.

Victor Hugo stood for the French presidency in 1848 but received only derisory support

Huguenots, an engraving of a massacre of French protestants at Cahors in 1561

Human sacrifice, an engraving of 1723 of a sacrifice performed by a tribe in the Andes

Alexander Humboldt produced the first map showing sets of isotherms

Hune, Joseph

Humpback whale. Biologists have made recordings of their song like sounds

Hummingbird of Notre-Dame. Quas modotaking part in the grinning competition

James Hunt with the winner's trophy after his victory in the French Grand Prix in 1976

Hunting, the horses and hounds of the Eridge Hunt on Tunbridge Wells common

Hume, Joseph (1777-1855). British radical politician. He was an MP in 1812, 1818-41 and 1842-55. He was a forceful advocate of the repeal of the corn laws and of the Combination Laws and a life long campaigner for parliamentary reform, including the introduction of universal franchise and the secret ballot.

Humerus, bone in the human upper arm, extending from the scapula (or shoulder blade) to the elbow. A notch, or depression, called the olecranon cavity, on the posterior roughened lower end of the humerus, provides the point of articulation for the ulna, one of the forearm bones. See also p 147.

Humidity, or relative humidity, measure of the amount of water-vapour in air. It is the ratio of the actual vapour pressure to the saturation vapour pressure, at which water normally condenses, and is usually expressed as a percentage. Humidity is measured by a hygrometer. See also pp 246-250.

Hummingbird, popular name for small, brilliantly coloured birds of the family Trochilidae, found in S and N America. They feed in flight on insects and nectar. Their speed can reach 100 km/h (60 mph) and their wings, which beat 50-75 times a second, make a humming sound. Length 6-22 cm (2.2-8.6 in). See also pp 81-114.

Humours, the. See FOUR HUMOURS, THE.

Humpback whale, finbacked whale found in all the world's oceans. It has breast fins that reach a third of its body length, long knobby flippers and a rounded back. Length to 16.75 m (55 ft), weight 32 tonnes. Genus *Megaptera*. See pp 161-179.

Humperdinck, Engelbert (1854-1921), German music teacher and composer. His works include incidental music, songs and seven operas, of which *Hansel and Gretel* (1893), the first, has remained his most popular work. Its simple melodies are used in the heavily orchestrated style of Wagner, whom Humperdinck helped at Bayreuth in the preparation of *Parsifal* (1880-81), even composing a few bars for the transformation scene.

Humphrey, Hubert Horatio (1911-78), US Vice-President (1965-69). He served as mayor of Minneapolis before entering the Senate as a Democrat. He incurred some hostility for his support of the Vietnam War when Vice-President, but won the Democratic presidential nomination in 1968, he lost the election to Richard Nixon. He was appointed chairman of the Congressional Joint Economic Committee in 1975, and Deputy President pro tem of the Senate in 1977.

Humphreys, David. See CONNECTICUT.

Humus, dark brown, organic substance resulting from partial decay of plant and animal matter. It improves soil by retaining moisture, releasing protein, aerating and increasing nitrogen content and bacterial activity. Often made in a compost heap or obtained naturally, types include peat moss, leaf mould and soil from woods. See also pp 660-661.

Hunan, province in SE central China, S of Tung-t'ing Lake. The capital is Changsha. A largely forested region, agriculture is nevertheless important, rice, tea, rape seed and tobacco are produced. The province has valuable mineral resources, including coal, tungsten and antimony. Area 210,570 sq km (81,301 sq miles). Pop. 38,000,000.

Hunchback, convex curvature of the upper spine, causing the back to bulge or a person having such curvature. It is generally caused by a disease such as tuberculosis or arthritis, but may be congenital.

Hunchback of Notre-Dame, The, English title of the novel by Victor Hugo, published as *Notre-Dame de Paris* in 1831. It was first published in an English translation in 1833. It was Hugo's first great novel and, with *Les Misérables*, the one that has remained most popular.

Hundred, subdivision of a shire in medieval England, having its origin in the Anglo-Saxon era. Its first official mention occurs in the 10th century. In theory a hundred consisted of 100 hides. The

hundred court (the hundred's administrative body) met every four weeks under the king's REeve to deal with small pleas and apportion taxation.

Hundred Days, Napoleon's, interlude between Napoleon's escape from exile on the island of Elba in March 1815 to his defeat at Waterloo in June. The French people received his avowed affection for constitutional rule with scepticism, and the recreated GRAND ALLIANCE defeated him at Waterloo and sent him into permanent exile on St Helena.

Hundred Rolls, records on a variety of matters in 13th-century England popularly known as Ragman Rolls. Most of them consist of returns from the inquest conducted by EDWARD I in 1274-75 into local administration. The commissioners put their questions to the HUNDRED court, from which the name of the rolls derived.

Hundred Schools, term referring to the classical period of Chinese philosophy (6th-3rd centuries BC). The primary concern of the many philosophical schools of the late chow period was ethics. Of the reputed "hundred schools", six were to prove historically significant, and of these CONFUCIANISM was the most important.

Hundred Years War, war between France and England pursued sporadically between the French seizure of English-held Guyenne in 1337 and the English defeat at Castillon in 1453. The refusal of EDWARD III of England to do homage for his French possessions began the war. Early English successes at Crécy and Calais and the capture of the French king JOHN II, in 1356, brought England territorial gains in the Peace of BRÉTIGNY (1360). The French gradually won their lands back and although HENRY V won the Battle of AGINCOURT, subsequent English failures at the siege of Orléans (1428-29) and the Battle of Patay (1429) ensured their ultimate expulsion from most of France. See also pp 1346-1347.

Hungarian, or Magyar, official language of Hungary, spoken by the country's 10.5 million inhabitants and by 3.5 million more in Romania, Czechoslovakia and elsewhere. It belongs to the Ugric branch of the FINNO-UGRIC LANGUAGES, which are in turn a part of the URALIC family.

Hungary, landlocked nation in central Europe, consisting of two rolling plains divided into three by the rivers Duna and Tisza. It was once a predominantly agricultural country, but the economy is now based on industry. Principal exports include machinery and chemicals. The capital is Budapest. Area 93,030 sq km (35,919 sq miles). Pop. (1975 est.) 10,619,000. See p 205-9.

Hunger, need or drive for an organism to obtain food. A specific hunger is a need for a particular substance in the DIET, eg vitamin C, to maintain health. In higher animals, eating and cessation of eating are governed by mechanisms in the HYPOTHALAMUS of the brain that respond to blood-sugar levels. In human beings hunger and thirst also reflect complex interactions between physiological clues and past experience with foods and tastes. See also pp 128-139, 162-163.

Hung Hsiu-Chuan (1814-64), Chinese visionary leader of the TAIPIŊ REBELLION. He came from KWANGTUNG province and was converted to Christianity in 1843. He believed himself the second son of god and set himself up as head of a new dynasty, centred on Nanking. Captured in 1853, he committed suicide in 1864. See also p 170.

Huns, nomadic Mongol people, probably of Turkish, Tataric or Ugric stock who spread from the Caspian steppes (present-day USSR) to wage a series of wars on the Roman Empire. Lacking the cultural development attributed to more sedentary peoples, they were very skilled in the arts of war, particularly military horsemanship. By the first half of the 4th century they had conquered the Ostrogoths and the Visigoths, reaching west as far as the River Danube. By about 432 the Huns were collecting an annual tribute from Rome. Their leader ATILIA (r 434-453) invaded the Eastern Empire and then moved still farther westward to

Italy and Gaul, but after his death in 453 the power of the Huns was broken. Many took service in the Roman armies, the rest settled on the lower Danube. See also pp 1270-1271.

Hunt, Geoff (1947-), Australian squash player. The foremost exponent of power squash, he has dominated the game in the 1970s, adding two world professional championships to numerous honours that include the world amateur (1967, 1969, 1971) and the British and Australian Open titles.

Hunt, Henry Cecil John, Baron (1910-) British soldier, mountaineer and explorer who in 1952 led the first successful ascent of Everest, when Sir Edmund HILLARY and Sherpa TENZING NORGEY scaled the peak. His army experience in India and Burma and his organizational skills were largely responsible for the expedition's success. He was made a life peer in 1966.

Hunt, James (1947-), British motor racing driver. After driving for Lord Hesketh's team in 1973-75, he moved to McLaren and won the world drivers' championship in 1976 with six grand prix victories.

Hunt, Leigh (1784-1859), British critic, journalist and poet. A member of literary circles which included SHELLEY and KEATS, he was known in his own time as a literary theorist and political journalist, writing for the contemporary periodicals *The Indicator* and *The Examiner*. He published a memoir of BYRON (2 vols, 1828) and *Poetical Works* (1832). His financial incompetence is satirized in the character of Harold Skimpole in Charles Dickens' *Bleak House*.

Hunt, William Holman (1827-1910), British painter who, with John Everett MILLAIS and Dante Gabriel ROSSETTI, founded the PRE-RAPHAELITE BROTHERHOOD in 1848. From 1854 he journeyed several times to Palestine and Egypt to paint biblical scenes in accurate local settings. His works, which include *The Light of the World* (1854) and *The Scapeloat* (1856) combine meticulous precision with didactic symbolism.

Hunter, John (1728-1793), and, his brother William (1718-1783), Scottish anatomists and surgeons. They worked in collaboration for several years during which they studied the lymphatic system, the course of the olfactory nerves and the exhalation of blood. John was the first to ligate an artery in the 1760s.

Hunter, John (1737-1821), British navigator who charted Sydney Harbour. As Governor of New South Wales (1795-1800) his attempts to introduce reforms aroused the enmity of MACARTHUR and Hunter was recalled to London.

Hunting, field sport involving the killing or trapping of small and large game. The three main types of hunting include those with firearms or bows and arrows, trapping and snaring, and coursing and falconry. For small game, hunting dogs (HOUNDS) are sometimes used. Hunting began as a means of survival but by the Middle Ages in Europe it was considered a sport usually reserved for the privileged class. In Britain it usually refers to the hunting of deer, otters, foxes and hares by a pack of hounds behind huntsmen on horseback. When a deer is cornered it is generally shot, foxes and hares are tracked down by the hounds who then move in for the kill.

Hunting and gathering, practice of small societies in which its members subsist mainly by hunting and by collecting plants rather than by agriculture. There is a low subsistence ratio of people to land, so the groups are always small bands. Although their technology is extremely simple they have sophisticated kinship and ritualistic systems. Today hunting-gathering societies are most numerous in lowland South America and parts of Africa. See also pp 118-121, 1828-1829, 1833.

Huntingdon, Selina Hastings, Countess of (1707-71), non-conformist religious leader in Britain and founder of the Calvinist Methodist sect (which broke with Wesley), called the "Countess of Huntingdon's Connexion". She built 64 chapels as well as a seminary in Wales.

Huntingdon, county district in WEST CAMBRIDGESHIRE, England, created in 1974 under the Local Government Act (1972). Area 912sq km (352sq miles). Pop (1974 est.) 111,300.

Huntingdon and Peterborough, former county in E central England, which became part of Cambridgeshire in 1974.

Hunting leopard. See CHEETAH.

Huntington's chorea. See CHOREA.

Hunyádi, János (1387–1456), Hungarian soldier and national hero. He was voivode (governor) of Transylvania (1440) and regent for Ladislas V (1446–52). A brilliant general, he took part in the HUSSITE Wars. In 1456 he defeated the Turkish fleet on the River Danube and broke the siege of Belgrade.

Hunza, people that live in mountainous terrain by the Hunza River, near Gilgit in Jammu, N Pakistan. They are Muslims of the Ismaili sect, followers of the AGA KHAN. **Hubei** (Hubei or Hupeh), province in E central China, the capital is Wei-chang. Drained by the Yangtze (Changjiang) and Han rivers, the region is one of the most productive agricultural areas in China. Products: wheat, barley, rice, tea, cotton, non-ferrous metals, steel. Area 187,590sq km (72,430sq miles). Pop 12,100,000.

Hurdles. See HORSE RACING.

Hurdles, track athletic event in which athletes clear ten flights of obstacles while running a prescribed distance. At Olympic and championship level, there are two hurdling events for men (110m, 400m) and one for women (100m, formerly 80m). Imperial distances are sometimes raced, as are events over 200m and 400m (women). The heights of the hurdles depend on the distance: 100m, 84cm (2ft 9in), 110m, 1.07m (3ft 6in), men's 400m, 91.4cm (3ft). Runners may take off from either foot. The event began in the mid-19th century, when sheep hurdles were used – hence the name.

Hurling, game similar to hockey, the national sport of Ireland. It is played by two teams of 15 on a field 137m (450ft) long and 82m (270ft) wide. At each end are goalposts 6.4m (21ft) wide with a crossbar 2.4m (8ft) above the ground. Each player carries a wooden hurley, similar to a hockey stick. The object is to catch the ball on the stick, run with it or hurl it towards a team-mate. Three points are scored for netting the ball under the crossbar, one point for hitting it over the crossbar. The ball may not be picked up or thrown by hand. Hurling, one of the fastest of all team games, is governed by the Gaelic Athletic Association.

Huron, small confederation of Iroquoian speaking tribes of North America. Indians who once occupied the St Lawrence Valley E of Lake Huron from Ontario to Georgian Bay. In wars for control of the fur trade with the IROQUOIS (1648–50) their population was reduced from 15,000 to about 500. They wandered widely, settling finally in Ohio, where they became known as the Wyandot. Others fled to the Great Lakes area and eventually settled in Kansas. Today some 1,250 live on reservations in Ohio, Oklahoma and in Ontario, Canada.

Huron, Lake, second largest of the GREAT LAKES, part of the boundary between the USA and Canada. It drains Lake Superior and feeds Lake Erie as part of the Great Lakes-St Lawrence Seaway system and is navigable by ocean-going vessels. Area 59,596sq km (23,011sq miles), max depth 229m (750ft).

Hurrians, ancient people of Mesopotamia. They established a kingdom in the N of the SUMERIANS by 2000 BC. By 1500 BC this had become organized into the kingdom of Mitanni, which established an empire in Syria and warred with Egypt. The power of the Hurrians was eventually destroyed by the ASSYRIANS in c 1200 BC but they had considerable influence over HITTITE culture. They spoke a language unrelated to any other Mesopotamian language and used a CUNEIFORM script. See also pp 1160, 1163, 1184.

Hurricane, wind of Force 12 on the BEAUFORT WIND SCALE, intense and devastating tropical cyclone with winds ranging from

120 to 320 km/h (75–200mph), known also as a typhoon in the Pacific. Arising over oceans 10 to 20 degrees from the Equator, hurricanes have a calm central hole, or eye, surrounded by inward spiraling winds and cumulo-nimbus clouds. The winds and waves of hurricanes take many lives and cause extensive damage to shipping and coastal areas, but weather satellites often give adequate warning of their approach. See also pp 248, 249.

Hus, Jan, or Huss, John (c 1369–1415), Bohemian (Czech) religious reformer. A teacher and priest at Prague, he was influenced by the beliefs of the English reformer John WYCLIFFE, became leader of a reform movement, quarreled with the pope and other church authorities and was excommunicated. In 1415 he was burned as a heretic. See also HUSSITES.

Husak, Gustáv (1913–), President of Czechoslovakia. He took over as First Secretary of the Communist Party after the fall of DUŠEK in 1969, became its head in 1971, and President in 1975.

Hussein ibn Ali (1856–1931), Arab religious and political leader. At first an ally of Germany and Turkey in WWI, he later supported the British and led a revolt against the Turks in 1916, proclaiming himself King of the Hejaz. He was defeated by IBN SAUD in 1924 and spent the last years of his life in exile.

Hussein I (1935–), King of Jordan (1953–). He was educated in England and his pro-Western views were attacked by other Arab leaders, especially President NASSER of Egypt. To stress his non-alignment he dismissed (1956) Gen. John Bagot GLUBB (Glubb Pasha), British commander of the Arab Legion (Jordanian Army). In 1967 he led his country into the Arab-Israeli War and lost all of Jordan W of the River Jordan to Israel. At the 1974 Arab summit meeting he was forced to relinquish his country's claim to west-bank Jordan to the Palestinian Liberation Organization (PLO).

Husserl, Edmund (1859–1938), German philosopher, known as the founder of the PHENOMENOLOGICAL MOVEMENT. He studied man's consciousness as it related to objects and the structure of experience. His works include *Ideas: General Introduction to Pure Phenomenology* (1913) and *Cartesian Meditations* (1931).

Husites, followers of John HUS in Bohemia and Moravia in the 15th century. They worked to reform the Church, demanding freedom of preaching, communion in both wine and bread and a reduction of Church property. The more extreme elements reduced the sacraments to two (BAPTISM and communion) and denied the doctrine of the REAL PRESENT. Their ideas thus foreshadowed the REFORMATION.

Hustings, platform from which prospective members of parliament spoke in the 18th and 19th centuries. Historically, the court of hustings, officially abolished only in 1977 in London, denoted a medieval open-air tribunal or common gathering.

Huston, John (1906–), US film director, writer and actor, son of the actor Walter Huston. As a scriptwriter he was responsible for several films including *Jezebel* (1938) and *Sergeant York* (1941). His greatest successes as a director were *The Maltese Falcon* (1941), *The African Queen* (1951) and *The Misfits* (1961).

Hutcheson, Francis (1694–1746), Scottish philosopher. In his best-known book, *Inquiry into the Original of Our Ideas of Beauty and Virtue* Hutcheson referred to a "moral sense" or "feeling", which distinguished the beautiful and the good. His criterion of what is morally right – "the greatest good for the greatest number" – was later utilized by Jeremy BENTHAM.

Hutter, Jakob (d 1576), Austrian ANABAPTIST and founder of the HUTTERITES. When Anabaptists in the Tyrol were persecuted, Hutter led many followers into Moravia. Charged with heresy, he was burned at the stake.

Hutterites, German-speaking Anabaptists practising communal living. The sect originated in Moravia in the 16th century under the leadership of Jakob HUTTER, moved to the Russian Ukraine, and in

1874 to the USA. Some also live in Canada. All things are held by them in common ownership and they stress family life, simple ways and pacifism.

Hutton, James (1726–97), Scottish geologist. He sought to formulate theories of the origin of the Earth and of atmospheric changes and concluded that the Earth's history could be explained only by observing current forces at work within it, thereby laying the foundations of modern geology, i.e. science. See also p 1466.

Hutton, Sir Leonard (1916–), England and Yorkshire cricketer who, in 1952, became the first modern professional to captain England. An opening batsman, he played in 79 Test matches between 1937 and 1955 (6,971 runs, average 56.67), 23 as captain. In 1938 he scored a record 364 against Australia in 13 hours 17 minutes, and by his retirement had accumulated 40,140 runs in first-class matches.

Huxley, Aldous Leonard (1894–1963), British novelist. He began his career as a literary journalist and began to satirize the hedonism of the 1920s in novels such as *Crome Yellow* (1921), *Annie Si* (1923) and *Point Counter Point* (1928). *Brave New World* (1932) presents a nightmarish utopia of the future. His later works include *Eveless in Gaza* (1936), *The Doors of Perception* (1954) and *Island* (1962).

Huxley, Sir Andrew Fielding (1917–), British physiologist. He analysed the electrical and chemical events in nerve cell discharge and for this work he shared the 1963 Nobel Prize in physiology and medicine with John ECCLES and Alan HODGKIN.

Huxley, Ekpeh Josephine (1907–), British writer b. Kenya. She recounted her African childhood in *The Flame Trees of Thika* and *The Mottled Lizard*. Her many novels include *The Merry Hippo* (1963) and *Love Among the Daughters* (1968). *Gallop Eyes* (1976) recounts a year in her Cotswold village home.

Huxley, Sir Julian Sorell (1887–1975), British biologist, son of Leonard and brother of Aldous Huxley. His researches were chiefly on the behaviour of birds and other animals in relation to evolution; his writings greatly promoted public interest in the subject. He served as secretary of the ZOOLOGICAL SOCIETY of London (1935–48) and as the director general of UNESCO (1946–48). His books include *The Individual in the Animal Kingdom* (1911) and *Evolutionary Ethics* (1943).

Huxley, Thomas Henry (1825–95), British biologist, champion of DARWIN'S theory of evolution and the scientific method in research. His works include *Zoological Evidence as to Man's Place in Nature* (1863), *Fisulation and Ethics* (1883) and *Manual of the Comparative Anatomy of Vertebrate Animals* (1871).

Huygens, Christiaan (1629–95), Dutch physicist and astronomer. His most notable contributions to science include the wave theory of light, the recognition of Saturn's rings and the use of a pendulum in clocks. See also p 1437.

Huymans, Joris-Karl (1848–1907), French novelist, b. Paris of Dutch parentage. He was much admired by Oscar Wilde and other figures of the 1890s for his "decadence", as revealed in his novel *A rebours* (1884, trans. *Against Nature* 1922), in which the hero pursues perverse sites to destroy boredom.

Hwang Ho (Huanghe or Yellow), major river in N China, the second longest in China. It rises in Tsinghai (Qinghai) province and flows E and NE through the Ordos desert, before turning due S between Shensi (Shānxī) and Shanxi (Shānxī) provinces. The river then flows E through Honan (Henan) and NE through Shantung (Shandong) to enter the Po Hai (Bohai) arm of the Yellow Sea. The river gets its name from the huge amounts of yellow silt it collects in its middle course. The silting of the river bed makes the river prone to serious flooding, and it is known as "China's Sorrow". Length approx. 4,830km (3,000 miles). See also pp 1176, 1176, 200.

Hyacinth, bulbous plant native to the Mediterranean region and Africa. It has long, thin leaves and spikes of flower

Hurdles, in this event an athlete must make natural strides between each flight of hurdles.

Hurricane force winds battered the south coast of England in 1954.

Thomas Huxley, his study of the pelvis was among many used to illustrate his works.

Christiaan Huygens developed an improved method of grinding lenses for his telescopes.

Hydroelectric plants convert the natural energy of falling water into electric power

Hydrofoil, the high speed craft designed originally by the Italian Enrico Foerster in 1906

Hydrangeas need a slightly moist, rich soil but grow well even in shaded places

Hyde Park, a view looking north over the Serpentine towards the Marble Arch

clusters. The bell-shaped flowers may be white, yellow, red, blue or purple. Family Liliaceae, genus *Hyacinthus*

Hyades, in Greek mythology, daughters of Atlas, nymphs placed by Zeus among the stars as reward for the care given the infant Dionysus (Bacchus), after the death of his mother Semele. Another story has them mourning for their dead brother Hyas until Zeus transformed them into part of the constellation TAURUS

Hyacina. See HYENA

Hyatt, John Wesley (1837-1920), US inventor who, with his brother Isaac Smith Hyatt, developed CELLULOSE patented in 1870. His other inventions include a sewing machine and processes important in sugar refining

Hybrid, offspring of two true-breeding parents of different gene composition, the cross result of the combination of heterozygous parents. Most inter-specific hybrids, plant or animal, are sterile

Hybridization, cross-breeding of plants or animals between different species, genera or, less commonly, families to produce offspring that differ in genetically determined traits, it is commonly the result of human intervention. Changes in climate or the environment of an organism may give rise to hybridization, but usually man uses specialized techniques to produce hybrids that may be harder or more resistant to disease than the original forms, or more economical. Most inter-specific hybrids are sterile. See also pp 670-671 716 734 734

Hybrid vigour, the inordinate strength demonstrated in some hybrid offspring, not characteristic of the parents

Hyde, Anne (1637-71), first wife of James Duke of York (later James II). She was the daughter of Edward Hyde, Earl of CLARENDON, and married James in 1660. She was the mother of Queens MARY II and ANNE

Hyde, Douglas (1860-1949), Irish nationalist leader, the first President of the Republic of Ireland (1938-45). He was also a major force in reviving Irish literature through the Gaelic League, of which he was first president (1893-1915)

Hyde, Edward. See CLARENDON, EDWARD

Hydr

Hyde Park, royal park in the Borough of Westminster, London, between Park Lane and Kensington Gardens. It originally belonged to the manor of Hyde, property of Westminster Abbey until the reign of Henry VIII, who turned it into a deer park. Its most distinctive features are Speaker's Corner (the meeting place of soap-box orators), Marble Arch, Rotten Row (a fashionable bridle path) and the Serpentine (an artificial lake completed 1730). Area 147 hectares (361 acres)

Hyderabad, city in S India, in the Deccan River valley, 640km (400 miles) SE of Bombay. It is the capital of Andhra Pradesh state and capital of the former state of Hyderabad (1724-1948). Founded in 1589 as the capital of the Golkonda kingdom, it has several notable buildings dating from that time including the Char Minar (1591). It is also the seat of Osmania University (1918). Present day industries include tobacco and textiles. Pop (1971) 1,607,396

Hyderabad, city of Sind province, Pakistan, on the River Indus, 144km (90 miles) ENE of Karachi. It is famous for its gold and silver embroidery. Industries include chemicals. Pop (1972) 628,310

Hyder Ali (1722-82), Indian ruler. By 1761 he commanded the army of the state of Mysore and had begun to seize land from the Marhatta states and Hyderabad. He defeated the British in 1767 and 1780 although he in turn was defeated near Madras by Sir Eyre COOTE in 1781

Hydra, popular name for a group of small, cylindrical freshwater organisms including JELLYFISH, CORALS and SEA-ANEMONES

Hydra (Idhra or Ydra), Greek island in the Aegean Sea, off the S coast of the Peloponnese. Its chief town, Hydra, on the N coast, became an expatriate artists' colony in the 1950s, it is now a tourist resort. Pop (1961) (island) 2,766, (town) 2,546

Hydrangea, any of a number of primarily deciduous woody shrubs and vines of the

SAXIFRAGE order, native to the W Hemisphere and Asia. They are grown for their showy clusters of flowers, which may be white, pink or blue. Blue hydrangeas can be obtained by feeding aluminium sulphate to the roots

Hydration, assimilation of water by an ion or compound. A hydrate is a compound such as cupric sulphate (blue vitriol) that has a fixed amount of water weakly bonded to each crystal ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$). ETHYLENE can be hydrated to produce ETHYL ALCOHOL (ethanol)

Hydraulic engineering, branch of engineering concerned with the principles of liquid flow and their practical application

Hydraulic mining, breaking down of earth or rock by high-pressure jets of water delivered through large nozzles (called hydraulic giants). It is mainly used in mining seams that are at or near the surface (surface mining). The large quantities of water transport the loosened materials to sluices, where the minerals are recovered. See also COAL MINING p 830

Hydrazine, fuming corrosive liquid ($\text{H}_2\text{N-NH}_2$) obtained by the reaction of chloramine (NH_2Cl) and ammonia (NH_3) or by the oxidation of UREA. It is used as a jet and rocket fuel, as a reducing agent and as a corrosion preventer. Properties: s.g. 1.011, m.p. 1.4°C (34.5°F), b.p. 113.5°C (236.3°F)

Hydride, chemical compound of HYDROGEN with another element, especially a more electropositive element. The hydrides of the electropositive metals, such as lithium hydride (LiH) and sodium hydride (NaH), are salt-like ionic compounds containing the negative ion H^- . They are useful reagents for HYDROGENATION reactions. See also ELECTROCHEMICAL SERIES IONIC BOND

Hydrocarbon, organic compound containing only CARBON and HYDROGEN. Many thousands of different hydrocarbons exist, they fall into two main classes, aliphatic and aromatic hydrocarbons. The aliphatic hydrocarbons are mainly open-chain compounds, including such groups as the alkanes (paraffins), alkenes (olefins), alkynes (acetylenes) and terpenes. Aromatic hydrocarbons have properties similar to BENZENE, they contain at least one benzene ring, as in NAPHTHALENE and ANTHRACENE. See also pp 416, 438, 440 441 756

Hydrocele, accumulation of clear liquid in a cavity, most often the scrotum. It builds up in between the tissue covering the testicles and causes a painless swelling

Hydrocephalus, accumulation of abnormal amounts of liquid in the cranium (skull), usually because of obstruction or excess production, resulting in the increase of head size and mental deterioration

Hydrochloric acid, solution of the pungent colourless gas hydrogen chloride (HCl) in water. It is obtained by the action of sulphuric acid on common salt, as a by-product of the chlorination of hydrocarbons or by combination of hydrogen and chlorine, and is widely used in the chemical, food and metallurgical industries. The concentrated commercial acid contains 38% HCl and has a s.g. of 1.19. See also pp 160 398

Hydrocyanic acid, or prussic acid, deadly poisonous weak acid, HCN . It is a liquid with an odour of bitter almonds, sometimes used as a fumigant to destroy rats and other pests of buildings. It also has uses in the chemical industry but is so dangerous to handle that its solid salts potassium and sodium cyanide are preferred, even though these, too, are highly poisonous

Hydrodynamics, in physics, branch of MECHANICS which deals with the motion of fluids (liquids and gases). It is of great importance in industry, particularly chemical, petroleum and water engineering. The properties of fluids studied include their adhesion, cohesion, viscosity and type of flow (viscous and turbulent). See also FLUID MECHANICS

Hydroelectricity, electricity generated from the motion of water, whether from dams, tides or waves. In all installations

this energy of movement, or kinetic energy, is first converted to mechanical energy in the spinning blades of a water turbine, and then to electricity by the spinning rotor of an electric GENERATOR. See also pp 428 429 445

Hydrofluoric acid, colourless corrosive fuming liquid consisting of a solution of the gas hydrogen fluoride (HF) in water, prepared by distilling a mixture of sulphuric acid (H_2SO_4) and fluorspar (CaF_2). It is used in frosting and etching glass and to make FLUOROCARBONS

Hydrofoil, speedboat whose hull is lifted out of water by flat or curved plane surfaces that provide lift in water, just as an aeroplane wing generates lift in air. The underwater fin attached to such vessels, seaplanes, or to submarines is also called a hydrofoil. Hydrofoil ships are capable of speeds up to 80 knots. See also pp 476 477

Hydrogen, gaseous non-metallic element (H), first identified as a separate element by Henry CAVENDISH in 1766. It is usually classified with the ALKALI metals in group 1A of the periodic table. Hydrogen is the most abundant element in the universe (70% by weight) and the lightest of all. It is used in the manufacture of AMMONIA and as a rocket fuel. Properties: at no. 1, at wt 1.00797, density 0.0899g cm^{-3} at STP, m.p. -259.14°C (-434.45°F), b.p. -252.9°C (-422.5°F), most common isotope H (99.985%). See also DEUTERIUM, TRITIUM, pp 888 889, 888 889

Hydrogenation, chemical reaction between molecular hydrogen (ie atmospheric hydrogen) and an element or compound, sometimes under pressure, usually in the presence of a metal catalyst such as nickel, platinum or palladium. An unsaturated compound, such as benzene, may accommodate the extra hydrogen, but a saturated species will break up (destructive hydrogenation)

Hydrogen bomb, or H-bomb, nuclear weapon developed by the USA in the late 1940s and first exploded by that country in 1952 in the Pacific. Subsequent H-bomb tests by the USA, USSR, Britain, France, China, India and possibly yet other countries have included explosions equivalent in force to that of ten million tons of TNT. These explosions have also greatly added to the poisoning of the atmosphere by radioactive wastes. H-bombs of much greater power, perhaps as much as several hundred million tons of TNT, are now easily within the resources of nuclear technology. Few countries are at present testing H-bombs. These bombs explode by a process of nuclear fusion, in which hydrogen atoms are joined to form atoms of helium, and a huge quantity of left-over energy, which appears as the light, heat, blast and radioactive emission of the bomb. The process is essentially the same as that which takes place in the Sun. See also NUCLEAR ENERGY, NUCLEAR WEAPONS, pp 574 774

Hydrogen bond, CHEMICAL BOND formed between certain hydrogen-containing molecules. The hydrogen atom must be bound to an electronegative (electron-withdrawing) atom, the bond being formed between the positive charge on hydrogen and the negative charge on an atom in an adjacent molecule. Hydrogen-bonding occurs in water, and in many biological systems

Hydrogen peroxide, syrupy liquid (H_2O_2), usually sold in aqueous solution, prepared by electrolytic oxidation of sulphuric acid (H_2SO_4), or from reacting anthraquinone with oxygen. It is used in bleaching, as a disinfectant and as a rocket fuel oxidizer. Properties (anhydrous): s.g. 1.44, m.p. -0.4°C (31.3°F), b.p. 150°C (302°F). See also p 894

Hydrogen sulphide, colourless poisonous gas (H_2S) with the smell of bad eggs, prepared by the action of sulphuric acid (H_2SO_4) on iron sulphide (FeS). It is used in chemical analysis. Properties: m.p. -85.5°C (-121.9°F), b.p. -60.7°C (-77.3°F). See also p 904

Hydrograph, graph-like representation of the run-off caused by 25mm (1in) of rainfall falling at a uniform rate and at a specific time over a drainage basin

Hydrographic chart, or nautical chart, map of the physical features of oceans and adjoining coastal areas. Such charts also contain tide and current information. The most detailed ones exist for coastal areas because more information has been collected there, but new sonar devices now facilitate the mapping of deep ocean floors.

Hydrography, science of charting the water-covered areas of the earth. Navigational charts have been made since the 13th century, but these were accurate only for sea-coasts. Interest in the charting of oceanic areas away from sea-coasts only developed in the 19th century. Now detailed bathymetric (deep-sea) surveys are available for geological studies. Hydrographic offices are run by governments of maritime nations to furnish their mariners with nautical charts, the work of these offices is co-ordinated by the International Hydrographic Bureau, founded in 1921. See also **HYDROGRAPHIC CHART**.

Hydrological cycle, also called water cycle, the circulation of water on and near the Earth's surface. Water leaves the oceans by evaporation, passes through the atmosphere as moist air and clouds, precipitates on to the land as rain, snow and hail, and returns to the oceans via lakes, rivers and the water table underground. See also pp 216, 217, 760.

Hydrology, study of the Earth's waters, their sources, circulation, distribution and chemical and physical composition. The hydrological cycle traces the movement of water through various stages of evaporation until it is returned to land, and the continental water systems, both on the surface and underground. See also pp 216, 221, 542, 543.

Hydrolysis, reversible chemical reaction between water and another substance, often assisted by CATALYSTS. It works by a double decomposition reaction, eg $AB + H_2O \rightleftharpoons AH + BOH$ where A and B are discrete molecules. In digestion, ENZYMES catalyze the hydrolysis of carbohydrates, proteins and fats into forms that the body can assimilate.

Hydrometallurgy, treatment of ores by wet processes to extract their metals. It usually includes LEACHING by water and additives such as sulphuric acid, separation of the waste, purification of leach solution and precipitation of metal from solution by chemicals or electrolytic means. Most metals are extracted by this method.

Hydrometer, instrument for measuring density or SPECIFIC GRAVITY of a liquid. It consists of a long-necked, sealed glass bulb that is weighted. The neck is calibrated to indicate specific gravity which is read off against the surface of the liquid in which it floats. Hydrometers are used to check concentrations of liquids in storage batteries, freezing points of radiator solutions and the "proof" of alcohol.

Hydronephrosis, enlargement of certain kidney structures by distention with urine, resulting from obstruction of the urinary tract. See also p 1078.

Hydrophobia. See **RABIES**.

Hydrophone, microphone used under water for receiving sound or seismic waves, used extensively in submarine warfare. See also **SISMATOLOGY**, p 646.

Hydrophyte, or aquatic plant, plant that grows only in water or damp places. The WATERLILY is considered to be the most important water garden plant. Among the oxygen-producing plants used in home aquariums are anacharis and cabomba. Others that float are azolla, water fern and water hyacinth.

Hydroplane, speedboat able to skim over water by rising out of it at speed until only a small area at the stern remains immersed. This is achieved by means of a flat-bottomed hull, which is powered by a high-performance outboard motor.

Hydroponics, also called soil-less culture or tank farming, growing of plants in a mineral solution or a moist inert medium (such as gravel) containing necessary nutrients, instead of soil. It requires special apparatus including a tank, a solution reservoir, a pump and a timer all installed in a greenhouse. Added nutrients include

nitrogen, phosphorus and potassium, with trace elements such as calcium, sulphur and magnesium. Houseplants may be grown hydroponically in ceramic or glass containers filled with water and fed with diluted plant food. See also p 661.

Hydrostatics, in physics, the branch of mechanics which deals with liquids at rest. Its practical applications are mainly in water engineering and in the design of such equipment as hydraulic presses, rams, lifts and vehicle braking and control systems. See also **STATICS**.

Hydrotherapy, use of water within the body or on its surface to treat disease. It is often used in conjunction with PHYSIOTHERAPY.

Hydrotropism, plant growth in response to water stimulus. It is not a strong tropism and plant responses to higher oxygen and water content, such as the growth of willow roots through river banks, are often confused with it.

Hydroxide, chemical compound containing the group $-OH$, which reacts as a base, neutralizes acids. The strong inorganic bases such as potassium hydroxide, KOH , dissociate in water almost completely to provide many hydroxyl ions, OH^- , for chemical reactions. By contrast, such organic hydroxy compounds as phenol, C_6H_5OH , produce no hydroxyl ions, so are not called hydroxides.

Hydrozoa, class of animals without backbones, all living in water, belonging to the phylum Coelenterata. They vary in shape and size from the large and complex PORTUGUESE MAN-OF-WAR to the small and simple freshwater HYDRA. A few marine hydrozoans are CORAL-like. See also pp 12, 14.

Hyena, predatory and scavenging carnivore native to Africa and Asia. The spotted or laughing hyena (*Crocuta crocuta*) of the sub-Saharan is the largest, and has sparse grey fur with dark round spots. The brown hyena (*Hyena brunnea*) of S. Africa is smaller, and has dark brown bands round its legs and feet. Weight 27-80kg (59-176lb). Family Hyaenidae. See also p 98.

Hygiene, the means of promoting health in the individual and the community. Private hygiene involves a healthy diet and cleanliness, whereas public hygiene, as it affects public health, is subject to legal regulations. In most Western countries legislation covers health and safety at work, environmental pollution, communicable diseases and the preparation of food for public consumption.

Hygrometer, instrument used to measure the water-vapour content, or HUMIDITY of the atmosphere. One type, the psychrometer, compares the wet and dry bulb temperatures of the air; other types measure absorption or condensation of moisture from the air, or chemical or electrical changes caused by that moisture.

Hygroscopic, term describing a substance that, on standing, reacts with or absorbs water vapour from the air. Magnesium and calcium chlorides are typical examples. Some hygroscopic solids such as magnesium chloride, said to be deliquescent, absorb sufficient water to dissolve, yielding a concentrated solution.

Hyksos, people who invaded ancient Egypt from Canaan using horse-drawn chariots, an innovation for the time. Probably Semites, they seized the kingdom from the pharaohs, establishing a new dynasty, ruling from Memphis over the great empire on the lower Nile. They are thought to have been overthrown in about 1570 BC after only one century in occupation. See also p 116.

Hymen, in Greek mythology, god of marriage and personification of the wedding feast or song. Son of APOLLO, he is represented as a brightly-dressed youth in attendance on APHRODITE.

Hymen, in anatomy, thin membrane that partially or completely closes the entrance to the VAGINA of some mammals.

Hymenoptera, insect order containing SAWFLIES, ANTS, WASPS, HORNETS and BEES. All have a complete life cycle - egg, larva, pupa and adult - and two pairs of membranous wings, which move together in flight. They are found worldwide, living

solitarily or in social groups. The larvae (grubs or caterpillars) feed on plants or are parasitic or predaceous. See also pp 36, 37, 116.

Hymn, song of praise or gratitude to a god or a hero. The term is normally used for a religious song sung in church, which is not a psalm or a canticle. It was the Reformation that encouraged singing by all worshippers, rather than merely the clergy and choir. Hymns are now regular parts of services, hymnals include songs ranging from translations of Latin poems to modern verses and music.

Hyoscine, or scopolamine, poisonous alkaloid, formula $C_{17}H_{21}NO_4$ obtained in nature from deadly nightshade (belladonna) and other plants of the nightshade family (Solanaceae). It is used in medicine mainly as an hypnotic and to relieve pain caused by muscular spasms.

Hypatia (c 370-415), Egyptian NEO-PLATONIST philosopher and mathematician. The daughter of Theon, she became head of the Neo-platonists at Alexandria where she attracted many followers. Although her works are lost, it is thought she wrote critiques on the *Arithmetica* of Diophantus of Alexandria and on Ptolemy's astronomical canon.

Hyperbola, plane curve traced out by a point that moves so that its distance from a fixed point always bears a constant ratio (greater than one) to its distance from a fixed straight line. The fixed point is the focus, the ratio the eccentricity and the fixed line is the directrix. The curve has two branches and is a CONIC SECTION. Its standard equation in CARTESIAN COORDINATES is $x^2/a^2 - y^2/b^2 = 1$. See also pp 786-787.

Hyperbole, rhetorical device in which an obvious exaggeration is used simply to create an effect without being meant literally, such as "The music is loud enough to wake the dead".

Hyperglycaemia, abnormal amount of sugar in the blood, one of the symptoms of DIABETES MELLITUS. See also pp 1076, 1077.

Hypericum, or St John's wort, genus of more than 300 species of shrubby plants and herbs many of which have yellow flowers. Most are native to temperate and warm regions of the Northern Hemisphere, and some are common wild flowers. Well-known garden species include Rose of Sharon (*H. calycinum*) and the Tutsan (*H. androsaemum*). Family Hypericaceae.

Hyperinsulinism, overproduction of insulin, which may result from an INSULINOMA (a tumour in the pancreas), from other organic disturbances such as pituitary dysfunction, or from functional causes such as overexertion or poor nutrition. Hyperinsulinism produces symptoms of HYPOLYCAEMIA (low blood sugar), such as sweating, dizziness and headaches. See also pp 155, 1076, 1077.

Hyperion, in Greek mythology, sometimes said to be the original sun god and often confused with his son HELIOS. He was a TITAN, the son of URANUS and GAEA and the father of Helios, the sun, SELENE, the moon, the EOS, the dawn. He drove his chariot across the sky each day and returned each night by the River Oceanus.

Hyperon, class of ELEMENTARY PARTICLES with an anomalously long lifetime. The group includes the lambda particle (Λ), sigma particles (Σ^+ , Σ^0 , Σ^-), xi particles (Ξ^0 , Ξ^-), and omega particle (Ω). A lambda can replace a NEUTRON in a nucleus to form a hypernucleus. See also **BARYON**, p 819.

Hyperplasia, increase in the normal number of cells in an organ or tissue, as opposed to an increase in the size of the cells (which is called HYPERTROPHY).

Hypersensitivity, condition in which a person reacts excessively or unusually promptly to a stimulus. Most hypersensitive reactions are synonymous with ALLERGIES, the commonest being HAY FEVER, ASTHMA and infantile ECZEMA. Some people become hypersensitive to drugs, such as penicillin, or to chemicals after initial contact.

Hypertension, persistence of HIGH BLOOD PRESSURE.

Hyenas have jaws which are as powerful as any in the animal kingdom.

Hygrometers, which work on various principles, all measure the air's moisture content.

Hymn singing is an activity enjoyed by children more for musical than spiritual reasons.

Hyperbola is one of the conic sections obtained when a plane cuts a cone.

Hyperthermia

Hypodermic syringe, a doctor on the Amazon taking a blood sample from a fever patient

Hyperthermia, medical treatment, now largely obsolete, in which a patient's temperature was raised to cure him of an infection. It was achieved by injecting the patient with certain vaccines. Less drastic hyperthermic methods involve the use of Turkish baths.

Hypertrophy, enlargement of an organ, such as the heart, as a result of an increased amount of work required of it. This refers particularly to muscular tissue. An increase in the number of cells is called **HYPERPLASIA**.

Hyperventilation, prolonged rapid and shallow breathing, or any condition in which excessive amounts of air enter the **ALVEOLI** (air cells) of the lungs, reducing carbon dioxide in the blood to undesirably low levels.

Hypnosis, entranced, sleep-like state during which suggestions are readily obeyed. Little has been learned about hypnosis since it was first described two centuries ago. Since the time of F. A. MESMER (1733-1815) it has provoked far more emotional and superstitious concern than serious research. It is, however, fairly well established that hypnosis is physiologically close to a state of relaxed wakefulness, there is increased suggestibility, and hypnosis may be able to affect memory. In deep hypnosis, it is sometimes possible to produce hypnoanaesthetic effects (painlessness), hypnosis can relieve symptoms in hysterical reactions. See also p 169.

Hypnotic drugs, or **soporifics**, drugs which induce sleep. The most well known are the **BARBITURATES** prescribed as sleeping pills. Sodium pentothal, used to induce profound sleep quickly before a surgical operation, is also a barbiturate hypnotic. Other hypnotics include chloral hydrate and paraldehyde.

Hypnotism, process of inducing a trance-like state. See **HYPNOSIS**.

Hypo, photographic, popular name for a solution of sodium thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$) in water (often 200-300g/litre), used as a photographic fixer. It is usually acidified by the addition of sodium metabisulphite (25g/litre of solution). See also pp 628-629.

Hypoesthesia, inability to feel pain. This rare condition derives from a congenital nervous abnormality. See also p 141.

Hypochondria (hypochondriasis), exaggerated chronic concern with illness, infection or pain without justification. The illnesses are commonly associated with the internal organs, especially the stomach, liver or heart. Hypochondriacs constantly complain of aches, pains, weakness and fatigue and often consult several doctors in the hope of cure.

Hypodermic injection, introduction of a liquid under the skin through a hollow needle.

Hypodermic syringe, surgical instrument for the introduction of liquid substances into the body, either under the skin, into muscles or into blood vessels. It comprises a tube containing a piston plunger, connected to a hollow metal needle. The whole is provided sterile - free from micro-organisms - and must be re-sterilized after use. Many mass-produced hypodermic syringes are used once and then thrown away. See also **INJECTION**.

Hypoglycaemia, abnormally low amount of sugar in the blood, which may result from fasting, excess **INSULIN** and various metabolic and glandular diseases. Its symptoms are dizziness, headache, cold sweats and when severe **HALLUCINATIONS**, convulsions and coma.

Hypostyle, term for a hall (from Greek *hypo*, meaning under, and *stylos*, meaning pillar), in which the roof - usually flat - is supported by a large number of columns, often arranged to form a wide centre aisle flanked by two or more side aisles. The famed Egyptian temples of Amon at Luxor (14th century BC) and Khons at Karnak (12th century BC) are celebrated examples.

Hypotension, subnormal blood pressure not always due to illness or injury. It is a symptom of various diseases, severe haemorrhage, circulatory disturbances or the administration of various drugs. It may also occur on change of position in persons

with types of heart or adrenal gland diseases (postural hypotension).

Hypotenuse, side opposite the right angle in a right-angled triangle. It is the longest side of the triangle. See also p 794.

Hypothalamus, principal forebrain structure containing nerve cells controlling the sympathetic and parasympathetic nervous systems. Along with other neural areas, it regulates basic physical and emotional behaviour, including the initiation of **HUNGER**, thirst and sexual functions. See also pp 128, 129, 140, 1076, 1077.

Hypothermia, lowering of body temperature either deliberately, in surgical operations, or spontaneously as in the **HIBERNATION** of animals. In harsh conditions with inadequate food or heat, hypothermia is a common cause of death, especially amongst old people.

Hypothyroidism, deficiency of thyroxine, one of the **THYROID** hormones, most common in women and resulting in slowness, fatigue, menstrual disorders and, if severe, anaemia and mental deterioration. It is caused by malfunction of the thyroid gland; the condition is called **myxoedema** in adults and **cretinism** in children. It can be caused by insufficient iodine in the diet. It is one of the forms of **GOTTRE**. See also p 1076.

Hypsometer, instrument used in forestry to measure heights of tall trees by **TRIANGULATION**. Hand-held hypsometers contain a bubble spirit level, a sighting device and a vertical scale reading in feet or metres. The name hypsometer is also given to an instrument that measures height above sea-level as a function of the boiling point of water (which drops with increasing height).

Hyacotherium (*Eohippus*), extinct progenitor of the horse that lived during the Eocene epoch (58 million years ago) in swampy areas of North America. It probably had a small head with large eyes, a short neck and an arched back. Each forefoot had four toes, and each hind foot three. Its teeth were simple and suitable for cropping leaves. Height up to 50cm (20in) at the shoulder. See also p 286.

Hyrax, small, rodent-like, herbivorous hoofed mammal of Africa and SW Asia, with a squat, furry body and short ears, legs and tail. Rock hyraxes (genus *Procavia*) of deserts and hills live in colonies of about 50 individuals and are larger than the solitary, nocturnal, arboreal hyraxes (genus *Dendrohyrax*), which are the only arboreal hoofed mammals. Length to 50cm (20in). Family *Procaviidae*. See also pp 87, 94-95.

Hyssop, common name for *Hyssopus officinalis*, an aromatic herb of the mint family. A hardy perennial native to Eurasia, it is used in seasoning food.

Hysterectomy, removal of the womb (uterus) and surrounding structures. Hysterectomy may be sub-total, removal of the body of the uterus only, total, removal of the cervix, or radical, removal of the entire uterus and its surrounding connective tissues. See also p 1098.

Hysteria, phenomenon occurring in the magnetic and elastic behaviour of substances in which the **STRAIN** for a given **STRESS** is greater when the stress is decreasing than when it is increasing. When the stress is removed a residual strain remains. The phenomenon is particularly important in **FERROMAGNETISM**, the magnetization of ferromagnetic materials lags behind the magnetizing force. See also pp 870-871.

Hysteria, in psychology, psychoneurosis characterized by emotional instability, suggestibility, dissociation and psychogenic functional disorders. Conversion has symptoms that resemble organic diseases; **DISSOCIATION** alters conscious awareness and can manifest itself in such diverse forms as **AMNESIA**, **SLEEPWALKING** and withdrawal. Leading researchers in this field have included Jean-Martin CHARCOT, Pierre JANET and Sigmund FREUD. See also pp 1112, 1113, 1120.

Hywel Dda, or **Howel the Good** (died c 950), Welsh king. Notable as an imitator of English ways, he is believed to have drawn up a code of laws, and was the only Welsh ruler to issue his own coins.

I

I, ninth letter of the alphabet, derived from the Semitic letter *yod*, meaning *hand*. It passed through Phoenician unchanged to the Greeks, who called it *iota*. In the Roman alphabet it was pronounced *ee*. In English it has two main sounds: short, as in *bit*, and long, as in *wide*. The long *i* has a different sound in some words (eg *police* and *first*) and is pronounced like a *y* in words such as *union* and *union*. See also pp 608, 609.

Iamb, metrical foot consisting of an unstressed syllable followed by a stressed syllable, or a short followed by a long, as in the word *amaze*. The metre is called *iambic*. Iambic trimeter is characteristic of Greek drama, iambic pentameter is predominant in English-language verse.

Iasi, city in NE Romania, 16km (10 miles) from the frontier between Romania and the USSR. It was the capital of Romania until 1861 when the capital moved to Bucharest. It remains an important commercial and administrative centre. Industries include textiles, machinery and food products. Pop. (1970 est.) 183,700.

Iatrogenic disease, illness or disorder caused by normal medical treatment. Its most serious aspect today is the mental and physical deterioration which sometimes occurs among isolated patients in geriatric wards. See also p 1064.

Ibadan, city in SW Nigeria, approx. 145km (90 miles) NNE of Lagos. An industrial and commercial centre, it handles the regional cacao and cotton trades. Its own industries include plastics, cigarettes and food processing. Pop. 847,000.

Ibáñez, Vincente Blasco. See **BLASCO IBÁÑEZ**.

Iberia, ancient region s of the Caucasus Mts, USSR, e part of the modern Georgian SSR. Founded as an independent kingdom between the sixth and fourth centuries BC, it became a vassal of the Roman Empire after defeat by the Roman general POMPEY in 65 BC. It became part of Georgia in the 8th century AD.

Iberian Peninsula, the part of SW Europe occupied by Spain and Portugal, separated from Africa by the strait of Gibraltar and from the rest of Europe by the Pyrenees Mountains. It is bordered by the Atlantic Ocean (N and W) and the Mediterranean Sea (E). Area 596,384sq km (230,264sq miles).

Ibert, Jacques (1890-1962), prolific French composer of songs, chamber music, ballets and operas, perhaps best known for his orchestral suite *Diversément* (1928).

Iberville, Pierre le Moyne, Sieur d' (1661-1706), Canadian naval officer and explorer. In 1699, he led an expedition to the Mississippi delta and established Fort Maurepas (now Biloxi), the first permanent French settlement on the coast of the Gulf of Mexico. He was governor of Louisiana from 1703 until his death.

Ibex, any of several species of wild Old World horns grow up to 1.5m (5ft) long on the male, and both sexes have long, yellow-brown hair. Ibexes are renowned for their agility. Height 85cm (3ft) at shoulder. Family *Bovidae*. See also p 320.

Ibis, tropical lagoon and marsh wading bird with long down-curved bill, long neck and lanky legs. Closely related to the **SPHINX**, it may be black, whitish or brightly coloured. It feeds on small animals and nests in colonies. The so-called sacred ibis of N Africa was worshipped by the ancient Egyptians. Length 60-90cm (2-3ft). Subfamily *Threskiornithidae*. See also pp 72, 314.

Ibiza, island of Spain, 129km (80 miles) off the E coast, in the W Mediterranean, part of the Balearic group. The mild climate and beautiful scenery have made Ibiza a major tourist resort. Other activities include fishing, salt mining and the cultivation of figs and olives. Area 572sq

Hyssop has small blue leaves and grows in warmer parts of the USA as well as Europe

Iasi, a view of the famous Church of the Three Saints in Romania's old capital city

Jacques Ibert (right) beside *Ports of Call* is a representation of Mediterranean seaports

km (221 sq miles). Pop. (1970) 45,075.
Ibn Saud (c 1880-1953) founder and first King of Saudi Arabia (r 1932-53). Although in exile, his family were considered the leaders of the orthodox Wahhabi movement. The Wahhabia city, Riyadh was recaptured in 1902 and by 1912 Ibn Saud ruled all of Nejd (central Arabia). He defeated his rival, Hussein ibn Ali, in 1924-25 and constituted his kingdom in 1932.

Ibn Taymiyyah. See WAHHABISM.

Ibo, or Igbo, Kwa-speaking people of E Nigeria. Originally their patrilineal society consisted of politically and socially autonomous village units, but during the 20th century a political unity developed in reaction to British colonial rule. In 1967 the Ibo attempted to secede from Nigeria as the Republic of Biafra.

Ibrahim Pasha (1789-1848), Egyptian general. The son of Mohammed Ali, governor of Egypt under the Ottoman Empire, he campaigned against the Wahhabis of Arabia in 1816-18 and later fought the Greek insurgents with great brutality, sending many into slavery in Egypt. When his father defied Ottoman supremacy, Ibrahim conquered Syria (1832-33) and became its governor. In 1841 Turkey, supported by Britain and Austria, forced him to withdraw to Egypt. He was named regent of Egypt in 1848.

Ibsen, Henrik Johan (1828-1906), Norwegian playwright whose works are characterized by a basic questioning of bourgeois morality. *Brand* (1866), *Peer Gynt* (1867), *A Doll's House* (1879), *Ghosts* (1881), *An Enemy of the People* (1882), *The Wild Duck* (1884), *Hedda Gabler* (1890), *The Master Builder* (1892) and *When We Dead Awaken* (1899) are some of his widely translated works. See also pp 1577, 1578.

Ica, important archaeological period in Peru centring on the Ica Valley and the surrounding area. It lasted from about AD 1000 to 1475. An unrelated tribe of Chibcha-speaking Indians in Colombia is also known by this name.

Icarus, in Greek mythology, the son of Daedalus, architect of the Labyrinth for Minos of Crete. Having offended the king, Daedalus made wings of feathers and wax in order to escape to the mainland, and was successful. But Icarus, despite a warning, flew too near the sun, which melted his wings, and he fell into the sea and drowned. He was washed ashore on an island which was named Icaria after him. **Icarus**, minor planet, discovered by Walter Baade in 1949. It has a more eccentric orbit and travels closer to the Sun than any other body in the Solar System with the exception of comets. Icarus approaches to within 6,300,000 km (4,000,000 miles) of Earth. See also SL pp 954-955.

Icaza, Jorge (1906-), Ecuadorian author. His best-known novel, *Plor of Land* (1934), portrays the exploitation of Indians by a landowner.

ICBM. See INTERCONTINENTAL BALLISTIC MISSILE.

Ice, water frozen to 0°C (32°F) or below, when it forms complex six-sided crystals. It is less dense than water and floats. When water vapour condenses below freezing point, ice crystals are formed. This occurs mainly in high cirrus clouds, but also in the grey portions of other clouds. Clusters of these ice crystals form snowflakes. See also p 841.

Ice Ages, periods of the Earth's history in which ice sheets and glaciers advance from the polar regions to cover areas previously temperate in climate. The most recent was the Great Ice Age, or Glacial Epoch, which began about 1,000,000 years ago and lasted until the retreat of the ice to about its present polar extent some 10,000 years ago, corresponding roughly to the Pleistocene Epoch of geological time. During this period the ice advanced and retreated not once but four times. The present time may therefore be an interglacial period. Many of the Earth's features seen today - such as glacial valleys, fjords and moraines - can be attributed to the advance and retreat of the ice. See also GLACIER pp 224-227.

Iceberg, large drifting piece of ice broken off from a glacier, or polar ice cap. In the Northern Hemisphere the main source of icebergs is the SW coast of Greenland. In the south the glacial flow from Antarctica releases huge tabular icebergs, some more than 97 km (60 miles) long. Icebergs can be dangerous to shipping, since only a small portion is visible above the surface of the water. See also pp 227, 1940.

Ice boating. See ICE YACHTING.

Icebreaker, ship with a heavy bow and armoured sides, designed with powerful engines which enable it to make a passage through ice. For breaking thick ice, the bow is so designed that the forward motion of the ship drives it up onto the ice, and the weight of the ship breaks it. Propellers fore and aft allow great manoeuvrability. Icebreakers are used regularly to clear channels in the Great Lakes and in the Baltic Sea, and they have also been used in Arctic and Antarctic explorations. The Soviet icebreaker *Lennin*, launched in 1959, was the first nuclear-powered non-naval vessel.

Ice cap, small ICE SHEET, often in the shape of a flattened dome, which spreads over the mountains and valleys of polar islands. The floating ice fields surrounding the North Pole are sometimes incorrectly called an ice cap. See also pp 226, 227.

Ice cream, sweet, generally smooth frozen food made of cream or vegetable and/or animal fats, milk, sugar and an emulsifying agent. The milk is pasteurized, homogenized and blended with fats and other non-milk solids, whipped and then cooled rapidly. At this stage flavourings, fruit or nuts may be added. See also pp 726, 727.

Ice dancing. See ICE SKATING.

Ice hockey, fast-action sport, most popular in Canada and the USA. It is played by two teams of six players each on an ice rink usually 61 m (200 ft) long by 26 m (85 ft) wide, surrounded by walls about 1.2 m (4 ft) high. Three to four metres (10-15 ft) from each end is a goal net. The rink is evenly divided into three zones - attacking, neutral and defending - each 18 m (60 ft) long. A vulcanized rubber puck is used, the object being to advance it into the opposing goal. Players wear ice skates, carry angled wood sticks similar to hockey sticks, and wear protective equipment. Each goal counts as one point and regulation games consist usually of three 20-minute periods. Substitutions are allowed and the game is controlled by a referee or two linesmen. A penalized player has to leave the ice for two or more minutes. Ice hockey originated in Canada c 1860. The amateur sport has been included in the Winter Olympics since 1920 and there are world and European championships as well. The sport is also popular in the USSR, Sweden, Finland and Czechoslovakia.

Iceland, island nation in the N Atlantic Ocean, 290 km (180 miles) E of Greenland. Largely composed of lava, the island still shows signs of volcanic activity, such as geysers and mud lakes. The country's economy is based on fishing, with fish products forming 80% of all exports. The capital is Reykjavik. Area 103,000 sq km (39,768 sq miles). Pop. (1980 est.) 228,785. See p 2060.

Icelandic, official language of Iceland, spoken by virtually all of the island's 218,000 inhabitants. It is a northern Germanic language, descended from, and still closely resembling, the Old Norse language which was taken to Iceland by the Vikings in the 9th century AD.

Iceland moss, flattened, branched, partly erect LICHEN that grows in arctic and high-cold mountainous regions. In Scandinavia particularly, Iceland moss has been used as a medicine and as food for livestock and human beings. Species *Cetraria islandica*.

Iceland spar, transparent form of CALCITE (calcium carbonate) that has the property of birefringence, ie it bends light two ways so that an image seen through it appears double. It is used for polarizing prisms and in polarizing microscopes and other optical instruments. See also POLARIZED LIGHT.

Iceli, ancient British tribe that occupied

the area now known as Norfolk and Suffolk. The territory had been ruled by Prasutagus, a client-king, but on his death (AD 60) the Romans attempted to annex it. This led to a widespread revolt led by Prasutagus's queen, BOUDICCA. The Iceni sacked Colchester, London and St Albans before they were crushed by the Roman governor, Suetonius Paulinus, and their territory reduced to a small area in E Norfolk.

Ice plant, or sea marigold, succulent plant found in warm regions, particularly South Africa. The thick, tongue-shaped leaves are covered with thin, glistening cells that give the plant an icy appearance. The small flowers are yellow or pink. Height 20 cm (8 in). Family Ficoidaceae, species *Crotophytum cristallinum*.

Ice sheet, also described as a continental glacier. The term may be used for the vast ICE CAPS covering Greenland and Antarctica. The icebergs formed when ice breaks from the margins of such sheets may themselves be many sq km in area. See also p 226.

Ice skating, winter sport, believed to have originated in Scandinavia c 7,000 years ago. The first iron skates were introduced in the 17th century. Previously skates were made of bone and then wood. In the 1850s steel skates, with straps and clamps to fasten them to the shoes, were introduced. This development was soon followed by the permanent skate, in which the skate and the shoe form a single unit. In Britain and North America ice skating became organized in the 17th and 19th centuries respectively. The sport consists of speed skating, figure skating and ice dancing. Speed skating is usually held over distances of 500 m, 1500 m, 5,000 m and 10,000 m. In figure skating, compulsory and free style movements are made.

Ice yachting, winter sport, known as ice boating. The boats, skiff-like craft with three ski-like runners and a raked mast, are propelled by the wind. The most popular craft is the bow-steered Skeeter class, which is 6.7 m (22 ft) long, weighs about 135 kg (300 lb) and is sailed to 7 sq m (75 sq ft) of sail. Competition craft are classified according to sail area and can hold one or two people. The sport was originated in the 18th century by the Dutch and became popular in the USA and Canada in the 1860s. It remains popular in North America, The Netherlands, Germany, Scandinavia and around the Baltic coast.

I Ching. See BOOK OF CHANGES.

Ichneumon fly, parasitic insect that attacks other insects and spiders. Found worldwide, they are characterized by an ovipositor that is often longer than its body. They are usually 1 cm (0.4 in) long, though a North American genus reaches 5 cm (2 in) in length. Family Ichneumonidae. See also HYMENOPTERA.

Ichthyology, zoological study of fish, including their classification, structure, distribution and ecology. The ancient Greeks, particularly Aristotle, are regarded as the pioneers of this science in the West. Although true fish are in the Class Osteichthyes, in some classifications it also includes lampreys, sharks, rays and skates. See pp 56-63, 56-63.

Ichthyosaurus, extinct fish-shaped marine reptile of 65-225 million years ago. These fish-eaters had limbs modified into paddles, a dorsal fin and the start of a fish-like tail. Their fossils suggest that they bore live young. Length, 1-9 m (2-30 ft). See also pp 281-282.

Ichthyosis, also known as fish-skin disease, a disorder characterized by harshness, dryness and flaking of the skin. Caused by excessive growth of the horny layer, it is often a hereditary condition.

ICI (Imperial Chemical Industries), British industrial company specializing in the manufacture of chemicals. In 1981 it employed about 140,000 people throughout the world.

Icknield Way, prehistoric roadway stretching across England from the Wash, along the Chiltern Hills and Berkshire Downs to Stonehenge on Salisbury Plain. The road divides at Choring to form the Upper and Lower Icknield Way, both of

Ibsen believed that man's final sin and ultimate tragedy was simply the loss of love.

Icebreakers, first used in the 1870s, can break through ice more than 10 m (32 ft) thick.

Ice hockey players are padded to protect them from injury in high-speed collisions.

Ichthyosaurus was much better adapted for an aquatic life than the other dinosaurs.

Iconography is the study and classification of symbols (particularly religious) in art history

Ieyasu Tokugawa, whose Shogun dynasty ended when the West intruded

Igloos are constructed in a spiral formation from large blocks of hard packed snow

Ignatius of Loyola believed he was divine and appointed to lead a revival in the Church

which follow LEY LINES for part of their course.

Icon, type of religious painting or sculpture, often of Christ, the Virgin and Child or individual saints. The term is particularly used of Byzantine pictures and later Russian imitations. They were being produced in the 5th century, from the 6th century they have been used as an aid to prayer. Icons are frequently portable and are usually highly stylized, often with dull gold backgrounds. In later Russian icons the central figure is often framed by a halo of jewels and precious metals.

Iconoclastic Controversy, controversy over the veneration of images or icons in the Byzantine Empire during the 8th and 9th centuries. The controversy began in 726 when the Emperor Leo III issued an edict forbidding the veneration of icons. The edict was opposed by the Church. The Second Council of Nicaea in 787 rejected iconoclasm but the struggle, which lasted for over a century, ended in 843 with a victory for the proponents of the veneration. Today the Greek Orthodox Church observes the feast of Orthodoxy on the first Sunday of Lent. See also p 1276.

Iconography, in art history, the study and interpretation of themes and symbols in the figurative arts. In the 18th century the term referred to the classification of ancient monuments by motifs and subjects, but by the 19th it was more specifically concerned with symbolism in Christian art. Twentieth-century iconographers also study secular art and that of religions other than Christianity. Leading 20th-century iconographers have included Aby Warburg (1866-1929) and Erwin Panofsky (1892-1968). In religion, iconography is the symbolic representation of religious concept and personages central to the worship of Eastern Churches.

Iconoscope, CATHODE-RAY TUBE used in early television cameras, invented by Vladimir ZWORYKIN. Light entering the tube strikes a photoelectric plate, causing it to become positively charged. The other side of the plate is scanned by a beam of electrons from an electron gun. These electrons not held in the plate bounce back to be collected and transmitted as the television signal. See also pp 640-641.

Ictinus (5th century BC), Greek architect. After designing the PARthenon with Callicrates (447-432 BC), he worked on the rebuilding and enlargement of the Temple of Mysterias at Eleusis. He also designed the Temple of Apollo Epicurus at Bassae (c 450-125 BC), most of the columns of which are still in place.

Id, in psychoanalytic theory, the deepest level of the personality that includes primitive drives (eg hunger, anger, sex) demanding instant gratification. Even after the ego and the superego develop and limit these instinctual impulses, the id is a source of motivation and often of unconscious conflicts. The term was coined by Sigmund FREUD. See also p 1133.

Idaho, state in NW USA on the border with Canada. The terrain is dominated by the Rocky Mts and is drained chiefly by the Snake River, whose waters are used to generate hydro-electricity and for irrigation. The principal crops are potatoes, hay, wheat and sugar-beet, and cattle are reared. Silver, lead and zinc are mined and industries include food processing and timber. The fine scenery attracts many tourists, an important source of income. The state capital and largest city is Boise.

Idaho remained unexplored until 1805 but fur-trading posts had been established within a few years. The discovery of gold in 1860 brought many immigrants although the native Indian population was not subdued until 1877. The state was admitted to the Union in 1890 and by the turn of the century had begun the development of its resources. Area 216,412 sq km (83,557 sq miles). Pop. (1975 est.) 820,000. See also p 2161.

Ideal gas law, law relating pressure, temperature and volume of an ideal (perfect) gas. $pV = NkT$, where N is the number of molecules of the gas and k is a constant of proportionality. This law implies that at

constant temperature, the product of pressure and volume (pV) is constant (BOYLE'S LAW), and at constant pressure the volume is proportional to the temperature (CHARLES' LAW). See also pp 836-837.

Ideal Husband, *An* (1895), four-act comedy by Oscar Wilde, first performed in London in Jan 1895. It was a merciless satire on Victorian hypocrisy, using brilliant epigrammatic wit and dialogue to drive home its points within a conventional structure. After 100 performances, Wilde's trial forced its closure.

Idealism, doctrine or view that asserts the ideal as fundamental in man's interpretation of experience. It gives preference to mental perceptions (of the soul or spirit) over sensory perceptions and is opposed to materialism and realism. Its history in the west dates from the teachings of Plato and it is found in the teaching of Christianity. Idealism is applied to artistic pursuits to denote a rendering, especially in art, of something "as it ought to be" rather than as it actually is (eg the idealization of the human figure in Renaissance painting).

Identical twins. See TWINS.

Identity, in psychology, the combination of characteristics that makes each person unique. This concept creates certain anomalies, however, in that to oneself one may be different from the image one projects, and from the image one thinks one projects.

Ideology, strictly the science of ideas. In the 20th century it has been applied to political theories which seek a coherent explanation of all the relationships within a society. It is particularly used to describe theories, such as FASCISM and MARXISM which are a prescription for political action to change society and all too often overlook humanitarian considerations.

Ides, day in the Roman Republican calendar. They fell on the eighth day after the nones of each month, that is on the 15th of March, May, July and October and on the 13th of the other months. Julius CAESAR was assassinated on the Ides of March.

Idiopathic, in medicine, a term used to describe a disease that arises spontaneously, or a condition whose cause is either unknown or unclear, eg PSORIASIS. See also p 1063.

Idocrase, or **vesuvianite**, orthosilicate mineral, hydrous calcium, iron, magnesium, aluminium silicate, found in impure amethyst. It forms tetragonal system crystals, is glassy green, brown, yellow or blue, hardness 6.5, s.g. 3.4. Its transparent green or brown crystals are cut as gems. See also pp 260-261.

Idris I (1890-), ex-king of Libya, grandson of the leader of the Senussi Muslim sect. He used Italian and British aid to become chief of CYRENAICA, allied his country with the British in WWII and was ruler of Libya when it became independent in 1951. He was deposed in 1969 by a Socialist military junta, and sentenced to death in absentia in 1971.

Idris II, or **Idris II** (c 1099-c 1165), Arabian geographer. He worked at the court of Roger of Sicily after 1145 and wrote the *Kitab Rujar* (Book of Roger, 1154), a geographical study of the world. He also made a map of the world engraved on silver.

Idyll, in Classical Greek literature, a brief poem, generally part of a group of poems describing pastoral scenes or events.

Idylls of the King (1842-85), series of poems by Alfred Lord TENNYSON based on the Arthurian legend. It includes *Morte d'Arthur* (1842), *Guinevere* (1859), *The Holy Grail* (1871), and *Balin and Balan* (1885). The work charts the progress of Arthur's court from nobility to sin and evil, through disillusion.

Ieyasu Tokugawa (1543-1616), Japanese leader who completed the unification of Japan and was made shōgun - military leader - in 1603. By 1615 he had established the Tokugawa shōgunate (1603-1867) as the unchallenged hereditary dynasty which remained in power through tight control of the feudal system and the revival of Confucianism. See also p 1267.

If, poem by Rudyard KIPLING, which appeared in *Barack Room Ballads* (1892). It was popular at the time, but today many people disagree with its imperialist assumptions.

If, French islet 3.2 km (2 miles) sw of Murvelles. Its fortress, Chateau d'If, has a long history as a prison for political offenders. Honoré MIRABEAU was imprisoned there (1774). Alexandre DUMAS made the castle the scene of the imprisonment of his hero in *The Count of Monte Cristo*.

Ife, historical kingdom in SW Nigeria from the 11th to the 19th centuries when it was conquered by the Oyo tribe. Its capital Ife, 80 km (50 miles) ENE of Ibadan, was the spiritual centre of the YORUBA peoples. It now serves the surrounding farm region as a market centre, exporting mostly cocoa. Pop. (1975) 176,000.

Ifé art, art of the Yoruba people of W Nigeria that takes its name from the town of Ife, their spiritual centre, where a number of exquisite sculptured heads in bronze and terracotta have been found during the 20th century. Thought to date from between the 12th and 14th centuries AD, these Ife heads are of such a high degree of naturalism and technical accomplishment that they have been compared with ancient Greek sculpture. Benin art probably inherited the technique of brass-casting from Ife sculptors in the late 13th century.

Ifni, region of SW Morocco, on the Atlantic Ocean. Formerly a Spanish overseas territory and controlled by Spain (1860-1969), it was ceded to Morocco in 1969, after border fighting between Spanish and Moroccan forces. Area: 1,502 sq km (580 sq miles).

Igbo. See IBO.

Igloo, Eskimo dwelling, especially the snow-house of eastern Eskimos built of blocks of snow stacked into a low dome and welded together by frozen water. Igloos are constructed as temporary dwellings in the winter and provide excellent protection against the cold.

Ignatiev, Count Nikolai Pavlovich (1832-1908), Russian diplomat. The border agreement he negotiated with China in 1859 enabled Russia to become a major Pacific power. Ambassador to Turkey (1864-78), he helped to draw up the Treaty of SAN STEFANO which ended the Russo-Turkish War (1877-78) and gave Russia advantages in the Balkans. **Ignatius of Antioch, Saint**, 1st-century bishop of Antioch. As a condemned prisoner on his way to Rome, where he died for his faith, he wrote his seven *Epistles*, some addressed to SYR POCYARP, which are valuable sources for an assessment of the doctrine of the early Church.

Ignatius of Constantinople, Saint (c 799-877), also called Nicetas, a son of Emperor Michael I. He became a monk and was elected Patriarch of Constantinople in 846. He was deposed in 858 and replaced by Photius, but was reinstated in 867.

Ignatius of Loyola, Saint (1491-1556), Spanish soldier, churchman and founder of the JESUITS. Convalescing from a wound received in battle, he read a number of religious works and became inspired to devote his life to the conversion of the heathen. In 1534, with FRANCIS XAVIER and other young men, he made vows of poverty, chastity and obedience. He was ordained to the priesthood in 1537 and moved to Rome where, in 1540, Pope Paul III formally approved his request to found a religious order, the Society of Jesus, or Jesuits. He spent the rest of his life in Rome supervising the rapid growth of the order, which was to become the leading force in the COUNTER REFORMATION in the second half of the 16th century. His *Spiritual Exercises* was one of the most important books of asceticism and has had a profound influence on religious thought. See also pp 1406-1409.

Igneous rocks, broad class of rocks produced by the cooling and solidifying of the molten magmas deep within the earth. They may take intrusive or extrusive forms. Intrusive rocks such as GRANITE

are those formed beneath the earth's surface by the gradual cooling of molten material, extrusive rocks, such as **BASALT**, are formed by the rapid cooling of molten material upon the earth's surface. See also **pp 208-209**

Ignis Fatuus. See **WILL-O'-THE-WISP**

Ignition, engine, electrical components for igniting fuel in a petrol engine. Air and petrol vapour are mixed in the carburettor and delivered to the cylinder, where the mixture is compressed and ignited by a spark produced by the spark plug. See also **pp 420-421, 426, 427, 496**

Iguana, any of numerous species of terrestrial, arboreal, burrowing or aquatic lizards that live in tropical America and the Galapagos Islands. The common iguana (*Iguana iguana*) is greenish-brown, with a serrated dewlap and a crest along its back. Length to 2m (6.5ft). Family Iguanidae. See also **pp 71, 18**

Iguanodon, primitive bipedal dinosaur that lived in Europe during the lower Cretaceous period. It had a spiked thumb, which may have served as a defensive weapon. Its jaws and teeth, like those of later ornithomimid dinosaurs, were specialized for grinding plant food. Length 10m (33ft). See also **p 281**

Ihara, Saitaku (1642-93), Japanese poet and novelist. He was renowned for his capacity for rapid verse composition and satires. He wrote many novels, among them *Five Women Who Loved Love* (1686).

IJsselmeer, large freshwater lake in the NW Netherlands, formed in 1932 by the dyke which divided the ZUIDER ZEE into the saline Wadden Zee and the freshwater IJsselmeer. Large land areas have been reclaimed from the former Zuider Zee since 1932. Length of dyke 32km (20 miles).

Ikhnaton. See **AKHENATON**

Ile-de-France, historic region in N central France, bounded by Picardy (N), Champagne (E), Orléans (S), and Normandy (W). In 987 Hugh CAPET established the first French Crown lands that were to encompass this region, whose capital was Paris. It is regarded as the cradle of the French monarchy. See also **p 1336**

Ilesha, city of SW Nigeria, 97km (60 miles) NE of Ibadan. It is a commercial centre for the surrounding region. Local crops include nuts, yams and cacao. Pop. (1964 est.) 192,500.

Ileum, part of the small intestine, about 4m (13ft) long, preceding the large intestine. Together with the jejunum (which is nearer the stomach and with which it is continuous), the ileum lies coiled in the front of the abdominal cavity. See also **DUODENUM**, **pp 160, 161**

Ilex. See **HOLLY**

Iliad, historic Greek epic poem probably written in the 8th century BC, and attributed to HOMER, with the *Odyssey*, it provides a rich source for understanding the religion and people of the period. The *Iliad* describes the activities of the gods and mortals in the last weeks of the ten-year siege of Troy when, after a quarrel with AGAMEMNON, ACHILLES refused to continue the battle. After Achilles' friend PATROCLUS was killed by HECTOR, Achilles led the attack and killed Hector. See also **pp 1172, 1202, 1208, 1209, 1210**

Ilium, broad flat bone on either side of the PELVIS. Joined by the sacrum, the fused bones of the base of the spine, it is fused with the IACRUM, and PUBIS in a triangular suture at the hip socket. The ilia form the back of the "basin" of the pelvic girdle and anchor the muscles that form the frontal wall of the abdomen. See also **p 147**

Illinois, state in N central USA on the E bank of the Mississippi River. The land is virtually level and is drained by many rivers flowing SW to the Mississippi. The state has fertile black loam soil which supports crops such as hay, oats and barley; livestock is also important. Mineral deposits are found in the S. Chicago is a transport centre and its port on Lake Michigan handles domestic commerce through the Great Lakes and ocean-going vessels through the St Lawrence Seaway. The state capital is Springfield.

Illinois was explored first by the French in 1673 and a few settlements were made in the next century. Ceded to the British in 1763, it was occupied by American troops in the American War of Independence. Illinois became a state of the Union in 1818. Area 146,075sq km (56,400sq miles). Pop. (1975 est.) 11,145,000. See also **p 2161**

Illiteracy, inability to read and write. Many people cannot read or write even a simple message, millions more are functionally illiterate - they cannot, for example, read instructions concerning products they buy, or write useful letters. The eradication of illiteracy is one aim of public and compulsory education around the world, and yet the problem remains huge. According to 1973 United Nations statistics, there are about 160 million illiterates in 67 countries.

Illuminations, illustrated manuscripts of the Gospels and other religious books, the earliest dating from about the 5th century. The style ranges from intricate decoration of initial letters and borders to miniatures and full-page illustrations. Glowing colours and the use of gold leaf are common features. Early medieval illuminations were monastic in origin. Gradually, many different schools developed, such as the Hiberno-Saxon, the Carolingian and the Winchester. During the Gothic period illumination was used for both religious and secular book illustrations. Illumination was at its height during the 14th and 15th centuries when the INTERNATIONAL GOTHIC style was in use by such Flemish and French artists as the LIMBOURG brothers and JEAN FOUQUET. Well-known examples include the BOOK OF KELLS, THE LINDBERGH GOSPELS and the LUTTRELL PSALTER. See also **pp 1333**

Illusion, lack of correspondence between the perception of an object and its physical measurement. Illusions include such phenomena as hallucinations and can occur in any of the five senses although optical and visual illusions are the commonest. Optical illusions are caused by physical properties such as refraction, eg a rod lowered into water appears to bend. A visual illusion is the misinterpretation by the brain of something perceived by the eye. Geometric illusions occur when patterns of lines or shapes present conflicts of interpretation, eg the illusion in which two lines of equal length appear unequal because of the diagonal lines that are attached to their ends in different ways. Other visual illusions concern the perception of colour, brightness, motion and depth. See also **APPARENT MOVEMENT**, **MIRAGE**, **PERCEPTION**, **pp 134-135**

Illustrative music, or programme music, type of music that sets out to re-create the emotions aroused by a poem, place or story. It may be contrasted with absolute music, which has no direct references to experiences outside the music itself. An essential concept in the music of the Romantic period, perhaps the earliest example is BEETHOVEN's 6th Symphony (The Pastoral). Symphonic poems by SMETANA and STRAVINSKY are more modern instances.

Illyria, ancient region on the N and E shores of the Adriatic Sea that was inhabited by self-governing Illyrian tribes of Indo-European origin. They remained free of Greek and Macedonian domination but were defeated by the Romans in 168 BC and their land annexed as Illyricum. In about AD 9 it was divided between the imperial provinces of Dalmatia and Pannonia. Modern Illyria is N of central Albania.

Ilmenite, black oxide mineral, iron titanate (FeTiO₃), a major ore of the metal titanium. It is found in basic igneous rocks and beach sands as tabular to fine, scaly crystals in the rhombohedral system, and as compact masses or granules. It has a metallic lustre and is magnetic. Hardness 5-6, s.g. 4.7.

ILO (International Labour Organization), specialized agency of the UN to facilitate improved industrial relations and conditions of work. It was formed as an agency of the LEAGUE OF NATIONS in 1919 by the Treaty of Versailles and has a

membership comprising government, employer and worker representatives. An annual conference is held, which passes resolutions on such matters as conditions of work, independence of trade unions, migrant workers, equal pay and so on, which member countries agree to abide by. It has a large permanent secretariat in Geneva.

Iloilo, city in the Philippines, in the SE of Panay Island, on Iloilo Strait. Important as a commercial centre since the 17th century, it was declared a foreign trade port in 1855. It now exports sugar, rice and copra and is especially known for its delicate hand-woven fabrics. Pop. (1970 est.) 213,000.

Ilorin, city in W Nigeria, approx 274km (170 miles) NNE of Lagos. It is a marketing and processing centre for a large agricultural region. Its own industries include cigarettes and palm products. Pop. (1972 est.) 260,474.

Image, optical, points to which light rays from an object converge (real image) or from which they appear to diverge (virtual image) after reflection or refraction. A real image of an object can be projected on to a screen and can be recorded in a photographic emulsion, a virtual image, such as that produced by a plane mirror, cannot. See also **LENS**, **MIRROR**, **pp 852, 853, 852, 853**

Image intensifier, electronic device in which gamma rays, X-rays, and ultraviolet waves from a source can be converted into a visible image or in which the intensity of a visible image can be increased. The radiation falls on to a special surface and releases electrons that are then accelerated and focused on to a fluorescent screen, producing an enhanced visible image. See also **PHOTOMULTIPLIER**, **ELECTROMAGNETIC SPECTRUM**, **p 861**

Imaginary numbers, in mathematics, the square roots of negative quantities. The simplest, $\sqrt{-1}$, is usually represented by i . The numbers are so called because when first discovered they were widely regarded as meaningless. But they are necessary for the solution of many quadratic equations, the roots of which can be expressed only as complex numbers, which are composed of a real part and an imaginary part. They find applications in AC (alternating current) theory. See also **NUMBER**, **COMPLEX**

Imagism, movement in poetry which flourished in the US and England from 1912-17. The Imagists believed that the language of common speech should be used and that new rhythms should be created. They allowed absolute freedom in the choice of subject but demanded that the work should be explicit. AMY LOWELL, the principal exponent of the movement, produced three anthologies called *Some Imagist Poets* (1915-17).

Imago, the adult, reproductive stage of an insect that has undergone full METAMORPHOSIS. Imagoes are the winged insects, such as butterflies and dragonflies, that emerge from PUPAS or develop from NYMPHS. See also **p 39**

Imam, Arabic word for a leader of the Muslim community, used in several senses. It may describe a man who leads public prayers, he does not usually have the status corresponding to priest in other religions. It is also a title of honour for Islamic theologians and religious leaders, such as the AGA KHAN. Finally, it is the title of a succession of spiritual guides of the SHI'ITE Muslims.

IMF (International Monetary Fund), guardian body of the international financial situation. It was formed at the BRETON WOODS CONFERENCE (1944) to secure international monetary co-operation and the stabilization of currency and exchange rates. It is affiliated to the UN and in 1974 had 126 members, who agree to consult the IMF when altering exchange rates (with the exception of one alteration of up to 10%). It also provides a pool of reserves to provide loans to member states.

Imhotep, vizier to Pharaoh Djoser (or Zoser) of Egypt in the Third Dynasty of the Old Kingdom (2680-2258 BC) and architect of the pyramid at Sakkara, also reputed to be a physician and writer. In

Iguana, members of this group are generally vegetarian despite their large size

The *Iliad* describes the final dramatic events in the 10-year war between Greece and Troy

Illuminations allowed medieval artists to make amusing, realistic images

Imhotep, one of few Egyptians to be deified, was merged with the Greek god Asclepius

Imipramine

Impalee live in herds in the open country of southern Africa, they can leap 3m (10ft) high

Impatiens, balsam is one of the many species of this plant found widely in N America

Imperialism, the British took cricket to many parts of the empire. The Umbela XI 1903

Impressionism part of Seurat's pointillist painting *The Barbers*, in the National Gallery

525 BC he was deified as the patron of scribes and the son of Ptah the builder-god of Memphis

Imipramine, antidepressant drug first synthesized 1951 and introduced into psychiatric use in the 1960s. It was the first of the tricyclic antidepressants and is usually given orally. Its side-effects may include tremors and mental confusion

Immaculate Conception, the Roman Catholic belief that the Blessed Virgin Mary was free of all original sin from the moment of her conception. It was defined as a dogma by Pope Pius IX in 1854

Immortelle. See EVERLASTING FLOWERS

Immune system, the main method by which the body defends itself against disease. It involves many kinds of cells in the blood, lymph and bone marrow, some of which make antibodies against invading microbes and other foreign substances, and others (phagocytes) which actively attack and digest such invaders. The total operation of the immune system is exceedingly complex and not fully understood. See also pp 156-157

Immunity, in biology, resistance to attack by disease micro-organisms. It can be acquired naturally, as from an infection which stimulates the body to produce protective antibodies (a newborn baby carries some antibodies from its mother). Alternatively, it can be conferred actively by the injection of an antiserum containing antibodies, or a vaccine containing dead or attenuated disease micro-organisms. See also IMMUNIZATION, pp 156-157

Immunity, diplomatic, exemption of diplomats from search, arrest or prosecution in the country in which they serve. It is an essential part of diplomatic practice

Immunization, practice of conferring immunity against a disease, usually by stimulating the production of antibodies that combat the disease. In a common type of immunization, weakened forms of infecting organisms are injected into the bloodstream, causing only a mild form of the disease but stimulating antibody production and so providing lasting immunity. See also pp 156-157, 1063, 1065

Immunoglobulin, protein of a globular shape, found in the bloodstream, that plays a part in the body's immune defence system. ANTIBODIES are immunoglobulins

Immunological disease, also called an auto-immune disease, a disorder often described as caused by "the body attacking itself". The immune system of the body produces antibodies which are normally defensive but which can, in some circumstances, cause tissue damage. The exact circumstances are often ill-defined. RHEUMATISM and some forms of ARTHRITIS are common examples of such disorders, and there are many others. Less well known MULTIPLE SCLEROSIS is possibly at least partly auto-immune. See also p 1063

Immunology, study of IMMUNITY, auto-immunity and ALLERGY. It is concerned with the provision of active immunity such as vaccination as a means of preventing disease, passive immunity (injections of antitoxins) to treat infection, and diagnosis using various laboratory animals. Auto-immunity is an abnormal injurious reaction which results from overactive immune response to the body's own tissues. Allergic reactions result from an overactive response to harmless foreign substances such as dust, rather than to infective organisms. See also pp 156-157

Immunosuppressive drug, any chemical used to prevent or weaken the body's immune response, ie its ability to form ANTIGENS. Such drugs are used so that a beneficial antigen (such as a tissue graft) may be retained or allergic reaction may be prevented

Impala, or pala, long-legged, medium-sized African antelope. Long, lyrate horns are found only on the males, but both sexes have sleek, glossy brown fur with black markings on the rump. Length to 1.5m (5ft), height to 1m (3.3ft) at the shoulder. Family Bovidae, species *Aepyceros melampus*. See also p 298

Impasto, word of Italian origin used in oil or acrylic painting to describe the thick

heavy application of paint to a canvas or panel. When the paint is so heavily applied that it stands out in relief, the term "loaded impasto" is used

Impatiens, genus of 450 species of succulent annual plants, mostly native to the tropics of Asia and Africa. They have white, red or yellow flowers and seedpods which, when ripe, pop and scatter their seeds, giving the plants their name "impatient". Some species are known as touch-me-not. Family Balsaminaceae

Impeachment, prosecution of a public official by the legislature of state. In Britain it is conducted by the HOUSE OF COMMONS with the HOUSE OF LORDS as judge and in the USA by the HOUSE OF REPRESENTATIVES with the SENATE as judge. In the USA the last impeachment trial was that of President Andrew JOHNSON, it failed to impeach him. The last person to be impeached in Britain was Lord Melville in 1806

Imperial Chemical Industries. See ICI

Imperial College of Science and Technology, school of the University of London established in 1907 by royal charter for the study of science, particularly applied to technology and industry. It combined three institutions established in the 19th century: the Royal College of Science, the Royal School of Mines and the City and Guilds College, and became a school of the University of London in 1908

Imperial Conferences (1887-1937), periodic gatherings of premiers of the countries in the British Empire and representatives of the home government. Early conferences in 1887, 1894 and 1897 emphasized joint political, military and commercial policies, but from 1902 they paid increasing attention to securing preferential trade tariffs. The 1926 Conference defined the British Commonwealth. The 1937 Conference unanimously supported APPEASEMENT of Germany

Imperialism, domination of one people or country by another. The domination can be economic, cultural, political or religious. Historically, for example, the Roman Empire held sway in Europe to a unique degree. In the wake of the rise of the nation state and the age of exploration came the setting up, from the 16th century, of trading empires by major European powers such as the British, French, Portuguese and Dutch. They penetrated Africa, Asia and North America, their colonies serving as a source of raw materials and providing a market for manufactured goods. With few exceptions imperialism imposed alien cultures on native societies. In the 20th century, although Japan, Germany and Italy exercised imperialist ambitions for a time, and the Communists gained control of a Europe in the 1940s, most former colonies, especially in Africa and Asia, have been granted independence or secured it through wars of liberation. See also pp 1608-1611, 1618-1620, 1696-1697, 1730-1731

Imperial War Cabinet (1917-18), special Commonwealth cabinet during WWI. It met in London about 300 times in 1917. It consisted of the inner British war cabinet, the Dominion Prime Ministers and representatives of India. It acted in an advisory capacity, and had no executive power

Imperial War Museum, London museum founded by the War Cabinet in 1917 to provide a record of the activities of British peoples in WWI. It now illustrates and records all aspects of both world wars, in which the forces of the Commonwealth have been engaged. The museum includes a photographic and film library. It is situated in Lambeth

Impetigo, contagious bacterial skin infection caused by STREPTOCOCCAL or STAPHYLOCOCCAL infection. It causes multiple, spreading lesions with yellowish brown crusts and primarily affects the face, hands and feet. See also p 1074

Importance of Being Earnest, The (1895), three-act play by Oscar Wilde, subtitled "A Trivial Comedy for Serious People". Written in Worthing at considerable speed in late 1894 as a quick way of resol-

ving Wilde's rapidly mounting debts, the work is regarded by many as the greatest English play of the 19th century. It was made into a film in 1952

Impotence, in men, the inability to perform the act of sexual intercourse. It is the result of organic or psychogenic factors, and is the equivalent of frigidity in women. It may be a temporary condition brought about emotionally, by anxiety regarding sexual performance, or physiologically, through disease or drugs. The term loosely describes various sorts of sexual dysfunction, the lack or loss of erection, loss of pleasure and the inability to reach orgasm. See also p 165

Impressionism, major French anti-academic art movement of the later 19th century. The movement gained its name (originally used as a term of derision) from a painting by MONET entitled *Impression, Sunrise* and exhibited in 1874. Impressionist painters using everyday subjects sought to capture the atmosphere and visual impression of a subject, rather than record it in highly finished, strictly literal style and in the words of Monet, the movement's leading painter, aimed to create "a spontaneous work rather than a calculated one". In the 1860s, MONET, RENOA and SISLEY formed a close-knit group exploring the possibilities of painting out of doors, working with a light, bright palette and closely analysing and interpreting the effects of light on nature. The first Impressionist exhibition took place in 1874 in the studio of the Parisian photographer Nadar. Academies and public alike were unable to accept the shimmering, spontaneous, non-academic paraphrases which these canvases offered them as being the real effects of light. The movement became widely accepted as an artistic style from the late 1880s and spreading through Europe. Major Impressionists include DEGAS, SEURAT and SIGNAC, PISABARO organized and exhibited works in all eight Impressionist exhibitions, including the last (1886), and CÉZANNE exhibited with the Impressionists in 1874 and 1887. MANET, never wholly an Impressionist, was influenced by, and in turn influenced, Impressionism. Other Impressionists include Frédéric Bazille, Berthe Morisot and Mary Cassatt. MODERN has been called Impressionist because of his interest in the effects of light on his sculpture. In music, RAVEL and DEBUSSY are the two composers whose compositions are most often described as Impressionist. See also pp 1596-1597

Imprinting, form of learning that occurs within a critical period in very young animals. A complex relationship develops between the newborn infant and the first object it encounters; this is usually, but not always, a parent. The future emotional development of the infant depends upon this relationship. Most animals respond only to their own species, some will respond to inanimate objects. Imprinting in birds has been studied by Konrad Lorenz, who stated that imprinting is an irreversible process. See also pp 82-83, 1130-1131

Improvisation, in music, performance in which the musician himself invents what he plays, either relating it to a given musical framework or playing it totally freely. Classical Indian music and jazz have explored many of the formal and aesthetic problems and possibilities involved, and most African music contains some degree of improvisation. Improvisation, especially at the keyboard or in CADENZAS, was an integral part of Western classical music until the 19th century, and was revived in the 20th century in the works of composers such as STOCKHAUSEN. See also pp 1756, 1756

Improvisation, in theatre and films, technique in which actors perform with little or no predetermined dialogue or action. It has always played an important role in the theatre, especially in COMEDIA DELL'ARTE, but its use was not formalized until the work of STANISLAVSKY. He saw it as a way of stimulating a player's observational insights into character, and his followers - especially in theatre workshops such as the New York Actors'

Studio called improvisation the **METHOD**. Today it is not uncommon for whole films or plays to be completely improvised.

Inbreeding, mating of two closely related organisms. It is the opposite of outbreeding and gives a more uniform genotype and phenotype. A form of genetic engineering, it can be used to improve breeds in plants and animals. In humans, it can have harmful results such as the persistence of haemophilia in some European royal families. See also **EUGENICS**.

Inca Empire, empire established by a South American Indian group that migrated from the Peruvian highlands into the Cuzco area in about AD 1250. The Incas expanded and consolidated their empire slowly and steadily until the reign of Pachacuti (c. 1438-71) and his son Topa (c. 1471-93), when Inca influence dramatically increased to include the area between Ecuador in the N and Chile, Bolivia and Argentina in the S. The Inca Empire was bureaucratic and militaristic; local leaders were moved to other regions and co-opted into Inca society. Good roads facilitated communication and tax collection. All products were the property of the state. Although the Incas never developed a system of writing, their standards in architecture, pottery, weaving, jewellery-making and other crafts were high. Religious rites included sun worship and the mummification of their dead. When Pizarro, the Spanish conquistador, arrived in 1532, he took advantage of civil war between two Inca claimants to the throne to complete the downfall of an already weakened empire. See also pp 1364-1365.

Incandescence, emission of light by a substance heated to a high temperature. Whether or not a hot body is seen as incandescent depends to some extent on the dark-adaptation of the human eye, but an incandescent body is never at a temperature below about 400°C (750°F). A body can emit bright light without being incandescent, as in a fluorescent lamp.

Incanism, in CHRISTIAN doctrine, the tenet that God became man, that the supreme deity became an ordinary mortal human being. The doctrine was confirmed amid controversy by the first general council of the Church at Nicaea in 325. Heresies emphasizing only the god-like or man-like aspects of Christ were condemned by the Council of Chalcedon (451), which expressed the definition that Christ is "truly God and truly man".

Incendiary bomb, bomb designed to burn rather than destroy by explosion, its target. Incendiary bombs were first used in WWI; in WWII they were used in the Allied bombings of Germany, using phosphorus or thermite as the charge. They were also widely used by the USA in the VIETNAM WAR in the form of NAPALM.

Incense cedar, widely distributed genus (*Libocedrus*) of evergreen trees native to Chile, North America, New Zealand and China. They may be pyramid-shaped or spreading, and have flat, scale-like leaves. The aromatic wood is used for interior work and furniture. Height 30-40m (100-150ft). Family Taxodiaceae.

Incest, sexual relations within a family or kinship group, the taboo on which varies between societies. In many countries incest is a crime that carries a prison sentence. It is likely that the rules of many communities of primitive man prohibited marriage between close relatives, long before the genetic effects of such relationships were realized. See also **ENDOGAMY**, **EXOGAMY** p 1828.

Inch, See WEIGHTS AND MEASURES.

Inchcape Rock, sandstone reef off the coast of Scotland. Partly exposed only at low tide, it formerly caused many shipwrecks until a lighthouse, designed by Robert Stevenson, was erected there (1807-11). Tradition claims that a warning bell was hung there by the Abbot of Aberbrothock (Aberbroath), the story is celebrated in Southey's ballad *The Inchcape Rock*.

Inch'on, port city in SW South Korea, on the Yellow Sea. Its economy is largely dependent on the export trade. One of

South Korea's major commercial centres its industries include iron and steel. Pop. (1970 est.) 646,000.

Inclisor, any of the chisel-shaped cutting teeth, in the front of the mouth between the canines in the dentition of mammals. There are eight in humans, two in each half of each jaw.

Inclination, magnetic, or dip, angle made by a free-floating magnet with the Earth's magnetic lines of force. At the north magnetic pole the inclination is zero, at the magnetic equator it is 90°. See also **DECLINATION**, **MAGNETIC** pp 196, 197.

Inclined plane, flat surface that is angled relative to a reference plane. The angle of the plane is the angle between two lines, one in each plane, both at right-angles to their line of intersection. See also pp 446-447, 448.

Income tax, yearly assessment of tax on income, profits and financial gains of any type, administered in Britain by the Board of Inland Revenue. It is a direct tax on money earned or acquired, as distinct from a tax levied on goods or services. In its modern form it was first imposed by William Pitt in 1799 as a temporary measure to acquire revenue during the NAPOLEONIC WARS. It took the form of a 10% levy on incomes over £200 per year, with lesser proportions levied on incomes above £60 on a graduated scale. Incomes below £60 were exempt. It was repealed in 1815, but revived in 1842 by Robert Peel and revised during the late 19th century. Since WWII the taxation rate has varied according to legislation in annual Finance Acts, and until 1972 tax rates were calculated after making an allowance for unearned income. Since then the tax rate has ignored unearned income.

Incubation, process of maintaining stable temperature and humidity conditions to ensure that eggs develop and hatch. Carried out naturally by birds, monotremes and some reptiles, it is accomplished by sitting on the eggs, or using volcanic, solar heat, or that produced by a natural covering such as earth, sand or decaying vegetation.

Incubus, demon lover or nightmare personified as various forms of oppressive night-presence, also known as the Muhr. Said to ride, press on, and even cause death to sleepers, this creature of fantasy can appear as a monstrous being or, more usually, as a desirable sexual partner. The female equivalent is the succubus.

Incunabula, books printed from the invention of typography (in the 1450s) to the end of the 15th century. Georg Wolf gang Panzer produced the first catalogue of such books in five volumes (1793-97).

Indemnity, in law, the compensation paid to a person for wrong done to him or for loss or expense suffered by him. It also means the deed in which is contained the undertaking that indemnifies him.

Indépendants, Salon des, society founded in Paris in 1884 by SEURAT, SIGNAC and other artists - many considered avant-garde - who disagreed with academic art and opposed the official annual Salon. The new Salon allowed any artist who so wished to display works in its exhibitions. The artist paid a fee but was not required to have his work judged by a selection committee.

Independence Day, See FOURTH OF JULY.

Independent Broadcasting Authority (IBA), British organization responsible for independent television and independent local radio. It appoints programme companies, supervises programmes provided by the contractors and their scheduling, controls advertising and hauls, owns and operates transmitting stations. Established as the Independent Television Authority in 1954 to provide an alternative television service to the BBC, the organization appointed companies to provide a programme service. In 1972, it changed its name to the Independent Broadcasting Authority, when its responsibilities were extended to cover the setting up of a network of independent local radio stations.

Independent television and radio are financed by the sale of advertising time, but programmes cannot be sponsored and advertisements (commercials) must

appear either at the end, the beginning or during a natural break in the programme. National news programmes are provided for Independent Television by a non-profit-making company, Independent Television News (ITN). Independent Radio News, a subsidiary of the London Broadcasting Company (LBC), acts as a news agency for all other independent local radio companies.

Independent Labour Party, British political party, founded at Bradford in 1893. Its first leader was KERR HARDIE. It formed a Labour Representation Committee to return trade union representatives to Parliament. In 1906 that committee became the LABOUR PARTY, which by 1918 completely overshadowed the ILP.

Independents, or Separatists, English Puritan sect which evolved from brownism and sought organizational and intellectual independence as separate congregations from the established Church of England. Separatists established a base in the Netherlands in 1608 and as the PILGRIM FATHERS settled in Plymouth, Massachusetts. The first truly independent church was founded in Southwark, London, in 1616 by Henry Jacob but the most famous Independent was undoubtedly Oliver CROMWELL. Independents formed the backbone of his army and his support guaranteed their strength during the English Civil War although it was to be eroded after the Restoration by the Act of Uniformity. The name "Independent" was first used during the 1640s and although it continued to be used until the 19th century, the term "Congregationalist" was more common by that time.

Independent Television Authority (ITA), See INDEPENDENT BROADCASTING AUTHORITY.

Independent variable, See VARIABLE.

Index, in Roman Catholic history, an abbreviation for "Index of Prohibited Books", the official list issued by the Roman Catholic Church of books its members were forbidden to read or possess save in exceptional circumstances and with specific permission. Intended to guard the faithful against moral or spiritual danger, the index was first issued in 1559 and revised at intervals until final abolished in 1966.

Index of Refraction, See REFRACTION.

India, republic in S Asia, occupying the greater part of the Indian subcontinent. One of the most populous countries in the world, its greatest problems are periodic drought and floods producing widespread famine. Agriculture has been improved since independence in 1947, however, and mineral deposits are now being exploited. The capital is New Delhi. Area 3,275,833sq km (1,266,479sq miles). Pop. (1979 est.) 650,000,000. See p 2063.

Indiana, state in N central USA S of Lake Michigan. Access to the lake and to the Ohio River in the S ensures efficient distribution of the state's agricultural and manufacturing products. Agriculture remains an important part of the economy and the area is regarded as the country's richest farming region. The development of heavy industry in the NW has made Indiana one of the leading producers of machinery, state capital is Indianapolis.

Indiana was explored first by the French who founded several forts there in the early 18th century to protect their fur trade. It was ceded to the British in 1763 and passed to the USA after the American War of Independence. The native Indian population was not subdued until 1811. The state remained a rural area until the late 19th century when industrialization began. Area 93,993sq km (36,291sq miles). Pop. (1975 est.) 5,311,000. See also p 2161.

Indian antelope, See BLACKBUCK.

Indianapolis, capital of Indiana, USA, 282km (175 miles) SE of Chicago on the White River. It is the major cereal and livestock market in a fertile agricultural area. Industries include chemicals, electronic equipment and meat packing. Pop. (1970) 745,739.

Indianapolis 500, most famous motor race in the USA. The distance is 805km (500

Inca Empire, a shepherd and his llamas at the ruins of Fortaleza de Sacsayhuaman, Peru.

Incense cedar leaves of the Cypress family produce a distinctive scent when rubbed.

Incunabula, a Latin word meaning birth place, refers to the earliest printed books.

Indianapolis 500. Tom Sneva in 1977 after the first ever lap of 320km/h (200mph).

Indian art and architecture

Indian mutiny; this engraving is entitled *Remember the ladies - remember the babies*

Indonesia: it is a Malay style wedding the couple stand in front of their relatives

Indra, the chief of the Vedic gods was often depicted riding on a white elephant

Indri; these tree-dwelling lemurs are rare due to the destruction of their forest habitat

miles) and the event has been held annually since 1911. The winner's prize is one of the richest in all motor racing.

Indian art and architecture, can be traced back to the ancient civilization of the Indus Valley which flourished from c. 2300 to 1750 BC. Excavations at HARAPPA (Punjab) and MOHENJO-DARO (Sind) show fortified cities with a variety of public and domestic buildings and highly sophisticated sanitation. Small sculptures found there in bronze and stone show a considerable understanding of the human form.

MAURYAN art (320-185 BC), intensely Buddhist in motivation, can be seen in *chaitya* (shrines) and *stupa* (monastic halls hollowed out of solid rock) at Ajanta, where there are some rare frescoes. The GUPTA era (AD 320-550) was the golden age of Buddhist art. The Buddhist temple, with a porch and cella (main sanctuary), originated at this time. Religious imagery often combines Buddhist detachment and Hindu passion, in which the portrayal of female figures is often profane.

From the 6th century AD, a typical Hindu temple plan developed: a portico leading through a pillared hall to a cella containing the statue of the deity or the lingam (phallic symbol) of the deity Shiva. In s India (fl. 7th and 8th centuries AD) a Dravidian style of Hindu temple emerged; its name came from the language spoken.

Islamic art and architecture were introduced into India after the Muslim conquest (1192). Under MUGUL rule between the 16th and 18th centuries an Indo-Islamic style evolved, influenced by Persian prototypes. The Taj Mahal at Agra, a marvel of symmetry in white marble and precious inlay, stands as the most perfect example of MUGUL architecture. Although Persian influence was initially strong in drawing, by the late 16th century Indian taste was emerging in bright colouring and in detailed backgrounds. Under British rule, most Indian art declined to mere craftsmanship until the early 20th century. Major modern painters include Abanindranath Tagore, Jamini Roy, Amrita Sher-Gil and Francis Souza.

Indian corn. See MAIZE.
Indian mutiny (1857-58), also called the Sepoy mutiny, uprising begun by the Indian troops (sepoys) in the Bengal army in India. The revolt occurred when Governor-General Canning continued policies that disregarded the traditions of Hindus and Muslims. The army had cartridges (lubricated with the fat of cows and pigs) which had to be bit open before use, and the outraged sepoys rebelled against their introduction. They gained a strong hold by taking Delhi, and the Mogul Emperor Bahadur Shah II reluctantly took their side. The revolt was eventually suppressed with the aid of Sir Hugh Rose and Sir Colin Campbell.

Indian National Congress, Indian political party, organized in 1885 with British approval, it later became a force for Indian independence. After the Amritsar Massacre in 1919 Mohandas GANDHI became leader of the party and it grew from an elitist group into a mass movement. Non-violent civil disobedience organized by the party brought about the Government of India Act in 1935, which gave India a new constitution. The party agreed to aid the British in WWII, receiving in return the promise of independence for India.

Indian Ocean, world's third largest ocean, bounded by Asia (N), Antarctica (S), Africa (W) and South-East Asia and Australia (E). Branches of the ocean include the Arabian Sea, Bay of Bengal and the Andaman Sea and its largest islands are Madagascar and Sri Lanka. The average depth is 3,962m (13,000ft) although there is a Mid-Oceanic Ridge or submarine mountain range, extending from Asia to Antarctica, several of its peaks emerge as islands. The ridge encloses a number of deep-sea basins or abyssal plains, the deepest of which is the Java Trench, S of Java, reaching 7,725m (25,344ft). Surface temperatures of the ocean do not reach the extremes

experienced in the Atlantic or Pacific oceans, partly because of its landlocked nature. The climate of the nearby land masses is strongly influenced, however, by the ocean's winds and currents. There are three wind belts: the monsoons which pick up moisture from the ocean, bringing heavy rainfall to W India and South-East Asia, the SE trade winds, and the prevailing westerly winds, bringing tropical storms. The currents are governed by these winds, the seasonal shift of the monsoon dictating the flow of water N of the equator. The other circulation system is the regular south equatorial current. The Indian Ocean was the first to be extensively navigated, crossed by Vasco da GAMA on his first voyage from Europe to India in 1479. Area: 73,427,868sq km (28,350,500sq miles). See also pp 1927-1934 1935 1954

Indians, American. See AMERICAN INDIANS.
India Office, British department of state, responsible for the administration of India until 1947, when India and Pakistan became independent. It came into being in 1858, when it replaced the board of control, which had shared the government of India with the EAST INDIA COMPANY. Its splendid library is now in the keeping of the FOREIGN AND COMMONWEALTH OFFICE.
Indicator, in chemistry, substance applied in minute quantities which, by a change of colour, fluorescence, or by precipitate formation, indicates acidity (usually red) or alkalinity (usually blue). Indicators can detect end-points in reactions involving a change of PH or an OXIDATION-REDUCTION reaction. A universal indicator is a liquid that undergoes a spectral range of colour changes from pH 1 to 13. See also pp 904-905

Indictment, written accusation presented to a court in a criminal prosecution, except when the defendant (the accused) is to be tried summarily before a magistrate. The indictment states the offence alleged, the statute (if any) which makes it an offence and other matters to assist the accused in knowing the charge which he has to answer.

Indigestion. See DYSPESIA.

Indigo (indigotin), violet-blue dye traditionally obtained from plants of the genus *Indigofera*. It has been manufactured synthetically since the late 1890s, and has the chemical formula $C_{16}H_{14}O_4N_2$.

Indigotin. See INDIGO.

Indium, metallic element (In) of group IIIA of the periodic table. Its chief source is as a by-product from zinc ores. The element is used in certain low-melting point alloys and in semiconductors. Properties: at no 49; at wt. 114.82, s.g. 7.31, m.p. 156.61°C (313.9°F); b.p. 2,081°C (3,776°F), most common isotope In^{115} (95.72%).

Indo-Aryan languages, sub-group of the INDO-EUROPEAN LANGUAGES comprising the languages of India, Pakistan and some of Nepal. With SANSKRIT as their oldest ancestor, they date from about AD 1100. Geographically, the most important group is the central Indian Hindi group, divided into eastern and western dialects. Western Hindi has the largest number of speakers in the Indian subcontinent and is the source of its two national languages, Hindi and Urdu. Hindi is based on the dialect of the Delhi region and is written in the Sanskrit alphabet. Urdu, which absorbed much more Persian and Arabic during the Mogul period and is written in a form of Perso-Arabic script, became the official language of the Muslims in N India in the 18th century and is now that of Pakistan. The other groups are the eastern group, of which the most important is Bengali, the central group of Rajasthani and Gujarati, the western group, most importantly Punjabi, the southern group, including Sinhalese (of Sri Lanka) and Marathi, and Pahari, the "mountain languages" of the north.

Indo-China, SE peninsula of Asia, including Burma, Thailand, Cambodia, Vietnam, West Malaysia and Laos. The name refers to the former federation of states of Vietnam, Laos and Cambodia, associated with France within the French Union (1945-54). European penetration of the

area began in the 16th century. By the 19th century France controlled Cochinchina, Cambodia, Annam and Tonkin, which formed the union of Indo-China in 1887; Laos was added in 1893. By the end of WWII France had announced plans for a federation within the French Union, allowing more self-government for the states. Cambodia and Laos accepted the federation, but fighting broke out between French troops and Annamese nationalists, who wanted independence for Annam, Tonkin and Cochinchina in Vietnam. The war ended with French defeat at DIEN BIEN PHU. French control of Indo-China was officially ended by the Geneva Conference of 1954.

Indoctrination, systematic training intended to implant certain attitudes, beliefs or behaviour in others. It especially applies to political opinion and involves strict control of information given in the media and in education. Although most societies practise subtle forms of conditioning, some such as the USSR and China use indoctrination for political purposes.

Indo-European languages, world's largest language family, extending over all of Europe, the Western Hemisphere and SW and S Asia. It includes the GERMANIC, ITALIC, CELTIC, Baltic, Slavonic, and Indo-Aryan subgroups, and embraces such disparate languages as English, Spanish, Russian, Greek, Icelandic, Welsh, Albanian, Lithuanian, Armenian, Persian, Sanskrit and Hindi. About half the world's population speaks one or another Indo-European language. See also pp 1878-1879

Indonesia, largest nation in South-East Asia, consisting of more than 3,000 islands and extending 5,150km (3,200 miles) between the Indian and Pacific oceans. Most of the population is engaged in subsistence and cash-crop farming, but other exports now include tin, oil and timber. The capital is Djakarta. Area 1,919,400sq km (741,080sq miles). Pop. (1977 est.) 138,133,500. See p 2067.

Indore, city in Madhya Pradesh state, W central India, on the Saraswati and Khan rivers, 545km (340 miles) NE of Bombay. It became important in the 18th century as the capital of the Maharajas of Indore. It is now a commercial centre whose industries include iron, steel and chemicals. Pop. (1971) 543,381.

Indra, in Vedic mythology, ruler of heaven, great god of storms, thunder and lightning, worshipped as rain-maker and bringer of fertility to the fields. In the creation myth he slew Vritra, dragon of drought, to produce the sun and water on the earth.

Indri, largest of the LEMURS, an animal that lives in mountain forests of Madagascar but is now extremely rare. It is about 70cm (2.3ft) long and has a blackish-brown body and a rudimentary tail. Family Indridae, species *Indri indri*. See also pp 343.

Inductance, property of an electric circuit which causes a voltage to be induced in it by a change in the current flowing through it (self-inductance) or through a nearby circuit (mutual inductance). See also ELECTROMAGNETIC INDUCTION pp 876-877.

Induction, in medicine, the bringing on of labour in childbirth by artificial means. See also p.169.

Induction, in physics, process by which an ELECTROMOTIVE FORCE (emf) is created in a circuit when the magnetic flux through it changes. The direction of the induced current is such that its magnetic field tends to keep constant the number of lines linked with the circuit, and the magnitude of the current is proportional to the rate of change of flux (FARADAY'S LAW of induction). In a transformer the changing magnetic field created by the alternating current in the primary coil induces a current in the secondary coil. A generator consists of a constant magnetic field created by a permanent magnet or a current-carrying coil (an electromagnet), within which a conducting coil (an armature) is rotated.

Inductive logic, method of reasoning by which a general proposition is supported through consideration of particular cases.

that fall under it, often contrasted to **INDUCTIVE LOGIC**.

Inductor, device that introduces induction into an electric circuit. A typical inductor is a torus (doughnut-shaped ring) of metallic or ceramic material, around which is wound a coil carrying an electric current. See also pp 880-881.

Indulgences, in Roman Catholic theology, remission by the Church of temporal punishment for sin. An indulgence, once granted, obviates the need for the sinner to do penance, although it does not necessarily remove guilt, and may itself be only a partial rather than a full (plenary) indulgence. Previously available from bishops, indulgences are today granted only by the pope. Abuses connected with the sale of indulgences in the later Middle Ages were among the principal causes of the Reformation. Restrictions were introduced in 1567, and further reforms by Pope PAUL VI in 1967.

Indus, river of India and Pakistan rising in the Kailas mountain range and flowing west through the Jammu and Kashmir regions of India, then southwest through Pakistan and into the Arabian Sea. Semi-navigable along its shallow lower part, the river is used chiefly for irrigation and hydroelectric power. Length approx 3,060 km (1,900 miles).

Industrial chemistry, study of the chemical reactions and processes involved in the large-scale manufacture of chemicals in industry. While the engineering aspects of the subject belong to the study of **CHEMICAL ENGINEERING**, the industrial chemist is concerned with the chemical problems associated with the transfer of small-scale laboratory reactions to industrial plant.

Industrial psychology, study of the response of industrial workers to the conditions of their environment at work. It examines the effects of factors such as noise and close supervision and seeks to devise strategies to obviate all barriers to increased productivity. An experiment tried in the Volvo car factory in Sweden, in which the assembly line method was dispensed of, resulted in reduced absenteeism and improved industrial relations.

Industrial relations, interaction of management and workers within an industrial concern, on questions of wages, conditions of work, and so on. In many firms the workers are represented by trade unions in their dealings with the management. Industrial relations in Britain are only slightly regulated by law, the 1971 Industrial Relations Act, which limited the right to strike, was repealed in 1974. An independent Advisory, Conciliation and Arbitration Service (ACAS) was set up in 1975 to help to settle industrial disputes.

Industrial Revolution, term applied to the profound economic changes that took place in Britain, Western Europe and the USA from the mid 18th century to WWI. It describes the process by which economies and societies were transformed from being predominantly agricultural to being predominantly industrial. The conditions needed for an industrial revolution include adequate supplies of labour, raw materials and fuel, an efficient transport system, sufficient capital to finance mills and factories, and markets for the sale of goods. All these conditions were met in 18th-century England and were accompanied by several technological innovations. It was the first nation to undergo such a transformation and is generally considered the classic example. Britain's population rose by about one sixth in the first half of the 18th century; there were large deposits of coal and iron ore and an expanding empire provided raw materials (eg cotton from the American colonies) and markets. Textile-making first experienced the impact of change. The flying shuttle was patented in 1733, and the power loom in 1785. Large factories were built to house the machinery, employing hundreds of workers. The use of coal to produce pig iron paved the way for the manufacture of heavy machinery, and the revolution in metallurgy resulted in the development by the 1850s of the

BESSEMER PROCESS for making steel. The steam engine provided power for industry and revolutionized transport on land and sea. Along with the great wealth produced, the Industrial Revolution brought social upheaval. The mechanization of agriculture and the enclosure of arable land threw thousands out of work. People flocked to the burgeoning cities, where mills and factories offered work. Living and working conditions were abominable and wages were so low that children worked to supplement the family income. In the USA the NE became industrialized soon after Britain. But the South remained largely agricultural until after the Civil War, and concerted industrialization did not occur until well into the 20th century. See also pp 388-389, 1542-1543, 1564-565.

Industrial Workers of the World (IWW), organization founded in Chicago in 1905, which united trade unions and the political left. The organization became unpopular for its disapproval of US policy during WWI; it further alienated itself from the trade unions and political left by developing ideological differences. Eventually in the 1920s it lapsed into insignificance, although at its height it had had branches in Britain, Australia, New Zealand, Canada, South Africa and Norway.

Indus Valley civilization (c 2500-1700 BC), ancient civilization of the valley of the River Indus in present-day Pakistan. It was re-discovered by the British archaeologist JOHN MARSHALL in 1921, and is the earliest known urban culture of the Indian subcontinent. Three major cities, Mohenjo-daro, Harappa and Chanhu-daro, have been extensively excavated. It is believed that these cities were overrun by Aryan invaders.

Inert gases. See NOBLE GASES.

Inertia, property possessed by all matter that enables a body to resist changes to its state of motion. NEWTON'S first law of motion is sometimes called the law of inertia. The constant of proportionality referred to in Newton's second law is chosen so that the mass of a body equals the numerical value of its inertia. See also p 155.

Inertial guidance, in aeronautics, system using components that respond to changes in INERTIA to control missiles or spacecraft whose orbits are largely above the Earth's atmosphere. The main components include GYROSCOPES for reference and for detecting changes in orientation, motors or jets for correcting differences between planned and actual flight paths, and ACCELEROMETERS for determining velocity and position. The system can be supplemented by radar observations and control to correct gyro drift. See also NAVIGATION.

Infallibility, in Roman Catholic theology, the inability of the pope to err while officially defining a doctrine regarding faith or morals to be held by the Church. Considered the supreme apostolic authority by Roman Catholics, the pope defines the dogma, previously affirmed by the CURIA from his throne of state (*ex cathedra*). PAPA infallibility itself was defined by the first VATICAN COUNCIL in 1870.

Infants and infante, titles given to princes and princes of Spain and Portugal, other than the heir apparent to the throne, who throughout the Spanish monarchy was known as the Prince of the Asturias. **Infanticide**, killing infants at birth or soon after birth. The custom has been practised by many societies. Reasons vary greatly and include inadequate food supplies, an abhorrence of weak, deformed or female babies, and CANNIBALISM. Methods used include exposure and suffocation.

Infantile paralysis. See POLIO.

Infantry, foot soldiers carrying portable firearms and equipment. Modern infantry forces are organized into platoons, companies and battalions, and are equipped with rifles, machine guns, mortars, grenades, rocket-launchers and other light weight weapons, as well as supplies for several days of operations. Using voice and hand commands, radios and flares, these units manoeuvre on the battlefield and co-operate with supporting forces. In

defence, infantry units rely on earthworks to strengthen their combat power. See also pp 555-557.

Infarction, death of part of an organ caused by a sudden obstruction in an artery supplying it. This blockage can lead to the formation of a wedge-shaped mass in the organ. The condition can develop from an EMBOLISM and can be serious, as with a myocardial infarction (a HEART ATTACK), in which a section of heart muscle dies.

Infection, invasion of the body by micro-organisms that multiply in the tissues and cause damage to cells or the disease state caused by the invasion. See also p 1096.

Inference, conclusion implicit, but not explicit, from given information. There are two types: conclusions drawn from a single premise and those drawn from two or more independent premises. Logic as a study is concerned with forms of inference.

Inferiority complex, personality pattern marked by feelings of unworthiness and insecurity. The term was coined by ALFRED ADLER, who believed that the condition arose from unsuccessful attempts to compensate for childhood feelings of insignificance. A person with an inferiority complex may set extremely high standards for himself, make unrealistic comparisons with others and adopt either sycophantic or aggressive attitudes.

Inferno, first major division, consisting of 34 cantos, of Dante's *The Divine Comedy*. In it Dante relates his journey through hell, accompanied by VIRGIL. At the centre is Lucifer, chewing the souls of the Roman traitors Brutus and Cassius, and of Christ's betrayer, Judas.

Infertility, inability to reproduce because FERTILIZATION does not take place, caused in human beings by a variety of medical or psychological factors. Approximately half of the cases of infertility are caused by inadequate sperm production. It can also result from lack of ovulation, an obstruction which prevents sperm reaching the ovum, hormone imbalances or undeveloped sex organs. See also p 165.

Infinity, without limit or end. Mathematically infinity can be represented in a number of ways. In geometry it is where parallel lines meet. In algebra, where y is any bounded function, then y approaches infinity as x approaches zero. In set theory, the set of all integers is only one example of an infinite set. See also pp 780-781.

Inflammation, reaction of body tissue to infection or injury, with resulting pain, heat, swelling and redness due to the stretching and swelling of small blood vessels and the migration of white blood cells into the affected area.

Inflation, in economics, continual upward movement of prices. Although normally associated with periods of prosperity, inflation may also occur during recessions. It usually occurs when there is relatively full employment. Under cost-push inflation, prices rise because the producers' costs increase. Under demand-pull inflation, prices increase because of excessive consumer demand for goods. Many economists believe that money supply is a major factor in determining the rate of inflation. They contend that the rate of increase of the money supply ultimately controls the consumers' ability to demand goods.

Inflection, in linguistics, a change in word form which distinguishes tense, person, number, gender, voice or case. In English, this is usually achieved by adding different endings to the word stem ("house, houses"; "jump, jumped"). Another type sees the word stem change ("bring, brought"). Even closely related languages may differ widely in inflection and, depending on the language, some systems are simpler than others.

Inflorescences, flower or flower cluster. Inflorescence are classified according to branching characteristics. A racemose inflorescence has a main axis and lateral flowering branches, with flowers opening from the bottom up or from the outer edge in; types include panicle, raceme, spike

Indus, one of the major rivers of the Indian continent, flows past the fort at Attock.

Industrial Revolution produced many tragic scenes such as this market for hiring children.

Industrial Revolution produced many tragic scenes such as this market for hiring children.

Industrial Revolution produced many tragic scenes such as this market for hiring children.

Industrial Revolution produced many tragic scenes such as this market for hiring children.

Inferno: Dante punishes his former master in the 3rd compartment of the 7th circle of Hell.

Inflation so devalued currency in Germany that banknotes were sold as waste paper.

Inflation so devalued currency in Germany that banknotes were sold as waste paper.

THIS SENTENCE CONTAINS NO LETTERS IN ALPHABETIC ORDER

Information theory studies choice and the redundancy of language in printed English.

Infra-red rays are used to transmit messages in total security between these devices.

Jean Ingres' nude *Odeusque Couchée*, which hangs in the Louvre Museum, Paris (detail).

Innsbruck's arched streets contrast with the many more modern spacious buildings.

and umbel. A cymose inflorescence has a composite axis with the main stem ending in a flower and lateral branches bearing additional, later flowering branches.

Influenza, highly infectious virus disease whose symptoms resemble those of the common cold, with fever and general debility. It is treated by bed rest; vaccines are available to confer immunity to some strains.

Information theory, the mathematical study of the laws governing communication channels. It is primarily concerned with the measurement of information and the methods of coding, transmitting, storing and processing this information. Some of its concepts have been used in psychology to describe the processes involved in sensory perception and memory.

Infra-red astronomy. See **ASTRONOMY**.

Infra-red rays, the part of the electromagnetic spectrum that lies between the red end of the visible spectrum and micro waves. Often called heat radiation, they were first discovered by Sir William Herschel in 1800. Their applications include heat lamps (which radiate infra-red rays), widely used in medicine, and infra-red photography. See also pp 753, 851, 861.

Infra-red wave, electromagnetic wave that produces a sensation of heat, emitted by hot objects. It is intermediate in energy between light and microwaves. Wavelength range about 750 nanometers (nm) to about 1 mm. See also ELECTROMAGNETIC SPECTRUM, p 851.

Infrasound, also called infrasonics, sound waves having a frequency of 15 hertz (cycles per second) or less. This range is also known as the subsonic range, because such low frequency waves are felt as vibrations rather than heard as sounds. See also ULTRASOUND.

Ingrudsen, Roman (1893–), Polish phenomenologist. Studying under Edmund Husserl, he came to reject the latter's transcendental idealism, seeing phenomenology as a method leading to realism. His main work is *The Constitution of the Existence of the World* (2 vols, 1947–48).

Inge, William Ralph (1860–1954), British churchman and writer. He was professor of divinity at Cambridge University (1907–11) and Dean of St Paul's (1911–34). His books include *Christian Mysticism* (1899), *Law Thoughts of a Dean* (1926) and *Our Present Discontents* (1938).

Inge, William Ralph (1913–73), US playwright, whose first Broadway play *Coma Back* (1950) examines the relationship between an alcoholic and his wife. *Prima* (1953) won him a Pulitzer Prize, and he also wrote *Bus Stop* (1955), *The Dark at the Top of the Stairs* (1957), *A Loss of Roses* (1960) and two later plays *Natural Affection* (1963) and *Whore's Duds* (1966).

Ingelow, Jean (1820–97), British novelist and poet, who also wrote children's stories. Her best known novels are *Off the Skerries* (1872) and *Sarah de Berenger* (1879); her poems include *High Tide on the Cress*, *Lincolnshire* (1877), which reveals her knowledge of nature.

Ingemann, Bernhard Severin (1789–1862), Danish writer, strongly influenced by Sir Walter Scott and the German Romantics. His novels such as *Kong Erik* (1833) and *Prins Otto af Danmark* (1835) glorified Danish medieval greatness. His hymn, *Through the Night of Doubt and Sorrow*, has become popular in English.

Ingenué, in drama, the innocent and naive young heroine of a play. Typical ingenues include Celia in Jonson's *Volpone* and Gwendolen Fairfax in Wilde's *The Importance of Being Earnest*.

Ingersoll, Robert Hawley (1859–1928), US industrialist. He pioneered the application of mass-production techniques to the manufacture of watches and produced a one-dollar watch in 1893.

Ingleborough Hill, one of the major land marks in the Yorkshire Dales, set in peaty moorland. There are the remains of a hill fort and an Iron Age settlement on this immense natural terrace of water eroded limestone. Height 723m (2,373ft).

Ingoldshy, Thomas. See **BARIAM, RICHARD** (1880–).

Ingres, Jean Auguste Dominique (1780–1867), French painter who painted in the Classical style with emphasis on the careful drawing of figures. He was best known for his portraits, including *Madame d'Haussonville* (1845), and his sensual bathing pictures, such as *Bather of Valpinçon* (1808). He also executed large wall paintings. See also pp 1487, 1487.

Inhibitor, compound that stops or substantially reduces the rate of a chemical reaction. Inhibitors are as specific in their action as catalysts and are widely used to prevent corrosion, oxidation or polymerization.

Injection, in medicine, introduction of a fluid (liquid or gas) into body tissues through a needle or catheter to treat, diagnose or prevent disease. Injections are either intravenous (into a vein), intramuscular (into a muscle), or intrathecal (into the spinal cord). Injection is an immediate method of introducing medication into the bloodstream.

Injunction, in English law, civil writ issued by any division of the High Courts enjoining a specified party to refrain from a specified action. Before 1873 the writs were issued only out of Chancery. Injunctions are of two kinds: interlocutory (until the hearing of a case) and perpetual (permanent).

Ink, coloured liquid or viscous mixture used for writing, drawing or printing. It may be coloured by a suspended pigment or a soluble dye. Soluble dyes, often based on aniline, are used in inks for ballpoint pens. Printing inks usually contain finely divided carbon black suspended in a drying oil, often with added synthetic resins. Some inks dry by evaporation of a volatile solvent rather than by hardening of a drying oil. See also pp 606, 606.

Ink cap, any of 100 species of fungi found throughout the world, particularly on wood, dung and in grassy areas. After the discharge of the spores, the gills beneath the cap exude a black liquid and the cap detaches rapidly. When young, the caps of a few species are edible. Order Agaricales, genus *Coprinus*. See also p 355.

Inkerman, Battle of (5 Nov. 1854), attack in the Crimean War by Russian forces against British and French troops who were besieging the naval base at Sevastopol. The Anglo-French troops resisted the attack, forcing the Russians to retreat in disorder. Some 11,000 Russian and 4,000 Allied lives were lost.

Inland Revenue. The Board of British government department that collects and administers revenue for government expenditure. It was established in 1849. Inland revenue, as defined by legislation, means the revenue of Britain imposed or collected and placed under the management of the Commissioners of Inland Revenue. The specific functions of the board are the collection of all taxes (including income tax, petroleum tax, stamp duty and capital gains tax), advice to the Chancellor of the Exchequer, the collection of rates in Wales, and the valuation in England of land and buildings for compulsory purchase.

Innate ideas, Platonic theory revived by the Rationalists that certain 'ideas', such as number and identity, are present in the mind at birth rather than being produced by subsequent experience. See also **RATIONALISM**.

Inner Hebrides. See **HEBRIDES**.

Inner Mongolia. See **MONGOLIA**.

Innes, James Dickson (1887–1911), Welsh landscape painter who worked mainly in Wales and the Pyrenees. He studied in London at the Slade School and became a member of the New English Club. His small landscapes in colour and colour were highly regarded and influenced his younger contemporaries.

Innes, Michael (1906–), pseudonym of I. M. Stewart. Scottish novelist noted for his detective stories, featuring John Appleby, a gentleman policeman. The novels are erudite and witty, and include *Seven Suspects* (1936), *A Comedy of Terrors* (1940) and *Open House* (1972).

Innocent, the name of 13 popes. Innocent I (r 401–17) developed the role of the papacy and excommunicated Pelagius in 417. Innocent II (r 1130–43) helped to draft the Concordat of Worms in 1122 and was at the centre of the Great Schism. Innocent III (r 1198–1216) brought the medieval papacy to its height of power. He presided over the Fourth Crusade and the Albigensian Crusade and convoked the fourth Lateran Council (1215). Innocent V (r 1224, r 1276) was the first Dominican pope. Innocent VI (r 1352–62) waged war to regain the papal states. Innocent VIII (r 1484–92) was involved in political disputes and was allegedly elected by bribery. Innocent XI (r 1676–89) was a pope of high integrity and a sympathizer with Jansenism. Innocent XII (r 1691–1700) renewed diplomatic relations with France. See also pp 1310, 1311, 1323, 1323.

Innocent's Day, so known is Childer Day, first day that commemorates the legendary slaughter by Herod the Great of a large number of baby boys after the visit of the three kings to the infant Jesus Christ. It is celebrated on 28 Dec.

Innsbruck, city in W Austria, on the River Inn (35km (84 miles) SW of Salzburg). Originally a transalpine trading town, it has become a commercial and industrial centre and resort. Its industries include manufacturing, metalworking and food processing. Pop. (1971) 115,200.

Inns of Court, four legal societies in London (Lincoln's Inn, Inner Temple, Middle Temple, Gray's Inn), dating from the 13th century, that have the exclusive right to admit persons to practise as barristers in England. The three grades of membership are benchers (senior members), barristers and students.

Inoculation, introduction of substances often micro-organisms, into body tissues or laboratory grown bacteria for the therapeutic or experimental purposes. See also **VACCINATION**.

İsmet, İsmet (1884–1973), Turkish military and political leader who became Mustafa Kemal Atatürk's Prime Minister (1923–24, 1925–37) and succeeded him as President of Turkey (1938–50). His party lost the first free general election but after a military coup and a new constitution he became Premier (1961–65).

Inorganic chemistry. See **CHEMISTRY**.

Inquest, inquiry into the manner of death of a person who has been killed, died in prison, died unexpectedly or under suspicious circumstances. In England an inquest is held before a jury of between seven and eleven jurors and is presided over by a coroner, who may in certain cases dispense with the jury.

Inquisition, court set up by the Roman Catholic Church in the Middle Ages to seek out and punish heresy. The inquisitor was authorized by the pope to take testimony, question witnesses and those accused of heresy, and pass judgment. The accused were sometimes questioned under torture. Punishments for the guilty ranged from penances and fines to banishment, imprisonment, and death by fire. Kings and nobles supported what amounted to organized persecution of Jews, Protestants and others considered enemies of Church and state, including those charged with witchcraft. The medieval Inquisition was active in much of Europe from the 12th to the 15th century.

A later tribunal, the SPANISH INQUISITION, was instituted in 1483 at the request of the rulers of Spain and was not finally and formally abolished until 1834. See also **HOLY OFFICE**.

Insanity, also called madness or imprecise term for several forms of mental illness. The condition has many manifestations, and is known by various other names which change from culture to culture and from age to age with the fashions in labelling. To psychiatrists there are three types of insanity: psychoses, which include schizophrenia, manic depression, paranoia and functional psychoses; neuroses, including states of obsessive anxiety or phobia, over- or obsessive, or

compulsive states and the hysterical or depressive neuroses, and personality disorders, such as the behavioural disorders of childhood, alcoholism and drug addiction. See also p 1107

Insect, any of more than a million known species of small, invertebrate animals, including BEETLES, BUGS, BUTTERFLIES, ANTS and BEES. There are more species of insects than all other animal and plant species combined. They are common in all parts of the world except for the oceans and polar regions. Adult insects have three pairs of jointed legs, usually two pairs of wings, and a segmented body with a horny outer covering or exoskeleton. The head has three pairs of mouthparts, a pair of compound eyes, three pairs of simple eyes and a pair of antennae.

Few insects have true hearing organs or ears. Most of them can detect a wide range of sounds through ultra-sensitive hairs on various parts of their bodies. Similarly insects do not have voices, but some can "sing" or make sounds by rubbing together parts of their bodies.

Most insects are plant-eaters, many being serious farm and garden pests. Some prey on small animals, especially other insects, and a few are scavengers. There are two main kinds of mouthparts - chewing and sucking. Each order of insects has a variation of one or other of these kinds, or a combination of both. Beetles, for example, chew, butterflies suck, and bugs and bees combine both processes.

Reproduction is usually sexual. Most insects go through four distinct life stages, in which complete METAMORPHOSIS is said to take place. The four stages are egg, larva (caterpillar or grub), pupa and adult (butterflies and beetles). Young grasshoppers and some other insects, called NYMPHS, resemble wingless miniatures of their parents. The nymphs develop during a series of moults (incomplete metamorphosis) and become adults with functional wings at the last moult. SILVERFISH and a few other primitive, wingless insects do not undergo metamorphosis. The newly hatched silverfish is a tiny, sexually immature replica of the adult. Phylum Arthropoda, class Insecta. See also ARTHROPOD pp 36-47

Insecticides, substances used to destroy or control insect pests. They may be stomach poisons, such as lead arsenate and sodium fluoride, contact poisons, such as DDT and ORGANOPHOSPHATES or systemic poisons, such as octamethylpyrophosphoramide, which are toxic to insects that eat plants into which they have been absorbed. Organophosphates are preferred to chlorinated hydrocarbons (such as DDT) because they eventually break down into non-toxic substances and cause less ecological damage.

Insectivore, small order of carnivorous MAMMALS (Insectivora), many of which eat insects. Almost worldwide in distribution although none are known in South America, some species live underground some on the ground and some in streams and ponds. Most insectivores have narrow snouts, long skulls and five-clawed feet. Length mostly smaller than 45cm (18in), weight mostly less than 0.5kg (1lb). Three families are always placed in the order Erinaceidae (moon rats, gymures, hedgehogs); Talpidae (moles, shrew moles, desmans); and Soricidae (shrews). But six other families - including TREE SHREWS, TENRECS and SOLENDONS - are also often included in the order. See pp 92-11

Insectivorous plant, also called carnivorous plant, any of several plants that have poorly developed root systems and are often found in nitrogen-deficient sandy or boggy soils. They obtain the missing nutrients by trapping, "digesting" and absorbing insects. Some, such as the Venus's fly-trap (*Dionaea muscipula*), are active insect trappers, when triggered, its hinged leaves close on its prey. The sundews (*Drosera*) snare insects with a sticky substance and then enclose them in their leaves. Bladderworts (*Utricularia*) suck insects into their underwater bladders. Other plants have vase-shaped leaves, such as the pitcher plant (*Sarracenia*

flava). See also pp 357-371

Inselberg, steep-sided, round-topped hill rising abruptly from a plain, found in semi-arid and subtropical regions. Inselbergs are probably formed by exfoliation erosion of old mountains.

Insemination, artificial, placing of semen at the womb's mouth by artificial means, most often a syringe. First developed on animals for livestock breeding purposes, it now has three types of human use. In the first the man may be fertile but unable to complete intercourse. The placing of his semen into the vagina at a suitable time in the menstrual cycle may achieve a successful pregnancy. Secondly, the male's semen may be produced in insufficient quantity in which case it is collected and frozen over a period of time until enough is obtained. In the third case the male is unable to produce healthy semen and that of another is used. The first two ways are known as AIH (artificial insemination by the husband) and the third as AID (artificial insemination by a donor).

Insomnia, continual difficulty in sleeping. It may be caused by worry, pain or stimulants such as drugs. See also pp 1081-1116

Instinct, behaviours that are unlearned and innately determined, as opposed to behaviours that are learned from experience. In the 19th century instincts were often cited to explain behaviour, but the term fell into disrepute with the advent of BEHAVIOURISM. The term has recently been revived in the work of such ethologists as Konrad Lorenz. The behaviour of many lower organisms, such as the courting behaviour of birds and aggressive pat terns in fish, is instinctive. However, modern research indicates that behaviour previously thought to be instinctive in humans and the higher animals is a result of learning. Consequently it is very difficult to apply the term accurately to these animals.

Institute of International Law, organization founded to promote progress in international law. It was formed in Belgium in 1873 and in 1904 was awarded the Nobel Peace Prize.

Insulation, material used to reduce heat loss, to confine electric currents within conductors, or to soundproof. Heat insulation may be accomplished by reflective materials (which reduce radiation), such as aluminium foil and coated steel and bulky materials (which reduce conduction), such as fibre-glass wool, vegetable fibres, paper, foam plastic and fire brick. Some of these bulk materials are also used for sound insulation. Several types of material are used as electrical INSULATORS. Insulation varies according to the intensity of heat or sound, or the voltage to be isolated. See also pp 867-867-868

Insulator, in electricity, substance that provides a high resistance to an electric current. Insulators are used to prevent contact between CONDUCTORS in electrical circuits; the thickness of the insulation necessary depending on the voltage. Common insulators are RUBBER, polyvinyl chloride (PVC), MICA, TEFLON, GLASS, ASBESTOS, THERMOPLASTIC and PORCELAIN. See also pp 867-868

Insulin, hormone secreted by the ISLETS OF LANGERHANS in the pancreas and concerned in the maintenance of the blood glucose level. Insulin has the effect of lowering the blood-glucose level and facilitating the uptake of glucose in the muscles. Sugar (glucose) unmetabolized because of lack of insulin accumulates in excess amounts in the blood and urine resulting in DIABETES MELLITUS, in which protein and lipid metabolism is also affected. See also INSULINOMA, HYPERINSULINISM pp 155, 1076-1077

Insulinoma, tumour consisting of tissue from the ISLETS OF LANGERHANS in the pancreas, which can cause a low blood-sugar level. Such tumours may secrete excess insulin and develop into cancers, but are usually removed surgically before this stage.

Insurance, procedure whereby one party (the insured) transfers the financial consequences of risk of loss to another (the

insurer) for a consideration (the premium). Insurance is practical because of the loss-sharing principle and the law of averages. Each insured contributes to a common fund and the losses of the unfortunate few are reimbursed from the fund. Forms of insurance have existed since before Christ; modern practices date back to the 16th and 17th centuries. It covers such things as life, fire, accident and theft. See also p 1462

Insurance, National, system of social security in Britain. It developed from the 1911 National Insurance Act, passed at the instigation of Lloyd George, which provided insurance against sickness. It gradually expanded to include retirement pensions, widows' pensions and insurance against unemployment. It was a self-supporting system with a fund (established by contributions from employers, employees and the government) from which benefits were paid. Employers were responsible for the payment of employees' contributions, which were deducted from wages. In 1937 National Insurance was extended to enable anyone with an annual income of less than £400 to join. The present scheme was established in 1946, when the Ministry of Pensions and National Insurance was set up. In 1966 it became the Ministry of Social Security and is now the Department of Health and Social Security. It offers a comprehensive system of social security for all people over the age of 16 resident in Britain including unemployment benefits, disablement benefits, maternity grants, sickness benefits, retirement pensions, child allowances and industrial injury grants.

Insurance policy, printed legal document stating the terms of an insurance contract. It is issued to the policy holder by the insurer.

Intaglio, incised carving, the opposite of CAMÉO, especially on gemstones, hard stones or glass. In printing, the term is used to describe a process in which ink is applied to incisions and hollows in a printing plate, as in ETCHING.

Intarsia, art of decorating furniture with inlay or MARQUETRY of wood, ivory, mother-of-pearl or tortoiseshell. Developed in Italy during the Renaissance, intarsia reached its peak during the 17th century.

Integer, negative, or positive whole number, eg the numbers -3, -2, -1, 0, 1, 2, 3, ..., of which there is a limitless (infinite) number. The positive integers are the natural numbers. The negative integers and zero allow any two numbers to be subtracted. The theory of numbers is concerned with the properties of integers. See also p 780

Integral, mathematical function used in calculus. The integral of a curve whose function is $f(x)$, where x is a variable, is the area enclosed between the curve and the x axis. It is written

$\int f(x) dx$

The symbol for an integral is an elongated "S", standing for "sum". For a definite integral (integration of the function) is equivalent to dividing the area into a number of small rectangles parallel to the y axis, and taking the limit of the sum of their area as the number increases (and each elementary rectangle becomes thinner). A definite integral is the area between given values of x , if these are unspecified the integral is indefinite. The derivative of the indefinite integral of a function gives the original function; thus integration is the inverse of differentiation. See also INTEGRAL CALCULUS pp 792-793

Integral calculus, in mathematics, the branch of calculus that deals with the finding of a function, one or more derivatives of which are given, it is the opposite of differential calculus. To take a simple example, the integral of x is $x^2/2 + c$, the first derivative (dy/dx) of that function being x . The constant c has to be added when integrating to allow for the fact that the derivative of any constant is zero. The applications of integral calculus are many. In mensuration it is used to find complex areas and volumes. In engineering calculations, differential equations are solved by integral calculus. Its principles

Insects of some species have existed in the same form for over 200 000 million years

Insecticides can be in liquid or powder form such as DDT, here shown being made

Intaglio carving differs from camé in that the image is hollowed out below the surface

Intarsia, the beautifully decorated choir stall by Fra Giovanni at Monte Oliveto in Siena

Integrated circuit

Integrated circuit (left) is much smaller than the printed circuit it replaces

Intercontinental ballistic missiles employ similar technology to space rockets

Internal combustion engines derive their power from a mixture of air and fuel

International Gothic, an illumination from the Limbourg Brothers' Book of Hours

are incorporated in many measuring and control instruments, eg in flow recorders, in which integrator mechanisms can totalize flows at any moment. See also p 792

Integrated circuit (IC), complete electronic circuit incorporating semiconductor devices, such as transistors as well as resistors, manufactured in one tiny unit. Hybrid integrated circuits have separate components attached to a ceramic base with interconnections by wire bonds or a conducting film. Monolithic integrated circuits have all the components manufactured into or on top of a single chip of silicon, interconnections between components being by conducting film. See also p 792

Integration. See INTEGRAL CALCULUS

Intelligence, general ability to learn and to deal with problems, new situations and abstract concepts. It can be manifested in many different ways, eg adaptability, memory, reasoning. Psychologists operationally define intelligence as a score on a test that samples some of the important components of intelligence, especially those related to performance in school. See also INTELLIGENCE TEST

Intelligence, military and political. See SPY SERVICE

Intelligence Quotient. See IQ

Intelligence test, puzzle or task used to try to categorize degrees of INTELLIGENCE. In 1905 Alfred BINET devised the first successful test, the Binet-Simon scale, to help in identifying mentally deficient pupils in Parisian schools. Subsequent developments included the intelligence quotient (IQ), group tests first used to screen army recruits in WWI, and the Wechsler intelligence scales and Stanford-Binet scales. Modern tests are used for such purposes as predicting success in school, screening job applicants, identifying exceptional children and diagnosing the mentally disturbed. See also pp 1114, 1115, 1117

Intendant, in history, agent of the French king in the provinces. Primarily tax collectors in the 16th century, their power was greatly increased by Louis XIV, who made them his representatives at the local level, dealing with administrative, judicial, financial and police matters. The office was abolished during the FRENCH REVOLUTION

Intensive care unit, special unit in a hospital for seriously ill patients who require continuous observation and the most up-to-date equipment. Since WWII such units have become a common feature of hospitals in large urban centres

Intercession, Christian belief that with Christ as the mediator or link between God and man, a congregation or a member of a Church may petition God, especially on behalf of a third party. While Anglicans believe that the Church and its members intercede in this way through Christ, the Roman Catholics hold that the Blessed Virgin Mary and the saints also intercede, and reverence them accordingly

Intercom, or intercommunication system, system that permits selective loud-speaker voice communication via wires between any pair of several stations, usually in the same building. The stations may be either "master stations", which may initiate calls to any in a group of stations, or "slave stations", which may initiate calls only to a master station

Intercontinental ballistic missile (ICBM), long-range - more than 8,000km (5,000 miles) - missile for military purposes. Such missiles are installed in scattered, well-protected underground sites (silos), and can deliver thermonuclear warheads across oceans in 30 minutes to a 2km (1 mile) wide error ellipse. Self-contained INERTIAL GUIDANCE systems eliminate JAMMING. ICBMs are also capable of directing multiple warheads to targets hundreds of kilometres apart, and may be equipped with decoys. They are considered to have no effective counterweapon. See also pp 562, 563, 574, 575

Interdict, instrument of punishment in the Roman Catholic Church whereby sacraments and clerical offices are refused. Bishops have this power over individual parishes, but the pope has much wider

powers. Medieval popes sometimes placed an interdict on an entire country. **Interest**, in economics, price paid to the lender by the borrower for the "use" of money over a specified period of time, usually a percentage of the principal (sum lent). In ancient and medieval Europe the charging of interest was condemned as USURY. With the development of capitalism it became standard practice whenever money was lent in a commercial transaction. There are two types of interest: simple and compound. Simple interest is paid as a percentage of the principal, irrespective of the period of the loan. In compound interest, the interest for one period (eg a year) is added to the principal and the interest for the next period calculated as a percentage of this total

Interference, in optics, the meeting and mingling of two or more beams of light, or other electromagnetic radiation. The beams totally or partly reinforce or neutralize each other, depending on whether they are more or less in phase or out of phase. This effect can be observed as the appearance of interference patterns or fringes. See also pp 854, 855, 860

Interferometer, instrument in which a wave, especially a light wave, is split into component waves which are made to travel unequal distances so that on recombination they form INTERFERENCE patterns. The patterns are used for measurement of wavelength, quality control of lenses and prisms, and other purposes. See also MICHELSON-MORLEY EXPERIMENT

Interferon, antiviral protein produced by most cells of the body when infected with certain viruses. It has potential therapeutic value, but work in this field is still in the experimental stage

Interlude, short theatrical piece prominent in the late 15th and early 16th centuries which provided entertainment during royal and noble banquets. Performed by a travelling company of half-a-dozen players, it combined the didacticism and allegory of morality plays with the clowning of medieval minstrelsy, and as such is sometimes seen as the starting-point for English drama. It was thus the immediate precursor of Elizabethan comedy, and John Heywood (c 1497-1580) is usually recognized as the first writer to transform the interlude into a short, specifically secular comedy. The form had completely disappeared by 1580, but its traditions were later incorporated into the 17th-century MASQUE

Intermezzo, light theatrical entertainment, performed to music between the acts of a drama or opera, which dates from the late 15th century. The 18th-century intermezzo of operas were the basis for the development of OPERA BUFFA. Today the term most commonly refers to an instrumental interlude during the course of an opera

Internal combustion engine, engine in which fuel is burned within the working cylinder rather than in a separate chamber. Piston and rotary-type petrol and diesel engines are all internal combustion types. The steam-engine is an example of an external combustion engine. See also pp 420-423

International, Communist. See COMMUNIST INTERNATIONAL

International Atomic Energy Agency (IAEA), inter-governmental agency founded to promote peaceful uses of atomic energy. It was formed in 1956 to establish international control of nuclear weapons. It attempts to divert atomic energy from military uses and gives advice and assistance for its applications in agriculture, medicine and so on, as well as setting standards of safety. The agency is managed by a 25-member board of governors representing more than 100 members

International Bank for Reconstruction and Development. See WORLD BANK

International Boundary Commission, for the USA-Canada border, a commission created by a series of treaties between the USA and Britain in 1892, 1908 and 1925. It defines, marks and maintains boundary lines between the USA and Canada

International Brigades, The, volunteer

forces which fought on the Republican side during the SPANISH CIVIL WAR (1936-39). Although the majority of their members were Communists and organized by the COMMUNIST INTERNATIONAL, they were a rallying point for anti-Fascists of all persuasions. They distinguished themselves at the siege of Madrid in 1936, but were too small (never more than 20,000 strong) to influence the result of the war. They were formally withdrawn in 1938

International Championship (rugby union), annual tournament between England, Ireland, Scotland, Wales (known as the four Home Unions) and France. It is also called the Five Nations Championship. Each country plays each of the others once, venues alternating yearly, with the placings determined on a league basis: two points for a win, one for a draw. A country which beats all the other four accomplishes the *Grand Slam*, if one of the four Home Unions beats the other three it wins the mythical *Triple Crown*. The championship began in 1884 when all four Home Unions met for the first time. France entered in 1910

International Civil Aviation Organization (ICAO), specialized agency of the UN that promotes world-wide safety and growth in civil aviation. Its activities include international standards in aircraft design, the development of airport and navigational facilities, and safety in the air. Organized in 1947, its headquarters are in Montreal, Canada

International Committee of the Red Cross, permanent committee situated in Geneva that negotiates between combatants for the safety and medical treatment of war wounded. It also improves and updates the GENEVA CONVENTIONS. The committee, together with the League of Red Cross Societies, was awarded the Nobel Peace Prize in 1963. See also RED CROSS

International Court of Justice. See INTERNATIONAL JUSTICE, PERMANENT COURT OF, THE HAGUE

International date line, imaginary line extending between the north and south poles (approximately corresponding along most of its length to the 180th MERIDIAN of longitude), that arbitrarily marks off one calendar day from the next. It is a consequence of the various internationally agreed TIME ZONES which are chosen so that noon corresponds approximately to the time at which the Sun crosses the local meridian

Internationale, L', socialist and Communist anthem written by Eugène POTTIER, a woodworker in Lille, and set to music by P. Degeyter. First sung in France in 1871, it begins *Debout, les damnés de la terre* ("Arise, ye starving from your slumbers"). It was the Soviet national anthem until 1946 and then the official Communist Party song

International Gothic, style of painting which spread through Europe in the late 14th and 15th centuries. A sophisticated linear style, it originated in French GOTHIC art, particularly illuminated manuscripts, and is characterized by naturalistic detail, elegant elongated figures and jewel-like colour. Examples include the *Très Riches Heures* by the LIMBOURG BROTHERS in Burgundy, and the work of PISANELLO and GENTILE DA FABRIANO in Italy. The style also flourished in Spain, Bohemia and Germany. A variant found in German painting and sculpture is known as the SOUTHERN GOTHIC

International Justice, Permanent Court of, *The Hague*, supreme judicial body of the UN for hearing disputes between countries involving treaties and international law. It developed out of the League of Nations' Permanent Court of Justice, set up in 1921. Its 15 judges are chosen by the UN and each comes from a different country. The UN Security Council may intervene to uphold a judgement of the court, but in fact only a small number of cases have been heard

International Labour Organization. See ILO

International law, body of rules deemed legally binding that have resulted from

Iodoform

Eugene Ionesco, peering for a squint through a camera's "pan" glass filter.

Ionian Islands are noted for beauty spots such as this monastery 8km (5 miles) from Corfu.

Ionic Order was much used in Baroque buildings as well as in Greek architecture.

Iphigenia is prepared for sacrifice: a detail from Corrado's painting in Madrid.

I^{131} (half-life eight days) is used in treatment of THYROID GLAND disorders. Properties: at no. 53, at wt. 126.9045, s.g. 4.93, m.p. 113.5°C (236°F); b.p. 184.35°C (363.8°F); most stable isotope I^{127} (100%). See also p.33.

Iodoform, yellow, crystalline chemical compound (CHI_3) with a characteristic odour, used as an antiseptic.

Ion, particle of atomic size with a positive or negative charge. Simple ions are formed when atoms gain or lose electrons. More complex ions are charged groups of atoms held together by COVALENT BONDS. Positive ions are called cations (they are drawn to a CATHODE), negative ions are called anions (drawn to an ANODE). Many crystalline solids are composed of arrays of ions of opposite charge. Ions are also responsible for the conduction of electricity by liquids and gases. See also pp.834, 898, 899, 902, 903, 902.

Ion, complex, electrically charged chemical group forming a CO-ORDINATION COMPLEX. It may occur either in solution or in crystal form. The ferrocyanide ion, $Fe(CN)_6^{4-}$, and the cuprommonium ion, $Cu(NH_3)_4^{2+}$, are examples.

Ionas, island off the coast of W Scotland in the Inner Hebrides. The island has an abbey, founded in AD 563 by St Columba. Tourism is the main source of income. Area 13sq km (5sq miles). See also pp.1274, 1316.

Ionesco, Eugène (1912–), French dramatist, b. Romania. A pioneer of the surrealist avant-garde, Ionesco had his first success with *The Bald Prima Donna* (1950), a satire on the futility of verbal communication. His other plays include *The Chairs* (1952), *Rhinoceros* (1959) and *Exit the King* (1962).

Ion exchange, method of water-softening employed widely in domestic and industrial units. Water hardness (permanent hardness) is caused mainly by chlorides and sulphates of calcium and magnesium. In ion exchange softeners the calcium and magnesium ions are exchanged by chemical reactions with those of sodium. Since sodium salts are much more soluble this softens the water.

Ionian, ancient region extending along the W coast of Asia Minor (now Turkey) and including the neighbouring Aegean islands, which are now part of Greece. The area was settled by the Greeks in the 10th and 11th centuries BC. Miletus and Ephesus were the most important cities of the Ionian civilization.

Ionian Islands (Ióniōi Nísoi), island group off SW Greece, in the Ionian Sea. It consists of seven main islands, Corfu, Paxos, Lefkada, Ithaca, Cephalonia, Zante and Cythera, and several islets. Grouped together as a province under the Byzantine Empire in AD 890 it was captured by the Venetians in 1500, ceded to France under the Treaty of Campo Formio in 1797 and made a British protectorate in 1815. It was ceded to Greece in 1864. Industries include shipping, timber, fruit and wine. Area 2,248sq km (868sq miles). Pop. (1970 est.) 183,600.

Ionians, in ancient Greece, inhabitants of ATTICA, BOEOTIA and IONIA, who spoke a dialect distinct from that of the DORIANS and AEOLIANS. More narrowly, it also described the inhabitants of Ionia alone, who made great contributions to classical Greek culture, notably in the development of the rational thought that was the basis of Greek philosophy.

Ionian Sea, part of the Mediterranean Sea, between W Greece and the S Italian Peninsula and S Sicily. It is connected to the Adriatic Sea by the Strait of Messina.

Ionic bond, or electrovalent bond, type of chemical bond in which ions of opposite charge are held together by electrostatic attraction. See also pp.894, 894, 898, 902, 902.

Ionic Order, one of the five ORDERS of classical architecture. It developed in the Greek colonies of Asia Minor in the 6th century BC and became known in Greece in the 5th century BC. It is characterized by slender columns with 24 flutes and prominent volutes, or spiral scrolls, on the capitals; the best example is the Erechtheum on the ACROPOLIS.

Ionic radius, effective radius of a particular type of ion. An ionic solid (crystal) is composed of two or more species of ions, which may be regarded as spheres packed together in a regular pattern. By considering the crystal structures and parameters of numbers of compounds, it is possible to obtain a consistent set of ionic radii.

Ionization, process in which neutral atoms or molecules are converted into ions. Positive ions can be formed by supplying energy to detach electrons from the atom, as by the action of X-rays, ultra-violet radiation or high-energy particles. The minimum energy to form an ion is the ionization energy (or potential). The opposite process – electron capture by a neutral species to yield a negative ion – is much less probable. Both types of ions can also be produced by breaking bonds, which can be induced by photons, particles, etc. or may occur spontaneously, as in the dissociation of acids and salts when dissolved in water. See also pp.898, 902, 902.

Ionization chamber, instrument for measuring the intensity of ionizing particles or radiation, such as X-rays. The gas-filled chamber contains two electrodes across which a voltage is applied. Passage of radiation through the chamber ionizes the gas and the ions formed move towards the charged electrodes. The current thus produced, which is amplified in an associated circuit, is proportional to the radiation intensity. A similar process is used in a GEIGER COUNTER, which detects and measures radioactivity.

Ionizing radiation, electromagnetic radiation having sufficient energy to react with atoms of the atmosphere to produce ions. There are two sources: radioactive elements in the Earth's crust and atmosphere, which emit beta and gamma radiation, and cosmic rays from outer space, which give rise to the IONOSPHERE.

Ion microscope. See MICROSCOPE. **Ionosphere**, wide region of IONS or charged particles in the ATMOSPHERE. It extends from about 60km (37 miles) above the Earth's surface to the limits of the atmosphere in the VAN ALLEN RADIATION BELTS. Radio waves are deflected from electron layers in the ionosphere, which makes possible long-distance radio communication.

Ion propulsion, method of propelling rockets by heating metals such as CAESIUM to produce IONS and ELECTRONS. The ions are accelerated through a POTENTIAL DIFFERENCE to provide power. In present development, ion propulsion offers advantages of longer acceleration periods, high mass efficiency and increased lifetimes for satellite control systems.

Iowa, state in the N central USA lying between the Missouri and Mississippi rivers. Originally prairie that was ploughed to create farmland, the region is known for its fertile soil. Maize and other cereals are produced and Iowa stands second only to Texas in the raising of prime cattle. Industries include food processing and the production of farm machinery. The state capital is Des Moines.

First discovered by MARQUETTE and SOULIER in 1673, the land was claimed for France in 1682. The region was explored by French trappers and hunters until it was sold to the USA in the LOUISIANA PURCHASE of 1803. Iowa was admitted to the Union in 1846. Industrial development was encouraged after WWI. Area 145,790sq km (56,290sq miles). Pop. (1975 est.) 2,870,000. See also p.2161.

Ipecacuanha, woody tropical plant and the drug obtained from its dried roots, which contain ALKALOIDS. The drug is used in medicine to cause vomiting. Family Rubiaceae.

Iphigenia, in Greek mythology and literature, daughter of AGAMEMNON and CLYTEMNESTRA and sister of Electra, Chrysothemis and ORESTES.

Ipoah, capital city of Perak province, Malaysia, on the Malay Peninsula. It is on the Singapore-Bangkok railway. Ipoah is Malaysia's major tin-mining centre, and dates from the 1890s when immigrant Chinese were brought to work in the tin mines. The city which also has rubber

plantations and limestone quarries. Pop. (1970) 247,689.

Ipswich, town and port in Suffolk, E England, on the Orwell estuary. A large wool centre in the 16th century, it now exports barley and malt and imports coal and oil. Other industries include milking and printing. Pop. (1973) 122,670.

IQ, intelligence quotient, classification of the supposed mental power of a person. It is computed by dividing the person's assessed mental age by his real age, then multiplying by 100. The mental age is determined by the average number of questions correctly answered by children of a certain age. If the average number of correct answers for a ten-year-old were 30, and an eight-year-old answered 30 questions correctly, his IQ would be ten divided by eight, multiplied by 100, that is 125.

Iqbal, Sir Muhammad (c. 1877–1938), Indian MUSLIM political leader, poet and philosopher. He was an advocate of an independent Muslim state and became President of the Muslim League in 1930. His best known poetic work is *The Secrets of the Self* (1915).

Iquitos, inland port city of NE Peru, on the upper River Amazon, approx. 41km (1.26 miles) NE of Lima. It is a commercial shipping centre whose exports include coffee, cotton, timber and rubber. Pop. (1969 est.) 74,500.

IRA (Irish Republican Army), semi-military, primarily Roman Catholic organization dedicated to establishing a united Irish republic. Formed in 1919, the IRA waged guerrilla warfare against British rule. Some members ("Irregulars") rejected the Anglo-Irish settlement of 1921, fighting a civil war until 1923. Periodically active since that time, the "provisional" wing ("Provos"), committed to armed struggle, split in 1969 from the "official" IRA, which emphasized political activities and a Marxist rather than religious approach. Thereafter, the Provos became prominent in the violence among Catholics, Protestants and British troops in Northern Ireland. See also p.1781.

Iraklion (Heraklion or Candia), largest city and seaport on the island of Crete, a Greece, in the sea of Crete. Founded in the 9th century by the Saracens, it was conquered by the Byzantines in 961, the Venetians in 1204 and the Turks in 1669. It became part of Greece in 1913. It is near to the ancient ruins of Knossos. Exports include wine, grapes and olives. Pop. (1971) 77,506. See also pp.1170, 11.

Iran, nation in SW Asia, formerly known as Persia. Although classed as a developing country it draws huge revenues from oil and is the largest oil exporter in the Middle East. In 1979, after a period of unrest and violence, the head of state, the Shah, was deposed. Reiminations, turmoil and chaos of leadership followed. The capital is Tehran. Area 1,648,006sq km (636,292sq miles). Pop. (1975 est.) 37,957,000. See p.2068.

Iranian languages, subdivision of the Indo-European family. The major Iranian languages are Persian, Pashto, Kurdish, Mazanderani and Gilaki (of Iran), Baluchi (of Iran and Pakistan) and Tadjik and Ossetic, spoken in the USSR. See also p.1878, 879.

Iraq, nation in SW Asia which includes the ancient region of Mesopotamia. Despite deriving a large income from oil the country is predominantly agricultural, producing cereals, tobacco and fruit. The government has encouraged industrial expansion, but internal politics and inter-Arab disputes have hindered development. The capital is Baghdad. Area 434,924sq km (167,924sq miles). Pop. (1975 est.) 11,124,000. See p.2069.

Irbid, city in N Iraq, between the Great and Little Zab rivers. It is the site of the ancient city of Urulium (Arbela). A modern transport and commercial centre, its industries include grain and tobacco. Pop. 90,320.

Ireland, John Nicholson (1879–1962), British composer, influenced by Brahms, Stravinsky, Dvořák and Ravel. His works

firmly grounded in a Romantic tradition and often inspired by places and landscape, include *The Forgiven Rite* (1913), for orchestra, *Ma-Dun* (1921), a symphonic rhapsody, *These Things Shall Be* (1937), for chorus and orchestra; the overture *Satyricon* (1946), and many songs and piano pieces.

Ireland, Home Rule. See **IRISH HOME RULE**.

Ireland, Northern. See p.2113.

Ireland, Partition of. division of Ireland in 1920 into two parts after the breakdown of British government after 1918. By an agreement signed in Dec. 1921 and taking effect in 1922 the six predominantly Protestant counties of Ulster remained part of the UK and the 26 predominantly Catholic southern counties became the Republic of Ireland. See also **IRISH HOME RULE**, pp.1780, 1781.

Ireland, Republic of. country that occupies five-sixths of Ireland, the westernmost island of the British Isles. Since the 1940s it has been changing from an agrarian to an industrial society, although the country's most valuable resource is still its rich farmland and agriculture remains the major factor in the economy. Sea fishing is also important. The capital is Dublin. Area, 70,282sq km (27,136sq miles). Pop. (1976 est.) 3,163,000. See p.2070.

Irenaeus, Saint (c.140-c.200). Church Father and, by tradition, martyr. He probably introduced Christianity to much of Gaul. A tireless opponent of Gnosticism, he wrote *Against Heresies* and *Demonstration of the Apostolic Preaching*.

Ireton, Henry (1611-51). English parliamentarian leader, a son-in-law of Oliver Cromwell. He signed the warrant for the execution of Charles I in 1649 and was Cromwell's deputy in Ireland (1649-51).

Irian Barat (West Irian), Indonesian province comprising the w. half of New Guinea, formerly Dutch New Guinea. It became independent in 1962 and a part of Indonesia in 1963. Capital, Djajapura. Area, 422,170sq km (163,000sq miles). Pop. 947,000.

Iridium, metallic element (symbol Ir) of the third transition series, discovered in 1803 by Smithson Tennant. It may be used in making pen tips and electrical contacts. Properties: at no. 77, at wt. 222.2, s.g. 22.42 (17°C), m.p. 2,410°C (4,370°F), most common isotope Ir¹⁹³ (62.6%).

Iris, in Greek mythology, goddess of the rainbow and messenger of the gods. Depicted as swift-footed, golden-winged and robed in bright colours, she appears in numerous classical writings, including Euripides' *Heracles*. She is also prominent in the myth of Ceyx and Halcione.

Iris, the coloured part of the eye. It controls the amount of light that enters the pupil in the centre of the eye by increasing or decreasing the size of the pupil. The iris is part of the choroid, the middle layer of the wall of the eye. See also p.136.

Iris, genus of about 200 species of flowering plants widely distributed, mostly in temperate areas. They may be bulbous or rhizomatous. The showy flowers have three erect inner petals, called *standards*, three drooping outer sepals, called *falls*, and flat swordlike leaves. Height up to 90cm (3ft). See also *CROCUS*, *GLADIOLUS*.

Irish. See **GAELIC**.

Irish Free State. See **IRELAND**.

Irish Guards. one of five household regiments in Britain, raised in 1900 to honour the service of Irish regiments in the SOUTH AFRICAN WAR. Their motto is *Quis separabit?* ('Who shall separate us?').

Irish Home Rule. movement to gain Irish legislative independence from the British Parliament in the 19th century, achieved for southern Ireland in 1922. The union of Britain and Ireland (1801) was challenged by O'CONNELL's Repeal Association in the 1830s and 1840s. It failed, but in the 1870s Isaac Butt began the Home Rule League. His successor, PARNELL, won for the movement the support of Gladstone. His Home Rule Bill of 1886 split the Liberal Party and sent Liberal Unionists into the arms of the Conservatives. That coalition blocked home rule until it was

granted by the act of 1914. It was deferred until the end of WWI when, by civil war, Ulster succeeded in retaining the British connection. See also **HOME RULE PARTY**, pp.1642, 1643.

Irish Literary Renaissance. period of exceptional literary creativity in Ireland in the late 19th and early 20th centuries. An outgrowth of the movement for self-government, it revived Irish literature and fostered Irish drama. Among those involved in the movement were W.B. YEATS, Lady GREGORY, J.M. SYNGE and Sean O'CASEY.

Irish moss, or carrageen, small, dark red seaweed (*Chondrus crispus*) with tufted fronds, common on North Atlantic coasts. Commercial Irish moss, which consists of dried carrageen, is used for thickening or emulsifying foods. See also **RED ALGAE**.

Irish National Land League. organization formed in 1879 by Michael DAVITT and Charles PARNELL to put pressure on Britain to reform the Irish system of land tenure. It arose out of rural depression and a great increase in evictions of Irish tenant farmers for failure to pay rent, mostly to English landlords. It encouraged agrarian outrages for four years, and was a powerful influence on the 1881 Land Act.

Irish Republican Army. See **IRA**.

Irish Sea, part of the Atlantic Ocean, between Ireland and Britain, connected to the Atlantic by the North Channel (N) and by St George's Channel (S). Scotland, Wales and England are on its E shore and Ireland on the W. Area, 103,600sq km (40,000sq miles).

Irish setter, gun dog, originally bred in Ireland as a red-and-white dog from the early 18th century and as the popular solid "red" from the 19th century. It has a long, lean head with a deep muzzle and low-set, pendulous ears. The body and neck are long and the legs straight. Its coat is fine-fringed and coloured chestnut-red or mahogany. Height to 69cm (27in) at the shoulder, weight 27-32kg (59-70lb).

Irish Sweep Derby. See **DERBY**.

Irish terrier, working dog, originally bred in Ireland. It has a long, flat head, squared off by chin whiskers and small, triangular ears that droop forward. The legs and body are moderately long, and the tail is commonly docked. The dense, wiry coat is generally a shade of reddish brown. Height to 46cm (18in) at the shoulder, weight 12kg (27lb).

Irish Volunteers. Protestant force raised by Henry Flood in 1779 to defend Ireland against a French invasion during the American revolutionary wars. By 1782 there were 80,000 volunteers. Their presence was used to extract from the British Parliament a free trade agreement in 1779 and legislative independence in 1782. They were disbanded in 1793.

Irish water spaniel, dog commonly used to retrieve ducks. It has a large, domed head with a square muzzle, and long pendulous ears. The medium-length body is slightly raised at the hindquarters and inset on strong legs with large feet. The long tail tapers to a fine point. The coat is usually liver-coloured and in tight ringlets. Height to 61cm (24in) at the shoulder, weight 20.5-29kg (45-64lb).

Irish wolfhound, large Celtic hunting dog originally used to hunt Irish wolves and elks. It has a long head with long, pointed muzzle and small ears. The deep and wide-chested body with its long back is set on long, straight legs. It has a long and slightly curved tail, its rough wiry coat may be grey, brindle, reddish-brown, black, white or fawn. Height at least 79cm (31in) at the shoulder, weight at least 54kg (120lb).

Iron, common metallic element (symbol Fe) of the first transition series, known from the earliest times. Its chief ores are haematite (Fe₂O₃), magnetite (Fe₃O₄) and iron pyrites (FeS₂). It is obtained in a blast furnace by reducing the oxide with carbon monoxide from coke (carbon), using limestone to form a slag. The pure metal - a reactive soft element - is rarely used, most iron is alloyed with carbon and other elements in the various forms of steel. The element has four allotropic forms, one of which is ferromagnetic.

Properties: at no. 26, at wt. 55.847, s.g. 7.86, m.p. 1,535°C (2,795°F), b.p. 2,750°C (4,982°F), most common isotope Fe⁵⁶ (91.66%). See also pp.394, 397.

Iron, cast, forms of iron made by remelting steel scrap with pig iron. They contain between 1.5-5% carbon and up to 3% silicon. Although brittle, they are widely used because of their cheapness, notably for the engine blocks of road vehicles.

Iron Age, period succeeding the BRONZE AGE, dating from about 1100 BC, in which man in general learned to smelt iron (although the HITTITES probably developed the first important iron industry in Armenia soon after 2000 BC). Iron's superior strength and cheapness, and the widespread availability of its ore, caused it gradually to supersede bronze. See also pp.393-395, 1198, 1199, 1202, 1219.

Ironbridge, gorge in Shropshire, central England, where at Coalbrookdale the first iron bridge was built in 1777-79 by Abraham DARBY and John Wilkinson (to the design of Thomas Pritchard). The bridge, which still stands, continued to be used for road traffic until the 1950s.

Iron Cross, highest German decoration for military valour. It was the first star award in German history, created by King FREDERICK WILLIAM III in 1813.

Iron Curtain, term coined in 1946 by Winston Churchill in a speech at Fulton, Missouri, USA, to describe the division between Communist eastern Europe and the West. "An iron curtain", he said, "has descended across the Continent". At that time the Communists imposed even more rigid restrictions on communication and the exchange of ideas with the West than they do now. In Germany the Iron Curtain caused particular sufferings by dividing families in the East and West.

Iron deficiency. See **ANAEMIA**.

Iron lung, term popularly used for the Drinker respirator, which is a device that provides long-term artificial respiration. It consists of a metal tank in which the patient's body is enclosed (with his head outside). Breathing is sustained by alternating negative and positive air pressure inside the tank.

Iron maiden, medieval torture instrument in the shape of a person. Rather like a sarcophagus, it was hinged in two parts with the interior covered with sharp spikes. The victim was placed inside.

Iron meteorite, type of common meteorite consisting mostly of iron with up to 11% nickel. When they are newly fallen, a thin black crust of iron oxide forms, and quickly rusts. See also p.970.

Iron ore, mineral source of the metal, which is predominantly in the form of iron oxides, particularly haematite, limonite and magnetite. Other ores include iron carbonate, siderite, and an iron sulphide, pyrites. See also **IRON PYRITES**.

Iron ore processing, extraction of iron from its ores, mainly by the reduction of iron oxides (principal ores) in blast furnaces. Iron ore, coke and a stony flux are heated in a blast furnace and then subjected to a blast preheated to between 700-1100°C. This both sustains the temperature, by burning off coke to carbon monoxide (CO), and also reduces the iron ore to the metal (steel), the carbon monoxide reacting with oxygen in the ore to form carbon dioxide (CO₂). See also **STEEL-MAKING**, pp.394, 396.

Iron oxides, exist in three forms: iron (II) oxide, or ferrous oxide (FeO), iron (III) oxide, or ferric oxide (Fe₂O₃), and ferro-silicic oxide (Fe₂O₃) which has iron in both forms.

Iron pyrites, mineral composed of iron and sulphur, having the chemical formula FeS₂. It crystallizes in large cubes having a yellow lustre that has led to the name "fool's gold". The most widespread of sulphide minerals, it is a valuable source of sulphur.

Ironsides, William Edmund (1880-1959), British soldier. He served in the SOUTH AFRICAN WAR and commanded the Allied forces at Archangel (1918). He was chief of the imperial general staff (1939-40) and commander of the Home Defence forces (1941).

Ironsides, cavalry regiment led by CHOM-

Ireland, donkeys carry peat in County Galway. Peat is used as a domestic fuel.

Irish wolfhounds originally hunted elks and wolves. They are the last breed of dog.

Iron compounds may take various forms, from masses of ores to crystals and salts.

Ironbridge has become a centre for an active growing interest in British industrial history.

Ironwood, or hornbeam

WELL IN THE ENGLISH CIVIL WAR drawn mainly from the yeomen and freeholders of the Eastern Association (formed in the East Anglian counties in 1642 in the parliamentary cause). They were nicknamed "Old Ironsides" by Prince Rupert whose royalist army they helped to defeat at MARSTON MOOR.

Ironwood, or hornbeam, two varieties of birch tree in N. America. The *Carpinus caroliniana*, or blue beech, has a smooth silver-grey bark. The *Ostrya virginica* has a ridged, light-brown bark. Various hard wood trees in Australia and the tropics are also called ironwood.

Irony, the use of words to convey, often satirically, the opposite of their literal meaning. It derives from the Socratic method of discussion by feigning ignorance.

Iroquois Confederacy (or League), confederation of tribes of North American Indians occupying the Mohawk valley and Lakes area of New York state. They call themselves Ongwanonsiohi (also spelled Hodinonsiohi) "People of the long house", after the distinctive shape of the bark dwellings they constructed in the 16th century. The original tribes were the Oneida, Mohawk, Seneca, Onondaga and Cayuga; they were later joined by the Tuscarora. The women fulfilled a leading role in society and grew corn, beans and tobacco while the men hunted. The Iroquois had a highly developed political system and were renowned warriors. Their total number has halved since 1600: in the mid-1970s there were 7,500, 10,000 of them in New York, Wisconsin, Oklahoma and Canada.

Irradiation, exposure to short-wave electromagnetic radiation. Materials are often irradiated with high-energy neutrons in nuclear reactors, to make them temporarily radioactive. More portable sources of such radiation are radioisotopes such as cobalt 60 and caesium 137, whose uses include irradiation treatment for cancer. Treatment also involves the use of particle accelerators, including proton and neutron beam machines. Radioactive sources are used industrially, e.g. in sterilizing food that cannot be heated without deterioration.

Irrational number, in mathematics, any number which cannot be expressed as the ratio of two integers, not including zero. An example is $\sqrt{2}$. Like other irrational numbers, it is infinite and non-repeating when expressed as a decimal. Irrational numbers, together with rational numbers, make up the set of REAL NUMBERS.

Irawaddy, river in central Burma, formed by the union of the Mali and Nmai rivers. Flowing through Burma, it serves as a trade and communications route for the cities of Myitkina, Bhamo and Mandalay. At Henzada a vast delta begins, extending 290km (180 miles) to the Andaman Sea. One of Asia's major rivers, it is also one of the largest rice-producing regions in the world. Length approx. 2,100km (1,300 miles).

Iredentists, Italian political party formed in 1878, as the *Italia Iredenta* society, whose name, meaning "unredeemed Italy", referred to their intention to gain (or regain) nearby territories such as Trentino and Trieste which contained large numbers of Italian-speaking people. After Italy's unification (1860-70) they aimed to incorporate similar areas that were controlled by Austria, and worked to keep Italy out of the TRIPLE ALLIANCE. They also influenced Italy's decision to enter WWI on the side of the Allies.

Irregular galaxy, type of GALAXY characterized by an apparent absence of symmetrical or definite structure. Only about 3% of observed galaxies fall into this category, and it is possible that some represent intermediate stages in development while others may be distorted by internal or external disturbances. See also p 1000.

Irreversible reaction, chemical reaction in which the reactants are completely converted into the products, with no reaction in the opposite direction, from products to reactants. The equation is written using a single arrow, as in $2\text{Na} + \text{Cl}_2 \rightarrow 2\text{NaCl}$.

Irrigation, artificial watering of land to

supply the necessary moisture for growing crops. It is used worldwide in regions with inadequate precipitation and dates from 2000 BC in Egypt. Primitive forms, such as buckets and water wheels, are still used in remote areas. Surface water in streams, rivers and lakes or subsurface water from wells are used, depending on the locality. Dykes, sprinklers, surface gravity, canals or underground pipes transport the water to desired locations. Suitable drainage is important when irrigating because concentrations of dissolved salts are harmful to plants and salt-saturated soil is agriculturally worthless. See also pp 538-539 662.

Irtys, river in central USSR rising in the Altay Mts on the Mongolian-Chinese border and flowing across the USSR border into Lake Zaisan. After crossing the Kazakh republic it joins the River Ob near Khanty-Mansiysk in West Siberia. It is the largest tributary of the Ob and is completely navigable. Length, 4,444km (2,760 miles). See also p 2194.

Irving, Sir Henry (1838-1905), British actor-manager, real name John Henry Brodribb. He made his first stage appearance in 1856 and in 1878 engaged Ellen Terry as his leading lady. He managed the Lyceum Theatre, London (1878-1902), and last appeared on stage in a production of *Becket* in 1905. See also p 1577.

Irving, Robert Augustine (1913-), British conductor, especially of ballet music. He was musical director of Sadler's Wells and the Royal Ballet (1949-58), then musical director of the New York City Ballet. He also conducts for the Martha Graham Dance Company.

Irving, Washington (1783-1859), US author, most famous for his stories, *Rip Van Winkle* (1819-20) and *The Legend of Sleepy Hollow* (1819-20). He went to Madrid in 1826 and wrote *The Conquest of Granada* (1829) and *The Legends of the Alhambra* (1832). He returned to the USA in 1837 and wrote *Astoria* (1836). See also p 1772.

Irvingites. See CATHOLIC APOSTOLIC CHURCH.

Isaac, in the Bible, only son of ABRAHAM and SARAH, born when Abraham was 100 and Sarah 90. As a test of faith in God, Abraham was prepared to sacrifice Isaac as commanded, but as the test was successful the sacrifice was not made. The sons of Isaac and Rebecca were JACOB and ESAU.

Isaacs, Sir Isaac Alfred (1855-1928), Australian political figure. In 1892 he was elected to the legislative assembly of Victoria and helped to draft a Commonwealth Constitution. He became attorney general in 1905 and the first Australian-born governor-general in 1931.

Isabella (1292-1358), Queen of England (1308-27) and wife of EDWARD I, daughter of Philip IV of France. Neglected by her husband, she formed a liaison with Roger de Mortimer. They raised armies, deposed Edward II, and in 1327 proclaimed her eldest son, Edward III, king.

Isabella, name of two Spanish queens. **Isabella I**, Queen of Castile and Aragon (1451-1504, r 1474-1504), was the daughter of John II. She married Ferdinand II of Aragon in 1469 and they ruled their two kingdoms jointly from 1479, forming the basis for a united Spain. **Isabella's** daughter Joanna ("the Mad") succeeded to the Castilian throne on her death. **Isabella II** (1830-1904, r 1833-68) was the daughter of Ferdinand VII and Maria Christina. Until she came of age, **Isabella's** mother and then Baldomero Espartero ruled as regents. **Isabella** abdicated in 1870, renouncing her claim in favour of her son Alfonso XII, after a troubled reign.

Isaiah, book of the Old Testament the first and longest (66 chapters) of the major prophets. Written in both verse and prose, it is generally attributed to at least two authors of different historical backgrounds.

Ischaemia, reduction in the blood supply to an area or organ such as the heart. It is caused by constriction or obstruction of blood vessels. See also pp 141, 1066-1067.

Ischia, volcanic island off S Italy in the

Etruscan Sea between the Gulf of Gaeta and the Bay of Naples. Its economy is based on tourism, although fishing and farming are also pursued. Area, 474sq km (184sq miles). Pop. (1971) 14,189.

Ischium, U-shaped bone at the base and on either side of the PELVIS. It is fused with the ILIUM and the PUBIS in the hip socket. Its lower edge meets the PUBIS. In primates the ischium takes most of the body's weight when sitting.

Isfahan (Esfahān), city in central Iran, on the Zaindeh River. The ancient city of Aspadana, it was taken in turn, by the Arabs, Seljuk Turks, Mongols and Safavids. The latter made it their capital, building many mosques and palaces. After capture by the Afghans in 1722, however, the city declined. Today it has steel and textile industries as well as the more traditional crafts of metalwork and silverware. Pop. 605,000.

Isherwood, Christopher William Bradshaw (1904-), British writer. His novels, written in a laud, economical style, are mainly autobiographical and deal with the sensibility of the homosexual artist in various social contexts. They include *All the Conspirators* (1928) and *Mr Norris Changes Trains* (1935), set in pre-war Germany, and much praised for its documentary value. The musical *Cabaret* (1966) was based on a short story from *Goodbye to Berlin* (1939). He emigrated to the USA in 1940 and his later works include material on Hinduism and an autobiographical retrospective *Christopher and his Kind* (1977).

Ishihara tests, method of detecting the presence of colour blindness by showing the subject plates that contain dots of various sizes and colours showing gradual tonal changes, forming normally recognizable patterns. An inability to distinguish shapes (usually numerals) on the plates indicates colour blindness.

Ishtar, principal goddess of the Assyro-Babylonian pantheon. In ancient mythology she is both the daughter of ANU, the sky god, and SIN, the moon god. Through the centuries, as she absorbed local deities and her power grew, she came to exhibit diverse attributes, those of a compassionate mother goddess and of a lustful goddess of sex and war. Ishtar is identified with the Sumerian Inanna, Phoenician ASTARTE, and the biblical Asherah.

Isidore of Seville, Saint (c 560-636), archbishop of Seville from c 600 and a distinguished administrator, teacher and author. His works include a history of the world from the Creation to 615 (622-23) and *Origines*, an encyclopedia.

Isidorus of Miletus. See ANTHEMIUS OF TRALLIS.

Isinglass, clear, almost pure gelatin that is prepared from the air bladders of sturgeon and other sources. It has a fibrous structure and is used primarily to clarify wines and beers. **MUSCOVITE**, also called isinglass, is an abundant silicate material, it is used as an electrical and thermal insulator.

Isis, in Egyptian mythology, wife and sister of OSIRIS, and mother of HORUS. After the murder of Osiris by his brother SETI (or Set), Isis managed to find and put together the dismembered parts of Osiris's body, and magically revive him. The epitome of fidelity and maternal devotion, veneration of her, particularly as the protectress of children, was spread throughout the ancient world by the Phoenicians and the Romans.

Isis, name applied to the River Thames in its upper course, above and around Oxford.

Iskenderun, Gulf of, formerly the Gulf of Alexandretta, an inlet of the Mediterranean Sea off the coast of S central Turkey. The seaport city of Iskenderun is on the E shore of S Turkey.

Islam, monotheistic religion founded by MOHAMMAD in Arabia in the 7th century. There is now a fundamental division of Islam into the SUNNI and SHI'ITE sects. Members of the faith, called MUSLIMS, date the beginning of the Muslim era from the year in which the HIGRA took place (AD 622). The KORAN, their sacred book, is believed to be the divine revelation of God to Mohammed, supplemented by the

Irrigation techniques include systems of sprinklers which water fields evenly

Washington Irving's *Rip Van Winkle* draws from the Dutch character of New York

Isabella 'The Catholic' Queen of Castile from a painting in the Columbus Museum

Isidore of Seville wrote histories and an encyclopedia of the knowledge of his time

Sunni, a collection of Prophet's sayings and deeds. Central themes of Islamic doctrine are belief in the unity of God or ALLAH, in Mohammed's prophetic mission and in the universal Judgement Day to come. The Arabic word "Islam" means "submission" and this should be the believer's attitude in the five duties he must perform. He must also abide by the religious law or Sharia. In theory the Sharia governs the whole life of the individual, but some modern Muslim states have adapted legal codes to replace Muslim law. See also pp.1278-1279.

Islamabad, capital of Pakistan 14km (9 miles) N of Rawalpindi. Construction of the city to replace Karachi as the capital began in 1960. Administrative and governmental activities provide most of its income. Pop. (1972) 77,318.

Islamic art and architecture evolved from a fusion of cultures. As the Moors swept through the Middle East and west to Spain in the mid-7th century, they developed a unique style of art based on the influences - Sassanid, Greek, Syrian, Roman, Coptic, Byzantine, Visigoth - of the conquered lands. Islamic art is best illustrated by its architecture. Two surviving examples of the 8th century are the Great Mosque of Damascus and the Dome of the Rock at Jerusalem. The Sassanid tradition of brick and stucco building then characterized Persian Muslim architecture from the Mosque of Tarik Khanah at Damghan (c. 9th century) to the sumptuous Safavid works of the 17th century. The Seljuk Turks, who defeated the Byzantines in 1071 and overran central Anatolia, left in Asia Minor a bold architectural style derived from Syrian stone carving techniques and the use of Persian decorative brickwork. Moorish architecture in Spain developed somewhat independently, and is characterized by its use of the horseshoe arch, faience and lacy stone screens. The Süleymaniye (1550), Istanbul, is one of the great Ottoman mosques inspired by the Byzantine Hagia Sophia.

Muslim secular art was expressed in pottery, metalwork, textiles and painting. Metalwork flourished from the 12th to the 14th centuries. Many ceremonial silks date from the 9th to 12th centuries, and carpets and rugs had their golden age in 16th and 17th-century Persia. See also pp.1278-1279, 1282-1285, 1304.

Islamic law, or Sharia, practical ordinances of Islam. Defined in the KORAN, it is believed to be the revelations by God to MOHAMMED, the traditional sayings of Mohammed, the consensus of the community in the past, and analogical reasoning. The Sharia is divided into two sections of equal importance. Ibadat, duties owed to God by way of worship, and Muamalat, practical duties towards men and society. Because Islam recognizes no distinction between religious and secular law, the Sharia provides for all aspects of a believer's existence. There are four schools of law: Maliki, Hanafi, Shafi'i and Hanbali, which have come to prominence in different areas of the Islamic world. Muslims were once expected to submit totally to the laws of one of the schools, but modern Muslim states have adopted legal codes limiting the dominance of the Sharia.

Islay, island in W central Scotland, the most southern of the Inner Hebrides. The fertile land allows intensive livestock and dairy farming. Fishing, malt whisky production and tourism also provide valuable income. Area 622sq km (240sq miles). Pop. 5,743.

Isle of Ely, region in N Cambridgeshire, England. Drained chiefly by the Rivers Ouse and Nene, the region rises above low-lying fen country that has been drained to form fertile farmland. Sugar beet and vegetables are grown, and pigs and poultry are raised. Tourism is important and the main town, Ely, is famous for its 11th-century cathedral.

Isle of Man, island off the NW coast of England, in the Irish Sea. It has been a British Crown possession since 1828 and has its own government, the Tynwald. The basis of the economy is tourism although agriculture is important, the chief pro-

ducts being oats, fruit and vegetables. The capital is Douglas. Area 572sq km (221sq miles). Pop. (1975 est.) 59,000.

Isle of Wight, island off the S coast of England, separated from the mainland by The Solent. It is an administrative county. The island's mild climate and attractive scenery have made it a popular tourist resort. Other industries: shipbuilding and aircraft construction. Area 318sq km (123sq miles). Pop. (1976) 112,200.

Islets of Langerhans, clusters of cells in the PANCREAS which produce two hormones: INSULIN, to raise the level of glucose in the blood and GLUCAGON, to counteract the effect of insulin when necessary. They were discovered by the 19th-century German physician Paul Langerhans.

Isma'ili, Shah of Persia (r.1501-24), founder of the SAFAVID DYNASTY. He re-established Persian independence after centuries of Arab control and established Shi'ite Islam as the state religion of Persia. He warred successfully against the UZBEKS in 1510 but was defeated by the Ottoman sultan SELIM I in 1514.

Isma'il Pasha (1830-95), ruler of Egypt (1863-79). In 1867 he received the title Khedive. The high price received for Egyptian cotton at the time enabled him to build extensively. Much money was wasted, however, and in 1875 Egypt was forced to sell to Britain its interest in one of the largest constructions, the Suez Canal. Egypt's finances were put in the control of a Franco-British debt commission. The Ottoman sultan replaced Isma'il Pasha with his son Tawfiq Pasha in 1879. See also pp.1609, 1611.

Isma'ili's, or Seveners, the smaller of two groups of the SHI'A sect of ISLAM. All Shi'ites believe in the authority of a succession of imams, or spiritual guides, descended from Mohammed's son-in-law Ali. After the sixth imam had disinherited his eldest son, Isma'il, a dispute arose about the succession. Those who chose Isma'il, and on his death his son Muhammad, are called Isma'ili's or Seveners because they believe that Muhammad was the seventh and last imam.

Isobar, line of constant pressure at the earth's surface or at a constant height above it on a weather map. The patterns of isobars depict the variation in atmospheric pressure, showing areas of high and low pressure on the map. See also pp.252-252.

Isocrates (446-338 BC), Athenian rhetorician who wrote speeches and numerous tracts on politics and education, but was himself shy of public speaking. He founded a school in Athens and was an influential teacher and prose stylist.

Isogamy, in biology, reproductive cells that act like sex cells but which are similar in size and structure. It is found in algae, some protozoans, and primitive plants, as distinct from anisogamy, where male and female sex cells differ in appearance.

Isolationism, theme particularly connected with US foreign policy, dating from President George WASHINGTON's farewell address (1796), in which he warned the USA to steer clear of European entanglements. In the 20th century the mood in favour of isolationism has been strong, especially among REPUBLICANS, after WWII at the start of WWII, during the KOREAN WAR and after the military failure in the VIETNAM WAR.

Isomers, chemical compounds having the same molecular formulas but different properties as a result of having a different arrangement of atoms within the molecules. Structural isomers have different structural formulae. For example, urea, CO(NH₂)₂, and ammonium cyanate, NH₄CNO, have the same molecular formula (CH₄N₂O) but totally different properties. Geometric isomers differ in their symmetry about a double bond, the cis-form of a compound has certain atoms or groups on the same side of a plane, whereas the trans form has them on the opposite side. For example, maleic acid is the cis-form of fumaric acid. Optical isomers are mirror images of each other. See also pp.495-501, 906.

Isomorphism, in CRYSTALLOGRAPHY, the resemblance between crystals of chemical compounds having similar crystal struc-

tures. In biology, isomorphism refers to the similarity of shape observed in unrelated groups, due to CONVERGENT EVOLUTION.

Isopod, any of about 4,000 species of CRUSTACEANS, including seven aquatic and one terrestrial suborder, characterized by flattened, oval bodies which have several hard-plated segments of similar appearance. The land forms are the familiar woodlice. Marine species include wood-borers (gribbles) and specialized fish parasites. See also p.35.

Isoprene, organic chemical compound, formula CH₂=C(CH₃)CH=CH₂. A synthetic product which closely resembles natural rubber can be prepared by the polymerization of isoprene.

Isoptera, HARMIES, an order of insects that lives in large colonies but which are more closely related to COCKROACHES than to the other social INSECTS, ANTS, BEES and WASPS. In tropical countries they damage timber structures because they eat wood, and their bodies harbour microscopic PROTOZOA which can digest CELLULOSE.

Isoceles triangle, triangle having any two of its sides equal in length, the angles opposite these sides are also equal.

Isostasy, theory describing the maintenance of an equilibrium in the total mass of the Earth's crust despite its crustal movement. There exists a balance between the land masses and the mantle of the earth on which the continental plates float so that the plates rise and sink on the semi-molten surface of the mantle in such a fashion that the relative mass weighing upon the Earth's crust is constant. The spread of the continental plates by the upwelling of material from deep within the Earth's crust is balanced by the submergence of the opposite edges of the plates. See also CONTINENTAL DRIFT, PLATE TECTONICS. pp.200, 206, 207.

Isotherm, line of equal temperature on a map (usually a weather map). The patterns of isotherms depict how the temperature changes across the area of the map.

Isotopes, atoms of an element with the same number of electrons or protons (same atomic number) but a different number of neutrons in the nucleus, so that both mass number and mass of the nucleus vary between isotopes. The atomic weight of an element is an average of the isotope masses. The isotopes of an element all have similar chemical properties, but physical properties do vary. Most elements have two or more naturally occurring isotopes, some of which are radioactive (radioisotopes). Many radioisotopes can be produced artificially by bombarding elements with high-energy particles such as alpha-particles. Radioisotopes are used in medicine, research and industry. Isotopes are also used in the dating of fossils and archaeological remains. See also CARBON DATING. pp.814, 886-887, 887.

Isotropic, term meaning the possession of physical properties which are the same regardless of the direction in which they are measured. For example, in water, conductivity and viscosity are isotropic, but they may not be so in a very thick oil.

Isuphan. See ISFAHAN.

Israel, biblical name originally that of JACOB after he had wrestled with the mysterious "man" who was either an angel or God himself. Israel was also the name of the territory of the ten northern tribes, as opposed to the two southern tribes of JUDAH, living in Palestine before the BABYLONIAN CAPTIVITY. After the captivity there were no southern tribes left only Israel returned.

Israel, republic in the E Mediterranean that comprises most of the historic region of Palestine. Most of the agriculture is on a co-operative basis, producing cereals and citrus fruits. Mineral deposits are being exploited and there has been much foreign investment in industry. The economy is heavily depleted by efforts to maintain sovereignty in an area regarded as Arab territory by the surrounding states. The capital is Jerusalem. Area 20,700sq km (7,992sq miles). Pop. (1979 est.) 3,816,200. See ARAB-ISRAELI WARS.

pp.2074

Issachar, in GENESIS, ninth son of Jacob.

Islamic architecture, centred on forms of the mosque, is usually highly decorated.

Isomers are chemical compounds with the same formula but different structures.

Isoceles triangle has two sides equal, the angles opposite them are also equal.

Israeli forces parade in celebration of the 20th anniversary of independence in 1968.

Issigonis, Sir Alec Arnold Constantine

Italian greyhounds have probably been bred in Italy since the days of the Roman Empire

Ivan IV the Terrible, portrayed with his only son whom he killed in a fit of rage

Ivory is often richly carved, as on the side of this 12th-century Mesopotamian jew's box

Ivory Coast villagers, at the weekly market, pay serious attention to the photographer

and Leah. His tribe occupied the fertile land along the River Jordan. Deborah and Barak were members of this tribe.

Issigonis, Sir Alec Arnold Constantine (1906–), British car designer, b. Turkey. He began his career in 1933 as a draughtsman. Subsequently a chief engineer and technical director, he became advanced design consultant to British Leyland in 1972. His designs include the Morris Minor (1948), Mini Minor Austin Seven (1959) and Austin 1100 (1962). See also p 494

Istanbul, city and seaport in sw Turkey.

Both sides of the Bosphorus, which links the Black Sea and the Sea of Marmara. It was known as Byzantium until ad 330 when a constantine chose it as his new capital and renamed it Constantinople. Captured by the Ottomans, Turks in 1453 the city was largely destroyed by an earthquake in 1509 and rebuilt by Sultan Mehmed II. Many of the city's mosques date from this period. When the new Turkish Republic was established after ww I the capital was moved to Ankara and Constantinople renamed Istanbul. Today it is the commercial and financial centre of Turkey, manufacturing glass, textiles and leather goods. It also derives a valuable income from tourism. Pop. (1973) 2,487,100. See also pp 1276, 1277, 1310, 1311, 1354, 1355, 1357

Istria, region of sw Yugoslavia, a peninsula between the Adriatic and the Gulf of Trieste. It was part of the Roman Empire in the 2nd century bc. Incorporated into Austria in 1918, it was ceded to Italy in 1919. In 1947 most of Istria passed to Yugoslavia. **Italian**, Romance language of the Indo-European language family and the official language of Italy and the canton of Ticino, Switzerland. A descendant of Vulgar Latin, its first extant record is in a *Testamentum Formidii* of Monte Cassino (960/63). There are many Italian dialects and the official language is based on those of central Italy, particularly Tuscan. Tuscany's geographical position between north and south, its economic importance and cultural dominance – in particular the writing of Dante, Petrarch and Boccaccio – in the 13th and 14th centuries led to its influence in the development of a single Italian language.

Italian greyhound, miniature breed of cat short so named for its elegant, prancing gait. It has a long, flat, narrow head, a tapering muzzle, folded ears and rings. The lean, arched body, slender, fine-boned legs and the long tail is generally held low. Height to 25cm (10in) at the shoulder, weight to 3kg, (6lb).

Italics, style of handwriting developed by the Florentine humanist Niccolò Niccoli in the 15th century. Known as *umanistica* (antique, cursive), it was adopted by the great chancery and by the 16th century it replaced Gothic script in most European countries. It has been revived in the 20th century. In printing it became the model for the italic type face which was designed in 1501 by Francesco Griffo for Aldus Manutius of Venice. With letters slanting to the right, it is now used for special purposes such as to indicate emphasis or foreign words. *This column is printed in italics*.

Italy, country extending from the main continent of Europe south to the Mediterranean Sea. After devastation during ww II made the transition from an agrarian to an industrial economy, although industry is concentrated in the sw, highlighting the vast regional differences between s and n. Sugar beet, wheat and rice are produced and exports include machinery and motor vehicles. An adverse balance of trade is reduced by a considerable income from tourism. The capital is Rome. Area 301,345sq km (116,351sq miles). Pop. (1980 est.) 57,141,000. See p 2075

itching, so called pruritus, sensation of irritation on the skin which, if constant, becomes unbearable. Frequent scratching can result in damage to skin tissue. It may be caused in a variety of ways – contact irritants, the bites of insects or lice, 'prickly heat' or allergic reactions, a remedy of which itching is a

symptom, is an instance where psychological factors may worsen the condition. Several disorders, including insect bites and jaundice, can cause various local skin irritations.

Itza', tototec Indian group that migrated to st Yucatan (Mexico) between ad 514 and 1300. The ceremonial centre of Chichen was transformed into a city by the Itza' who were subsequently absorbed into Maya society.

IUD, intrauterine device, plastic or metal loop inserted by a doctor inside a woman's womb as a means of contraception. For those on whom it can be used it is reliable, but it does not suit all women. See also pp 1102, 1103

Ivan, name of two grand princes of Moscow and three tsars of Russia. Ivan I (c. 1304–41) was Grand Prince of Moscow from 1328 until his death. He enlarged Moscow (Muscovy) and made it the richest province in st Russia. By allying himself with the Russian Orthodox Church he made Moscow the spiritual centre of Russia. Ivan III (1440–1505) was Grand Prince of Moscow from 1462 until his death. He laid the foundations of a centralized monarchy and began the conquest of the Ukraine from Lithuania and Poland. Ivan IV (1530–84), known as Ivan the Terrible, was the first tsar of Russia (1547–84). He created a centrally administered Russian state and began an expansion of Russia into non-Slavic lands. He gave Russia its first national assembly (1549). He earned his nickname by the oppression of political opponents in his last years, more than 1000 of whom died. Ivan V (1666–96) was tsar of Russia from 1692 to 1696. He was an invalid and mentally retarded and took no part in government affairs. Ivan VI (1740–64) was the last tsar in 1740–41. He was deposed by a group led by Elizabeth's daughter, Peter the Great, confined to solitary imprisonment and assassinated during Catherine's reign in 1764.

Ivanhoe, (1819), novel by Sir Walter Scott based on the enmity between Saxon and Norman in England under Richard I. Wilfred of Ivanhoe returns from Richard's crusade and, after various adventures, is united with Lady Rowena. **Ivanov, Iosif** (1834–1901), Russian ballet dancer and choreographic assistant to Marius Petipa, the director of the Imperial Russian Ballet, for which he later staged some 20 works. He raised his choreography on the emotional content of the musical score, concentrating on patterns of group movement, as in his snowflake dance in *The Nutcracker* (1892).

Ivanov, Vsevolod Vycheslavovich (1895–1963), Russian novelist and dramatist whose ability for vivid description and irony was encouraged by Maxim Gorky. The story *Armoured Train 14-69* (1933) which he later dramatized is regarded as his most important work.

Ivanov, Vycheslav Ivanovich (1866–1949), Russian poet and philosopher. His poetry displays both symbolism and Platonic ideas and mysticism. *See also* *Arctura* (1911). His philosophical works, influenced by Friedrich Schopenhauer, include *Dionysius and Prometheus* (1910).

Ives, Charles (1874–1954), American composer. He was a pioneer in experimenting in the use of new harmonic and rhythmic effects. He was only gradually acknowledged as the earliest, and one of the most original, of US modern composers. American folk music is often the thematic basis of his work, as in the *Variations on America* for organ (1893) and the *Symphany No. 2* (1902). His music ranges from symphonies and chamber works to songs and piano music. In 1947 he was awarded the Pulitzer Music Prize. See also p 1754

Ivory, James (1930–), US film director whose work mostly explored the meeting of traditional and modern in Indian life. His early films include *Shakhspeare*, *Wah* (1965) and *Blomby's Talkie* (1970). *Strangers* (1972), which was set in the USA, marked a departure in content, but Ivory returned to familiar themes in *Autobiography of a Princess* (1975).

Ivory, hard, yellowish-white dentine of an elephant's tusk from which the most highly prized ivory is obtained. The term also refers to the teeth of hippopotamuses, walrus, sperm whales and several other mammals.

Ivory Coast, nation in w Africa. The tropical climate produces valuable hardwoods for export although coffee is the country's most important crop. The republic is also a leading producer of cocoa. These exports have produced a high economic growth rate and have encouraged foreign investment in new industries, notably oil and minerals. The capital is Abidjan. Area 322,463sq km (124,503sq miles). Pop. (1975) 6,673,000. See p 2080

Ivy, woody climber or vine with thick, leathery leaves native to Europe and Asia. Its long, climbing stems cling to upright surfaces by aerial roots. It may be injurious to trees by becoming virtually parasitic on them. The common English ivy (*Hedera helix*) is propagated by cuttings and grows outdoors in moist, shady, or sunny areas. Family Araliaceae.

Iwo Jima, formerly Suphan Island, the largest of the Japanese Volcano Islands in the w Pacific Ocean. Taken by the USA at great cost in ww II, it was returned to Japan in 1968. Industries include sugar refining and sulphur mining. Area 21sq km (8sq miles).

Yvelles, city in central Belgium, a suburb of Brussels. Its industries include metal working, chemicals and textiles. Pop. (1971 est.) 187,500.

Jard, Pyrenean ibex, a short-eared, highly wild goat of the family Bovidae. Also called Spanish ibex, it is regarded as a critically endangered species. Species *Capra pyrenaica*.

Jazur, formerly Smyrna, port city in w Turkey on the Gulf of Izmir. The city was part of the Ottoman Empire from 1324 until 1919, when it was tentatively assigned to Greece. It passed to Turkey by the terms of the Treaty of Lausanne (1923). It has been the seat of the st head quarters of NATO since 1952. A commercial centre, it exports fruit, tobacco and silk. Pop. 619,150.

J

J, tenth letter of the alphabet. It evolved from the letter *i* and was the last to be incorporated into the modern alphabet. Its early history is therefore the same as that of *i*. The *j* developed from the tailed form of the *i* as often written at the beginnings of words. It is a consonant in English, nearly always pronounced as in *me* in some words (such as *balloon*) is pronounced like a *v*. See also pp 608, 609

Jabberwocky, seven stanza nonsense poem by Lewis Carroll, which appeared in *Through The Looking Glass* (1872). The language developed from a mock Anglo-Saxon verse Carroll had first published in 1855 and looked forward to comparable language in *The Hunting of the Snark* (1876). Tennyson illustrated the jabberwocky itself as a type of dragon, a concept pursued by the film *Jabberwocky* (1977).

Jabiru, the largest stork of the New World, found in tropical swamps from Mexico to Argentina. The head and upper neck are naked. Length 1.4m (4.6ft). Family Ciconiidae. Species *Jabiru myiactes*.

Jaborandi, any of several tropical shrubs 1m in height (Rutaceae) that grow in South America, especially *Pilocarpus pennatifolius* and *P. setoanus*. It is also another name for the atropine-producing which is derived from the leaves of these plants. This drug stimulates secretion, causes sweating and contracts the iris of the eye.

Jacamar, any of several species of small birds of tropical America with an iridescent black or green back and black or tawny breast, a long sharp bill and a long tapering tail. The common rufous-tailed jacamar (*Galbula ruficauda*)

perches in trees along the banks of streams, flying out to catch insects. Length to 30cm (12in). Family Culiidae.

Jacana, or lily trotter, long-tied water bird of tropical lakes with a slender body, narrow bill, webbed feet and long claws. It is black or reddish-brown, sometimes with a bright frontal shield. It runs over floating vegetation, feeding on aquatic plants and small animals. Length to 50cm (20in). Family Jacanidae. See also p 331.

Jacaranda, tree native to tropical America and cultivated in greenhouses throughout the world. The ornamental *Jacaranda mimosifolia* and *J. cuspudifolia* have showy blue flowers. There are 40 species. Family Bignoniaceae.

Jaccuse, first two words of an open letter from Émile Zola published in the newspaper *L'Aurore* on 13 Jan. 1898. In the letter Zola accused the French government of concealing the true facts of the DREYFUS AFFAIR. The resulting controversy helped re-open the issue.

Jacynth, hyacinth, a rare gemstone, transparent red, orange or yellow in colour, which is a variety of zircon. Deposits are found, notably in Ceylon and New South Wales, where erosion has exposed them.

Jackal, wild dog that resembles a coyote in habits, size and general appearance. It preys on small animals and eats carrion fruit and seeds. The various species in the genus *Canis* are distributed throughout Asia and Africa. Length to 74cm (29in). Family Canidae. See also p 68.

Jackdaw, gregarious black-and-grey bird that frequents open country near buildings, ruins or cliffs. Smaller than its relative, the crow, it has a grey head and white-rimmed eyes. It lives in colonies, with both parents constructing the nest and feeding the young. Family Corvidae. Species *Corvus monedula*. See also p 76.

Jackeroo, Australian colloquial term for a young man who works as an assistant on large properties and cattle stations. His duties usually include boundary maintenance and supervision. The female counterpart is a *jackaroo*, a term coined during WWI.

Jack-in-the-box, children's toy consisting of a box from which a figure on a spring jumps when the box is opened. The name is derived from a phrase used in the 17th century to describe salesmen in market stalls.

Jack-in-the-pulpit. See CUCKOO-PINT.

Jacklin, Tony (1944-), British golfer. The highlights of his career came when he won the 1969 British and 1970 US Open Championships. Thereafter his performances became less consistent, although he continued to represent Britain in the Ryder Cup.

Jack rabbit, any of several large, slender, long-eared hares of W North America. Jack rabbits rely on their great speed, powerful leaps and general agility to escape from coyotes and other predators. Most are grey with white underparts, but the common northern white-tailed jack rabbit has a lighter winter coat. Family Leporidae, genus *Lepus*.

Jackson, Andrew (1767-1845), 7th US President (1829-37), general and Indian fighter. At the age of 13 he was captured by the British in the American War of Independence but later as a general in the Battle of New Orleans (1815) he defeated them and became a national hero. A frontiersman intolerant of formal education, he soon emerged as the symbol of a new egalitarian society. During his presidency the balance of power shifted from the urban East to the farmers and small businessmen of the West.

Jackson, Sir Barry Vincent (1879-1961), British theatre manager and director. He founded the Birmingham Repertory Theatre in 1913 and ran it until his death and founded the Mowbray Festival (1929), notable for productions of plays by George Bernard Shaw. From 1945 to 1948 he was director of the Shakespeare Memorial Theatre, Stratford-on-Avon.

Jackson, Donald (1940-), Canadian

figure-skater who, after being a bronze medalist in the 1960 Winter Olympics, won the 1962 world championship with a free-skating routine that included spectacular triple jumps. He turned professional and was world champion in 1970.

Jackson, Glenda (1916-), British actress famed for strong performances in historical and modern dramas. Her films include *Women in Love* (1969), *Sunday Bloody Sunday* (1971), *Elizabeth R* (1971), *A Touch of Class* (1972) and *The Romantic Englishwoman* (1974). Her stage roles have included that of the poet Stevie Smith in *Straw* (1977).

Jackson, John Hughlings (1835-1911), British neurologist. He studied speech defects as a symptom of brain disease, the disease he located in the left cerebral hemisphere. He also traced motor spasms to a brain disorder. Such spasms are now called Jacksonian epilepsy.

Jackson, Marjorie (1931-), Australian sprinter. Nicknamed the "Blue Streak", she won the 1952 Olympic 100m and 200m, plus seven British Empire gold medals (1950-1954). When she retired at age 22, she had established five world records, equalled five and shared in three relay world records.

Jackson, Thomas J. ("Stonewall") (1824-63), US Civil War Confederate general. His stand against overwhelming odds at the first Battle of Bull Run (1861) gained him the nickname "Stonewall". He drove his troops so hard that they were known as "Jackson's Foot Cavalry". He was considered Gen Robert E. Lee's best general. Jackson was accidentally shot by one of his own men at Chancellorsville where he had just defeated the Unionists. See also pp 1628-1629.

Jackson, capital and largest city in SW central Mississippi on the Pearl River. Originally a trading post established in the 1790s and known as Le Fleur's Bluff, it was chosen as the site of the state capital in 1821. It is the centre for an extensive farm region and has a variety of industries including food processing, glass and textiles. Pop. (1973) 163,924.

Jacksonville, seaport and largest city in NE Florida, USA, on the St John's River. It served as a CONFEDERATE base during the Civil War, developed as a port in the 19th century and was devastated by fire in 1901. An important centre of commerce and finance in the southern states, it is also a focal point of air, rail and road routes. Industries include cigars, fruit canning and wood products. Pop. (1970) 528,865.

Jack the Ripper (fl. 1888), presumed murderer of at least seven prostitutes in the East End of London in late 1888. The name given to the murderer came from his mutilation of his victims. He was never definitely identified.

Jacob, in the Bible, son of Isaac and Rebecca and younger twin brother of Esau. While fleeing after tricking Esau out of his birthright, he wrestled with an angel to obtain God's blessing. He married Leah and Rachel, the descendants of his 12 sons became the 12 tribes of ISRAEL.

Jacob, François (1920-), French biologist. With Jacques Monod he discovered that a substance that they named messenger RNA carried hereditary information from the cell nucleus to the sites of protein synthesis and that certain genes, called operator genes, control the activity of others. They shared the 1965 Nobel Prize in physiology and medicine with another French biologist, Andréwoff. See also pp 907, 911.

Jacob, Gordon Percival Septimus (1895-), British composer and conductor. His music has a certain crisp aggressiveness, although much of his vocal music is more lyrical in vein. His compositions include two ballets, *The Jew in the Bush* (1923) and *Uncle Remus* (1930), film music and chamber music.

Jacob, Max (1876-1944), French avant-garde poet, a close associate of APOLLINAIRE and BREASON in the early days of DADAISM. Of Jewish descent, he converted to Roman Catholicism in 1915, he lived as a recluse but died in a German concentration camp. Jacob's poetry, a mixture of macabre humour and mysticism

includes *Le Cornet à des* (1917).

Jacobean, term designating the artistic styles of the reign of JAMES I (1603-25) from whose name in Latin Jacobus it is derived. The major literary art form was drama, typical examples of which are the works of WEBSTER and FORBES as well as the late plays of SHAKESPEARE. The development of the masque, particularly by DEWEE and the poetry of DONNE and the METAPHYSICALS were further features of the age. In architecture Italian MANNERISM was a formative influence, but the major achievement of the period lies in the work of Inigo Jones who introduced PALLADIANISM to England. Jacobean painters, such as the miniaturist Peter Oliver, did not equal the achievement of other artistic mediums and were to be surpassed by the painters of the following reign. See also p 1430.

Jacobin, alternative name in France for a JESUITICAN friar from the first Dominican house in Paris which was under the patronage of St James - Jacobus in Latin. The JACOBIANS of the FRENCH REVOLUTION took their name from this former Dominican convent in which they used to meet.

Jacobins, French political radicals belonging to a club that played an important role during the FRENCH REVOLUTION. Begun in 1789 by some deputies to protect the revolution against an aristocratic reaction, the club split in 1791 when the moderates left it. Thereafter more popular in orientation, the Jacobin movement developed a network of clubs throughout France. In 1793-94 the club was an instrument of ROBESPIERRE and became part of the government's administration. It was closed soon after Robespierre's downfall in 1794. See also pp 1550-1551.

Jacobite rebellions, two attempts to overthrow the HANOVERIANS and restore the STUART line to the British throne. The first led by the Earl of Mar on behalf of the "Old Pretender" James III began in September 1715. By the time that James arrived in England from Paris in December, Mar had failed to overcome the Duke of Argyle's forces at Sheriffmuir. Sporadic uprisings had occurred throughout the autumn but by February 1716 the revolt had been put down. James returned to France and Mar also escaped there. Only 26 rebel officers were executed. The second rebellion led by James' son, the "Young Pretender" Bonnie Prince Charlie began in August 1745. It ended with the overwhelming English victory over the Scots Highlanders at Culloden Moor in April 1746 at which the English lost only 310 men and the Scots 1,000. See also p 1472.

Jacobites, supporters of JAMES II and his Stuart descendants, who attempted to regain the English throne after the GLORIOUS REVOLUTION of 1688. With unofficial French encouragement, Jacobites were found among Scots (the homeland of the Stuarts), Irish (James II was Catholic) and disgruntled Tories (Whigs dominated the government). See also JACOBITE REBELLIONS, p 1472.

Jacobs, Aletta Henriette (1854-1929), the first woman doctor in the Netherlands who ran the medical service set up by the Malthusian League in 1882. Its aim was to provide information on contraception. In 1890 she set up the world's first contraceptive clinic, and the idea spread rapidly to other countries.

Jacobsen, Arne (1902-71), Danish architect and industrial designer in the 1930s, an influential practitioner of the INTERNATIONAL STYLE in Denmark. After WWII he designed brick housing of elegance and originality, and in the 1950s beautifully proportioned CURTAIN WALL office blocks, including the SAS Building, Copenhagen (1959). In England, he was engaged in building the immaculately finished St Catherine's College, Oxford (1964). He designed the "Egg" swivel chair (1959).

Jacob's ladder, any of 40 species of wild and cultivated plants of temperate areas. It has clusters of delicate blue, violet or white flowers and alternate compound leaves. The European *Polemonium caeruleum* of woodlands and high regions has large blue or white flowers. Height up to

Jackdaws, although not used to them, are useful to farmers in destroying insects.

François Jacob, the French biologist who began his career at the University of Paris in 1940.

Jacobite rebellions: the Battle of Culloden Moor, which saw the end of Stuart hopes.

Jacob's ladder grows on English moorland limestone hills, especially in part shade.

Jade was a small, dark, round cat with a white patch on its chest.

Jamaica was a large, dark, round cat with a white patch on its chest.

James I was a large, dark, round cat with a white patch on its chest.

James II was a large, dark, round cat with a white patch on its chest.

20km (130 miles). Primarily, Primaries are in the South Africa. His first novel was *The Trap* (1955). He has also written *The Rape of Tamar* (1970), *The Wonderworker* (1973) and *The Confessions of Josef Barez* (1977).

Jacopo da Lentino (fl 13th century), Italian poet and notary. His poetry, mostly on the theme of chivalry, was both elegant and ingenious. He is credited with inventing the sonnet form and he is mentioned in Dante's *Divine Comedy*.

Jacopone da Todi (c 1236-1306) Ital. poet. After the death of his wife in the 1260s, he became a monk and wrote numerous fervid intensely personal hymns. His work is notable for the vehemence with which he rejects the temptations of the flesh.

Jacquard, Joseph Marie (1752-1834) French silk weaver who perfected a loom that could weave patterns automatically (1801-06). It aroused bitter hostility from many silk weavers who feared for their livelihood. By 1812 there were 11,000 Jacquard looms in use in France. The first automated machine, the loom was controlled by punched cards, the forerunners of those used in modern data storage systems. See also p 626.

Jacquerie, insurrection of peasants against the nobility in France in 1358. It was triggered by the increased taxes to finance the Hundred Years War and pillaging by English invaders and the French nobility. The peasants and some townsmen revolted. They destroyed several castles. The revolt was defeated by the nobles who executed the leader Guillaume Calais. Many thousands of peasants were massacred.

Jacques, Reginald (1894-1969) British conductor and organist. In 1926 he was appointed organist at Queen's College, Oxford. He was renowned for his choral conducting and in 1947 founded the Finches String Orchestra.

Jade, a semiprecious silicate mineral of two major types - jadeite which is often translucent and nephrite which has a waxy quality. Both types are extremely hard and durable. Jade is found mainly in Burma and comes in many colours, most commonly green and white.

Jadotville. See (KAS).

Jaffa, port in Israel, 56km (35 miles) NW of Jerusalem. Mentioned in the Bible, it was captured and hellenized by Alexander the Great in 332 BC. Taken back by the Jews during the Hasmonean revolt, it was destroyed by Vespasian in AD 68. It changed hands many times in the Middle Ages and became important in the 20th century as a point of Palestinian resistance to Jewish settlement. In 1948 the Arab inhabitants fled and the town was settled by Israelis.

Jagan, Cheddi (1918-), Prime Minister of British Guiana (1961-64). He founded the People's Progressive Party, which came to power in the 1950s. When British Guiana gained independence in 1966 and was renamed Guyana, he and Burnham had split, the latter becoming the first prime minister and Jagan leading the opposition.

Jagatani (d c 1242), second son of GENGIS KHAN, whose kingdom was divided among his three sons and a grandson. Jagatani recovered modern Turkestan and Afghanistan and he sternly maintained nomadic traditions. His subjects' language and literature are still known as 'Jagatani'.

Jagellon, name of a dynasty of Polish kings, beginning with the marriage of Jagello of Lithuania to Queen Jadwiga of Poland (1386) and ending with the death of Sigismund II (1572). Intervening rulers included Wladyslaw III (1434-44), Casimir IV (1444-92), John Albert (1492-1501) and Sigismund I (1506-48).

Jaguar, spotted big cat found in wooded and grassy areas from USA and New Mexico to Argentina. It has a chunky body, rounded ears and a yellowish coat with black rosettes. This fierce cat eats large mammals, turtles and fish. Length body to 1.8m (5.9ft), tail to 91cm (35in), weight to 136kg (299lb). Family Felidae, species *Panthera onca*. See also pp 314-315.

Jaguarundi, small ground-dwelling cat found in Central and South America. It is black, brown, grey or fox-red. Length to 67cm (26.4in), excluding the tail, weight to 9kg (19.8lb). Family Felidae, species *Felis yagouaroundi*.

Jahangir (1569-1627) Mogul emperor of India (1605-27). Although he revolted against his father Akbar in 1594, Akbar still named him his successor. He continued the expansion of the empire, conquering Mewar in 1614 and Ahmadnagar in 1616. In 1622, however, the Persians retook Kandahar. He granted trading privileges to the Portuguese and the British East India Company.

Jahweh. See YAHWEH.

Jair. See PELOTA.

Jainism, an ancient religion of India which originated in the 6th century BC as a reaction against conservative BRAHMINISM. It was founded by Mahavira (599-527 BC). Jains do not accept Hindu scriptures, rituals or priesthood. They believe that salvation can be attained only through rigid self-effort and asceticism, but they do accept, with some modification, the Hindu doctrine of transmigration or souls. Jainism lays special stress on ahimsa or non-injury to all living creatures including animals, birds and insects. The number of Jains in the mid-1970s was estimated at about two million.

Jampur, city in NW India, 225km (140 miles) W of Agra. Founded in 1727, it is completely enclosed by a wall which still exists and has a system of wide regular streets which is unusual for a city of its size. A transport and commercial centre, it is famous for its jewellery, enamels and printed cloth. Pop. (1971) 613,144.

Jairzinho, Jair Ventura Filho (1944-), Brazilian footballer, an attacking right winger who, in the 1970 World Cup finals, became the first player to score in every round of the competition. A member of the Botafogo club, he won his first cap in 1964 and also played in the 1966 and 1974 World Cups.

Jakarta. See DIABAKATA.

Jamaica, independent island nation in the Caribbean, 145km (90 miles) S of Cuba. It is a largely mountainous country with a tropical maritime climate and the chief crops are sugar cane, bananas and other fruits. The economy is based on light engineering, construction, and mining. Jamaica is one of the world's producers of the aluminium ore bauxite; tourism is also important. Rural migration to the cities has raised the unemployment rate and there has been much civil unrest. The capital is Kingston. Area 10,962sq km (4,232sq miles). Pop. (1975 est.) 2,029,000. See p 208.

James, name of three saints in the New Testament. James the Greater (d 44) one of the Twelve Apostles of Jesus was the brother of the Apostle John. He was beheaded as an exemplary measure by Herod Agrippa I. James the Less, also one of the twelve, was the son of Alphaeus and perhaps one of the three women named Mary at Christ's cross and later his tomb. James (died c 62) called the 'brother of the Lord' a witness to the Resurrection was a leader of the early Jewish Christians in Jerusalem. Allegedly stoned to death or thrown down from a tower, this James is usually identified as the author of the epistle of that name, although there have been suggestions that the author may in fact have been James the son of Alphaeus.

James, the Epistle of, New Testament letter probably written by James called 'the brother of the Lord' although it is occasionally attributed to the disciple James the Less. In strictly Jewish Christian terms it exhorts Christians to live righteous lives.

James I (1566-1625) King of England son of MARY, QUEEN OF SCOTS. Crowned James VI of Scotland on his mother's abdication (1567), James passed his minority mainly under the control of the PRESBYTERIANS who determined to shield him from Roman Catholic influence. Forced to decide between France and England as an ally for Scotland, James chose Protestant England in 1586. On 21 JANUARY his death in 1603 he became King

of England. He supported the ASSEMBLY and sponsored a translation of the Bible in 1611 that is known as the King James Version but his failure to conciliate either the Puritans or the Roman Catholics caused discontent. His reliance upon favourites and his troubled relationship with the House of Commons weakened his effectiveness as a ruler. See also pp 141-142, 1420-1421.

James II (1633-1701) King of England son of CHARLES I and younger brother of CHARLES II. After the restoration (1660) James, then Duke of York, played a prominent part in naval affairs and as Lord High Admiral in 1672 defeated the Dutch fleet at Southwold Bay. As a Roman Catholic, he was forced to resign all his offices in consequence of the TEST ACT (1673). Despite the rival claim of the Duke of MONMOUTH in illegitimate but Protestant Charles II, James succeeded his brother (1685). His adherence to Roman Catholicism, however, alienated his subjects, and James was forced to abdicate. While lords invited WILLIAM III and his wife Mary, James's Protestant daughter, to assume the English throne, he landed in Britain in 1688. In an unsuccessful campaign (1689-90), James failed to hold Ireland against William. The Stuart cause was carried on hopelessly by his son, the grandson the Old Pretender. See also pp 1427-1428.

James, the name of five kings of the Stuart dynasty of Scotland. James I (1594-1625) was captured at sea by the English on his way to France and was unable to return to Scotland until 1624. His reign was largely devoted to breaking the power of the nobles, restoring law and order after a long period of disunity and improving commerce and Scotland's military power. Low and Scotland in particular developed economically during James's reign but his curbing of the nobles had made him many enemies and in 1637 he was murdered. See also p 1378.

James II (1633-1701) was only six years old when his father was murdered and for many years of his reign he was under the domination of three vying clans. He was nevertheless able to enhance royal authority and extend the reform of the legal system. A supporter of the cause of the House of ANGLICAN in the Wars of the ROSES, he attacked English border outposts and was killed at the siege of Roxburgh. See also pp 1378-1379. He was succeeded by his son James III (1452-88, r 1460-88), during whose reign the consolidation of the kingdom was assisted by the acquisition (through his marriage to Margaret of Denmark) of Orkney and Shetland. Opposition to James by a group of Border nobles finally led to an uprising in 1488 during which the king was murdered. See also p 1378.

James IV (1473-1513, r 1488-1513) was the nominal leader of the rebels who killed his father, James III. A strong monarch, he maintained his authority throughout Scotland during his reign and concluded peace with England in 1497, consolidated by his marriage to MARGARET, daughter of HENRY VII. However, he led an invasion of England and was defeated and killed at BLOOMSBURY. See also p 1379. His son James V (1512-42, r 1513-42) like so many of the Stuarts, started his reign as a minor. Efforts to retain control of his nobles and yet remain independent of his uncle, HENRY VIII, occupied much of his reign. His death, it is said from grief, followed the English rout of his forces at MURRAY MOUNT. See also pp 1378-1379. He was succeeded by his six-day-old daughter MARY II, later Queen of Scots, whose son James VI was in time to become James I of England.

James, the name of two kings of Aragon. James I (1208-76, r 1214-76) called 'the Conqueror' became effective ruler in 1227 after a minority disturbed by warring nobles. He consolidated royal power and enlarged his realm by seizing the Balearic Islands (1229-35) and Valencia (1233-38). James II (1264-1327, r 1291-1327) became King of

Aragon on his brother's death. He gave up his claim to Sicily, which had been conquered by his father, and received Sardinia and Corsica from Naples as compensation. He began the annexation of Sardinia (1323-24) but failed to take Corsica.

James, Frank. See JAMES, JESSE WOODSON. **James, Henry** (1843-1916), US novelist, short story writer and critic. Brother of William JAMES, he received his early education abroad. In 1915 he became a British subject. James, the master of a complex and convoluted prose style, felt that a writer should "never allow anything to enter a novel which was not represented as a perception or experience of one of the characters." Among his many works are *The Portrait of a Lady* (1881), *The Bostonians* (1886) and *The Ambassadors* (1903). See also pp 1575, 1772.

James, Jesse Woodson (1847-82), school-lawyer. With his brother Frank he fought for the Confederacy during the Civil War. In 1867 they formed an outlaw band and terrorized the frontier, robbing banks and trains in Missouri and nearby states. In 1882 he was shot by Robert Ford, one of the members of his own gang, for a large reward. See also p 1630.

James, Thomas (c 1593-1635), English navigator. In 1631 he sailed in search of a northwest passage to the Indies and explored James Bay, the southern part of HUDSON BAY. He wrote an account of his exploration, *Singe and Dangerous Voyage* (1633).

James, William (1842-1910), US philosopher and psychologist, the brother of Henry JAMES. Regarded by many as the most distinguished of US psychologists, he pioneered research in many areas, particularly that of the emotions. He held that emotion is the feeling of a state of the body, the bodily state therefore comes first and the emotion follows. His most famous works are *The Principles of Psychology* (1890) and *Varieties of Religious Experience* (1902). See also pp 1119, 1886-188.

James Bay, extension of Hudson Bay in Canada, between W Quebec and N Ontario. It receives several rivers including the Nottaway, Albany and La Grande. Length 450 km (280 miles), width 242 km (150 miles).

James Edward Stuart. See STUART, JAMES FRANCIS EDWARD.

Jameson, Sir Leander Starr (1853-1917), British political figure in South Africa. He was an associate of Cecil ROODES and led the unsuccessful JAMESON RAID (1895). Later he served as Prime Minister (1904-08) of the CAPE COLONY.

Jameson, Margaret Storm (1897-) British novelist. Her novels, in the family-saga genre, include *The Lovely Ship* (1927), *The Voyage Home* (1940) and *The Early Life of Stephen Hind* (1966).

Jameson Raid, action in South Africa taken by Sir Leander Starr Jameson in 1895. Jameson and Cecil ROODES wished for a federation of South African colonies, but the British had seen the BOER government of the Transvaal as a threat to this. The raid was a complete failure. Jameson was captured, sent to Britain and imprisoned.

James-town settlement, first successful English settlement in America, established in May 1607 under the auspices of the Virginia Company. Despite disease and attacks from the Indians, the leadership of John SMITH and John ROE made the colony firm by 1614 when an alliance was made with the local Indians. The town was in decay by 1700. See also p 1538.

Jami (1314-92), Persian poet and mystic, the last of Iran's great mystical poets, real name Mowlana Shir Oidin Abul Orr ih Ismaili Bin Ahmad. He also wrote prose, dealing with the Koran, Sufism and music. He is most famous for his seven-part poetic compendium *Haft Owraq* (*The Seven Thrones*, trans 1856, 1882).

Janaček, Leoš (1854-1928), Czech composer who studied Czech folk music and speech, which greatly influenced his music. His compositions include such orchestral works as *Tarata Bulba* (1918) and *Sinfonietta* (1926), two string quartets

(1927 and 1928), the cantata *The Fiery Gospel* (1914) and other choral works. He wrote a number of operas, including *Jenufa* (1904), a complex story of tragedy and love, and *Cunning Little Vixen* (1924), a comedy of an maid and humans.

Janco, Marcel (1895-), Romanian architect and painter, from 1916 to 1921 at the fore-front of the DADA movement in Zurich, and during the 1920s and 1930s a propagandist of modern art in Romania. In 1940 he emigrated to Israel, where he founded an artists' community.

Jane Eyre (1847), novel by Charlotte BRONTË. It is remarkable as a great romantic novel telling of the relationship between Jane, an orphaned governess of great spirit and will, and her sardonic but passionate employer, Mr Rochester.

Jane, Pierre Marie Félix (1859-1947), French psychiatrist. He did valuable research in the diagnosis and treatment of HYSTERIA and spent his later years searching for ways of re-educating personalities overwhelmed by seemingly minor anxieties. See also p 1109.

Janiwaries, élite corps of soldiers of the Ottoman Empire. The practice of recruiting Christian youths and other war captives who were converted to Islam was begun in the 14th century by the sultan Orkhan. Later membership became hereditary and the corps wielded supreme power within the empire until 1826 when by order of Sultan Mahmud II the corps was massacred. See also p 1355.

Jan Mayen, Norwegian island in the Greenland Sea of the Arctic Ocean between Greenland and N Norway. First sighted in 1607 by Henry ARNOLD, it was annexed by Norway in 1929. The island is barren and uninhabited except for a NATO radio and navigation station. Area approx 373 sq km (144 sq miles).

Jannings, Emil (1884-1950), US film actor b Germany. He made his stage debut at the age of 16. His films included *Peter the Great* (1923), *The Way of All Flesh* (1928) and *The Blue Angel* (1930).

Janov, Arthur (c 1925-), US psychotherapist who developed primal therapy as a means of treating neurosis. In his book *Primal Scream* (1970) he postulates that neurosis is a defence against pain which may have originated in childhood. It can be treated by reliving "primal" - emotional outbursts in which the patient faces this pain. See also p 112.

Jansenism, theological school which grew up in the Roman Catholic Church in the 17th and 18th centuries. It is associated with the name of the Dutch theologian Cornelius Jansen (1585-1638), Bishop of Ypres, but the movement grew strongest in France. The main Jansenist tenets may be summed up in the propositions that man is incapable of carrying out the commandments of God without special divine grace and that the operation of grace is irresistible. French Jansenists suffered persecution during most of the 18th century. See also p 1109. **Jansky, Karl** (1905-50), Czech engineer who in 1931, while investigating interference to telephone communications, discovered an unidentified radio wave source. He concluded that it was stellar in nature and that the source lay in the direction of SAFFORD'S later established as the direction of the centre of our galaxy. See also pp 922, 923, 996.

Janssen, Pierre-Jules-César (1834-1907), French astronomer, a pioneer of solar physics and of photography. He made a number of scientific expeditions, including a search for the magnetic equator in Peru (1857-58). In 1869 he established an observatory on Mont Blanc.

Januarius, Saint, or San Gennaro (died c 305), legendary martyr and patron saint of Naples, who suffered under the Emperor Diocletian. A phial said to contain his blood is preserved in Naples Cathedral and 18 times a year the phenomenon of the liquefaction of the blood occurs. No natural explanation of this event has ever been put forward.

January, first month of the Gregorian calendar, consisting of 31 days. Originally it was the eleventh month of the Roman

Republican calendar, but when the Julian version brought calendar date into step with equinoctial time in the first century BC it became the first month of the year. It was named after JANUS. The birthstone of January is the garnet and its flowers are the snowdrop and the carnation. See also NEW YEAR'S DAY.

Janus, in Roman religion, the anthropomorphic spirit of doorways and archways. He was regarded as the god of all beginnings. He was normally depicted with two heads facing in opposite directions and was invoked at the first of any gods in regular liturgies.

Japan, independent nation in E Asia, consisting of four large islands and about 3,000 smaller ones. It is a mountainous country with volcanoes and frequent earthquakes. Although there is little arable land, high yields mean that most food is home produced. Japan has few natural resources, having to import many minerals. Despite this it leads the world in shipbuilding. The capital is Tokyo. Area

377,935 sq km (145,966 sq miles). Pop. (1976 est.) 112,550,000. See p 2081.

Japan, Sea of, part of the W Pacific Ocean lying between Japan (E), the Korean peninsula and the coast of the USSR to the W. The shallower areas used to be important fishing grounds but since 1946 the fisheries have become depleted. Area 1,007 sq km (389,100 sq miles).

Japanese art, aesthetic tradition which embraces painting, printmaking, sculpture, metalwork, architecture and the decorative arts. The earliest examples are Jomon pottery figurines (c 1000 BC). The Chinese influence was introduced with BUDDHISM in the 6th century. LATER WORK sculpture and ink painting developed during the NARA period (AD 674-794) at which time FANG cultural forms combined with the emergence of characteristically Japanese techniques. The YAMATO-E tradition, which was based on national rather than Chinese aesthetic standards, originated in the Kofun school of painting in the later HEIAN (HEIJARA) period and flowered during the KAMAKURA military rule (1185-1333). The profound influence of ZEN Buddhism on Japanese art is particularly apparent in the Muromachi period (1333-1573), when Zen masters used painting as a teaching method. Many of the best known examples of Japanese art were produced in the Edo (TOKUGAWA) period (c 1600-1868). The UKIYO-E prints of Utagawa HOKUSAI (1760-1800) and others from this period became known in Europe after the Meiji Restoration (1868) and influenced Western artists such as Van Gogh, J.M.W. WHISTLER and some IMPRESSIONISTS. Modern Japanese artists have made important contributions to 20th-century art and design. See also pp 1265-1266, 1502-1503.

Japanese spaniel, toy dog, probably bred originally in China, but developed in Japan. Its long, silky coat is usually black and white or red and white. It was brought to the West by Matthew Perry. Height 23 cm (9 in), weight 3.2 kg (7 lb).

Japanica, any of several shrubs and their fruit. *Camellia japonica* is also called CAMELLIA, the Japanese quince, *Chaenomeles japonica* (Family Rosaceae) bears green aromatic quince-like fruit. The latter is also cultivated for its orange-red flowers. Height to 2 m (6 ft).

Jacquie-Dalcroze, Émile (1865-1950), Swiss composer and educator, who from 1892 to 1909 taught at the Geneva Conservatory, where he invented his system of Eurythmics. He established a school (1910) devoted to his system which through his pupils, especially Marie RAMBERT, had great influence on ballet.

Jarmo, archaeological site, now in S Iraq. It contains remains of wheat and barley cultivation dating from the 8th millennium BC. Jarmo was excavated in 1928-55 and there is a modern village near by. See also p 1158.

Jarnach, Philipp (1892-) French horn composer. A student of Debussy, he arranged piano scores for several of his master's operas.

Jarrah, hardwood timber tree that grows in sandy soils in Australia; it is a type of

Henry James, one of America's greatest writers, mastered all literary forms except drama.

Jameson Raid, a contemporary impression of a cavalry charge during the raid.

Janus, the Roman god of gates, with two faces.

Japan, the view from one of the observation holes in the Goddess of Mercy statue, Tokyo.

Jasminum, the Spanish variety is larger than common *jasminum* and is tinged with red

EUCALYPTUS Its leathery leaves are lance-shaped, glossy and dark green above and paler underneath. Height to 30m (98ft). Family Myrtaceae. Species *Eucalyptus marginata*.

Jarrett, Keith (1945-), US jazz pianist. An introspective and serious musician, he played with Art Blakey and Charles Lloyd before forming a trio with Charlie Haden and Paul Motian in 1966. After a time with Miles Davis in 1970-71, he became a solo performer and recording artist.

Jarrow March (1936) progress of unemployed workers from Jarrow, in county Durham, to London. Jarrow, a small ship-building town, relied upon one firm, which closed down in 1933. By the end of 1935 nearly three-quarters of the town's insured workers were out of work and 200 of them marched (5-31 October) to draw national attention to their plight. See also p. 67.

Jarry, Alfred (1873-1907), French playwright and satirist. He is chiefly remembered for his farce *Ubu Roi* (1896), whose principal character, le père Ubu, is the personification of avarice, cowardice and ugliness. Jarry also wrote other works which foreshadowed SURREALISM, including *César-Antichrist* (1895) and *Supermale* (1902).

Jasmine, climbing shrub known in the Mediterranean region since ancient times. It produces fragrant yellow, pink or white flowers, and an oil that is used in perfumes. Species include *Jasminum sambac* and the white *J. officinale*, which is hardy in temperate regions. Height to 6.5m (20ft). Family Oleaceae.

Jason, hero in Greek mythology. Sent on a quest for the GOLDEN FLEECE to prevent him from claiming his usurped throne. Jason sailed aboard the *Argo* with heroes who included HERCULES, THESEUS, ORPHEUS, CASTOR AND POLLUX. After surviving many perils, and despite losing some of his companions, he found the fleece in Colchis, and stole it, with the help of the sorceress MEDEA. At the end of a long life he was a wanderer who died under the prow of his old ship, the *Argo*. **Jasper**, opaque, semi-precious stone, usually red to brown, sometimes yellow or grey to green. Jasper is found in Greece, Siberia, Libya and the River Nile valley. It was once believed that stomach complaints could be cured by wearing these stones. A dark form of jasper was traditionally used as a touchstone to estimate the gold content of precious alloys.

Jaspers, Karl Theodor (1883-1969), German philosopher. His existentialism was influenced by the works of KIERKEGAARD and NIETZSCHE and his own studies in psychopathology. The main themes of his philosophy appear in *Philosophy* (1932), other works include *Philosophical Faith and Revelation* (1962) and *The Future of Germany* (1967).

Jasperware, unglazed stoneware first made in France and by Josiah Wedgwood c. 1770. When in its natural state it can be stained to various colours with metallic oxides - usually to pale blue, but also to dark blue, lilac, green, black and yellow. White decorations in the neo-classical style are moulded separately and applied to the jasperware.

Jat, member of an agricultural and pastoral people of the plains of N India, renowned for their fighting prowess. The Jats became a political force in the 17th century. At first Hindu, many later became Muslims or Sikhs.

Jataka, 'birth stories'. Buddhist writings which drew moral conclusions from stories of the BUDDHA or some other Buddhist figure in a previous existence. The main character usually appears as an animal whose present circumstances are the result of past acts.

Jaundice, yellowing of the skin and other tissues, especially the whites of the eyes, caused by excess of bile pigment in the blood. It usually occurs in premature babies, if severe, and if associated with excessive bilirubin in the blood, it may lead to widespread destruction of tissues in the brain. In adults jaundice may occur when the flow of bile from the liver to the intestine is blocked by an obstruction such

as a GALLSTONE, or in disease of the liver such as CIRRHOSIS and HEPATITIS. See also p. 1069.

Jaurès, Jean Léon (1859-1914), French socialist leader. He helped to form the unified French Socialist Party and founded and edited the socialist journal *L'Humanité*. At the advent of WWI he was assassinated by a fanatical nationalist for advocating arbitration rather than war with Germany.

Java, fourth largest island of Indonesia, lying between the Java Sea and Indian Ocean. It is a mountainous country, having a volcanic belt in the S and an alluvial plain to the N. It has many rivers, and rice, tea and coffee are produced. There is silver, gold and phosphate mining in the N. The largest city is Djakarta. Area 126,501sq km (48,842sq miles). Pop. 78,201,000.

Java man, extinct race of *HOMO ERECTUS*, whose skeletal remains were found at Trinil, Java, in 1891. The skull was ape-like but the limb structure was similar to that of modern man. See also pp. 112-113.

Javelin, lightweight spear thrown by hand, used as a weapon since ancient times. The modern javelin used in sport, in athletic field events, may be made of wood or a light alloy. It has a metal tip and weighs a minimum of 800g (28.2oz). Length to 2.7m (8.9ft). See also pp. 554-555.

Jawara, Sir Dauda Kauraba (1924-), Gambian politician. He served as Minister of Education (1960-61) and Prime Minister (1962-70) of Gambia when it was a British colony, becoming its president when the country became a republic in 1970.

Jawlensky, Alexey von (1864-1941), Russian painter who worked principally in Germany. He was influenced mainly by MATISSE. In Munich he met KANDINSKY, later, with Kandinsky, KLEE and Lyonel FEININGER he formed a group known as the Blue Four, but worked mostly in isolation. Late works, eg *Head* (1935), were deeply expressive, icon-like images.

Jay, any of several species of harsh-voiced birds related to MAGPIES and JACKDAWS, especially the European *Garrulus glandarius*. It is an aggressive bird with characteristic blue wing markings. Length 34cm (13.5in). Family Corvidae. See also pp. 83, 295.

Jazz, style of music that evolved in the USA in the late 19th century out of African and European folk music, popular songs and US vaudeville (music hall). It is traditionally characterized by a steady rhythm, usually four beats to the bar, prominence of melody, often with elements derived from the BLUES, and improvisation by the performer. Early jazz was developed in New Orleans in the form of RAGTIME, BLUES and DIXIELAND MUSIC. In the 1920s it spread to Chicago and New York City and became known throughout the world as a musical style unique to America. In the 1930s swing enjoyed great popularity, as did the more sophisticated BEBOP style of the 1940s. The popularity of jazz has decreased as its technical resources and expressive scope have grown. Jazz elements influenced composers such as MAURICE RAVEL and DARIUS MILHAUD and also had an impact on other styles of popular music, such as ROCK-AND-ROLL. See also pp. 1756-1757.

Jazz Singer, The, US film (1927), the first major film to use sound. It was directed by Alan Crosland and starred AL Jolson. A second version was made in 1953.

Jean, Grand Duke of Luxembourg (1921-). He was a member of the Irish Guards during WWI, and became Grand Duke on the abdication of his mother (1964).

Jeanerret, Charles-Edouard. See LE CORBUSIER.

Jenns, Sir James Hopwood (1877-1946), British scientist and author. He investigated STELLAR DYNAMICS and proposed the tidal, or catastrophic, theory of planetary origin, in which he assumed that the matter of the planets was drawn out of the Sun by the attraction of a passing star. His works include *The Universe Around Us* (1929). See also pp. 924-925.

Jedda, port city in Saudi Arabia on the

Red Sea 74km (46 miles) W of Mecca. Under Turkish rule until 1916, when it joined the independent Hejaz, it was taken in 1925 by ISRA'IL. It serves Mecca as a port for pilgrims and as such imports many goods to support this annual influx of people. Since WWII industry has been expanded to include steel rolling, oil refining and pottery manufacture. Pop. (1965 est.) 194,000.

Jedi, Asian tower similar to a STUPA, housing religious relics. Jedis are found throughout SE Asia, dating from any time between pre-Christian and medieval.

Jeep, small, rugged, four-wheel-drive vehicle used by the US Army in WWII as a light general-purpose (GP) form of transport. See also p. 502.

Jeeps, Richard Eric Gantrey (Dickie) (1931-), British rugby union player. A solid scrum-half with a quick service and accurate kick to touch, he won 24 caps (1956-62) as a member of the Northampton club and toured South Africa (1955-1962) and New Zealand (1959) with the British Lions.

Jeffries, Richard (1848-87), British novelist. A naturalist, he wrote several books about the English countryside, including *Wild Life in a Southern County* (1879). Mystical philosophy figures largely in *Wood Magic* (2 vols, 1881), *Bevis* (3 vols, 1882) and *Amoryllis at the Fair* (1887). His autobiography is entitled *Story of My Heart* (1883).

Jefferson, Thomas (1743-1826), third president of the USA (1801-09) and one of the authors of the American Declaration of Independence. A scholar and philosopher, he believed in agrarian democracy. In 1769 he was elected to the Virginia House of Burgesses and, six years later, represented the state at the Second Continental Congress. After independence he served as governor of Virginia, represented the USA in Europe, and became the first US secretary of state in 1789. The main achievements of his presidency were the LOUISIANA PURCHASE, the avoidance of US involvement in the NAPOLEONIC WARS, and the abolition of the slave trade. See also pp. 1466, 1540, 1547, 1626.

Jeffreys, George, 1st Baron Jeffreys (c. 1648-89), English judge. He was made Lord Chief Justice in 1683 and Lord Chancellor in 1685. Notorious as a hanging judge, he presided over the assizes which tried participants in MONMOUTH'S REBELLION against JAMES II. For the number of executions he meted out they gained the name BLOODY ASSIZES. After James' overthrow (1688), he was imprisoned in the Tower of London, where he died. See also p. 1427.

Jeffreys, George (d. 1685), English composer. A member of the Chapel Royal and organist to Charles I at Oxford (1643) during the Civil War, he wrote anthems, motets and other church music, as well as part-songs and music for masques and plays. The library of the Royal College of Music, London, has a collection of his works.

Jeffreys, Sir Harold (1891-), British astronomer and geophysicist. He ascertained that the four outer planets, JUPITER, SATURN, URANUS and NEPTUNE, are intensely cold and investigated the origin of the solar system. He was the first to suggest that the Earth's core is liquid.

Jeffries, James Jackson (1875-1953), US boxer who reigned unbeaten as world heavyweight champion from 1899 until he retired in 1905.

Jeffries, John (1744-1819), British physicist, b. USA. He lived in England after the War of American Independence and conducted experiments on balloons. With the Frenchman Jean-Pierre BLANCHARD, he was the first man to cross the English Channel in a balloon.

Jehovah, misnomer for the name of God. It developed from YHWH (or JHVH or YHVH), the scriptural name of the God of the ancient Israelites as written in Hebrew, whose alphabet at that time contained no vowel symbols. To this framework during the Middle Ages were added the vowels from the Hebrew *adonai*, 'my lord', creating the alternative form

Javelin, apart from modifications to the tip, the weapon altered little over the years

Jay has many nicknames, especially in the USA, because of its mischievous nature

Jeep has a four cylinder engine, carries up to six people and can travel at 105km/h

Jehovah From then, both Jehovah and Yahweh came to be used in the Jewish and the Christian religions. Today, Yahweh is recognized as the basic form.

Jehovah's Witnesses, religious sect founded in the 1870s by Charles Taze Russell (1852-1916) of Pittsburgh, Pennsylvania. The sect believes in the imminent end of the world for all except its own members, who are to be the sole inheritors of the kingdom of God. Their name is derived from a passage in the Old Testament: "Ye are my witnesses," saith Jehovah (Isaiah 43 10). They hold to the gradually-developed theory of a "theocratic kingdom", membership of which is not to be reconciled with allegiance to any country. In their publication *The Watchtower* they carry out vigorous propaganda against all civil authority and all institutional religion. They deny most of the fundamental Christian doctrines. The sect has now become a worldwide body and is active in preaching and door-to-door missionary work. It is registered in Britain under the name "The Watch Tower Bible and Tract Society".

Jejunum, portion of the small intestine, about 25-30cm (10-12in) long, into which food passes from the DUODENUM. The jejunum precedes the ILEUM, which at the lower end opens into the large intestine. It is generally found empty (jejune) after death. Length 2.4-2.7m (8-9ft). See also p 160.

Jekyll and Hyde (1886), two main characters from *The Strange Case of Dr Jekyll and Mr Hyde* by ROBERT LOUIS STEVENSON. This novel, which greatly widened Stevenson's readership, is both a thriller and a bitter moral allegory. Dr Jekyll, a mild man, seeks an understanding of man's baser instincts and invents a potion to release the "beast within". In a dramatic climax, the doctor's crude alter-ego, Mr Hyde, surfaces, unbidden and uncontrollable.

Jellicoe, John Rushworth Jellicoe, 1st Earl (1859-1935), British admiral and gunnery expert. For the first two years of WWI (1914-16), as Commander-in-Chief of the Grand Fleet, he blockaded German naval forces. When the German fleet finally put to sea, Jellicoe skilfully placed his fleet at Jutland between the enemy and its bases. Poor visibility, however, and British mistakes in relaying German signals denied the Grand Fleet an absolute victory. See also JUTLAND BATTLE.

Jellyfish, marine COELENTERATE found in coastal waters and characterized by tentacles with stinging cells. The adult form is the MEDUSA. It has a bell-shaped body with a thick layer of jellylike substance between two body cell layers, many tentacles and four mouth lobes surrounding the gut opening. The common *Aurelia* is transparent with four violet circles near its centre. Diameter 7.5-30 cm (3in-12in). Class Scyphozoa. See pp 2, 14 15, 340.

Jena, Battle of (14 Oct 1806), victory of NAPOLEON over the Prussian army led by the Prince of Hohenlohe-Ingelfingen. In conjunction with the simultaneous French victory at ALBERTSTADT, it led to the French capture of Berlin and the collapse of Prussia. See also p 1552.

Jenkins, Roy Harris (1920-), British politician. Formerly a member of the Labour Party, he first entered Parliament in 1948. As Home Secretary (1965-67) he sponsored stronger laws against racial discrimination and liberalized laws on ABORTION and HOMOSEXUAL activities. In 1976 he left Parliament on his appointment for a four-year term as President of the European Commission at the EEC in Brussels. Increasingly disenchanted with the power of the left-wing within the Labour Party, he founded, with three colleagues, the Social Democratic Party (SDP) in 1981.

Jenkins's Ear, War of (1739-41), war between England and Spain arising out of long-term mercantile grievances. War was sparked off by the English outcry at reports of the boarding of Robert Jenkins's ship at Havana in 1731 by a Spanish official, who cut off one of the English captain's ears. See also p 1462.

Jenner, Edward (1749-1823), British

physician who developed VACCINATION. Aware that cowpox, a minor disease, seemed to protect people from smallpox, Jenner in 1796 inoculated a healthy boy with cowpox from the sores of an infected dairymaid. The boy developed the disease but six weeks later, when inoculated with smallpox, was found to be immune to that dreaded infection. This finding established the principle of vaccination as an invaluable technique in medicine. See also pp 1088, 1477.

Jenner, Henry (1848-1934), British writer. He initiated the 20th-century revival of the Cornish language and literature, speaking in Cornish in 1903 at a congress in Brittany. He also wrote a *Handbook of the Cornish Language* (1904), a work which rationalizes the language's grammar and spelling.

Jennings, Sarah. See MARI BOROUGHE SARAH CHURCHILL DUKES OF.

Jensen, Johannes Vilhelm (1873-1950), Danish novelist, poet and essayist. His works include travel tales, the historical novel *The Fall of the King* (1901), and *Myths* (1906-44). His famous series of six novels, *The Long Journey* (1908-22), follows the development of the Nordic race from before the Ice Age to the time of Columbus. He was awarded the 1944 Nobel Prize in literature.

Jerash, ancient city of the Decapolis, the league of 10 cities of the River Jordan. It is in present-day Jordan. It was rebuilt by the Romans in the 1st century AD and furnished for the next two centuries. It is one of the best-preserved Palestinian cities of Roman times. Many temples and columns still stand.

Jerbil. See GERBIL.

Jerboa, nocturnal burrowing rodent of Eurasian and African deserts, with long hindlegs developed for jumping. It has a satiny, sand-coloured body and a long tail. It is herbivorous and does not usually drink water. Length to 15cm (5.9in) excluding the tail. Family Dipodidae. See also pp 318, 319.

Jeremiah (c 646-c 580 BC), Hebrew prophet whose life and teachings are recorded in the Old Testament book of his name. When Babylon invaded Judah (587), Jeremiah saw it as a punishment from God and urged the inhabitants to sue for peace and to trust in God, teaching that they could preserve their worship even in disaster and exile. This attitude was largely construed as treason and ignored. Babylon duly captured Jerusalem and deported most of the Israelites, leaving only a garrison and a skeleton population of trusted individuals, including Jeremiah, who could now see that the only hope for his religion lay with the exiled majority's strength of faith - which he himself had helped to inspire. See also pp 1190-1191.

Jeremy, the Epistle of, name given to the sixth and last chapter of the Book of BARUCH, placed in the APOCRYPHA in the Authorized Version of the Bible. It is a warning against idolatry.

Jerez de la Frontera, Spanish town in Cadiz province, formerly called Xeres and, even earlier, Ceret. It is best known for sherry wine, to which it has given its name. The numerous wine lodges (bodegas) are a feature of the town.

Jericho, ancient city of Palestine, in the Jordan valley, N of the Dead Sea. Captured by Joshua from the Canaanites in 1550 BC, the city was rebuilt by Herod in the first century BC, S of the old site. In 1950 excavations revealed magnificent Roman remains at the site of Herod's city. Its archaeological importance is further enhanced because it is one of the earliest known continuous settlements, dating from the early NEOLITHIC period.

Jeroboam, name of two kings of Israel, for whose reigns the Bible constitutes the main source. Jeroboam I (10th century BC) led an unsuccessful revolt against SOLOMON, and later established the secessionist kingdom of north Israel, consisting of all Israel except Judah and part of the land of BENJAMIN. Jeroboam II (783-741) succeeded Jehoash and ruled during a period of relative peace.

Jerome, Saint (c 347-420), Eusebius Hieronymus, biblical scholar. After a

literary education he spent two years of intense study as a hermit in the desert of Chalcis. Later he went to Rome and became secretary to Pope Damasus I. The pope commissioned Jerome to prepare a standard text of the gospels for use by Latin-speaking Christians. Jerome revised the gospels from the Old Latin and later made a new translation of the Psalms and the Old Testament from Greek and Hebrew sources. His work was the basis for what later became known as the Vulgate, which remained the authorized Latin text of the Bible until 1977, when it was superseded by a new version.

Jerome, Jerome Klapka (1859-1927), British humorist whose reputation now rests solely on his best-seller *Three Men in a Boat* (1889) and its successor *Three Men on the Bummel* (1900). His contemporaries knew him as an actor and dramatist whose most successful play, *The Passing of the Third Floor Back* (1908), describes how the inmates of a Bloomsbury boarding house are intimidated by a strange lodger resembling Christ.

Jersey, largest of the Channel Islands of the United Kingdom, lying about 16km (10 miles) off the W coast of France. It is administered as a bailiwick. The official language is French although English is spoken everywhere. The mild, sunny climate makes dairy and fruit farming the basis of the economy. Tourism is also important. The capital is St Helier. Area 117sq km (45sq miles). Pop. 72,700. See also p 2006.

Jersey, breed of small brown DAIRY CATTLE that originated in France and was developed on the island of Jersey in the Channel Isles. The butterfat content (5.2%) of the milk from Jerseys is the highest of all.

Jerusalem, capital city of Israel, 56km (35 miles) SE of Tel Aviv. It is a sacred city of the Christian, Jewish and Muslim faiths. Originally a Jebusite stronghold (2000-1500 BC), the city was captured by King DAVID after 1000 BC. Destroyed by NEBUCHADNEZZAR c 587 BC, it was rebuilt by HEROD c 15 BC, but again destroyed by TITUS AD 70. The Roman colony of Aelia Capitolina was established and Jews were forbidden within the city limits until the fifth century. Christian control was ended by the Persians in AD 614. It was conquered in 1071 by the SELJUK Turks, whose mistreatment of Christians precipitated the CRUSADES as a result of which the kingdom of Jerusalem 1099-1187 was formed. It was held by the OTTOMAN Turks (1444-1917, when it became the British mandated territory of Palestine. It was divided in 1948 between Jordan and Israel, the latter taking complete control of the city in 1967. An administrative and cultural centre, the city's industries include tourism and diamond cutting. Pop. (1979) 438,200. See also pp 1190-1191, 1310-1311, 1782-1783.

Jerusalem, Kingdom of, feudal state created in Palestine and Syria by the Crusaders. After Jerusalem fell in the First Crusade (1099), GODFREY OF BLOULIN ruled even though the royal title was held by his brother BALDWIN I. The elected kings also oversaw the Latin counties of Antioch, Edessa and Tripoli, although local lords fought among themselves, as well as for their masters against the MAMLUKES of Egypt, the SELJUK Turks and the Byzantine emperors. Military orders such as the KNIGHT TEMPLARS gradually undermined royal authority. SALADIN captured Jerusalem in 1187, and the kingdom essentially ended when Jerusalem was sacked by the Turks (1244). See also pp 130-131.

Jerusalem (1804), prophetic poem by William Blake in which he explains his theory of the redeeming imagination: "the world of imagination is the world of eternity" where man goes "after the death of the vegetated body".

Jerusalem artichoke. See ARTICHOKE.

Jervis, John, 1st Earl of St Vincent (1735-1823), British naval officer. He held important commands during the French Revolutionary Wars and won a spectacular victory over a larger Spanish fleet off Cape St Vincent in 1797. As first Lord of the Admiralty (1801-04) he im-

Jellicoe: "I was sad that he was the only man who could lose WWI in an afternoon."

Jellyfish: some stinging fish are not harmed by their stinging and hide among the tentacles.

Jerboa: when frightened, escape by jumping, using its tails to balance its body.

Jerusalem's Golden Gate, rebuilt by Justinian with the Mount of Olives behind.

Jester, an early 15th-century impression of a jester entertaining his king

Jesuits have included a great many illustrious explorers, scientists and writers

Jesus Christ, Fra Bartolommeo's representation inspired many later portrayals

Jew's harp, similar instruments have been found throughout most parts of the world

tiated many basic and necessary reforms. **Jervis Bay**, inlet of the S Pacific Ocean in New South Wales, Australia, approx 145km (90 miles) ssw of Sydney and the same distance ene of Canberra. It is the port of the landlocked Australian Capital Territory.

Jessner, Leopold (1878-1945) German theatrical producer and director. His association with the German expressionist theatre in the 1920s brought him world-wide fame. His productions included *Hamlet* in modern dress and *Wiederkehr des Marquis von Keith*. Nazism forced his emigration to Hollywood in 1933 where he worked anonymously in the film industry.

Jester, professional court fool retained by medieval rulers and nobles. Often deformed and invariably of small stature, jesters were noted for their quick wit and motley costume which included a cap with bells or asses' ears.

Jesuit Martyrs (1648-49), five Jesuits martyred in Canada. The Jesuits began missionary work among the Indians in 1600. Under the leadership of Isaac Jogues and Jean de Brébeuf, they worked to convert the Hurons and Iroquois to Roman Catholicism. Brébeuf, Antoine Daniel, Gabriel Lallemant, Charles Garnier and Noël Chabanel were killed by the superstitious Iroquois after a series of epidemics in 1648. They were canonized by the Roman Catholic Church in 1930.

Jesuits, officially the Society of Jesus, a Roman Catholic religious order founded by St Ignatius of Loyola in 1540. They played a significant role in the counter-reformation. The Jesuits were often the first Christian missionaries in the New World and in parts of Asia and Africa. They antagonized many European rulers because they gave allegiance only to their general in Rome and to the pope. In 1773 Pope Clement XIV abolished the order under pressure from the kings of France, Spain and Portugal but it continued to exist in Russia. The order was re-established in 1814. Jesuits have distinguished themselves in education, scholarship and missionary work.

Jesus Christ (c 4 BC - c AD 30) the inspiration for Christianity and to Christians the Son of God. 'Jesus' is a Greek form of the Hebrew name *Joshua*, 'Christ' comes from the Greek translation of the Hebrew *messiah*, the 'anointed' whose coming had long been prophesied as the deliverance of the people of Israel. Present knowledge of Jesus's life is based mostly on the biblical gospels of MATTHEW, MARK and LUKE, of which Mark is the earliest and Luke the most detailed. Although he (before Christ) and AD (*anno domini* in the year of the Lord) dates are timed from the birth of Christ, Jesus was probably born in 4 BC - the calendar error was made by Christians of the 6th century. It was not at the end of the reign of HEROD THE GREAT and was just at the time that the Romans had ordered a census of all the empire's inhabitants at their places of birth. For the census Jesus's mother MARY had to travel with her husband Joseph to Bethlehem in Judaea where Jesus was also born in a stable. He probably grew up in Galilee.

In about AD 26 or 27 JOHN THE BAPTIST began preaching his message of repentance and baptism in the area. Jesus was one of many baptized in the River Jordan by John, who may have been a relation. Thereafter Jesus began His own ministry, attracting large numbers and gathering many followers as He wandered throughout the country. He also taught - through spiritual insights, parables and even miracles - a special group of 12 of His closest disciples who were later to be sent out as the nucleus of the spread of the gospel and to be called APOSTLES. His teaching was to 'love God and love one's neighbour' (comprising all fellow men) and that salvation depended on doing what was patently God's will rather than merely adhering to the letter and the contemporary interpretation of the Jewish Law. This tenet did not find approval with the hierarchy of the Jewish religion particularly those of the TEMPLE in Jerusalem who themselves were the butt of some of Jesus's ridicule.

In about AD 29 or 30 Jesus and His disciples went up to Jerusalem to celebrate the Jewish feast of the Passover. It was a dangerous place for Him, for although the common people loved Him, the chief priests and elders of the Jewish faith were now trying to devise means of silencing Him in an exemplary manner. A few days later Jesus gathered His disciples for a LAST SUPPER, at which He instituted the Eucharist. The next morning, after a night of prayer, He was arrested by agents of the priests and denounced before the Roman governor, Pontius PILATE, on a charge of sedition that He had claimed to be a king of the Jews. Roman soldiers crucified Jesus on a hill outside the city wall. After His death His body was buried in a sealed rock tomb. Two days later He rose from the dead and appeared several times to His disciples and to other people. Forty days after His resurrection He ascended into heaven, leaving His disciples the promise that His spirit would give them the courage and strength to go on proclaiming His message to all the world.

Christians believe that Christ is at the same time truly man and truly God, and that He came into the world to reconcile sinful man to God by His sacrificial death. See also pp 1244-1245.

Jesus Maria, small town in Argentina, site of one of the first Jesuit missions to South America, established in 1618. The town has a fine 18th-century church.

Jet, dense variety of lignite coal formed from wood buried on the sea floor. It is often polished and used in jewellery. See also p 260.

JET, Joint European Torus Research Project, nuclear fusion power research centre set up in 1977 at Culham in England. Scientists, sponsored by the EEC, hope to develop a machine which will heat plasmas to immense temperatures within a magnetic bottle and thereby fuse atoms of hydrogen with the subsequent release of nearly limitless energy. The TORUSAK fusion machine developed by the USSR has shown the small-scale feasibility of this technology.

Jet engine, type of engine that relies for its propulsive power on the thrust provided by the expansion of exhaust gases, also called a gas turbine. Air is taken in at the front, compressed and kerosene vapour added and ignited. The simplest jet engine, the ram jet, uses this principle alone, but can operate only at speeds which force enough air into it. Turbojets and turbofans have a compressor (for the induction of air), driven by a turbine. See also p 421.

Jet propulsion, movement of a body by way of thrust provided by the backwards discharge of a jet of fluid (gas or liquid), as in jet engines or rockets. In jet engines the ejected gas consists of a mixture of air taken from outside and exhaust gases resulting from internal combustion. See also ENGINE, pp 421, 427.

Jet streams, narrow, swiftly moving winds between slower currents at altitudes of 10 to 15 km (6 to 10 miles) in the upper troposphere or lower stratosphere, principally in the zone of prevailing westerlies. High-flying aircraft may be helped or hindered by the jet stream and the rapid wind directions around it. See also ATMOSPHERE.

Jevons, William Stanley (1835-82) British economist. His major contribution to economics was his theory of utility, he held and demonstrated in mathematical terms, that value was determined by utility. His most important book is *The Theory of Political Economy* (1871).

Jewel, John (1522-74), English religious leader. He spent some time abroad during the reign of Mary I but returned to England on the accession of Elizabeth I and was made Bishop of Salisbury. His defence of the Church of England against Rome, *Apologia pro Ecclesia Anglicana* (1562), formed the groundwork for all subsequent controversy about the positions of the English and Roman Churches. **Jewson, Norman** (1926-) Canadian film maker trained in television whose

films include *The Cincinnati Kid* (1965), *The Russians Are Coming* (1966), *The Thomas Crown Affair* (1968) and *Fiddler on the Roof* (1971). His most distinguished film is *In the Heat of the Night* (1967), which won three Oscars.

Jews, people who originated in the ancient Middle East, and lived in kingdoms in Palestine for centuries. After the destruction of Jerusalem by the Romans (AD 70) they were dispersed over the world, sometimes as ghetto minorities, sometimes as citizens (see DIASPORA). In 1948 they established the national state of Israel. Millions more live in other countries. Jews differ among themselves in physical appearance, language and to some extent in customs, so there is no simple definition of Jewishness. Their sense of identity is found in religious beliefs and traditions going back through the Hebrew prophets to the time of MOSES and ABRAHAM. See also ISRAELISM.

Jew's harp, also called jaw's harp, primitive musical instrument. It is a metal frame which the player holds to his mouth with a flexible metal strip vibrated by his finger. The player changes tone and pitch by altering the shape of his mouth.

Jes-Blake, Sophia Louisa (1840-1912) British physician who fought vigorously and successfully to get legislation through Parliament enabling women to qualify as doctors and to practise medicine and surgery. She founded a medical school for women in London in 1873 and another in Edinburgh in 1886.

Jezebel (died c 843 BC) in the Bible Phoenician princess who became wife of AHAZ, King of Israel. A haughty foreigner who introduced the worship and priesthood of BAAL, she was disliked intensely by religious Israelites, she clashed most severely with the prophet EZEKIEL, who foretold her death at the hand of Jehu the usurper of her son Jehoram's throne.

Jhabvala, Ruth Prawer (1927-) British writer, b Germany. Her first novel was *To Whom She Will* (1955). In 1973 she published *A New Dominion: Heat and Dust* (1975) won the Booker Prize.

Jhelum, river in NW India and Pakistan and one of the Five Rivers of the Punjab. It rises in the Himalayas in NW India, flows NW then SW into Pakistan at the W foot of the Pir Panjal Range and continues S and W to join the Chenab W of Jhang. Length approx 725 km (450 miles).

Jidda (Jedda or Jeddah), city in Hajaz, W Saudi Arabia, on the Red Sea, 74 km (46 miles) W of Mecca, one of the major ports of Saudi Arabia. The port for Mecca. Jidda receives many pilgrims. Pop. (1974 est.) 300,000.

Jig, peasant festival dance in 6/8 time familiar throughout western Europe. It achieved popularity in the 16th century, especially in Scotland and Ireland, and a still included among the traditional dances of those countries. Usually a dance for couples, it may be accompanied by the bagpipes or fiddle.

Jig-saw, mechanical saw used for cutting shapes in thin materials. It has a short, narrow blade that moves rapidly up and down. The jig-saw puzzle derives its name from the saw used to make it.

Jihad, or Jehad, religious war of Muslims against non-believers. Established in the KORAN as a divine institution, such warfare is a sacred religious duty undertaken especially for the purpose of advancing Islam and protecting Muslims from evil. There are four ways in which Muslims may fulfil their Jihad duty: by the heart (by the tongue, by the hand, and by the sword). Jews and Christians, called by Mohammed *ahl al kitab*, or people of the book (having a written religious belief) were given special consideration: a choice of conversion or submission to Islamic rule before the declaration of Jihad.

Jimenez, Juan Raman (1881-1958) Spanish poet. He lived in Spain until 1936, but then went to the USA and later to Puerto Rico. His lyrical work gave way to a simple free verse style. His best known prose work is *Platero and I* (1917). He was awarded the 1956 Nobel Prize in literature. **Jimenez de Quesada, Gonzalo** (c 1495

1579). Spanish soldier and adventurer. When chief magistrate of Santa Marta he was sent to Colombia where he discovered the source of the Magdalena River, conquered the Chiriguano Indians and founded Bogotá (1538).

Junco weed. See THORN APPLE.

Jungism, chauvinistic and aggressive nationalism. The term originated in the Russo-Turkish War (1877-78) when British supporters of moves to restrain Russia were called Jungists, after a line of a song popular at the time which ran, 'We don't want to fight but by jingo if we do we've got the ships, we've got the men, we've got the money too'.

Junja, second largest city in Uganda on the River Nile in the south of the country at an altitude of 1,140m (3,740ft). It was founded by the British in 1901 and its development as an industrial town resulted from the construction of the Owen Falls Dam in 1957. Industries include tobacco, steel, copper, textiles, grain milling and sugar. Pop. 52,000.

Junna (Djinn), in Arabian mythology, a supernatural spirit composed of air and fire; it may dwell in any inanimate object. Jinns have been variously portrayed as treacherous and vengeful, but it was said that mortals who knew the correct magical procedure could exploit them. The plural form, *jinni*, became Anglicized as *genie*.

Jinnah, Muhammad Ali (1876-1948), founder of Pakistan. He obtained a law degree in England and returned to practice in India. In 1906 he joined the Indian National Congress and became a keen advocate of Hindu-Muslim unity, but his views changed over the years and by 1945 he had come to believe that when independence was achieved, there must be a separate Muslim state to prevent the Hindu majority from dominating the entire subcontinent.

Jipcho, Ben (1933-), Kenyan middle-distance runner who set a world record in 1973 by running the 3,000m steeplechase in 8min 14.0sec.

Jitterbug, a livery dance popular in the 1940s and 1950s, usually performed to the syncopated rhythms of jazz. A very lively dance, it involved acrobatic twisting and whirling.

Jivaro, unlike South American Indian people of the Montana region on the slopes of the Andes. They grow crops for food as a supplement to wild fruits, fishing and game and live in large conical houses. The Jivaro were once noted for their practice of shrinking the heads of their victims. These shrunken heads, called *ushaitas*, were believed to give supernatural power to the taker. See also p. 1830.

Jive, popular dance which began in the USA in the mid 1950s as the dance of teenagers who loved the new rock and roll, beat of William Haley and Elvis Presley. It soon spread to Europe. The jive does not prescribe a specific footwork.

Joachim, Joseph (1831-1907), Austro-Hungarian violinist. He founded the Joachim Quartet (1869), which presented the conservative quartet repertory of the 19th century in brilliant interpretations. He composed chamber music for the violin concertos of Beethoven and Brahms.

Joan of Arc (c.1412-31), national heroine of France, canonized by the Roman Catholic Church, also known as Joan of Lorraine and the Maid of Orleans. A deeply religious peasant girl she claimed to hear heavenly voices and set out to save France during the Hundred Years War. In early 1429 wearing men's clothes, Joan and some French troops broke the long English siege of Orleans. She then drove the English from the Loire towns and defeated them at Patay. After this victory she persuaded the indecisive dauphin to proceed to Reims and be crowned. She attempted to liberate Paris but was unsuccessful. In early 1430 she was captured by the Burgundians, handed over to the English and burnt at the stake for witchcraft and heresy (1431). She was declared a saint in 1920. See also pp. 1337, 1337, 1338.

Joan of Kent (1328-85), English noblewoman, daughter of Edmund of Woodstock, youngest son of Edward I. Early in her life she gained renown for her charm, intelligence and beauty and in 1361 married Edward the Black Prince by whom she had two sons, Edward (1365-1370) and Richard (later Richard I).

Joh, Old Testament wisdom book that describes the crisis in the life of Job. The main theme of the book, which was probably written about 500 BC, is that suffering comes to good and bad people alike. God visits upon the wealthy and happy Job all kinds of deprivations and disease in order to test his faith. Convinced of his own innocence, Job rejects the view that suffering is the result of sin. In the end his faith is rewarded and his faith is justified.

Job's tears, leafy annual grass that grows in Asia and the USA. It is named after the shiny white tear-shaped beads that enclose its edible seeds. Height to 0.9m (3ft). Family: Poaceae, species: *Cyn. latyrma Jobi*.

Jocasta. See OEDIPUS.

Jockey Club, the governing body of flat and since 1964 National Hunt horse racing in Britain. It was formed in 1750 at a Pall Mall inn by influential gentlemen interested in the turf. Today through Weatherbys, who act as secretaries, it attends to the Rules of Racing, discipline, licences, fixtures and publication of the Racing Calendar. There are similar organizations in many other countries.

Jodl, Alfred (r. 1892-1946), German general and one-time chief of the Operations Staff of the German Armed Forces High Command. A brilliant soldier, he was nevertheless utterly subservient to Hitler and did nothing to restrain his military ambitions. In 1945 Jodl signed the unconditional surrender of Germany in Reims and after the Nuremberg trials he was hanged in 1946 for crimes against humanity during WWII.

Jodrell Bank, experimental station, part of the University of Manchester, England, and the location of one of the world's largest steerable radio telescopes, with a 26m (250ft) parabolic dish. The observatory, built under the supervision (1946-57) of Sir Bernard Lovell, also contains smaller radio telescopes. It is devoted to astronomy as well as to the observation and tracking of artificial satellites.

Joel, second of the 12 minor prophets of the Old Testament. The book of his name, written about 400 BC, falls into two main sections: part one tells how an invasion of locusts lays Judah waste; lamentation (the psalm) brings the promise of help from Yahweh; part two describes the Day of Yahweh, and his judgment on the nations.

Joffre, Joseph Jacques Césaire (1852-1931), French general. Joffre was Commander in Chief of the French Army at the outbreak of WWI (1914). Determined to advance at all costs and underestimating German strength, he was repulsed but halted the enemy's counterattack at the battle of the Marne (1914). Joffre was also responsible for the failure of the Anglo-French offensive in the Somme Valley (July-Nov. 1916) and resigned; he was made a Marshal of France.

Joffrey Ballet. See ROBERT JOFFREY BALLETS.

Jogjakarta, city in s Java, Indonesia, 382km (237 miles) wsw of Surabaya, at the foot of Mt Merapi. It served as the capital of a Dutch-controlled sultanate from 1755 and was the scene of a revolution led by Prince Diponegoro who protested against Dutch forced labour practices and exploitation (1825-30). A Javanese stronghold during the Indonesian Independence Movement of the 1940s, it was the temporary capital of Indonesia (1946-49). Industries include handicrafts, textiles and tanning. Pop. (1971) 340,000.

Jogues, Saint Isaac (1607-46), French Jesuit missionary and martyr. Ordained in 1636, he went to Canada and converted the Huron Indians to Roman Catholicism. The Iroquois captured him but he was rescued by the Dutch. He returned to missionary work in the Great Lakes region and was killed there by the Mohawks. He was canonized in 1930.

Johannesburg, city in the Republic of South Africa. It was founded in 1886 after the discovery of gold on the Witwatersrand. Today it is the country's largest and leading industrial and commercial city, and the administrative headquarters for the country's gold mining companies. Industries include industrial chemicals, textiles and leather products. Pop. 1,498,700.

John, Saint, one of the 12 apostles of Jesus, the son of Zebedee and brother of the apostle St James the Greater. He is generally believed to be the author of the fourth gospel, and is commonly considered also to have written the three epistles under his name in the New Testament. Together with his brother and St Peter, he belonged to the inner group of disciples who witnessed Jesus's TRANSFIGURATION and His agony in GETHSEMANE. John is also traditionally identified with the anonymous disciple referred to in the fourth gospel as the one 'whom Jesus loved', both at the Last Supper and at the crucifixion, where Jesus left the care of His mother to John. Another tradition states that John miraculously escaped martyrdom and died at an old age at Ephesus. Feast day: 27 December.

John, First, Second and Third Epistles of, three New Testament letters often attributed to the Apostle John. They describe the need and benefits of faith, warn against false teachers and call for Church unity.

John, the Gospel According to Saint, fourth and last gospel of the New Testament, believed to have been written by the Apostle John. Although in some ways it supplements the preceding three synoptic gospels devoted to Jesus's life and work in Galilee, it differs greatly from them in that it uses no parables, stresses the king's nature of Jesus, places a unique emphasis on the power of the Holy Spirit and suggests that Jesus not only fulfilled the Old Jewish liturgy but by doing so brought it to an end. More concerned with the spiritual meaning of events than with historical facts or even historical sequence, it was for centuries identified as the work of the author of the Book of Revelation (Apocalypse).

John, the name of 21 popes and two anti-popes. John I (r. 523-526) was sent by the Ostrogothic king Theodoric to Constantinople to gain consent for the toleration of the Arian Christians in northern Italy. John gained imperial recognition of the superiority of the Roman bishop over the patriarch of Constantinople but failed in his original purpose. On his return, Theodoric threw him into prison, where he died a few days later. John VIII (r. 872-875) first pope to be assassinated. As pope, he built fortifications to protect Rome, founded the papal navy and fought tirelessly against the Saracens, although to little purpose since his forces were too weak and help was not forthcoming from Constantinople. He was compelled by the times he lived in to assume an almost entirely political role. John XII (r. 955-64) was only about 18 on his election. He and his court were notorious for depravity and sacrilege and he was deposed in 963. He returned to Rome and regained power but died the following year. John XXI (r. 1276-77) was a student of medicine and a philosopher of some repute and the first Portuguese pope. Essentially a man of learning, he nevertheless attempted to organize a crusade against the Saracens in 1276. His *Summa logicae* became famous as a textbook on logic. John XXII (r. 1316-34), one of the Avignon popes, condemned (1323) the doctrine of absolute poverty as heretical. His dislike of FRANCISCANS alienated many scholars of his time, but he remained the final arbiter in the affairs of the empire and in 1324 excommunicated a king of Bavaria for having himself crowned without papal sanction. During his pontificate, John XXII organized the Curia in the form which, with minor changes, it is found today. John XXIII (1881-1963) became pope in 1958. Before his election he had served as director of the Society for Propagation of the Faith, had been papal nuncio

Joan of Arc, the most glorious of 15th-century heroines, led her army to victory in the Hundred Years War.

Jodrell Bank's radio telescope began its work in tracking artificial satellites.

Johannesburg, von Brandts Square named after the first mining commissioner.

Saint John as depicted in the Book of Revelation, a 15th-century illuminated manuscript in Latin.

King John, whose death prevented his army from certain victory over the barons.

Elton John singing with Kiki Dee in 1970 at the Central Park, New York.

John Bull, a symbol of the English people, was depicted in 19th-century caricatures.

John O'Groats, supposed to be the northernmost part of the Scottish mainland.

in France and from 1953 patriarch of Venice. John's place in church history rests on his courage and foresight in calling the Second Vatican Council, which met in 1962 to provide an *aggiornamento* (renewal or updating) of Roman Catholic religious life and doctrine. His reign was also notable for the emphasis he put on questions of peace and justice. John Paul II, who became Pope in 1978, was born a Pole, the first native of an Iron Curtain country to head the Roman Catholic church. See also p 1790.

John, the name of eight BYZANTINE emperors. John I Tzimiskes (925-76; r 969-76), a former general, defeated both the Bulgarians and the Russians in the Balkans and consolidated Byzantine power in the Near East. John II Comnenus (1108-1143; r 1118-43) gained further military successes in the Balkans and Asia Minor during his rule. John III Dukas Vatatzes (1143-1251; r 1222-51) ruled from Nicaea because Constantinople had been taken by the Crusaders in 1204. He failed to recapture it after a siege in 1235. John IV Lascaris (1250-1300; r 1258-61) was a minor throughout his reign and was deposed by Michael Palaiologos, the restorer of Byzantine power, who had him blinded and imprisoned. John V Palaiologos (1332-91; r 1341-91), another boy emperor, had a disturbed reign during which he was imprisoned in Venice as a debtor (1369) and he was deposed in 1376, although he regained his throne. From 1347 to 1354 John V was co-emperor with John VI Cantuzenus (1292-1383) who, in order to resist the Serbs allied himself with the Turks, with whose help he regained Constantinople in 1347. John VII Palaiologos (1360-1410) reigned briefly in 1390 and was regent (1399-1402) for his uncle, Manuel II, during a time of constant danger from the Turks. John VIII Palaiologos (1390-1448; r 1425-38) made the last desperate attempt to defend the empire against the Turks. In order to get aid from the West, he achieved in 1439 the union of the Greek and Roman churches.

John (c 1167-1216), King of England, youngest son of Henry II. During his father's absence on a crusade, John did not seize control in 1193 and on the king's return, had to forfeit all his lands. But Richard soon relented and on his death in 1199 was succeeded by John. His probable murder of his nephew Arthur in 1203, the loss of vast territories in France (1204-05) and heavy taxation to finance abortive attempts to regain them made him extremely unpopular. He was forced to submit to the pope after he had been excommunicated. At Runnymede in 1215 he was compelled to accede to the demands of his barons and after his death the draft of *Magna Carta* (which was issued during which John died, possibly poisoned). See also pp 1302, 1303, 1303-1312, 1320.

John, the name of two kings of France. John I (1316), the posthumous son of Louis X, lived only five days. John II, called 'the Good' (1319-64) succeeded his father Philip VI in 1350. At the battle of Poitiers (1356) during the Hundred Years War, he was captured by the English and taken to London. John was later released in exchange for hostages and an enormous ransom. When one of the hostages escaped, John, chivalrous to the last, voluntarily returned to London where he died. See also pp 1337-34, 1346.

John, the name of two kings of Hungary. John I (1487-1540; r 1526-40), or János Zápolya, was governor of Transylvania (1511-26) and elected king by electors of Tokaj and Szekesfehervar. He is a rival to the Hapsburg claimant, Ferdinand I, the Holy Roman emperor. The ensuing civil war ended when John agreed that Ferdinand would determine the succession. Instead, one was elected by the Turks, John I arranged for the succession of his son, John II, who was to rule as a vassal of the Sultan.

John, the name of three kings of Poland. John I, or John Albert (1459-1511; r 1492-1501). During his reign, which

saw the development of parliamentary government, the nobility and gentry acquired, in return for subsidies, extensive privileges at the expense of the peasants. John I unsuccessfully invaded Moldavia, which incurred a counter attack by the Turks. John II (1609-72; r 1648-68). He became a *testis* in 1646 but resigned after a year. Upon becoming king, he was almost immediately (1648) faced with rebellion by the Cossacks and their allies, the Tatars. Wars with Russia and Sweden occupied him from 1654-67, during which time the Swedes occupied much of Poland and John was at one time forced to flee to Silesia. Threatened with rebellion by the diet, he abdicated (1668) and retired to the abbey of Saint Germain-des-Près, France. John III (John Sobieski) (1629-96; r 1674-96), commander of the Polish army. He successfully relieved the Turkish siege of Vienna in 1683. By decisively defeating the Turkish armies three times the size of his own, he saved Europe from Muslim conquest and was acclaimed the hero of Christendom. He was a notable patron of letters and the arts but the last years of his rule were marred by a decline in his prestige as a result of the country's political stagnation. His death marked the virtual end of Polish independence; foreigners occupied the throne for the next 66 years.

John, the name of six kings of Portugal, the first three of the Aviz family, the others of the Braganza. John I, or John the Great (1357-1433; r 1385-1433), was the illegitimate son of Pedro I. He forced the King of Castile to raise the siege of Lisbon and leave Portugal, later he defeated the Spaniards several times on their own territory and compelled them to agree to a long term peace treaty. John II (1455-95; r 1481-95) was a great patron of navigators and explorers and Portugal's great empire had its beginnings during his reign. He was succeeded by a brother in law, Manuel I. John III (1502-57; r 1521-57) was a deeply religious man. During his reign he introduced the Protestantism into Portugal (1536). Brazil was colonized and the empire reached its greatest extent. He was succeeded by his grandson, Sebastian. John IV (1604-56; r 1640-56) founded the Braganza dynasty and ruled during a period of turmoil. He ascended the throne following a successful revolution against Spanish domination and reconquered Brazil, the coast of which had been seized by the Dutch. John V (1689-1750; r 1706-50) inherited Portuguese involvement in the War of the Spanish Succession and suffered military defeats at their hands. He is best remembered for his architectural improvements in Lisbon, made possible by immense riches from Brazil. John VI (1767-1826; r 1816-26) was embroiled during his reign (he was regent from 1799 and effective ruler from 1792) in the upheavals of the Napoleonic wars. In 1807 when the French occupied Lisbon, he was forced to flee to Brazil. He returned in 1821 but was obliged to accept a new, more democratic constitution. In 1825 Brazil became independent.

John III (1537-92), King of Sweden (1568-92), son of Gustavus VASA. A theologian, from 1577 he sought (without success) to establish a synthesis of Catholicism and Lutheranism in Sweden and himself became a Catholic in 1578. He sought to control Russian trade routes.

John, Augustus Edwin (1878-1961). British portrait and landscape painter who gained early recognition through his superb draughtsmanship. Always an ardent opponent of academism, he joined the NEW ENGLISH ART CLUB in 1901. Although influenced by the Old Masters and by early impressionism, his high-toned colour and boldness of drawing were very much his own. His works include *Galway* (1916) and the brilliant portraits of his wife *Dorothy* and of *Madame Sigg* (c 1923). Tate and Bernard Shaw (c 1914).

John, Barry (1945-). Welsh rugby union player. A fly half of elusive genius and a skilful goalkicker, he scored a record 90 points for Wales in 25 matches (1966-72) and toured South Africa

(1968) and New Zealand (1971) with the British Lions, scoring a record 180 points in New Zealand.

John, Eric (1947-). British rock singer and pianist, b. Reginald Dwight. He began his musical career in 1964 and has since sold millions of records throughout the world. He composes his own music (with lyrics by Bernie Taupin). His records include *John John* (1970), *Country* (1971), *Rock Road* (1973), *Rock of the Westies* (1975) and *Blue Moves* (1976).

John, Gwendolen Mary (1876-1939). British painter. The sister of Augustus John, she is primarily known for her portraits and interiors. Examples of her subtlety in characterization and in tonal relationships include *Self Portrait* (c 1900) and *Portrait of a Nun* (c 1920-30).

John Bull, symbolic representation of the typical Englishman and by extension, of Britain itself. The name became popular after the appearance of the *History of John Bull* (1712) by Dr John Arbuthnot. It advocated a policy of peace with France.

John Chrysostom, Saint (c 350-407), brilliant preacher and greatest of the Greek Church Fathers. In 398 he was made Bishop of Constantinople.

John Dory. See *Dory*.

John of Austria, also called Don John (1547-78). Spanish prince and military leader, illegitimate son of Emperor Charles V and half brother of Philip II of Spain. In 1571, as head of the naval forces of the Holy League formed by Pope Pius V, Spain and Venice, he defeated the Turks in the naval Battle of Lepanto. He took Tunis from the Turks in 1573.

John of Damascus, Saint (c 675-c 749), theologian and doctor of the Church. He was born in Syria and became a Christian priest in the monastery at Mar Saba near Jerusalem. There he wrote hymns and treatises on theology, notably *The Fountain of Wisdom* dealing with philosophy, sciences and the Orthodox faith. Feast day 4 December.

John of Gaunt (1340-99), fourth son of Edward III of England and Duke of Lancaster. His name comes from the Middle English *gaunt* for 'cheek', his birthplace. He led the English army against the French from 1372 to 1374. He was the greatest of medieval 'overmighty' subjects and for a brief period in the mid 1370s was the most powerful man in the kingdom. The main line was descended from him and Catherine Swynford, his third wife. See also pp 1313, 1342, 1348-1349.

John of Salisbury (c 1115-80), English churchman and scholar. He was secretary to the abbot and secretary to St Thomas Becket. His most important works were *Polycricon* (1159), a treatise on government, and the *Metaphysic* (1159).

John of the Cross, Saint (1542-91), Spanish mystic, poet and doctor of the Roman Catholic Church. He was a monk and then a priest in the Carmelite order, which he tried to reform, becoming co-founder of the Discalced Carmelites. His endeavours aroused opposition and he was deprived of his positions and imprisoned, under torture. He is best known for his spiritual poems, such as *Dark Night of the Soul* translated with other works in *The Poems of St John of the Cross* (1968). Feast day 14 December.

John o' Groats, point in Scotland, at the tip of the mainland, on the Pentlands. It is commonly supposed to be the northernmost point of Scotland, although that is actually Dunnet Head, several miles away.

John Paul, the name of two Popes. John Paul I (1912-78). Cardinal Albino Luciani, Archbishop of Venice, was elected Pope in August 1978. Despite his 33 day reign, one of the shortest on record in the Roman Church, his humility and warmth won him the title 'the smiling Pope'. John Paul II (1920-). Was elected Pope in October 1978. Formerly Karol Wojtyla, Archbishop of Cracow, Poland, he is the first non-Italian Pope since 1846.

John Player League, sponsored English

cricket competition for the 17 first-class counties. Played on Sunday afternoons, matches are of 40-overs innings per side, with bowlers restricted to eight overs each and a run-up of no more than 13.72m (15yd). It commenced in 1969.

John Sobieski. See JOHN (KINGS OF POLAND).
Johns, Jasper (1930-), US painter. He abandoned the ABSTRACT EXPRESSIONIST style of his early work to begin painting canvases covered with everyday images (eg flags, targets and numbers) depicted in a highly painterly style. Examples of his work of this period are *Three Flags* (1958) and *Target With Four Faces* (1955). After 1961 he sometimes attached real objects to the canvas; common street or studio items appeared against painted fields (eg *Fake Start*, 1959). He also executed many lithographs and drawings that show the influence of COLLAGE and imprint techniques.

Johnson, Amy (1903-41), British pilot who became famous in 1930 for her solo flight from England to Australia. The next year she flew to Tokyo across Siberia and back to Britain, setting another record. In 1932 she broke the record held by her husband (J. A. Mollinson) for a solo flight to the Cape of Good Hope. In 1936 she flew solo to the Cape and back. In WWII she worked as an air ferry pilot and was killed in an air crash near London.

Johnson, Andrew (1808-75), 17th US president (1865-69). Unschooled and a tailor by profession, he entered politics as a supporter of Andrew Jackson. He was both a pro-slavery southerner and a strong Unionist and as such was nominated running-mate for LINCOLN's re-election in 1864. They won by a large majority, but a month after the inauguration Lincoln was assassinated and Johnson succeeded him as president. Post-Civil War dissension between the president (who favoured a moderate reconstruction policy) and Congress (which advocated a harsh one) culminated in Johnson's impeachment. He was acquitted by one vote. See also p.1630.

Johnson, "Bunk" (1879-1949), US jazz trumpeter, real name William George Johnson, who helped to create the New Orleans style. He was a member of Buddy Bolden's band, which he led after Bolden's collapse in 1907. None of his early work was recorded.

Johnson, Celia (1908-), British actress best remembered for her WWII film performances in *This Happy Breed* (1944) and *Brief Encounter* (1945). Trained at RADN, she returned to the stage in 1947 as *St Joan* at the Old Vic. Other notable appearances in the theatre were in *The Reluctant Debutante* (1955), *Flowering Cherry* (1957) and *The Dame of Sark* (1974).

Johnson, Cornelius (1593-1661), English painter of Dutch parentage. One of England's foremost portraitists, his popularity waned after the arrival of VAN DYCK (1632), by whom he was increasingly influenced. In 1643 Johnson returned to Holland.

Johnson, Eyvind (1900-76), Swedish novelist. Although his novels contain much political and social comment, he is best known for his autobiographical tetralogy *Romanen om Olof* ("The Novel of Olof", 1934-37), in which he depicts the grim labour conditions of logging in the sub-Arctic. He shared the 1974 Nobel Prize in literature with his fellow countryman Harry Martinson.

Johnson, Lyndon Baines (1908-73), 36th President of the USA (1963-69). In the House of Representatives (1937-48) and the Senate (1948-60), he acquired a reputation as a liberal and a skilled representative. As vice-president under John F. Kennedy he took charge of the space programme, and after Kennedy's assassination embarked on the most ambitious legislative programme since the NEW DEAL. He sought to build a "Great Society" through free medical care for the aged, strong civil rights acts, and anti-poverty and urban renewal projects. His domestic success was over-shadowed by his VIETNAM WAR policy. He increased US commitment to more than 500,000 troops

and in 1965 authorized the bombing of North Vietnam. Costs burgeoned and the war became widely unpopular in the USA. In March 1968 Johnson declared that he would not seek re-election and announced a partial halt to the bombing, opening the way to the start of peace talks.

Johnson, Philip Cortelyou (1906-), US architect. He was heavily influenced by MIES VAN DER ROHE, but his style was not as austere. He is noted for his glass-walled New Canaan house (1949) and the New York State Theatre (1962-64).

Johnson, Robert (c.1913-38), US blues singer and guitarist. Arguably the greatest bluesman of all time, Johnson combined a highly accomplished but idiosyncratic guitar technique with a passionate improvisational singing style. His death-haunted lyrics in particular can be compared with the best contemporary poetry.

Johnson, Dr Samuel (1709-84), British lexicographer, poet and critic. He settled in London in 1737 and began writing pieces for *Gentleman's Magazine*. He was a prolific writer and witty conversationalist, and his works include the satire *The Vanity of Human Wishes* (1749), *Rasselas* (1759), the 10-volume *Lives of the Poets* (1779-81), the periodical *The Rambler* (1750-52), the *Dictionary of the English Language* (1755) - which established his reputation - and an edition of Shakespeare's plays (1765), and the essays comprising *The Idler* (1758-61). He was a founder (1764) of *The Club*, later known as *The Literary Club* whose members included David Garrick, James Boswell, Edmund Burke and Oliver Goldsmith. Boswell wrote a noted biography of Johnson.

Johnson, Sir Harry Hamilton (1858-1927), British explorer and colonial administrator in Africa. His expedition to Mt Kilimanjaro in 1884 furthered British interests in East Africa, and in 1889 he led an expedition that founded the British Central Africa Protectorate in Nyasaland.

John the Baptist, in the New Testament the herald of Christ's appearance and of the coming of the kingdom of God. The son of ZECHARIAH and ELIZABETH, he was born in Judea six months before Jesus. At about the age of 30 he went to live in the desert, preaching on the banks of the River Jordan, exhorting his hearers to repent and be baptised for time was short. His baptism of Jesus, although recorded in the New Testament, marks the precise end of the Old, and the beginning of Christ's ministry. John's expressed disapproval of Herod Antipas's marriage (to his brother's ex-wife Herodias) led to his own execution.

Johor Bahru, capital city of Johore state in Malaysia, SE Asia. The city contains the sultan of Johor's residence, the Bukit Serene Palace. It is also a commercial centre for rubber. Pop. (1970) 136,234.

Joint, in anatomy, place where one bone meets another. In moveable joints such as those of the knee, elbow, spine and fingers and toes, the bones are separated and cushioned from one another by pads of CARTILAGE. In fixed joints cartilage may be present in infancy but disappear later as the bones fuse together, as in the FONTANELLES of the skull. See also pp.146, 147, 1070-1071.

Joint venture, capital project undertaken by two or more people or companies (usually in the same industry), under the terms of a formal agreement.

Joinville, Jean (1225-1317), French chronicler. A hereditary royal steward, he was a friend of Louis IX, whom he accompanied on his first Crusade (1248-52) and in captivity. He wrote *Histoire de Saint Louis*, a vivid, detailed narrative of the first Crusade and of the pious Louis IX. **Jókai, Mór (Maurus)** (1825-1904), Hungarian novelist and journalist. His early radicalism gave way to liberalism, a development reflected in his novels as he moved from the romanticism of *Az Aranyember* (1872) (*Man with the Golden Touch*) to the realism of *Rab Ráby* (1879) (*The Strange Story of Ráby Rab*). His prolific non-journalistic writings occupy 100 volumes.

Jokjakarta. See JOGJAKARTA.

Joliot-Curie, name of two French physicists. Irène (1897-1956), daughter of Pierre and Marie CURIE, met Frédéric (1900-1958) when they were both working as assistants to the Curies. She worked on the physical and he on the chemical aspects of RADIOACTIVITY. Their discovery of artificial RADIOSOTOPES was rewarded by the 1935 Nobel Prize in chemistry. They were active in the French resistance during WWII and became Communists. Frédéric was responsible for the construction of France's first nuclear reactor, but he was dismissed for political reasons. See also ISOTOPES.

Joliet, Louis (c.1645-c.1700), French-Canadian explorer who, with Jacques MARQUETTE, was the first white man to travel down the Mississippi River from where it met the Fox River in Wisconsin to the mouth of the Arkansas River. His expedition in 1672 hoped to show that the Mississippi emptied into the Pacific Ocean.

Jolson, Al (1886-1950), US comedian and singer. Semimentally singing *Swanee* and *Mammy* with his face blacked, this music hall and Broadway stage performer later starred in *The Jazz Singer* (1927), the first talking film.

Jonah, fifth of the 12 minor prophets and subject of the book of his name in the Old Testament. After the fall of Jerusalem (586 BC), he was ordered by God to go and admonish the citizens of Nineveh as a prophet. Reluctant, and foreseeing their hostility, he tried to flee his responsibilities by ship, only to be thrown overboard and swallowed by a fish (usually represented as a whale). Cast ashore, the chastened Jonah went to Nineveh where he was well received and was instrumental in saving the city from the threatened destruction by God.

Jones, Ann, née Haydon (1938-), British table-tennis and tennis player who won the 1969 Wimbledon singles. She was runner-up in the 1957 world table-tennis, 1967 Wimbledon and 1961 and 1967 US finals. A left-hander, she won the French singles (1961, 1966) and shared five major doubles titles.

Jones, Bobby (1902-71), US golfer, full name Robert Tyre Jones Jr. Never turning professional, he won the British Open (1926, 1927, 1930), US Open (1923, 1926, 1929, 1930), British Amateur (1930) and US Amateur (1924, 1925, 1927, 1928, 1930) titles. His four 1930 championships constituted an impressive record.

Jones, Daniel Jenkyn (1912-), Welsh composer. He has written nine symphonies, a violin concerto, two operas (*The Knife* and *Orestes*) and an oratorio (*St Cherry*).

Jones, David Michael (1895-1974), British artist and writer. During WWII he served in the Royal Welsh Fusiliers. In 1921 he was converted to Roman Catholicism. His paintings were mainly illustrative of Welsh or Christian mythology. With *In Parenthesis* (1937), based on his wartime experience, he became known as a writer. His works include *Anathemata* (1952), *Epoch and Artist* (1959) and *The Tribunes Visitation* (1969).

Jones, Ernest (1897-1958), Welsh psychiatrist. He introduced PSYCHOANALYSIS into Britain and founded the Institute for Psychoanalysis in London in 1924 and the London Clinic for Psychoanalysis in 1926. His best-known book is *The Life and Works of Sigmund Freud* (3 vols, 1953-57).

Jones, Ernest Charles (1819-69), Welsh Chartist, b. Germany. He became a Chartist in 1845 and co-edited the *Northern Star* with Feargus O'CONNOR. He was imprisoned for encouraging the use of force (1848-50), and his attempt to revive CHARTISM in the 1850s failed.

Jones, Frederic Wood (1879-1954), British anatomist and physical anthropologist whose career started as anatomy demonstrator at St Thomas's Hospital, London. He became anthropologist to the Egyptian Government, and carried out an archaeological survey of Nubia. Later he was a professor at many universities; Adelaide (1919-26), Hawaii (1927-30), Mel-

Lyndon B. Johnson's Presidential term was over-shadowed by the Vietnam War.

Phil Johnson designed this facade for the Museum of Modern Art in New York City.

Dr Samuel Johnson with Goldsmith and Boswell at the Mitre Inn, London.

John the Baptist, a detail from Leonardo da Vinci's portrait of him, now in the Louvre.

Jones, Gwyneth

Johan Barthold Jongkind; a detail from a watercolour he painted in 1873

Ben Jonson barely escaped the gallows in 1598, having killed an actor in a duel

Jacob Jordaens; a detail of his Boating Party. His work was influenced by that of Rubens

Joseph interpreting the Pharaoh's dream; this ability led to his advancement at court

bourne (1930-37), Manchester (1938-45) and London at the Royal College of Surgeons (1945-52). His works include: *Mammals of South Australia* and *Trends of Life* (1953).

Jones, Gwyneth (1936-), Welsh dramatic soprano. She has performed at many opera houses in Europe and the USA and is famous as well for her oratorio roles and recitals. She is a principal guest artist at Covent Garden, London and recent roles have included the Marschallin (1975, *Der Rosenkavalier*) and Chrysothemis (1977, *Elektra*).

Jones, Inigo (1573-1652), English architect. He spent his early career painting and designing theatrical sets and costumes for English court masques. During his many journeys to Italy he studied the classical elements of design, which he incorporated into his own architectural work, including the Queen's House, Greenwich (1616-35); the Banqueting House in Whitehall, London (1619-21); and St Paul's, Covent Garden, London (1638). See also pp. 1417, 1430.

Jones, James (1921-77), US author. His best-known novels, *From Here to Eternity* (1951) and *The Thin Red Line* (1962), deal with army life. He also wrote *Go to the Widow Maker* (1967).

Jones, John Paul (1747-92), naval officer during the American Revolutionary War. Born in Scotland, he joined the Continental navy in 1775, and proved successful at capturing supplies and enemy vessels. With his flagship *Bonhomme Richard* he engaged the superior British ship *Serapis* in battle off the coast of England in 1779.

Jones, Lewis (1931-), Welsh rugby union and league player. An attacking fullback and goalkicker for Llanelli, he won ten caps for Wales (1950-52) and toured Australia and New Zealand with the 1950 British Lions. In 1952 he joined Leeds Rugby League club for a record fee and set international and domestic scoring records. He played 15 times for Great Britain (1954-57).

Jongkind, Johan Barthold (1819-91), Dutch painter and etcher whose work had close affinities with IMPRESSIONISM. His style was influenced by Louis-Gabriel Isabey and the Dutch masters. Many of his oil paintings were based on landscape watercolours and drawings executed outside his studios. Like VAN GOGH, he was plagued by personal misfortune and, later, madness.

Jongleur, in medieval France, a strolling entertainer. He was a juggler, acrobat and singer of popular songs, unlike a troubadour, whose style was courtly. Much folklore was spread throughout Europe by jongleurs.

Jönköping, city in Sweden, at the end of Lake Vättern. Since 1844, it has been the centre of Swedish match manufacturing. The safety match was developed there and the city has some of the world's largest match factories. Other industries include textiles and machinery. Pop. (1973 est.) 108,429.

Jongquil. See NARCISSEUS.

Jonson, Ben (c. 1572-1637), English dramatist, lyric poet and actor. A friend of Shakespeare, he was popular and influential in Elizabethan and Stuart drama. His comedies of humours include *Everyman in His Humour* (1598), *Everyman Out of His Humour* (1599), *Volpone* (1606), *Epicoene* (1609), *The Alchemist* (1610) and *Bartholomew Fair* (1614). He also wrote the neoclassic tragedies *Sejanus* and *Catalina* and several court masques. His poems include the famous lyric which begins "Drink to me only with thine eyes". See also p. 1417.

Joplin, Scott (1868-1917), US composer. He wrote RAGTIME piano music such as *Maple Leaf Rag* (1900) and *The Entertainer* (1902), and also the opera *Treemonisha* (1911). His music underwent a revival of popularity in the 1970s. See also p. 1756.

Joppa. See JAFFA.

Jordaens, Jacob (1593-1678), Flemish painter. He is known for his allegorical and mythological works and for his naturalistic depictions of peasant life. He was considered to be Flanders' most eminent

painter after the death of Rubens. His works include *The Sayer and the Peasant* and *The King Drinks*.

Jordan, Dorothea (Dorothy) (1761-1816), British actress. She made her debut in Dublin in 1779 and excelled in London in high-spirited roles such as Peggy in *The Country Girl* (1785), and Priscilla Tomboy in *The Rump*, a musical farce. In 1791 she became the mistress of the future William IV by whom she had ten children.

Jordan, Arab monarchy in the Middle East. An arid desert region with a N-S depression forming the River Jordan divides the country into the East and West Banks. The economy has been affected by low agricultural production and a large refugee population after the seizure of the West Bank by Israel in 1967. The capital is Amman. Area: 97,740 sq km (37,737 sq miles). Pop. (1975 est.) 2,702,000. See p. 2086.

Jordan (Al-Urdunn or Hayarden), river in Palestine rising in the Anti-Lebanon Mts at the confluence of the Hashani, Dan and Baniyas Rivers, flowing S through Israel and the Sea of Galilee and emptying into the Dead Sea. Since 1967 the S part of the river has formed a section of the Israel-Jordan border. Length: 320 km (200 miles).

Jorn, Asger (1914-73), Danish painter, a forerunner of ACTION PAINTING in Europe and a founder member of the COBRA group. His painting career reached its peak between 1956 and 1959 with his highly luminous colour compositions, executed with savage brushwork, in which he combined AUTOMATISM with a pictorial vision of immense power. An example from this period is *Letter to my Son* (1957).

Joseph, in Genesis, the youngest son of JACOB and RACHEL. After his father had given him a multicoloured coat, he was sold into slavery by his jealous brothers. In Egypt, by his skill at interpreting dreams, he gained the pharaoh's favour and reached a high position. During the great 7-year famine, the stores laid by from the previous 7 good years by his foresight fed all of Egypt - and his father and brothers in the outlying districts. In the New Testament, Joseph is the name of several men. One was the husband of MARY the mother of Jesus. A descendant of David, he was a carpenter in Nazareth. According to St Matthew (only), he fled with his family to safety in Egypt to escape Herod the Great's massacre of the HOLY INNOCENTS. See also JOSEPH OF ARIMATHEA.

Joseph, name of two Holy Roman Emperors. Joseph I (1678-1711; r. 1705-11), allied himself with England and Holland in the War of the SPANISH SUCCESSION. Joseph II (1741-90; r. 1765-90), King of Hungary and Holy Roman Emperor from 1765, was dominated by his mother and co-ruler MARIA THERESA until her death in 1780, but then initiated radical social reforms. His "enlightened despotism", however, was largely reversed by his brother LEOPOLD II. See also pp. 1458, 1459, 1461.

Joseph Bonaparte (1768-1844), brother of NAPOLEON and King of Naples (1806-08) and Spain (1808-13). He was a member of the French Council of Five Hundred (1798) and a councillor of state (1799). He was placed on the Neapolitan and Spanish thrones by his brother.

Josephine (1763-1814), consort of NAPOLEON I and empress of the French. Her first marriage, to Vicomte Alexandre de Beauharnais, ended with his death in 1794 in the Reign of Terror. She married Napoleon in 1796 and was crowned with him in 1804. Her inability to bear him a son caused Napoleon to seek and obtain annulment of their marriage in 1810.

Joseph of Arimathea, Simeon, in the New Testament, a prosperous Israelite and member of the SANHEDRIN who was converted by Jesus. He begged for and received Jesus's body from Pilate for burial. He is said later to have helped to found the first Christian community at Glastonbury. Feast: 17 March in the West; 31 July in the East.

Josephson, Brian David (1940-), British physicist who shared the 1973 Nobel Prize in physics with Leo ESART and Ivar

GIAEVER for his discovery of the Josephson effect. In 1962 he predicted that an electric current would flow between two superconductors separated by a thin layer of insulator (the Josephson current), and that none would flow if, instead of insulation, a battery was connected between them. This hypothesis was later verified experimentally, and has helped in the understanding of SUPERCONDUCTIVITY.

Josephus, Flavius (c. 37-c. 100), Jewish leader and historian. A Pharisee, he was drawn into the revolt against Rome (66-70) and was appointed military governor of Galilee. The city fell but Josephus won favour with the Roman commander, VESPASIAN, and took Vespasian's family name (Flavius) as his own. In 70 Josephus went to Rome where he remained for the rest of his life and wrote his *History of the Jewish War*. In *The Antiquities of the Jews* he traced their history from the Creation to the outbreak of the revolt; his *Against Apion* defends Judaism.

Joshua, biblical book named after Joshua, the son of Nun, who became leader of the Israelites after the death of MOSES. The book emphasizes that God was responsible for the conquest of CANAAN, the reaching of Israel's Promised Land, and its subsequent apportionment, and ends with Joshua's death.

Josiah, in the Bible, son and successor of AMON as king of JUDAH. He ascended the throne at the age of eight after his father was murdered. During his reign a copy of the Deuteronomistic Code was discovered and, guided by its precepts, he vowed to remove all forms of idolatry.

Josquin des Prés (c. 1445-1521), Flemish composer of masses, motets and chansons. The expressiveness and inventiveness of his music marks him as the most prominent composer of Renaissance Europe. In excellence of composition he was rivalled only by the later 16th century composer, PALESTRINA.

Joubert, Piet (1831-1900), also known as Petrus Jacobus Joubert, Boer political figure. He helped to lead a rebellion to restore Transvaal's independence in 1881, and was defeated four times for the presidency by Paul KRUGER.

Jouhaux, Léon (1879-1954), French labour leader and advocate of international co-operation. He proposed the formation of the International Labour Organization in 1916, and was secretary-general of the French General Confederation of Labour (CGT) (1909-40, 1945-47). In 1949 he helped to found the Confederation of Free Trade Unions, and two years later received the Nobel Peace Prize.

Joule, James Prescott (1818-89), British physicist. Joule's law (1841) related the current flowing through a wire to its heat loss and laid the foundation for the law of conservation of energy. The JOULE is named after him. See also pp. 827, 843.

Joule, unit of energy, named after James P. JOULE, in the metre-kilogramme-second (MKS) system of units. One joule is the work done by a force of one newton acting through a distance of one metre. See also ERG, p. 843.

Joust, in the Middle Ages in Western Europe, one of the main attractions at a tournament of knights. Differing from the MELEE, a joust involved single combat on horseback with a lance and a sword, ending in the death or injury of one of the knights. The church condemned jousts, and by the 15th century the winner simply had to unhorse the heavily-armed adversary. See also p. 555.

Jowett, Benjamin (1817-93), British classical scholar and liberal thinker. His ideas were in advance of his time; he was in favour of university reform, and in 1860 was tried by the university for heresy after publishing an essay *On the Interpretation of Scripture*. He published authoritative translations of PLATO (1871), THUCYDIDES (1881) and ARISTOTLE (1885).

Joyce, Eileen (1912-), Australian concert pianist, also a harpsichordist. With Percy GRAINGER as her patron, she studied in Germany with Schnabel and later settled in England, where she won great

popularity. Her interpretation of John IRELAND's piano concerto in particular is said to be highly sensitive.

Joyce, James (1882-1941), Irish novelist. He was educated by Jesuits but renounced Roman Catholicism and left Ireland in 1904 to live and work in Europe. Joyce experimented with the form of the novel attempting to convey consciousness itself. The stream-of-consciousness technique became increasingly apparent in Joyce's work, which includes *Dubliners* (1914), *A Portrait of the Artist as a Young Man* (1916), *Ulysses* (1922) and *Finnegan's Wake* (1939), all set in Dublin. *Finnegan's Wake*, perhaps a dream sequence is probably best appreciated read aloud. See also p.1424.

Joyce, William (1906-46), anti-British propagandist in WWII. Born in the USA, he grew up in Britain and founded the British National Socialist League (1937). In 1939 he went to Germany and broadcast Nazi propaganda to Britain, and came to be called "Lord Haw-haw". Captured in 1945, he was tried, found guilty of treason and hanged.

Jozsef, Attila (1905-37), Hungarian poet whose work deals with his childhood and working class life, as well as with Marxist and Freudian thought. His first volume of poems, *The Beggar of Beauty*, appeared in 1922, although his work did not gain recognition until after WWII. He committed suicide in 1937.

Juan Carlos I (1938-), King of Spain (1975-). The grandson of Alfonso XIII, the last king, he was named heir to the throne by Francisco FRANCO in 1969. He became king when Franco died in 1975.

Juan de Fuca, Strait of, inlet between a Vancouver Island, BC Canada, and the N shore of Washington, USA. Length: approx. 160km (100 miles); width: 24-32km (15-20 miles).

Juan Manuel, Infante Don (1282-c.1349), Spanish poet and fabulist. An illustrious nobleman, he is generally accepted as the most artistic prose writer of his time. His work includes *Libro de los Cantares* (a volume of poetry) and his masterpiece *Libro de Patronio* or *Conde Lucanor*, a collection of 50 moral tales.

Juantezorena, Alberto (1951-). Cuban athlete. Tall and powerfully long-striding, he won an unprecedented 400m and 800m double at the 1976 Olympics, setting a world record in the 800m. In 1977 he achieved the same double in the World Cup.

Juarez, Benito Pablo (1806-72), Mexican president. He was elected governor of his native state of Oaxaca in 1847, but was exiled by SANTA ANNA in 1853. He returned in 1855 and joined in Juan Alvarez's rebellion against Santa Anna. He was president of Mexico from 1857 until his death.

Juba, river in E. Africa, formed near Dolo, s Ethiopia at the confluence of the Dawa and Genale Rivers. It flows, reaching the Indian Ocean near Kismayu, Somalia. Length: approx. 1,610km (1,000 miles).

Jubilee, celebration of an anniversary, after the Jewish tradition of releasing slaves and cancelling debts every 50th year. In British history it marks a particular number of years a monarch has occupied the throne: silver (25 years), golden (50 years) and diamond (60 years). The first such celebration was for Queen VICTORIA's golden jubilee in 1887. See also p.1591.

Judea, Roman province corresponding to Syria and the old tribal kingdom of JUDAH. The region came under Roman control in 63 BC. The word is also used to apply to the whole region inhabited by the Jews, including the kingdom of ISRAEL. See also pp.1190-1191, 1232.

Judah, in the Old Testament, fourth son of JACOB and Leah, and forefather of one of the most important tribes of ancient Israel. Of the two kingdoms after the death of SOLOMON, the southern (comprising the tribes of Judah and Benjamin) became known as Judah as opposed to the northern, Israel. It was also prophesied that the MESSIAH would be born of the tribe of Judah.

Judaism, the religion of the Jews. Based

entirely on the OLD TESTAMENT, the TALMUD (the body of Jewish Law and legend) and on commentaries on both, it is an ancient monotheistic religion which concentrates on the works of God, past and present, and which stresses man's relationship with God as part of everyday living. Its written authorities cover civil as well as religious regulations; through faith and a correct good life salvation may be attained. Modern Judaism is split into three large groups: Orthodox, Conservative and Reform Judaism. They differ mainly in the practice of rituals and the use of Hebrew. Some elements of belief are formulated differently in each group. Judaism today encompasses an awareness of a long historical development, a rich literature and a strong sense of ethnic identity. See also pp.1190-1191.

Judas Iscariot, in the New Testament, one of the original 12 apostles of Jesus, always enumerated last. Apparently finding parts of Jesus's teaching incomprehensible he finally betrayed Jesus to the chief priests (and thereby the Romans) for 30 pieces of silver by pointing him out to them with the customary greeting kiss. He subsequently committed suicide in remorse. His name now connotes treachery.

Judas Maccabaeus (d.161 BC), Jewish warrior who led a revolt against Syria. When King Antiochus IV threatened to end Jewish religious practices, Judas used guerrilla tactics to defeat the Syrian armies. The festival of HANUKKAH celebrates his recapture of the Temple of Jerusalem. He was killed in battle, but his brothers continued the fight and made Judaea independent. The story is told in Maccabees I and II, books included in the Old Testament APOCRYPHA in the Greek Bible.

Judas tree, also called redbud, small tree native to S Europe and W Asia. It has round leaves and pink flowers in clusters. Height: to 12m (40ft). Family Leguminosae; species *Cercis siliquastrum*.

Judge, any officer appointed by the state to administer the law, but in England neither a magistrate nor a JUSTICE OF THE PEACE is properly called a judge. Judges are persons raised from the bar to preside over courts. Their chief duties are to conduct court cases fairly, to arrive at a conclusion (or to direct a jury to a conclusion) and to pass sentence. Judges are removable by the Crown for misconduct. Provided he acts within his judicial authority no action lies against a judge.

Judges, biblical book that originally contained the Book of RUTH. It is an account of events from JOSHUA to SAMSON and is considered a valuable, although highly prejudiced, early history of the Israelites in Palestine.

Judicial separation, separation of man and wife obtained in Britain in a High Court or county court sitting as a divorce court. It differs from separation by a magistrate's court in that a divorce court is competent to apportion property. The grounds are the same as those used to demonstrate irretrievable breakdown of the marriage in a divorce case - adultery, unreasonable conduct, desertion and living apart - but irretrievable breakdown does not have to be shown.

Judith, Old Testament book considered apocryphal by Protestants and Jews. It relates the story of the legendarily beautiful widow Judith, who rescued the city of Bethulia from siege by the Assyrians. Having managed to reach the enemy camp, she advised the Assyrian general Holofernes to expect victory and then murdered him as he slept.

Judo, form of JIJITSU and one of the most popular of the Japanese martial arts; an international competition is held every two years. It is a system of unarmed self-defence that was developed in 1882 by Jigoro Kano, a Japanese jujitsu expert. He modified many of the holds that were considered too dangerous to be used in sport, and developed the system of coloured belts, the method of ranking people who practise judo. A white belt indicates a novice and black an expert. Kano's methods, which place greater emphasis on physical fitness and mental discipline than

on self-defence, depend greatly on the skill of using an opponent's weight and strength against him. Judo matches, scored using a points system, begin with a ceremonial bow, after which each contestant grabs the other by the collar and sleeve of his jacket. The techniques used include holds, trips, strangles and falls, with the end of the match signalled by one of the contestants slapping the mat twice to acknowledge defeat.

Judson, Edward Zane Carroll. See DIME NOVEL.

Jugendstil, German name for ART NOUVEAU.

Juggernaut, or Jagganath, form of the HINDU god KRISHNA, worshipped in the Indian town of Puri, Orissa. At an annual festival statues of the god are carried around the town on very heavy carriages; devotees have been known to throw themselves under the wheels. The word has come to mean any large vehicle.

Jugoslavia. See YUGOSLAVIA.

Jugular, in anatomy, term which applies to any structure in the neck and especially to any of several veins. The external jugular veins receive blood from the outside of the cranium, the neck and the deep tissues of the face. Others receive blood from the back of the neck, the larynx, tissues below the lower jaw, the brain and the face.

Jujitsu, system of unarmed self-defence, used in hand-to-hand combat. It involves such techniques as striking, kneeling, holding, throwing, choking and joint locking. There are as many as 50 variations of this system (including JUDO, KARATE and AIKIDO) which have been refined over a period of 2,000 years in Japan, China and Tibet. A fusion of various techniques in 16th-century Japan became what is known in the West as jujitsu. Warriors devised it as a secondary combat system to complement the tactics of their swordsmen. By the early 19th century, when the SAMURAI were forbidden to carry weapons, jujitsu became a highly specialized form of self-defence.

Jujube, either of two species of small thorny trees and their fruit of the genus *Zizyphus*. *Z. jujube*, native to China, has elliptical leaves and reddish brown, plum-sized fruits, which have a crisp, white, sweet flesh. *Z. mauritiana* of India has smaller fruit. Jujubes may be boiled or baked. Family Rhamnaceae.

Jukebox, coin-operated machine for playing music. The first jukebox, which played cylinder recordings, was installed at the Palais Royal, San Francisco, in 1889. The first pre-selective jukebox was invented by John Duntton, of Michigan, in 1905. The first disc-playing pre-selective jukebox was made in 1906, the first all-electric in 1927. Manufacture of jukeboxes in Britain began in 1947. See also p.643.

Jukkskei, team game indigenous to South Africa and Rhodesia in which bottle-shaped pieces of wood (*jukkskeis*) are thrown to land as close as possible to a stake in the ground. A team consists of four players. Men throw from 15.8m (52ft), women from 14.0m (46ft). It began as a campsite pastime for Voortrekkers on the great north-bound treks of the 19th century.

Julian (the Apostate) (c.331-366), Roman emperor so named for his attempts to restore paganism without, however, persecuting Christians. Made emperor in 360, he headed successful expeditions against the Persians.

Juliana (1909-), Queen of The Netherlands (1948-80). She succeeded to the throne upon the abdication of her mother, Queen Wilhelmina, and in turn abdicated in favour of her daughter Beatrix. Married in 1937 to the German prince, Bernhard, she retained the loyalty of the Dutch during WWII.

Julian day, or Julian date (JD), day in the dating system introduced in 1582 by Joseph SCALIGER and named after his father Julius Caesar Scaliger. Julian days, which commence at noon (1200 hrs), are calculated consecutively from 1 Jan. 4713 BC, independently of months and years. Julian dating is used in astronomy, principally in studying long-period phenomena, such as variable stars.

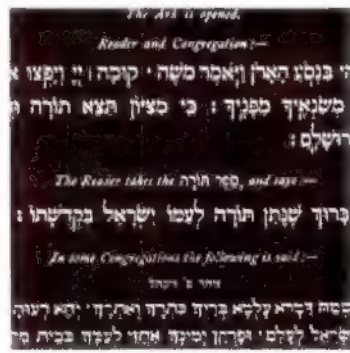

James Joyce, who died almost blind, was one of this century's greatest writers.

Jubilee: Queen Elizabeth at Greenwich with the Cutty Sark visible in the background.

Jujitsu, a martial art once confined to the East, is now popular in the West.

Judaism is a religion of the book in which a "word" acquires significance as an "image".

Julian of Norwich

Julian of Norwich (1342–c. 1420), English religious writer and mystic, also called Juliana. An anchoress, or hermit, she lived in a cell at St Julian's church, Norwich. Her *Revelations of Divine Love*, completed before 1400, are still regarded as some of the most important expressions of religious mysticism.

Julius, name of several popes. Julius I, Saint (r. 337–52), played a major role in increasing Roman and papal authority and condemning Eastern Arianism. His attempt to unite the West in opposing Arian heresy failed. Julius II (1443–1513; r. 1503–13), a warrior as well as a pope, completed the work begun by Cesare Borgia of restoring the Papal States to the church and established the Swiss Guard to protect the pope and Rome. A great patron of the arts, he began the building of St Peter's basilica in 1506. See also p. 1388. Julius III (1487–1555; r. 1550–55), was one of three co-presidents of the Council of Trent and worked with Mary Tudor for the reunion of England with the Church of Rome.

Julius Caesar. See CAESAR, GAIVS JULIVS. **Julius Caesar**, tragedy in five acts by William Shakespeare, based on PLUTARCH's lives of Caesar, MARK ANTONY and BRUTUS. The play was first performed in c. 1599 and has been filmed several times. It deals with the conflicts surrounding the last years of Caesar's life and the events following his assassination. See also CAESAR, GAIVS JULIVS.

July, seventh month of the Gregorian calendar, comprising 31 days. It was named after Julius CAESAR, whose birth month was the fifth month of the Roman Republic's Calendar (previously called Quintilis). It is the month when the Sun enters the sign of Leo. Its stone is the ruby.

July Revolution (1830), insurrection in France against the government of the Bourbon King, CHARLES X. The immediate cause was the July Ordinances that dissolved the chamber of deputies, reduced the electorate and imposed rigid press censorship. Street fighting broke out in Paris and Charles was forced to flee. He abdicated and named his grandson Henri his heir, but he was rejected in favour of the Duc d'Orléans who was proclaimed King LOUIS PHILIPPE.

Jumping hare. See SPRINGHAAS.

Jumping mouse, any of five species of leaping mice (four from North America, one from China), with long hindlegs and tails. Chiefly nocturnal, they eat insects and seeds and hibernate underground. Length: to 26cm (10in). Family Zapusidae; genera *Zapus*, *Napaeozapus* and *Eozapus*.

Jumping spider, spider that leaps on its prey trailing a strand of silk by means of which it returns to its place of rest. Most jumping spiders are brightly coloured and active during the day. Length: to 18mm (0.7in). Family Salticidae.

June, sixth month of the Gregorian calendar, comprising 30 days. Its name probably derives from the chief Roman goddess, Juno, who was the patroness of women. In the Northern Hemisphere, June falls in the summer solstice, and in the Southern Hemisphere in the winter solstice. Its flower is the rose and its gemstones are pearl and moonstone.

Jung, Carl Gustav (1875–1961), Swiss psychiatrist. After working with Sigmund FREUD from 1906 to 1914, Jung broke with him to found his school of analytical psychology. His investigations into personality, especially its spiritual and unconscious aspects, led him to his concept of a collective unconscious. He believed introversion and extraversion to be basic personality types, and stressed the importance of personal transformations and self-discovery for the development of a healthy personality. Among his noted works are *Wandlungen und Symbole der Libido* (1912, tr. *Psychology of the Unconscious*, 1952 rev. ed.), tr. *Symbols of Transformation* and *Modern Man in Search of a Soul* (1933). See also pp. 1120–1121, 1122, 1123, 1143.

Jung, Johann Heinrich (1740–1817), pseudonym of Jung-Stilling, German physician who later became professor of

economics at Marburg from 1787 to 1803. As well as a popular autobiography published first in separate parts and later as *Heinrich Stilling's Leben* (1806) and *Heinrich Stilling's Alter* (1817), he wrote poetry, novels and treatises on medical, veterinary and economic matters.

Jungfrau, mountain peak in central Switzerland, in the Bernese Alps. It is the site of the Jungfraujoch Pass and an alpine research station. Height: 4,158m (13,642ft).

Jungle Book, The (1894), children's story by Rudyard KIPLING. Like its sequel *The Second Jungle Book* (1895), it relates the adventures of Mowgli, an Indian boy, who gets lost in the jungle and is reared by a family of wolves. Kipling imbued the jungle with its own political and social structure and each animal with a characteristic style of thought and behaviour.

Jungle fowl, ancestor of all domestic poultry, long domesticated by man and bred into many varieties. It resembles a chicken and has a high arched tail. Often known as red jungle fowl (*Gallus gallus*), it is native to South-East Asia, where noisy flocks frequent deep woods and forest edges. See also CHICKEN.

Jung-Stilling, Johann Heinrich. See JUNG, JOHANN HEINRICH.

Juniper, any of several species of evergreen shrubs and trees native to temperate regions of the Northern Hemisphere. They have needle-like or scale-like leaves and may be tall and upright or low and spreading. These shapes make them popular as ornamentals. The aromatic timber is used for making pencils, and the berry-like cones of common juniper for flavouring gin. Family Cupressaceae. See also pp. 378–379.

Junk, wooden sailing boat, used for thousands of years by the Chinese and Far Eastern peoples. It is a flat-bottomed vessel with a high stern and up to five masts carrying sails made of cloth and bamboo. It can be used as either a transport vessel for cargo or a home. The huge rudder, a feature of the early junks, takes the place of the keel. See p. 472.

Junkers, Hugo (1859–1935), German aircraft designer who founded a factory at Dessau in 1910. He designed the first successful all-metal aeroplane, the J-1 (1915). Later he pioneered the cantilever wing. In 1939 the Junkers factory was the largest in Germany, and in WWII the LUFTWAFFE used many Junkers aircraft, particularly the three-engined JU-52 transport aircraft. See also p. 515.

Junkers, the landed aristocracy of Prussia and Germany which exercised considerable political influence, particularly in the periods 1871–1918 and 1919–33. The Junkers were conservative politically and staffed the Prussian army, which brought about Germany's unification.

Juno, in Roman mythology, the principal female deity and consort of Jupiter, depicted as a statuesque, matronly figure. She was also goddess of light and of childbirth. She became the protective symbol to Imperial Rome after geese sacred to her allegedly warned of an attack on the Capitoline Hill in 390 BC.

Juno, ASTEROID discovered in 1804 by Karl Ludwig Harding. Diameter: 240km (150 miles); mean distance from the Sun: 398,700,000km (247,600,000 miles); mean sidereal period 4.36 yr. See also pp. 954–955.

Junta, ruling administrative council. In contemporary usage, the term generally refers to a ruling faction or clique, often military, which has seized power by force.

Jupiter, king of the Roman gods, protector of Rome, originally god of the sky; identified with the Greek god ZEUS. The Roman games were held in honour of Jupiter, who could take on various forms: the light-bringer (Lucius), god of lightning and thunderbolts (Fulgur), and god of rain (Jupiter Elicius). Marriages, treaties and oaths were also associated with Jupiter.

Jupiter, largest of the planets and fifth from the Sun; it has 13 known satellites. The temperature under its enveloping cloud of frozen ammonia crystals is estimated to be between –170°C (–274°F)

and –110°C (–166°F). Its mass and volume are 318 and 1,300 respectively times that of the Earth; equatorial diameter: 142,800km (88,700 miles); polar diameter: 133,000km (82,800 miles). See also SOLAR SYSTEM, pp. 956–959, 964–965, 1048–1049.

Jura, island of the Inner Hebrides, Strathclyde, W Scotland. Separated from the mainland (Knapdale and Kintyre) by the Sound of Jura, the island has an airfield and two car ferry ship services. Area: 381sq km (147sq miles). Pop. 230.

Jura mountains, part of the Alpine system in E France and NW Switzerland, extending from the River Rhine at Basel to the River Rhône at Geneva. The range has several hydroelectric schemes that supply power to local industries. The highest peak is Crête de la Neige in France, 1,723m (5,652ft).

Jurassic period, in the history of the earth, the central division of the MESOZOIC PERIOD; it lasted from 195–135 million years ago. In this period there were large saurian dinosaurs such as *Atlantosaurus* and *Allosaurus*, ornithischian dinosaurs such as *Camptosaurus* and *Stegosaurus*. PLESIOSAURS, PTEROSAURS and ARCHAEOPTERYX (the first known bird) also date from this period. Primitive mammals had begun to evolve; they were the ancestors of later marsupial and placental species. See also pp. 185, 269, 281–283.

Jurisdiction, legal power or right of a court to decide a case, limited by the authority that established the court. Some courts have original jurisdiction only, whereas others have the jurisdiction to review decisions of lower courts on appeal.

Jurisprudence, philosophy of the law. It dates at least from the ancient Greeks; both PLATO and ARISTOTLE attempted to answer the question "What is law?" Jurisprudence seeks to discover the source and justification of the law and its scope and function in a particular society. It may be a commentary on a local legal system, such as BLACKSTONE's *Commentaries on the Laws of England* (1765–69), or it may be generally philosophical, as in H.L.A. Hart's *The Concept of Law* (1961). See also p. 1870.

Jury, body of laymen summoned to pass judgment under oath. Its origin may be the sworn inquests of CAROLINGIAN kings, at which people answered questions to help to determine royal rights and which were introduced into Britain by the Normans. Or it may come from the Scandinavian "jury of twelve familiars" introduced into Britain by the Danish kings and becoming the Anglo-Saxon trial by compurgation, at which 12 people could acquit the accused by testifying to his honour. The 12-member jury in criminal trials dates from the mid-12th century, but it was only in the 17th century that juriesmen ceased to give evidence and simply passed judgment on the basis of evidence heard in court.

Justice, Lord Chief, presiding judge of the QUEEN'S BENCH division in England. He is the second-ranking officer in the hierarchy of English law and presides over the High Court in the absence of the lord CHANCELLOR. He is also an ex-officio judge of the Court of CRIMINAL APPEAL. He has replaced the former Chief Justice, who presided over the former Queen's Bench and the Court of COMMON PLEAS.

Justice of the Peace, subordinate MAGISTRATE in English law, appointed by the Crown on the advice of the lord CHANCELLOR to keep the peace within a local jurisdiction. The office dates from the reign of EDWARD I. It is unpaid and JPs are rarely qualified lawyers. They issue warrants for arrest, commit cases for trial and sit in groups of two or more in the petty sessions courts.

Justiciar, highest royal servant in England in the 12th and 13th centuries. He was not part of the HOUSEHOLD but above it, since he was expected to have competence over all matters, ready to act as regent in the king's absence or incapacity. The most famous, and last of great influence, was Hubert de BURGH, who ruled England during HENRY III's minority.

Justinian, name of two Byzantine Emperors. Justinian I, "the Great" (c. 482–565; r. 527–565), the son of an Illyrian peasant, became one of the most cultured men of his time and one of the greatest rulers of the Byzantine Empire. During his reign large parts of the old Roman Empire in North Africa, Italy and Spain were reconquered for Byzantium, and his vast building programmes included the erection of the Church of St Sophia in Constantinople. His most lasting legislative achievement was his revision of Roman law. Justinian II (c. 669–711; r. 685–95 and 705–11) was surnamed Rhinotmetus ("with a cut-off nose"). A tyrannical ruler, he was deposed in 695, mutilated (hence the surname) and exiled. Ten years later, with the help of the Bulgarians, he regained the throne but was killed in 711. See also pp. 1231, 1276, 1276, 1518, 1519, 1871.

Justinian Code, monument of Byzantine law and the greatest contribution of the Emperor JUSTINIAN I to posterity. The code was prepared in the 6th century by a commission headed by the legal scholar Tribonian. To the revision of Roman law, Justinian added other legislative works, now known collectively as the *Corpus Juris Civilis* (Body of Civil Law). See also pp. 1276, 1871, 1871.

Justin Martyr, Saint (c. 100–c. 165), Christian scholar. Converted to Christianity, he was also a PLATONIST. A strong defender of Christian doctrine in his *Major Apology* and *Second Apology*, he was put to death in Rome for his faith.

Just So Stories (1902), collection of animal stories for children by Rudyard KIPLING. Included among the stories are *How the Elephant got His Trunk*, *The Camel's Hump* and *The Cat That Walked by Himself*. Kipling first wrote the stories for Mary Mapes Dodge's *St. Nicholas* magazine.

Justus of Ghent (c. 1435–80), Flemish painter who also worked in Italy. He was influenced by the early Italian Renaissance style, which can be seen in the simplicity of form and idealization of subject in his paintings. His works include the *Adoration of the Magi* (c. 1466) and a large Crucifixion triptych (c. 1465).

Jute, natural plant fibre obtained from *Corchorus capsularis* and *C. olitorius*, both native to India. Grown as a crop in India and Bangladesh, the plants mature in three months from seed and grow up to 4.6m (15ft) high. The fibre is obtained from the bark by soaking (retting) and beating. Jute is used to make sacking, twine and rope. See also pp. 712, 712.

Jutes, one of the three Germanic-speaking tribes that invaded Britain in the 5th century. They settled around Kent, the Isle of Wight and parts of Hampshire, and called them *Jutae*, and it was believed they came from western Jutland, but the social system of Kent was Frankish in character, differing from that of the other two tribes, the SAXONS and ANGLES. Some modern scholars believe the Jutes may have come from the Rhine delta region rather than Jutland. See also pp. 1270, 1272.

Jutland, Battle of (1916), naval battle between the British Grand Fleet, under Admiral JELlicoe, and the German High Seas Fleet, under Admiral SCHEER. Although inconclusive in itself it was ultimately decisive in that the German surface fleet remained in harbour for the rest of WWII. See also p. 1669.

Jutland, peninsula in N Europe, comprising Denmark and the N state of Schleswig-Holstein, West Germany. It is bounded by the Skagerrak (N), North Sea (W), Kattegat (E) and the River Eider (S). The land along the E coast is fertile, supporting dairy and livestock farming and the W coast is sand and marshland. There is some mining for iron, marble and limestone. Area: 29,390sq km (11,436sq miles). Pop. (1973 est.) 2,235,848.

Juvarra, Filippo (1678–1736), Italian architect, one of the finest exponents of the BAROQUE style. His highest achievements are the two churches, Superga (1717–31) and the Church of the Carmine (1732), both in Turin, and the four great palaces built at Turin between 1714 and
